STM90558 Law for Business

This stream is designed to provide students with a comprehensive understanding of legal issues and developments that impact on the business sector. Building upon the core subject, Introduction to Law, students are provided with the opportunity to choose between a range of subjects to satisfy the learning requirements for career specialisation. The broad range of subject areas is designed to provide a legal framework to enhance the planning and application of current and future commercial strategies.

Completion requirements

70110	Introduction to Law	6cp
79013	Industrial and Labour Law	6cp
79014	Applied Company Law	6cp
79018	Advanced Commercial Law	6cp
79032	Competition and Consumer Law	6cp
Select 18 credit points from the following options:		18cp
79006	Intellectual Property Commercialisation	6cp
79011	Marketing Law	6cp
79015	Banking Law	6cp
79017	Taxation Law	6cp
79019	Corporate Environmental Responsibility	6cp
79021	International Aspects of Australian Taxation Law	6cp
79022	GST and other Indirect Taxes	6cp
79026	Estate Planning (UG)	6cp
79027	Retirement Planning (UG)	6cp
79033	Insolvency Administration	6cp
79603	International Business Transactions and the Law	6cp
79606	Advanced Taxation Law	6cp
Total		48cp

STM90559 Foundations of Law stream

This stream caters for business students interested in developing an in-depth understanding of the law. After developing skills which are essential to the study of law, students undertake fundamental law subjects of direct application to the business environment. Students then have an opportunity to specialise in areas relevant to their particular career focus.

Completion requirements

70211	Contracts	8cp
70311	Torts	8cp
70327	Commercial Law	6cp
70102	Foundations of Law	8cp
70103	Ethics Law and Justice	6cp
Select 12 credit points from the following options:		12cp
76002	Sports Law	6cp
76023	Deceptive Trade Practices and Product Liability	6cp
76024	Environmental Law	6cp
76027	Competition Law	6cp

Total		18cp

STM90694 No specified major (Life and Environmental Sciences)

The flexibility of this major gives students the opportunity to choose study areas in line with their interests, abilities and career aspirations. Flexibility can be important to students who are uncertain of their career path, students who have not yet decided which area they wish to specialise in, or students who have decided to undertake a general science degree with a cross-disciplinary mix of studies.

Choosing to not specify a major gives students the opportunity to experience and confirm their interests and expectations, and assists them to tease out the study area they are interested in. It also enables students to focus on their career choice according to their interests while keeping their options open.

In addition, students can choose this major for their first year of study. Then, once they have experienced a range of science disciplines in the first year, they can go on to choose a major at the end of their first year.

The majors on offer are: applied chemistry, applied physics, biotechnology, biomedical science, environmental biology, environmental forensics, marine biology, mathematics, medical science, nanotechnology and statistics.

Students can also decide against choosing a major but choose a range of second- and third-year subjects to match their interests and aspirations, leading to a Bachelor of Science award without a specified major. Students can also include sub-majors in other course areas such as business, law, information technology, communication.

Completion requirements

SUBJECTS

010039 Teaching English for Academic Purposes

6cp; availability: not offered to exchange and study abroad students
Postgraduate

This subject is designed for students who aim to teach programs that support students studying at tertiary level in English. This may include teaching in tertiary preparation courses, academic language support programs, or teaching other subject areas in English-medium universities where some or all students are non-native speakers of English. It is also relevant to teaching in senior secondary schools as a pathway to academic study. The subject takes account of the contexts of English for academic purposes (EAP) in Australia and internationally. The content addresses aspects from the nature of academic English, issues of program design and provision, modes of pedagogy, and practices in testing and assessment. Students engage with theories of language and learning as they have relevance to the context of teaching EAP. They apply theoretical knowledge in explorations of their own practice and that of others in the field.

010040 Program Development and Evaluation in Indigenous Education and Development

6cp; availability: not offered to exchange and study abroad students
Postgraduate

This subject extends to areas of adult learning to look at evaluation, the development of programs and the complex range of considerations and perspectives that need to be considered in designing and evaluating programs in Indigenous education and development.

010041 Research, Ethics and Indigenous Cultural Heritage

6cp; availability: not offered to exchange and study abroad students
Postgraduate

This subject focuses on issues, considerations and protocols for educators and researchers working with Indigenous peoples and communities.

010042 Student Learning and Teaching Approaches

6cp; on campus (6 x 3hr face-to-face workshops during semester, plus online learning/negotiated independent learning for participants unable to attend some workshops); availability: not offered to exchange and study abroad students

Participants in this subject develop their understanding of key ideas from research on student learning and teaching in higher education to enable them to reflect on and review their teaching from the perspective of this research. They develop their understanding of a model that relates teaching to student learning and is underpinned by empirical research on student learning and teaching in higher education, so that they become more aware of students' approaches to their learning, the influences of the learning environment on students' approaches to learning, and relations between learning approaches and the quality of the learning outcome. Participants relate this to their approaches to teaching, the nature of good teaching and teaching strategies which encourage high quality student learning. They seek feedback on their own teaching from students and peers and make use of this feedback and the research to plan changes to their teaching to improve the learning environment for students.

010043 Course Design and Assessment

6cp; 6 x 3hr seminars approx. 2 wks apart during semester;
availability: not offered to exchange and study abroad students

This subject aims to develop university teachers' ability to design courses and subjects that provide an environment for meaningful student learning in higher education. The subject looks at the context within which subjects and courses are developed and how course design policies shape the development of course goals and subject objectives. Participants in the subject develop an understanding of the principles of constructive alignment (Biggs, 2003) as a method for achieving consistency between objectives assessment and teaching and learning activities. Participants relate the features of effective assessment to their own subject design, with attention to issues of equity, validity, the involvement of students in assessment choices, marking efficiencies, and the provision of effective feedback on student work. This subject enables university teachers to explore a range of methods for improving courses and subjects in order to ensure an effective learning environment for students.

010044 Scholarly Teaching and Learning Project

6cp; 1 x 1hr seminar, once a month project adviser; availability: not offered to exchange and study abroad students

This subject draws together and builds on what participants have learned in other course subjects and their previous teaching experience. It involves participants in undertaking a scholarly project focused on understanding and improving selected aspects of their teaching and learning. Participants choose an area that they would like to investigate, and undertake one plan-act-observe-reflect cycle in which they plan a change to their teaching or subject, implement the change, collect information about its effects, and reflect on the information. The project is informed by scholarly literature related to higher education in general and/or to teaching and learning in the participant's discipline. Participants may choose to develop their project further and communicate it to achieve publishable outcomes.

010045 Reflective Academic Practice

6cp; 1 x 3hr seminar, work experience adviser; availability: not offered to exchange and study abroad students

This subject enables participants to extend their awareness of the broader context of academic work in a practice-oriented university. Participants have the choice of exploring a wide range of topics relevant to their academic work, including research supervision or research-led teaching in their discipline. Credit can be gained towards subject completion by participating in professional development activities offered in the University such as the LEAP modules on entrepreneurship or project management. The subject also provides an opportunity for participants to reflect on their learning over the course as a whole and identify practical learning outcomes for their own practice.

010050 Student Welfare: Implications for Teaching and Learning

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

Living in contemporary society presents many challenges affecting students' readiness to learn and engage with others. This subject describes and analyses some welfare issues currently dealt with in the primary school context. Issues addressed include children's rights, youth suicide, grief, drug and alcohol problems, domestic violence, child abuse, bullying, adoption, and eating disorders. An important aim is to assist future teachers to follow referral procedure, identify appropriate resources and use strategies for coping with these situations when they arise. Presentation of this subject involves visiting experts in their field. It does not have a counselling function.

010051 Beginning Teaching: Surviving and Thriving

6cp
Undergraduate

This subject addresses some of the challenges that beginning teachers meet in their first year of teaching, including interaction with parents, membership of the wider school community, collegial and professional interactions, and management of professional roles and responsibilities. Students explore strategies that assist them to thrive, rather than merely survive, as beginning teachers. The hidden curriculum of the primary school is examined as a means of equipping students with a repertoire of skills that facilitate a smooth transition to becoming a professional primary school teacher.

010052 Environmental Sustainability Education

6cp
Elective

This subject investigates ways in which education for sustainability can be incorporated in the F-6 curriculum, in particular HSIE/ Geography and Science and Technology, and the mandate for its inclusion. Education for sustainability involves recognising the need to understand the world around us and how it works, natural and human/social systems, and how these things interrelate. The subject also investigates and supports the development of the skills and experience necessary in implementing, integrating and evaluating related teaching/learning experiences in current curriculum documents and those that are under development. The

subject addresses values such as a commitment to an understanding of environmental sustainability, as well as causes and effects related to social justice, globalisation, economics, intercultural understanding, democratic processes and responsible uses of technologies.

010070 Professional Practice 1 Language Literacy and Numeracy

6cp; 2hpw, weekly (TESOL students in Autumn semester), block (non-TESOL students); availability: not offered to exchange and study abroad students
Undergraduate

This subject develops initial practical teaching skills through the observation and analysis of lessons; the planning and delivery of several short, micro teaching activities; undertaking a practicum placement; and the keeping of a reflective journal.

010071 Professional Practice 2 Language Literacy and Numeracy

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject extends the skills developed in Professional Practice 1, in the areas of lesson planning and implementation, and classroom management. The focus in this subject is on supervised classroom practice and the development of a reflective stance in teaching.

010072 Professional Practice 1 Vocational Education and Training

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject aims to develop the professional skills of teachers/trainers within the vocational education and training (VET) sector to meet the learning needs of adults and young adults. The subject links to industry training requirements and draws upon theories of adult and adolescent learning. It requires participants to develop their teaching/training proficiency through the design, delivery and evaluation of lessons. Practical experiences take place within the university setting and at participants' workplaces; feedback is provided by DVD filming, peers, and UTS professional staff.

The subject is one of a pair. Professional Practice 1 focuses primarily on the teacher's role in providing direct instruction, including demonstration of practical skills. Professional Practice 2 is concerned with the teacher as designer and facilitator of student-centred learning. Both subjects additionally aim to develop participants' written communication skills.

010073 Professional Practice 2 Vocational Education and Training

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 010072 Professional Practice 1 Vocational Education and Training
These requisites may not apply to students in certain courses. See access conditions.
Undergraduate

This subject aims to develop the professional skills of teachers/trainers within the vocational education and training (VET) sector to meet the learning needs of adults and young adults. The subject links to industry training requirements and draws on theories of adult and adolescent learning. It requires participants to develop their teaching/training proficiency through the design, delivery and evaluation of lessons. Practical experiences take place within the university setting and at participants' workplaces; feedback is provided by DVD filming, peers, and UTS professional staff.

The subject is one of a pair. Professional Practice 1 focuses primarily on the teacher's role in providing direct instruction, including demonstration of practical skills. Professional Practice 2 is concerned with the teacher as designer and facilitator of student-centred learning. Both subjects additionally aim to develop participants' written communication skills.

010074 Professional Practice 1 Human Resource Development

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject is designed to assist students develop their skills in both the practice of HRD and the capacity for critical reflection on their own practice and learning. Within this subject students analyse their own practice and consider how theories and principles discussed in other subjects forming part of this program have impacted on their own human resource development practice.

010075 Professional Practice 2 Human Resource Development

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 010074 Professional Practice 1 Human Resource Development
These requisites may not apply to students in certain courses. See access conditions.
Undergraduate

This subject is designed to assist students develop their skills in both the practice of HRD and the capacity for critical reflection on their own practice and learning. Within this subject students extend their ability to analyse their own practice and consider how theories and principles discussed in other subjects forming part of this program have impacted on their own human resource development practice.

010076 Professional Practice 1 Organisational Learning

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject has a focus on the development of professional skills of teaching/training and the facilitation of learning and workplace training/education for organisational learning. The subject has a work-based focus, prepares students for their workplace experience and is supported by theories of adult learning. It involves students in demonstrating the acquisition of skills through practical implementation of new knowledge. This may occur via demonstration of teaching/training skills, design and presentation or facilitation of learning activities and other specific applications underpinning knowledge to effective problem solving in a variety of learning contexts in organisations.

010077 Professional Practice 2 Organisational Learning

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 010076 Professional Practice 1 Organisational Learning
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Undergraduate

This subject has a focus on the continued development of professional skills of teaching/training and the facilitation of learning, workplace training/education and the work experiences of adults. The subject has a work-based focus and is supported by theories of adult learning. It involves students demonstrating the acquisition of skills through practical implementation of new knowledge, presentation to peers and critical reflection on personal learning from an approved workplace experience of 100 hours.

010078 Professional Practice 1 Vocational and Workplace Learning

6cp
Undergraduate
Further information on this subject is available from UTS: Education.

010079 Professional Practice 2 Vocational and Workplace Learning

6cp
Undergraduate
Further information on this subject is available from UTS: Education.

6cp

Further information on this subject is available from UTS: Education.

010143 Exchange Elective 4 (Education)

6cp

Further information on this subject is available from UTS: Education.

012208 English Education 1

6cp; availability: exchange and study abroad students with faculty approval

Undergraduate

This subject introduces students to the central role of language in the development of primary students' intellectual, social and psychosocial development. Students are introduced to the NSW K-6 English syllabus and the drama strand of the NSW K-6 creative arts syllabus, and the projected national curriculum. Through a program of structured engagement, students develop knowledge and skills in a repertoire of language practices related to the teaching and learning of language through literature and drama. The subject develops students' knowledge about the English language (printed texts, visual and digital formats), informed appreciation of literature (Australian and international texts) and growing repertoires of English usage (spoken and written modes). Through engagement with the subject, students improve their standards of personal literacy in the context of tertiary studies and primary school teaching. The subject examines a broad range of genres and the crucial aspects of language in the key learning areas.

012209 English Education 2

6cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 012208 English Education 1 OR 024211 English Education 1

Undergraduate

The aim of this subject is to develop students' knowledge and understanding of the nature of literacies with a focus on the knowledge, skills and strategies needed to teach children to read and write and to use reading and writing as a useful, enjoyable part of their lives. This subject follows on from the introductory English Education 1 and focuses on the development of reading and writing in K-6. Students engage in analysing different texts and contexts and develop proficiency in planning, implementing, monitoring and evaluating the literacy development of children K-6. Students also undertake reading and writing activities of their own. Through a functional approach to learning language, students come to appreciate a diversity of language contexts within a multicultural society and gain increasing facility in describing how language works, not only in reading and writing but also across all of the key learning areas. Current theories/research about reading and writing are examined with a focus on the implications for teaching/learning in the primary school context.

012210 Mathematics Teaching and Learning 1

6cp; availability: exchange and study abroad students with faculty approval

Undergraduate

This subject encourages students to become aware of their beliefs about the nature of mathematics and the teaching and learning of mathematics and examine the implications that these beliefs can have for their teaching. Students become familiar with various theories of learning that are dominant in mathematics education. This subject encourages students to use problem-solving approaches in the teaching and learning of mathematics. Students are introduced to ways of teaching and learning concepts, particularly in measurement. The study of measurement concepts involves the modelling of participative and collaborative learning approaches.

012211 Mathematics Teaching and Learning 2

6cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 012210 Mathematics Teaching and Learning 1 OR 025211 Mathematics Teaching and Learning 1

Undergraduate

This subject develops students' understanding of how to work mathematically in the teaching and learning aspect of the NSW K-6 mathematics syllabus. Students use current approaches to develop their own understanding of geometrical and number concepts and to develop strategies and techniques for teaching geometry and number concepts in the primary school. Participative and collaborative learning approaches are employed and the use of reflection and documentation of learning through portfolios is continued. The subject assists students to develop critical thought about, and reflection on, the teaching of mathematics in the primary school.

012212 Mathematics Teaching and Learning 3

6cp; availability: exchange and study abroad students with faculty approval

Requisite(s): (012210 Mathematics Teaching and Learning 1 OR 025211 Mathematics Teaching and Learning 1) AND (012211

Mathematics Teaching and Learning 2 OR 025212 Mathematics Teaching and Learning 2)

Undergraduate

This subject allows students to further develop their philosophy of teaching and learning in mathematics. It examines the construction of, and builds students' understanding in, sound methodological principles for the development of concepts in rational number, introductory algebraic concepts, elementary number theory, and basic ideas in probability and statistics. The subject also identifies and analyses some of the critical issues in contemporary mathematics education, and develops an awareness of their implications for teaching and learning. Students are encouraged to reflect on their own learning about, and teaching of, the NSW K-6 mathematics syllabus. The link with the school-based field component of the corresponding professional experience subject enables students to apply and reflect upon mathematics teaching and learning episodes.

012213 Learning in Science and Technology 1

6cp; availability: exchange and study abroad students with faculty approval

Undergraduate

This subject introduces students to learning and teaching science and technology in the primary school (K-6). Throughout this subject students are encouraged to articulate, reflect on and develop their theories of learning and teaching in science and technology based on their reading of the literature and experiences in the classroom and with primary school-aged children. Students develop their understanding of the nature of science and technology, of current theories of learning and teaching science and technology, and of research that informs those understandings. Students learn how to access information in a variety of forms from a range of sources, and how to critically evaluate information and ideas; a preparation for lifelong learning and for developing scientific, technological, information and language literacy. Students are guided to use the Board of Studies Foundation Statements to develop teaching and learning units and teaching approaches. The subject locates learning and teaching in intellectual, practical, creative, social, gender-inclusive and culturally sensitive contexts.

012214 Learning in Science and Technology 2

6cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 012213 Learning in Science and Technology 1 OR 028221 Learning in Science and Technology

Undergraduate

This subject builds on Learning in Science and Technology 1 and continues to assist student development as a lifelong learner. It guides students in undertaking independent and collaborative inquiry, leading to the creation of new ideas and a critical understanding of established knowledge. Students are supported as they take increased responsibility for their own learning about science and technology concepts, and about pedagogies and approaches to teaching and learning with primary aged students and with programming in this

key learning area. In requiring students to use a variety of sources (including the internet) for accessing, analysing and evaluating information, Learning in Science and Technology 2 contributes to the development of literacy in science and technology and information technologies. Further, it helps students to become informed, ethical and committed primary school teachers and/or scholars and researchers in this field.

012215 Social and Environmental Education 1

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject develops a student's understanding of the NSW primary curriculum area of human society and its environment. Students acquire proficiency in planning, presenting, assessing and evaluating pupils' learning experiences at the K–6 levels, consistent with current syllabus approaches. Students are also encouraged to critically reflect on the wider challenges of preparing Australian school children to become community, national and global citizens. It is anticipated that through studying this subject, prospective teachers do more than inform themselves about the social sciences, but that they hone their skills as social scientists, formulating and expressing the views and questions that social scientists (and all of us) do.

012216 Social and Environmental Education 2

6cp; availability: exchange and study abroad students with faculty approval
Requisite(s): 012215 Social and Environmental Education 1 OR 029211 Social and Environmental Education
Undergraduate

This subject develops students' understanding of social justice issues through a critical examination of the media. It extends students' knowledge of the civics component of the NSW K-6 human society and its environment syllabus and builds pedagogical skill in its implementation. In this subject students investigate current social issues as a means for exploring and understanding social justice matters. One aim of this subject is to enable students to interpret and respond to the media more critically and discerningly, with a view to helping their primary students do likewise. Investigation of social responses include the use of media, consumer power and political processes to effect change. This subject also focuses on a study of devices used by the media, and their role in persuading readers/listeners of certain points of view. At the completion of the subject, students are expected to have a well-developed understanding of the impact that the media have on public opinion, including the power of persuasion through advertising, as well as language bias in news and documentary reports. Students also deconstruct their own learning, and implications for the teaching of topics and content they choose in their own classrooms.

012217 Personal Development, Health and Physical Education 1

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

The aim of this subject is to develop students' knowledge and understanding of the nature of the discipline of personal development, health and physical education (PDHPE), its relationship to supporting the development of the health and wellbeing of the child, and implications for teaching. The subject introduces students to PDHPE in primary schools. It examines health and movement issues relevant to the primary-aged child in today's society. It introduces relevant theories and processes underpinning the discipline and teaching of the PDHPE key learning area. The subject addresses the areas of fundamental movement skills, dance, gymnastics, games, sports, healthy approaches to physical activity, healthy eating, sexual health, safety and protective behaviours, child protection, drug education, social and emotional wellbeing, resilience, connectedness, interpersonal relationships and healthy choices. This involves a thorough analysis of the theoretical and practical movement and health studies supporting the implementation of the NSW K–6 PDHPE syllabus package, with a view to the development of informed and integrated teaching programs. Students participate in activity-based workshops that address supporting topics as well as issues relevant to their future working environments.

012218 Personal Development, Health and Physical Education 2

6cp; availability: exchange and study abroad students with faculty approval
Requisite(s): 012217 Personal Development, Health and Physical Education 1 OR 027211 Personal Development, Health and Physical Education
Undergraduate

This subject aims to further develop students' understanding of the nature of personal development, health and physical education (PDHPE) in primary schools. It involves analysing the NSW K-6 PDHPE syllabus and effectively planning and implementing strategies for PDHPE lessons. The subject builds on the introduction to fundamental teacher knowledge of curriculum content, design and pedagogical skills in the PDHPE key learning area (KLA) with particular reference to the primary school. The subject investigates the roles and responsibilities of teachers of PDHPE and provides an opportunity for both the theory and practice of learning and teaching in PDHPE to be explored. The subject gives insight into a range of curriculum materials, strategies and processes. It investigates the advantages and disadvantages of the various teaching principles for the PDHPE KLA and provides students with the knowledge, skills and understanding to be able to plan, program and teach effectively in all facets of the PDHPE syllabus.

012219 Music, Movement and Dance

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject develops student knowledge of the K-6 NSW Board of Studies syllabus relating to the teaching of music, movement and dance in accordance with the creative arts key learning area. It also develops students' skill and confidence in actively engaging primary students in learning experiences that are developmentally appropriate and meet the diverse needs of those students. This subject focuses on the development of basic skills and understandings in music literacy, classroom-based performance skills, and teaching strategies in the areas of vocalising, movement, playing musical instruments, listening to music, and composing music for the primary school classroom. In examining movement, elements of dance are also explored. Students are involved in the implementation of the curriculum through a range of strategies: whole-class campus-based teaching, peer teaching of musical concepts, presentations of ideas for engaging K-6 students in learning activities relating to music, movement and dance, and through opportunities to apply this learning in school-based settings in the field.

012220 Visual Arts Education

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject engages participants in art practice across a range of 2D, 3D and 4D forms and develops competencies in the fields of art criticism and art history. Participants enhance their capacities in visual literacy, art theorising and aesthetic education through managed classroom dialogue and on-site learning in an art gallery environment. In addition, an introduction to art education methods and essential professional management of learning in visual arts equips participants in this subject to develop engaging, competent visual arts programs and initiatives in their field experience in the primary school.

012221 Philosophical and Ethical Practice in Education

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

The aim of this subject is to assist students to be ethical decision-makers and reflective educational practitioners, basing their actions on their own clearly considered philosophy of education as well as relevant and convincing arguments from research and policy. Such decision-making implies a reasoned and informed approach to teaching based upon an understanding and evaluation of relevant arguments, responsibilities and underlying principles. Students develop and clarify their own philosophy of education by examining various perspectives and the arguments and principles involved in current educational issues. In so doing, it is expected that students further develop critical-reflective skills needed for meaningful and successful educational practice.

012222 Child Development

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

The aim of this subject is to develop student knowledge and understanding of the nature of human developmental change, and its implications for primary education, within the age range of 5 to 12 years. The subject focuses on knowing and understanding children; how they are alike and different, and how they change over time. This is important in helping teachers make appropriate educational decisions. The notion of childhood as a developmental phase and aspects of human development that change over time, including cognitive, biosocial and psychosocial, are considered. Current theories, reflective of the scholarly field, and their implications for practice in the primary school, are examined. Students take part in a program of professional reading, and in a range of class-based and field-based activities that enable a critical consideration of selected theories of human development and how they may inform teaching practice in the primary school.

012223 Research in Learning

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

The aims of this subject are to explore educational issues through research with a view to improving professional practice, to develop student knowledge and understanding of the research process with a specific focus on research in education (teaching and learning) and to foster a critical reflective capacity to enhance and improve praxis. The subject examines the role that educational research can play in informing classroom practice. Students read and interpret a range of research studies from differing paradigms and perspectives. The questions, assumptions, methodologies, findings and implications of these studies are identified and assessed. Discussions centre on ways that such research can be used in developing approaches that help K–6 students learn. Consideration is also given to the role of the teacher as researcher in a school context.

012224 Sociology of Education

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject enables students to apply sociological theories and concepts to the study of education and inequality in Australian society. It supports the development of an understanding of the social world through social theories that seek to explain the social, economic and political forces shaping schools and classrooms. It explores the ways in which these forces interact in the Australian context to influence educational outcomes. The subject focuses on a critical-reflective approach to educational practices and beliefs highlighting the importance of discussion and dialogue in the development of our understanding of educational issues. Some issues examined are the construction of knowledge and the process of socialisation in schools, forms of capital, poverty and disadvantage, globalisation, gender, indigenous and multicultural education.

012225 Issues in Indigenous Australian Education

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject is a mandatory Aboriginal and Torres Strait Islander perspective that provides a scaffold for education students, through field-based and investigative activity, to develop their own capacity to implement some state and federal Indigenous education policy priorities. Enhancing the educational outcome of Indigenous students and ensuring that all school students are appropriately taught Aboriginal and Torres Strait Islander studies are priorities in contemporary education across Australia. The subject provides foundation knowledge and experiences that assists students to recognise underpinning principles that apply to effective partnership with Indigenous communities and reflect upon their own practice and how it might contribute to meeting the diverse requirements of Indigenous Australian students. Issues such as integrating Aboriginal perspectives across key learning areas, historical educational experiences, and the nature and impact of policy, post-colonialism and the foundation status of Indigenous Australians are explored.

012231 Professional Experience 1: Beginning Teaching

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject introduces students to primary school teaching and to the professional teaching standards. It provides a foundation on which future professional experience subjects build in terms of theoretical knowledge and practical skills. It begins the process of integrating theory and practice by forging close links between campus-based activities and field-based experiences.

The campus-based component of the subject orients students to the nature of primary schools, the roles of the primary school teacher, the relationship of teacher to learner, and the diversity of learning experiences offered by the different disciplinary areas. In the field-based component of the subject, students complete a series of distributed full-day visits to a regular primary classroom, with an observational focus. This provides students with authentic experiences on which to base critical reflection and interpretation in terms of the literature.

This subject requires eight days in a school setting.

First-year experience videos

View commentary from students and academics about this first-year subject at:

- Student video: www.youtube.be/nKP5qjt2s4I
- Academic video: www.youtube.be/wo_aZQqpM3w

012232 Professional Experience 2: Developing Classroom Management

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 012231 Professional Experience 1: Beginning Teaching OR 023151 Professional Experience 1: Beginning Teaching Issues in the Primary School
Undergraduate

The central aim of this subject is to introduce students to classroom management in the primary school in terms of the interconnected elements of planning for learning, managing the physical and psychological environments in which learning occurs, and managing student behaviour within those contexts.

This subject provides students with a knowledge and skill base enabling the making of informed and appropriate educational decisions as they relate to daily classroom life. The skills associated with maximising learning and learner cooperation are central to effective teaching practice. On this premise, the subject engages students in critical consideration of learning, planning and presentation strategies for learning episodes and of the skills associated with classroom management in the primary school. The subject examines current professional literature on classroom management. Students apply and critique selected management principles in the context of school-based professional experience settings.

This subject requires 10 days in a school setting.

012233 Professional Experience 3: Integrating Learning Technologies

6cp; availability: not offered to exchange and study abroad students
Requisite(s): (012231 Professional Experience 1: Beginning Teaching OR 023151 Professional Experience 1: Beginning Teaching Issues in the Primary School) AND (012232 Professional Experience 2: Developing Classroom Management OR 023152 Professional Experience 2: Developing Classroom Management)
Undergraduate

This subject develops critical thinking on the use of educational technologies in the primary school. It emphasises collaborative learning and encourages students to develop relevant knowledge, skills and attitudes to make effective use of ICT as a professional teacher.

In this subject, students deepen their understanding of how children can creatively use learning technologies to enhance their learning experiences across the K–6 curriculum. They develop their own teaching philosophy and consider innovative pedagogical approaches to using ICT in various key learning areas (KLA), with a particular focus on the science and technology KLA. Students need to demonstrate prescribed ICT competencies before starting this subject. Subject content focuses on the theme of 'children as designers' as a theoretical orientation underpinning K–6 e-learning.

This subject requires 10 days in a school setting.

012234 Professional Experience 4: Integrating Diverse Contexts in Education

6cp; availability: not offered to exchange and study abroad students
 Requisite(s): ([012231 Professional Experience 1: Beginning Teaching OR 023151 Professional Experience 1: Beginning Teaching Issues in the Primary School] AND [012232 Professional Experience 2: Developing Classroom Management OR 023152 Professional Experience 2: Developing Classroom Management]) AND [012233 Professional Experience 3: Integrating Learning Technologies OR 023153 Professional Experience 3: Assessment and Evaluating in Education]

Undergraduate

The main aim of this subject is to give students experience, pedagogical skills and background in teaching and learning in a range of diverse educational environments both inside and outside the school classroom. The subject extends students' knowledge and skills base, enabling them to make increasingly informed decisions concerning teaching practices that place the primary student at the centre of learning. Students develop skills in providing optimal learning environments and optimal approaches to learning for primary students in school, at home and in informal learning settings.

The subject addresses the theoretical underpinnings and professional skills of promoting learner interaction, self-initiated thinking and inquiry. It looks at the different approaches, considerations and pedagogies that are needed when students are learning outside the classroom environment. It investigates appropriate learning interactions with a range of adults, such as parents/caregivers, expert visitors to the school and informal educators, in order to provide primary students with the best possible opportunities for learning with their school class and for personal lifelong learning.

This subject requires five days in an informal learning setting.

012235 Professional Experience 5: Teaching Students with Special Educational Needs

6cp; availability: not offered to exchange and study abroad students
 Requisite(s): ([012231 Professional Experience 1: Beginning Teaching OR 023151 Professional Experience 1: Beginning Teaching Issues in the Primary School] AND [012232 Professional Experience 2: Developing Classroom Management OR 023152 Professional Experience 2: Developing Classroom Management]) AND [012233 Professional Experience 3: Integrating Learning Technologies OR 023153 Professional Experience 3: Assessment and Evaluating in Education] AND [012234 Professional Experience 4: Integrating Diverse Contexts in Education OR 023154 Professional Experience 4: Designing Educational Programs]

Undergraduate

This subject examines strategies for teaching students with special education needs within the regular classroom. It explores methods of assessment, programming, explicit teaching and classroom organisation to meet the needs of primary students who are experiencing difficulty, particularly in literacy and numeracy. Students with special educational needs can include students from the entire spectrum of skill and development levels, including gifted and talented students.

The subject examines literature in which approaches to educational programming for students with special needs have been evaluated. As such, the subject forms linkages and extends concepts visited by other curriculum subjects in this degree. Students have an opportunity to discuss how changes in the design and delivery of special education impacts on their teaching in mainstream classrooms. It provides the basis for reflective practice in this important area of rapidly changing professional practice. The practical component of this subject allows students to apply the concepts and skills developed in the subject, and reflect on their application in a regular primary classroom and refine their teaching practices accordingly. This subject requires 11 days in a school setting.

012236 Professional Experience 6: Programming and Assessing in Education

6cp; availability: not offered to exchange and study abroad students
 Requisite(s): ([012235 Professional Experience 5: Teaching Students with Special Educational Needs OR 023155 Professional Experience 5: Teaching Students with Special Educational Needs] AND [012231 Professional Experience 1: Beginning Teaching OR 023151 Professional Experience 1: Beginning Teaching Issues in the Primary School] AND [012232 Professional Experience 2: Developing Classroom Management OR 023152 Professional Experience 2: Developing Classroom Management]) AND [012233 Professional Experience 3: Integrating Learning Technologies AND 012234 Professional Experience 4: Integrating Diverse Contexts in Education]

Undergraduate

This subject provides students with a critical understanding of the elements of programming and assessing as fundamental to planning and evaluation responsibilities of the primary school teacher. The subject also explores reporting as a critical means by which the teacher facilitates student learning through effective feedback provision to students, parents/caregivers and school personnel.

The subject focuses on the development of educational programs by classroom-based practitioners. It contextualises programming in the primary school through considering external factors that impact on teachers' decision-making, including local, national and international policies, initiatives and trends in curriculum development. A key aim of the subject is to equip future teachers with practical skills of designing and creating effective classroom programs that are inclusive of students with varying learning needs. Highlighted in this subject are strategies for assessment of student learning within the classroom program, evaluation of that program and approaches to reporting both school activities and individual student achievement to parents and other stakeholders.

This subject requires 10 days in a school setting.

012237 Professional Experience 7: Meeting the English Language Needs of Learners

6cp; availability: not offered to exchange and study abroad students
 Requisite(s): ([012235 Professional Experience 5: Teaching Students with Special Educational Needs OR 023155 Professional Experience 5: Teaching Students with Special Educational Needs] AND 012236 Professional Experience 6: Programming and Assessing in Education AND [012208 English Education 1 OR 024211 English Education 1] AND [012209 English Education 2 OR 024212 English Education 2] AND [012231 Professional Experience 1: Beginning Teaching OR 023151 Professional Experience 1: Beginning Teaching Issues in the Primary School] AND [012232 Professional Experience 2: Developing Classroom Management OR 023152 Professional Experience 2: Developing Classroom Management]) AND [012233 Professional Experience 3: Integrating Learning Technologies AND 012234 Professional Experience 4: Integrating Diverse Contexts in Education]

Undergraduate

This subject develops effective teaching and learning strategies for meeting the needs of all students and accounts for cultural and linguistic diversity (e.g. Aboriginal and Torres Strait Islander students) in primary school classrooms. With specific reference to the NSW K-6 English syllabus, its embedded ESL scales and the Board of Studies Foundation Statements, understanding of the implications for teaching and learning in these contexts is fostered. The subject focuses on the development of talking, listening, reading and writing across all key learning areas, as well as significant issues relating to the acquisition of English as an additional language. Students develop understanding of the impact of culture, cultural identity and diversity in schooling; the specific culture and language learning needs of students; and appropriate teaching strategies.

012238 Professional Experience 8: Reflecting on Educational Practice

6cp; availability: not offered to exchange and study abroad students
Requisite(s): ([012235 Professional Experience 5: Teaching Students with Special Educational Needs OR 023155 Professional Experience 5: Teaching Students with Special Educational Needs) AND 012236 Professional Experience 6: Programming and Assessing in Education AND 012237 Professional Experience 7: Meeting the English Language Needs of Learners AND ([012231 Professional Experience 1: Beginning Teaching Issues in the Primary School] AND [012232 Professional Experience 2: Developing Classroom Management OR 023152 Professional Experience 2: Developing Classroom Management] AND 012233 Professional Experience 3: Integrating Learning Technologies AND 012234 Professional Experience 4: Integrating Diverse Contexts in Education)
Undergraduate

The subject aims to challenge students' thinking and understanding of crucial aspects of the work of the teacher in the primary school, and develop skills in applying current practices, grounded in a critical awareness of recent literature in the field. To this end, Professional Experience 8 engages students in the completion of two 5-week modules: Module One - Class Management in a School Context which will critically examine how effective classroom management strategies are located within a school-wide approach to student discipline and welfare; and Module Two - NSW Quality Teaching Program: A pedagogical practices framework for professional dialogue to improve students' academic and social outcomes. Throughout the subject, articulation between campus- and field-based elements are also highlighted.

013001 The Psychology of Adolescent Learning

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject examines the nature of adolescents as learners and socio-cultural theories of learning and their implications for secondary teaching. It focuses on psychological variables and individual differences in adolescent students' development and the practical implications and contributions of motivational theory for learning. Central themes include the role of meaning and structure, acquisition of skills, motivation to learn, anxiety and learning, learning concepts and acquiring skills, memory, retention and forgetting, and transfer of learning.

013002 Designing Learning for a Digital Generation

3cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject considers the impact of digital culture on teaching philosophy and how new learning technologies might be utilised in secondary education. The focus is on critique and analysis of using new learning technologies to help teenagers design, think and learn in a digital world, and how these technologies might mediate active, collaborative learning in a secondary education subject. Appropriate pedagogies for both face-to-face and online learning environments are examined.

013003 Evidence-based Practice

3cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject examines evidence-based practices of teaching and learning and their implications for contentious issues such as classroom management, class streaming and homework. Topics include 'teacher as researcher', reflective practitioner, action research, and action learning; the nature of evidence; how, what and when the educator knows students are learning; and what makes teaching effective. Research by UTS staff that exemplifies the role of evidence in teaching and learning is examined.

013004 Issues in Indigenous Australian Education

3cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject examines principles and practices for effective educational partnership with indigenous communities and individuals. It considers Australian social, educational and political policies and histories that affect contemporary Aboriginal education. Integrating Aboriginal perspectives across key learning areas and the foundational status of Indigenous Australians is explored. Topics include significant themes in Aboriginal education, current priorities/statistics pertaining to Aboriginal education, professional and community services/networks within Aboriginal education, cultural inclusiveness, cultural heritage protection and NSW syllabuses pertaining to Aboriginal studies and culture.

013005 The Secondary School

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject considers the knowledge, skills and attitudes teachers require to promote and manage learning in a secondary school. In this subject the theory and principles of teaching are linked to the experiences of in-school practice. The key roles teachers play in education and schooling and the institutional and legal responsibilities and rights of teachers in schools are examined. Topics include the purposes of schooling in a modern age, planning and programming, syllabus development, student-centred learning, effective teaching and classroom management skills, and evaluating teaching and learning technologies.

013006 Educating Students with Special Needs

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject examines issues in special education and how secondary teachers can meet the challenges presented by students with learning or behavioural difficulties. It considers strategies for identifying students with special needs and developing effective programming to meet their needs. Topics include alternative curricula and pathways, adaptations and accommodations, types and purposes of assessment, support services available, adapting written materials, exam provisions, proactive approaches to behaviour management, and interventions and/or supports for students with problem behaviour.

013007 Professional Learning Portfolio

6cp; availability: not offered to exchange and study abroad students
Undergraduate

In this subject students develop and present a professional learning portfolio that documents their learning in becoming an effective secondary teacher. The portfolio can demonstrate learning from a range of areas such as indigenous perspectives, social contexts, learning theory, teaching strategies, e-learning, disciplinary literacy and syllabus content.

The portfolio identifies the student's strengths and areas for improvement using a series of artefacts with reference to relevant elements of the Australian Institute for Teaching and School Leadership (AITSL) National Professional Teaching Standards for Teachers at the Graduate stage. The seven standards are grouped within the key domains of teaching; of professional knowledge, professional practice and professional engagement as indicated in the subject outcomes.

013008 The Socio-cultural Contexts of Secondary Education

3cp
Undergraduate

This subject investigates the sociocultural contexts of secondary education and social theories which seek to explain the social, economic and political forces shaping schools and classrooms. It explores the ways in which these forces interact in the Australian context to influence educational outcomes. This subject focuses on a critical-reflective approach to educational practices and beliefs which enables a critique of educational philosophy and how it influences professional practice. Some of the following issues are examined: the construction of knowledge and the process of socialisation in schools; forms of capital; poverty and disadvantage; globalisation; and gender, indigenous and multicultural education.

013009 Professional Experience 1 (Commerce, Business and Economics)

6cp; availability: not offered to exchange and study abroad students
 Requisite(s): 013039c Commerce, Business Studies and Economics Teaching Methods 1
 Undergraduate

This subject introduces the wide-ranging experiences of a school teacher in the secondary school by placement in a school (the subject requires 23 days in a school setting). Opportunities vary depending on schedules and timetables but experiences include situation analysis, orientation, staff meetings, meetings with parents, sport activities and carnivals, supervision duties (e.g. playground duty), assessment, reporting, professional development sessions, and excursions.

Teaching begins with co-teaching, working with small groups and providing support to cooperating teachers and leading up to teaching parts of lessons and whole lessons. It includes close supervision from the cooperating teacher. In the subject, students demonstrate effective communication, knowledge of the subject being taught, planning and assessment for effective learning and improvement in professional knowledge and practice.

013011 Professional Experience 1 (English/History)

6cp; availability: not offered to exchange and study abroad students
 Requisite(s): 013041c English Teaching Methods 1 OR 013045c History Teaching Methods 1
 Postgraduate

This subject introduces the wide-ranging experiences of a school teacher in the secondary school by placement in a school (the subject requires 23 days in a school setting). Opportunities vary depending on schedules and timetables but experiences include situation analysis, orientation, staff meetings, meetings with parents, sport activities and carnivals, supervision duties (e.g. playground duty), assessment, reporting, professional development sessions, and excursions.

Teaching begins with co-teaching, working with small groups and providing support to cooperating teachers and leading up to teaching parts of lessons and whole lessons. It includes close supervision from the cooperating teacher. In the subject, students demonstrate effective communication, knowledge of the subject being taught, planning and assessment for effective learning and improvement in professional knowledge and practice.

013012 Professional Experience 1 (English)

6cp; availability: not offered to exchange and study abroad students
 Requisite(s): 013041c English Teaching Methods 1
 Undergraduate

This subject introduces the wide-ranging experiences of a school teacher in the secondary school by placement in a school (the subject requires 23 days in a school setting). Opportunities vary depending on schedules and timetables but experiences include situation analysis, orientation, staff meetings, meetings with parents, sport activities and carnivals, supervision duties (e.g. playground duty), assessment, reporting, professional development sessions, and excursions.

Teaching begins with co-teaching, working with small groups and providing support to cooperating teachers and leading up to teaching parts of lessons and whole lessons. It includes close supervision from the cooperating teacher. In the subject, students demonstrate effective communication, knowledge of the subject being taught, planning and assessment for effective learning and improvement in professional knowledge and practice.

013013 Professional Experience 1 (Geography/Commerce, Business and Economics)

6cp
 Requisite(s): 013044c Geography Teaching Methods 1 OR 013039c Commerce, Business Studies and Economics Teaching Methods 1
 Postgraduate

This subject introduces the wide-ranging experiences of a school teacher in the secondary school by placement in a school. Opportunities vary depending on schedules and timetables but experiences include situation analysis, orientation, staff meetings, meetings with parents, sport activities and carnivals, supervision duties (e.g. playground duty), assessment, reporting, professional development sessions, and excursions. Teaching begins with co-teaching, working with small groups and providing support to cooperating teachers and leading up to teaching parts of lessons and whole lessons. It includes close supervision from the cooperating teacher. In this subject the student

demonstrates effective communication, knowledge of the subject being taught, planning and assessment for effective learning and improvement in professional knowledge and practice.

013014 Professional Experience 1 (History/Geography)

6cp
 Requisite(s): 013045c History Teaching Methods 1 OR 013044c Geography Teaching Methods 1
 Postgraduate

It includes close supervision from the cooperating teacher. In the subject, students demonstrate effective communication, knowledge of the subject being taught, planning and assessment for effective learning and improvement in professional knowledge and practice.

013022 Professional Experience 1 (Visual Arts)

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 013050c Visual Arts Teaching Methods 1
Undergraduate

This subject introduces the wide-ranging experiences of a school teacher in the secondary school by placement in a school (the subject requires 23 days in a school setting). Opportunities vary depending on schedules and timetables but experiences include situation analysis, orientation, staff meetings, meetings with parents, sport activities and carnivals, supervision duties (e.g. playground duty), assessment, reporting, professional development sessions, and excursions.

Teaching begins with co-teaching, working with small groups and providing support to cooperating teachers and leading up to teaching

parts of lessons and whole lessons. It includes close supervision from the cooperating teacher. In the subject, students demonstrate effective communication, knowledge of the subject being taught, planning and assessment for effective learning and improvement in professional knowledge and practice.

013023 Professional Experience 1 (Mathematics)

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 013047c Mathematics Teaching Methods 1
Undergraduate

This subject introduces the wide-ranging experiences of a school teacher in the secondary school by placement in a school (the subject requires 23 days in a school setting). Opportunities vary depending on schedules and timetables but experiences include situation analysis, orientation, staff meetings, meetings with parents, sport activities and carnivals, supervision duties (e.g. playground duty), assessment, reporting, professional development sessions, and excursions.

Teaching begins with co-teaching, working with small groups and providing support to cooperating teachers and leading up to teaching parts of lessons and whole lessons. It includes close supervision from the cooperating teacher. In the subject, students demonstrate effective communication, knowledge of the subject being taught, planning and assessment for effective learning and improvement in professional knowledge and practice.

013024 Professional Experience 2 (Commerce, Business and Economics)

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 013009 Professional Experience 1 (Commerce, Business and Economics)
Undergraduate

In this subject, students gain professional experience in secondary schools (the subject requires 23 days in a school setting). It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teaches, assist with classes and teach small groups of pupils and classes. Students analyse and modify their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching, including effective planning, assessment and reporting, and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013026 Professional Experience 2 (English/History)

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 013011 Professional Experience 1 (English/History)
Undergraduate

In this subject, students gain professional experience in secondary schools (the subject requires 23 days in a school setting). It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teaches, assist with classes and teach small groups of pupils and classes. Students analyse and modify their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching, including effective planning, assessment and reporting, and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013027 Professional Experience 2 (English)

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 013012 Professional Experience 1 (English)
Undergraduate

In this subject, students gain professional experience in secondary schools (the subject requires 23 days in a school setting). It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teaches, assist with classes and teach small groups of pupils and classes. Students analyse and modify their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching, including effective planning, assessment and reporting, and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013028 Professional Experience 2 (Geography/Commerce, Business and Economics)

6cp

Requisite(s): 013013 Professional Experience 1 (Geography/Commerce, Business and Economics)

Undergraduate

In this subject the student gains professional experience in secondary schools. It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. The student observes lessons, team teaches, assists with classes, and teaches small groups of pupils and classes. In this subject the student analyses and modifies their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching. This includes effective planning, assessment, and reporting and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013029 Professional Experience 2 (History/Geography)

6cp

Requisite(s): 013014 Professional Experience 1 (History/Geography)

Undergraduate

In this subject the student gains professional experience in secondary schools. It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. The student observes lessons, team teaches, assists with classes, and teaches small groups of pupils and classes. In this subject the student analyses and modifies their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching. This includes effective planning, assessment, and reporting and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013031 Professional Experience 2 (Languages)

6cp; availability: not offered to exchange and study abroad students

Requisite(s): 013016 Professional Experience 1 (Languages)

In this subject students gain professional experience in secondary schools. It provides an opportunity to fully engage in a school experience as a teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teaches, assist with classes, and teach small groups of pupils and classes. Students analyse and modify their experience in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching. This includes effective planning, assessment, and reporting and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013032 Professional Experience 2 (Mathematics/Computing Studies)

6cp

Requisite(s): 013017 Professional Experience 1 (Mathematics/Computing Studies)

Undergraduate

In this subject the student gains professional experience in secondary schools. It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. The student observes lessons, team teaches, assists with classes, and teaches small groups of pupils and classes. In this subject the student analyses and modifies their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching. This includes effective planning, assessment, and reporting and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013033 Professional Experience 2 (Mathematics/Science)

6cp; availability: not offered to exchange and study abroad students

Requisite(s): 013018 Professional Experience 1 (Mathematics/Science)

Undergraduate

In this subject, students gain professional experience in secondary schools (the subject requires 23 days in a school setting). It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teaches, assist with classes and teach

small groups of pupils and classes. Students analyse and modify their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching, including effective planning, assessment and reporting, and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013034 Professional Experience 2 (Mathematics)

6cp; availability: not offered to exchange and study abroad students

Requisite(s): 013023 Professional Experience 1 (Mathematics)

Undergraduate

In this subject, students gain professional experience in secondary schools (the subject requires 23 days in a school setting). It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teaches, assist with classes and teach small groups of pupils and classes. Students analyse and modify their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching, including effective planning, assessment and reporting, and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013035 Professional Experience 2 (Personal Development Health and Physical Education)

6cp; availability: not offered to exchange and study abroad students

Requisite(s): 013019 Professional Experience 1 (Personal Development, Health and Physical Education)

Undergraduate

In this subject, students gain professional experience in secondary schools (the subject requires 23 days in a school setting). It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teaches, assist with classes and teach small groups of pupils and classes. Students analyse and modify their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching, including effective planning, assessment and reporting, and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013036 Professional Experience 2 (Science/Computing Studies)

6cp

Requisite(s): 013020 Professional Experience 1 (Science/Computing Studies)

Undergraduate

In this subject the student gains professional experience in secondary schools. It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. The student observes lessons, team teaches, assists with classes, and teaches small groups of pupils and classes. In this subject the student analyses and modifies their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching. This includes effective planning, assessment, and reporting and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013037 Professional Experience 2 (Science)

6cp; availability: not offered to exchange and study abroad students

Requisite(s): 013021 Professional Experience 1 (Science)

Undergraduate

In this subject, students gain professional experience in secondary schools (the subject requires 23 days in a school setting). It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teaches, assist with classes and teach small groups of pupils and classes. Students analyse and modify their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching, including effective planning, assessment and reporting, and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013038 Professional Experience 2 (Visual Arts)

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 013022 Professional Experience 1 (Visual Arts)
Undergraduate

In this subject, students gain professional experience in secondary schools (the subject requires 23 days in a school setting). It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teaches, assist with classes and teach small groups of pupils and classes. Students analyse and modify their experiences in order to improve their practice. They demonstrate knowledge of their subject/content and strategies for effective teaching, including effective planning, assessment and reporting, and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013039 Commerce, Business Studies and Economics Teaching Methods 1

6cp; availability: not offered to exchange and study abroad students
Postgraduate

This subject considers the foundation skills, knowledge, understanding, values and attitudes required of an effective beginning teacher of commerce, business studies and economics in secondary school. (This subject is closely associated with practicum.) An emphasis is placed on professional aptitude and commitment, and current and innovative developments in teaching and learning, particularly with regard to the NSW Board of Studies syllabus' documents presently in use, as well as reflection on teaching practice. It explores teaching strategies and approaches as well as the content, rationale and structure for the study of commerce in stages 4, 5 (years 7, 8, 9 and 10) and business studies and economics in stage 6 (years 11 and 12).

013040 Computing Studies Teaching Methods 1

6cp
Undergraduate

This subject combines theory with practice to explore the skills and understandings required to teach information and software technology/computing studies in secondary school. (This subject is closely associated with practicum.) It examines teaching approaches and strategies for working with adolescents in information and software technology, with a focus on developing knowledge and understanding – and promoting problem solving and critical thinking – in design and development. The topics include the effects of past, current and emerging information and software technologies on the individual and society; responsibilities and ethics in the use of information and software technology; effective communication skills and collaborative work practices; and selecting, and employing a range of appropriate assessment strategies.

013041 English Teaching Methods 1

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject explores how English teaching and curriculum can be organised and managed for effective learning. It combines theory with practice in considering the skills and understanding required for beginning English teaching in a secondary school. The subject includes the study of secondary syllabuses, lesson planning and assessment, and is closely associated with 015250 Professional Experience 1. Topics also include programming; the needs of diverse learners; use of computers in English education in years 7-12; and designing, organising and evaluating methods and materials for English teaching.

013042 Commerce, Business Studies and Economics Teaching Methods 3

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject considers learning and teaching approaches and strategies to promote the study of business studies and economics in stage 6. It examines understanding and skills required to develop the craft of teaching business studies and economics. Professional skill is blended with suitable academic insights as the subject examines a range of approaches and strategies to use in the classroom which reflect research findings in education. Students develop a philosophy of teaching business studies and economics taking account of current syllabuses and policies, and demonstrate understanding of the professional insights and demands of the practising business studies and economics teacher.

013044 Geography Teaching Methods 1

6cp
Undergraduate

This subject develops students' understanding and practice of learning and teaching approaches and strategies to promote the study of geography in stages 4, 5 and 6 (years 7 and 8, 9 and 10, and 11 and 12, respectively). Students are taught the skills, knowledge, understanding, values and attitudes required of an effective beginning teacher of geography in secondary school. This subject is closely associated with Professional Experience (Practicum). An emphasis is placed on professional aptitude and commitment, and current developments in teaching and learning, particularly with regard to the NSW Board of Studies Syllabus' documents presently in use, as well as reflection on teaching practice.

013045 History Teaching Methods 1

6cp; availability: not offered to exchange and study abroad students

This subject develops students' understanding of the nature of history and history teaching. It explores a variety of teaching approaches and strategies suitable for the stage 4, 5 history secondary curriculum as detailed in syllabus documents. The subject aims to provide students with the skills, knowledge, understanding, values and attitudes required of an effective beginning teacher of history in the secondary school. This subject is closely associated with practicum experience. An emphasis is placed on innovative teaching methods, professional commitment, current developments in teaching and learning, and reflection on teaching practice.

013046 Language Teaching Methods 1

6cp
This subject is designed to explore how languages teaching and curriculum can be organised and managed for effective learning. The subject combines theory with practice to provide a student with the skills and understanding required to begin to teach languages in a secondary school. The subject includes study of secondary syllabuses, lesson planning and assessment. The use of technology in the teaching and learning of languages is integrated into each aspect of the subject. The subject is closely associated with Professional Experience 1.

013047 Mathematics Teaching Methods 1

6cp
Undergraduate

This subject explores how mathematics teaching and curriculum can be organised and managed for effective learning. Closely associated with Professional Experience, the subject combines theory with practice to provide students with the skills and understanding required for beginning mathematics teaching in a secondary school. It examines child development and how mathematics is learned, as well as recognising behavioural and diagnostic indicators of pupil comprehension. The subject includes study of secondary syllabuses; lesson planning and assessment; explaining mathematical ideas accurately and with clarity; and using suitable language examples, models, etc.

013048 Personal Development, Health and Physical Education Teaching Methods 1

6cp
Undergraduate

This subject aims to contribute to the preparation of PDHPE teachers who are reflective of their practice, able to cope with the changing nature of PDHPE teaching, have a commitment to interpersonal skills, are able to put current developments in learning and teaching into practice, and have a commitment to lifelong learning.

013049 Science Teaching Methods 1

6cp
Undergraduate

This subject explores how science teaching and curriculum can be organised and managed for effective learning. The subject combines theory with practice to provide students with the skills and understanding required to begin to teach science in a secondary school and is closely associated with 015250 Professional Experience 1. The subject includes study of secondary syllabuses, lesson planning, assessment, interactive approaches to learning and teaching science, and different forms and functions of practical work and its role in learning and teaching.

013050 Visual Arts Teaching Methods 1

6cp

Postgraduate

This subject combines theory with practice in considering the skills and understanding required for beginning visual arts teaching in a secondary school. It examines the notion of practice-based learning through exposure to artists, critical and historical practice, and models of enacted creative practice. This subject explores the importance of 'creating' and 'making' as central to the study of the arts and how visual arts education can be organised and managed. (This subject is closely associated with practicum and associated teaching/learning activities.)

013051 Commerce, Business Studies and Economics Teaching Methods 2

6cp

Requisite(s): 013039 Commerce, Business Studies and Economics Teaching Methods 1
Undergraduate

This subject explores the skills and understandings required to be an effective commerce, business studies and economics teacher. It considers strategies to develop expertise in planning, implementing, managing, and evaluating suitable learning experiences for teaching commerce, business studies and economics. This subject is closely associated with Professional Experience 2. It focuses on professional commitment, current developments in teaching and learning, and reflection on teaching practice.

013052 Computing Studies Teaching Methods 2

6cp

Requisite(s): 013040 Computing Studies Teaching Methods 1
Undergraduate

This subject focuses on preparing proficient beginning teachers in TAS computing subjects and setting a foundation for continuing professional development. Students create programs of work and design educational experiences in computing studies for secondary school students, and consider how to design, organise and evaluate methods and materials for teaching. A range of programs and projects that facilitate student learning are explored. (Students demonstrate ability in applying their educational studies to the teaching of selected computing subjects.)

013053 English Teaching Methods 2

6cp

Requisite(s): 013041 English Teaching Methods 1
Undergraduate

This subject explores the skills and understandings required for effective English teaching, and develops teaching approaches and strategies to promote learning. (This subject is closely associated with Professional Experience 2.) It focuses on professional commitment, current developments in teaching and learning, and reflection on teaching practice. Students demonstrate a developing ability to critique and apply selected key ideas in the NSW stage 4 and 5 English (junior secondary) and stage 6 English (senior) curricula.

013054 Commerce, Business Studies and Economics Teaching Methods 4

6cp

Requisite(s): 013039 Commerce, Business Studies and Economics Teaching Methods 1
Undergraduate

The focus of this subject is on preparing proficient beginning teachers in commerce, business studies and economics, and setting a foundation for continuing professional development. The skills needed to design, organise, and evaluate methods and materials for commerce, business studies and economics teaching are explored. The use of a theoretical framework, grounded in education research, is considered as a basis for future teaching.

013055 Organisational Workplace Learning

6cp

This subject introduces students to the fields of organisational and workplace learning, and human resource development. Students critically explore the theoretical approaches to organisational and workplace learning. They have opportunities to examine a range of strategies developed by organisations to meet organisational and individual learning needs and the challenges posed by technological,

social, economic changes to work and organisations. The subject also focuses on the roles of educators/learning and development practitioners in facilitating this learning.

013056 Geography Teaching Methods 2

6cp

Requisite(s): 013044 Geography Teaching Methods 1
Undergraduate

This subject develops students' understanding and practice of learning and teaching geography in stages 4, 5 and 6 (years 7 and 8, 9 and 10, and 11 and 12 respectively). The subject aims to provide students with the skills, knowledge, understanding, values and attitudes required of an effective beginning teacher of geography in secondary school. This subject is closely associated with Professional Experience (Practicum). An emphasis is placed on professional aptitude and commitment, and current developments in teaching and learning, particularly with regard to the NSW Board of Studies Syllabus' documents presently in use, as well as reflection on teaching practice.

013057 History Teaching Methods 2

6cp

Requisite(s): 013045 History Teaching Methods 1
Undergraduate

This subject considers the nature of history and history teaching, and the skills, knowledge, understanding, values and attitudes required of an effective beginning teacher of history in secondary school. Students examine a variety of teaching approaches and strategies suitable for stage 4, 5 and 6 history secondary curriculum as detailed in syllabus documents. (This subject is closely associated with practicum.) They also examine innovative teaching methods, professional commitment, current developments in teaching and learning, and reflection on teaching practice.

013058 Language Teaching Methods 2

6cp

Requisite(s): 013046 Language Teaching Methods 1

This subject is designed to provide participants with the foundation of effective teaching of languages within the perspective of the K-12 continuum, assist them to develop a flexible and informed approach whereby strategies can be selected appropriate to the learner's linguistic and communicative needs in the process of learning, and maintain and develop participants' own language skills. The focus is on the teaching of the four macro skills of listening, speaking, reading and writing. The acquisition of these skills involves the ability to use various learning and communication strategies, the ability to convey meaning clearly and coherently and the ability to understand both oral and written messages in the target language. All these factors are considered along with the means by which these skills may be best acquired.

013059 Mathematics Teaching Methods 2

6cp

Requisite(s): 013047 Mathematics Teaching Methods 1
Undergraduate

This subject explores the skills and understandings required to be an effective mathematics teacher. It considers strategies to develop expertise in planning, implementing, managing and evaluating suitable learning experiences for teaching mathematics. (This subject is closely associated with 023151 Professional Experience 2.) It focuses on professional commitment, current developments in teaching and learning, and reflection on teaching practice. Topics include impediments to teaching mathematical thinking and how to overcome them, the primacy of problem solving in the teaching and learning of mathematics, and teaching for mixed achieving classes.

013060 Personal Development, Health and Physical Education Teaching Methods 2

6cp

Requisite(s): 013048 Personal Development, Health and Physical Education Teaching Methods 1
Undergraduate

This subject examines the NSW Board of Studies years 11-12 PDHPE syllabus and examines pedagogies including productive pedagogy. The emphasis is on professional practice, that is, the essential knowledge and skills necessary to enter the profession. The focus is on the syllabus and pedagogies, as distinct from the content of the teaching programs.

013061 Science Teaching Methods 2

6cp

Requisite(s): 013049 Science Teaching Methods 1
Undergraduate

This subject considers the skills and understandings required to be an effective secondary science teacher and to create an engaging program for learning in science. This subject is closely associated with Professional Experience 2. An emphasis is placed on professional commitment, current developments in teaching and learning, and reflection on teaching practice. Topics include safety, teaching to mixed achievement classes, organising and evaluating methods and materials for learning, theoretical teaching frameworks, enacting selected policies and perspectives, including ATSI perspectives.

013062 Visual Arts Teaching Methods 2

6cp

Requisite(s): 013050 Visual Arts Teaching Methods 1
Undergraduate

This subject allows students to study curriculum development in Australia, models for teaching and visual arts, within a range of educational contexts, such as schools and community galleries. Students are expected to research current national and international issues in visual arts education to formulate significant programs and models for teaching visual arts. Students focus on syllabus content and critically analyse this in relation to international and national trends, and in response to personally derived models of visual arts education practices.

013063 English Teaching Methods 3

6cp

Undergraduate

This subject is designed to develop knowledge and understanding of teaching and learning approaches to the study of English in stages 4, 5 and 6 (years 7 and 8, 9 and 10, and 11 and 12, respectively – there is a particular focus on stage 6). The subject focuses on the development of proficient, professional and reflective teachers who can apply their educational studies to design, organise and evaluate methods and materials for English teaching, and who commit to awareness of current educational theory and practice.

013064 Language Teaching Methods 3

6cp

This subject aims to develop the craft of teaching languages in the secondary school while blending professional skills with suitable academic insights. The students develop a range of approaches and strategies to use in the classroom, which reflect research findings in education. They develop a philosophy of teaching languages taking account of current syllabuses and policies, and demonstrate understanding of the professional insights and demands of the practising language teacher.

013065 Mathematics Teaching Methods 3

6cp

Undergraduate

This subject aims to develop the craft of teaching mathematics while blending professional skill with suitable academic insights. Students develop a range of approaches and strategies to use in the classroom that reflect research findings in education. They develop a philosophy of teaching mathematics taking account of current syllabuses and policies, and demonstrate understanding of the professional insights and demands of the practising mathematics teacher.

013066 Personal Development, Health and Physical Education Teaching Methods 3

6cp

Undergraduate

This subject examines the NSW Board of Studies years 7 to 10 PDHPE syllabuses as they relate to teaching and learning issues, with particular emphasis on learning to teach from the new syllabus and teaching programs. It combines a practical and theoretical focus to develop skills and understanding of the structure and content of the syllabuses, and provide students with opportunities to explore a wide range of programming, planning, teaching and learning strategies, and computer-based technologies. It also lays the foundation for teacher thinking and theorising.

013067 Science Teaching Methods 3

6cp

Undergraduate

This subject aims to develop the craft of teaching science while blending professional skill with suitable academic insights. Students develop a range of approaches and strategies to use in the classroom that reflect research findings in education. They develop a philosophy of teaching science, taking account of current syllabuses and policies, and demonstrate understanding of the professional insights and demands of the practising science teacher.

013068 Visual Arts Teaching Methods 3

6cp

Undergraduate

This subject explores the skills and understandings required for effective visual arts teaching, and develops teaching approaches and strategies to promote learning. This subject is closely associated with practicum and focuses on professional commitment, current developments in teaching and learning, and reflection on teaching practice. Topics include Indigenous Australian heritage protection issues and their implications for teaching, sociocultural contexts for art education, health and safety requirements, approaches to evaluation and assessment, inclusive practice(s) in visual arts curriculum development, and conceptual frameworks in practice.

013069 English Teaching Methods 4

6cp

Requisite(s): 013041 English Teaching Methods 1
Undergraduate

This subject focuses on preparing proficient beginning teachers in English and setting a foundation for continuing professional development. It explores skills needed to design, organise, and evaluate methods and materials for English teaching. The use of a theoretical framework, grounded in education research, is considered as a basis for future teaching. In this subject students demonstrate a developing depth of knowledge within a selected area of English education relevant to selected NSW stage 4, 5 and 6 English syllabuses and the Australian Curriculum: English. Topics in this subject include methods and types of assessment, teaching writing, drama, Shakespeare and poetry, and strategies to assist student learning in English with an emphasis on student-centred learning.

013070 Language Teaching Methods 4

6cp

Requisite(s): 013046 Language Teaching Methods 1

This subject aims to prepare proficient beginning teachers in languages. It is intended as a foundation for continuing professional development. On completion of this subject, students are able to apply their educational studies to the teaching of languages; to design, organise and evaluate methods and materials for languages teaching; and to use their theoretical framework as a basis for their future teaching.

013071 Mathematics Teaching Methods 4

6cp

Requisite(s): 013047 Mathematics Teaching Methods 1
Undergraduate

The focus of this subject is preparing proficient beginning teachers in mathematics and setting a foundation for continuing professional development. It explores skills needed to design, organise, and evaluate methods and materials for mathematics teaching, and examines stage 6 extension 1 and extension 2 mathematics syllabuses. The use of a theoretical framework, grounded in education research, is considered as a basis for future teaching. In this subject students demonstrate a developing depth of knowledge within a selected area of mathematics education relevant to selected NSW stage 4, 5 and 6 mathematics syllabuses.

013072 Personal Development, Health and Physical Education Teaching Methods 4

6cp

Requisite(s): 013048 Personal Development, Health and Physical Education Teaching Methods 1

Undergraduate

This subject combines a practical and theoretical focus on movement skills and socio-cultural concepts and policies. It concentrates on gymnastics, games and different learner groups, while providing students with an understanding of the K-10 PDHPE syllabuses. It develops students' professional understanding and skills and encourages them to develop as reflective practitioners.

013073 Science Teaching Methods 4

6cp

Requisite(s): 013049 Science Teaching Methods 1

Undergraduate

This subject focuses on preparing proficient beginning teachers in science and setting a foundation for continuing professional development. On completion of this subject students are able to apply their educational studies to the teaching of science; to design, organise and evaluate methods and materials for science teaching; and to use their theoretical framework as a basis for their future teaching. Students also demonstrate the development of a depth of knowledge within selected areas of science education relevant to selected NSW Stage 4, 5 and 6 science syllabuses.

013074 Visual Arts Teaching Methods 4

6cp

Requisite(s): 013050 Visual Arts Teaching Methods 1

Undergraduate

This subject studies models for teaching the visual arts within a range of educational contexts, including secondary schools and community galleries. It examines research of current national and international issues in arts education and the use of that information to formulate significant models for teaching the visual arts. Students demonstrate the use of the latest technologies to access peak bodies in visual arts learning and teaching. This subject considers syllabus methodologies and critically analyses these in relation to international and national trends and in response to personally derived models of art education practices.

013075 Music Therapy 1

6cp

Postgraduate

This subject provides an introduction to the diversity within the field of music therapy, its context, history, methods, research base and underlying premises (including physiological, psychological, social and spiritual roles of music). Music skills are consolidated and extended: focusing on improvisation, aural skills, vocal care, and composition/repertoire for children. Students undertake clinical practice supervised by registered music therapists and address the issues of professional ethics and self care.

013076 Music Therapy 2

6cp

Postgraduate

This subject examines in more depth a selection of theoretical models, key expressive and receptive techniques, and research methods used in music therapy. Music skills are developed, focusing on improvisation to movement, voice work, accompaniment, and repertoire for adolescents. Clinical practice is continued in the field, developing students' skills in the documentation of music therapy sessions.

013077 Music Therapy 3

6cp

Postgraduate

This subject addresses the need for direction and purpose in casework by studying the procedures of assessment, program design, evaluation and closure. The importance of choosing appropriate research design and analysis methods is highlighted. Music skill development focuses on individual and group improvisation, sight singing, the range of musical styles and repertoire suitable for adults. Clinical practice continues in a range of settings.

013078 Music Therapy 4

6cp

Postgraduate

This subject is designed to support graduating students to enter the profession of music therapy. Topics covered in the subject include supervision, support groups, private practice, professional ethics, communication, and working in multidisciplinary teams. Music skills are further developed in the areas of instrumental proficiency, improvisational freedom, transposition, playing from memory and repertoire for older adults. A project, which contributes to the field, is undertaken, and clinical practice is tailored toward students' intended areas of specialisation.

013080 Integrated Arts Therapy 2

6cp

Postgraduate

This subject focuses on the articulation between music therapy and other creative arts therapies through immersion in the foundations of intermodal expressive arts therapy, which include play, poesis and imagination. The key differences between arts modalities are examined and students are supported to develop ways in which other arts can enrich their styles as music therapists. Public presentation skills are refined, and arts-based options in research are reviewed. Students also undertake and report the outcomes of self-care projects.

013081 Aboriginal Studies Project

6cp; availability: not offered to exchange and study abroad students

Undergraduate

In this subject students complete a major research project on a subject relating to Aboriginal or Torres Strait Islander society. Under the supervision of a member of academic staff, either in groups or individually, students negotiate their project through a learning contract. They demonstrate the ability to identify a subject for research, access a range of appropriate sources of information, describe and analyse the issues, and present their findings in the production of a major piece of research.

013082 Aboriginal Social and Political History

6cp; availability: not offered to exchange and study abroad students

Undergraduate

This subject examines and analyses the impact of colonialism on Indigenous Australian people, with particular reference to the Aboriginal inhabitants of this region. The emergence of Aboriginal social and political movements is presented as the basis for repossession of traditional heritages in land and culture. Topics include ethnocentric versions of history, consequences of the practices and policies particularly in relation to the Aborigines Protection Boards, Indigenous Australian social and political movements, and misconceptions about Aboriginal history; and their impact on public opinion to the detriment of Indigenous peoples.

013087 Discourse Analysis

6cp; availability: exchange and study abroad students with faculty approval

Postgraduate

This subject examines the theory and practice of discourse analysis and how discourse analysis can inform research and teaching. It introduces a number of approaches to discourse analysis, including conversational analysis, a systemic functional perspective on discourse, and critical discourse analysis, and illustrate ways in which discourse analysis can be applied to a wide range of research questions and contexts. Specific attention is given to discourse as spoken interaction (especially casual conversation) including both language and gesture, and discourse in written texts via various media, and including image in texts.

013088 Educational Management

6cp; availability: exchange and study abroad students with faculty approval

Undergraduate

This subject introduces students to key approaches and understandings of management and organisations as they particularly relate to educational organisations and the learning/training functions of other organisations (e.g. private enterprise, community organisations, government organisations). Students explore ways of understanding organisations as a basis for developing their abilities in organisational

analysis, and to critically reflect on their own workplace and other organisations and industries. The subject focuses on a range of management issues, such as workplace and organisational learning, staff development, human resources management and leading and coaching. It provides students with opportunities to gain skills, knowledge and expertise in dealing with a specific operational or logistical issue in the company, the TAFE college, the private provider, the community-based organisation, and the work of the consultant.

013090 e-Learning Design

6cp

Requisite(s): 013091 e-Learning Experiences 1 OR 013092

e-Learning Experiences 2

Postgraduate

In this subject students explore the processes of design, development and operationalisation of e-learning systems, locating such study in actual cases. Students examine ways these new cultural forms might influence and be influenced by the existing structures and functions of organisations: relationships that are fundamental to knowledge management.

They analyse possible cultural barriers to the implementation of e-learning, including deep values, principles and prejudices (particularly in relation to equity and social justice for disempowered groups, locally and globally) and how such barriers might be circumvented. Students elicit those values and principles underpinning e-learning systems that are in tune with existing organisational and cultural structures and consider how such values and principles might be developed in organisations and cultures confronting potentially destabilising development. The subject culminates in a draft proposal for an e-learning design to address educational and/or training issues in the student's own discipline or field of professional practice. By exploring the potential of technology-mediated solutions, students further increase their level of technological fluency.

013091 e-Learning Experiences 1

6cp

Postgraduate

This subject is the first of a sequence of related subjects aimed at helping students develop their understanding of e-learning systems, both as an e-learner and as an e-learning theorist and designer. Without a good grasp of the experience of being a learner and without a clear understanding of the models and theories implicit in e-learning systems, it is difficult to design and operate these systems sensitively or imaginatively.

This subject immerses students, as learners in a learning community, in a small set of carefully chosen e-learning contexts so that their sensitivities to the potency of these media for learning are sharpened. As well, their understanding of problem-oriented approaches to learning (a key set of strategies within this suite of e-learning subjects and courses) is developed. Particular emphasis is placed on understanding the nature and educational significance of e-learning communities and networks. Students attain a basic level of technological fluency by using e-learning approaches to enhance their understanding of aspects of this increasingly important field; and they develop their critical appreciation of the worth of e-learning approaches, from the perspectives of individual learners and active members of a learning community. They use their experience of e-learning, together with their reading and discussion in this subject, to begin to distil educational models and theories for testing and use in their studies and professional practice.

013092 e-Learning Experiences 2

6cp

Postgraduate

This subject is designed to enhance and deepen students' understanding of e-learning, both as a practitioner and as a theorist. It aims to develop confidence about taking a leadership role in the design and use of e-learning systems, through combining experience of collaborative digital tools with an understanding of relevant models and theories.

With an understanding of a range of learning theories, students engage with e-learning systems and identify and critique their design and practical implementation. E-learning is considered in a variety of contexts and cultures. During the subject, students are expected to focus on a particular problem or challenge that is of interest to them and to use their understanding of educational theory and digital practice to offer innovative e-learning solutions.

013093 e-Learning Technologies

6cp

Requisite(s): 013091 e-Learning Experiences 1 OR 013092

e-Learning Experiences 2

Postgraduate

In this subject students engage with selected problem-oriented scenarios, chosen to fit with their needs and experiences, in which actual learning problems are presented, and which have led to the development of particular e-learning contexts. By considering steps, both actual and possible, towards the solution of these learning problems, students develop a basic understanding of a range of e-learning technologies, equipping them to take an informed part in interdisciplinary e-learning design teams. As a central part of their experience in this subject, students are introduced to and develop a basic familiarity with a selected range of technical solutions that are possible for a variety of educational problems. Students' technological fluency is further developed through their consideration of the technological principles implicit in e-learning systems.

013095 Global Englishes

6cp; availability: exchange and study abroad students with faculty approval

Postgraduate

This subject explores the implications of the global spread of English, a hotly debated current issue in TESOL (teaching English for speakers of other languages) and applied linguistics. It examines the general causes and effects of the global spread of English, including its current relationship with global media and the internet. This includes linguistic imperialism, linguistic genocide, and the maintenance of global inequality. English in context and the implications of English having become both a global and a local language in many parts of the world is presented. The contemporary roles, status, forms and implications of different varieties of new Englishes, including Indian, Singaporean and Australian Aboriginal English, as well as pidgins and creoles are considered.

013096 Grammar and the Construction of Meaning

6cp; availability: exchange and study abroad students with faculty approval

Postgraduate

This subject explores the functional organisation of grammar and how it creates meaning both through the classification of our physical, social and psychological worlds, as well as through the dynamics of negotiating and maintaining social and interpersonal relationships. This subject enables students to develop practical skills in the analysis of the grammar of real-life texts and to develop skills in evaluating the appropriateness and effectiveness of language use. Students develop an understanding of the nature and structure of grammar and text, and develop a terminology to talk about the competencies and needs of language learners in the effective teaching of language, literacy and numeracy.

013097 Human Resource Development in Organisations

6cp; availability: exchange and study abroad students with faculty approval

Undergraduate

This subject critically evaluates the major theories and debates that explain the behaviour of people in work settings and the nature of the organisational context where that behaviour occurs. It focuses on individual, group and organisational factors influencing the effectiveness of organisations. The subject analyses, in detail, underlying situational and environmental factors and issues affecting the behaviour of people at work and the impact of that behaviour upon HRD plans and activities. Themes include employee attitudes and behaviour in relation to motivation, organisational performance, motivation, groups and teamwork, decision-making, and the management and development of culture and meaning in organisations. Case studies and exercises are used to illustrate organisational and behavioural issues within the HRD context.

013098 Independent Study Project 1

6cp

Requisite(s): (in spk(s): C04232 Master of Education OR in spk(s): C04231 Master of Arts OR in spk(s): C04245 Master of Arts in Teaching English to Speakers of Other Languages) AND (013952 Research Perspectives OR 013122 Understanding Adult Education and Training)
Postgraduate

This subject enables students to extend their skills and knowledge in an area of education of interest to them. Students design and carry out, in consultation with a member of academic staff, an individual course of study such as a field-based project or an in-depth review of the literature of a particular subject. Enrolment in the subject is contingent upon the student finding a member of academic staff willing to supervise the project and the completion of a form available from student services. The form requires an outline of the work to be carried out and the deadlines for various stages of the project and must be signed by the student, academic supervisor and subject co-ordinator before enrolment.

013099 Individualised Project 1

6cp

Undergraduate

This subject focuses on the extension of skills and knowledge in an aspect of education of interest to the student. In ISP 1 and 2 students design and carry out, in consultation with a member of academic staff, an individual course of study such as a field-based project or an in-depth review of the literature of a particular subject. Enrolment in the subject is contingent upon the student finding a member of academic staff willing to supervise the project. An outline of the work with deadlines for various stages of the project must be signed by the student, academic supervisor and subject coordinator before enrolment.

013102 Introduction to Language

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject provides a broad and applied introduction to the study of language for students who are working towards an initial teacher qualification. It focuses on understanding how English works, which is essential for those embarking on careers as language or literacy teachers. It introduces students to both traditional and functional grammar, and explores the structure and organisation of language. Students investigate the relationship between meaning and grammar, and explore how language varies in a range of social contexts.

013103 Issues in Aboriginal Education

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject focuses on developing a critical understanding of a range of issues concerning Aboriginal education and examines the social contexts within which Australian education and Aboriginal and Torres Strait Islander education operate. Rather than attempting to move to resolution or conclusions about issues in Aboriginal education, it seeks to develop skills and knowledge for approaching the negotiation of issues in creative and strategic ways. It explores how to recognise multiple perspectives on specific issues and the use of metaphor as an approach to generating discourse.

013104 Language and Power

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject is designed to help those with a language/literacy background to develop an understanding of the significance of a critical perspective on issues of language and power, and for those already with a strong view of the political nature of social life to develop an understanding of the significance of language and literacy. Central to the subject is an understanding of the interrelationships between power and language. No previous knowledge in the area is assumed, although the subject attempts to build on knowledge of different areas that participants bring to the subject. The focus of the subject is on broad political and theoretical issues relevant to the concepts of language, power, literacy, and pedagogy. A further aim is to introduce perspectives and techniques for developing critical literacy and discourse analysis skills, and for taking up the pedagogical challenge posed by issues of language and power.

013105 Language Development

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject provides a framework for studying first and second language development, with particular emphasis on social and functional perspectives on language learning. In doing so, it draws out implications for classroom pedagogical practices. The subject offers a survey of the principal topics currently addressed in the study of second language acquisition, and of the major research methods and paradigms used in such studies.

013106 Mentoring in the Workplace

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject aims to develop students' professional learning and mentoring skills. It provides students with opportunities to develop an understanding of the research literature relating to mentoring as well as exploring the issues involved in developing effective workplace mentoring practices. An important part of the subject is interaction with colleagues through UTSOnline. Access to a computer and the internet is required for this subject.

013107 Phonology and Pronunciation

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject explores theoretical and practical perspectives on the teaching of pronunciation within a functional approach to language. Phonemic and prosodic aspects of language are considered, and the role of prosody in contributing to the construction of meaning is explored. Students develop strategies for the teaching of pronunciation to learners of a second language, and also consider phonological aspects of the first language.

013110 Programming and Assessment in Language Literacy and Numeracy

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject considers the knowledge and skills required to develop and implement language, literacy and numeracy programs in adult education. It locates language, literacy and numeracy assessment and program development practices within the broader context of approaches to curriculum development. Participants examine and evaluate assessment methods and procedures to use in developing coherent programs. This subject also explores strategies for monitoring and recording progress and outcomes, and developing student-centred programs.

013112 Research Design

6cp; availability: exchange and study abroad students with faculty approval
Requisite(s): 013952 Research Perspectives
Postgraduate

This subject introduces the design of research across the full spectrum of education - school education, higher education, vocational education and training, and adult and vocational learning in all its forms. It builds on the work of 013348 Research Perspectives. These two subjects provide the main research coursework for UTS: Education master's students. Participants demonstrate their capacity for research and the ability to undertake an independent piece of scholarly research with critical awareness.

013115 Professional Practice and Changing Work

6cp
Undergraduate

In this subject, factors influencing change are identified and strategies for managing them are assessed. It examines models of the learning organisation and processes for change management, including creativity, innovation, ethical practice and strategies for facilitating workplace learning. Participants engage collaboratively with specialists from various fields of adult learning, and discussion topics are drawn from economic, social, political and technological forces impacting on society. The professional adult educator as change agent, consultant, network manager and leader is examined in detail.

013117 Theory and Practice of Literacy

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject aims to provide students with advanced knowledge and skills in teaching literacy in a variety of contexts, and with theoretical frameworks for exploring, evaluating and critiquing a range of pedagogic practices and approaches to literacy teaching and learning. These theoretical frameworks provide reference points for exploring the nature of literate language, the role of literacy in learning, and pathways and processes in literacy development in schools and adult contexts. The subject aims to enable students to engage in an informed way in current debates and discussions around literacy in the public domain. In practical terms, students engage with the enactment of different pedagogies in teaching and learning materials and in teacher–learner interactions.

013118 Teaching and Learning Literacy

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject explores different understandings about the nature of literacy and its role(s) in our society. It provides a rationale for viewing literacy as a sociocultural practice and examines the implications of this approach for developing literacy programs for adults in a variety of contexts. This subject examines methodologies for teaching and learning literacy that draw on theories of literacy, adult learning and social theories of language.

013120 The Psychology of Adult Development

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

In this subject students examine how the 'development of adults' is understood within different schools of thought in psychology and within critiques of these schools of thought. The subject focuses on contemporary adult development practices across different educational and learning sites as mini case studies through which to study psychological assumptions about adult development. These mini case studies include examples such as emotional intelligence, personal development courses, diversity training, self-help books, and coaching; and examples from student experiences. Also discussed are how different theoretical schools of thought within psychology in relation to adult development have their own distinct views on how adults are imagined to develop; what the mechanisms of developing adults are, and how development is understood. The subject also explores how these schools of thought have been critiqued from within psychology; critical psychology; Indigenous and cultural psychology and feminist psychology; and within sociology and cultural studies. If and how these different schools of thought manifest themselves in practice is examined. The subject goes on to ask what the effects and politics of these are in relation to workplace learning, adult education and notions of personal and social change. It is aimed at students from any of the fields of practice represented in the Master's program. The subject provides students with an opportunity to develop their knowledge of different schools of psychology in relation to adult development, to understand how these schools underpin contemporary adult development practices and to reflect critically on their own development practices as a learner and as an adult educator.

013121 Theory and Practice of Teaching English to Speakers of other Languages

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject explores the theories and practices of English language teaching in contemporary society and critically examines the theoretical assumptions that underpin various approaches to TESOL (teaching English for speakers of other languages). With a focus on the teaching and learning of spoken language, it examines approaches to syllabus and program design, including the discourse of the classroom. The content in this subject includes sociocultural approaches to second language learning and teaching, intercultural issues and identity, collaborative learning in the classroom, planning language programs, and assessing spoken language.

013122 Understanding Adult Education and Training

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject surveys a range of theories and research in different aspects of adult education practice. It relates the theories and research to the core activities of teaching, group work, learning facilitation, program design and evaluation, policy formation and implementation. In this subject students demonstrate an understanding of their position in the field of adult education that takes into account personal values, organisational values, ethics and intellectual traditions. The subject also examines debates related to significant contemporary issues.

013123 Work and Learning

6cp
Postgraduate

The nature of work is at the core of many debates about contemporary and future society. A critical aspect of these debates is the role of adult education and learning. This subject is concerned with the changing relationship between work, the economy and adult learning and focuses on contemporary debates and literature.

The subject connects with others offered in the master's programs. There is an overlap with those subjects concerned with issues of skill, workplace and organisational learning, technology and communications. This subject however attempts to place these particular issues within a larger framework that considers changes in the economy and society and adult learning. Its primary concern is not with the specific application of workplace learning but rather in situating those particular applications within a wider political and economic context.

In the subject students look at why there is so much interest in the connection between work and learning; the various assumptions about education, economy and employment are examined; and the practical outcomes of new policy prescriptions are critically explored. Short stories of work and case studies of work and learning are examined.

The subject is designed for those interested in exploring the broader connections of work, economics, labour and management initiatives, policy development and workplace learning. It offers students the opportunity to further their study and reading in areas such as labour process, ethnography of work, economic policy; workplace change; international restructuring including globalisation and the movements of people and jobs across national borders; and examine how education and learning is connected to these areas.

The subject should enable students to understand and better locate policy proposals around workplace change, skill formation, work/life balance, employment and unemployment, power relations at work and economic development, and their connections to learning and in particular lifelong learning.

013124 Work and People

6cp; weekly; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject introduces the world of work and considers an overview of the global changes in modern employment. It examines the skills required to analyse the structure and organisation of work in mature industrial societies. The subject reviews the various shifts in the nature and composition of the labour force. Case studies are used to explore the nature of work and its impact on individuals and groups. The trends and developments in workplace contexts are examined through applied projects.

013125 Adult Education: History, Policy and Context

6cp
Postgraduate

This subject examines the history of adult education and the claims that adult educators have made about the special role and purpose they play. Among these are that the first adult educators were popular educators and that adult education's defining purpose is to support democracy and social change; others concentrate on preparing adult learners for work, to assist adults to achieve self-actualisation and see it as developing human and social capital; while others say adult education provides a second chance at education, especially in the fields of literacy and numeracy, and in underdeveloped economies. How might we understand the claims made for adult education in the early 21st century against earlier claims? Is it still a force for social or radical change or has it been conscripted to deliver a flexible

and adaptable workforce? Can we even say there is a role for adult education or indeed that the term continues to have a particular meaning? By exploring these issues and questions, this subject also looks at contemporary policy and thinking.

013127 Communication Management

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject focuses on developing the ability to apply conceptual frameworks in adult communication management to professional practice. Particular attention is given to communication skills for effective management. Topics to be considered are people in systems and the shadow side of communication management, conflict and communication management, nonverbal communication, persuasion, listening, assertiveness, negotiation, writing, helping and feedback at work, and inter-cultural communication competence.

013128 Learning and Change in Organisations

6cp
Postgraduate

This subject enables teachers, trainers and managers to explain and critique a range of contemporary theoretical perspectives on organisational development in order to enhance educators' analysis of specific organisations, change management methods, communication strategies and initiatives for learning in organisational settings. The subject enhances educators' capability to manage the relentless demands for facilitating learning and managing change, which is now faced by all educational institutions and groups across Australia.

013129 Effective Cognitive Learning Strategies

6cp
Postgraduate

This subject introduces a range of cognitive learning strategies needed for effective lifelong learning. It examines the links between skill, will and self-regulation. This subject presents the knowledge and skills required to identify, use and teach appropriate cognitive learning strategies for effective adult learning. Topics to be considered include the importance of the Information Processing Model as a framework in cognitive learning strategy teaching, basic learning strategies involving repetition, elaboration and organisation, and the role of mnemonic devices in effective learning and mnemonic generation.

013130 Education for Social Change 1

6cp

This subject explores theories of social change and the educational dimension of various fields of practice that overtly seek to bring about social change. They include commercial advertising, social marketing, therapy programs, and popular education. The ideas of great thinkers who have theorised about social change including Thomas Hobbes, Michel Foucault, Karl Marx, Max Weber, Jurgen Habermas and Alfred Schutz are briefly considered. It examines how educators can help people identify choices – to agree, question, challenge or defy – and then learn how to make those choices effective.

013131 Education for Social Change 2

6cp
Postgraduate

This subject considers different education, organising and activist strategies being used by movements and organisations pursuing social justice and change agendas. The sites of social change struggles include the environment movement, democracy movements opposed to authoritarian regimes, feminism, disability advocacy, union movement, and local community action projects. This subject extends the work of Education and Social Change 1 by focusing on educational practices. It examines the difference between propaganda and education, and the individual and social change. Key concepts and practices developed by educators engaged in social change are explored, including naming the world, strategic questioning, story-making, dialectical analysis, culture jamming, and organising.

013132 Technology Enhanced Language Learning

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject provides students with the initial computing and multimedia competencies applicable to the teaching and learning of language. Students learn skills in the application and evaluation

of a range of computer-based technology within the specific context of language learning. The emphasis is on learning through experience and students are expected to undertake projects relating to the classroom applications of the technologies to which they are introduced.

013136 Developing People and Teams

6cp
Postgraduate

This subject explores concepts of team development and contemporary perspectives for developing a team culture in organisations. It examines the nature and types of teams and techniques for improving the communication abilities of team leaders and team members. This subject considers strategies for building and maintaining best performing teams. Topics also include coaching and mentoring in teams, autonomy and empowerment, diversity and teams in global and virtual contexts.

013137 Educational Leadership

6cp
Postgraduate

This subject explores the nature and importance of educational and organisational leadership within a variety of adult learning/ workplace contexts. It focuses on modern leadership theories and their application to the educational context. It considers current understandings of effective educational leadership that address educational and organisational challenges including change management. Topics to be explored include the implications of organisational culture for leadership, motives and characteristics of leaders, and issues such as style, cultural diversity, and collaboration.

013139 Assessing Learning

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

In this subject, students analyse assessment practices and policies in educational, learning, training and workplace contexts. The educational and learning issues in assessment and how these relate to the purposes of the assessment are explored. Drawing on sociological research, the subject evaluates assessment paradigms and methods of assessment and their use. Students systematically evaluate assessment practice across a range of educational, learning and training contexts. Students apply a range of current academic and practice thinking to their own practice as an educator with a view to enhancing assessment literacy and improving assessment practices. The content for the subject is structured around three core themes: assessment contexts, professional practices and assessment futures.

013140 Simulation and Games

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject examines the scope of the simulations and games field, and introduces theoretical frameworks for their application to particular learning contexts. It uses a practice-based approach to design and usage problems. Relevant theories of human behaviour, social interaction and skill development are considered in relation to the way these inform the design, choices, and use of simulations and games for learning. Concepts examined include 'micro-worlds', online role-play, business management games, social planning games and mechanical simulators.

013141 Language Programming and Assessment

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject explores the programming of learning sequences and pathways for English language and literacy, and issues in assessment in the context of language and literacy programs. It introduces knowledge and skills for designing, evaluating and critiquing programs of learning for English language and literacy. Theoretical explanations for progression in language and literacy learning, and processes of design are examined. It focuses on programming at the levels of curriculum, syllabus, and individual units of teaching and learning in a variety of contexts. The subject addresses both informal and formal processes and procedures in language assessment, including designing and critiquing language and literacy assessment instruments. Critical and ethical issues in assessment practices are discussed.

013142 Adult Learning and Program Development

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject is designed to provide opportunities for participants to explore the skills and knowledge necessary to be competent designers and facilitators of adult learning. It examines some of the principles and processes relating to helping adults learn as well as a variety of ideas about program development in adult education. The subject is suitable both for those relatively new to adult education and experienced practitioners who have not previously studied adult education in an academic program at tertiary level.

013145 Culture, Difference and Curriculum

6cp
Postgraduate

Planning education and training for people with different needs is a central political challenge for those concerned in building a just and democratic society. It is a popular assumption that people of 'different' cultural backgrounds have different educational needs. This subject critically examines this notion that difference can usefully be defined by culture, and looks also at such factors as class, history, identity, gender and politics. The subject links debates about culture and difference directly to the practice of planning curricula that meets the needs of groups with marginal or minority status.

013146 Using Film for Critical Pedagogy

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject is aimed at those who are interested in the potential for films to rouse an audience to ask questions and find answers to pressing social issues in the world. This subject is relevant to students if part of their paid or voluntary work requires them to plan strategies that question the status quo or bring about organisational and social change. Over the semester a variety of short films, excerpts from feature films, web-based film and advertisements are screened. Students view films that pose questions, show the world from different perspectives, and seek to facilitate change, be it social, organisational or personal. These are films with ambitious intentions. They seek to rouse, inspire, agitate, and educate on 'big' issues such as work, war, poverty, exploitation, environmental destruction and ill-health. In other words, films aimed at encouraging viewers to think and act. Are there films that are better at this than others? Drawing on theories of learning and change, the subject facilitates discussion and critique.

013147 Human Resources and Organisational Development

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject critically evaluates the major theories and debates developed to explain the behaviour of people in work settings and the nature of the organisational context within which such behaviour occurs. It focuses on individual, group and organisational factors influencing the effectiveness of organisations. It provides a detailed analysis of the underlying situational and environmental factors and issues affecting the behaviour of people at work and its impact upon HRD plans and activities. Themes include employee attitudes and behaviour in relation to motivation, organisational performance, motivation, groups and teamwork, decision-making, and the management and development of culture and meaning in organisations. Case studies and exercises are used to illustrate organisational and behavioural issues within the HRD context.

013148 Initiatives in Aboriginal Education

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject critically explores Aboriginal initiatives in education through the production of a research project. It examines the different interpretations of policies and programs and their impact on Indigenous Australians. This subject considers the issues raised in conducting and writing research specifically in relation to Indigenous issues, peoples and communities. These include the power of representation and the responsibility of the researcher in this process.

013149 The Language Literacy and Numeracy Learner

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject focuses on the factors that influence individual adult learners of language, literacy and numeracy. These factors are studied in four areas: social, cultural, psychological and educational, and include motivation, goals, learning styles and cultural values. The experiences and practices of the individual learner in the field of language, literacy and numeracy are explored. This subject considers the literacy demands of university study and strategies for developing skills in reading and writing for academic purposes.

013150 Literacy and Numeracy in and for Work

6cp; block, 2 x 1.5 days face-to-face workshops

In Australia and many other OECD (Organisation for Economic Co-operation and Development) countries, there is an increasing focus in the fields of adult literacy and numeracy on teaching and learning literacy and numeracy to meet workplace needs. This subject critically explores integrated delivery of literacy and numeracy in VET courses, and workplace literacy and numeracy programs. Students examine dominant discourses in policy and practice relating to pedagogies of integrated and workplace literacy and numeracy, and analyse what is shaping these discourses and practices. Students also consider alternative discourses, and the pedagogies that might emerge from such discourses and what they could offer that is different to the dominant practices. Students are introduced to theoretical resources for examining alternative discourses.

Typical availability

Autumn semester, City campus

013151 Project Management

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject immerses participants in a number of scalable integrated problem-based learning processes. Students acquire and develop project management skills and related knowledge in a manner relevant to the subject content, through use of purpose-built simulations which model aspects of the cycle of work in standard projects. The subject addresses the nine competencies established in the national competencies framework for project managers and guides participants in the development of strategies for achieving competence at level 3 or 4 of the framework.

013152 Individual Difference and Vocational Education Teaching

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject explores the range of individual differences that are likely to be encountered in the vocational education and training (VET) context and examines teaching and classroom management practices most likely to result in effective learning. Developmental psychology is presented as a basis for understanding the different needs of adolescent and adult learners. This subject reviews access and equity policy requirements and the role of the VET teacher/trainer in meeting these requirements. Students also consider strategies and resources for addressing the learning needs of those with special needs.

013153 Professional Experience 1 (Computing Studies)

6cp
Requisite(s): 013040c Computing Studies Teaching Methods 1
Undergraduate

This subject introduces the wide-ranging experiences of a school teacher in the secondary school by placement in a school. Opportunities vary depending on schedules and timetables but experiences include situation analysis, orientation, staff meetings, meetings with parents, sport activities and carnivals, supervision duties (e.g. playground duty), assessment, reporting, professional development sessions, and excursions. Teaching begins with co-teaching, working with small groups and providing support to cooperating teachers and leading up to teaching parts of lessons and whole lessons. It includes close supervision from the cooperating teacher. In this subject the student demonstrates effective communication, knowledge of the subject being taught, planning and assessment for effective learning and improvement in professional knowledge and practice.

013154 Professional Experience 2 (Computing Studies)

6cp

Requisite(s): 013153 Professional Experience 1 (Computing Studies)
Undergraduate

This subject centres on professional experience in secondary schools. It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teach, assist with classes, teach small groups of pupils and classes. In this subject the student analyses and modifies their experiences in order to improve their practice. The student demonstrates knowledge of their subject/content and strategies for effective teaching. This includes effective planning, assessment, and reporting and demonstrating a range of strategies to create and maintain safe and challenging learning environments through classroom management skills.

013155 Professional Experience 1 (Commerce, Business Studies and Economics/Computing Studies)

6cp

Requisite(s): 013039c Commerce, Business Studies and Economics Teaching Methods 1 OR 013040c Computing Studies Teaching Methods 1
Undergraduate

This subject introduces the wide-ranging experiences of a school teacher in secondary school by placement in a school. Opportunities vary depending on schedules and timetables but experiences include situation analysis, orientation, staff meetings, meetings with parents, sport activities and carnivals, supervision duties (e.g. playground duty), assessment, reporting, professional development sessions, and excursions. Teaching begins with co-teaching, working with small groups and providing support to cooperating teachers, and leading up to teaching parts of lessons and whole lessons. It includes close supervision from the cooperating teacher. In this subject the student demonstrates effective communication, knowledge of the subject being taught, planning and assessment for effective learning and improvement in professional knowledge and practice.

013156 Professional Experience 2 (Commerce, Business Studies and Economics/Computing Studies)

6cp

Requisite(s): 013155 Professional Experience 1 (Commerce, Business Studies and Economics/Computing Studies)
Undergraduate

This subject centres on professional experience in secondary schools. It provides an opportunity to engage fully in a school experience as teacher, supported by mentoring with cooperating teachers and colleagues. Students observe lessons, team teach, assist with classes, teach small groups of pupils and classes. In this subject the student analyses and modifies their experiences in order to improve their practice. The student demonstrates knowledge of their subject/content and strategies for effective teaching. This includes effective planning, assessment, and reporting and demonstrating a range of strategies to create and maintain safe and challenging learning environments through the use of classroom management skills.

013157 Computing Studies Teaching Methods 3

6cp

Undergraduate

This subject examines the role of communications technology in changing classroom environments. It focuses on the integration of the internet into the teaching of a variety of subjects. Students cooperatively create a website with links to subject-specific resources, and the creation of support materials for classroom implementation.

013158 Computing Studies Teaching Methods 4

6cp

Requisite(s): 013040 Computing Studies Teaching Methods 1
Undergraduate

In this subject students create programs of work and design educational experiences in computing studies for secondary school students. The aim is to prepare proficient beginning teachers in computing subjects, and is intended as a foundation for continuing professional development. On completion of this subject students are able to apply their educational studies to the teaching of selected computing subjects; to design, organise and evaluate methods and materials for teaching; and to use their theoretical framework as a basis for their future careers as teachers.

013159 Independent Study Project 2

6cp

Requisite(s): [24 Credit Points in spk(s): C04232 Master of Education OR 24 Credit Points in spk(s): C04231 Master of Arts OR 24 Credit Points in spk(s): C04245 Master of Arts in Teaching English to Speakers of Other Languages) AND (013952 Research Perspectives OR 013122 Understanding Adult Education and Training)
Postgraduate

This subject focuses on the extension of skills and knowledge in an aspect of education of interest to the student. Students design and carry out, in consultation with a member of academic staff, an individual course of study such as a field-based project or an in-depth literature review of a particular subject. Enrolment in the subject is contingent on the student finding a member of academic staff willing to supervise the project. Before enrolment, the student, academic supervisor and subject coordinator must sign an outline of the work with deadlines for the various stages of the project.

013160 Professional Learning and Practice

6cp; availability: exchange and study abroad students with faculty approval

This subject provides students with opportunities to explore contemporary approaches to professional learning and practice being developed in Australia and internationally. In the context of changing notions of professional learning and inter-professional practices in increasingly global contexts, students critically examine: the different ways learning and practice are theorised; and key issues, such as responsibility, ethics and professional identities. Using recent case studies of research on professional practices in diverse sectors including health and hospitality in Australia and internationally, students gain insights into the ways professionals learn and the links to organisational and workplace learning.

013161 Popular Education and Social Movements

6cp; block; availability: exchange and study abroad students with faculty approval

This subject explores the relationship between popular education and a variety of social movements in a globalised world. It considers the ways in which politics, strategy and pedagogy are used to mobilise resources to support change-orientated collective action around a wide range of local-global issues. Contrary to conventional wisdom, social movements are not simply about challenging or reinforcing power: as historical and current responses to community or group conflicts and issues, they are also important sites of education, learning and knowledge production. This subject is designed to introduce practitioners and researchers to major educational theories and debates applied to the empirical reality of social movements.

013162 Organisational Learning

6cp; block; availability: exchange and study abroad students with faculty approval

This subject seeks to orientate students to current practices in organisational learning. It examines the various theories of organisational learning from the perspective of the individual, organisational unit and whole organisation. The application of these theories to organisations in various sectors is critically examined and case studies of organisational learning are used to illustrate the impact of organisational learning on the long-term performance of the organisation. The future of organisational learning in the context of economic, social, demographic and technological change is also examined.

013163 New Media and Social Change

6cp; availability: exchange and study abroad students with faculty approval

This subject is part of the Popular Education and Social Change major in the Master of Education but is also relevant to students in master's degrees in the fields of communication management, media arts production and journalism. There are two features that distinguish traditional media – such as film, images, music, books, magazines and newspapers – from new media. The first is the digital nature of new media technologies, many of which exploit the power of the world wide web. The second, and for the purpose of this subject, more important feature is the participatory and interactive capabilities of new media. This subject examines how new media has, in the last decade, been used to strengthen 'people's' voice and participation. In particular, the subject explores the ways new media has created opportunities for grassroots groups in communities and workplaces

to be positioned in social change campaigns in ways that are more powerful than when they relied on traditional media. New media has been important in enabling participatory action research and the development of popular education projects. In this subject students also learn how to use various new media for hypothetical or real social change projects.

013164 Narrative and Storymaking in Education and Change

6cp; availability: exchange and study abroad students with faculty approval

Storytelling may be what most distinguishes social movements from interest groups and other forms of collective action because it combines two ways of knowing, the feeling associated with narrative and the thinking associated with analysis. Story-making and telling is central to social movements because it constructs agency, shapes identity, and motivates action. Social movements learn to exercise agency to deal with new challenges partly through the collective construction of narrative. Drawing on theories of learning, storytelling, and narrative, plus examining case studies of storymaking in social movements this subject helps participants examine the pedagogy and practice of collective identity construction geared towards promoting social change.

013165 Leading Learning in the Workplace

6cp; weekly; availability: exchange and study abroad students with faculty approval

This subject is designed to assist students in developing their understanding of leadership as it applies in a workplace learning environment. It examines the concept of leadership as opposed to management and the various theories that underpin current leadership studies. It examines the special nature of leadership in a workplace learning environment at both the group and organisational level and looks at the selection, development and mentoring of current and future workplace learning leaders.

013166 Education in Policy Contexts

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

The focus of this subject is the dynamic, contested and evolving world of policy, particularly as it affects education in Australia. Given that the process is generally poorly understood, and often emerges around contentious or polarising issues, it is important for practitioners and researchers in private and public sectors, civil society and community organisations to understand the complex and changing world of policy. Within this context, the political and contested nature of policy is explored in relation to questions about who participates in making policy and whose interests are being served, or not. The subject also examines theoretical and ideological frameworks that are linked to broader debates and historical contexts.

013167 Contemporary Work and Learning

6cp; availability: exchange and study abroad students with faculty approval

The nature of work is at the core of many debates about contemporary and future society. A critical aspect of these debates is the role of adult education and learning. This subject is concerned with the changing relationship between work, the economy and adult learning, and focuses on contemporary debates and literature both in Australia and globally. There is an overlap with those subjects in the master's program concerned with issues of skill, workplace and organisational learning, technology and communications, and so on.

Contemporary Work and Learning, however, attempts to place these particular issues within a larger framework. Its primary concern is not with the specific application of workplace learning but rather in situating such applications within a wider political and economic context that considers changes in the economy and society. The subject looks at why there is so much interest in the connection between work and learning; examines various assumptions about education, economy and employment; and critically explores the practical outcomes of new policy prescriptions. The subject helps students gain critical insights into the way changes are taking place in their own workplaces, and enables them to formulate responses to these changes that are informed by a richer understanding of work and learning.

013168 Adult Education: Past, Present, Future

6cp; weekly, on campus; availability: exchange and study abroad students with faculty approval

This subject examines the history of adult education and the claims that adult educators have made about the special role and purpose they play. Among these are that the first adult educators were popular educators and that adult education's defining purpose is to support democracy and social change; others concentrate on preparing adult learners for work, to assist adults to achieve self-actualisation and see it as developing human and social capital; while others say adult education provides a second chance at education, especially in the fields of literacy and numeracy, and in underdeveloped economies. How might we understand the claims made for adult education in the early 21st century against earlier claims? Is it still a force for social or radical change or has it been conscripted to deliver a flexible and adaptable workforce? Can we even say there is a role for adult education or indeed that the term continues to have a particular meaning? By exploring these issues and questions, this subject also looks at contemporary policy and thinking.

013218 Studio Practice: Painting

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject uses both a practice-based and theoretical approach to the exploration of the painted surface within a range of fine arts conventions. Students explore colour theory, pigment, media and surfaces in innovative processes that lead to individualised works and expanded understandings of the potential, significance and diversity of representation through the painted surface. The role of the painter in a post-modern context is examined inclusive of discourse about aesthetic education, creativity and critical theory.

013219 Studio Practice: Ceramics

6cp

This course is designed as an introduction to the media of clay. Historical and contemporary studies of this medium form a basis from which students are encouraged to explore individual expression whilst learning about clay and ceramic techniques. The properties of clay, its sculptural characteristics, safe workshop practice and the firing process pertaining to electric kilns are also addressed in this course.

013401 Professional Experience and Classroom Management 1

6cp; work experience placement plus 10 hours of workshop session or equivalent in blended mode

Requisite(s): [013411c English Teaching Methods 1 OR 013415 Mathematics Teaching Methods 1 OR 013423 Languages Teaching Methods 1 OR 013431 Visual Arts Teaching Methods 1 OR 013419 Science Teaching Methods 1 OR 013437 History Teaching Method OR 013438 Business Studies/Economics Teaching Methods 1 OR 013427 Personal Development, Health and Physical Education Teaching Methods 1 OR 013435 Human Society and its Environment Teaching Methods 1]) OR ([013039c Commerce, Business Studies and Economics Teaching Methods 1 OR 013041c English Teaching Methods 1 OR 013045c History Teaching Methods 1 OR 013046c Language Teaching Methods 1 OR 013047c Mathematics Teaching Methods 1 OR 013048c Personal Development, Health and Physical Education Teaching Methods 1 OR 013049c Science Teaching Methods 1 OR 013050c Visual Arts Teaching Methods 1])

During an extended professional experience, students develop capabilities in the AITSL domains of teaching: professional knowledge; professional practice; and professional engagement. This subject also targets classroom management by exploring what effective teachers do to proactively organise the inclusive learning environment to maximise student engagement in learning and minimise disruption. The subject draws upon evidence-based classroom management practices to provide students with the skills and understanding required to begin to manage learning environments in a secondary school.

Typical availability

August session, Kuring-gai campus

May session, Kuring-gai campus

013402 Professional Experience and Classroom Management 2

6cp

Requisite(s): (013401 Professional Experience and Classroom Management 1 OR ((013009 Professional Experience 1 (Commerce, Business and Economics) OR 013012 Professional Experience 1 (English) OR 013011 Professional Experience 1 (English/History) OR 013023 Professional Experience 1 (Mathematics) OR 013021 Professional Experience 1 (Science) OR 013018 Professional Experience 1 (Mathematics/Science) OR 013019 Professional Experience 1 (Personal Development, Health and Physical Education) OR 013022 Professional Experience 1 (Visual Arts) OR 013016 Professional Experience 1 (Languages))))

Further information on this subject is available from UTS: Education.

013408 Designing Learning for a Digital Generation

6cp

Further information on this subject is available from UTS: Education.

013831 Maths for Numeracy Teachers

6cp; block; availability: exchange and study abroad students with faculty approval

This subject is designed for students who are, or intend to, teach numeracy in a stand-alone numeracy course or in an integrated language, literacy, numeracy course in adult learning contexts including adult basic education or foundation education; TESOL; and vocational education and training in formal and informal adult education settings. The focus of the subject is on developing students' own approaches to learning the mathematics that they need in their teaching contexts.

For a variety of reasons, including negative experiences of school mathematics, many adults have a fear or anxiety about learning mathematics. Using a range of methods including discussions and reflections to examine the affective dimension of mathematics learning, the subject helps students develop confidence and an effective approach to re-engaging with the learning of mathematics. Through the use of a learning contract the students identify the mathematical areas as relevant for their contexts of teaching, and negotiate how they approach and demonstrate their learning.

013949 The Arts in Supervision and Self Work

6cp

In this subject, students learn about expressive arts therapy practices which can be applied to a variety of arts modalities and settings, including individual therapy, supervision and coaching, group therapy and consulting. Learning is based on application of arts based techniques to one's own personal development through autobiographical arts explorations and working in dyads and small groups. Experiential learning is supported by reading and discussion of key principles, peer feedback and supervision.

013950 Verbal and Body Psychotherapies

6cp

This subject has two streams: one stream examines verbal counselling and psychotherapy skills; the other stream focuses on the importance of the body in the arts therapies. The purpose of both verbal and body-based streams is to provide resources for students' development as empathetic therapists, for increasing self-awareness and expressive range. Experiential work and theoretical background is drawn from various schools of counselling and psychotherapy, somatic education, somatic psychotherapy, rhythm-work and voice-work.

013951 Learning and Change

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

This subject addresses big picture questions about change and learning. A premise that underpins the subject is that there are significant economic, social, technological and identity changes taking place that suggest educators need to be constantly thinking about their purpose, role and practice in the context of the changes in their world.

013952 Research Perspectives

6cp; availability: exchange and study abroad students with faculty approval
Postgraduate

The purpose of this subject is to develop research-literate students who understand research practices and processes, are critical readers of research, and who are able to develop ideas about potential research problems and applications of research in their field of practice. The subject explores how research texts are constructed by assumptions about knowledge, values and the nature of reality, and through research activities and practices which produce accounts of and evidence for innovation. The subject engages with a series of research perspectives, exploring key concepts, case studies and developing research literacy skills. The subject thereby encourages students to explore and critically reflect on their own perspectives on knowledge.

This subject introduces research in education through the critique of carefully selected research texts drawn from different research traditions and perspectives. Participants draw on their own experience of professional practice to inform their critical reading of research texts and to extend their understanding of the diversity of contemporary approaches to research.

The subject aims to equip students with skills and knowledge that are relevant both to students who intend to go on to develop and implement research projects themselves (particularly those intending to undertake 013112 Research Design), and those who engage with research at the cutting edge of their field in order to inform the development of policy and practice.

013953 Adult Learning in Context

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject introduces the theories and philosophies that inform the practice of adult education and the variety of contexts in which adult teaching and learning occur. It examines a number of key practitioners and theorists who have contributed to, or are identified with, the various schools of thought.

Students demonstrate a developing understanding of their own professional practice as educators as they consider their own approaches to learning and teaching in comparison to the theoretical perspectives on teaching and learning presented in this subject.

013954 Program Design

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject provides students with the opportunity to explore various approaches to developing programs within different contexts, ranging from the training room to community settings and workplace learning. It assists students to identify, critically evaluate and practice strategies for planning, designing and evaluating programs relevant to a diversity of learners and contexts. The subject provides a critical overview of the formal adult education and training context in Australia.

013955 Assessing Learning

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject critically analyses assessment practices and policies in educational, training and workplace contexts. It examines how the social and political context influences assessment paradigms and practices. Students identify and evaluate a range of models and tools of assessment, relating these to educational contexts and learning models. Students also reflect on their own skills development and professional learning needs. The subject is structured around three core content themes: assessment contexts, professional practices and learners and learning.

013958 Language Teaching Methodology

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject focuses on the development of language teaching knowledge and skills. It introduces theories and approaches to teaching spoken and written language. Students explore strategies that promote purposeful and communicative language use in relation to specific contexts for language teaching and learning. Topics include approaches to lesson planning and task design, critique and evaluation of current language teaching materials, and application of language teaching theories in diverse settings.

013959 Communication and Learning

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject focuses on the professional development of adult educators as communicators in academic contexts such as adult education workplaces and universities. It considers the spoken and written communication skills necessary to become effective members of organisations. The subject also examines approaches for analysing communication events and written texts to provide tools for understanding spoken and written language use in a variety of situations. Topics include the relationship between teaching and learning and the nature of human communication, academic speaking and listening, academic writing, and different text types of written communication in learning environments.

013960 Individual Communication in the Workplace

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject examines communication processes and skills used by individuals in the workplace. It explores theoretical approaches to individual communication in the workplace, including transmission and transactional approaches. The focus is on assisting educators to develop their own and others' interpersonal skills. Both oral and written dimensions of workplace communication are analysed, including development of public speaking, self-presentation and interpersonal skills. Topics to be considered include nonverbal communication, emotional intelligence, listening, questioning, reframing, assertiveness, conflict management, intercultural communication in the workplace, and developments in interpersonal skills training.

013961 Team Communication in the Workplace

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject forms part of a major sequence providing specialist knowledge for adult educators wishing to teach/train in areas of communication studies. In this subject communication processes and skills are examined to assist educators to facilitate the learning and performance of teams in the workplace. In particular, educators investigate a variety of communication techniques to enhance team quality and productivity, increase team member satisfaction and motivation, improve performance as a team leader and/or team member, achieve and maintain team cohesiveness and interpret communication interactions within the team.

013963 Cultural Diversity at Work

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject examines the workplace in a social and cultural context and introduces the complexities of learning and working with diversity. It provides participants with the knowledge and skills to identify and understand the sociopolitical nature of cultural diversity and how this has developed in Australian society and its workplaces. The subject reviews Australia's cultural history and how it is relevant to the changing work environment and the changing nature of work in an increasingly globalised world. Finally, the subject investigates and analyses practical applications of approaches to working with and managing cultural diversity.

013966 e-Learning Experiences

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject introduces the concept of e-learning and its application and applicability in an organisational context. It explores a range of technology-mediated learning tools and examines them from both a personal and organisational perspective. Case studies examining organisations currently employing e-learning strategies highlight workplace issues and are critically analysed in comparison with the experiences gained from participating in an e-learning short course.

013967 e-Learning Design

6cp; availability: exchange and study abroad students with faculty approval
Requisite(s): 013966 e-Learning Experiences
Undergraduate

This subject uses the knowledge and experiences developed in 013966 e-Learning Experiences to identify and examine theories that underpin the development of e-learning content within an organisational context.

The subject focuses on the construction of e-learning environments in the organisational context by using a problem-based approach in which students analyse learning contexts and design strategies informed by the application of learning theories, visual communication and multimedia principles, and selection of educational technologies.

Students also develop a basic level of proficiency in a number of educational technologies in order to review and evaluate the suitability for the organisational context.

013970 Using Information Technology for Learning

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject introduces students to an understanding of information technology and computer systems as they apply to educational and human resources development contexts. On completion of this subject students should be able to effectively use computers and other information technologies in educational and training contexts to solve and document relevant problems. The understanding and skills developed are designed to promote confidence in the operation of computer hardware and software. The subject covers the educational use of computers in the application areas of word processing, databases, spreadsheets, graphics, multimedia and communication. The subject also focuses on the development of information literacy. Information literacy is related to information technology skills but is broader in its application. It furnishes the basis for life-long learning and is common to all contexts of teaching and learning at all levels of education.

013971 Teaching and Learning Numeracy

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject explores concepts of numeracy, and adult numeracy as a field of practice, drawing on both Australian and international research. Students develop a working definition of numeracy, an appreciation of the diversity of adults who participate in numeracy learning, and understanding of theories of numeracy and mathematics learning. Students have opportunities to apply their theoretical understanding to practical tasks of designing and critically evaluating teaching approaches and resources.

013972 Organisational Learning

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

The subject provides students with opportunities to apply their organisational learning (OL) knowledge and skills developed prior to, and during their final year of undergraduate study. For part of the semester, students use an interactive learning environment created as an 'organisation in the classroom' simulation to develop an understanding of forces at work within human systems, groups and organisations. Students create an OL strategy for a particular organisational context that builds upon their knowledge and

assessment of organisational learning theories and practices and integrates their understandings of organisations, change and contexts for learning. The completed assessments provide examples of critical theoretical readings, group-based analysis of organisational barriers to learning and the design of a OL strategy that can contribute to professional practice in organisational learning and transfer to students' workplaces.

013973 Adult Education Policy in Context

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject is designed to create critical awareness and understanding of education policies in Australia, particularly adult education, as they affect teaching, learning and the provision of courses across NSW and Australia. The subject provides an historical context for understanding important policies and an appreciation of the affect that policies have on professional practice in different fields of specialisation.

013974 The Psychology of Adult Learning

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject considers the major psychological approaches to adult learning and teaching. These include processes for developing cognitive and performance skills, variables affecting acquisition, retention and transfer of knowledge and skills, and a range of learner characteristics that affect learning. The subject explores how to apply an understanding of psychological principles when making decisions affecting the teaching and learning process.

013975 Designing and Developing Simulations and Games

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject introduces the world of 'play as learning'. It explores current theoretical frameworks relating to the selection, design and development of simulations and/or games for a variety of contexts. Basic design principles are introduced including psychological theories relevant to cultural factors, language issues and other specific characteristics.

The subject provides a theoretical underpinning and related skill development for choosing, adapting, designing, constructing and managing active learning contexts. Exemplar models of simulations and games from a variety of sources are examined.

013976 Strategic Human Resource Development

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject extends students' awareness of the diverse practices of human resource development (HRD) as an area of organisational activity. It emphasises the importance of integrating HRD practice and activity into the broader scope of organisational strategic directions and examines activities related to the development of all employees to achieve desired organisational outcomes. While some attention is directed to traditional approaches to organisational training, this subject particularly examines a diverse range of alternate learning, organisational development and performance improvement strategies which can be used to enhance organisational learning and facilitate organisational change and development.

013977 Teaching and Learning in Practice

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject introduces principles and practices associated with both teaching and facilitating learning, which are relevant for a range of adult learning contexts. As such the subject both extends learner understanding of a range of concepts introduced in other foundation subjects, as well as providing an introduction to more specific subjects which focus on learning and development in more specialised contexts (e.g. education institutions, organisations, community sector).

013978 Research and Inquiry

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject aims to develop an understanding of the relationship between research and professional practice. In particular, it develops an understanding of how research is used to shape, inform, critique and/or change practice. It focuses on developing research literacies that enable professional educators to evaluate research texts relevant to their field of practice, as well as design ethical research methods and justify their appropriateness for addressing professional problems and/or issues that arise in their professional practice.

013979 Organisational Learning and Change: Local and Global

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

In this subject students study three arenas where there are intense efforts to lead and facilitate change. The first arena is organisational management with a focus on improving organisational learning, performance and productivity. The second arena focuses on workers and community groups that are concerned also about quality of life, work conditions and corporate social responsibility. The third arena is that of large organisations seeking to lead and facilitate change for environmental sustainability. The subject is designed to provide a counter-point to the widespread interest only in changing organisational effectiveness through the development of people (or 'human capital').

013980 Identity, Culture and Communication

6cp; weekly and block schedules to be developed by lecturers to fit in with the delivery modes
Undergraduate

This subject aims to develop an understanding of the relationship between identity, culture and communication and the importance of this relationship in both professional and personal contexts. It explores identity and culture as socially constructed and dynamic, and examines these concepts in relation to the individual and society, as well as their relationship to learning and teaching. The subject also extends students' interpersonal and intercultural communication skills through an understanding of how language is related to social contexts.

013981 Teaching Aboriginal Studies

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject focuses on developing competent teachers of Aboriginal studies through practice and critique. It considers a range of issues, strategies and resources for presenting information about Indigenous Australian studies. This subject explores a number of approaches to translating social content in learnable/teachable episodes and examines ethical issues in the teaching of Indigenous Australian studies. A range of resources and Indigenous Australian studies sessions are critiqued through peer assessment.

013982 Aboriginal Cultures

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

The subject description is available from UTS: Education.

013983 Academic Literacies in TESOL and Applied Linguistics

6cp

This subject is designed to assist postgraduate students for whom English is a second language, particularly international students. It develops students' academic literacies in the fields of TESOL and applied linguistics by analysing key research literature and supporting students to develop the genres and grammar of second language (L2) writing. The subject additionally develops competence in spoken communication in English-speaking settings.

015033 Programming for Community Learning

6cp
Undergraduate

This subject engages with concepts and practices of approaching and developing community learning programs to empower social action and change. It posits itself through identifying and building on community strengths and with theories and practices of appreciative inquiry and asset-based community development. Learning is approached from a positive rather than deficit foundation that aims to give voice to community members on community issues.

015144 Education and Cultural Diversity

6cp
Undergraduate

Australia is one of the most culturally and linguistically diverse countries in the world and is still in the process of developing appropriate ways of responding to this diversity in terms of equity and social justice; and in terms of valuing and maximising the advantages of such diversity. Adult educators working in a range of community and Aboriginal contexts need therefore to develop an understanding of their own and others' cultures in order to operate effectively and flexibly within such a culture of change.

015356 Learning in Diabetes Education

6cp; availability: not offered to exchange and study abroad students
Postgraduate

This subject aims to develop students' understanding of how to promote learning in diabetes education. Adult learning principles are examined in the context of theories of health behaviour and the implications these have for practice. Practical workshop sessions supported by a range of learning materials, provide students the knowledge to design, deliver and evaluate diabetes education. This subject also facilitates students' ability to become effective self-directed professionals by providing strategies for them to reflect on their own development as diabetes educators.

015381 Thesis Development and Appraisal

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject is designed to develop the competencies necessary to plan and write an honours thesis. It also aims to critically develop the knowledge and skills required to critique research proposals, plans and outcomes. It contributes to the course aim by developing critical thinking about applied research which in turn contributes to academic thesis writing skills.

016102 Thesis (Education)

0cp; availability: not offered to exchange and study abroad students
Postgraduate

This subject is the thesis component for part-time students of the Master of Education (Honours). Students are required to complete a thesis of 50,000 words.

016714 Research Proposal Development

9cp
For further details, contact UTS: Education.

016715 Analysing Professional Practice

9cp
Postgraduate

This subject is designed to help students develop a critical posture in relation to their educational practice and the sites in which they work. A relevant framework for critically analysing practice is discussed and then applied, illustrated and refined using the students' educational sites as case studies. Students are required to present their own case study and maintain a portfolio of written comments on the presentations of other students.

016716 Introduction to Doctoral Research

9cp
For further details, contact UTS: Education.

018723 Research Dissertation 1 (Education)

24cp
For subject description, contact UTS: Education.

018724 Research Dissertation 2 (Education)

24cp
Requisite(s): 018723 Research Dissertation 1 (Education)
There are also course requisites for this subject. See access conditions.
For subject description, contact UTS: Education.

019950 EdD Thesis: Education

0cp; availability: not offered to exchange and study abroad students
The subject description is available from UTS: Education.

019981 Thesis (Doctor of Education)

0cp; availability: not offered to exchange and study abroad students
The subject description is available from UTS: Education.

019982 PhD Thesis: Education

0cp; availability: not offered to exchange and study abroad students
Postgraduate
The subject description is available from UTS: Education.

020705 Educational Drama

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject develops a foundation knowledge in the theory and practice of educational drama; explores a variety of drama strategies and forms an approach for developing literacy; investigates the role of the teacher in developing literacy through drama; develops educational drama resources and teaching materials suitable for use in the school; evaluates the acquired knowledge through talk, reading enactment and writing; and examines the role of educational drama across the key learning areas.

021412 Educational Computing Study 2

6cp
Requisite(s): 021311 Computer-mediated Learning for Children
Undergraduate

This subject focuses on the use of integrated packages as information-handling and problem-solving tools, with specific reference to educational context. Students are introduced to spreadsheets and further work is done on databases. Finally, concept mapping software is studied from a student learning perspective as well as a teacher productivity tool.

021702 ICT in Primary Education: Current Issues and Applications

6cp
This subject provides an overview of contemporary social issues, curriculum issues and emerging learning technologies relating to the use of ICT in K-6 education. Strategies are developed for keeping up-to-date with K-6 e-learning trends and developments, including new pedagogical approaches. Sessions are mostly hands on and students develop related technical skills (no experience necessary).

022203 HSIE Study 2: Conflicts and Resolutions

6cp; 3hpw
Undergraduate

Developing the skills, attitudes and self-esteem to productively manage conflict is essential as a means of facilitating learning. It is also a vital life and vocational skill, arguable as important in the home and workplace as in international affairs. This subject allows students to explore the causes and possible resolutions to conflicts. Students also explore examples of conflicts as part of contemporary and historical sociologies, critically analysing the actions and possible motivations of the main players.

022204 HSIE Study 3: Multicultural Australia in its Asia-Pacific Regional Context, Implications for Teaching

6cp; 3hpw; availability: exchange and study abroad students with faculty approval
Undergraduate

Australians are becoming increasingly aware of regional and global shifts in power and influence, particularly the 'emergence' of the Asia-Pacific region, and the implications this has for Australia in terms of its links with the region. At the same time, an awareness of Australia's Aboriginal history, and now, of Aboriginal and non-Aboriginal shared

histories and futures, is emerging. This subject investigates some of the implications this has for teaching in the Australian context. It examines the nature and theoretical underpinnings of intercultural studies, and looks into the dynamics of the Australian classroom in the national, regional and global context. The subject explores some of the current debates in Australia with regard to multiculturalism, immigration, Aboriginal issues, refugees, etc., and their implications for teaching.

022601 Learning Beyond the Classroom

6cp

Undergraduate

An important component of teaching involves taking students outside the classroom. Research increasingly shows that teaching strategies need to be specifically developed for these learning environments, and that classroom teachers are often not aware of the range of options available for making these experiences meaningful. This subject investigates the research base and then looks at applications of its findings. The subject includes considerable 'learning outside the classroom'.

022602 Independent Study

6cp

Advanced study elective

Undergraduate

This subject allows students to develop their own learning project in consultation with a member of the academic staff. The project may take the form of a reading course, a field-based study or an action-research project relating to an aspect of primary school education.

022603 Teaching Across the Curriculum

6cp; availability: exchange and study abroad students with faculty approval

Elective

Undergraduate

This subject focuses on the practical and creative ways in which teachers can incorporate aspects of the curriculum into integrated units. It is based on the philosophy that learning is most successful within meaningful contexts and when it is holistic rather than fragmented. Ways in which cross-curricular teaching can be programmed, assessed and evaluated are also explored. In recognition of the demands of programming for teachers, the integration of ICT is also examined.

023001 Psychology of Secondary Students

6cp

Postgraduate

The aim of this subject is to provide students with an understanding of the principles and patterns of human growth and development in the secondary school years; a knowledge of types of learning and their interaction with teaching approaches; and a knowledge of effective ways of interacting with their students.

023122 Professional Practice in Personal Development, Health and Physical Education 1

6cp

Postgraduate

This subject is divided into two modules, each requiring two hours attendance a week. Module A examines the Board of Studies' (BOS) years 7–10 PDHPE syllabus. Module B examines teaching and learning issues, with a particular emphasis on pedagogies in the BOS years 7–10 PDHPE syllabus. The emphasis of this subject is on professional practice, that is, the essential knowledge and skills necessary to enter the profession. The focus is on the syllabus and methodology, as distinct from the content of the teaching programs.

023123 Professional Practice in Personal Development, Health and Physical Education 2

6cp

Requisite(s): 023122 Professional Practice in Personal Development, Health and Physical Education 1

Postgraduate

This subject is divided into two modules, each requiring two hours attendance a week. Module E examines the new stage 6 PDHPE syllabus (preliminary and HSC courses). Module F examines the new 25-hour PDHPE course called Crossroads. Together with the modules

in 023126 Learning in Personal Development Health and Physical Education 2 (modules G and H), all four modules provide students with the opportunity to examine relevant school syllabuses and policies and apply these documents in their preparation of programs and lessons. It develops students' professional understanding and skills and encourages them to develop as reflective practitioners by providing models of teaching excellence. The subject comprises compulsory modules which enhance students' ability to teach PDHPE.

023124 Professional Practice in the Secondary School

6cp

Postgraduate

This subject combines theory with practice to provide students with the skills and understanding required to begin to teach in a secondary school. This subject develops students' teaching approaches and strategies to promote learning with the skills and understandings required of an effective beginning teacher. This subject is closely associated with practicum. An emphasis is placed on professional commitment, current developments in teaching and learning, and reflection on teaching practice.

023125 Learning in Personal Development, Health and Physical Education 1

6cp

Postgraduate

This subject is divided into two modules, each requiring two hours attendance a week. Module C examines controversial and sensitive issues (with some reference to the catholic education PDHPE syllabus). Module D concentrates on dance, and combines a practical and theoretical focus. In this subject, the emphasis is more on the component areas of personal development, health and physical education in terms of the basic requirements for recruitment into the profession. The focus is on the foundational content of the teaching programs, as distinct from the syllabus and methodology. Together with the modules in 023122 Professional Practice in PDHPE (modules A and B), all four modules emphasise developing skills and understanding of the structure and content of the syllabuses, and provide students with opportunities to explore a wide range of programming, planning, teaching and learning strategies and computer-based technologies.

023126 Learning in Personal Development, Health and Physical Education 2

6cp

Postgraduate

This subject is divided into two modules, each requiring two hours attendance a week. Module G concentrates on gymnastics and movement skills in the years 7–10 syllabus. It combines a practical and theoretical focus. Module H examines the concept of a sociocultural perspective on health in relation to K–12 health issues. Taken together, the two modules emphasise developing skills and understanding of the structure and content of the K–12 PDHPE syllabuses, and provide students with opportunities to explore a wide range of programming, planning, teaching and learning strategies, and computer-based technologies. Together with the modules in 023123 Professional Practice in PDHPE 2 (modules E and F), all four modules provide students with the opportunity to examine relevant school syllabuses and policies and apply these documents in their preparation of programs and lessons. It develops students' professional understanding and skills and encourages them to develop as reflective practitioners by providing models of teaching excellence. The subject comprises compulsory modules which enhance students' ability to teach PDHPE.

023137 Professional Practice in Catering for Difference and Special Needs

6cp

Postgraduate

The aim of this subject is to provide students with effective ways of interacting with students; strategies for identifying students with learning or behavioural difficulties; knowledge of how secondary school teachers can meet the challenges presented by students with special needs, including those with learning or behavioural difficulties, and gifted and talented students; and an understanding of the educational issues relevant to the use of alternative curricula and learning contexts, including alternate pathways in post-compulsory education.

023138 Social and Philosophical Aspects of Secondary Education

6cp
Postgraduate

This subject consists of two strands which together enable students to investigate the sociological and philosophical dimensions of secondary education. In the social bases strand, students explore social theories which seek to explain the social forces shaping schools and classrooms and the ways in which school and society interacts in the Australian context. They also investigate how social characteristics influence the educational outcomes of certain social groups and current policies and programs which address these influences. In the critical issues strand, students begin to clarify their own educational philosophy. They do this by analysing and evaluating a range of positions on critical educational issues which confront secondary educators at the present time. From this, students determine their own stance on these issues and identify how this will impact on their professional practice.

023156 Professional Experience 6: Promoting Student Centred Learning

6cp
Requisite(s): (023151 Professional Experience 1: Beginning Teaching Issues in the Primary School OR 023111 Practicum 1: Beginning Teaching) AND (023152 Professional Experience 2: Developing Classroom Management OR 023112 Practicum 2: Developing Classroom Management) AND (023153 Professional Experience 3: Assessment and Evaluating in Education OR 023116 Practicum 6: Assessing and Evaluating in Education) AND (023154 Professional Experience 4: Designing Educational Programs OR 023115 Practicum 5: Designing Educational Programs) AND (023155 Professional Experience 5: Teaching Students with Special Educational Needs OR 023114 Practicum 4: Managing Learning Difficulties OR 012235 Professional Experience 5: Teaching Students with Special Educational Needs)

This subject extends the knowledge and skills base of students, enabling them to make increasingly informed decisions concerning teaching practices that place the primary student at the centre of his or her learning. It addresses both the theoretical underpinnings and professional skills of promoting learner interaction, self-initiated thinking and enquiry. It also examines the phenomenon of individual differences in primary education and associated practical implications for learning and teaching. Further, this subject explores learning beyond the classroom, looking at the different approaches and considerations that are needed when taking students outside the school environment and in providing students with the best possible opportunities for learning with their school class and for life-long learning.

023157 Professional Experience 7: Reflection on Educational Practice

6cp; availability: not offered to exchange and study abroad students
Requisite(s): (023156 Professional Experience 6: Promoting Student Centred Learning OR 023882 Special Education Professional Experience 2: Collaborative Participation in Inclusive Service Models OR 023832 Special Education Practicum 2: Collaborative Participation in Inclusive Service Models OR 023113 Practicum 3: Promoting Student-centred Learning) AND (023151 Professional Experience 1: Beginning Teaching Issues in the Primary School OR 023111 Practicum 1: Beginning Teaching) AND (023152 Professional Experience 2: Developing Classroom Management OR 023112 Practicum 2: Developing Classroom Management) AND (023153 Professional Experience 3: Assessment and Evaluating in Education OR 023116 Practicum 6: Assessing and Evaluating in Education) AND (023154 Professional Experience 4: Designing Educational Programs OR 023115 Practicum 5: Designing Educational Programs) AND (023155 Professional Experience 5: Teaching Students with Special Educational Needs OR 023881 Special Education Professional Experience 1: Assessment, Programming and Evaluation OR 023831 Special Education Practicum 1: Assessment, Programming and Evaluation OR 023114 Practicum 4: Managing Learning Difficulties OR 012235 Professional Experience 5: Teaching Students with Special Educational Needs)

This subject is structured so students reflect on teaching practices; analyse the school as a workplace; examine, test and evaluate their theories of teaching and learning; explore educational problems; and

critically evaluate methodologies to solve educational problems. The field experience component of this subject occurs in a regular primary school. The placement articulates with Professional Experience 8, which is intended to occur in the same setting. The field experience has both distributed and block elements.

023158 Professional Experience 8: Analysing Current Issues in Australian Education

6cp; availability: not offered to exchange and study abroad students
Requisite(s): (023154 Professional Experience 4: Designing Educational Programs OR 023115 Practicum 5: Designing Educational Programs) AND (023155 Professional Experience 5: Teaching Students with Special Educational Needs OR 023114 Practicum 4: Managing Learning Difficulties OR 023881 Special Education Professional Experience 1: Assessment, Programming and Evaluation OR 023831 Special Education Practicum 1: Assessment, Programming and Evaluation OR 012235 Professional Experience 5: Teaching Students with Special Educational Needs) AND (023156 Professional Experience 6: Promoting Student Centred Learning OR 023113 Practicum 3: Promoting Student-centred Learning OR 023882 Special Education Professional Experience 2: Collaborative Participation in Inclusive Service Models OR 023832 Special Education Practicum 2: Collaborative Participation in Inclusive Service Models) AND (023157 Professional Experience 7: Reflection on Educational Practice OR 023117 Practicum 7: Reflecting on Educational Practice) AND (023151 Professional Experience 1: Beginning Teaching Issues in the Primary School OR 023111 Practicum 1: Beginning Teaching) AND (023152 Professional Experience 2: Developing Classroom Management OR 023112 Practicum 2: Developing Classroom Management) AND (023153 Professional Experience 3: Assessment and Evaluating in Education OR 023116 Practicum 6: Assessing and Evaluating in Education)
Undergraduate

This final-semester subject is designed to help students draw together their teacher preparation experiences as they engage with a number of major professional issues. Issues examined reflect current trends and demands affecting teaching, learning and schooling in Australia, enabling students to critically analyse these and develop an appropriate and well-supported response that guides their future professional practice. Students' engagement in their professional experience program is continued during this semester and culminates in the associate teacher program. The field experience component of this subject occurs in a regular primary school. The placement articulates with the prerequisite subject, which is intended to occur in the same setting. The field experience has both distributed and block elements.

023412 Education Study 2: Value

6cp; availability: exchange and study abroad students with faculty approval

Further information on this subject is available from UTS: Education.

023505 Educational Research

6cp
Undergraduate

This subject aims to develop students' understanding of research through their active participation in it. With the support of the lecturer, students undertake a sustained research investigation of a particular avenue of interest to them, within a broad and fruitful research focus of relevance to the class community. In addition to developing students' appreciation of research by doing it, the subject deepens their understanding of the broad spectrum of educational research paradigms. This subject is designed both as an essential preparation for the Bachelor of Education (Honours) course and as an elective for third-year Bachelor of Education students.

023612 Social Context of Childhood Stress

6cp
For further details, contact UTS: Education.

023625 Research Seminar

6cp
Undergraduate

This is an advanced research subject which explores the ranges of paradigms, methods, and procedures appropriate for disciplinary and interdisciplinary-based research investigations. Both quantitative and

qualitative methods are analysed, particularly as they relate to the student's thesis work. Focus is on critically evaluating research from a range of perspectives and developing an appropriate methodological approach for the student's thesis.

023634 Honours Thesis 1

12cp

In this subject students discuss and develop understandings and confidence to design and begin to implement a research study investigating an educational research question. Students develop their literature and methodology and undertake data collection and analysis. The subject culminates in 023635 Honours Thesis 2 with the submission of an honours thesis.

023635 Honours Thesis 2

12cp

In this subject students continue work started in Honours Thesis 1. They design and implement a research study investigating an educational research question. Students finalise their literature and methodology and undertake data collection and analysis. Writing of the thesis is an important component of this subjects. The subject culminates with the submission of the honours thesis.

023821 Special Education 1: Managing Challenging Behaviours

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject develops an understanding of the theoretical approaches to programming for students who have challenging behaviour. It also explores the ways in which these approaches have been researched. It examines the criteria for selecting different preventive and management approaches. Participants are given the opportunity to discuss concepts raised in the lecture/workshop sessions, from the perspectives of their experiences in the practicum.

023822 Special Education 2: Preventing and Remediating Difficulties in Reading and Spelling

6cp; block; availability: not offered to exchange and study abroad students
Undergraduate

This subject examines the teaching of early reading and spelling to students who fail to learn from normal instructional techniques. Participants analyse and evaluate research on reading and spelling acquisition, apply the findings to the instructional needs of students, and examine and evaluate diagnostic and assessment tools both formal and informal in reading and spelling.

023823 Special Education 3: Educating Students who have Difficulties with Written Text

6cp; availability: not offered to exchange and study abroad students
Undergraduate

This subject examines ways in which teachers can support and assist students who have difficulty in understanding their school texts and school writing tasks. Strategies for increasing comprehension, and their applicability to classroom situations, are investigated. The effectiveness of various approaches to facilitating writing is evaluated and attention is given to primary school reading and writing, with an emphasis on non-fiction content areas.

023824 Special Education 4: Numeracy Instruction for Students with Learning Difficulties and Disabilities

6cp; availability: not offered to exchange and study abroad students
Undergraduate

In this subject participants critically examine key issues, research and approaches in numeracy instruction for students with learning difficulties and a range of disabilities. They are provided with information and experiences which assists them to determine and utilise appropriate assessment tools and develop programs based on the assessment results. Participants examine adaptation of mainstream mathematics curricula and functional numeracy based on individualised ecological inventories. The role of language in numeracy instruction is also examined, and appropriate and motivating activities and teaching strategies to assist students to effectively learn are investigated in detail.

023825 Special Education 5: Educating Students with Moderate and High Support Needs

6cp
Undergraduate

In this subject, participants critically examine key issues and approaches in the education of people with moderate and high support needs. The evaluation of curriculum models and assessment tools appropriate for students with moderate and high support needs is a component of this subject. Use of assessment data to develop individual education programs to meet students' needs across a range of curricula domains is examined. This subject also involves examination of a variety of transition processes that persons with high support needs may be involved in throughout their lives.

023826 Special Education 6: Educating Students with Delayed or Disordered Communication

6cp
Undergraduate

In this subject, students acquire an understanding of communication delays and deficits in the context of current theories of language acquisition in oral and non-oral forms; evaluate the validity, reliability and educational usefulness of commonly used methods of assessment; consider the issues and procedures involved in the choice of a communication system; and identify effective facilitation methods for both oral and non-oral communication in a wide range of contexts.

023881 Special Education Professional Experience 1: Assessment, Programming and Evaluation

6cp
Requisite(s): (023151 Professional Experience 1: Beginning Teaching Issues in the Primary School OR 023111 Practicum 1: Beginning Teaching) AND (023152 Professional Experience 2: Developing Classroom Management OR 023112 Practicum 2: Developing Classroom Management)) AND ((023153 Professional Experience 3: Assessment and Evaluating in Education AND 023154 Professional Experience 4: Designing Educational Programs) OR (023113 Practicum 3: Promoting Student-centred Learning AND 023114 Practicum 4: Managing Learning Difficulties)

The subject description is available from UTS: Education.

023882 Special Education Professional Experience 2: Collaborative Participation in Inclusive Service Models

6cp
Requisite(s): (023151 Professional Experience 1: Beginning Teaching Issues in the Primary School OR 023111 Practicum 1: Beginning Teaching) AND (023152 Professional Experience 2: Developing Classroom Management OR 023112 Practicum 2: Developing Classroom Management) AND (023881 Special Education Professional Experience 1: Assessment, Programming and Evaluation OR 023831 Special Education Practicum 1: Assessment, Programming and Evaluation)) AND ((023153 Professional Experience 3: Assessment and Evaluating in Education AND 023154 Professional Experience 4: Designing Educational Programs) OR (023114 Practicum 4: Managing Learning Difficulties AND 023113 Practicum 3: Promoting Student-centred Learning)

For further details, contact UTS: Education.

023999 Research Literacies

9cp
Postgraduate

This subject enables students to become competent, sophisticated readers of research by examining the conventions and assumptions within the different research traditions. The subject is designed to enable students to engage in collaborative appraisal of recent research studies as well as to individually analyse and evaluate a study pertinent to the student's field of practice.

024213 English Education 3

6cp; availability: exchange and study abroad students with faculty approval
Requisite(s): 024211 English Education 1 OR 024212 English Education 2
Undergraduate

This subject develops an understanding of the implications of a multicultural society for TESOL teaching; examines the sociocultural basis of language and the implications for language methodologies; explores appropriate language pedagogy relevant to the field of TESOL; examines ways of promoting a positive learning environment for the language development of the bilingual / multilingual student; examines assessment techniques for spoken and written language; examines the effectiveness of a language teaching program within the school context; and explores language for learning across the key learning areas.

024411 English Study 1: Shapes and Patterns in Literary Narrative from Sendak to Shakespeare

6cp; 3hpw
Undergraduate

This one-semester subject introduces the concept of literature as a continuum which includes the fairy tales of the Brothers Grimm and the novels of the Bronte sisters, the children's stories of Maurice Sendak and the plays of William Shakespeare. It develops and encourages theoretical understandings of literary concepts, of narrative, and of narrative and character patterns and archetypes. A wide range of children's books and other literary texts is studied, with particular reference to the prescribed texts. Students are expected to develop and demonstrate an understanding of a range of literary concepts and research skills in the fields of literature and literary theory.

024412 English Study 2: Images of Australia, the Place and the People - Literary Representations in Prose, Poetry and Drama

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject introduces a broad study of Australian literature within a context of the literature of place. There are considerations of such concepts as Australia as an alien place, as the place of 'exiles at home'; the bush mystique and the dream of paradise; Aboriginal and multicultural Australia; literary representations of the Australian male ('mates' and the 'dinkum Aussie') and female (a crisis of identity for 'the drover's wife'); mindscape and landscape; and the notion of a 'subjective Australia'. Prose, poetry and drama are studied. A wide range of material is discussed, but there is particular reference to the selected texts. Students are expected to develop and demonstrate an understanding of a range of literary concepts and research skills in the fields of literature and literary theory.

024413 English Study 3: The Literature of Protest

6cp; 3hpw
Undergraduate

This one-semester subject introduces considerations of literature not just as art but as agency. The voices of writers have not only changed old worlds, they have shaped new worlds. This course focuses on such changes. Texts as diverse as *Hard Times* (Dickens) and *One Flew over the Cuckoo's Nest* (Kesey) are studied, as are the Romantic poets, T. S. Eliot, George Orwell and Aleksandr Solzhenitsyn. Two Shakespearean plays are also studied within a framework of Elizabethan concepts of world order. A wide range of material is discussed, but there is particular reference to the selected texts. Students are expected to develop and demonstrate an understanding of a range of literary concepts and research skills in the fields of literature and literary theory.

024414 English Study 4: Cultural and Textual Cross-currents

6cp
Undergraduate

This subject focuses on two different types of appropriation. First, it studies the appropriation of English by the indigenous populations of post-colonial countries, as the chosen language of their unique cultural voice. Secondly, it studies the appropriation of texts of the literary 'canon' by moviemakers as they 'take over' and rewrite literature texts for the screen. Several texts are studied and comparisons are made between the original texts and cinematic versions of, for

example, Shakespeare's plays and the novels of Jane Austen. How these different versions reflect on the original is explored. A wide range of material is discussed, but there is particular reference to the selected texts. Students are expected to develop and demonstrate an understanding of a range of literary concepts and research skills in the fields of literature and literary theory.

024421 Children's Theatre and the Creative Arts 1: Overview of World Theatre, Production Roles, Script Writing

6cp; 2hpw
Undergraduate

This subject introduces knowledge and understanding of drama in an historical and cultural context with a focus on its practical and multidisciplinary nature and includes the study of the roles of a production process, as well as scriptwriting and adaptation. Emphasis is given to scriptwriting, story adaptation, and play building productions for young people.

024422 Children's Theatre and Creative Arts Study 2: Acting and Performing Skills - Genres for Children

6cp; 3hpw
Undergraduate

This one-semester subject introduces the student to the acting techniques and skills required to perform for children at different stages of development – developing imagination, audibility, voice production, concentration and an awareness of the skills involved in interpreting a role and developing a character.

024423 Children's Theatre and Creative Arts Study 3: Production and Direction

6cp; 3hpw; availability: exchange and study abroad students with faculty approval
Undergraduate

This one-semester subject develops understanding about the roles of the producer and the director in the performance process. Other creative arts skills are also developed as students explore the use of lighting, scenery and costuming for performance. A cross-discipline approach is utilised and the notion of theatre as collaboration is highlighted.

024424 Children's Theatre and Creative Arts 4: Staging Performances

6cp
Undergraduate

This subject focuses on working towards and presenting a performance for children. The performance may include the multidisciplinary skills of dance and music and partially involves the children in the performance so that they are able to have a total theatre experience. The performance brings together the students' acting skills, knowledge of theatre forms and expertise in stage management, lighting, scenery and costuming.

024705 Children's Literature and Multi-literacies: Teaching Critical, Cultural, Visual and Digital Literacies through Children's Books

6cp; availability: exchange and study abroad students with faculty approval
Undergraduate

This subject develops advanced understanding of children's literature texts and of creative and innovative ways to present these texts in a classroom. It explores the historical sources of children's literature, and makes special reference to the development of Australian children's literature. A wide range of material is discussed, but there is particular reference to the selected texts. Students are expected to develop and demonstrate an understanding of a range of literary concepts and research skills in the fields of literature and literary theory.

024713 Teaching English to International Students

6cp
Undergraduate

This subject develops students' understanding of the learning of a second language. It examines a range of practices for teaching English to speakers of other languages and raises awareness of cultural and linguistic diversity. This subject is compulsory for all students undertaking an international practicum program. In Autumn semester, the subject is offered only to students accepted into an

international practicum program in Thailand, China or Samoa. In Spring semester, the subject is available to any students with an interest in teaching English to international students. It is assessed on a pass/fail basis.

026411 Music Study 1

6cp

Undergraduate

This subject comprises aural musicianship in the areas of melodic dictation, rhythmic dictation, chord identification and playing back melodies on keyboard; an overview of western music; the use of information technology in music; and selecting choral music, performing in a choir and conducting a choir.

026412 Music Study 2

6cp

Undergraduate

This subject comprises aural musicianship in the area of sight singing; focusing on renaissance and baroque music; arranging music for small ensembles using computer software; and developing music lessons for the primary school.

026702 Music and Society

6cp; availability: exchange and study abroad students with faculty approval

Undergraduate

This subject develops an awareness that music is both a reflection and a product of the society from which it comes. Music genres and traditions from a variety of musical cultures are studied. Music technology is used to create compositions in the style of each culture. Dances, songs and instrumental ensemble works are also explored.

027411 PDHPE Study 1: Theory and Practice of Personal Development Health and Physical Education and Support

6cp

Undergraduate

This subject is designed to provide students with an opportunity to consolidate their learning about integrating PDHPE and its relation to school sport. It focuses on school students' health and physical activity needs and developing their knowledge and movement skills. It also considers safety implications for teaching.

027412 Personal Development Health and Physical Education: Teachers and Physical Activity

6cp; availability: exchange and study abroad students with faculty approval

Undergraduate

This subject is designed to elaborate school students' physical activity needs and fundamental movement skills. It is geared towards developing best practice for lifelong learning about the health habits of physical activity. Special emphasis is given to fitness principles, games skills, competitions and carnivals.

028222 Society, Science, Technology and the Environment

6cp

Undergraduate

This subject studies how science, technology, environment and society interact and dynamically influence each other in ways that impact upon our past, present and future. To understand many events, experiences, problems and issues in our world we need to draw on a range of disciplines. This subject uses themes and issues to explore key ideas relevant to science, technology, society and environment. These are integrated with practical, creative and cultural contexts as students research theories and perspectives that contribute to our understanding of learning and teaching in authentic contexts. This subject addresses teaching and learning through integration of the human society and its environment and the science and technology syllabuses.

028412 Science and Technology Study 2: Science and Technology in Daily Life

6cp; 3hpw

Undergraduate

This subject is designed to provide students with a sound knowledge base from which to draw, as well as a working understanding of the processes and skills of science and technology. It looks specifically at the workings of everyday items and processes, and emphasises Australian scientific endeavour. The emphasis is on broadening and extending understanding in science and technology through an integrated approach which removes disciplinary boundaries.

028413 Science and Technology Study 3: Issues in Science, Technology and Society

6cp; 3hpw

Undergraduate

This subject aims to develop ideas about the nature of science and technology and its impact on society. Students investigate issues embedded in a range of contexts – social, cultural, political, historical and economic. Ethical considerations are raised in order to present a reasoned and informed understanding of the issues. Students acquire knowledge and appreciation of the contribution made to the field of science and technology in Australia and in other cultures. A range of indigenous and appropriate technologies is also studied. Students have opportunities to investigate areas of personal interest as part of the assessment criteria. As prospective primary teachers, students are able to select appropriate strategies for the students in their care based on an informed understanding of issues relating to science, technology and society.

028414 Science and Technology Study 4: Planet Earth

6cp

Undergraduate

This subject develops an overall view of the structure and systems of planet Earth incorporating information gained from all science disciplines. Students study interrelationships between biological and physical systems, a range of environments with particular emphasis on the Australian environment and investigate global issues relating to responsible environmental management. Students have opportunities to investigate areas of personal interest as part of the assessment criteria. As prospective primary teachers, students are able to select appropriate strategies for the students in their care based on an informed understanding of issues relating to this planet.

029410 International Study

24cp

Undergraduate

This subject is designed to enhance students' cultural awareness and understanding through first-hand experience of living and studying in a non-English-speaking culture. It provides students with the opportunity to spend one semester at an overseas university studying the language and culture of the host country and participating in education subjects which are taught in the English language. Students visit schools in the host country, as well as undertake excursions to places of cultural and historical significance. The number of places available in this subject is determined by the number of overseas students wishing to spend an equivalent semester on exchange studying at UTS. If there are more applications for the International major than there are places available, a ballot is held to allocate places. Students undertaking the international major are responsible for meeting their own travel and living expenses for the semester abroad. Normal HECS arrangements apply but there are no extra tuition fees. Host institutions include Jonkoping University in Sweden and Haagse Hogeschool in the Netherlands. The international major takes place in semester 5 of the Bachelor of Education program.

11204 Integrated Services

6cp

Undergraduate

This subject aims to develop students' understanding of how energy, air, water, people and goods move through the built environment. Students are equipped with the ability to integrate the designs of systems into architectural projects to enhance performance and adaptability. The subject covers the fundamentals of power infrastructure and electrical services, water infrastructure and hydraulics, air quality and HVAC systems, fire services engineering, urban transport infrastructure, and building vertical transport. Multidisciplinary teamwork and strategies for integrating engineering systems in building and architectural projects are also discussed.

Typical availability

Spring semester, City campus

11205 Architecture Culture and Environment

6cp

Undergraduate

This subject is a foundational introduction to the ways in which architecture is influenced by both culture and environment. It is designed to synthesise and combine an introductory level of architectural history and theory with a variety of cultural and environmental concepts, and to critically examine boundaries between these by highlighting shifts, differences and commonalities. The subject focuses on how cultural and environmental values influence environmental, social and cultural developments in architecture. It also addresses value systems and ethical positions as they relate to and influence ecological impact and environmental design.

Typical availability

Autumn semester, City campus

11206 Introduction to Construction and Structural Synthesis

6cp

Undergraduate

This subject consists of an introduction to the principles involved in the integration of structure, construction, and material performance in architecture. This is undertaken by studying and analysing historical and contemporary precedents, where the performance of materials and their contribution to the stability and structural integrity of elements and systems design within the built object are clearly demonstrated. Students are further expected to demonstrate these principles by integrating the knowledge gained of materials, structure and building fabric in project-based design exercises, primarily involving single cell buildings.

Typical availability

Spring semester, City campus

11207 Architectural Design and Construction

6cp

Undergraduate

This subject introduces students to principles and techniques of architectural detailing. Students learn how to represent construction materials, building components and the connections between them in orthographic drawings and physical models and begin to develop the ability to produce technically proficient details of assembly. Students develop an understanding of architectural detailing as an extension of the design process and develop an appreciation of the significance of architectural detailing to the formal aesthetics of architecture.

Typical availability

Autumn semester, City campus

11208 Architectural Design: Architectural Communications 2

6cp

Undergraduate

The ability to develop and give an account of any architectural proposition relies on the thoughtful and strategic deployment of a range of representational types. This subject aims to develop the necessary knowledge and skills required in the production of these forms of representation together with the capacity to align their usage to appropriate communicative applications. Consequently, the subject introduces students to a range of techniques aimed at developing an understanding of representation as a formally generative, illustrative, observational and analytical tool. The subject also focuses on compositional issues concerned with the assemblage of images and, where appropriate, text. Students explore the use of these representation modes, in both two- and three-dimensional forms, through a range of manual and digital tools. This subject is a corequisite to the first-year, second semester design subject and together they are to be understood as integrated subjects. As such, content and assessment tasks are aligned, though not necessarily identical to design.

Typical availability

Spring semester, City campus

11209 Architectural Design: Making

6cp

Undergraduate

This subject introduces students to the design potentials of diverse structural, material and organisational approaches in architecture. A constraint-based process is used to inform a series of both two-dimensional and three-dimensional exercises. Relationships between structure, materiality and performance in existing buildings are analysed and explored for new design potentials and formal outcomes. Fabrication techniques and representational processes are investigated at varying scales with an emphasis on making a wide range of material practices.

Typical availability

Spring semester, City campus

First-year experience videos

View commentary from students and academics about this first-year subject at:

- Student video: www.youtube.be/XumYfFSu_-I
- Academic video: www.youtube.be/VMBhqEOvimk

11211 Architectural Design: Forming

6cp

Undergraduate

This subject is the introductory studio in the Bachelor of Design in Architecture studio sequence. The subject provides the framework to learn essential techniques for the production of spaces as well as important strategies in critical and analytical thinking. Students gain an understanding of the design process; develop an understanding of our relationships to space, form, sequence and the environment; undergo rigorous research and analysis; and develop strategies for translating concepts into spatial solutions. The subject introduces students to diverse sources of architectural concepts, methodologies, principles and skills that comprise a common knowledge base critical to the practice of architecture, including those found in the history of architecture and from outside of architecture, for example, in nature, mathematics, the human body, the landscape and the environment. These sources are considered in terms of their formal appearance, performance in different conditions, cultural and historical associations, and potential for inventive development and transformation. Students are introduced to two- and three-dimensional thinking and exploration, composition and representation. Processes for the development of initial formal proposals for site and program-specific conditions are explored through orthographic drawing, three-dimensional modelling using appropriate software, sketches and scale models.

Typical availability

Autumn semester, City campus

11212 Architectural History and Theory: Orientations

6cp

Undergraduate

The subject introduces key themes in history and theory framed in terms of architectural examples from antiquity until the beginning of the nineteenth century. Themes may include ideas of architectural origins; theories and applications of geometry and composition, proportion and order; relations between antiquity and subsequent architectural developments; the development and use of different forms of representation, including perspective; the architect as historical figure; the role and influence of architectural treatises; impacts of developments in scientific thinking; ideas that underpin the writing of architectural history; the historical development of architectural theory; and cultural encounters between East and West and their impact on architecture.

Typical availability

Autumn semester, City campus

11214 Architectural Design: Architectural Communications

6cp

Undergraduate

Students of architecture must acquire a set of skills that enable clear communication of architectural ideas. This subject has been designed to equip students with a range of basic tools that enable dissemination

of their architectural thinking and propositions. It comprises four components:

- technical illustration — an introduction to a variety of architectural projections and rendering techniques
- freehand illustrations — students of architecture require a level of competency and ease in the production of quick, freehand sketches. Different techniques are covered in this component, delivered through a series of freehand drawing classes
- architectural computing — the use of the computer is studied in this component as a tool to aid communication of design thinking
- architectural model-making — introduces students to elementary physical model-making as a tool to aid design thinking and communication. Various techniques from the quick card study model to the professional presentation model are reviewed.

Typical availability

Autumn semester, City campus

11216 Architectural History and Theory: Modernity and Modernism

6cp

Undergraduate

The subject considers the relationship between the diverse practices of modernism in art and architecture, and theories of modernity as they bear upon and are challenged by these practices. The subject develops students' ability to read and understand key case studies from the nineteenth into the first half of the twentieth century. Themes considered may include industrialisation, impacts of technology, the modern concept of space, debates about style and ornament, ideas and practices of avant-gardism, utopianism and revolution, new social formations, abstraction, hygiene, and geo-politics, particularly the reception of modernism in Europe, North America and Australia.

Typical availability

Spring semester, City campus

11221 Architectural Design: Strategy

6cp

Requisite(s): 11211 Architectural Design: Forming AND 11215 Architectural Design: Making
Undergraduate

The strategic organisation of spaces to satisfy experiential ambitions, proposed use and urban context is the focus of this subject. Issues of horizontal and vertical circulation and movement, sequence, hierarchy and proximity are developed through section and plan drawings and models. Aspects of privacy, enclosure, permeability, sequence and transparency in regard to individual spaces within the organisation of spaces are considered.

Techniques for conveying and designing the experience of occupying and moving through space, as well as the temporal uses of different spaces, are developed. These may include diagrams, animated fly-throughs and sketches. Design is explored as an iterative process through these techniques.

Typical availability

Autumn semester, City campus

11222 Architectural History and Theory: Critique

6cp

Undergraduate

This subject focuses on the rise of architectural theory after 1965 as a particular discipline with its own debates and forums of exchange. The subject builds on the previous history and theory subjects by considering how modernism has become the subject of critique. It also considers architecture in relation to wider strands of thinking that critique the practices and products of culture. Themes addressed may include criticism and critical thinking, disciplinarity, the nature and role of theory, the concept of position, postmodernity, deconstruction and literary theory, theories of the image and affect, gender and power relations, race, subjectivity, architecture and fashion, architecture and art, experimental architecture, architecture as critical object, ideology, politics and power, discourse, and framing.

Typical availability

Spring semester, City campus

11225 Thermal Design and Environmental Control

6cp

Undergraduate

The subject aims to further develop students' understanding of thermal comfort, building thermodynamics and natural ventilation, and provides an introduction to the principles of daylighting and sound control. The subject encompasses the basic principles, design strategies, as well as qualitative and quantitative evaluative methods and analytical techniques for environmental control. It seeks to equip students with the ability to apply their learning in the technical and design aspects of thermal and environmental control in the design of domestic scale architecture.

Typical availability

Spring semester, City campus

11227 Architectural Design: Performance

6cp

Requisite(s): (11211 Architectural Design: Forming AND (11215 Architectural Design: Making OR 11209 Architectural Design: Making))
Undergraduate

This subject introduces students to the concepts of building and architectural performance. Recognising that architectural projects are mediators of environmental variables, as well as contributors to environmental change, it asks students to examine the consequences of this in design. Students consider both qualitative and quantitative methods for assessing the environmental and social performance of architecture. Along with the techniques for using energy and material resources efficiently, the subject also considers other aspects of performance that might be addressed through concepts of interactivity, responsiveness and experiential design.

Typical availability

Spring semester, City campus

11231 Architectural Design: Field

6cp

Requisite(s): 11211 Architectural Design: Forming AND 11215 Architectural Design: Making AND 11221 Architectural Design: Strategy AND 11224 Architectural Design: Performance
Undergraduate

This subject considers architecture as an intervention within the broader field of an urban or other landscape. Beyond the design of an object, the subject is concerned with relationships between buildings, and between buildings and the infrastructure and landscapes in which they are situated. At the same time, the subject asks students to account for the many competing interests in the design of any public or commercial building or space and to understand the field of negotiation in which the architect makes architectural proposals. Questions of architectural form making are raised in relationship to the interplay of representation and identity, the programmatic and structural organisation of buildings and their location within the urban field.

Typical availability

Autumn semester, City campus

11232 Lighting, Acoustics and Advanced Environmental Control

6cp

Requisite(s): 11225 Thermal Design and Environmental Control
Undergraduate

The subject aims to deepen students' understanding of the principles of lighting acoustics and environmental control in the context of medium rise and complex architecture and seeks to equip students with the ability to design and modify the building fabric through analysis and evaluation to enhance the environmental performance of designed spaces. It encompasses advanced daylighting systems and the integration of electrical lighting, strategies for noise management, room acoustics, hybrid ventilation and mixed mode systems as well as an introduction to alternate and sustainable building energy systems. Qualitative and quantitative evaluative and analytical processes that inform such design decisions are explored in this subject.

Typical availability

Autumn semester, City campus

11233 Advanced Architectural Construction

6cp

Requisite(s): [11226 Architectural Design and Construction OR 11207 Architectural Design and Construction] AND [11217 Introduction to Construction and Structural Synthesis OR 11206 Introduction to Construction and Structural Synthesis]
Undergraduate

This subject takes the form of a series of case studies demonstrating how the implementation of highly-integrated architectural spatial strategies, specific construction methods and material systems give rise to outstanding architectural outcomes of various scales. The subject argues that any notion of 'advanced' can only be attained through the conceptual and practical frameworks of deep-level integrated practice. The knowledge, methodologies and analytical tools developed during the initial exercises deeply inform the studio design project.

Typical availability

Autumn semester, City campus

11234 Architectural Design: Integration

6cp

Requisite(s): 11211 Architectural Design: Forming AND 11215 Architectural Design: Making AND 11221 Architectural Design: Strategy AND 11224 Architectural Design: Performance
Undergraduate

This subject develops skills in the integration of diverse aspects of building towards more resolved and coherent design proposals. The integration of, for example, construction and material choices, building performance, building services, planning, formal expression and urban context area developed. Techniques for development clear design strategies in response to complex briefs and ambitions are explored, including the use of diagrams, overlays and the presentation of alternatives. Through successive design iterations students learn the ability to control, test and manipulate heterogeneous and competing design parameters. The relevancy and clarity of the process of design development is considered as an integral part of the final outcome.

Typical availability

Spring semester, City campus

11235 Architecture and Urban Projects

6cp

Requisite(s): 11215 Architectural Design: Making AND 11211 Architectural Design: Forming AND 11214 Architectural Design: Architectural Communications
Undergraduate

This subject is an introduction to the architecture of urban spaces, key civic buildings, the influence of topography, environmental and landscape themes, and the role of particular housing types in forming the city. It includes a survey of city plans across time and across cultures as well as an introduction to histories, theories and critiques of urban design, urban projects and urban architecture.

Typical availability

Spring semester, City campus

11247 Architectural History and Theory: Current Events and Debates

6cp

Undergraduate

This subject examines contemporary debates through which the present day condition of architecture is examined, explored and constantly re-constructed within a greatly expanded field. To assist a more profound understanding of the issues involved, it embeds these discussions within an extended historical and theoretical context. In this, it partly relies on the basic historical and theoretical knowledge presented in previous subjects.

The subject is intended as preparation for entry into research-related subjects in the context of the Master of Architecture program and, more generally, for academic writing and investigation-led practice. It introduces students to basic research methodologies, scholarly writing and the organisation of related visual material. It results in the production of a short paper and its presentation at a final student symposium.

It is structured around a number of topics introduced through lectures. Each topic forms the focus of a seminar group that engages students in debating the topic and critiquing their own work as well as that of others. Seminar group tutors support and direct students in their investigations.

Typical availability

Spring semester, City campus

11248 Architectural History and Theory: Urbanism and the City

6cp

Undergraduate

The subject considers the development of the city in the context of modernity and modernisation. The subject builds on knowledge gained from previous history and theory subjects, and extends it with an understanding of the range of forces and processes that have shaped cities and their urbanisms. Particular cities are examined in relation to specific themes, which may include industrialisation and urbanisation, colonisation, production, consumption, labour and economic forces, governance, demographic mapping and change, political processes and urban development, theories of urban experience, institutions of public and private life, post- and ex-urbanism, the suburbs, and the city as the site of research and speculation for architecture.

Typical availability

Autumn semester, City campus

11272 Designing with Landscape Elements

6cp

Undergraduate

This elective explores how various landscape elements can contribute to the modification of urban climate. Specifically there is an examination of how these elements may contribute to the lessening of the urban heat island (uhi) effect that is generated by the built environment and its supporting infrastructure. This subject uses case studies to illustrate how, by using various combinations of vegetation and surfaces, these can be used to modify extremes of temperature, wind velocities and contribute to lowering the diurnal range of temperatures while at the same time showing in what ways this approach may be used to lessen the uhi effect and improve the general amenity of urban environments.

Typical availability

Spring semester, City campus

11282 Advanced Building Systems

6cp

Undergraduate

This elective explores the systems and component aspects of architecture and examines how industrialisation, materials and assembly lines have influenced the building professions and materials used in 19th- and 20th-century architecture. The subject examines how the development of new building types during and after the industrial revolution also influenced the evolution of various architectural theories. The subject specifically focuses on the architecture of Paxton's crystal palace, the case study houses, Buckminster Fuller, Team 4, as well as recent projects designed by Foster, Rogers, Piano, Murcutt and the like. There is also an investigation into the way in which the standardisation of components has impacted upon the production of everyday items like bicycles, the Citro'n 2cv and yachts. At the end of the semester students are able to produce detailed, analytical, three-dimensional drawings of a selected contemporary building.

Typical availability

Spring semester, City campus

11283 Access in Large Scale Buildings

6cp

For further details, contact UTS: Design, Architecture and Building.

Typical availability

Autumn semester, City campus

11285 Advanced Modelmaking

6cp

Undergraduate

This subject extends students' basic modelling construction techniques and introduces them to different modelling techniques and media. It examines various ways of using models, across a range of scales, to highlight the model's conceptual, generative and illustrational value as evidenced through the various stages of the design process. Students explore a wide range of additive, reductive and casting modelling techniques, using diverse materials and, where appropriate, extend their existing knowledge of software to incorporate advanced digital fabrication technologies, including milling, rapid prototyping and laser cutting. The definition of model in this subject is broad and the curriculum may include the notion of the model in both its physical and digital forms, however, the emphasis is on the production of physical artefacts. As a consequence, students are expected to develop a material sensibility that demonstrates an understanding of the tactile, visual and structural potentials of any selected materials.

Typical availability

Autumn semester, City campus

11287 Islamic Architecture 630-1700

6cp

Undergraduate

What is Islamic architecture? This elective seeks to answer that question as it visits buildings designed for and by Muslims in Jerusalem, Damascus, Baghdad, Samarra, Cairo, Cordoba, Granada, Istanbul and Isfahan.

11291 Freehand Illustration

6cp

Undergraduate

This subject focuses on practical experience in freehand drawings and presentation. The classes focus on life drawing, experimentation with alternative rendering techniques and, finally, presentation layouts for the design and the rendering of these drawings. The intent is to develop the relationship between what we see and how we graphically present these images.

Typical availability

Spring semester, City campus

11294 Architectural Experience A

6cp

Undergraduate

This subject covers basic architectural experience including office skills, understanding and calculating wages and conditions of employment, planning work, managing correspondence including document transmittals, faxes, phones, emails, information organisation including filing, and performing simple domestic documentation.

Typical availability

Autumn semester, City campus

Spring semester, City campus

11295 Architectural Experience B

6cp

Undergraduate

In this subject students individually study basic building construction overall, including visits to building sites, measurements, drafting (CAD or Manual) and perform complex domestic scale and nature documentation.

Typical availability

Autumn semester, City campus

Spring semester, City campus

11296 Architectural Experience C

6cp

Undergraduate

This subject is concerned with detailed architectural experience, where students individually process, design and document a specific unique construction detail involving key sections of a specific individual building fabric and structure of a commercial nature and scale.

Typical availability

Autumn semester, City campus

Spring semester, City campus

11297 Architectural Experience D

6cp

Undergraduate

This subject is concerned with complex architectural experience where students organise, manage and document a specific unique built project involving designed responses to client requirements of a commercial scale and nature.

Typical availability

Autumn semester, City campus

Spring semester, City campus

11301 Fine Houses of Europe and America

6cp

For further details, contact UTS: Design, Architecture and Building.

Typical availability

Autumn semester, City campus

11304 House and Housing

6cp

This subject is based around the analysis of the relationship between housing typology and the changing of the city, including the interrelationship between geography, layout, the landscape of public works, subdivision and housing types. It includes a survey of the changes to housing typologies and the city plan across time, analysis of urban and suburban housing types, a review and critique of histories and theories of urban design, urban history and the architecture of the city. It also comprises an introduction to the work of key architects and their contribution to the architecture of the housing and the city.

11305 Architecture Special Topics

6cp

For further details, contact UTS: Design, Architecture and Building.

Typical availability

Autumn semester, City campus

Winter session, City campus

11307 Architecture Special Project

6cp

This subject requires students to demonstrate self-directed learning, in the pursuit of a project of their own choice, or one offered by the program. Advice from an academic supervisor assists students to select, refine and complete their particular project. The subject is only available to students who are capable of undertaking independent study, and students intending to take the subject must gain approval and agreement from an academic supervisor, and the program director, prior to enrolment. The number, nature and timing of the assessment items is normally negotiated between the supervisor and the student, and administered via learning contract. This flexible learning approach allows for students to examine an area of special interest in detail, and to independently explore beyond a basic level of understanding of the selected subject matter. Projects may respond to special conditions within the program, the faculty, the community, or contemporary architectural practice. The range of projects is limited only by the capacity of the program and the academic supervisor to provide appropriate support to the student and to facilitate optimum study conditions.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Summer session, City campus

Winter session, City campus

11308 Reading and Writing Architectural Criticism

6cp

This subject examines the theory and practice of architectural criticism, in Australia and internationally. It approaches this broad field in three ways. First, it examines fundamental philosophical questions of what criticism actually is, its role and function (in architecture and other disciplines), and the relationship between criticism and judgement, discernment, and discrimination, amongst other things. Second, the subject approaches architectural criticism as a rhetorical or writerly practice – through analyses of specific texts and the work of exemplary architectural critics, it identifies the different modes of writing employed in different forums and for different audiences, and the different subject positions taken by critics on various issues. In this way the subject also seeks to examine criticism critically – to read 'between the lines' of public criticism and probe the unspoken ideological positions and complexities held by critics, and also by the forums in which their work is disseminated. It notes the ways in which criticism is affected by its mode and method of presentation – in terms of its voice, vocabulary, projected audience, apparent level of objectivity and so on. Finally, the subject approaches architectural criticism in terms of its specific relationship with architectural practice, and questions the role that criticism plays in the profession, the academy, and in architectural culture more generally. In this way it opens a debate on whether architectural criticism does, and indeed whether it should, contribute to better buildings. The subject concentrates particularly on criticism published in architectural journals, but also touches upon the popular press, as well as film and television.

Typical availability

Spring semester, City campus

11309 Architecture, Cinema and Representation

6cp

This subject examines the way in which architecture and 'the architect' have been represented, and to a certain extent constructed, through the cinema. It uses examples from various periods of film history to examine some ways in which architects, architecture as a profession, and architecture (as building) itself, have been perceived, and also stereotyped. Making a critical reading of such cultural 'texts' can reveal much about what society wants to believe about architecture, whilst also demonstrating the (often vast) distance between this romanticised image of the architect, and who architects actually are and what they actually do. Similarly, the ways in which architecture and the city have been represented through film can be critically examined for what they conceal, as much as for what they reveal, about real and ideal conditions in the built environment.

11310 Critical Theory

6cp

This subject looks at the history of critical theory. Starting with the writings of Walter Benjamin, it goes on to examine central texts and topics presented and analysed by Bloch, Simmel and others. The final part of the course is an engagement with Adorno's aesthetic theory. Central topics in critical theory are analysed in detail, though emphasis is given to those elements directly concerned with design, art, architecture and aesthetics.

11311 Drawing to Diagrams: Topics in Architectural Theory

6cp

This subject presents an overview of central issues within architectural theory. The basic presupposition guiding the subject is that architecture is inextricably bound up with questions of representation. In part, the history of architecture is the history of its 'self-representation'. As such, emphasis is given to the way elements of architecture – line, diagrams, walls, corners, etc. – are articulated within the history of architecture's continual attempt to conceptualise its own practice. Instead of understanding theory as the application of a discourse external to architecture, theory is understood in terms of the issues that arise from the practice of design.

11312 Modern Western Aesthetics

6cp

Modern Western Aesthetics introduces students to the principal aesthetic theories of the last hundred years, with the ultimate expectation that students are able to appreciate not just the principle philosophical bases and cultural ramifications, but also are capable of discriminating between competing aesthetic theories. Special attention is given to the theoretical applications and implications to architecture and design.

11313 Exploring Space 1: from Simple Beginnings to Baudrillard

6cp

Starting from the simple beginnings offered in a number of 'standard' architectural texts, and moving through a selection of different and more challenging readings, this subject explores the subject of space in relation to architecture, examining the variety of meanings and implications that attend the term 'space', investigating how space is constructed, both intellectually and physically, and explicating the effects of space over a range of situations.

A number of different – and often contradictory – perspectives on architectural space are examined; a number of non-architectural investigations of space are considered; and a number of specific issues pertaining to space – including the spatial organisation of society and the idea of 'social space', the commodification of space, post-modern constructs of space, and questions of spatial 'reality' – are explored. The subject concludes with a brief analysis of Baudrillard's ideas on simulacra, and with some 'last words' on space and architecture.

In parallel with the above, and with space as its vehicle, the subject also explores relations between architecture and its theoretical bases, and aims at the continued development in students of skills in reasoning, argument and critical thinking, and the exploration of the ways in which these skills may be applied to the analysis of architecture and design.

11314 Architectural Communications: Dynamic Modelling

6cp; intensive

Elective

Postgraduate

The use of computer animation software is now firmly entrenched within contemporary digital design practice more for its formally generative, rather than illustrative, potential. This potential is linked to the software's unique capacity to parameterize geometric entities derived from b-splines, and so to test form as a product of variable vectors (magnitude and direction) acting over time. The use of animation software differs from modelling software in two significant ways. First, it acts procedurally as the primary site in which to generate form. Second, its use of contemporary geometries provides a strong analogous framework in which to formally embed the effects of variable data sets. Consequently, the designer is able to explore form making within a paradigm of variation and change rather than one based on the appropriation of pure and static platonic form. The subject aims to expose students to the unique design methodologies and techniques that result from this digital design paradigm. Specifically, students develop knowledge and skill in the exploitation of this software type to conceive, manipulate and image complex form.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Summer session, City campus

July session, City campus

11315 Architectural Communications: Parametric Modelling

6cp

Elective

Postgraduate

Computer modelling software is increasingly influencing the way design professionals think about generating form. The functionality of such software instigates a very specific type of design process that focuses on the manipulation of imported form, be they primitive geometries, appropriated real objects, two-dimensional images or diagrams. This subject enables students to explore the unique architectural design processes opened by these types of softwares. The subject aims to both foster a competency in the usage of modelling softwares and cultivate an understanding of how to exploit this functionality to conceive and image formal outcomes.

Typical availability

Autumn semester, City campus

Spring semester, City campus

July session, City campus

Summer session, City campus

11316 Architectural Communications: Building Information Modelling

6cp
Elective
Postgraduate

The computational capacity of digital technologies has led architects to explore increasingly complex forms and systems. This, in turn, has led to the development of associative parametric design software, which enables designers to concurrently generate and test complex form and relationships while resolving constructional and structural issues to an incredible degree of dimensional accuracy.

Building on a strong foundational base in the use of basic modelling software, this subject aims to introduce students to associative parametric design software, both as an aid to an iterative design process, a method of design exploration and a tool to resolve complex form through the testing and refinement of non-standard architectural systems.

Typical availability

Autumn semester, City campus
Spring semester, City campus
July session, City campus
Summer session, City campus

11318 Architecture Special Project 2

6cp
Requisite(s): 11307 Architecture Special Project

For further details, contact UTS: Design, Architecture and Building.

11361 Special Project (Theory)

6cp

Students explore areas of interest related to the special projects content through a self-directed learning contract or, when offered, intensive studio mode. The areas for study within the special projects are theory, technology, communications, design and a field study with an overseas study visit. This flexible learning approach allows students to further examine these areas of study in greater detail, or to explore another issue relevant to the topic that has an application to their academic and career development. Projects that are offered may respond to special conditions within the community and/or faculty. The range of projects is limited to the capacity of the program and the academic supervisor to facilitate adequate study conditions and to offer support to the students. Enrolment in this subject is granted upon negotiation with the course director and students must demonstrate that they have a viable project, study plan and appropriate academic supervision. It is the responsibility of the head of school to appoint the academic supervisor.

Typical availability

Summer session, City campus

11362 Special Project (Technology)

6cp

Students explore areas of interest related to the special projects content through a self-directed learning contract or, when offered, intensive studio mode. The areas for study within the special projects are theory, technology, communications, design and a field study with an overseas study visit. This flexible learning approach allows students to further examine these areas of study in greater detail, or to explore another issue relevant to the topic that has an application to their academic and career development. Projects that are offered may respond to special conditions within the community and/or faculty. The range of projects is limited to the capacity of the program and the academic supervisor to facilitate adequate study conditions and to offer support to the students. Enrolment in this subject is granted upon negotiation with the course director and students must demonstrate that they have a viable project, study plan and appropriate academic supervision. It is the responsibility of the head of school to appoint the academic supervisor.

Typical availability

Summer session, City campus

11363 Special Project (Communications)

6cp

Students explore areas of interest related to the special projects content through a self-directed learning contract or, when offered, intensive studio mode. The areas for study within the special projects are theory, technology, communications, design and a field study with an overseas study visit. This flexible learning approach allows students to further examine these areas of study in greater detail, or to explore another issue relevant to the topic that has an application to their academic and career development. Projects that are offered may respond to special conditions within the community and/or faculty. The range of projects is limited to the capacity of the program and the academic supervisor to facilitate adequate study conditions and to offer support to the students. 11400 Digital Theory

6cp

Postgraduate

This subject consists of an intensive study of the relationship between architectural theory and the realm of digital creation. It involves a group-based intensive study within a semester and examines specific topics within the theory of digital design. The subject investigates issues including the relationship between the history of drawing and the development of computer-based design schemes, and the question of the relationship between the diagram as a computer generated series of lines and its subsequent connection to forms of material realisation. It also covers a theoretical account of central elements of the design course, namely the relationship between geometry and materials; the relationship between the digital and analogue models; and the conceptualisation of objects and artefacts as a surface condition. The digital has necessitated a rethinking of the terminology central to architecture, e.g. line, plane, surface.

Typical availability

Spring semester, City campus

11401 Digital Master Class A

6cp

Postgraduate

The focus of this subject is an intensive design workshop presented and curated by an invited guest architect. It offers students an opportunity to work with a highly regarded international or Australian practitioner, while examining specific digital design topics. In this subject, students investigate issues such as the relationship between geometry and materials, the relationship between the digital and analogue models, and the conceptualisation of objects and artefacts as a surface condition. Students are given the opportunity to review digital technologies and apply these to the analysis of the guest architect's work.

Typical availability

Spring semester, City campus

11402 Digital Architecture Project A

12cp

Postgraduate

This is a studio-based design subject that aims to critically explore the appropriation of digital techniques and technologies towards the creation of new architectures through design research and exploration. The subject establishes and reinforces the required core skills, and level of professionalism of the digital architecture course for new students, and serves to hone and extend skills for continuing students. Experimentation with computational processes and techniques for software and hardware that afford a new relationship to the built environment is an expectation, as is a level of design of the highest order. Students must demonstrate a high level of proficiency in design and computational techniques in order to pass this subject.

Typical availability

Spring semester, City campus

11403 Digital Master Class B

6cp

Postgraduate

The focus of this subject is an intensive design workshop presented and curated by an invited guest architect. It offers students an opportunity to work with a highly regarded international or Australian practitioner, while examining specific digital design topics. In this subject, students investigate issues such as the relationship between geometry and materials, the relationship between the digital and analogue models, and the conceptualisation of objects and artefacts as a surface condition. Students are given the opportunity to review digital technologies and apply these to the analysis of the guest architect's work.

11404 Digital Architecture Project B

12cp

Postgraduate

This subject aims to critically explore the appropriation of digital techniques and technologies towards the creation of new architectures through design research and exploration. The subject establishes and reinforces the required core skills, and level of professionalism of the digital architecture course for new students, and serves to hone and extend skills for continuing students. Experimentation with computational processes and techniques for software and hardware that afford a new relationship to the built environment is an expectation, as is a level of design of the highest order. Students must demonstrate a high level of proficiency in design and computational techniques in order to pass this subject.

11501 Architectural Practice: Advocacy

6cp

Postgraduate

This subject applies knowledge developed in the field of marketing and business studies to architecture in order to equip students for successful practice. The subject recognises that success in the industry is contingent not only on good design skills but on a range of other skills and services that includes the capacity to clearly articulate architectural ambitions to a range of audiences, and to achieve a public profile through diverse media. The impact of new media and techniques upon architectural practice is analysed and strategies for working with new and emerging media are tested. The subject also uses case studies to support and critically understand marketing theory and practices. Subject areas include entrepreneurship; research and development; strategy and marketing; copyright and moral rights as they apply to design; client and public relationships; new business development; decision-making and leadership; media and publishing; competitions and awards.

Typical availability

Spring semester, City campus

11502 Architectural Practice: Finance and Project Management

6cp

Postgraduate

This subject introduces the financial and project management issues arising out of practice and emphasises the role of negotiation and strategic planning. Financial management of projects is considered from the fee proposal or feasibility study through design development and documentation and to the establishment of contracts and on to the management of the building process. New forms of procurement and contracts are considered, alongside the strategic establishment of alliances with consultants, clients, developers and builders.

Typical availability

Autumn semester, City campus

11503 Architectural Practice: The Profession

6cp

Postgraduate

This subject addresses the role of the architect in history and the present, and explores trends indicative of potential roles and challenges for future architects. The formation of the profession and ideals of professionalism are investigated, as well as the process of professional regulation through registration, the RAIA, the AACA logbook and compulsory continuing education. The relationship between the design professions and the property industry is examined. This subject is also concerned with individual pathways and careers

through employment within the architectural industry and with the management of practice. The subject addresses résumé writing and putting together a portfolio; traditional and emerging models of practice; office management; managing service businesses; personnel planning, recruitment and staff development; built environment leadership, leadership styles, managing teams across disciplines, internal communication; and power and politics in organisations.

Typical availability

Spring semester, City campus

11504 Architectural Practice: The City

6cp

Postgraduate

This subject establishes the theoretical, historical and social context in which cities are contested sites for development and preservation. Regulations governing change to fabric or use are mechanisms for managing competing stakeholders representing economic and social interests. They sit between urban theory and law and give formal expression to broader cultural beliefs about what makes a good city. This subject seeks to examine regulatory systems within the broader, and highly political, context of the city. The ways in which regulatory and political processes reflect ethical and aesthetic positions is addressed, as well as the opportunities and challenges for architects to act ethically within corporate culture. The relationship between the design professions and planning systems and governance bodies is explored through international and local case studies in lectures, tutorials and field studies. The subject specifically addresses urban theory; regional and urban planning issues; planning policies and procedures; infrastructural planning; governance bodies and regulations – local councils, planning departments; managing community conflict; and the micro-economics of the property industry.

Typical availability

Autumn semester, City campus

11512 Architecture Competition Project

6cp; availability: approval from course director required to undertake the subject

Elective

Postgraduate

This subject gives students the opportunity to undertake a current external architectural competition chosen by the subject coordinator for its significance and suitability for design experimentation. The requirements of the competition brief, including all parameters of registration, presentation, content and submission, are to be satisfied while adhering to a collaborative working method that approximates the professional design studio. The working method for architectural competitions used in the subject includes the formation of a team, the identification of strengths and tasks within the team, the formulation of strategic design directions and the generation of ideas and a process for their selection for further development towards a coherent submission. The subject is only available to students who demonstrate the capacity to work at a high level of design performance in a collaborative setting.

Typical availability

Autumn semester

Spring semester

July session

Summer session

11520 Spatial Research

6cp

Postgraduate

This subject aims to extend students' ability to analyse and understand the nature of space, and to develop forms of critical spatial research through the discipline of architecture and urbanism. Information sources from a broad range of fields are read through a range of specific architectural or urban agendas. The subject emphasises the importance of information retrieval, analysis and intellectual engagement with a range of issues pertaining to our understanding of space, and of understanding the nature of research and developing skills in the formulation of research questions that yield forms of spatial knowledge. The subject gives a coherent and directed introduction to the issue of space, and, via its research essay, aims to address the social, cultural, political, intellectual, and contextual issues relating space and an advanced spatial understanding to the contemporary metropolis as a field in which advanced architecture graduate

designers are engaged. It also sets out to interrogate the relationship between the capacities of the discipline and the broader environment in which its skills are deployed. In so doing it introduces and develops techniques by which information about and interpretation of cities might be found and critically analysed such that the city is revealed in relation to a range of spatial issues.

Typical availability

Autumn semester, City campus

11521 Digital Theory

6cp

Postgraduate

The digital has necessitated a rethinking of the terminology central to architecture (e.g. line, plane, surface, structure, system,) and this subject equips students with an understanding of the territory of computational design through its theoretical vocabulary and relevant histories.

The subject consists of an intensive study of architectural theory and specific technical developments that have influenced the realm of digital creation in advanced architectural design since the 1950s. This subject investigates the theoretical and technical histories principally concerned with research in intelligence, information and complexity theory, material philosophy, and networks and how these have been translated into advanced digital systems in architectural practice. Other issues that are addressed through the above theme's include the relationship between models or organisation and architectural space, material systems and the engagement with technologies of production, form generation and issues of form generally as a result of digital processes and conceptualisation, and the relationship between developments in the sciences and their import to architecture.

Students read both weekly readings and a series of books over the course of the semester, attend lectures and discuss the readings in seminar mode. Assessment is based on a short written review of a section of the weekly reading material, a short written review of a book and a critical essay.

Typical availability

Spring semester, City campus

11522 Master Class Urban Design

6cp

Postgraduate

This subject offers students an opportunity to work alongside a guest instructor of international standing, who has demonstrated both a high degree of recognised design excellence and a strongly articulated position in research and practice within the field. The subject focuses on an intensive design workshop presented and curated by the invited guest architect, urban designer or theorist. It offers students an opportunity to develop particular skills relevant to the research interests of the guest instructor(s). The subject involves both group based and individual study and is held in seminar and intensive mode examining topics and design responses within the wider area of urban design. Students explore a particular position on an aspect of urban design and develop the tools and understanding to apply a range of design techniques used by the guest instructor to creatively execute a focused design project or study. This subject investigates focused issues and processes of urban design directed towards a short study, prototype or design proposal. The subject also includes software training, research background, reading seminars and / or other tutorial based sessions as necessary, to prepare students for the intensive block teaching weeks.

Typical availability

Spring semester, City campus

11523 Master Class Design Technologies 1

6cp

Postgraduate

This subject offers students an opportunity to work alongside a guest instructor of international standing, who has demonstrated both a high degree of recognised design excellence and a strongly articulated position in research and practice within the field. The subject focuses on an intensive design workshop presented and curated by an invited guest architect, urban designer or theorist. The subject offers students an opportunity to develop particular skills relevant to the research interests of the guest instructor(s).

The subject involves both group based and individual study and is held in seminar and intensive mode examining topics and design

responses within the wider area of design technology. Spring semester, City campus

11525 Demonstration Project

12cp

Postgraduate

This subject concludes the Master of Advanced Architecture degree and is intended as an opportunity to critically respond to the challenges from the course through a negotiated research project. The project is formulated in consultation with external partners and is carried out by teams of students across the architecture degrees. The aim of the subject is to develop and profess a theoretical position, and to demonstrate its consequences through a concrete situation of public significance. Students demonstrate their capacity over the range of skills introduced throughout the degree, and work together in cross-disciplinary teams to defend their design research outcomes in a significant public forum for comment and review.

The research project must consolidate and extend learning in the area of urban design/ design technologies and the themes considered throughout the degree. Students are responsible for identifying disciplinary specific research techniques, managing the research process and for publicly demonstrating the outcomes of their research project. Students table their research project brief at the end of the Spring semester, formulate a plan for project management and regular meetings with their advisers over the Summer session, leading toward presentation in the week prior to the commencement of the following Autumn semester.

Students are assessed on the creativity and legitimacy of their response to the negotiated project situation and their capacity to demonstrate the application of their learning to the practice context.

Typical availability

Summer session, City campus

11551 Masters Architectural Design Studio 1

12cp

Postgraduate

This subject aims to further architectural design skills through the integration of a specific research agenda that may be tested through project-based speculations. The research agenda comprises of a particular topic selected from a range of discipline areas including, but not limited to, computation and digital design in architecture and manufacturing, material and construction in architecture,

environmental and performance based design in architecture, urban design, and activism and the role of the architect and design within critical cultural discourse. The subject also enhances a critical understanding of architecture as both a discipline with an existing body of knowledge and a set of practices that continuously challenge and add to that body of knowledge. The subject requires the testing of ideas and modes of practice in architectural design, and the production of design proposals that accurately and persuasively convey the most relevant ideas and practices. Masters Architectural Design Studio 1 is the first of four studio subjects required to complete the Master of Architecture degree.

Typical availability

Autumn semester, City campus

Spring semester, City campus

11555 Masters Architectural Design Thesis

12cp
Postgraduate

This subject aims to further architectural design skills through the integration of a specific research agenda of the student's own area of interest that may be tested through project-based speculations under the supervision of an advisory academic. The research agenda is developed by the student as part of a preceding special research project and may include topics such as, but not limited to, computation and digital design in architecture and manufacturing, material and construction in architecture, environmental and performance based design in architecture, urban design, and activism and the role of the architect and design within critical cultural discourse. The subject also develops a critical understanding of architecture as both a discipline with an existing body of knowledge and a set of practices that continuously challenge and add to that body of knowledge. The subject requires the testing of ideas and modes of practice in architectural design, and the production of design proposals that accurately and persuasively convey the most relevant ideas and practices. This subject is the fourth of four studio subjects required to complete the Master of Architecture degree.

Typical availability

Autumn semester, City campus
Spring semester, City campus

12511 Building Technology and Regulation

6cp
Postgraduate

In this subject students undertake a critical examination of building structure, cladding and service systems for a range of building types. The subject covers the following topics: maintenance, life cycle costing and energy efficiency; purpose and application of building regulations; and interpretation of building documentation in the context of property development and management processes.

Typical availability

Spring semester, City campus

12515 Strategic Asset Management

6cp
Postgraduate

A strategic and responsible approach to management of property assets requires the ability to understand and respond to economic and social influences which affect the performance of property through a life cycle which begins with raw land and includes development, management and redevelopment. Marketing and effective property management techniques are examined in this subject as responses to changing economic and social forces in the strategic management of property assets.

Typical availability

Autumn semester, City campus
Spring semester, City campus

12518 Property Transactions

6cp
Postgraduate

This subject looks at the following topics: the nature of the ownership of personal property including intellectual property; the nature of ownership of real property including the related concepts of title, leases, mortgages, conveyancing transactions, and options to purchase; an overview of the law of contract with emphasis on construction industry contracts and joint venture agreements; the law of negligence including liability for negligently given advice or certification, the operation of the statute of limitations; and the manner

in which local government building, planning and subdivision approvals are given including the mechanisms for appeal to the Land and Environment Court.

Typical availability

Autumn semester, City campus
Spring semester, City campus

12525 Property Analysis 1

6cp
Postgraduate

In this subject students study general accounting principles; capital budgeting techniques; discounted cash-flow analysis; risk analysis techniques; interest rate theory and discount rates; traditional and contemporary principles and methods of valuation, advanced capitalisation and other valuation methods; valuation of different classes of property; and sources of finance. A basic knowledge of a spreadsheet program such as Microsoft Excel is assumed. Students need to bring a financial calculator to class.

Typical availability

Autumn semester, City campus
Spring semester, City campus
Summer session, City campus

12535 Development Feasibility and Valuation

6cp
Postgraduate

This subject is designed to foster an understanding of residential property valuation methodology in the context of development site analysis and financial assessment. Students develop a strong theoretical and practical understanding of feasibility studies and how the key decisions relating to property development, financing structures, and financial reporting outcomes are made. This subject analyses the structure and key determinants of financial variables that affect property development projects, provides an understanding of property financing, and examines financial analysis techniques applicable to analysis of property development.

15111 Planning Project Analysis

6cp
Postgraduate

This subject questions the rationale for urban planning and reviewing the need for, and arguments against, regulation. Students are introduced to the form of urban areas and theories of city structure and location as a factor in urban development. Basic frameworks, concepts and tools for analysing and understanding urban problems are investigated, including microeconomics, macroeconomics and urban sociology concepts, in order to develop an elementary comprehension of urban issues. The subject also develops students'

abilities to effectively investigate, analyse and present planning data (written, graphic and oral). Exercises in exploring research methods and data sources for urban planning and management practice include land use and density mapping, data-gathering survey methods, geographic information systems, and skills in using journal and other library resources.

Typical availability

Autumn semester, City campus

15121 Urban Analysis

6cp

Postgraduate

The planning project is centred on a site which is sufficiently large and complex to raise questions of ownership, infrastructure, urban transport, environmental impact, social impact, heritage, regional implications, land use, built form, plan preparation, and development control. The four subjects which make up the project are intended to give students an experiential education in the process of planning, enabling concepts and information from knowledge areas to be integrated at each stage. Students work in groups of between four and eight, emulating planning practice where knowledge and ideas are put into practice, where experience is gained in the techniques and methods of planning, and where the skills of spatial analysis, problem-solving, design, organisation and communication are enhanced.

This first planning project subject requires the analysis of the chosen site, through the documentation of its physical characteristics and its social and environmental context. Students are required to perceive, identify, record, analyse and manipulate patterns and relationships. In addition, they provide a preliminary definition of planning problems, design a project brief and prepare consultancy contracts.

Typical availability

Autumn semester, City campus

15131 Planning Project Visioning

6cp

Postgraduate

This subject explores the management of the physical environment from the perspective of development impact, concentrating particularly upon ecology, hydrology, geomechanics and climate. By examining the management of these physical parameters, students are able to understand the complexity of environmental carrying capacity, evaluate resource risks and comprehend the application of sound principles of ecologically sustainable development in policy and practice scenarios.

Resource management, environmental law and key policy initiatives are investigated in order to build an understanding of how regulatory frameworks are responding to increasing physical pressures. The management of movement is introduced and considered in order to relate development scale and type to transport provision and, conversely, how and why transport constrains development; more generally, the relationship between transport and sustainable forms of development.

Typical availability

Spring semester, City campus

15141 Sustainable Development

6cp

Requisite(s): 15121 Urban Analysis

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This is the second subject in the planning project and requires student groups to produce a vision for the future development of the chosen site, incorporating alternative proposals that respond to some of Sydney's main planning problems. The vision should draw on the assessment of those problems identified in 15121 Planning Project Analysis, and on the site's physical and human site characteristics. The vision should result in a desired kind of place for the site, which may kindle the capacity for positive change. This exercise provides hands-on experience of a key phase of plan-making.

Typical availability

Spring semester, City campus

15142 Property Development Process

6cp

Postgraduate

This subject provides an introduction to the nature of land, property and property markets, with a focus on the different property valuation methods and the property development process. The methods used for property valuations and preparation of valuation reports, cash flow analysis and feasibility studies are covered, with the related concepts and issues found in property development analysis identified. The property development process and issues associated with obtaining a development approval within the planning framework are discussed.

Typical availability

Spring semester, City campus

15143 Group Project A: Urban Renewal

6cp

Requisite(s): 15142c Property Development Process AND 15146c Sustainable Urban Development

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject introduces the practice of planning for large urban redevelopment sites. It involves the development by student groups of a masterplan and associated planning controls for a selected urban renewal site. Approaches to the planning of brownfields and related urban renewal master-planning are outlined. These are supplemented by case studies of urban renewal. Methods of evaluating alternative masterplans are also outlined.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15144 Group Project B: Greenfields Development

6cp

Postgraduate

This subject is a group and project-based subject designed to develop students' skills in planning larger scale urban developments, such as large scale subdivisions or new greenfields developments, involving environmental assessment, design of infrastructure and services, consideration of land use and density controls, etc. Students form into small groups, and develop a masterplan for a larger-scale urban development, including the design and assessment of alternative proposals for the site. Approaches to, and techniques for, the planning of urban expansion are taught including population and household forecasting, constraint mapping, land use zone allocation, urban facilities population thresholds, and street and road layouts.

15145 Development Negotiation

6cp

Postgraduate

This subject develops the communicative skills and understanding needed by planners in managing urban development. It provides an introduction to community participation techniques, negotiation skills and conflict resolution techniques. It develops understanding of the perspectives of developers and other stakeholders in urban development. It introduces the role of ethics in the way planners address development proposals and developer demands.

15146 Sustainable Urban Development

6cp

Postgraduate

This subject provides an introduction to the triple bottom line of environmental, economic and social sustainability in urban development, particularly in relation to ecologically sustainable development. The concepts of eco-footprints and assessment methods for sustainable building and precinct developments are discussed as benchmarks for evaluating sustainability performance. Physical constraints on development including landform, hydrology and ecology are introduced. The causes and urban effects of global warming are analysed. The nature of social and economic sustainability and sustainable urban development are covered, including rating tools for sustainable building and precinct developments, sustainable transport, water sensitive urban design, sustainable energy use, and sustainable practices in national and international case studies. The feasibility of alternative methods for evaluating sustainability strategies is discussed.

Typical availability

Autumn semester, City campus

Spring semester, City Campus

15211 Planning Project Development Assessment

6cp

Requisite(s): 15141 Sustainable Development

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This is the third subject in the planning project and requires student groups to develop at least three land-use options for the site. Each of these options is evaluated on the basis of an analysis of feasibilities, an assessment of impact and an examination of costs and benefits. The aim is to compare and contrast the options and select the most suitable for development, which adequately incorporates elements of the vision developed in the previous stage of the planning project.

Typical availability

Autumn semester, City campus

15221 Urban Design and Management

6cp

Postgraduate

This subject provides a detailed exploration of the principles of the urban design process and best practice in the management of the urban environment. By examining past and present approaches to the management of both the design process and broader urban governance, students are able to gain both a competent perception and the ability to recognise and apply sound principles of urban design and governance. Emphasis is placed on how the form of the public realm responds to social, political, environmental and economic pressures. Particular attention is focused on the promotion and control of urban development and design via regulatory instruments, plans, codes, desired future character statements, policies, etc. The evaluation of development alternatives is considered through cost benefit analysis and the planning balance sheet.

The subject examines changing philosophies of urban management and governance, through the delivery of lectures in political theory and the structures of decision-making and how they have shaped planning and design practice, including the analyses of public participation and community politics.

Typical availability

Autumn semester, City campus

15222 Urban Design

6cp

Postgraduate

This subject provides an introduction to the theory and practice of urban design. It reviews key urban design movements and ideas through to transit-oriented development and new urbanism, and covers the principles of good urban design. It looks at the use of development control plans and other mechanisms to achieve good urban design. It emphasises the actual process of urban design using case studies and practical workshops.

15231 Planning Project Implementation

6cp

Requisite(s): 15211 Planning Project Development Assessment

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This is the fourth and final subject in the planning project and requires student groups to develop a planning solution to allow implementation of the chosen option of the site (selected in 15211 Planning Project Development Assessment). Students are required to produce an appropriate realisation plan, strategy or other 'vehicle' which sets out clear aims, objectives, policies and controls. This vehicle must elaborate the framework for the achievement of the vision and be presented in a professional format with recourse to a high degree of accuracy and legitimacy.

Typical availability

Spring semester, City campus

15241 Urban Economics and Finance

6cp

Postgraduate

The subject presents the basic microeconomic theory underpinning the development of overall urban structures and the operation of land markets within cities, and how this differs from standard models of 'perfect competition' and 'perfect information'. This enables students to appreciate the role of planning in minimising externalities, and in influencing the efficiency of infrastructure such as roads, rail, water supply, waste, power and communications, and social infrastructure including education, health and community services. It also provides an overview of options for financing urban infrastructure, including debt funding backed by taxation, developer contributions, and public-private partnerships. Case studies of alternative methods of funding infrastructure are included to illustrate the key principles involved.

Typical availability

Spring semester, City campus

15251 Spatial Analysis in Planning and Property

6cp

Requisite(s): 15142 Property Development Process AND 15146

Sustainable Urban Development

This subject introduces students to using geographic information systems (GIS) for spatial analysis in property development and planning. Students develop the skills to use standard ArcGIS software to manage and manipulate spatial data, create multidimensional thematic maps, perform simple statistical and other analyses of spatial relationships, and present spatial information in a form relevant to policy, regulatory, and development decisions. The subject introduces demographic, economic, environmental, topographic, and other physical data, and enables students to learn how to use these various data types to solve site analysis, development feasibility, market analysis, master planning, and social and economic planning problems.

15301 Planning Theory and Decision Making

6cp

Requisite(s): 15241 Urban Economics and Finance AND 15142

Property Development Process AND 15146 Sustainable Urban

Development AND 17700 Planning and Environmental Law AND

15222 Urban Design

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject studies and analyses contemporary planning theory (including the notions of democracy, power, governance and neo-liberalism) and advanced planning practice. It allows students to observe, perform and reflect on advanced techniques in the broad themes of ecologically sustainable development, community participation and economic development. Lectures explore the application of planning theory and contemporary planning approaches to: urban economic development, including the establishment of state-private sector partnerships and the fostering of industry clusters; collaborative planning, including efforts to empower people from minority cultures such as Indigenous Australians; planning as part of the overall urban management for environmentally and culturally sustainable development, and the operation of institutional frameworks; and planning for urban regeneration and urban consolidation.

Typical availability

Autumn semester, City campus

15302 Major Project: Methods

6cp

Requisite(s): 15143 Group Project A: Urban Renewal AND 15144

Group Project B: Greenfields Development AND 15145 Development

Negotiation AND 15241 Urban Economics and Finance

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject, together with 15303 Major Project: Analysis and 15304 Major Project: Outcomes, develops core skills that give students the ability to successfully complete rigorous and original planning problem-solving exercises. In this subject, students produce a literature

review of their chosen planning problem, as the first of three parts of the major project (the other two parts are completed in Major Project: Analysis and Major Project: Outcomes). The literature review both identifies contemporary analyses relating to the problem, and places the problem into the context of wider planning issues. The literature review critiques contemporary planning practice relating to the problem, and thus develops students' ability to constructively reflect on the validity of current planning methods. Students develop an understanding of relevant research approaches and analytical techniques used in problem solving. The subject is undertaken primarily via self-direction, but students are carefully guided by their supervisor and meet on a regular basis for tutorials. The subject also incorporates seminar discussions.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15303 Major Project: Analysis

6cp

Requisite(s): 15302 Major Project: Methods

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject, together with 15302 Major Project: Methods and 15304 Major Project: Outcomes, develops core skills that give students the ability to successfully complete rigorous and original planning problem-solving exercises. In this subject, students produce an analysis of the causes and effects of their chosen planning problem, as the second of three parts of the major project (the other two parts are completed in Major Projects: Methods and Major Projects: Outcomes). Students produce a report which identifies the nature of the planning problem, the causes which give rise to this particular problem and the effects of the problem, in terms of the environmental, economic and sociocultural consequences. This allows students to evaluate the extent of the problem and the potential stakeholders involved in addressing the problem, and develops student abilities to reflectively assess the nature, causes and effects of urban planning problems from a holistic perspective that incorporates the physical environment, the economy and society. The subject is undertaken primarily via self-direction, but students are carefully guided by their supervisor and meet on a regular basis for tutorials. Students attend a seminar, where they defend and debate their report findings and their implications for the next stage, the elucidation of practical solutions.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15304 Major Project: Outcomes

6cp

Requisite(s): 15303 Major Project: Analysis

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject, together with 15302 Major Project: Methods and 15303 Major Project: Analysis, develops core skills that give students the ability to successfully complete rigorous and original planning problem-solving exercises. In this subject, students produce a report describing a solution to their chosen planning problem, as the third of three parts of the major project (the other two parts are completed in Major Projects: Methods and Major Projects: Analysis). This report is the culmination of the major project. Students consider and interpret their findings from the previous two stages to provide the basis for a solution to the chosen problem. Students then develop and deliver a viable solution(s) to the problem in the form of a comprehensive report. This enhances students' abilities to develop their own considered responses to contemporary planning. The subject is undertaken primarily via self-instruction, but students are carefully guided by their supervisor and meet on a regular basis for tutorials. This provides an opportunity for the identification, presentation and discussion of creative solutions to planning problems.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Summer session, City campus

15311 Managing Complex Projects

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This is a scenario and problem-based subject delivered through an intensive workshop and supported by online learning materials. It integrates and applies knowledge and skills focusing on project integration, including initiation, planning, implementation, delivery and post-implementation review of a project within a changing and ambiguous organisational environment.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15312 Communication and Critical Thinking

6cp

Requisite(s): 15315c Project Management Principles

Postgraduate

This subject focuses on developing the ability to critically apply a diverse range of communication styles, structures and techniques in a project environment. The subject material is delivered through a series of practical exercises in small teams in the workshop, before culminating in an individual assignment which students use to demonstrate their critical communicative ability. Communication, and the ability to think critically about your own as well others' styles, impacts on project management; this subject helps to develop this vital project management competency.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15313 Project Procurement and Risk Management

6cp

Requisite(s): 15315c Project Management Principles

Postgraduate

This subject provides an understanding of the procurement theory applied to managing a project and the associated risks. The areas of contract law, statutory regulations, legal relationships and negligence are explored. The principles of managing risk on a project are covered through a review of the Australian Standard as it applies to a project environment. Students work in teams on a case study during the workshop and independently on other assessment tasks. This subject will not be offered after 2012.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15314 Project Implementation

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is the in-depth simulated implementation of a project, based on a complex real case study. Students work to deliver the project in teams, reacting to simulated project changes in client demands. This subject focuses on embedding and integrating standard project management capabilities that were introduced in the foundational-level subject. Students work in teams to develop a business case during the block workshop and independently on specific tasks.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15315 Project Management Principles

6cp

Postgraduate

The theory of the nine project management knowledge areas are explored by students when applied to a real-life industry project. Emphasis is given to the project being delivered according to the five project management process groups to demonstrate the students' ability to initiate, plan, implement and deliver a project while monitoring and controlling. Students work in an interactive forum to present the team project and work independently on individual assessment tasks outside the block attendance workshop.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15316 Project Management Knowledge Areas

6cp; full attendance at the block workshop is compulsory

Requisite(s): 15315c Project Management Principles

Postgraduate

This subject explores and develops the key concepts and techniques necessary to understand and practice the core project management competencies of time, cost, risk and quality management. Topics include activity definition and duration estimating, schedule development and control, resource planning, feasibility analysis, cost estimating; budgeting and control, risk identification; analysis and management and quality planning; assurance and control. Project performance management and reporting is examined in relation to these competencies. Students work independently and in small groups on a range of assessment tasks and have the opportunity to attend an introductory Microsoft Project tutorial.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15323 Development Management

6cp

Postgraduate

This subject examines the economic and political framework within which development occurs, the phases of initial project development and the necessary technical tools to carry out a full feasibility study for a development proposal; planning, approval and financing considerations; and strategies to deliver value for money during the development phase.

Typical availability

Spring semester, City campus

15324 Facility Obsolescence

6cp

Postgraduate

This subject examines facility obsolescence, renewal, refurbishment and adaptive re-use; heritage implications and legislative constraints; the importance of change to organisational growth and continuity; effective change management; organisational churn; and future-proofing organisations through flexible space planning and technology provision.

Typical availability

Spring semester, City campus

15325 Negotiation and Conflict Management

6cp; 100% attendance at the block workshop is required

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject develops students' skills in dispute resolution processes: negotiation and conflict management, mediation and arbitration and their application in dealing with escalation of conflicts in projects. Students work on a series of scenarios in an intensive workshop mode supported by online learning materials and integrate the knowledge gained about various aspects of dispute resolution learnt in a final individual assignment.

Typical availability

Autumn semester, City campus

15326 Project Management Practicum

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject focuses on embedding students' learning from previous subjects in their real-world working lives. Students are required to manage a project outside their university environment. Students develop practice-based learning capabilities through reflecting on their progress applying project management theories to their real-world projects. Students attend regular lectures and share their experiences in supported discussion when presenting progress reports and through interaction in an online discussion forum. A reflective journal and final project management plan are submitted as evidence of the student's ability to apply theory in practice.

Typical availability

Autumn semester, City campus

15327 Managing Project Complexity

6cp; block

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This is a scenario and problem-based subject that is delivered through an intensive workshop. It explores sources of complexity in projects; how complexity manifests in projects; relevant theory informing management decisions; implications for managing risk, schedule, budget; procurement; governance; capabilities needed for management of complex projects; and tools and methods for managing different kinds of complexity.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15330 Program Management

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Program management concerns the harmonised management of a number of projects and other transitional efforts to produce a strategic advantage for organisations. This subject aims to demonstrate how program management can help deliver strategies to realise benefits for an organisation and value for its stakeholders. The subject addresses the cyclic and agile nature of programs. It explains how strategic objectives and stakeholders' expectations are used to select and prioritise a number of interdependent actions based on their contribution to benefits and their achievability. Students are then shown how to allocate and prioritise resources between actions that have been selected to deliver new capabilities to the business. Program maturity, decision management, stakeholder engagement, governance, as well as the program architecture is also discussed. During the block workshop, students work in teams and independently analysing a real-life case study to demonstrate an understanding of program management principles.

Typical availability

Autumn semester, City campus

15331 Project Portfolio and Program Management

12cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Organisations that adopt projects as a means to achieving change and delivering results often find it difficult to prioritise projects and to make best use of their resources. Additionally, many recent surveys have demonstrated that project backlog is a major issue in Australia. Portfolio management is a management approach that aims to align project efforts with the corporate strategy and optimise the efficient use of resources throughout the organisation.

This subject focuses on two aspects of the management of portfolios: the selection and prioritisation of projects, based on contribution to organisational benefits and achievability; and the allocation and prioritising of resources between those projects that have been chosen so that they can deliver the expected benefits.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15332 Strategic Project Management

12cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject examines managing complex projects (such as infrastructure, merger acquisition, strategic development and alliances) from the idea to the operation stage. Topics include presentation use of a meta-method for structuring, analysing, solving socioeconomic problems, and deciding under uncertain conditions. It uses both quantitative and qualitative approaches, systems thinking and system dynamics in project scenario modelling.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15333 Managing Organisations by Project

12cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject explores organisational design, re-engineering, implementation and improvement strategies for organisations managing or willing to manage by using projects. Topics include organisation theory overview, competence management and building learning organisations, change management, knowledge management, information systems, and quality issues focusing on creation of value, continuous improvement and maturity models.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15335 Project Appraisal and Finance

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is an in-depth appraisal for appraising and financing a simulated project based on a complex real-life case study. Students work to build a business case for the project in teams, reacting to simulated project changes in client demands. This subject focuses on embedding and integrating standard project management capabilities that were introduced in the foundation-level subjects of the Master of Project Management course. Students work in teams to develop a business case during the block workshop and independently on specific tasks.

15336 Systems Thinking for Managers

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The subject introduces the concepts of systems to help address management problems. It examines both hard and soft systems thinking approaches to develop an understanding of the interrelationships between various elements of a project and the environment in which they are executed. It equips students with systems diagnosis, systems thinking and business modelling tools to analyse issues arising in projects and design ways to maintain internal stability within a project while increasing its adaptive capability, and to deal with factors affecting the project due to factors beyond its control in its external environment.

Typical availability

Autumn semester, City campus

15337 Specialist Project Study

12cp

Requisite(s): 15315 Project Management Principles

Postgraduate

This subject provides students with the opportunity to work with selected visiting international or local experts on topics reflecting contemporary developments in project, program and portfolio management. The subject is delivered as a combination of a masterclass, where managers from industry are present, followed by a workshop with the visiting expert where the students can apply what was learned in the class.

Typical availability

Spring semester, City campus

15338 Strategic Procurement and Contract Management

6cp; 100% attendance required at the block workshop

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject focuses on the role of a project manager to procure goods and services and its timely provision for a project on behalf of a principal or client. It provides an overview of the laws relating to corporations, intellectual property, employment and contracts used in projects. It enables students to understand the law of contracts and statutory obligations of a purchaser and owner in a project to demonstrate how such obligations of the parties to a transaction might be varied by agreement. Students learn how ethical rules of professional bodies impact on commercial conduct in a project. As a result of knowledge gained through this subject, students learn how to interact confidently with persons who have legal training while dealing with contractual issues arising in projects.

Typical availability

Autumn semester, City campus

15339 Project Performance Evaluation

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

In this subject emphasis is placed on assessment of project performance from the perspectives of delivery of project key success factors and business benefits. Topics also include setting strategic objectives, information support systems and knowledge management in a project environment.

15341 Sustainable Development

12cp

Postgraduate

This subject examines issues affecting the interaction between economic development and environmental protection. It includes an understanding of the importance of ecologically sustainable development and the provision of strategic advice on the most effective use of resources over a project's life cycle. Advanced selection criteria and the measurement of sustainability are discussed in the context of political, legal, ecological and societal considerations.

Typical availability

Autumn semester, City campus

15342 Environmental Design

12cp

This subject examines the design and management of facilities in the context of environmental performance; low energy design solutions, renewable energy sources, energy measurement and conservation strategies, life-cost evaluation, occupancy costs, and asset management tools such as post-occupancy evaluation and environmental auditing aimed at effective facility operation; and embodied energy and recycling.

Typical availability

Spring semester, City campus

15343 Strategic Facility Planning

12cp

Postgraduate

This subject provides the economic evaluation and operation of existing facilities in the context of improved business performance and worker productivity; and an understanding of facility strategies, organisational responsibilities and structures and the appropriate decision-making tools that should be applied. Specific areas of focus include workplace ecology, needs analysis, space planning principles, computer-aided facility management solutions, outsourcing and risk analysis.

Typical availability

Autumn semester, City campus

15344 Facility Performance

12cp

Postgraduate

This subject examines the economics and management of facilities and support services using a whole-of-life approach; property maintenance, financial management, value identification and quality assessment; the impact of taxation on portfolio management, including asset depreciation; due diligence; environmental health and safety issues; and planned retrofitting, refurbishment, adaptive re-use and implications for business continuity.

Typical availability

Spring semester, City campus

15345 Minor Project

6cp

Postgraduate

This subject requires students to analyse a planning problem and develop a viable solution(s). Students analyse the causes which give rise to this particular problem and the effects of the problem, in terms of environmental, economic and socio-cultural factors. They then develop a creative solution to the problem, drawing on existing literature as appropriate. The subject is undertaken primarily via self-direction, but students are carefully guided by their supervisor and meet on a regular basis for tutorials.

15346 Governance and Leadership of Project Management

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The subject aims to examine the concepts of project governance at three levels within the project-based organisation: the board, the context within which projects thrive, and the project. Governance in this context includes the governance of portfolios and programs. The subject introduces students to modern concepts of governance of project management. Leadership theories are reviewed and students are introduced to the competencies of project leadership required to support effective governance of project management.

Typical availability

Spring semester, City campus

15347 The Project Organisation: A New Organisational Model

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines how an organisation can use a 'project approach' to generate value for its stakeholders in a rapidly changing and fast-moving economic context, while sustaining long-term competitive advantage. Students learn how organisations are increasingly using project, portfolio and program management, combined with project/program management offices (PMO) to manage their change activities. Such organisations are now commonly referred to as 'Project Organisation' (PO). Students are exposed to different organisational models and trends through real-life case studies, that demonstrate how an integrated and dynamic PO can be developed to sustain competitive advantage. In the block workshop, students work independently and through team activities to demonstrate an understanding of the PO concept.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15348 Commercial Management of Projects

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

A scenario and problem-based subject delivered through an intensive workshop and supported by online learning materials. The subject focuses on the business aspects of Project Management. It is aimed at meeting the needs of managers in environments that require an emphasis on project financing and profit and loss margins. The subject includes a focus on organisational-level risk management, gateway and approval processes, and covers the different contracting structures required to address the needs of a variety of contexts.

15349 Integrated Project Delivery Management

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject focuses on the management of the interdisciplinary (specifically, architectural, engineering design and construction management) aspects of construction projects. The subject uses the preparation of a construction management plan for a real project by setting up appropriate responsibilities between the various parties involved in the project and integrating the efficient and effective use of data, information and knowledge throughout the project life cycle. The subject focuses on system integration management of construction projects using an interdisciplinary teamwork perspective.

15350 Professional Project Practice

6cp

Requisite(s): 15315 Project Management Principles AND Cross-institutional studies

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject focuses on the professional aspects of project management. It aims to develop an understanding of the importance of professional status through the formal acquisition of knowledge, standard practices and regulations. The subject includes a focus on the role of the project manager in this developing profession through self-regulation, codes of conduct, bodies of knowledge and competency standards. The subject sits within the advanced stream in the Master of Project Management and is of relevance to any students interested in developing their level of understanding and application of the professional practice of managing projects.

Typical availability

Spring semester, City campus

15356 Project Performance Improvement

6cp

Requisite(s): 15315 Project Management Principles

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides students with the tools and theories required to develop their reflective capability in a project context. Different methods are explored individually and in groups to make sense of the human and organisational factors that contribute to project success and/or failure. Students apply reflective practices to current and completed projects using specific frameworks to further develop their project management capabilities.

Typical availability

Spring semester, City campus

15456 Industry Project Studies A

12cp

Further information on this subject is available from UTS: Design, Architecture and Building.

Typical availability

Spring semester, City campus

15459 Project Management Methodologies

6cp

Requisite(s): 15315c Project Management Principles

Postgraduate

This subject provides an introduction to PRINCE2, Systems Engineering, and Agile Project Management, three popular complementary alternatives to how project management is represented in the PMBOK® Guide.

PRINCE2® (Projects in Controlled Environments) is an approach to project management that was developed by the UK Government, and is now widely used in the public and private sectors. PRINCE2® is a generic method, that can be applied to projects across a range of industries and scales.

Systems Engineering is an interdisciplinary approach to creating and modifying systems. It emphasises systems thinking to cope with the levels of complexity inherent in most project systems. To think systemically is to recognise that a system is not just its elements, but also the vital inter-relationships between these elements.

Agile is an umbrella term that describes a set of values, principles and practices that improve the way work is delivered. Agile has its origins in Lean manufacturing and has emerged over the past 15 years offering the benefits to project management of increasing value and reducing risk.

15460 Doctoral Thesis: Project Management

0cp

Postgraduate

This subject is the thesis component for students in the Doctor of Project Management course.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15461 Doctoral Thesis: Facility Management

0cp

Postgraduate

This subject is the thesis component for students in the Doctor of Facility Management course.

Typical availability

Autumn semester, City campus

15462 Introduction to Research

6cp

Requisite(s): 36 credit points of completed study in C04006 Master of Project Management

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject develops research skills in Master of Project Management and Doctor of Project Management students and is delivered through online readings and activities. The subject introduces the academic research process to postgraduate students and equips them with knowledge about research strategies, research methodology and methods to prepare them to undertake postgraduate research for doctoral studies; or to undertake small research projects and submit research reports.

Typical availability

Autumn semester

Spring semester

15463 The Research Process

6cp

Requisite(s): 15462 Introduction to Research

Postgraduate

This subject enables Master of Project Management students to conduct a small scale research project and submit a research report for assessment/publication and enables Doctor of Project Management students to prepare a research proposal for their first assessment to confirm their candidature. The focus of this subject is on planning a research project, reviewing the relevant literature, identifying risks associated with ethical issues, justifying the research methodology, designing the research projects, analysing quantitative and qualitative data, and writing a comprehensive research proposal and/or a research report.

Typical availability

Autumn semester, City campus

Spring semester, City campus

15464 Doctoral Thesis: Project Management

0cp

For subject description, contact UTS: Design, Architecture and Building.

15601 Planning for Bushfire Prone Areas

6cp; block

Postgraduate

This subject is designed to provide planning and development professionals, particularly those working in the local government arena, with the necessary skills and understanding to apply the relevant requirements of the *Environmental Planning and Assessment Act 1979*, *Rural Fires Act 1997* and AS 3333959 (Buildings in Bushfire Prone Areas). Severe bushfires over recent years have again highlighted the importance of ensuring that development in bushfire prone areas is carefully planned and controlled to maximise safety. This has been given a high priority by the NSW Government through amendments to legislation and publication of a new guideline, *Planning for Bushfire*

Protection. It is essential that professionals involved in this area have a thorough grasp of both the legislation and planning and design principles involved, as well as an understanding of related aspects of bushfire behaviour and management. This is required not only to produce quality outcomes but also to help protect local councils against claims of negligence in exercising their development control functions.

15602 Social Planning and Development

6cp

Requisite(s): 15604 Local Government Management Principles and Practice 1

Postgraduate

Social planning is all about change and how we manage it effectively - changing populations; changing expectations; how change is resisted or embraced. Local governments are uniquely placed to respond positively to change through strong social planning processes. Councils have a responsibility to their communities to continually scan the broad socio-political arena (which includes all spheres of government and the community) to identify and respond to social issues and opportunities. This subject equips participants to use social planning tools and techniques to deal effectively with change - changing populations; organisations; policies. It encourages holistic approaches to big picture issues as well as local concerns. These approaches are grounded in social justice principles and intentionally embrace systems thinking and new methods of inquiry to encourage practitioners to build on their training and creativity to promote better integration and collaboration in their practice.

15603 Integrated Strategic Planning

6cp

Requisite(s): 15604 Local Government Management Principles and Practice 1

Postgraduate

This subject adopts a multidisciplinary approach that recognises the many different strands of strategic planning in modern local government. While strategic planning had its origins in plans for land use and development, councils must now prepare a wide range of strategies also covering environmental management, social and economic development, infrastructure provision and various aspects of regulation and service delivery. These need to be linked to statutory planning instruments as well as corporate plans and budgets. This subject reviews the principles and concepts underlying all strategic plans; examines the legislative and organisational frameworks within which strategic planning takes place; incorporates case studies of different types of strategic plans; and focuses on some of the ways in which plans may be implemented more effectively. In particular, the subject examines the case study of the NSW Department of Local Government's new proposal for 10-year community strategic plans and what this might mean in practical terms.

15604 Local Government Management Principles and Practice 1

6cp; 24hpw x 2wks, block

This subject introduces the key principles, theories and models that affect management in a local government workplace. It develops an understanding of the background and origins of current local government management practice. The subject explores issues of local democracy, community, service delivery, governance and leadership in local government and the difficulties that confront local government at present and challenges they are likely to face in coming years.

Through dealing with the material in a way that takes learners on the process from theory – practice – application to capacity building, the academic and research skills of students are enhanced.

Typical availability

Spring semester, City campus

15605 Local Government Management Principles and Practice 2

6cp; block

Requisite(s): 15604 Local Government Management Principles and Practice 1 OR 49460 Local Government Management Principles and Practice 1

This subject allows students to build upon the concepts, principles and theories that they learnt in 15604 Local Government Principles and Practices 1 and develop skills necessary to put them into practice.

It requires students to take the knowledge learnt and embark on a series of actions in both the classroom and their workplace.

Students are required to negotiate and develop a series of actions that are valuable to both themselves and their organisation. The subject has a particular emphasis on the research and articulation of ideas and the use of discussion and debate as a tool for future learning.

15606 Vocational Competencies 1

6cp

This subject enables students to develop and undertake an individual program of vocational study in an area of professional competence that builds on their existing skills and previous studies.

15607 Vocational Competencies 2

6cp

This subject enables students to develop and undertake an individual program of workplace learning in a specialist area of professional competence that builds on their existing skills and previous studies.

15608 Corporate Management and Organisational Change

6cp; block (five-day intensive workshop either on or off campus)

Requisite(s): 15604 Local Government Management Principles and Practice 1 OR 49460 Local Government Management Principles and Practice 1

This subject introduces the key legislative requirements for corporate and strategic planning in NSW local government. It builds on the organisational analysis carried out in foundation subjects and requires participants to examine more closely the planning processes that drive various aspects of the council. It requires students to develop a comprehensive knowledge of planning requirements and to clearly understand the interrelationships at play. It is a fundamental knowledge base for the understanding of better 'place management'. This subject is focused on achieving better outcomes through more effective strategic and corporate planning in local government. Its starting point is that councils need to match broadly based, outward-looking strategic planning for the whole of the local community and environment, with more rigorous and outcomes-focused corporate planning for their own operations. The subject highlights models and opportunities to integrate planning processes, strengthen links to budget and financial systems, enhance decision-making for implementation, and improve performance management.

15609 Local Environmental Management

6cp; block (five-day intensive workshop either on or off campus)

Requisite(s): 15604 Local Government Management Principles and Practice 1 OR 49460 Local Government Management Principles and Practice 1

This subject is focused on achieving better community outcomes through more effective integration of the principles and practices of ecologically sustainable development (ESD) into the day-to-day management of a council. This is a highly practical subject, strongly focused on how to achieve better results. It covers a wide range of processes and techniques that improve local government's performance in promoting sustainability and maximising quality environmental outcomes. This is particularly important at a time when both governments and communities have increasing concerns about these issues and higher expectations of local government's performance.

15610 Local Government Leadership: Personal and Professional Skills

6cp

In today's local government environment, leaders need to have more than just intellectual ability and technical know-how. They should also exhibit what is known as emotional intelligence. This is their ability to manage their emotions and those of others, their skill in inspiring performance in others and their ability to lead change, communicate effectively, and build and sustain work relationships.

This subject develops participants' understanding of the leadership issues facing managers in the local government environment. It then focuses on some core leadership capabilities and guides participants through the development of their personal action plan to enhance their leadership skills.

15611 Managing Local Enterprise

6cp

Requisite(s): (15604 Local Government Management Principles and Practice 1 OR 49460 Local Government Management Principles and Practice 1) AND (15605 Local Government Management Principles and Practice 2 OR 49461 Local Government Management Principles and Practice 2)

This subject involves an intensive research-based project. Content is discussed between the student and subject coordinator to best meet individual needs. Students are guided to select an appropriate topic and then carry out research from industry and academic resources.

15612 Building Regulation

6cp

Postgraduate

This is an introductory subject on interpreting and applying the regulatory requirements for dwellings (Class 1) and outbuildings (Class 10) as contained in the Building Code of Australia and the *Environmental Planning and Assessment Act 1979*.

15613 Development Control

6cp

Postgraduate

This subject deals with the basic building blocks of development control, ranging from the legal framework to planning instruments and policies, specific elements of the assessment process, and the workings of the Land and Environment Court. It is designed to complement experience at work and 'on the job' training for those relatively new to the field of development assessment. It provides essential knowledge and skills for effective professional practice, balancing planning law and policy with impact assessment and design factors.

15614 Advanced Development Assessment

6cp

Postgraduate

This subject has a strong practical focus and seeks to promote fresh thinking and improved techniques in development assessment in order to produce better development outcomes. It deals with key themes including interpreting and applying planning instruments; identifying and acting on key issues in assessment; precinct, site and environmental analysis; performance-based assessment and managing the assessment process. It is aimed at more experienced practitioners who see a need to broaden and refresh their practical skills, consider new ideas, and perhaps change their current approach.

15615 Advanced Building Regulation

6cp

Recommended studies: 49277 Building Regulation

Postgraduate

This subject deals with building regulation requirements and performance-based solutions for Class 2-9 buildings under the Building Code of Australia and NSW *Environmental Planning and Assessment Act*. It covers multiple dwellings, commercial and industrial buildings, and provides guidance on up-to-date theory and practice in assessment. Because the subject deals with more complex buildings and issues, students should have substantial experience in building regulation.

15616 Community Leadership Project

6cp; block

Postgraduate

The Community Leadership Project (CLP) is a flexible, project-based subject that enables students to work with community groups to achieve real outcomes. The CLP is a semester-long subject where students work on a community-based project and receive full academic supervision. Students identify a community project and develop a work plan together with expected outcomes with the community group and teaching staff. Ongoing support is provided throughout the semester. The CLP offers students the opportunity to further their personal leadership skills through independent, self-directed learning and to use these skills to benefit the community. Students are also given the opportunity to work alongside other local leaders.

Typical availability

May session, City campus

15617 Team Building and Leadership

6cp

This subject requires students to build and lead a team through a local government hypothetical scenario. Action learning is combined with workshop sessions, coaching and mentoring. Students are guided through a series of steps to build and form a team and they then take the team through a hypothetical local leadership challenge. This is followed by a de-brief, feedback and a critical reflection. This subject allows students to build and enhance their own leadership capabilities and also provide support and encouragement to others. Students keep a logbook throughout the subject and then write up a reflective analysis at the end of the subject.

15618 New Perspectives in Local Government Leadership

6cp

This subject introduces students to a range of perspectives on local government leadership. Drawing from the literature, key government and local government documents, as well as from relevant case studies, the subject explores local government leadership in both theory and practice. The subject covers topics such as civic leadership, public service, public value, ethics, integrity, social capital, leadership skills, innovation risk and due process. It involves workshops, readings, guest presenters and recorded interviews.

15619 Comparative Local Governance

6cp; block, on campus

Requisite(s): 15608 Corporate Management and Organisational Change

This subject introduces students to the key elements of comparative local governance. It addresses conceptions of governance and how they drive public sector representation, service delivery and reform. Notions of public value, public interest, localism and innovation are also discussed in order to map out how these are translated into local government structures and determine the role and purpose of this level of government. International and interstate examples of local government models and legislative frameworks are used to illustrate the practical articulation of these concepts. Case studies are used in order to identify lessons for Australian local government.

Typical availability

December session

15620 Local Governance Project

12cp

Requisite(s): 15619 Comparative Local Governance AND 15621 Research in Local Government

This subject develops core skills that enable students to conduct rigorous and original problem-solving in the local government context. In this subject students produce a substantial report describing applied solutions to their chosen local governance issue. Local governance comprises a set of institutions, mechanisms and processes through which citizens and their groups can articulate their interests and needs, mediate their differences, and exercise their rights and obligations at the local level. It is broader than local government, which comprises the administrative organisation and elected representatives, and incorporates the participation of a wider set of actors in governing a community such as the private sector, community groups and other key stakeholders.

Students are required to identify a local governance topic which has significance to the contemporary local government sector, and which they have learned about and explored in previous Master of Local Government subjects. They produce a literature review which identifies contemporary analyses and places their issue in the broader local government context. They also need to conduct some practice-based research which identifies current practice, stakeholder perspectives, and a range of practice and policy options for local government. Finally the subject requires students to design their own considered responses to their chosen topic. This subject is undertaken primarily through self-instruction, but students are carefully guided by their supervisor through regular feedback and tutorials. A seminar is incorporated in which students defend and debate their work with peers and other reviewers.

Typical availability

Autumn semester

15621 Research in Local Government

6cp; block, on campus

Requisite(s): 15608 Corporate Management and Organisational Change

Utilising research in a local government context can be an important tool in improving capacity and outcomes. Research can generate new knowledge that improves service delivery, challenge or shed new light on existing attitudes, values and practices, or develop new perspectives and innovation. This subject enables students to become critical users of research outputs through developing their skills in interpreting and applying findings. This includes developing:

- a better understanding of research: the subject introduces conceptual frameworks and methods for research and enables students to determine which approaches are best suited for the investigation of different typologies of research questions
- a stronger capacity to use research to improve practice: the subject strengthens students' abilities to use research findings to inform policy development and local government practice
- strategies to strengthen local government's evidence-base for decision making
- better design of research questions for the development of project briefs: students develop their skills in designing research briefs, and in assessing responses to these briefs in terms of proposed methodologies and outputs, and how they are used
- stronger research skills: the subject covers basic research skills such as how to use databases, referencing techniques, and how to carry out literature reviews and basic interviews.

Typical availability

Spring semester, City campus

15622 Enhancing Local Government Service Delivery

6cp; block, on campus

Requisite(s): 15604 Local Government Management Principles and Practice 1

The role of local government in providing services has become broader and more complex over the last decades as community expectations have increased and other levels of government have devolved various functions.

The NSW Integrated Planning and Reporting Framework and IPART (Independent Pricing and Regulatory Tribunal) recommendations for rate rise variations have highlighted the need for councils to rigorously examine their services to find productivity improvements and ensure 'value for money' for their ratepayers. More than ever, councils are looking for ways to ensure the mix and quality of services they provide are relevant to their communities, and are financially sustainable.

This subject has been designed to help meet these challenges through building understanding and skills in reviewing and transforming service delivery. After completing the program, participants are able to assist their organisations through improving service outcomes, reducing costs and generating additional income.

Typical availability

May session, City campus

15903 Thesis (Quantity Surveying)

0cp

Further information on this subject is available from UTS: Design, Architecture and Building.

Typical availability

Autumn semester, City campus

Spring semester, City campus

16072 Industry Economics

6cp

Requisite(s): 16125 Built Environment Economics
Undergraduate

This field of economics is concerned with the relationship between the strategic behaviour of firms and the industry and markets they compete in. The structure-conduct-performance framework is explored and related issues such as market power, entry and exit are discussed. The subject provides students with an understanding of how economists analyse industrial structure and firm conduct as well as a basic knowledge of how competition policy is used to promote competition and safeguard consumers' interests. Topics include game theory and firm strategies such as advertising, product

differentiation and price discrimination. Issues in the economics of imperfect competition, such as barriers to entry, collusion, switching costs, market structure and regulation, are also covered, as are the impact of technology and the role of standards and network effects.

Typical availability

Spring semester, City campus

16074 International Construction

6cp

Undergraduate

This subject aims to introduce students to construction industry structure, practices and methods of construction adopted in various parts of the world. The subject covers current practices and future trends in various countries and international approaches to construction procurement, management practices and construction resource availability, requirement and usage. It also covers the impact of local economic, labour and technical parameters on construction management; staffing for international projects; and areas of competitive advantage in international construction.

Typical availability

Spring semester, City campus

16075 Sustainable Building Technology

6cp

Undergraduate

This subject aims at providing the student with the skills necessary to evaluate the embodied energy and energy efficiency of existing construction methods as well as introducing alternative and more energy efficient methods. It also covers the issues surrounding recycling of building materials and alternative energy sources and issues affecting the interaction between economic development and environmental protection. It includes an understanding of the importance of ecologically sustainable development and the provision of strategic advice on the most effective use of resources over a project's life cycle. Advanced selection criteria and the measurement of sustainability are discussed in the context of political, legal, ecological and societal considerations.

Typical availability

Autumn semester, City campus

16076 Building Assessment

6cp

Undergraduate

The subject aims to provide students with the skills necessary to assess the technical condition of new and existing buildings. Methods appropriate to each of the various building components (including services) are covered. The subject also covers the assessment of the technical condition of existing buildings and the impact of that condition on possible future use of the building, detailed knowledge of the construction methods used in the past and the likely deterioration with time that would be expected of the building elements.

Typical availability

Autumn semester, City campus

16077 Advanced Construction Technologies

6cp

Undergraduate

This elective subject examines the structure and performance of various building structures (such as space frames) which are not generally covered within the core part of the program. It also looks at innovative building systems and examines issues such as the performance of buildings under unusual loading conditions and in fires. The subject also considers the latest developments in construction technology both within Australia and overseas. Students are required to evaluate these techniques to identify their applicability to the local building industry.

16078 Fire Dynamics

6cp

Undergraduate

This subject covers basic fire engineering fundamentals – problem-focused and applied-learning techniques in the areas of fluid dynamics, mass transfer and heat transfer.

16079 Performance-based Certification

6cp
Undergraduate

This subject teaches students to assess and understand the intent of codes and regulations. It also covers regulatory making processes and drafting of building regulations, the Building Code of Australia, performance versus prescriptive provisions and alternative design solutions, case studies, the certification process, the certification of major buildings, specific fire design processes, and procedural requirements of the Fire Engineering Design Guidelines.

16080 Fire Safety Systems

6cp
Undergraduate

This subject covers in detail all the fire safety subsystems and terms of their contribution to life safety, property protection, contents protection, etc., regarding their criteria, performance, operation, maintenance and control; including case studies.

16081 Human Behaviour in Fire

6cp
Undergraduate

This subject looks at various issues to do with human behaviour in fire. Topics covered include occupant characteristics, cues, response, egress simulation and design, egress systems, wayfinding, tenability criteria, design methodologies and verification.

16082 Expert Witness

6cp
Undergraduate

This subject comprises experience at giving expert testimony. Topics include the purpose and role of an expert witness, the context within which expert testimony is delivered, rules of evidence and natural justice, examination and cross-examination and the law relating to consultants in the construction industry. Students research a particular area of dispute, prepare a written report and participate in a mock tribunal hearing.

16083 Evolution of Technology

6cp
Undergraduate

The focus of this subject is the exploration of the history of technology and the role of invention and design innovation in the process of economic growth and social development. An introduction to chaos theory and complexity and the evolution of technology brings together two of the most potent forces in our history for exploration and analysis. The subject evaluates technology in the modern context of the sciences of complexity. The dialectic between technology and evolution is considered.

16084 Construction Practice Project

6cp; 3hpw (workshop) and may include fieldwork.
Undergraduate

In this subject students explore areas of interest related to the special projects content through a self-directed learning contract or, when offered, intensive workshop mode. The areas for study within the special projects are construction management theory, construction technology or case study. This flexible learning approach allows students to further examine these areas of study in greater detail, or to explore another issue relevant to the topic that has an application to their academic and career development. Projects that are offered may respond to special conditions within the community and/or faculty. The range of projects is limited to the capacity of the program and the academic supervisor to facilitate adequate study conditions and to offer support to the students. Enrolment in this subject is granted upon negotiation with the course director and students must demonstrate that they have a viable project, study plan and appropriate academic supervision.

Typical availability

Spring semester, City campus

16085 Building Control and Regulations

6cp
Undergraduate

This subject provides students with an understanding of the NSW building control system and the technical requirements of the Building Code of Australia.

16103 Materials Science

6cp
Undergraduate

This subject introduces students to the properties, behaviour and testing of construction materials and the principles of heat, light and sound as they apply to building design. Students explore the important link between ecologically sustainable design and construction material choice during the design process. This includes an examination of the durability and life-cycle of construction materials and the embodied energy and energy efficiency of various design options and construction methods.

Typical availability

Spring semester, City campus

16104 Preparatory Studies

6cp
Undergraduate

This subject helps students to develop professional communication and computing skills. It covers basic research methodologies including library skills, information gathering, written communication skills, and academic and essay/report writing. It also includes oral presentation skills, industry orientation and basic technical drawing skills.

Typical availability

Autumn semester, City campus

16105 Cost Management 1: Measurement

6cp
Requisite(s): 16109 Construction Technology 1
There are also course requisites for this subject. See access conditions.
Undergraduate

This subject examines the principles, procedures and practical application of construction quantities measurement. It commences with an overview of the importance of and the use and application of construction quantities. Students carry out a series of detailed exercises in construction quantities calculation, measurement and description utilising electronic CAD/BIM technology. The Australian Standard Method of Measurement of Building Works is used as the main measurement standard but students explore the differences in approaches to measurement for builders quantities, estimates, cost planning and other forms of quantities.

Typical availability

Spring semester, City campus

16106 Drawing and Surveying

6cp
Undergraduate

In this subject, detailed instruction is given in manual drafting and graphic skills and the reading of construction drawings. Students are introduced to CAD work using 2D CAD packages. In terms of surveying, the subject covers the process of setting out works; extractions of information from surveying drawings, levels and contours; the choice of setting out techniques; the use of tape, level, theodolite and optical plummets; the NSW land title systems and the powers of public authorities. Fieldwork involving the use of building surveying equipment is undertaken.

Typical availability

Spring semester, City campus

16107 Planning and Design Process

6cp

Undergraduate

This subject introduces students to the necessary skills and considerations for planning and design processes. It covers: design principles, building regulations, approvals processes (DA, BA), environmental impact of buildings, integrated design, contextual issues which relate to human impact on the environment including environmental impact statements; economic theories of land use including urbanisation; effects of controls; provision of services; rehabilitation and renewal; welfare provision; transportation; decentralisation; heritage considerations; environmental law and procedures; powers of environmental protection agencies; global warming and ozone depletion; international conservation issues; and policy strategies and initiatives.

Typical availability

Spring semester, City campus

16108 Introduction to Law

6cp

Undergraduate

This subject is an introduction to the legal system in Australia including sources of law, the court system and the legal personnel. It includes a detailed study of contract law and an outline of criminal law, civil law, industrial law, insurance law, dispute resolution, property law and the law of business associations.

Typical availability

Autumn semester, City campus

16109 Construction Technology 1

6cp

Undergraduate

This subject examines construction technology for single dwelling (Class 1A) residential buildings. Students are introduced to construction terminology and typical construction / design details and their components. The major elements in the residential construction process (site considerations, foundations, footings, floors, walls, roof framing and coverings, windows and doors, internal linings and joinery, cladding, finishes and landscaping) are examined in detail. Examples of alternate and innovative forms of construction are provided. Basic structural principles are explained throughout the subject and students are introduced to basic residential building services (hydraulics, electrical and fire protection systems). Students are also introduced to the main building regulations / codes governing residential construction, such as the Building Code of Australia and Australian Standards.

Typical availability

Autumn semester, City campus

16123 Introduction to Property

6cp

Undergraduate

Through the delivery of lectures, seminars and case studies, this subject gives an introduction to property studies. It introduces the various property professions, the property market, property investment analysis and the methodology and technical tools used for valuing real estate.

Typical availability

Autumn semester, City campus

16126 Appraisal and Statistics

6cp

Undergraduate

Appraisal and statistics provides students with the elementary tools needed in undertaking and analysing property-related mathematics and statistics. The mathematical component encompasses the business application of percentages, compound interest and annuities. The majority of the subject is focused on statistical concepts and applications.

Typical availability

Spring semester, City campus

16127 Building Technology

6cp

Undergraduate

This subject introduces students to the building and construction industry technology discipline with the focus on the property sector. The subject is divided broadly into two component parts. The first component acquaints the student with the nature of building construction by treating the building as a series of interconnected systems and components. The second component acquaints the student with the nature of multistorey, multi-occupancy residential construction, industrial, commercial and high-rise construction by treating the building as a series of interconnected systems and components.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Winter session, City campus

16129 Forensic Trust Accounting

6cp

Requisite(s): 16124c Accounting and Business Management OR

16264c Property Accounting and Financial Management

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject incorporates the assimilation of accounting and governance principles with an emphasis on trust accounting under the relevant statutory and regulatory requirements. Students develop trust accounting and bookkeeping skills and knowledge to accurately maintain the appropriate accounting records. Students are introduced to analytical and critical thinking skills with regards to fraud detection.

Typical availability

Spring semester, City campus

16137 Digital Built Environment

6cp

Core

Undergraduate

This subject provides students with an introduction to global digital technologies that are revolutionising society and business practices with a focus on leading edge digital technologies used in planning, designing and constructing the built environment. The key technologies addressed include geographical information systems (GIS), building information modelling (BIM) and spatial analysis. The use of these technologies to optimise project information flow and management are explored and key planning and project management software systems covered. Students are introduced to the concept of virtual projects and remote project management. The subject also addresses the main industry issues, challenges and opportunities related to the development and practical application of these digital technologies.

Typical availability

Autumn semester, City campus

- Academic video: www.youtube.be/orVXAFKULIA

16138 Site Establishment

6cp

Requisite(s): 16204 Construction Technology 2 OR 16265

Construction Technology 2

Undergraduate

This subject examines the technology and processes involved in construction site establishment and operation and site surveying. The changing nature of the site as construction evolves is also explored. The key issues surrounding site excavation are also explored and include maintaining faces of excavation, shoring, underpinning, piling and other sub-strata operations. The design and erection of temporary structures to support construction works during the course of a project are examined in detail. Students are introduced to site

surveying including advanced set out and levelling skills, setting out using theodolites and a thorough background in all building marking out and location techniques. Safety requirements and legal liabilities form a thread through the whole subject.

Typical availability

Autumn semester

16203 Cost Management 2: Estimating

6cp

Requisite(s): 16105 Cost Management 1: Measurement

Undergraduate

This subject examines estimating practices and techniques typically used by contractors. Construction pricing underpins the subject and includes breaking construction costs and quantities into labour, material, plant, sub-contract and indirect cost components. The differences in quantity-related, time-related and fixed costs are explored. A series of tutorials and exercises in quantifying and pricing construction work items and activities are carried out by students. The subject then looks at more strategic estimating areas such as tender preparation, the use of builder's bills of quantities, obtaining and checking sub-contractor quotations, pricing preliminaries and determining margins for profit and overheads. Estimating software applications are utilised throughout the subject and students are exposed to leading edge practices that involve integrating construction cost estimating into building information modelling (BIM) systems.

Typical availability

Autumn semester, City campus

16205 Services 1

6cp

Undergraduate

This subject provides an introduction to electrical, airconditioning, vertical transportation, and fire protection services and systems, covering terminology, design and construction requirements. It also includes an introduction to intelligent buildings and an in-depth study of coordination, integration, installation and inspection of services, and safety and access requirements.

Typical availability

Spring semester, City campus

16206 Structures

6cp

Requisite(s): 16109 Construction Technology 1

Undergraduate

This subject examines the role of structural engineers and the structural knowledge that project managers require to effectively manage and supervise projects and to be able to interact with and manage structural engineers as part of the design team. This includes the development of an understanding of structural principles by introducing students to the loads acting on simple and complex structures and demonstrating how these loads are supported by structural members and transmitted to footings. Students are provided with an appreciation of the structural behaviour of common structural systems and temporary structures through the calculation of internal structural forces and moments. Students also develop an understanding of typical structural design documentation with a focus on structural drawing and specification details.

Typical availability

Autumn semester, City campus

16207 Cost Management 3: Cost Planning

6cp

Requisite(s): 16203 Cost Management 2: Estimating

Undergraduate

This subject covers the principles and practices of construction economics involving project scope management, the establishment of project budgets, preliminary estimating, cost planning, cost modelling and elemental building cost analysis. The role of the cost planner in the project design team is investigated and the principle of 'designing to a cost' rather than 'costing a design' is emphasised. The differences between project price, cost and value are identified. Scope

management is a critical part of the cost planning process and the principles and practices of project scope identification, management and control are examined in detail. The subject then examines long-term operational costs and environmental impact through the concepts of life-cost planning and multi-objective decision analysis. Cost planning exercises utilising cost data bases, historical building cost data, price indices and leading edge cost planning software are implemented to strengthen student understanding. The subject concludes with an overview of the integration of cost planning practices with building information modelling (BIM) systems.

Typical availability

Spring semester, City campus

16209 Building Science/Materials 2

6cp

Requisite(s): 16103 Materials Science

Undergraduate

This subject looks at advanced principles of heat, light and sound as they apply to building design. It examines in detail issues such as the embodied energy of materials and the life cycle of building materials as they relate to sustainable development. The subject also focuses on the material properties of concrete, soil and rocks and the testing thereof.

Typical availability

Spring semester, City campus

16212 Digital Design and Construction 1

6cp

Requisite(s): 16137 Digital Built Environment

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject examines 3D design coordination, construction modelling and documentation. It investigates the role of the project manager and construction contractor in digital design and construction, and explores the knowledge they require to effectively manage, supervise and participate in construction projects enabled by building information modelling technologies. The subject familiarises students with synchronous and asynchronous design communication and collaboration tools and their impact on building design and production. Students develop an understanding of the extent to which information modelling systems facilitate the generation, representation, rationalisation, materialisation and fabrication of design artefacts in collaborative and multidisciplinary design settings. Students are therefore provided with a foundation in 3D modelling principles and procedures before developing skills in the coordination of the design work of project team members using linked models. Students develop an understanding of how to read and coordinate architectural, structural and service design models; undertake 3D model reviews and interference checking; and learn how to model construction details and produce electronic construction documentation. Technical and communication skills are practised in different digital environments, including computing lab, digital workshop and interactive construction environment. Current issues surrounding the use of building information modelling in construction are discussed.

Typical availability

Autumn semester, City campus

16231 Property Management

6cp

Requisite(s): 16234 Property Valuation

Through the delivery of lectures, seminars and case studies, this subject intensively examines the management of commercial property. It covers the various lease structures, the role of the property manager, including the enforcement of the lease conditions, the statutory requirements, and budgeting and forecasting.

Typical availability

Autumn semester, City campus

16232 Property and Political Economy

6cp

Requisite(s): 16235 Urban Economics
Undergraduate

This subject is designed to allow students to engage with and debate contemporary issues of property and the political economy. It offers an appreciation that the institution of property is a human construct, adapted to meet the changing needs of a particular society at a given moment in time. Taking a property-rights approach to the political economy, issues for current practice are examined including customary tenure, environmental concerns, land taxation, equity and intercultural contrasts.

Typical availability

Spring semester, City campus

16233 Urban Planning Process

6cp

Undergraduate

This subject focuses on the regulation of the land-development process by analysing the nature and necessity for planning. Students are introduced to the contemporary structure of the NSW planning system, enabling an understanding of the plan-making process and the power relations between the State, local consent authorities, the community, and agents of development. A key aim is to allow students to recognise the application of sound planning and design practice to the fields of residential and commercial development.

Note: Students should be aware that the statutory and regulatory regimes which govern planning in NSW are under continuous review. Changes are frequent. UTS endeavours to maintain currency of lecture material but occasionally some items may be obsolete.

Typical availability

Autumn semester, City campus

Spring semester, City campus

16234 Property Valuation

6cp

Undergraduate

This subject is an in-depth study of the role, functions and obligations of the valuation profession and the purposes of valuation. It covers the purposes of valuation and concepts of value and their use in the market place.

The methods of valuation covered include the direct comparison, summation, capitalisation, hypothetical development and residual methods of valuation. It introduces financial theory and the application of the time cost of money.

Typical availability

Spring semester, City campus

16235 Urban Economics

6cp

Requisite(s): 16468 Introduction to the Built Environment
Undergraduate

This subject engages with economics, demographics, geography, planning and political science within property and the built environment. It provides a basis for understanding the forces that shape urbanism, its form and structure and the factors which impact on its viability.

Typical availability

Autumn semester, City campus

16236 Property Cash Flow Analysis

6cp

Requisite(s): 16136 Introduction to the Built Environment OR 16468 Introduction to the Built Environment
Undergraduate

This subject examines application and theory of cash flow analysis; discounted cash flow analysis with computer modelling; working capital management; forecasting and theory; various forms of risk analysis, including sensitivity and scenario analysis with computer skills; and forecasting and validity issues. It introduces forecasting approaches including regression, time series and chaos; validity of forecasting for future property variables in cash flow valuation.

Typical availability

Autumn semester, City campus

16237 Property Taxation

6cp

Requisite(s): 16264 Property Accounting and Financial Management
Undergraduate

This subject analyses various forms of taxation relating to property holdings and property investment; income tax, capital gains tax, depreciation allowances, land tax, stamp duties and goods and services tax; taxation of trusts; negative gearing; and alternative forms of taxation and their likely impacts on the property industry.

Typical availability

Spring semester, City campus

16238 Research Methods

6cp

Requisite(s): 16468 Introduction to the Built Environment AND 16234 Property Valuation
Undergraduate

This subject is designed to give students the skills to select and use appropriate procedures in research and project studies and to understand and manage the various facets of research projects. This subject provides students with the required skills to undertake a number of types of research studies.

Typical availability

Autumn semester, City campus

16257 Advanced Procurement Methods

6cp

Undergraduate

This subject examines the range of methods used when procuring built assets, with an emphasis on the innovative, non-traditional methods found on large, complex projects. The subject contrasts traditional procurement methods introduced in earlier subjects with collaborative procurement methods aimed at reducing the cost of construction and operation, achieving milestones, shortening duration, reducing claims, and improving constructability and innovation. Case studies of major projects are used to identify the issues found with project delivery systems that combine designers, builders, and suppliers into an integrated project team. Designing procurement systems to minimise the risk of collusion and corruption is discussed.

16258 Financing Construction Projects

6cp

Requisite(s): 16125 Built Environment Economics OR 16466 Built Environment Economics
Undergraduate

This subject examines in detail the various financing options for building and construction projects including joint ventures, private finance infrastructure initiatives, international collaborations and project finance options involving government guarantees, off-take agreements and producer payments. The subject gives students a deeper knowledge of project finance methods found in the property and construction industries, so graduates are better suited to industry practice, consistent with intended graduate attributes. The issues covered apply to the project finance techniques, requirements and processes found in construction finance and used for property developments.

16259 Honours Research 2

6cp

Requisite(s): 16661 Honours Research 1 OR 16262 Honours Research 1
Undergraduate

In this subject students develop an understanding of research methodologies. Through the delivery of workshops and individual supervisor meetings, this subject introduces the students to research methodologies. Workshop 1 introduces the students to the concept of research methodology and research approaches. Students are introduced to quantitative and qualitative paradigms and their respective characteristics. The advantages and disadvantages of each approach is discussed. The second workshop involves a presentation to staff and students of their proposed research method. Students work closely with their supervisors to develop a research design and write the methodology chapter of the thesis.

Typical availability

Autumn semester, City campus

Spring semester, City campus

16260 Honours Research 3

6cp

Requisite(s): 16662 Honours Research 2 OR 16259 Honours Research 2

Undergraduate

This subject involves the preparation and submission of an original thesis, which would normally be 8000-12000 words in length. The thesis must comprise the identification of a problem, a thorough literature review of the topic and development of a solution based on a selected research design. The submission should include comprehensive annotated appendices relating to data collection and analysis to support the findings in the thesis.

Typical availability

Spring semester, City campus

16261 Development Management

6cp

Requisite(s): 16231 Property Management

Undergraduate

This subject looks at aspects of the management of projects under development or undergoing major maintenance: client needs determination; procurement methods; design management including cost planning and buildability; and approvals management. It also covers the development of maintenance standards for and estimate of live components of buildings; maintenance budgets; and assessing the effects of design on maintenance and recording operating cycles of plant and equipment.

Typical availability

Autumn semester, City campus

Spring semester, City campus

16262 Honours Research 1

6cp

Through workshops and individual supervisor meetings, this subject takes students through the process of choosing a topic area, developing a specific set of research questions, and completing a literature review to set the groundwork for investigating the research questions. Workshops focus on establishing a rationale for research, developing aims and objectives based on research questions, library search skills, how to structure a literature review, and how to develop an endnote library of sources.

Typical availability

Autumn semester, City campus

16263 Design Team Management

6cp

Requisite(s): 16912 Site Management

Recommended studies: this subject is intended for senior undergraduate or master's-year level students of construction-related disciplines (architecture, engineering or construction management)

Undergraduate

This subject examines management of design teams within multidisciplinary, cross-functional projects. It discusses theoretical models of the design process (including the question of sustainable design) and the practical aspects of design management, including brief formulation and management, value analysis, design team structure, planning and coordination, communication between design professionals, contractual management, management information systems and knowledge management. The use of Building Information Modelling (BIM) and other digital technologies to optimise design team collaboration and performance forms an integral thread through the subject. Core learning material is supplemented with case studies by specialist guest lecturers from various design disciplines.

Typical availability

Spring semester, City campus

16264 Property Accounting and Financial Management

6cp

Requisite(s): 16234 Property Valuation

Undergraduate

This subject provides an introduction to accounting and business management principles and procedures with a focus on the financial structure and performance of construction/property entities. The subject incorporates the fundamental elements which drive a company from a financial perspective. Students learn how to interpret and analyse financial reports including the statements of financial performance and financial position, budgets and cash flows, to help assess the company's performance. Students also learn the principles of depreciation.

Typical availability

Autumn semester, City campus

16265 Construction Technology 2

6cp

Requisite(s): 16109 Construction Technology 1 OR 48340

Construction

Undergraduate

This subject examines construction technology for multiple occupancy, medium density residential buildings. Terminology and construction/design details for typical construction solutions are examined in detail for attached housing, walk up apartments and other medium residential types. The subject explores the main construction systems, processes and principles that construction managers should be familiar with for this type of construction. Students develop an understanding of relevant building regulations and compliance issues. The subject incorporates investigation of alternative construction techniques, materials handling and basic understanding of how services interface with the building.

Typical availability

Spring semester, City campus

16266 Sustainable Urban Design and Development

6cp; 2hpw (lecture), 1hpw x 5 weeks (tutorial)

Requisite(s): 16468 Introduction to the Built Environment

This subject provides an introduction to the environmental impact of urban development and the roles and responsibilities that professionals in the built environment have in reducing environmental problems. The subject commences with an overview of the major global environmental problems and how the built environment has contributed to these problems. The principles of sustainable urban development, planning and design are then explored in conjunction with the roles that professionals in the built environment can play in achieving sustainability. This subject also provides the basis for understanding the processes that shape the built environment particularly in relation to the development and redevelopment of cities. Students are exposed to the history of the city and city development and a general understanding of the environmental and social impacts of urban development. It further shows how built environment professionals can play a more responsible role in resolving some of the current environmental challenges facing our cities. Examination of these issues is underpinned by analysis of contemporary case studies.

Typical availability

Spring semester, City campus

16267 Property Title and Spatial Data Analysis

6cp

Undergraduate

This subject examines the origin and nature of property title and tenure and the issues associated with the determination of the physical extent of property title. Maps, plans and digital information are used in computation and assessment of spatial information in the measure of land and elements of the built environment.

Typical availability

Spring semester, City campus

16307 Project Management Integration

6cp

Requisite(s): 16912 Site Management AND 16317 Risk and Safety Management AND 16913 Time and Quality Management AND 16207 Cost Management 3: Cost Planning
Undergraduate

This subject involves a Capstone Project that provides students with the opportunity to demonstrate and integrate the professional knowledge and skills that they have acquired through their course. Students work in groups to go through the process of procuring a project from inception to completion and also covering the commissioning and operational stages of the project. Students are expected to demonstrate a professional level of preparation, planning, execution, testing and documentation for the project and are expected to meet a number of strictly enforced milestones. They need to demonstrate proactive initiatives in overcoming problems associated with the project. The subject brings together the processes of project management as defined by the Project Management Body of Knowledge (PMBOK) and their interaction within a project life cycle. Project initiation is explored, including project purpose and justification, stakeholder-needs analysis, feasibility analysis, setting project objectives, development and evaluation of alternatives and project definition. Students then address the practical application of project planning, executing, controlling and closing processes. This incorporates the integration of project scope, time, cost, quality, risk, procurement and facilitating processes. Emphasis is placed on effective project teamwork and communication.

Typical availability

Spring semester, City campus

16308 Services 2

6cp

Undergraduate

This subject provides an introduction to hydraulic, security services and systems, intelligent buildings and an in-depth study on coordination, integration, installation and inspection of services, safety and access requirements.

Typical availability

Spring semester, City campus

16313 Building Economics 2

6cp

Undergraduate

This subject examines the financial and economic issues of relevance to the construction industry, including the application of industrial economics within the industry, the measurement of performance, forecasting techniques and the relationship between business and building cycles, and the process of structural change.

Typical availability

Autumn semester, City campus

Spring semester, City campus

16314 Construction Technology 3

6cp

Requisite(s): 16204 Construction Technology 2 OR 16265 Construction Technology 2

Undergraduate

This subject examines construction technology for industrial buildings. Terminology and construction/design details for typical construction solutions for typical industrial buildings such as warehouses and factories are examined in detail. The subject commences with an examination of site sub-strata conditions and soil types and the use of geotechnical analyses to identify specific site conditions. The subject further explores the main structural principles that construction managers should be familiar with for this type of construction. This includes applied structural principles for steel framed construction. Building services technology (hydraulics, electrical and fire protection systems) are also covered. Students develop an understanding of relevant building regulations/codes and compliance issues. The subject incorporates investigation of alternative construction techniques and materials handling issues.

Typical availability

Spring semester, City campus

16315 Structural Behaviour

6cp

Requisite(s): 16206 Structures
Undergraduate

This subject builds on the knowledge developed in 16206 Structural Appreciation by extending the principles developed for timber to the behaviour of concrete and steel structures. The interaction of concrete elements with foundation materials is also given more detailed consideration. Simple calculation techniques are used to illustrate the rationale behind various construction details and special emphasis is given to the structural behaviour of temporary structures.

Typical availability

Autumn semester, City campus

16316 Building Company Performance

6cp

Undergraduate

The objective of this subject is to provide students with a thorough understanding of the financial operations of companies and the factors that affect their financial performance. Students are acquainted with accounting principles, analysis of financial statements, methods of capital budgeting, and preparation of feasibility studies.

Typical availability

Spring semester, City campus

16317 Risk and Safety Management

6cp

Requisite(s): 16912 Site Management
Undergraduate

This subject provides a framework for the management of occupational health and safety (OHS) and risk on construction projects. Safety is one of the most important issues on construction projects and there are stringent legal obligations placed on contractors and construction managers through OHS legislation and other legislation/codes of practice. These requirements are examined in detail as are concomitant workers compensation and insurance obligations. Management practices to ensure and maintain a safe working place throughout the course of a project are covered and students are presented with the many issues, challenges and problems that are faced in achieving this. Effective risk management practices are at the core of safety management and the integration of the two is investigated.

The subject provides an overview of project risk management generally and the main theories of risk causation and implications for management. The techniques and methods used for risk identification, evaluation and response are examined in detail and contextualised to cover the risks typically faced by project stakeholders (including safety). Students are challenged to develop project risk management systems including methods of monitoring and controlling risks utilising risk software applications.

Typical availability

Autumn semester, City campus

16331 Specialised Valuation

6cp

Requisite(s): 16234 Property Valuation AND 16236 Property Cash Flow Analysis
Undergraduate

This subject involves an in-depth study relating to a diverse range of specialised property types and the underpinning factors which lead to the creation of value in the same. The subject also considers special purpose valuations relating to strata and community title, stratum subdivision, heritage property, financial reporting and plant and equipment.

Typical availability

Spring semester, City campus

16332 Investment and Portfolio

6cp

Requisite(s): 16236 Property Cash Flow Analysis AND 16234 Property Valuation
Undergraduate

This subject is an in-depth study of the methods and techniques of investment and portfolio management, and a study of the asset allocation process and risk and return with an introduction to the techniques of investment and portfolio analysis.

Typical availability

Autumn semester, City campus

16333 Statutory Valuation and Compensation

6cp

Requisite(s): (16234 Property Valuation AND 16231 Property Management AND (16123 Introduction to Property OR 16136 Introduction to the Built Environment OR 16468 Introduction to the Built Environment))
Undergraduate

This subject equips students to assess, prepare and defend statutory valuations used for land acquisition, rating and taxing and other court-related purposes including general litigation, family law and equity involving property. The subject is designed to cover the preparation of instructions, statements of evidence and the presentation and delivery of expert evidence.

Typical availability

Autumn semester, City campus

16335 Advanced Valuation

6cp; 1 x 3hrs lecture / workshop weekly

Requisite(s): 16331 Specialised Valuation AND 16236 Property Cash Flow Analysis
Undergraduate

This subject is concerned with the analysis of property investment transactions and the application of this analysis within the process of appraising non-residential investment property and leasehold interests. The subject also involves the application of time value of money theory within the capitalisation and discounted cash flow approaches.

Typical availability

Autumn semester, City campus

16336 Property Title and Tenure

6cp

Requisite(s): (16231 Property Management AND 16123 Introduction to Property AND (16334 Development Management OR 16261 Development Management))
There are also course requisites for this subject. See access conditions.
Undergraduate

This subject covers the origin and nature of property title and tenure and the issues associated with the determination of the physical extent of property title. Maps, plans and digital information are used for the computation and assessment of spatial information in the measure of land and elements of the built environment.

Typical availability

Autumn semester, City campus

16338 International Property Investment

6cp

Requisite(s): 16332 Investment and Portfolio
Undergraduate

Through the delivery of lectures, seminars and case studies, this subject analyses the factors that determine foreign real estate investment; examining the underlying factors that determine the level of such investment with particular focus on Australia and the Pacific region.

Typical availability

Spring semester, City campus

16341 Facility Evaluation

6cp

For further details, contact UTS: Design, Architecture and Building.

Typical availability

Spring semester, City campus

Summer session, Singapore

Winter session, Singapore

16342 Property Cycles and Forecasting

6cp

Requisite(s): (16123 Introduction to Property OR 16136 Introduction to the Built Environment OR 16468 Introduction to the Built Environment) AND (16125 Built Environment Economics OR 16466 Built Environment Economics)
Undergraduate

This subject provides a study of the property market characteristics. It analyses the cyclical nature of property markets, key determinants and provides methods and techniques that can be applied to property market analysis.

Typical availability

Autumn semester, City campus

Spring semester, City campus

16343 Development Case Study

6cp

Undergraduate

This subject examines the processes of generic project management and their interaction within a generic project life cycle. Project initiation is explored, including project purpose and justification, stakeholder-needs analysis, setting project objectives, development and evaluation of alternatives and project definition. Project planning, executing, controlling and closing processes includes practical knowledge and application of the planning processes, such as scope, time, cost, quality, risk, procurement and facilitating processes, including project communication, organisational structures and influences.

Typical availability

Autumn semester, City campus

16345 Property Trusts and Funds

6cp

Requisite(s): 16332 Investment and Portfolio AND 16238 Research Methods
Undergraduate

Through the delivery of lectures, workshops and debates this subject examines Australia's property trust and funds industry, analysing alternative investment structures, their benefits and weaknesses, performance, legal and taxation issues, methods of valuation, while contrasting with similar industry sectors in overseas markets.

Typical availability

Spring semester, City campus

16346 Moot Court

6cp

Requisite(s): 16333 Statutory Valuation and Compensation AND 16234 Property Valuation
Undergraduate

The moot case study is a hypothetical scenario in which students work as a team in the preparation and presentation of a property-related case involving compulsory acquisition or rating and taxing. A scenario is provided in which students respond with a written report and present and argue their position before a panel, tribunal or court.

16412 Cost Management 4: Advanced Estimating

6cp

Requisite(s): 16207 Cost Management 3: Cost Planning
Undergraduate

This subject covers advanced estimating and cost management techniques and procedures used by contractors. This includes bidding theories, tendering practices and cost monitoring, control and remedial action during the course of a project. The practical issues and problems faced by contractors in estimating project costs and securing work are examined in detail as are the strategies used by contractors

to achieve competitive advantage. The subject also explores other decision-making techniques such as value management, cost benefit analysis and multi-criteria. The subject utilises contemporary software applications and explores leading edge industry practices such as electronic measurement, linking automated quantities to estimating databases/systems and the integration of the estimating process with building information modelling (BIM) systems.

Typical availability

Autumn semester, City campus

16421 Construction Law and Professional Practice

6cp

Requisite(s): 16108 Introduction to Law

Undergraduate

This subject is based on the tortious liability imposed by the law upon professionals, some major contractual problems related to the building industry and an outline of employment law and statutory industrial regulation. It also provides students with an understanding of the issues of professional responsibility and practice within the project management discipline, including issues of ethics.

Typical availability

Autumn semester, City campus

Spring semester, City campus

16422 Construction Technology 4

6cp

Requisite(s): 16314 Construction Technology 3 Industrial

Undergraduate

This subject examines construction technology for multi-storey commercial buildings. It commences with an overview of the main methods/systems of high rise construction and materials handling and then examines the typical elements in high rise construction such as concrete framed structures, pre-stressed concrete construction, pre-fabricated construction (such as precast concrete), slip-form and jump-form construction and curtain walling. This is then extended to the internal fitout of high rise buildings. The subject explores the main structural principles and building services technology (hydraulics, electrical, mechanical, security, communication, fire protection and vertical transportation systems) that construction managers should be familiar with for this type of construction. The main building regulations and codes relevant to high rise construction are identified and addressed in detail and students explore issues and difficulties with ensuring compliance.

Typical availability

Spring semester, City campus

16423 Procurement and Contract Management

6cp

Requisite(s): 16467 Built Environment Law and Ethics AND 16912

Site Management

Undergraduate

This subject examines the project procurement systems used in the construction industry and the principles and practices involved in the administration and management of construction contracts. The variety of methods used to procure construction projects are examined in detail. The subject examines common construction contracts used in the industry and explores typical contractual responsibilities and liabilities imposed by these contracts and the issues that emanate from these. Students are given exercises in examining and interpreting general conditions of contract and contractual risk allocation to strengthen their understanding. The subject then examines the principles and procedures of effective contractual claims management including preparation of variations, progress claims and time extension/delay cost claims. This is extended to include the administration and management of subcontract and supply agreements. Cost/time/quality monitoring, administration and control and cash flow forecasting and earned value analysis during the construction stage are then explored in detail. Students are then introduced to conflict management and dispute resolution as an integral part of the contract management role. The subject utilises contemporary software applications and explores leading edge industry practices such as web-based contract administration and the integration of contract administration and information flow with building information modelling (BIM) systems.

Typical availability

Spring semester, City campus

16424 Construction MIS

6cp

Undergraduate

This subject considers the emerging role of information technology in the design, procurement, construction and operation of construction projects. It looks at virtual project teams and the interconnections necessary to enable effective workflows. The subject also covers shared project models and the systems that support them, communication strategies, virtual projects, the use of CAD in realising virtual models, as well as the next generation of software tools and their likely application.

Typical availability

Spring semester, City campus

Summer session, City campus

16466 Built Environment Economics

6cp

Undergraduate

This subject provides an introduction to the structure and performance of the Australian and international economies with a focus on the relationship with the construction and property industries. An introduction to macro and microeconomic theory and concepts and the structure and performance of the Australian and international economies provides a national and international perspective to this subject. The relationships between macroeconomics and the business environment and building cycles are covered through use of interactive examples and case studies. Economic issues and policies relevant to the Australian construction and property industry are covered as well as financial markets, institutions and instruments. Students also develop an understanding of the importance of market structure and the behaviour of firms.

Typical availability

Autumn semester, City campus

16467 Built Environment Law and Ethics

6cp

Undergraduate

This subject provides students with an introduction to construction and property law for the built environment. The contractual, tortious and trade practices liabilities imposed on construction and property professionals are examined and case law examples are used to demonstrate the ramifications of failing to meet legal requirements on projects. Students are introduced to construction contracts and the key contractual provisions, liabilities and responsibilities imposed on parties to these contracts. Property law focuses on the transfer and acquisition of property, property titles, estates and interests in land. Agency, employment and insurance law are also addressed. The subject also provides students with a foundation in legal research and referencing.

Typical availability

Spring semester, City campus

16468 Introduction to the Built Environment

6cp

Undergraduate

This subject provides an introduction to the property market and valuation and the property development process in the built environment. The role and regulation of the various property development professionals are explored with a focus on the role of property valuers and developers, contractors, designers, engineers, project managers, construction managers, quantity surveyors and other project consultants. Students are given an overview of the nature and structure of the property/construction industry and the main issues and challenges facing the industry. Property appraisal processes, including valuation methods and investment analyses, are covered at an introductory level. Students are introduced to the main forms of documentation used in the industry. The fundamentals of report writing, academic writing and professional communication are also incorporated in the subject.

Typical availability

Autumn semester, City campus

16469 Professional Practice

6cp

Requisite(s): ((16123 Introduction to Property OR 16136 Introduction to the Built Environment OR 16468 Introduction to the Built Environment)) AND ()

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject defines the liabilities of design, construction and property professionals. Contractual problems, ethics and issues in the construction/property industry are examined through the use of legal case studies. Legal research, professional codes and conduct and ethical behaviour are a central focus of this subject. Social responsibility and professional ethics for design, construction and property professionals provide a well-rounded foundation for practice in these disciplines. Approaches to ethical thought, including historical and cultural precedents, provide an evolutionary perspective of this subject.

Typical availability

Spring semester, City campus

16470 Digital Design and Construction 2

6cp

Requisite(s): 16212 Digital Design and Construction 1 AND 16913 Time and Quality Management

Undergraduate

This subject examines the practical application of Building Information Modelling (BIM) technologies and processes for the development and delivery of construction projects. The role of the project manager, contractor and the design team in the development and use of building information models is explored in detail. This includes the effective management and control of information contained in discipline-specific 3D models, taking an in-depth look at tools and methods used during the pre-construction and construction phases for construction process planning. Students develop an in-depth understanding of 4D simulation of the planned construction process, visualisation and animation. The subject also examines the issues and problems that are inhibiting the widespread application of timelining and 4D simulation technologies in the industry. Students are presented with the future development of BIM technologies for construction. The impacts that these developments are having on industry are also discussed.

Typical availability

Autumn semester, City campus

16471 Integrated Services

6cp

This subject explores the typical services associated with modern commercial construction projects. The subject covers topic areas such as energy systems (electrical, gas, solar), mechanical systems (HVAC), hydraulic services (water, drainage, plumbing), fire services, vertical transportation (lifts/escalators), communication systems (telecommunications and IT), security systems, environmental systems and 'intelligent building' concepts. This subject identifies the design requirements for each of the services. A holistic examination of services is undertaken through a review of the management of integrating services into a commercial building project.

16631 Construction and Development Process

6cp

For further details, contact UTS: Design, Architecture and Building.

16632 Built Environment Law and Professional Practice

6cp

For further details, contact UTS: Design, Architecture and Building.

16633 Macroeconomics for Property

6cp

For further details, contact UTS: Design, Architecture and Building.

16634 Financial Analysis

6cp

For further details, contact UTS: Design, Architecture and Building.

16641 Property Rights and Landlord Tenant Law

6cp

For further details, contact UTS: Design, Architecture and Building.

16642 Property Investment and Valuation

6cp

For further details, contact UTS: Design, Architecture and Building.

16643 Property Market Research and Analysis

6cp

For further details, contact UTS: Design, Architecture and Building.

16655 Property Finance

6cp

For further details, contact UTS: Design, Architecture and Building.

16656 Sustainable Construction and Development Management

16900 Construction for Developing Communities

6cp

Undergraduate

This subject offers students the opportunity to experience the process of the design and construction of residential or small scale developments in developing communities. It involves students in the planning and construction of residential or small buildings in disadvantaged communities either within or outside Australia. The subject is project based and includes instruction on both the customs and culture of the relevant community and the construction methods relevant to that community. The main focus of the subject is an on-site residential workshop where students participate in construction teams working on real community projects.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Winter session, City campus

16904 Building Research 1

6cp

Undergraduate

This subject teaches students to identify and locate sources of building and construction information, and allows them to develop advanced research techniques. Topics covered include the implementation of electronic information retrieval techniques, library and Internet searching, accessing online databases and other resources, referencing skills and research methodology. Students are required to undertake a meaningful review of literature on a nominated topic related to the construction industry.

16905 Building Research 2

6cp

Requisite(s): 16904 Building Research 1

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject builds on the research skills developed in 16904 Building Research 1. Students learn to set appropriate research aims and objectives and to formulate a research hypothesis. The subject allows students to develop data collection skills, including original data collection on a nominated topic, survey design, methods of statistical analysis and interpretation and an understanding of data collection procedures and protocols.

Typical availability

Autumn semester, City campus

16906 Thesis Construction Management

12cp

Requisite(s): 16904 Building Research 1 AND 16905 Building Research 2

There are also course requisites for this subject. See access conditions.

Undergraduate

The Honours thesis subject requires students to prepare and submit a major dissertation, involving the detailed analysis, critique and write-up of an original investigation into a topic related to construction management, construction economics or project management. Students build on their previously completed literature review and expand that research through the analysis of original data collected in 16905 Building Research 2.

16910 Project Management 1

6cp

Undergraduate

This subject is an introduction to the discipline of project management, covering in brief the concepts of project integration, scope, time, cost, quality, human resources, communications, risk, and procurement management. Lectures are delivered in a generic manner with specific tutorials relating to the discipline of individual students.

Typical availability

Spring semester, City campus

16912 Site Management

6cp; weekly, on campus, 2hr lecture and tutorials supplemented by group work and online learning

Requisite(s): 16204 Construction Technology 2 OR 16265

Construction Technology 2

Undergraduate

This subject introduces students to the discipline of construction project management with a focus on the management of construction site activities and operations. The subject commences with an overview of the fundamentals of project management and the Project Management Body of Knowledge (PMBOK). This is then applied to the principles and procedures for construction site management. Areas covered include site planning, materials handling, quality management, occupational health and safety, industrial relations, subcontractor management, cost management, time management, human resource management and contract administration.

Typical availability

Autumn semester, City campus

16913 Time and Quality Management

6cp

Requisite(s): 16912 Construction Management 1 Site Management

Undergraduate

This subject examines time and quality management on construction projects. The subject commences with an overview of project planning, executing, controlling and closing processes and then examines construction programming and planning techniques in detail. This includes site planning, the development of work breakdown structures (WBS) and detailed resource and activity scheduling. Quality management systems and procedures are investigated and explored. Sub-contractor management forms an important thread through this subject as it is sub-contractors who carry out the vast majority of construction work. This includes attention to concepts such as quality control, quality assurance, total quality management and lean construction. The subject concludes with leading edge industry research and practices for productivity enhancement on projects such as BIM (Building Information Modeling) concepts, constructability studies, virtual construction and 4D simulation.

Typical availability

Spring semester, City campus

16914 Human Resources and Communications Management

6cp

Requisite(s): 16912 Site Management

Undergraduate

This subject explores the human side of construction project management. It commences with organisation theory and planning and progresses to human resource strategies, personnel management, staff acquisition and performance management. This is then linked to effective client management and communication and the marketing of services to potential clients. Industrial relations on construction projects is then examined in detail. Project communications are extended to include the principles and practical application of effective negotiation and conflict management on projects. Students are guided through the development of a framework to effectively manage these areas.

Typical availability

Spring semester, City campus

16918 Risk Management

6cp

This subject examines risk management generally but with a focus on project risk management. It covers the main techniques and methods used for risk identification, evaluation and response and relates these to the risks typically faced by project participants. The subject presents risk management as a positive process that should be intertwined with the identification and realisation of opportunities. Risk identification examines the various risks inherent in projects such as financial risk, environmental risk, estimating risk, schedule risk and safety risk. Various methodologies are introduced for the qualitative and quantitative assessment of these risks. Risk response

and treatment and issues such as risk sharing and transfer between clients and project participants are examined. Methods of monitoring and controlling risks are then explored. The subject culminates with the development of risk management plans for projects.

Typical availability

Spring semester, City campus

16919 Project Strategy and Leadership

6cp

This subject covers strategic approaches to construction project delivery and the leadership requirements for not only construction projects but the construction industry generally. The construction industry is increasingly facing social, economic and environmental challenges that require leaders that can inspire and affect real change. The subject explores the difference between management and leadership and examines how the 'softer' leadership skills such as strategic vision, communication skills, charisma, personality and business understanding can be integrated with project and business strategies to improve both project and business performance. This includes strategic approaches to negotiation and dispute resolution. The characteristics of major industry and world leaders are explored and analysed in terms of their applicability to the construction industry. The importance of cross-cultural skills in a global project environment is also covered. Students are introduced to the concept of organisational project management (OPM) which aligns project deliverables with strategy.

16920 Value Management

6cp

For subject description contact UTS: Design, Architecture and Building.

16921 Lean Construction

6cp

For subject description contact UTS: Design, Architecture and Building.

16991 Property Economic Issues

6cp

Undergraduate

This subject allows students to extend their breadth of knowledge and understanding of current and future major economic issues. The issues are viewed from a macro and micro perspective, i.e. from a national and property industry outlook. Issues examined during the course of the subject include key demographic changes; immigration; urban labour force; housing; urban transport; quality of life; privatisation; and globalisation.

Typical availability

Autumn semester, City campus

Spring semester, City campus

16992 Planning and Political Economy

6cp

Undergraduate

This subject includes an advanced study of the political economy of property with a focus on the relationship between planning, property value and national economic and social goals. Concepts including betterment, the common good and property are investigated with their ethical implications, and various resolutions of the problem of property are critically appraised.

Typical availability

Spring semester, City campus

171200 Conservation and Heritage

6cp

Postgraduate

This subject is centred on the development of sites of heritage significance, including both statutory and strategic planning issues and practice, and alternative solutions and approaches to the development of historic buildings and precincts. It also covers the evaluation of the statutory and community processes involved in heritage issues.

Typical availability

Autumn semester, City campus

17121 Native Title

6cp

Postgraduate

Land rights history and the Mabo decision are the topics covered in this subject, as well as the Native Title Act 1993 and the Indigenous Land Fund, alternative approaches to land claims and management, and interface between stakeholders and current land management controls.

17122 Environmentally Sustainable Development

6cp

Postgraduate

Topics for detailed study are selected from the following: cultural, political and financial influences underpinning and guiding the built environment in relation to the ecology and sustainability. The subject covers effective planning and design processes and systems; historical and philosophical origins of the modern environmental movement; the history and nature of environmental legislation; the role of authorities and planning instruments in relation to environmental assessment and planning; sustainability and city planning; traffic, waste and water management; building design for sustainability; environmental economics; environmentally responsible development and life cycle costs; environmental risk management; the environmental audit process; environmental management planning; and application to a real development project.

17518 Advanced Property Development

6cp

Requisite(s): 15142 Property Development Process

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

In this subject, students progressively explore the process of development from inception to occupation and redevelopment of complex commercial, industrial, and non-residential property. The subject covers land acquisition, highest and best use appraisal, feasibility and approval, procurement and contract administration, marketing and promotion and leasing of the development through an understanding of best practice procedures and legislative policy controls. Maintenance management strategies and principles are also discussed. Information about international and sustainability issues affecting different property developments are also discussed. Information is provided in textual and graphical form.

Typical availability

Autumn semester, City campus

17519 Property Research Methods

6cp

Postgraduate

Research methods: students study the research process, research and questionnaire design, sampling, estimation and sample size, and their application to property situations.

Statistical methodology: students study elementary statistical analysis with emphasis on non-parametric statistics. Theory generation and review of relevant property research literature are also covered. Students are given an introduction to relevant statistical computer packages.

Typical availability

Spring semester, City campus

17551 Property Market and Risk Analysis

6cp

Postgraduate

This subject provides a study of property markets and their characteristics. It analyses the structure and key determinants of property markets, provides an understanding of property cycles, and examines risk analysis techniques applicable to real estate market analysis.

Typical availability

Autumn semester, City campus

17552 Property Asset Management

6cp

For further details, contact UTS: Design, Architecture and Building.

Typical availability

Autumn semester, City campus

Spring semester, City campus

17553 Construction Cost Planning

6cp

Postgraduate

This subject includes an examination of cost planning and cost management of development projects including budgeting, preliminary estimating, pricing of construction work, elemental cost planning and techniques for managing cost during design development and construction. It also considers costs-in-use, occupancy costs, functional costs analysis, and the nature of costs over time and the use of historical cost data for forward planning.

Typical availability

Spring semester, City campus

17554 Urban Simulation

6cp

Postgraduate

This subject introduces students to the tools needed and methods used to analyse and visualise spatial data. Particular emphasis is given to the analysis of large data-sets relevant to those in property development, urban economics and planning. Tools to which students are introduced change with technology, but currently include programs such as ArcGIS, MapInfo, Google Earth and AutoCAD.

Typical availability

Autumn semester, City campus

17555 Complexity and Spatial Analysis

6cp

Postgraduate

This subject introduces students to the science of complex systems, with a specific focus on using that science to better understand cities and urban processes. Issues include: Are cities in equilibrium? Do cities change gradually and predictably? Do small changes to prices, infrastructure and resident/firm behaviour cause only small effects?

The answer to these questions is assumed, implicitly, to be 'yes' by most classical economic and financial models. Recognising that cities are complex, far-from-equilibrium systems with components that interact at different spatial and temporal scales requires the adoption of a new set of mental tools.

Typical availability

Spring semester, City campus

17700 Planning and Environmental Law

6cp

Postgraduate

This subject introduces students to property and environmental law. It includes the structure and operation of the NSW planning system, the legal processes of making plans and planning controls, the application of planning controls to development, the nature and application of environmental controls to development, and a comparative overview of planning law and systems across Australian states.

Typical availability

Autumn semester, City campus

Spring semester, City campus

17701 Environment and Control

6cp

Postgraduate

This subject covers the following topics: property development and statutory control processes, including both statutory and strategic planning issues and practice; alternative solutions and approaches to environmental issues and sustainable development; community consultation and dispute resolution; and communication of strategic advice to stakeholders on environmental issues.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Summer session, City campus

17703 Property Taxation

6cp

Postgraduate

This subject involves the analysis of various forms of taxation relating to property holdings and property investment; income tax, capital gains tax, depreciation allowances, land tax and stamp duties; taxation of trusts; negative gearing and alternative forms of taxation and their likely impacts on the property industry.

Typical availability

Autumn semester, City campus

17704 Property Development Finance

6cp

Requisite(s): 15142 Property Development Process AND 12535c

Development Feasibility and Valuation

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject covers sources and types of finance available for various property developments; debt versus equity; specialised financing techniques, including hybrids, long-term and offshore finance; project finance; and evaluation techniques and risk management.

Typical availability

Spring semester, City campus

17716 Research Project 1

9cp

For further details, contact UTS: Design, Architecture and Building.

Typical availability

Autumn semester, City campus

Spring semester, City campus

17717 Research Project 2

9cp

For further details, contact UTS: Design, Architecture and Building.

Typical availability

Autumn semester, City campus

17771 Valuation Methodology

6cp

Postgraduate

In this subject, students study general accounting principles; capital budgeting techniques; discounted cash-flow analysis; risk analysis techniques; interest rate theory and discount rates; traditional and contemporary principles and methods of valuation, advanced capitalisation and other valuation methods; valuation of different classes of property; and sources of finance. A basic knowledge of a spreadsheet program such as Microsoft Excel is assumed. Students need to bring a financial calculator to class.

17772 Commercial Retail Property Management

6cp; block

Postgraduate

The subject provides students with an in-depth understanding of property management principles, issues and processes and the lease administration of commercial and retail property. Property management plays an important role in all stages of a commercial performance, both prior to and after the disposal of the development. Property managers are responsible for generating and monitoring of income, and their role has evolved into a diverse and complex one that requires technical understanding of industry practices and the relevant legislation that govern it.

Typical availability

Spring semester, City campus

17774 Green Building Evaluation

6cp; block
Postgraduate

This subject gives students a deeper knowledge of sustainable development and its relationship to the built environment. It gives an understanding in the domain of green developments, commercial opportunities and political realities. The subject covers green rating tools and their impacts for the property industry both locally and internationally. Class exercises run in the computer lab working on the green rating tools. Green rating tools include BREEAM, SBTool, GreenStar, BASIX, LEED, etc.

Typical availability

Spring semester, City campus

17775 Land Acquisition Statutory Valuation and Litigation

6cp
Requisite(s): 12535 Development Feasibility and Valuation
Recommended studies: Introduction to Property and Planning 12142 and Valuation Application 15235
Postgraduate

This subject addresses the acquisition of land for economic development and the provision of infrastructure. It equips students with the ability to assess, prepare and defend statutory valuations used for land acquisition, rating and taxing purposes and statutory charges in the development process. The subject is designed to cover the preparation of instructions, statements of evidence and the presentation and delivery of expert evidence.

Typical availability

Spring semester, City campus

17900 PhD Thesis: Built Environment

0cp
Further information on this subject is available from UTS: Design, Architecture and Building.

18723 Research Dissertation 1 (DAB)

24cp
For subject description, contact UTS: Design, Architecture and Building.

18724 Research Dissertation 2 (DAB)

24cp
Requisite(s): 18723 Research Dissertation 1 (DAB)
There are also course requisites for this subject. See access conditions.
For subject description, contact UTS: Design, Architecture and Building.

20100 Integrating Business Perspectives

6cp
The subject contributes to the Bachelor of Business by providing students with an introduction to the dynamic nature of business. It exposes students to the many perspectives of the role of business in the economy and the interrelationship of the various business functions. Through examples of 'wicked problems', students are encouraged to think through contemporary business issues and the social, ethical, legal and technical implications these may pose for operating in a dynamic business environment. Students develop written, oral and team work skills in tasks which also develop innovative and creative thinking skills.

20101 Management Skills

6cp
Undergraduate
This subject aims to equip students with the theoretical underpinnings and practical tools necessary to increase proficiency in a number of management and communication skills areas. Specifically, the subject provides students with the opportunity to engage in active participation, personal reflection, experimentation and practice. It is based on the premise that we ourselves are responsible for the outcomes in our lives and that non-judgmental self-awareness and acceptance is fundamental to personal development. To this end, there is a strong focus on experiential learning and the role of individual and team reflection.

20102 The Global Context of Management

6cp
As a core subject in the management, human resource management and international business majors, this subject is designed to give students a broad overview of the complexity of the global business environment. Student gain an understanding of how the global context of the business environment impacts upon managerial processes. Understanding business in context engages students to appreciate the interrelationships between global business and the environmental, social, technical, legal and regulatory frameworks that influence business operations. Students are encouraged to explore examples of the ethical dilemmas managers encounter operating within this context through problem-based learning activities where they develop essential global management capabilities.

20103 Global Operations and Supply Chain Management

6cp
This subject builds on the business knowledge taught in the core subject Integrating Business Perspectives and provides students studying in the Management, Human Resource Management and International Business majors with an opportunity to develop their understanding of sustainable business operations and global supply chain management from a systems perspective. Through a blended process of experiential, engaging and reflective learning, this subject further assures problem-based learning skills, added with the ability to manage the development of higher order capabilities for addressing complex operational issues in a real business context.

20104 Human Resource Management

6cp
Undergraduate
This subject is designed to give students an understanding of human resource management (HRM) by examining the structures and processes of HRM from the points of view of the employer, employee, government and other stakeholders. It examines the relationship between human resources practices and organisational strategy, and utilises the flow model concept to introduce some of the key processes of people management, which are treated at theoretical and skills levels. The subject aims to provide an introduction to the formal employment relationship, the relevant legislation and practical application of competencies in order to establish a fundamental basis of HRM.

20105 Innovation and Entrepreneurship

6cp
Undergraduate
The aim of this conceptual and decision-making subject is to provide students with the competencies and skills necessary for understanding, implementing and then managing the entrepreneurial innovation process within a highly competitive global environment. Entrepreneurship/intrapreneurship is more than the mere creation of a new business. Seeking opportunity, taking risks and having the tenacity to push ideas into reality are special characteristics that permeate entrepreneurial individuals. Entrepreneurship is an integrated concept that has revolutionised the way business is conducted. Students are required to study how winning entrepreneurs think, act and perform.

20106 Management Capstone

6cp
Requisite(s): 20101 Management Skills AND Two subjects from 20102, 20103, 20104, 20105
There are also course requisites for this subject. See access conditions.
This subject is regarded as a crowning achievement and consolidates the knowledge that has been learnt in the major as well as integrates the core disciplines in a holistic manner. The subject provides students with opportunities to apply the knowledge and skills developed before and during their final year of undergraduate study. Students gain transferable skills with research application including presentation, research process and team-working skills. Students produce submissions to relevant authorities, professional bodies and the wider academic community through a formal presentation. The subject engages students in ethical and sustainability issues at the same time giving them experience of some of the practical aspects of management, highlighting how various business disciplines contribute to their professional knowledge.

20107 Sustainable Enterprise

6cp

Undergraduate

This subject considers one of the most pressing issues for business in the 21st century: the increasing importance of civic governance and the rising awareness of the earth's limits. The subject critically analyses and examines the social and ecological assumptions that underpin commercial activities in contemporary society, and reviews the current global performance of business in terms of human and ecological sustainability. The subject provides students with opportunities to expand their personal horizons and develop understanding of both aspects of sustainability. There is an introduction to how a sustainable enterprise might operate at three different levels: individual, organisational and societal. A number of different frameworks for considering sustainability are introduced, and students are given a range of practical methods for improving corporate performance and measurement in the three key areas of economic, social and ecological reform.

20200 Financial Statement Analysis and Valuation

6cp

Undergraduate

The aim of this subject is to demonstrate and apply a framework for business analysis and valuation using financial statement data. The emphasis is on translating the tools of business analysis and valuation into practical situations. To achieve this, the subject is relatively case-intensive, with this method used to develop key skills as well as demonstrate their application. The subject is intended for students interested in business consulting, investment banking, business analysis and corporate lending. Given the increasing trend towards a business analysis-based approach to auditing and assurance services, it is also relevant to those interested in public accounting.

20201 Understanding Financial Reports Prepared under IFRS

6cp

Requisite(s): 22207 Accounting for Business Decisions B
There are also course requisites for this subject. See access conditions.

Undergraduate

This subject provides the foundation for understanding international financial reporting standards (IFRS) and the ability to critically evaluate corporate financial reports. It considers the financial reporting environment and factors influencing the forms of financial reporting, and addresses a range of accounting issues from within a contracting cost framework.

20300 International Trade and Investment

6cp

Requisite(s): 23115 Economics for Business
There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces students to models, frameworks and issues in international trade theory and policy including analytical tools for evaluating the welfare and income distributional consequences of various trade policies. These tools have application not only in academic research but also business and government decision making. The subject covers the main theories of international trade, the impact of trade on economic growth, determination of foreign exchange rates, multilateral trading systems and institutions, regional trade and cooperative agreements and the effects of trade policy interventions such as tariffs, quotas, and subsidies.

20400 International Marketing

6cp

Requisite(s): 24108 Marketing Foundations
There are also course requisites for this subject. See access conditions.

Undergraduate

This subject provides students with contemporary theoretical international marketing knowledge and the practical skills required for effective marketing management performance in a global environment. It deals initially with the conceptual and environmental aspects of international marketing. Using this knowledge, issues associated with developing practical marketing strategies appropriate to different world markets are then considered in detail.

20500 Financial Valuation and Strategy

6cp

Undergraduate

This subject develops an understanding of the relationship between financial information and multinational corporate strategic decisions. Analytical skills using financial tools are integrated with economic fundamentals to aid in decisions involving cross-border operations and performance evaluation. This subject encourages a broad perspective by focusing on financial implications of decisions.

20501 International Financial Management

6cp

Undergraduate

The subject provides students with a general understanding of the financial management aspects of international business as well as the international financial system. It builds on learning outcomes from economics, finance and quantitative methods to provide students with a capability to undertake international finance case studies.

20502 International Banking Management

6cp

Undergraduate

This subject teaches the fundamentals of managing a financial institution in an international context. The principles are applied in the context of banks, but have a wider relevance to the management of non-bank financial institutions. The structure of the financial system and problems posed by managing financial institutions in today's environment are studied. Students also assess the performance of financial institutions from a creditors, investors and regulators' viewpoint. The principles of asset liability management, capital and foreign exchange risk management are studied in response to a changing environment in prudential supervision and the important of the ending function. The subject topics include: banking risks, performance evaluation, capital adequacy, the formulation of loan policy, loan pricing, project finance, country risk analysis, trade and international finance.

20503 Investment Analysis and Risk Management

6cp

Requisite(s): 25300 Fundamentals of Business Finance
There are also course requisites for this subject. See access conditions.

Undergraduate

This subject develops a set of tools for making investment and risk management decisions. It introduces the pricing of financial securities and derivatives and provides a foundation for analysing risk and return of financial assets. The topics covered include risk and risk aversion, portfolio optimisation, the pricing of equities, bonds, and derivative contracts. Students learn to use derivative contracts to manage investment risks.

20600 Collaborative Business Processes

6cp

Undergraduate

The subject describes ways to organise collaborative business processes to facilitate knowledge sharing and innovation within and across business units. Its focus is on teamwork, which has become an ever more important aspect of carrying out tasks as well as building knowledge and expertise within organisations. Ways of organising teams for different business objectives are covered. In addition, virtual teams collaborating across vast distances are using internet technologies to support their work. The subject introduces the ways in which teams function in modern organisations, how businesses can change to support culturally diverse teams, and how systems can enable effective team operation. It focuses on improving the ways people work together, developing trust and designing teams.

20601 Information System Development Methodologies

6cp

Recommended studies: knowledge of the software development life-cycle and systems modelling techniques
Undergraduate

Successfully designing and developing information systems is complex and difficult. A number of techniques and approaches have been developed but there are no 'silver bullet' solutions to the problems that plague IT development projects. This subject introduces students to a number of different methodologies and provides them

with the skills they need to identify their strengths and weaknesses in key areas. These issues are of critical importance to those wishing to successfully manage software projects.

21008 Management Consulting

6cp
Postgraduate

This subject introduces students to the nature and characteristics of the consulting industry and the value creation activities of management consultants. It then examines how management consultants conduct business analysis of enterprises, including assessment of business strategies, processes and systems. It considers methods of consultancy project design and management, and different performance measures. Finally, the subject takes a critical look at responsibilities and ethics of consultancy contract management including project costing, scheduling and reporting.

21011 Managing Consulting

6cp
Postgraduate

Through the development of a client-based project, this subject examines the way management consultants analyse enterprises, including assessment of business strategies, processes, and systems. Through practice-based learning it provides opportunities to explore different approaches to business consulting, encompassing new business ventures, not-for-profit organisations, joint ventures and strategic alliances, mergers, and innovation in business models. It considers methods of consultancy, project design and management, and measures of success. Finally, the subject takes a critical look at the responsibilities and ethics of consultancy contract management including project costing, scheduling and reporting.

21012 Governance and Sustainability

6cp
Postgraduate

The subject employs a stakeholder management perspective to analyse organisational strategies, values and operations that facilitate the development of sustainable, high-performing organisations, as well as enabling a balance between enterprise, society and the ecosphere. The subject focuses on how organisations develop a 'licence to operate and grow' through their relations with employees, wider society and the natural environment, developing skills in critical analysis, risk evaluation and management, scenario planning and stakeholder dialogue.

21036 Managing Strategic Performance

6cp
Undergraduate

This subject introduces students to the theory and practices utilised to manage the performance of employees in profit and not-for-profit organisations. It establishes the nature and function of the various components of a strategic performance management system and practices (such as 360 performance, pay-for-performance, etc.). It also exposes students to performance management skills and considers the future direction of strategic performance management.

21037 Managing Employee Relations

6cp
Undergraduate

This subject introduces students to the challenges affecting the regulation of employment in a decentralised environment. It aims to help students understand the new legal and regulatory environment under which Australia operates. Students develop practical negotiation and advocacy skills required in employment relations. The employment relationship is studied in terms of the influence of social, economic, political and legal environment and the power resources of the key institutional parties and others who seek to influence employment.

21040 Advocacy and Social Change

6cp
Undergraduate

This subject covers theories as they relate to advocacy and activism and engages students in a project to assist community organisations that have a need for developing advocacy and communication strategies and tactics by developing a tailored advocacy strategy. It locates activists through their shared experience and explores strategies for effective advocacy. To do this the subject covers topics such as

community organisations and social and political change (including theories as they relate to civil society and collective action), the theory and practice of strategic communication for community organisations, advocacy strategies and campaigning (including examination of case studies of successful campaigns), the relationship between government funding and capacity to advocate, the relationship between individual and systemic advocacy, and institutional and non-institutional forms of advocacy in the indigenous rights movement.

21041 Australian Indigenous Social and Political Development

6cp; block (3 x one-day sessions)
Undergraduate

This subject assists students to develop and review their understanding of Australian Indigenous culture and society in the context of social and political developments.

21042 Australian Indigenous Studies Research Project

6cp; block (3 x one-day sessions)
Undergraduate

This subject provides an opportunity for students to carry out a major project in Aboriginal studies under the supervision of a member of academic staff, either in groups or individually. Students negotiate the project through a learning contract.

21043 Australian Indigenous Studies

6cp; block (3 x one-day sessions)
Undergraduate

This subject assists students to identify, learn and develop strategies for understanding Australian Indigenous cultures and communities in order to enhance and support professional conduct and service in community management and development settings. It introduces participants to Australian Indigenous culture and business; and shows how Australian Indigenous cultures are represented in response to market demands with a comparative analysis of the response by Indigenous organisations and enterprise to culture, business and enterprise development.

21044 Strategic Management of Nonprofit Organisations

6cp
Undergraduate

This subject introduces students to strategic management in community (nonprofit) Indigenous organisations and provides the opportunity for students to reflect on, extend, and integrate their knowledge of community management gained from preceding subjects in the course. It also explores critical issues currently impacting on the sector, and appropriate strategic responses to those issues. It encourages a strategic perspective on the management of organisations and an ability to apply that perspective within community organisations.

21045 Career Development in Indigenous Community Management

6cp

This subject helps students review their learning, and plan career paths both for themselves and for people they manage or supervise. This is an important subject; career paths in the community sector are often unclear and overlooked as they cross over sector boundaries within the government and business sectors. The subject provides the theoretical and practical frameworks for students to integrate their credentialled and uncredentialled learning into a cohesive portfolio that positions them optimally for career choices in the sector. It enables them to identify gaps in their repertoire of knowledge and skills, gaps that can be addressed through career planning.

21058 Management Project

6cp
Undergraduate

This subject provides students who have undertaken the Management major and a sub-major in Employment Relations, International Management, Strategic Management or Small and Medium Enterprise Management with the opportunity to apply the knowledge and skills acquired in these subjects to a management research project in the area of their sub-major specialisation. It further develops understanding of management research methodologies and provides the necessary skills to design, conduct and report on the project both orally and in writing.

21082 Small and Medium Enterprise Management

6cp

Undergraduate

This subject creates knowledge and analytical skills through applied research and involvement in the process of managing a small and medium enterprise venture in the contemporary business environment. Students collaborate with selected industry practitioners on an industry-based research project. This enables students to acquire the basic competencies necessary for entry into a career in new venture/small and medium business management. Students learn to appreciate the major ingredients in small and medium enterprise success, and the special problems small and medium enterprises may encounter.

21126 Capstone Project in Business Planning

6cp

Undergraduate

This is a core subject in the 'Innovation' degrees and provides a linking function to the four Technology Innovation and Science Specialisations. It draws together the two key themes of innovation and entrepreneurship as they are developed and practiced within the respective specialisations. It provides an applied context for integrating business and disciplinary skills and competencies in the creation, initiation, implementation and operation of a range of science, bio-engineering, engineering, and information technology-related business innovations. Students work in small teams located in situ with host companies to produce a business plan for the commercialisation of a scientific or technical idea or venture, which is assessed by experts in the respective fields of application. Students develop innovative, entrepreneurial, communicative and interpersonal skills in obtaining expert advice from scientists, engineers, designers, business people and venture-capitalists in the development of their business plans.

21129 Managing People and Organisations

6cp

Requisite(s): 26100c Integrating Business Perspectives

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces students to the fundamentals of management and organisational behaviour in the context of today's contemporary global business environment. It examines the major theories and models in areas of communication, group dynamics, individual behaviour and motivation, decision-making, leadership, power and politics, and ethics and social responsibility. It places particular emphasis on the application of theory to dilemmas and issues likely to confront managers today and in the future.

21134 Introduction to Community Management

6cp

Undergraduate

This subject introduces the basic features of non-profit organisations, and develops a foundation for students to develop skills in effectively organising and managing aspects of a non-profit organisation. It examines the requirements of establishing an organisation, the principles underlying the voluntary management structure of non-profit organisations, the range of types of non-profits, and their relationship to the community.

21136 Resource Management in Nonprofit Organisations

6cp

Undergraduate

The focus of this subject is on the practical skills and knowledge required for the basic management of financial resources in Indigenous community organisations. As such, it makes a major contribution to the following course objectives:

- to develop transferable skills to influence organisations and management decisions and processes across the Indigenous community
- to demonstrate work-ready knowledge, technological competencies and values for Indigenous community organisational management and developmental settings.

The subject also covers ethical and legal considerations relevant to resource management in Indigenous community organisations and society.

21140 Monitoring Organisational Performance

6cp

Undergraduate

This subject assists students in developing competence in monitoring organisational performance on a number of levels. It incorporates a critical analysis of current theories of organisational performance, examining the difficulties of measuring the performance of organisations providing human services, the tools and technologies for evaluating and improving the performance of non-profit organisations, and the use of evaluation data for performance improvement.

21143 Current Issues in the Community Sector

6cp

Undergraduate

This subject provides an opportunity for students to keep up-to-date with current issues, and to apply the theoretical frameworks already gained to systemic problems and concerns. Through regular seminars, students explore the social, political and economic issues affecting the operation of community organisations.

21183 Funds Development

6cp

Undergraduate

This subject introduces the variety of revenue sources utilised by third-sector organisations and the variety of methods that are used to tap these resources. Particular attention is given to fundraising from individuals and corporations, but the emphasis is on effectively managing a whole variety of funding resources.

21184 Government and Community Sector

6cp

Undergraduate

This subject familiarises students with the ways governments operate, and relations between community organisations and governments are constructed and conducted.

21185 Social Change and Community Practice

6cp

Undergraduate

This subject critically appraises the contributions that community organisations and their programs and activities make to personal and societal transformation in the current social, political, and economic context. The connection of principles drawn from social and political theory to the practice of community organisations is discussed. Students explore these links, and develop specific skills in the organisational practice of strategic planning and program development as they undertake individual and group projects.

21211 Indigenous Community Organisation Practicum

6cp

Undergraduate

This subject provides an opportunity for students to apply previous learning in the course in the context of a specific indigenous community organisation different from that in which they work or are involved. Through designing, organising and participating in an observational placement within an indigenous community organisation, students are exposed to the specific organisational, social, political, economic and cultural issues affecting the operation of that organisation. Students are required to identify a particular area of community organisation practice as the focus of their placement based on previous work completed in the course and prepare a report and presentation in order to share their observations and insights with other students in the subject.

21221 Organisational Structure and Change

6cp

Requisite(s): 21129 Managing People and Organisations OR 21157 Australian Corporate Environment OR 48260 Engineering Project Management OR 16910 Project Management 1

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject considers the various structural forms that organisations may take and the pressures which led to their adoption. It covers the strengths and weaknesses, as well as the management challenges,

of running each form. Various change models are examined, and the interaction of the organisational change process with the forces driving change is considered. The impact of internationalisation and current organisational design issues are discussed.

21223 Social Analysis and Indigenous Community Organisations

6cp
Undergraduate

This subject introduces a conceptual framework for examining the historical and current social context of policy development in regards to Indigenous people in Australia. It explores the role of Indigenous organisations in responding to social policy.

Typical availability

Autumn semester, City campus

21224 Indigenous Community Research

6cp
Undergraduate

This subject provides a foundation in basic research and evaluation skills as they can be applied in Indigenous community organisations. It introduces students to basic research skills which they may be able to use in a variety of ways, such as carrying out a community needs analysis, evaluating the performance of their organisation, conducting action research, assessing the community's response to the service, and undertaking research into community issues. Students are encouraged to evaluate and modify techniques for use in Indigenous communities.

21225 Managing Human Resources in Indigenous Organisations

6cp
Undergraduate

This subject introduces the basic principles of personnel management and industrial relations and explores their applicability and application in Indigenous organisations. It explores the unique features of community management and the roles and personnel practices in relation to paid staff and volunteers. It examines recruitment, selection, staff development principles, industrial conditions and resolving industrial disputes.

21227 Innovation and Entrepreneurship

6cp
Undergraduate

The aim of this conceptual and decision-making subject is to provide students with the competencies and skills necessary for understanding, implementing and then managing the entrepreneurial innovation process within a highly competitive global environment. Entrepreneurship/intrapreneurship is more than the mere creation of a new business. Seeking opportunity, taking risks and having the tenacity to push ideas into reality are special characteristics that permeate entrepreneurial individuals. Entrepreneurship is an integrated concept that has revolutionised the way business is conducted. Students are required to study how winning entrepreneurs think, act and perform.

Typical availability

Autumn semester, Kuring-gai campus

Spring semester, Kuring-gai campus

21228 Management Consulting

6cp
Undergraduate

This subject introduces students to the nature and characteristics of the consulting industry, major practice areas in consulting and the value creation activities of management consultants. It discusses the main success factors of consulting. It also considers methods of consultancy project design and management, and integrative problem-solving applying the principles of design thinking and different performance measures. Finally, the subject takes a critical look at the responsibilities and ethics of consultancy contract management. Note: This subject requires students to have completed the majority of their subjects and it should be taken towards the end of their degrees.

21229 Management Knowledge

6cp
Undergraduate

The basis for the global momentum of implementing knowledge management is the need to understand the real value of knowledge, to create new management philosophies, standards and practices and to establish new models of success. The subject examines the movement away from the traditional paradigm of 'hoarding knowledge' to a structured approach, which creates the incentive for sharing knowledge and establishes a knowledge management framework. Students are introduced to management initiatives of implementation, technology strategies, planning organisational transformation and a general understanding of the future environment for managing knowledge within the organisation.

21407 Strategic Human Resource Management

6cp
Undergraduate

This subject focuses on the strategic nature of human resource management (HRM) functions within various organisations and builds on general issues first raised in 21306 Employment Relations in the Global Context. It develops an appreciation of critical HRM issues through an exploration of conceptual issues such as alternative ways of viewing the HRM field, how HRM should relate to changes in the organisational environment, and the relationships between organisation strategy and HRM functions. The underlying concept considered in this subject is how an organisation in a changing environment can best manage its human resources in such a way as to provide long-term benefits to the organisation.

21440 Management Skills

6cp
Undergraduate

The behaviour of people at work can best be understood not by focusing on individuals, but by examining the way in which groups and organisations are incorporated in an individual's mind. This subject is based on the premise that managerial effectiveness can best be improved by an understanding of human behaviour and psyche in the context of the modern organisation. It provides students with the opportunity to explore the manner in which we interpret our own and others' behaviour, the nature of groups and how they affect decision making, the nature of strategic interaction, conflict of interest and negotiation. The subject considers the critical role of language and non-verbal communication, the nature and impact of prejudice and discrimination and the nature and significance of leadership. The applied nature of this subject provides students with the opportunity to engage in active participation, personal reflection, experimentation and practice in the various areas of skill development. To this end, there is a strong focus on the role of individual and team reflection.

21491 Cross Cultural Management

6cp
Undergraduate

This subject provides students with the knowledge and skills necessary to identify and evaluate the role of culture in work organisations. It aims to develop intercultural awareness and organisational effectiveness in the global context through a critical evaluation of mainstream and emerging models of national culture. There is a strong emphasis on real life cases, students learn to identify the role of culture in determining organisational strategy, structure, communication, motivation and leadership.

To successfully manage an organisation in a culturally diverse society or to be part of a global organisation, an understanding of the differences in social code, communication, motivation systems, organisational structure and leadership is needed. Business is increasingly competitive, and competing in the 21st century requires a global orientation to sustain economic advantage. Use of the internet now can place business anywhere in the world. Hence an assessment of the risks that include financial, political, economic, environmental and now cultural factors are gaining increasing importance in the global context. Culture determines how one builds trust, communicates, balances risk, negotiates, motivates and leads. Knowing the cultural sensitivities for each country a business can gain profitability, and without cultural intelligence lose spectacularly. This subject provides a foundation for cross-cultural management and looks at various models of culture including Hofstede's Value Dimensions, Project GLOBE Cultural Dimensions, Trompenaars's Value Dimensions, and Cultural Clusters.

Typical availability

Shanghai, China

21504 Management Capstone

6cp

Requisite(s): 21440 Management Skills AND 2 Subjects from 21510, 21511, 21591, 21227, 21228, 21595, 21602, 21555 AND 21512 Understanding Organisations: Theory and Practice
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject is regarded as a crowning achievement and consolidates the knowledge that has been learnt in the major as well as integrates the core disciplines in a holistic manner. The subject provides students with opportunities to apply the knowledge and skills developed before and during their final year of undergraduate study. Students gain transferable skills with research application including presentation, research process and team-working skills. Students produce submissions to relevant authorities, professional bodies and the wider academic community through a formal presentation. The subject engages students in ethical and sustainability issues at the same time giving them experience of some of the practical aspects of management, highlighting how various business disciplines contribute to their professional knowledge.

21505 Human Resource Management (Capstone)

6cp

Requisite(s): (21555 Human Resource Management AND (21407 Strategic Human Resource Management OR 21036 Managing Strategic Performance OR 21037 Managing Employee Relations))
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

The subject provides students with opportunities to apply their knowledge and skills developed prior to and during their final year of undergraduate study. Using a project learning approach, students are required to work with an industry client on a project that mirrors the workplace environment. Although students generally work in groups, individual performance is also assessed taking into account the quality of the product produced, the depth of content understanding demonstrated, and the contributions made to the ongoing process of project completion.

21506 International Business Capstone

6cp

Requisite(s): (21511 Global Operations and Supply Chain Management OR (21510 The Global Context of Management AND 21591 Transnational Management AND Two subjects from 21511, 22240, 24220, 21440, 25304, 22309, 21595))
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject aims to develop and extend students' international business skills and in-depth knowledge associated with developing and managing practical research projects. The projects provide students with opportunities to apply the knowledge and skills developed before and during their final year of undergraduate study. The nature of research projects varies from semester to semester; however, projects are intended to help students consolidate and integrate knowledge that has been learnt during the international business major, as well as to develop practical experience in conceptualising, managing and delivering applied research projects. Among the transferable skills that students are asked to demonstrate are information and critical literacy, project management, team work, and reflective practice.

21510 The Global Context of Management

6cp

As a core subject in the management, human resource management and international business majors, this subject is designed to give students a broad overview of the complexity of the global business environment. Student gain an understanding of how the global context of the business environment impacts upon managerial processes. Understanding business in context engages students to appreciate the interrelationships between global business and the environmental,

social, technical, legal and regulatory frameworks that influence business operations. Students are encouraged to explore examples of the ethical dilemmas managers encounter operating within this context through problem-based learning activities where they develop essential global management capabilities.

21511 Global Operations and Supply Chain Management

6cp

This subject builds on the business knowledge taught in the core subject Integrating Business Perspectives and provides students studying in the Management, Human Resource Management and International Business majors with an opportunity to develop their understanding of sustainable business operations and global supply chain management from a systems perspective. Through a blended process of experiential, engaging and reflective learning, this subject further assures problem-based learning skills, added with the ability to manage the development of higher order capabilities for addressing complex operational issues in a real business context.

21512 Understanding Organisations: Theory and Practice

6cp

This subject considers what is theory and what is theorising in the specific context of organisations and organisation theory. It covers both mainstream classical business theorising and some alternatives. This examination should lead to an understanding that theory and organisational reality interact, influencing and shaping each other. It then follows that the practising manager is informed by theory when defining issues, sense making and choosing practical action.

21513 Business Ethics and Sustainability

6cp

Business Ethics and Sustainability explores the breadth and depth of ethical issues confronting contemporary organisations. It examines major philosophical conceptualisations of ethics and applies these to critically analyse both theory and practice. It places particular emphasis upon developing students' ethical vocabulary and ethical argumentation so that they are better equipped to successfully carry an ethically informed subjectivity into their organisational practice.

21532 Applied International Business

6cp

Requisite(s): (21591 Transnational Management AND (25304 Asian-Australian Economics Relations OR 23304 Asian-Australian Economics Relations) AND 22240 International Accounting AND 24220 International Marketing)
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.
Undergraduate

This capstone subject applies knowledge gained from the study of prerequisite subjects to the examination of contemporary issues facing international business. Students develop skills in researching current issues and assessing how they affect multinational businesses. Students also develop an understanding of the complexity of international operations and how firms have responded to this complexity. The interrelated and multifaceted nature of challenges facing multinationals is stressed. Current organisational problems are used as a basis for discussion and teaching and students develop an appreciation of the evolving international environment and how it may affect corporations. Students also gain experience in written and oral presentations.

Typical availability

Autumn semester, City campus

Spring semester, City campus

21555 Human Resource Management

6cp

Undergraduate

This subject introduces students to the theory and practices utilised to manage an organisation's human resources. It establishes the nature and function of the various components of typical human resource management (HRM) practices, and exposes students to the skills of HRM through the use of structured exercises. It also considers the future direction and strategic application of HRM within Australia and overseas.

21591 Transnational Management

6cp

Undergraduate

This subject examines the management challenges associated with the strategic and operational management of organisations whose activities stretch across national boundaries. It develops a conceptual framework which enables students to understand the interplay between the multinational corporation, the country in which it does business, including an understanding of the psychological, social, political and economic forces useful for managers and consultants involved in multinational organisations and cross-border management. Through theory, cases, readings and research articles, the subject considers approaches to the development of strategy, organisational capabilities, and management challenges for operating in the global economy. It provides comprehensive understanding of managerial processes such as, cultural diversity, the entrepreneurial process (identifying and acting on new opportunities), the integrative learning process (linking and leveraging those pockets of entrepreneurial initiative), and the leadership process (articulating a vision and inspiring others to follow).

21595 International Management Field Study

6cp

This subject enables students to undertake a focused overseas study tour, during which the business, management and cultural practices of a selected country are researched and experienced. Through this, students gain first-hand exposure to the various business and international management theories that have been studied in their course. The subject involves pre-departure briefings and lessons, as well as a mixture of in-country activities that may include visits to businesses, talks by business leaders and trade officials, tours of culturally significant venues, and/or time to explore freely.

Feedback from previous students suggests that they have found the subject personally rewarding because, in the course of experiencing business, culture and travel in a foreign country, individuals discover capacities for leadership, collaborative support, and problem solving in themselves that might not emerge in a classroom.

This subject involves overseas travel and students taking this subject incur travel costs, which are in addition to the normal study fee. The faculty endeavours to keep travel costs as low as possible by negotiating group rates with airlines, hotels and other providers. To ensure the affordability of the study tour, it is only run if a sufficient number of students enrol and commit to the subject.

21602 Strategy: Theory and Practice

6cp

This subject, incorporating extensive case studies, offers an intellectually rigorous exploration of strategic theory and practice. Drawing on established disciplines such as sociology, economics and other social science disciplines, the subject takes an encompassing critical knowledge–interrogating view of the strategy literature. Students are required to engage with political, ethical and sustainability issues that the next generation of managers are likely to encounter.

21702 Industrial Relations

6cp

Postgraduate

This subject provides an in-depth knowledge of the institutions, processes and contemporary forces relevant to understanding industrial relations in Australia and in other national contexts. The contemporary pressures upon industrial relations and the major legislation affecting the workplace are discussed and analysed. The practical skills required to effectively handle industrial relations are also covered, particularly those relating to grievance procedures, negotiations and advocacy.

21715 Strategic Management

6cp

Requisite(s): [(22747 Accounting for Managerial Decisions OR 22784 Accounting: Concepts and Applications) AND (25706 Economics for Management OR 25745 Economics: Concepts and Applications OR 23706 Economics for Management) AND (24734 Marketing Management OR 24746 Marketing: Concepts and Applications) AND (25742 Financial Management OR 25746 Financial Management: Concepts and Applications) AND 36 Credit Points in spk(s): C04018 Master of Business Administration]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject adopts a holistic strategic approach to the design of innovative business models and the development of integrative processes that promote competitive superiority. This capstone subject integrates and builds on the materials previously studied in the core subjects of the MBA. The aim of the subject is to provide the student with the knowledge and skills necessary for designing and managing strategy processes that can assure the long-term viability and success for enterprises that operate in a highly competitive business environment. The strategy literature supports the adoption of a more creative, strategic and flexible approach to the design of business models. Students are encouraged to design innovative business solutions and develop new problem solving rationales for the formulation of flexible strategies. The students should then be able to understand, communicate and materially contribute to the purpose of an organisation.

21717 International Management

6cp

Postgraduate

This subject encourages participants to: study how people in other countries go about conducting business and managing their enterprises; ascertain the reasons behind their various management practices; assess their effectiveness; and determine the implications for Australian managers. The subject helps develop an integrated world view to provide a better basis for decision-making within the international business arena.

21720 Human Resource Management

6cp

Postgraduate

This subject presents an introduction to the field of human resource management (HRM). Topics covered include historical steps in the development of the human resource function and the forces that have shaped its development; the role and importance of strategic HRM; ethical considerations in HRM and contribution to good corporate governance; implications of HRM policies and procedures for human and other forms of sustainability; the importance of effective HR information systems; the contribution of various HR functions such as job analysis and design, recruitment, selection, remuneration management, performance management and appraisal as well as training and development; the role of key stakeholders including government, industrial tribunals and associations; forms of regulation and entitlements including legislation, awards and agreements; handling workplace grievances and performance problems; managing diversity and EEO.

21722 Leadership, Coaching and Mentoring

6cp

Requisite(s): 21813 Managing People OR 21867 Managing People: Concepts and Applications OR 21844 Managing Work and People

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject emphasises understanding the role of the manager as leader, decision maker and change agent. Topics include the manager's role; transformational/ transactional leadership; rational and incremental decision-making; decision-making alternative strategies; situational characteristics of decision-making; creativity and problem solving; transactional analysis; the rational-emotive approach; the Gestalt approach; and dealing with interpersonal conflict.

21724 Strategic Human Resource Management

6cp

Requisite(s): 21720 Human Resource Management

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject develops the ability to locate, critically analyse and explain the relevance of the recent literature in key areas of Human Resource Management (HRM). It emphasises strategic models of HRM, and the links between HRM and recent trends in management theory and practice.

21741 Managing Operations

6cp

Postgraduate

Operations management designs, operates, and improves the processes and systems that are used to create products and provide services. Effective operations management can significantly contribute to the success of supply chains through improved productivity and enhanced competitive advantage. This subject provides a broad introduction to operations management covering a range of key topics including operations strategy, quality management, inventory management, sales and operations planning, resource planning, decision-making analysis, and sustainable operations management. Teaching methods include a combination of lectures, case studies and a research experience.

Note(s)

Before Autumn semester 2011, this subject was called Value Chain Management.

21742 Quantitative Management

6cp

Postgraduate

This subject provides an introduction to the application of operations research and mathematical modelling techniques to the solution of business problems. The practical application of the various techniques is stressed. Hands-on experience is gained through the use of computer software packages. Topics covered include a revision of basic statistics; project management (CPM/PERT); decision models; simulation techniques; linear programming; statistical quality control; game theory; and inventory management.

21743 Business Excellence

6cp

Requisite(s): 21741c Managing Operations

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject develops an understanding of the practical and managerial aspects of quality, including the fundamentals of total quality management and its relationship to productivity and organisational performance. Topics include the fundamentals of quality, productivity, and organisational performance; total quality management; traditional concepts and modern definitions of quality; quality management tools and techniques; quality standards; and performance measurement.

21745 Service Operations Management

6cp

Postgraduate

This subject covers the management of the design, production and delivery of services, and the application of operations concepts and methods to service situations. Topics include strategic management and marketing, process analysis, and delivery systems; establishing, measuring and control of service levels; location and layout; capacity planning; quality assurance; organisational behaviour and design in services; and managing professional services.

21751 Management Research Methods

6cp

Postgraduate

This subject contributes to the students' vocational and professional attributes by providing a foundation in the analytic and research skills that can be applied to the solution of problems encountered in

their professional lives. It develops expertise in research design and methods needed to effectively conduct both academic and applied management research. Topics include survey research, experiments and quasi-experiments, case studies, content analysis, interviews and focus groups.

21758 Strategic Governance and the Business of Government

6cp

Postgraduate

This subject draws from strategic management models for the public, private and non-profit sectors and the previous studies of students. It helps them to develop a capacity for 'big picture' analysis, planning and implementation of strategy.

21760 Performance and Talent Management

6cp

Requisite(s): 21720 Human Resource Management OR 21866

Human Resource Management: Concepts and Applications

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines the role and nature of performance management systems in contemporary organisations. The needs and expectations of both organisations and individuals are explored and the sources of performance difficulties identified. The business requirement to align individual and organisational goals is examined and the implications for each stage of the human resource management process is analysed. Approaches to performance management and enhancement are examined and critically evaluated. The subject examines the roles of HRM specialists, line managers and individual employees/contractors in identifying essential job functions and relating them to the organisation's goals, developing appropriate performance standards, providing needed feedback about performance, developing and enhancing performance as well as dealing with performance problems.

21766 Managing Community Organisations

6cp

Postgraduate

This subject provides an introduction to the field of community management. It develops a critical appreciation of management practices and organisational forms within the community sector, evaluates the application of different models of management, and explores key issues such as governance and accountability.

21767 Not-for-Profit Sector Theory and Context

6cp

Postgraduate

This subject introduces some of the ways of thinking about the third sector and the community sector within it. Students study a growing body of knowledge about the third sector, its origins, dimensions and contribution to society, the economy and polity of Australia and selected other countries. It also introduces ways of thinking about the dynamic interaction between third sector organisations and the social, economic and political systems in which they are embedded.

21778 Resource Mobilisation

6cp

Postgraduate

This subject introduces the variety of revenue sources utilised by third sector organisations and the variety of methods that are used to tap these resources. Particular attention is given to fund raising from individuals and companies, but the major emphasis is on effectively managing and developing the variety of revenue sources in the context of the organisation's environment and in accord with the organisation's mission.

21779 Management Skills

6cp

Postgraduate

In this subject, students develop insight into the interpersonal skill requirements of managers and establish a basis for the future development of skills. This subject deals experientially with the interpersonal skills needed by managers to lead teams successfully and takes the individual's awareness of his or her skills and

interpersonal style as its starting point. It goes on to examine basic communication skills such as listening, counselling and non-verbal behaviour. It deals with applied skills including interviewing, time management, goal setting, delegation, group facilitation and meetings management, decision-making, conflict management and negotiation, and organisational communication.

21786 Research Seminars in Management

0cp
Postgraduate

This subject provides a forum each semester for students to present an update on their research efforts and review the work of others.

21797 Strategic Supply Chain Management

6cp
Requisite(s): 21741 Managing Operations
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

Strategic supply chain management concerns the effective design and long-term planning of a network of interconnected businesses involved in the provision of products and services to the end-users. This subject introduces students to the philosophy of supply chain management with the main focus placed on how to view the supply chain as a strategic asset. A broad range of topics are covered including supply chain network design, integrated supply chain planning and optimisation, supply chain performance analysis, strategic sourcing and supplier management, lean supply chains, sustainable supply chain practices, and supply chain uncertainty.

21800 Management and Organisations

6cp
Requisite(s): 21878c Organisational Dialogue: Theory and Practice
These requisites may not apply to students in certain courses. See access conditions.
Postgraduate

This subject develops students' understanding of the nature of organisations and the role of managers within them. The implications of internal organisational factors and external forces for effective management are examined. Management theories are explored and applied to practical contemporary situations.

21811 Global Strategic Management

6cp
Postgraduate

This subject provides an understanding of the contemporary international business environment and how business can formulate appropriate organisational strategies. A variety of strategic options available to organisations is explored. Emphasis is placed on the inevitability of changes in the global environment and on the need for strategic management in this changing environment in Asia, Europe and the United States.

21814 Management Project Design

6cp
Requisite(s): 21751 Management Research Methods
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

This subject further develops knowledge and skills in management research. Specific content is determined by the student and his or her supervisor in relation to the specific project topic.

The major emphasis is on defining the topic; locating the relevant literature; analysing this literature and integrating it with relevant issues; formulating conclusions and implications arising from the literature review; designing a study to explore these implications; and preparing a report.

21815 Management Project

6cp
Postgraduate

This subject aims to develop research skills through the design and conduct of a focused management project. With guidance from a supervisor, students develop appropriate research questions for their project, conduct a literature review, design a research methodology,

collect and analyse data, and present the research in a report. The selection of the project topic enables students to increase their knowledge in their area of specialisation.

21817 Volunteer Management

6cp
Postgraduate

The level of volunteering in a society is a sign of its well being, and third sector organisations are the main beneficiaries of volunteering. This subject provides students with a comprehensive introduction to the social phenomena of volunteering and the use of volunteers by third sector and public organisations. This is an elective subject and is taught only if sufficient interest is expressed.

21827 Change Management

6cp
Postgraduate

This subject provides managers with a framework for rethinking their past change management experiences, and for gaining a critical appreciation of future change management practices. It takes students through four aspects of change management: leading change; managing individual experiences of change; conceptualising the need for change; and critiquing specific change management programs.

21832 Managing for Sustainability

6cp
Postgraduate

This subject provides students with a framework for incorporating the natural environment into business strategies and practices. It provides an opportunity to systematically understand business-environment relationships and integrate concepts and techniques from disciplines ranging from operations management to environmental sociology. It provides a unique set of skills for future managers to transform environmental challenges into business opportunities.

21833 International Human Resources Management

6cp
Postgraduate

This subject focuses on issues relating to the management of a global flexible workforce, specifically those concerning the strategic international dimensions of human resource management (HRM). Topics include the strategic link between international business and international HRM; theories of strategic international HRM; strategy, structure and the people management function; contemporary issues in international HRM; expatriate management; and critical evaluation of the international HRM function.

Typical availability

Autumn semester, City campus

21841 Corporate Governance and Strategic Direction

8cp; availability: Executive MBA (C04031) students only
Executive MBA (C04031) students only
Postgraduate

This subject provides a deeper understanding of the way companies are owned and controlled and of the systems for corporate governance which exist in different institutional environments. The subject provides students with a positive philosophy about the way they can structure thinking about corporate strategy and focuses on the development of corporate strategies by adopting a comprehensive approach incorporating different perspectives. The subject is holistic, comprehensive and takes a practical, applied approach to theoretical concepts.

21844 Managing Work and People

6cp
Requisite(s): 21878c Organisational Dialogue: Theory and Practice
These requisites may not apply to students in certain courses. See access conditions.

This subject is specifically designed to enable students to develop a critical appreciation of management practice with critical thinking and the integrative approach. The aim of the subject is to help students improve their understanding and abilities to manage human systems, exercise leadership and work effectively with other people. Students are exposed to a variety of leadership perspectives through readings, discussions of experts in the field and successful leaders via video, and group discussion. The subject also provides a forum for students to learn and think introspectively about their own personal values,

leadership styles, emotional intelligence and long-term aspirations. Participating in experiential activities allows students to have direct experience applying team dynamic concepts in the context of their own teams and challenges.

21854 Innovation and Entrepreneurship

6cp

Postgraduate

This subject presents students with a perspective on how innovation and entrepreneurship occurs – across industries and firms, in large and established organisations and in small and new ventures. The subject examines broad processes of innovation (the creation of markets, the flow of ideas, the dynamics of invention and commercialisation) and also related organisational processes (strategy, structure and internal processes that foster creativity) that are relevant to all organisations and essential to those seeking to develop an entrepreneurial mindset. Students gain an appreciation of the competitive, institutional, political and economic drivers of innovation and entrepreneurship, and gain practical insights into analysing business model viability, assessing opportunities, creating new ventures, designing effective organisations for innovation, producing business plans and pitch decks, and how they can use their social capital for career advancement.

21856 Career and Portfolio Development

6cp

Postgraduate

This subject assists students to review learning and plan career paths for themselves and for the people they manage and supervise. It provides the theoretical and practical frameworks for students to integrate their credentialed and uncredentialed learning into a cohesive portfolio that positions them optimally for career choices in the sector. It enables students to identify gaps in their repertoire of knowledge and skills, which can then be addressed within the industry-training program.

21869 Innovation and Entrepreneurship

8cp

Postgraduate

This subject presents students with a perspective on organisational innovation and entrepreneurship. In a globalised economy, innovation becomes one of the key strategic differentiators and drivers of growth. Analysing the practice of innovation, the topics include successful intra- and entrepreneurship models, sources of innovation, business models supporting innovation strategies, and reflection on the innovation journey. Special emphasis is placed on the understanding of new venture creation and the innovation process with the aim of broadening students' perspectives and better equipping them for successful innovation.

21870 Strategic Human Resource Management

8cp

Postgraduate

This subject introduces students to the theory, practices and skills utilised to strategically manage human capital within the context of high-performance cultures. Students learn how to develop and utilise human capital metrics to evaluate the effectiveness of an organisation's HRM system.

21871 Operations and Value Chain Strategy

8cp

Postgraduate

Operations and Value Chain Strategy presents operations from a vantage point that encompasses both the entire organisation and the broader supply network. The subject contextualises operations management by arguing that the goals to which any high quality operation must aspire are the goals of profitability and sustainable business practices. The subject presents operations within a context that acknowledges the interactions both within all functional areas of an organisation as well as the supply chain network serving it.

21872 Organisational Analysis

8cp

Postgraduate

The subject enables students to understand and improve their own managerial and organisational practice by introducing them to the ideas associated with established theories of organising and emergent theories of practice in organisation studies. The subject reviews the key

concepts and issues that inform debates on contemporary organising and allows students to develop reflective perspectives on these as they are relevant to their own work. Following an introduction to the theory and practice of organising, the subject is divided into two main parts: concepts and issues. The key concepts that are discussed include organisational structure, organisational culture, organisational power and organisational responsibility. The key issues for practice that are discussed are organisational change and identity, gendered organisations and diversity, cross-cultural organising, management and organisational fads and fashions, anti-corporate movements and globalisation, and corporate social responsibility and sustainability.

21873 Global Business Strategies

8cp

Requisite(s): [21874 Corporate Governance and Sustainability AND 24800 Managerial Marketing AND 27800 Applied Leadership and Strategy AND 21875 Organisational Behaviour in Practice AND 22814 Accounting Information for Managers AND (25845 Managerial Economics OR 23845 Managerial Economics) AND 25841 Decision Making Tools AND 25846 Managerial Finance]

There are also course requisites for this subject. See access conditions.

Postgraduate

Global Business Strategies is the capstone subject in the Executive MBA degree. This subject challenges the traditional thinking about strategy and is designed for serious academic study by managers and practitioners who wish to apply high level conceptual and critical thinking skills to global business strategy and value innovation. The key issues addressed are how to plan and execute the steps required for initiating new international business ventures, how to meet the business challenges arising from international, social and environmental concerns, and technical innovation. The implications of cross-country differences in cultural, demographic and market conditions, strategy options for entering and competing in foreign markets, the growing role of alliances with foreign partners, the importance of locating operations in the most advantageous countries and the special circumstances of competing in such emerging markets are explored.

21874 Corporate Governance and Sustainability

8cp

Postgraduate

This subject examines corporate governance systems by which business corporations are directed and controlled, and how these may contribute to sustainable enterprise. Issues considered include the implications of the separation of ownership and control, contrasting institutional systems of governance, competing theoretical explanations, the mechanisms of governance, the increasing significance of capital markets and the internationalisation of finance and regulation. The subject employs a stakeholder management perspective to analyse organisational strategies, values and operations that facilitate the development of sustainable, high-performing organisations, as well as enabling a balance between enterprise, society and the ecosphere. The subject focuses on how organisations develop a 'licence to operate and grow' through their relations with employees, wider society and the natural environment, developing skills in critical analysis, risk evaluation and management, scenario planning and stakeholder dialogue.

21875 Organisational Behaviour in Practice

8cp

Postgraduate

As organisations are primarily collections of people working together towards common goals, and the primary management task is to lead human resources in the effective pursuit of those goals, an understanding of organisational behaviour is critical to managers and the process of managing. Managing and leading people takes place in an increasingly complex and uncertain global environment. Furthermore, people are complex, multifaceted and not always predictable, and this is amplified when people are in dynamic relations: in groups, teams and organisations. In dealing with this dynamism, complexity and uncertainty, managers need to have knowledge and insight into behaviour that stands on solid foundations.

This subject is concerned with the systematic study of human behaviour within the context of organisations and seeks to provide an understanding and explanation of behaviour that provides such a foundation. Organisational behaviour is an applied field of study that aims to improve the performance of organisation

members and enhance organisational effectiveness. Core issues upon which managerial and organisational success hinge, such as effective communication, decision making, creativity, teamwork, management of conflict, organisational culture and organisational change, are central topics in this subject. Effectively driving these vital processes requires knowledge and competencies in dealing with the complexities of people's personalities, values, attitudes, and perceptions; these issues are also covered. This subject is designed to help students develop into better leaders, managers and organisation members.

21877 Strategic Procurement

6cp

Requisite(s): 21741 Managing Operations

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject focuses on the management of procurement of goods and services from a strategic perspective. Topics include procurement as a strategic function; key procurement issues such as outsourcing, sourcing strategies and relationships, total cost of ownership, inventory management and negotiations; and applications of procurement such as procurement of commodities, international and global sourcing, capital procurement, efficient consumer response, services procurement and corporate social responsibility and e-procurement and contract management.

21878 Organisational Dialogue: Theory and Practice

6cp

This subject is designed to develop students' sensitivity to the importance of organisational communication and dialogue. It enables students to evaluate communication practices in terms of their capacity to facilitate shared understanding among various organisational stakeholders. By integrating current management and communication theory, the subject emphasises the link between communication and the broader strategic and socio-cultural contexts of organisations. Cultural issues and leadership challenges are specifically considered to develop an understanding of the complexity of facilitating organisational dialogue. On a practical level, the subject assists students in developing their communication skills for academic and professional purposes.

21879 Corporate Social Responsibility and Measuring Social Impact

6cp

Postgraduate

This subject examines different approaches to identifying and analysing the social impact of corporate and not-for-profit organisations. It explores the potential usefulness and relative merits of various impact assessment methods, including social accounting and audit, social return on investment, log frame techniques and the merits and limitations of existing indices such as the Dow Jones Sustainability Index, Corporate Responsibility Index and Global Reporting Initiative. The subject also examines how corporations and community organisations can work together to further their respective objectives by exploring the challenges and opportunities associated with cross-sector partnerships.

21886 Integrated Business Consulting

8cp

Postgraduate

This subject draws on functional knowledge in business and applies this to live case studies. The subject is framed as a strategic consultancy, whereby students are expected to undertake professional assessment of clients' needs and challenges in order to provide viable solutions and rigorous business plans. Students are expected to work closely with the client, undertake primary research and analyse secondary data sources in order to identify business problems and design strategic business solutions. They work in teams to achieve innovative results for the client reflecting integrity in assessing the situation, communicating and justifying the results to the client and independent assessors.

21907 Research Methods and Approaches in Management and Organisations

6cp

Undergraduate

The subject provides the core philosophical underpinning for doing social scientific research in an informed and ethical way. Emphasis is placed on the research design process and introduces students to qualitative, quantitative, comparative and mixed research methods. This subject is offered to all students in the business faculties and is designed to complement advanced subjects across the disciplines (e.g. 21909 Advanced Organisation and Management Theorising, 24756 Philosophy of Science, etc.).

21908 Advanced Management and Organisation Research Methods

6cp

Undergraduate

The subject provides advanced knowledge and advice in the design, execution and writing up of research. The aim is to develop high quality, critical thinking, creative and productive academics and researchers of the future. The core assessment tasks are all directly relevant to student's research projects.

21909 Advanced Organisation and Management Theorising

6cp

Undergraduate

This subject provides research degree students with the theoretical skills to be able to engage with the highest quality research literature and understand the issues that frame the debates encountered. Topics included current and historical perspectives, metatheoretical approaches to management and organisation theory, and epistemological and ontological issues in theorising organizations and management.

21910 Researching Organisations and Management

6cp

Undergraduate

Exemplary research is well conceived, well executed, and well written. It is what scholars should aim to do. The purpose of this subject is twofold: 1) to introduce research students to the ideas and techniques that underpin particular examples of exemplary research; and 2) to help research students apply these ideas in the execution of their own research. Students not only critically evaluate examples of research but also explore the practice of research to identify key strategies and potential pitfalls that can affect their research process and timing.

21912 Thesis Proposal in Management (Honours)

6cp

Undergraduate

This subject requires students to produce a written thesis research proposal of about 6000 words that forms the basis of the research to be carried out in 21913 Thesis in Management (Honours). Students are allocated an academic supervisor from within the School of Management, with whom they meet regularly throughout their enrolment in the subject. The subject develops the student's competency in carrying out a critical review of the literature, choosing appropriate research methodologies, and the writing of research proposal.

21913 Thesis in Management (Honours)

18cp

Undergraduate

The honours thesis requires the student to produce a thesis of about 20,000 words based on an original problem of a theoretical or applied nature. The thesis is expected to demonstrate the student's competency to conceptualise, conduct and present research in a scholarly and independent manner.

21914 Readings and Reflecting on Management

6cp

Requisite(s): 21907 Research Methods and Approaches in Management and Organisations

There are also course requisites for this subject. See access conditions.

This subject is an advanced undergraduate research subject. It develops advanced understanding in a specialised area of interest such as strategy, operations management, leadership, the history of management thought, organisation behavior, or other relevant areas of management research.

21915 Management and Organisation Seminars

6cp

Requisite(s): 21907 Research Methods and Approaches in Management and Organisations

There are also course requisites for this subject. See access conditions.

This subject is a series of seminars that surveys in-depth one or two particular theoretical perspectives and issues studied in organisation and management theory (OMT) research. Organisation and management theory is a fertile area of social science because of the importance of understanding organisations, and it is the place where key challenges to traditional theory have emerged in recent times. This subject explores two or three topics in depth allowing students to gain a sense of the power of theory and its potential applications.

21982 PhD Thesis: Management

0cp

Postgraduate

Students must undertake original research, supervised by a senior member of the school's academic staff. Students must prepare a proposal, present it and gain approval before proceeding. The thesis should advance knowledge in the area of management, and should be of a standard publishable in an international refereed journal.

21990 Master of Business Thesis (Management)

0cp

Students are required to complete a thesis which is considered to involve an amount of study equivalent to four semesters for full-time study, and six semesters for part-time study. The thesis is expected to present original research of a theoretical or applied nature in management. It is not expected to advance knowledge, as is required in the case of a PhD thesis, but it should give evidence of the student's ability to engage in a substantial investigation, identify and analyse research problems and present the results in a coherent and scholarly manner.

21999 Business Internship

6cp; availability: students need to have completed 72 credit points of study at credit average to enrol in this subject

Requisite(s): 72 Credit Points in spk(s): C10026 Bachelor of Business OR 72 Credit Points in spk(s): C10027 Bachelor of Business OR 96 Credit Points in spk(s): C10020 Bachelor of Business Bachelor of Arts in International Studies OR 96 Credit Points in spk(s): C10021 Bachelor of Business Bachelor of Arts in International Studies OR 78 Credit Points in spk(s): C10235 Bachelor of Accounting OR 144 Credit Points in spk(s): C10065 Bachelor of Engineering Bachelor of Business OR 144 Credit Points in spk(s): C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 144 Credit Points in spk(s): C10125 Bachelor of Business Bachelor of Laws OR 144 Credit Points in spk(s): C10162 Bachelor of Science Bachelor of Business OR 144 Credit Points in spk(s): C10163 Bachelor of Medical Science Bachelor of Business OR 144 Credit Points in spk(s): C10169 Bachelor of Biotechnology Bachelor of Business OR 144 Credit Points in spk(s): C10219 Bachelor of Business Bachelor of Science in Information Technology

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

In this subject, students undertake an internship with an organisation in a capacity relevant to their academic studies. This assists in developing employment skills, knowledge and contacts which can contribute to their career goals. Through their internship, students are exposed to the professional functions and activities relevant to

their field of study (major). A written reflection and report on the outcomes of the internship is required. Students must undertake at least 210 hours of work with a host organisation, which is equivalent to six weeks or 30 days of full-time experience. The terms and time frame of the experience are flexible and may be negotiated between the student and host organisation. The internship must be based on an agreed and approved program of work which aims to achieve predetermined learning objectives.

22107 Accounting for Business Decisions A

6cp

Requisite(s): 26100c Integrating Business Perspectives

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

In most economies business success is measured in financial terms. It is the accountants who undertake this measurement. Many decisions in business are made based on accounting information, both historical (based on past events) and projected (based on estimates of the future). Understanding accounting as a systematic way of measuring and communicating financial information on the financial status of various business entities is the foundation for any successful career in both the private and public business sectors.

22157 Australian Corporate Environment

6cp; availability: Bachelor of Accounting students only

For Bachelor of Accounting students only

Undergraduate

This subject introduces students to the Australian corporate environment as part of their first Industrial Experience semester. Students undertake a variety of work-based assignments involving research into the structure of the sponsoring organisation they are training with, readings of current business journals, interviews with managers, and regular readings and homework from the set text.

22207 Accounting for Business Decisions B

6cp

Requisite(s): 22107 Accounting for Business Decisions A OR 22107c Accounting for Business Decisions A

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject applies accounting in an information systems context to equip students with the appropriate accounting skills necessary to participate in a managerial capacity, including the skills to facilitate and enhance decision-making, accountability and control. Ethical implications of decisions are considered throughout the subject. The subject covers areas in both financial and management accounting.

Note(s)

Students intending to enrol in the Accounting, Banking or Finance majors must complete this foundation core subject.

22240 International Accounting

6cp

Requisite(s): 22107 Accounting for Business Decisions A

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

In a rapidly changing world environment, the significance of international accounting has grown substantially, along with the expansion of international business activity. This subject introduces students to the importance of international accounting in global trade and gives them an awareness of the complex variables involved. Through the perspective of multinational corporations, students discuss and analyse major issues impacting global operations and research topical issues that drive their development and understanding of international accounting at work.

22309 Accounting for Overseas Transactions

6cp

Requisite(s): 22107 Accounting for Business Decisions A
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces students to the basic concepts underlying the variety of accounting issues involved in the recording and reporting of overseas transactions. It covers relevant aspects of documentation, foreign exchange gains and losses, foreign exchange hedging, forward exchange contracts, effects of overseas inflation, financing overseas transactions and facilitation through government and non-government agencies. It provides skills and information needed to advise clients on overseas transactions. Concentration is placed on the operational and accounting treatment of foreign operations as distinct from a marketing or economic approach to the subject area.

Typical availability

Autumn semester, City campus

Spring semester, City campus

22319 Financial Statement Analysis (Capstone)

6cp

Requisite(s): 22420 Accounting Standards and Regulations AND 25300 Fundamentals of Business Finance

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

The aim of this course is to demonstrate and apply a framework for business analysis and valuation using financial statement data. The emphasis of the course is on translating the tools of business analysis and valuation into practical situations. To achieve this, the course is relatively case intensive, with this method used to develop key skills as well as demonstrating their application. The course is intended for students interested in business consulting, investment banking, business analysis and corporate lending. Given the increasing trend towards a business analysis-based approach to auditing and assurance services, it is also relevant to those interested in public accounting.

22320 Accounting for Business Combinations

6cp

Requisite(s): 22207 Accounting for Business Decisions B
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Undergraduate

Together with 22420 Accounting Standards and Regulations this subject deals with the application and analysis of prescribed accounting treatments. It specifically surveys the institutional and legal framework of current Australian accounting with reference to international accounting standards and local and overseas standards and exposure drafts. The subject also emphasises financial reporting and accounting for companies including consolidated accounts of complex economic entities, associate companies and joint arrangements.

22321 Cost Management Systems

6cp

Requisite(s): 22207 Accounting for Business Decisions B
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces students to the basic concepts underlying management accounting, which is one of the core streams in the study of accounting. It provides an in-depth understanding of appropriate cost management concepts with an emphasis on the use of accounting information to understand and make decisions about the management of the cost structure of organisations. Students acquire a set of concepts, skills and techniques that are necessary for potential managers, with particular appreciation of the various issues and challenges faced by managers within organisations.

22420 Accounting Standards and Regulations

6cp

Requisite(s): 22207 Accounting for Business Decisions B
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Undergraduate

This subject provides the ability to understand, critically evaluate and apply accounting standards and interpret financial reports. It considers the financial reporting environment and factors influencing the forms of financial reporting, and addresses a range of accounting issues from within a contracting cost framework.

22421 Management Decisions and Control

6cp

Requisite(s): 22321 Cost Management Systems
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces the use of management accounting information to support managerial decisions and control within organisations. It emphasises decision and control issues in a contemporary environment and introduces appropriate decision and control concepts, techniques and skills. It also emphasises the ways in which accounting information can be used to understand and make decisions about the operational and strategic management of an organisation, and to control the implementation and ongoing management of such decisions.

22491 Financial Statement Analysis and Valuation

6cp

Undergraduate

The aim of this subject is to demonstrate and apply a framework for business analysis and evaluation using financial statement data. The emphasis is on translating the tools of business analysis and evaluation into practical situations. To achieve this, the subject is relatively case intensive, with this method used to develop key skills as well as demonstrating their application. The subject is intended for students interested in business consulting, investment banking, business analysis and corporate lending. Given the increasing trend towards a business analysis-based approach to auditing and assurance services, it is also relevant to those interested in public accounting.

22492 Understanding Financial Reports Prepared Under IFRS

6cp

Requisite(s): 22207 Accounting for Business Decisions B
There are also course requisites for this subject. See access conditions.

Undergraduate

This subject provides the foundation for understanding international financial reporting standards (IFRS) and the ability to critically evaluate corporate financial reports. It considers the financial reporting environment and factors influencing the forms of financial reporting, and addresses a range of accounting issues from within a contracting cost framework.

22502 Financial Planning in Australia

6cp

Requisite(s): 22207 Accounting for Business Decisions B AND 25556 The Financial System AND 79017 Taxation Law

This subject provides students with an understanding of the financial planning processes in Australia from a professional practice perspective. The subject exposes students to a variety of alternative strategies for the management of personal financial risk exposures and links those strategies with a consideration of broader contemporary socioeconomic and sociolegal issues.

Students consider the interaction between stakeholder interests and the availability of products and service processes in the context of the effective management of potential ethical issues, and the need for the provision of effective professional services while maintaining ongoing compliance with the requirements of the financial services sector regulatory environment.

22515 Computer-based Accounting

6cp

Requisite(s): 22207 Accounting for Business Decisions B

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces the concepts of computerised accounting and the general operation of several microcomputer accounting packages. It also provides opportunities for students to gain experience in the installation and operation of accounting packages for small business. Topics covered include the development of an accounting framework for small and medium enterprises; and the selection, application and operation of microcomputer accounting packages including general ledger, cash book, accounts receivable, accounts payable and inventory. The subject also covers the statutory reporting requirements of SMEs from a professional practice perspective.

22522 Assurance Services and Audit

6cp

Requisite(s): 22320 Accounting for Business Combinations AND

22420 Accounting Standards and Regulations

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject addresses the provision of assurance services. It focuses mainly on the attest services offered by auditors to provide credibility of information in company and other organisation financial statements. The subject studies the audit process of understanding client's operations and risk, analytical review and the pivotal importance of evaluation of the quality of client internal control and evaluates internal control in a COSO framework. The subject provides an understanding of professional, ethical and legal requirements and responsibilities in completing and reporting on assurance tasks. It is accredited by the accounting professional bodies.

22566 Small Business Management and Accounting

6cp

Undergraduate

This subject develops the knowledge and skills required by accountants in dealing with the problems that are unique to their professional work in the small business sector. It highlights and emphasises the practical matters associated with the initiation and growth of a small business. Topics covered include an overview; the requirements of establishing a business — the steps and structures; economic business cycles' growth and future; acquiring and/or financing the business; accounting — records, control, costing and pricing; financial analysis and management; appraisals and acquisitions; the growing trend towards franchising as a form of small business; taxation and tax planning; insurance and risk; business disaster planning and recovery; and business and financial planning and budgeting.

22567 Planning and Control for Small Business Enterprises

6cp

Requisite(s): 22107 Accounting for Business Decisions A

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject provides students with the skills required to successfully operate a small business enterprise. Students are required to analyse financial data of small business enterprises and develop integrated business plans. The subject highlights the practical matters associated with small business enterprise start-up, operations accounting and management. It also provides an opportunity for students to gain a thorough understanding of planning and controlling small business operations.

The subject provides students with a better understanding of basic accounting procedures and strengthens their knowledge of cost accounting techniques. It builds on the skills in the use of computer technology and software, particularly spreadsheet applications, to increase student's proficiency in this area.

Topics covered include the use of spreadsheets, performance evaluation, budgeting, cash-flow analysis, sensitivity analysis, financing, planning for innovation, sustainability and environment management, and challenges and issues faced by contemporary Australian small business operators.

22573 Accountability of Small Business Enterprises

6cp

Requisite(s): 22566 Small Business Management and Accounting

Undergraduate

This subject develops the knowledge and skills required by accountants and managers of small business enterprises in dealing with record keeping and compliance requirements. It highlights and emphasises the link between accounting records, taxation reporting and administration of employees. Topics covered include an overview of the basic taxation requirements for small business enterprises from registering an Australian Business Number (ABN) to reporting Business Activity Statements and preparing income tax returns; management of employees from employing new staff to planning for retirement; planning business succession or closing down a business; compliance with various employee-related requirements such as payroll tax, insurances, superannuation and statistical reporting.

22605 Accounting Information Systems

6cp; availability: Bachelor of Accounting students only

Undergraduate

This subject introduces the role of information systems in supplying both qualitative and quantitative financial information to management within large organisations. Extensive practical experience on PCs allows students to be fully productive in their subsequent first internship.

22610 Accounting for Insolvency

6cp

Undergraduate

This subject provides students with a study of accounting for insolvency that is an optimal stream in the study of accounting discipline. It provides an essential set of concepts, skills and techniques to business majors who are potential managers in business. The subject is also designed to provide students with learning experiences that enable them to gain an understanding of the financial management mistakes leading to these business failures or near failures. It develops an understanding and an appreciation of the accounting requirements for business enterprises that are insolvent. It encourages students to develop a basis for research and analytical skills specifically appropriate for diagnosing issues and problems as well as evaluating and interpreting the different characteristics related to business rescue, reconstruction and liquidations by the use of case studies and participating in a group research project. The subject covers a number of important current events and does not only inform students about the major issues, ideas and developments, but also stimulate further inquiry and debate.

22705 Management Planning and Control

6cp

Requisite(s): 22753 Cost Management and Analysis

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines the role of management accounting in the process of planning, control and performance evaluation of contemporary organisations at corporate, division and functional levels. It talks about what it means to have an organisation be in control, what alternatives managers have for ensuring good control and how managers should choose from among control system alternatives. It then focuses on financial control systems, financial targets setting, performance measurement and evaluation, and the assignment of various forms of organisational rewards (and punishments). Finally, planning, control and performance evaluation issues of inter-organisational collaboration ventures and international operations are examined. The subject takes mostly a user perspective. At least some of the material covered in this subject is relevant to students no matter what kind of organisation they work in and what function they have in that organisation.

22708 Accounting Information Systems

6cp
Postgraduate

This subject provides students with a broad knowledge of the fundamentals of accounting data management and analysis, modelling of decision problems, business process execution and control and information integration. The subject also introduces examples of accounting information systems software for both SMEs and large enterprises (enterprise systems software). Models and software tools are used in order to plan and simulate the process of the transformation of real-world complexity into accounting figures and in order to highlight the interdependencies between different business functions. The subject also emphasises the role of computerised accounting systems in internal control and demonstrates how to evaluate the effectiveness and limitations of control systems.

22730 Auditing and Assurance Services

6cp
Requisite(s): 22748 Financial Reporting and Analysis AND 22754 Corporate Accounting AND 22747 Accounting for Managerial Decisions
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject addresses the provision of auditing and assurance services. It focuses mainly on the attest services offered by auditors to provide credibility of information in company and other organisation financial statements. It also considers the expansion of assurance services beyond the traditional financial statement audit into such areas as risk assessment, information system reliability, asset protection, detection and prevention of fraud and electronic commerce. It also deals with the methodology necessary to complete a financial statement audit or to provide other assurance services, and the criteria and professional standards used to measure information quality and integrity. The subject studies the audit process of understanding client's operations and risk, analytical review and the pivotal importance of evaluation of the quality of client internal control and evaluates internal control in a COSO framework.

While internal control systems are evaluated assuming a business environment where information systems are an integral part of control systems and client operations, a variety of information technology environments (including the use of enterprise resource planning (ERP) systems such as SAP e-commerce applications) are introduced. The subject provides an understanding of professional, ethical and legal requirements and responsibilities in completing and reporting on assurance tasks. It is accredited by the accounting professional bodies.

22743 Business Valuation and Financial Analysis

6cp
Requisite(s): [(25742 Financial Management OR 25746 Financial Management: Concepts and Applications) AND 22748 Financial Reporting and Analysis AND 22754 Corporate Accounting AND 22747 Accounting for Managerial Decisions]
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

The aim of this subject is to demonstrate and apply a framework for business analysis and valuation using financial statement data. The emphasis is on translating the tools of business analysis and valuation into practical situations. To achieve this, the subject is relatively case intensive, with this method used to develop key skills as well as demonstrating their application. The subject is intended for students interested in business consulting, investment banking, business analysis and corporate lending. Given the increasing trend towards a business analysis-based approach to auditing and assurance services, it is also relevant to those interested in public accounting.

22747 Accounting for Managerial Decisions

6cp
Requisite(s): 21878c Organisational Dialogue: Theory and Practice OR 26001 Business Communication Skills
These requisites may not apply to students in certain courses. See access conditions.
Postgraduate

The subject aims to expose students to the nature and use of accounting information as used by managers to plan and control business operations as well as for decision support. The subject is intended to prepare students to understand and use accounting information for decision support, analysing historical operations and planning future business activity. This subject provides a sound grounding in the application of accounting concepts and techniques used to gain intelligence about all aspects of business operations.

The topics comprise a mix of financial and management accounting. The financial accounting topics concern the basic financial statements, their analysis and the concepts and procedures that underpin their preparation. The management accounting topics relate to cost and profit planning, and the use and application of financial information to support management decision activity for both routine and non-routine business situations.

Typical availability

Summer session, City campus

22748 Financial Reporting and Analysis

6cp
Requisite(s): 22747 Accounting for Managerial Decisions OR 22784 Accounting: Concepts and Applications
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

The principal aim is to provide students with the skills and competencies to undertake accounting analysis. Accounting analysis is a tool in performing business analysis using financial statements. In making accounting analyses, students distinguish between the information revealed by management on the firm's underlying business activities, the sources and effects of distortions of this information that can be induced into the accounting numbers and the errors that can arise in accounting estimates used in accounting numbers. This is an intermediate level financial accounting subject.

22753 Cost Management and Analysis

6cp
Requisite(s): 22747 Accounting for Managerial Decisions OR 22784 Accounting: Concepts and Applications
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Management accounting information systems are one of the main decision-support systems in organisations. This subject introduces students to quantitative and qualitative techniques for the analysis of business operations using accounting and financial management measurement and analytical tools. This subject equips students with the skills and knowledge to design and use effective management accounting information for planning and controlling organisational activities.

Topics include forecasting revenues and costs, cost behaviour and cost-volume-profit analysis, business planning and cost control using budgeting and variance analysis. Data analysis and conversion to information products utilising information technology productivity tools is applied to practical 'real-life' decision situations confronting managers, paying particular emphasis on building sustainable organisations.

22754 Corporate Accounting

6cp

Requisite(s): 22747 Accounting for Managerial Decisions OR 22784 Accounting: Concepts and Applications

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines the institutional and legal framework of modern Australian financial accounting. The main topics include accounting for acquisition of assets including business enterprises; valuation and goodwill; consolidated accounts of complex economic entities; accounting for associate companies and joint ventures; and corporate restructuring.

22759 Accounting and ERP

6cp

Requisite(s): 22747c Accounting for Managerial Decisions OR 22784c Accounting: Concepts and Applications

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject introduces students to accounting with enterprise resource planning systems (ERPS) and provides an integrated view on accounting, information management, and business processes management in an ERPS. Students get the opportunity to manage master data, day-to-day transactions and periodic/closing transactions in accounting in a virtual company implemented in a 'real world' market-leading ERPS (SAP ERP). Cross-functional automation and control features in ERPS are demonstrated, and students manage cross-functional business processes within their own virtual accounting environment.

22766 Assurance for Enterprise Systems

6cp

Requisite(s): 22759c Accounting and ERP

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This advanced accounting information systems subject deals with assurance and control issues in an integrated systems (enterprise systems) environment. The control frameworks evaluated include management/general controls, task controls and application controls. Students gain advanced financial reporting skills for detective control and learn how complex authorisation profiles and automation can be used as preventive controls in an enterprise systems environment. In an extensive case study, students have to demonstrate and deepen their theoretical knowledge and practical skills with SAP solutions.

22776 Business Information Systems

6cp

Postgraduate

In this subject students explore the role of information systems in the modern business environment and examine a broad range of issues including IT governance and strategy, IT infrastructure management, the role of IT in supporting business processes, data warehousing/business intelligence, e-business and environmentally sustainable IT. Practical examples of both successful and failed information systems projects are presented and discussed in the light of the 'IT Productivity Paradox'. An important objective of the subject is to provide students with the opportunity to discuss and debate the ethics regarding the use of IT and information systems in modern organisations and society.

22777 International Accounting

6cp

Requisite(s): 22747 Accounting for Managerial Decisions OR 22784 Accounting: Concepts and Applications

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

In the context of many corporations operating in an extensive global business environment, this subject explores the causes and effects of diversity in corporate financial accounting and evaluates the efforts undertaken to harmonise accounting standards and practice

internationally. The identities and interests of stakeholders in this process are considered. The subject is intended to equip students with the knowledge and skills to appreciate the characteristics and limitations in the interpretation of accounting reports originating from various countries and that arise from diverse cultural and other factors impacting on each country's national accounting profession.

22782 Business Process Integration with ERP

6cp

Requisite(s): 22759 Accounting and ERP OR 21741 Managing Operations

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This capstone-type subject focuses on the integrative nature of operational business plans and actual business processes, and it demonstrates how organisations can implement those plans and execute/control those processes in enterprise resources planning systems (ERPS). The subject provides students with knowledge about the theoretical concepts and techniques used in operations management/supply-chain management and cost accounting, and it also exposes them to the practical representation of those concepts and techniques in a large-scale, highly integrative ERPS (currently SAP ERP). An extensive group project provides students with strong exposure to real-world (implementation) issues at the interface of operations management, cost/financial accounting and information management with enterprise systems.

22783 Business Intelligence 2: Advanced Planning

6cp

Requisite(s): 22708 Accounting Information Systems AND 22759 Accounting and ERP

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Understanding and applying advanced planning and optimisation methods for supply chain management are essential skills of management accountants in today's business. This subject deals with techniques that generate optimised executable plans in response to rapid changes in supply or demand (demand planning, profit maximisation through demand and supply optimisation, integrated, value-based supply chain management). Interactive, problem-based lectures and seminars demonstrate these management accounting concepts and allow students to practise in real-time how these techniques can be applied using the SAP products for advanced supply-chain management.

22787 Business Project Management

6cp

Postgraduate

This subject takes a holistic and business-oriented approach to the management of projects. Topics covered include project definition, roles and responsibilities, project planning, managing project risk, resource management, time and cost estimation, project control and reporting, measuring project success, and post-implementation review. Project management software is used to assist with resource allocation, costing and schedule. Students are required to form project teams and manage their own projects throughout the teaching period.

22797 Business Intelligence 1: Advanced Analysis

6cp

Requisite(s): 22776 Business Information Systems OR 22708 Accounting Information Systems

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject introduces students to data warehousing and data mining, key issues in future information management in an environment in which the filtering and aggregation of external (e.g. WWW) and internal information becomes the critical success factor. The SAP New Dimension Product, Business Warehouse, is used in order to practise the procedures in data warehouse design and in order to demonstrate the integration of data warehouses with other business information systems, above all, the application of information generated in data warehouses for management accounting and decision-making.

22814 Accounting Information for Managers

8cp
Postgraduate

This subject develops accounting knowledge and its application in the management of business activity. It integrates accounting with other aspects of managerial decisions including general management, finance, production, marketing and human resource decisions. The subject is divided into two parts, with the first part introducing students to the interpretation and analysis of financial statements and their practical applications. The second part focuses on management accounting issues including budgeting, variance analysis, cost allocations and internal performance measurement and reporting systems. Students are required to undertake a 'real-life' syndicate case study based on a listed public company.

22815 Business Decisions and Models

8cp
Requisite(s): 22814 Accounting Information for Managers AND 25846 Managerial Finance
There are also course requisites for this subject. See access conditions.
Postgraduate

This subject introduces students to quantitative techniques for forecasting, planning and analysing business operations, using accounting and financial management measurement and analytical tools. Statistical data analysis and business modelling techniques are applied to generate forecasts of future business operations to provide quantitative information support for management decision-making. The consideration of internal organisational and external environmental factors with regard to the revenue streams and the impact of economic indicators on business activity are also considered. Data analysis and conversion to information products, utilising information technology productivity tools, are applied to practical 'real-life' situations confronting managers.

22816 Financial Analysis and Business Valuations

8cp
Requisite(s): (22814 Accounting Information for Managers AND (25845 Managerial Economics OR 23845 Managerial Economics) AND 25846 Managerial Finance AND 25841 Decision Making Tools)
There are also course requisites for this subject. See access conditions.
Postgraduate

This subject explores the latest developments in accounting methods and practices used to analyse and value business operations. It examines the information content of financial statements and how this information, coupled with global, industry and company-specific financial data, aids in the development of models to predict future profits and cash flows. These models are then applied in the context of corporate restructuring, acquisition and mergers, private equity considerations, bankruptcy predictions and fundamental equity valuations. Students are required to evaluate and apply valuation techniques based on pre-configured computer-based spreadsheet valuation templates.

22901 Accounting Research and Consulting Skills

6cp
Undergraduate

The subject introduces students to the notion of scientific and applied research. Building on these frameworks, students are taught how to identify research questions, develop theoretical frameworks and empirically test their theories. Students are also given insight into how to structure research reports.

22902 Financial Reporting, Capital Markets and Disclosure

6cp
Undergraduate

The subject introduces students to the notion of scientific and applied research in financial accounting. Building on these frameworks, the students are taught how to identify research questions, develop theoretical frameworks and test empirically their theories. Students are also given insight into how to structure research reports.

22903 Contemporary Issues in Management Accounting Research

6cp
Undergraduate

The subject entails an overview of historical and contemporary developments in management accounting theory and research plus a detailed review of research in specific topic areas. In any one year three to four major topic areas are selected from the wide diversity of research on management accounting, with an emphasis on contemporary developments.

22906 Thesis in Accounting

24cp
Requisite(s): 22901 Accounting Research and Consulting Skills AND 22902 Financial Reporting, Capital Markets and Disclosure AND 22903 Contemporary Issues in Management Accounting Research AND 22908 Current Issues in Corporate Governance and Assurance
There are also course requisites for this subject. See access conditions.
Undergraduate

This subject requires the student to produce a 20,000-word (maximum) thesis based on an original problem of a theoretical or applied nature. The thesis is expected to demonstrate the student's competency to conceptualise, conduct and present research in a scholarly and independent manner.

22908 Current Issues in Corporate Governance and Assurance

6cp
Undergraduate

The subject introduces students to the notion of scientific and applied research in auditing and corporate governance. Building on these paradigms, students are taught how to identify research questions, develop theoretical frameworks and test empirically their theories.

22982 PhD Thesis: Accounting

0cp
Postgraduate

Students must undertake original research, supervised by a senior member of the school's academic staff. Students must prepare a proposal, present it and gain approval before proceeding. The thesis should advance knowledge in the area of accounting, and should be of a standard publishable in an international refereed journal.

22990 Master of Business Thesis (Accounting)

0cp
Students are required to complete a thesis which is considered to involve an amount of study equivalent to four semesters for full-time study, and six semesters for part-time study. The thesis is expected to present original research of a theoretical or applied nature in accounting. It is not expected to advance knowledge, as is required in the case of a PhD thesis, but it should give evidence of the student's ability to engage in a substantial investigation, identify and analyse research problems and present the results in a coherent and scholarly manner.

22991 Thesis in Accounting (BAcc)

24cp
Requisite(s): 22901 Accounting Research and Consulting Skills AND 22902 Financial Reporting, Capital Markets and Disclosure AND 22903 Contemporary Issues in Management Accounting Research AND 22908 Current Issues in Corporate Governance and Assurance
There are also course requisites for this subject. See access conditions.
Honours

This subject requires the student to produce a 20,000-word (maximum) thesis based on an original problem with a professional or applied impetus. The thesis is expected to demonstrate the student's competency to conceptualise, conduct and present research in a scholarly and independent manner.

22999 Business Internship

6cp; availability: students need to have completed 72 credit points of study at credit average to enrol in this subject
 Requisite(s): 72 Credit Points in spk(s): C10026 Bachelor of Business OR 72 Credit Points in spk(s): C10027 Bachelor of Business OR 96 Credit Points in spk(s): C10020 Bachelor of Business Bachelor of Arts in International Studies OR 96 Credit Points in spk(s): C10021 Bachelor of Business Bachelor of Arts in International Studies
 There are also course requisites for this subject. See access conditions.
 Undergraduate

In this subject, students undertake an internship with an organisation in a capacity relevant to their academic studies. This assists in developing employment skills, knowledge and contacts which can contribute to their career goals. Through their internship, students are exposed to the professional functions and activities relevant to their field of study (major). A written reflection and report on the outcomes of the internship is required. Students must undertake at least 210 hours of work with a host organisation, which is equivalent to six weeks or 30 days of full-time experience. The terms and time frame of the experience are flexible and may be negotiated between the student and host organisation. The internship must be based on an agreed and approved program of work which aims to achieve predetermined learning objectives.

23021 Labour Economics

6cp
 Requisite(s): 23567 Intermediate Microeconomics OR 25567 Intermediate Microeconomics
 These requisites may not apply to students in certain courses.
 There are also course requisites for this subject. See access conditions.
 Undergraduate

This subject applies the knowledge and skills students have developed in the prerequisite subject to the functioning of modern labour markets, with a specific focus on the Australian context. Students expand their knowledge of economic concepts to include those that can be used to rationalise firms' and workers' behaviour in the labour market, and students use these concepts to critically evaluate labour market policies. They investigate individual differences in wages and employment, assess the economic effects of minimum wage laws, payroll taxes and education subsidies, and explore the institutional features, historical trends and current policy issues in Australian labour markets.

23022 Public Economics

6cp
 Requisite(s): 23567 Intermediate Microeconomics OR 25567 Intermediate Microeconomics
 These requisites may not apply to students in certain courses.
 There are also course requisites for this subject. See access conditions.
 Undergraduate

This subject applies and extends the knowledge and skills students have developed in Intermediate Microeconomics to an analysis of the economic rationale for collective choice and government intervention in the economy. It explores and evaluates the government's ability to identify and achieve more efficient and equitable outcomes. Students extend their knowledge of welfare economics and examine the motivation behind government intervention in the economy. They see why a market economy fails to achieve efficient solutions in the presence of public goods, externalities, natural monopoly and asymmetric information. The subject explains the mechanisms of collective choice, cost-benefit analysis and income redistribution and explores the theory of taxation. Students enhance their ability to distinguish between progressive and regressive taxes, between formal and effective incidence, and between efficient and equal taxes. They also examine how individuals react to income taxes and benefits by modifying their labour supply and consumption behaviour. Finally, the subject presents specific sectors where government intervention is traditionally active, such as health care and education, with emphasis on the Australian economy.

23115 Economics for Business

6cp
 Requisite(s): 26100c Integrating Business Perspectives
 These requisites may not apply to students in certain courses. See access conditions.
 Undergraduate

This subject provides students with a basic understanding of the economic influences on business. It offers an introductory treatment of consumer and business behaviour in competitive markets, the effects of government policies on market outcomes, and the basic economic concepts used in business analysis and decision-making. It also introduces students to the problem of aggregate economic fluctuations, inflation and the structure of economic relations between countries. Economics for Business also equips students with basic analytical skills to examine the impact of these macroeconomic forces on business conditions and to communicate the results of their analysis in writing.

23304 Asian-Australian Economics Relations

6cp
 Requisite(s): (25115 Economics for Business OR 23115 Economics for Business) AND (26134 Business Statistics OR (33130 Mathematical Modelling 1 AND 33230 Mathematical Modelling 2))
 These requisites may not apply to students in certain courses.
 There are also course requisites for this subject. See access conditions.
 Undergraduate

This subject gives an overview of the Asian region, its political economy and its economic relationship with Australia. The focus is on those Asian economies that have significant trading relations with Australia. Emphasis is given to exchange rate changes, dynamic comparative advantage driving changing trade patterns, the political economy and sources of economic growth, regional and global market failure, and comparisons of key macroeconomic variables such as inflation, GDP, unemployment, asset prices and interest rates.

23418 Economics of Money and Finance

6cp
 Requisite(s): (23567 Intermediate Microeconomics OR 25567 Intermediate Microeconomics) AND ((23568 Intermediate Macroeconomics OR 25568 Intermediate Macroeconomics))
 These requisites may not apply to students in certain courses.
 There are also course requisites for this subject. See access conditions.
 Undergraduate

This subject equips students with the conceptual tools to more thoroughly understand and interpret monetary phenomena in the macroeconomy. It develops the treatment of macro models in intermediate macroeconomics using key frameworks from intermediate microeconomics and uses this treatment to examine various explanations of interest rate determination, the interaction between money, inflation and output, and the functions and regulation of financial intermediaries. This provides a detailed framework for carefully investigating the principles and operation of monetary policy and enables students to develop the skills to evaluate recent challenges and developments in monetary policy implementation.

23491 International Trade and Investment

6cp
 Requisite(s): 25115 Economics for Business OR 23115 Economics for Business
 There are also course requisites for this subject. See access conditions.
 Undergraduate

This subject introduces students to models, frameworks and issues in international trade theory and policy including analytical tools for evaluating the welfare and income distributional consequences of various trade policies. These tools have application not only in academic research but also business and government decision making. The subject covers the main theories of international trade, the impact of trade on economic growth, determination of foreign exchange rates, multilateral trading systems and institutions, regional trade and cooperative agreements and the effects of trade policy interventions such as tariffs, quotas, and subsidies.

23564 Labour and Industry in the Global Context

6cp

Requisite(s): (23115 Economics for Business OR 25115 Economics for Business)) AND (26134 Business Statistics OR ((33230 Mathematical Modelling 2 OR 33130 Mathematical Modelling 1))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject examines the effects of institutional structures on the operation of the Australian labour market and the role of government policy in this market with special attention to the economic and cultural implications of immigration. Labour and Industry in the Global Context also examines recent changes in the international and Australian economies and the impact of these changes on industry and job structures. Students are equipped to evaluate labour market and industry trends as well as current policy debates.

23565 Mathematics for Economics and Business

6cp

Requisite(s): 23115 Economics for Business OR 25115 Economics for Business

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces students to a range of mathematical techniques used widely in economics and stresses the importance of understanding the logic of these techniques and the kinds of economic problems to which they can be applied. The subject enables students to analyse a number of economic problems from a mathematical perspective and to incorporate this analysis within a wider understanding of these problems.

23566 Economics for Business 2

6cp

Requisite(s): (23115 Economics for Business OR 25115 Economics for Business) AND (26134 Business Statistics OR 33130

Mathematical Modelling 1 OR 33230 Mathematical Modelling 2 OR 35101 Introduction to Linear Dynamical Systems OR 35151 Introduction to Statistics)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject extends the foundational treatment received in 23115 Economics for Business by analysing the decisions that lie behind the demand and supply curves in markets, and the forces that affect aggregate demand and aggregate supply curves of the economy. The subject examines a number of core issues in economics such as: how firms choose their production levels and how their decisions are affected by the market conditions, how consumers choose between alternative combinations of goods and services, how government conducts fiscal and monetary policy and which forces affect the long-run economic growth of a country. The subject also equips students with the basic quantitative skills needed to examine these questions.

23567 Intermediate Microeconomics

6cp

Requisite(s): 23566 Economics for Business 2 OR 25566 Economics for Business 2

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject extends students' knowledge and understanding of microeconomic phenomena and the environment within which consumers and businesses operate, as developed in 23115 Economics for Business and 23566 Economics for Business 2. It develops the ability of students to analyse and critically evaluate these microeconomic issues by equipping them with formal concepts and models.

Issues considered in this subject include the theory of consumer choice, competitive strategy and firm behaviour under various market structures, comparative welfare outcomes produced by different market forms, externalities arising from market failure such as pollution and environmental issues, and analysis of public goods. The subject prepares students for further study in a range of specialised microeconomic fields.

23568 Intermediate Macroeconomics

6cp

Requisite(s): 23566 Economics for Business 2 OR 25566 Economics for Business 2

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject extends the treatment of macroeconomics in 23115 Economics for Business and 23566 Economics for Business 2 by introducing students to more formal models that are used to explore issues of current macroeconomic significance. Attention is also given to the operation of macroeconomic policy within these frameworks.

Students broaden their knowledge of current macroeconomic events, develop their abilities to critically analyse macroeconomic phenomena and enhance their skills in effectively communicating the results of their analysis in written form.

23569 Economic Growth and Development

6cp

Requisite(s): (23567 Intermediate Microeconomics OR 25567 Intermediate Microeconomics) AND (23568 Intermediate Macroeconomics OR 25568 Intermediate Macroeconomics)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

At the dawn of the 21st century, nations of the world exhibit large differences in material prosperity. Within countries too, the standard of living of the urban elite often contrasts sharply with the rural poor. Economic Growth and Development extends the treatment of economic growth in 23568 Intermediate Macroeconomics incorporating formal behavioural models from 23567 Intermediate Microeconomics.

It develops students' knowledge and understanding of economic growth by considering a wider range of explanations for this phenomenon and applies these explanations to the large differences in material prosperity and policies designed to address this problem.

23570 Economics of the Environment

6cp

Requisite(s): (23115 Economics for Business OR 25115 Economics for Business)) AND (26134 Business Statistics OR ((33130 Mathematical Modelling 1 OR 33230 Mathematical Modelling 2))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

Economics of the Environment provides students with an understanding of the contribution economic analysis can make to the solution of environmental problems. After setting the current interest in the environment into its post-industrial-revolution context, the subject examines externalities, ill-defined property rights and the management of natural resources. This leads to questions of valuing the environment (either economically or according to some other criterion), and how to satisfy the legitimate claims of future generations through so-called sustainable development. The subject focuses on the policy question of pollution control and natural resource depletion, applying various policy tools to contemporary examples.

23571 Introductory Econometrics

6cp

Requisite(s): [23115 Economics for Business OR 25115 Economics for Business]) AND [26134 Business Statistics OR ([3130 Mathematical Modelling 1 OR 33230 Mathematical Modelling 2)]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

Introductory Econometrics equips students with a general knowledge of regression analysis and model building, which stands them in good stead for basic empirical work in business environments. In particular, students are able to quantify the effects of causal variables and predict using regression models. The approach to modelling, and the reasoning about multi-variable empirical relationships, strengthens students' analytic skills.

23572 Applied Microeconometrics

6cp

Requisite(s): 23571 Introductory Econometrics OR 25571

Introductory Econometrics

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

Applied Microeconometrics equips students with a general knowledge of model building, which stands them in good stead for basic empirical work in business environments. It provides students with the analytic tools required for further study in cross sectional econometrics. The approach to modelling, and the reasoning about multi-variable empirical relationships, strengthens students' analytic skills.

23580 The Global Economy (Capstone)

6cp

Requisite(s): [23567 Intermediate Microeconomics OR 25567 Intermediate Microeconomics]) AND ([23568 Intermediate Macroeconomics OR 25568 Intermediate Macroeconomics])

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This capstone subject outlines an economic perspective on contemporary globalisation. This is done by considering trade theory and open economy macroeconomics, by internationalising concepts that apply equally within economies and by considering perspectives on globalisation. It emphasises contemporary debates related to the global mobility of capital, trade and labour. The subject focuses on policy solutions for global challenges, such as poverty and environmental degradation, and on understanding the worldview of the advocates of particular policy solutions. Students are guided to their own reflective conclusions about the applicability and limitations of mainstream economic analysis.

23591 Economics of Law

6cp

Requisite(s): 23567 Intermediate Microeconomics OR 25567

Intermediate Microeconomics

Undergraduate

This subject introduces economic concepts underlying the law. It examines and critiques various aspects of the law from the perspective of economics and applies economic tools and concepts to the interpretation and analysis of law and legal institutions.

23592 Game Theory

6cp

Requisite(s): 23115 Economics for Business OR 25115 Economics for Business

Undergraduate

This subject introduces students to game-theoretic concepts used in solving a wide range of economic and non-economic problems. It provides a range of techniques for analysing strategies in both cooperative and non-cooperative settings and explores many applications.

23593 Industrial Organisation

6cp

Requisite(s): 23567 Intermediate Microeconomics OR 25567

Intermediate Microeconomics

Undergraduate

Industrial Organisation examines the relationships between firms strategies and the market and regulatory environment in which they operate. The subject introduces students to the methods and models used by economists to analyse the behaviour of firms and industries. The models are applied to a range of problems in both the private and public sectors.

23623 Alternative Perspectives in Contemporary Economics

6cp

Requisite(s): [23567 Intermediate Microeconomics OR 25567

Intermediate Microeconomics] AND [23568 Intermediate

Macroeconomics OR 25568 Intermediate Macroeconomics]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

Economics contains an exciting diversity of instructive analytical approaches. The first objective of this subject is to understand eight of the main schools of thought in contemporary economics, all of which have something significant to say about economics and economics. This provides an overview of economics as a whole, introduces students to different analytical perspectives on economic theory and policy, and delivers an understanding of the insights offered by each school. The schools of thought are neoclassical economics, behavioural economics, post-Keynesian economics, institutional economics, Austrian economics, Marxist economics, ecological economics and feminist economics. Each perspective is examined in terms of its conceptual foundations, modes of analysis, and strengths and weaknesses.

The second objective of the subject is to foster in students a wide range of graduate attributes or skills that are beneficial in the workplace and personal life. These include analytical thinking, critical thinking, creative thinking, public speaking, leadership, mentoring, teamwork, written communication (analytical and creative), cultural awareness, gender awareness and independent learning. The subject uses content-related activities such as games, debates, presentations and exercises which provide environments that are highly conducive to the development of these skills.

23706 Economics for Management

6cp

Requisite(s): 21878c Organisational Dialogue: Theory and Practice

OR 26001 Business Communication Skills

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject comprises two parts which deal with the fundamental principles of microeconomics and macroeconomics as they relate to business management. The microeconomics part of the subject examines the forces of supply and demand, consumer behaviour, the nature of production costs, price setting by firms in a range of market types, the rationale and ethical underpinnings of trade practice restrictions and the fundamental forces affecting international trade. The macroeconomics part of the subject is concerned with the larger scale aspects of the economic systems in which businesses operate. It examines the determinants of gross domestic product, the behaviour of the general price level and inflation, unemployment, and the forces that affect the general rate of interest. Attention is also given to the nature, ethical rationale and impact of government policies on the macroeconomic environment and business conditions.

23781 Readings in Economics

6cp

Postgraduate

Students wishing to enrol in this subject should seek the approval of the head of the Economics Discipline Group.

23787 Health Technology Assessment

6cp
Postgraduate

This subject provides knowledge of the context and methods of health technology assessment, particularly the use of health economics theory and methods, economic evaluation and clinical epidemiology in evaluating the implications of the introduction of new health care interventions, including procedures, diagnostic tests, devices and drugs. The subject covers how to define a health technology assessment question, identify appropriate data, methods of analysis and interpretation of results.

23845 Managerial Economics

8cp
Requisite(s): 25841 Decision Making Tools
There are also course requisites for this subject. See access conditions.
Postgraduate

This subject introduces the theory of the firm and other major economic themes that provide students with an understanding of managerial decision-making. It outlines the economic forces that influence corporate strategy, enabling participants to acquire a range of skills and expertise expected of corporate managers. The outcomes are achieved using learning strategies that foster the application of leading-edge practices to meet the business challenges arising from international forces, and technical and knowledge innovation.

23907 Advanced Microeconomics

6cp
Requisite(s): 25917c Advanced Macroeconomics AND 23909c Thesis Proposal in Economics (Honours) AND 23908c Economic Modelling
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Honours

Advanced Microeconomics extends earlier training received by students in subjects such as Intermediate Microeconomics, Game Theory and Mathematical Economics by providing both stronger analytical foundations for the results and frameworks derived in those subjects, and by extending principles learned previously to new areas of analysis.

23908 Economic Modelling

6cp
Requisite(s): 25917c Advanced Macroeconomics AND 23909c Thesis Proposal in Economics (Honours) AND 23907c Advanced Microeconomics
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Honours

Economic Modelling extends earlier training received by students in their economics major by introducing students to a selection of economic modelling approaches that are at the heart of modern economic research based on experimental and observational data. Specifically, it extends the set of topics covered to include methods for panel data analysis, instrumental variables, maximum likelihood estimations, and others.

23909 Thesis Proposal in Economics (Honours)

6cp
Requisite(s): 25917c Advanced Macroeconomics AND 23908c Economic Modelling AND 23907c Advanced Microeconomics
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Honours

This subject trains students to conceptualise, develop and defend a research proposal on an original problem of a theoretical or applied nature in economics.

23910 Thesis in Economics (Honours)

18cp
Requisite(s): 23909 Thesis Proposal in Economics (Honours)
There are also course requisites for this subject. See access conditions.
Honours

The subject allows students to research and write a thesis on the proposal developed in Thesis Proposal in Economics (Honours). Students receive regular guidance and feedback from their thesis supervisors. The Honours thesis requires the student to produce a 20,000-word (maximum) thesis based on an original problem of a theoretical or applied nature. The thesis is expected to demonstrate the student's competency to conceptualise, conduct and present research in a scholarly and independent manner.

23917 Advanced Macroeconomics

6cp
Undergraduate

Advanced Macroeconomics extends earlier training received by students in subjects such as Macroeconomics: Theory and Applications and Economics of Money and Finance by providing both stronger analytical foundations for the results and frameworks derived in those subjects, and by extending principles learned in them to new areas of analysis. Specifically, it provides rigorous treatment of the microeconomic underpinnings of key macroeconomic phenomena such as investment and consumption. It also examines questions of economic growth and business cycles in some detail and provides a theoretical framework for discussion of macroeconomic policy.

23918 Economic Policy Seminar

6cp
Requisite(s): 25917 Advanced Macroeconomics AND 25907 Theory of Financial Decis.Making(Hon AND 23908 Economic Modelling
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Undergraduate

This subject examines important recent developments in policy and regulation in the Australian economy. Frameworks are developed to understand and evaluate these developments, especially for Australian business. Developments studied include: the introduction of inflation targeting, medium term fiscal strategy; the Wallis Inquiry and financial regulation reform; national competition policy; and telecommunications policy.

23926 PhD Thesis: Economics

0cp
Postgraduate

Students must undertake original research, supervised by a senior member of the school's academic staff. Students must prepare a proposal, present it and gain approval before proceeding. The thesis should advance knowledge in the area of economics, and should be of a standard publishable in an international refereed journal.

23990 Master of Business Thesis (Economics)

0cp
Students are required to complete a thesis which is considered to involve an amount of study equivalent to four semesters for full-time study, and six semesters for part-time study. The thesis is expected to present original research of a theoretical or applied nature in finance or economics. It is not expected to advance knowledge, as is required in the case of a PhD thesis, but it should give evidence of the student's ability to engage in a substantial investigation, identify and analyse research problems and present the results in a coherent and scholarly manner.

23999 Business Internship

6cp; availability: students need to have completed 72 credit points of study at credit average to enrol in this subject
 Requisite(s): 72 Credit Points in spk(s): C10026 Bachelor of Business OR 72 Credit Points in spk(s): C10027 Bachelor of Business OR 96 Credit Points in spk(s): C10020 Bachelor of Business Bachelor of Arts in International Studies OR 96 Credit Points in spk(s): C10021 Bachelor of Business Bachelor of Arts in International Studies OR 78 Credit Points in spk(s): C10235 Bachelor of Accounting OR 144 Credit Points in spk(s): C10065 Bachelor of Engineering Bachelor of Business OR 144 Credit Points in spk(s): C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 144 Credit Points in spk(s): C10125 Bachelor of Business Bachelor of Laws OR 144 Credit Points in spk(s): C10162 Bachelor of Science Bachelor of Business OR 144 Credit Points in spk(s): C10163 Bachelor of Medical Science Bachelor of Business OR 144 Credit Points in spk(s): C10169 Bachelor of Biotechnology Bachelor of Business OR 144 Credit Points in spk(s): C10219 Bachelor of Business Bachelor of Science in Information Technology
 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
 Undergraduate

In this subject, students undertake an internship with an organisation in a capacity relevant to their academic studies. This assists in developing employment skills, knowledge and contacts which can contribute to their career goals. Through their internship, students are exposed to the professional functions and activities relevant to their field of study (major). A written reflection and report on the outcomes of the internship is required. Students must undertake at least 210 hours of work with a host organisation, which is equivalent to six weeks or 30 days of full-time experience. The terms and time frame of the experience are flexible and may be negotiated between the student and host organisation. The internship must be based on an agreed and approved program of work which aims to achieve predetermined learning objectives.

24100 Applied Project in Marketing (Capstone)

6cp
 Requisite(s): 24202 Consumer Behaviour AND 24309 Marketing Research AND 24415 Marketing Planning and Strategy AND Two subjects from 24104, 24210, 24220, 24223, 24222, 24224, 24205, 24306, 24331
 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject allows students to apply the marketing knowledge they have gained in previous subjects to a real-world project. It provides them with an opportunity to utilise their research skills and advance their time management, project management and teamwork skills.

24101 Applied Project in Marketing Communication (Capstone)

6cp
 Requisite(s): 24202 Consumer Behaviour AND 24309 Marketing Research AND Three subjects from 59330, 24210, 24207, 24510, 59333
 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject allows students to apply the marketing communication knowledge they have gained in previous subjects to a real-world project. It provides them with an opportunity to utilise their research skills and advance their time management, project management and teamwork skills.

24104 Emerging Marketing Issues and Social Media

6cp
 Requisite(s): 24108 Marketing Foundations
 Undergraduate

Marketing is a dynamic area of business that continues to evolve as a result of changes in technology, competitive landscape and consumer behaviour. This subject provides students with the opportunity to investigate marketing issues that emerge over time, and transform the way consumers and businesses respond to them. Topics surrounding social media and e-marketing are a particular focus of this subject.

24108 Marketing Foundations

6cp
 Requisite(s): 26100c Integrating Business Perspectives
 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
 Undergraduate

This subject covers the basic principles of marketing. It develops an understanding of the overall process of marketing planning, implementation and control in the contemporary business environment and also develops a basic understanding of marketing information systems; market research and marketing ethics; market segmentation; buyer behaviour; product development; and the development of product, distribution, promotion and pricing strategies for both goods and services domestically and internationally.

24202 Consumer Behaviour

6cp
 Requisite(s): 24108 Marketing Foundations
 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
 Undergraduate

A clear understanding of consumer behaviour is critical for developing and evaluating effective marketing strategies. This subject provides a theoretical grounding in the field of customer behaviour examining both the internal and external human factors affecting behaviour and decision-making. It develops an awareness and understanding of customers as the central focus of marketing action, and discusses relevant theories developed in marketing, psychology and other behavioural sciences. This subject develops students' abilities to apply customer behaviour concepts to marketing problems.

 Spring semester, Kuala Lumpur

24205 Business-to-Business Marketing

6cp
 Requisite(s): 24108 Marketing Foundations
 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
 Undergraduate

The marketing of industrial goods and services poses some unique challenges. This subject provides an integrated managerial and strategic approach that places industrial goods and services issues within a broader general marketing management context and addresses the need for business marketers not only to understand buyer needs and behaviors, but also how to use these insights to develop strategies for competing effectively in the marketplace. Organised around a strategic marketing framework, this subject develops the knowledge and skills to develop and implement an effective business marketing strategy.

Typical availability

Autumn semester, City campus

24207 Media Planning

6cp
 Requisite(s): 24210 Integrated Marketing Communications
 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
 Undergraduate

This subject focuses on the important role of media planning in the development of an organisation's marketing communications activities. It provides an understanding of the media planning process and strategic decision-making behind media selection in successful advertising campaigns. It also provides both a theoretical and practical approach to media planning.

24210 Integrated Marketing Communications

6cp

Requisite(s): 24108 Marketing Foundations AND 24202 Consumer Behaviour

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject examines all aspects of integrated marketing communications from an advanced viewpoint based on theory and research findings. It provides managers with systematic approaches to setting marketing communications objectives, establishing budgets, identifying relevant target audiences, formulating and testing strategies and evaluating campaign results. It considers contemporary issues in advertising, together with reference to complementary aspects such as publicity and direct marketing and includes an applied project covering these decision factors.

Typical availability

Autumn semester, City campus

24220 International Marketing

6cp

Requisite(s): 24108 Marketing Foundations

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject develops an understanding of marketing influences on demand for products and services in international environments. This involves consideration of cultural, political, legal and other environmental forces that facilitate or hinder exchanges among diverse sellers and buyers. Students learn different strategies that could be used in an international context to meet the needs and wants of diverse customers while concurrently enabling international marketers to achieve their goals and objectives.

24222 Marketing Channels

6cp

Requisite(s): 24108 Marketing Foundations AND 24202 Consumer Behaviour

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject develops the knowledge and skills to design, develop, maintain and manage effective relationships among worldwide marketing channels to achieve sustainable competitive advantage by using strategic and managerial frames of reference.

24223 New Product Marketing

6cp

Requisite(s): 24108 Marketing Foundations AND 24202 Consumer Behaviour

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject provides future new product managers, project managers and team leaders with a comprehensive set of knowledge and skills to manage new product development processes including how to develop an effective development strategy, and generate and evaluate concepts. It offers a managerial focus, with an emphasis on understanding the issues and solving the problems by implementing a variety of state-of-the-art methods and perspectives, and integrates marketing, R&D, production engineering, and financial aspects of new product design and marketing.

24224 Pricing Strategies and Tactics

6cp

Requisite(s): 24108 Marketing Foundations AND 24202 Consumer Behaviour AND 24309 Marketing Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

Pricing directly affects a firm's bottom line. It is through pricing that managers can affect revenues and profit. This subject builds the required knowledge and competencies so that managers can generate revenues through the development of profitable value-oriented pricing strategies and tactics.

24306 Services Marketing

6cp

Requisite(s): 24108 Marketing Foundations

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject enables students to broaden their understanding of marketing by focusing on the marketing of services. Services dominate the global economy and are becoming critical for competitive advantage in organisations across the world and in all industry sectors. Services require a distinctive approach to marketing strategy, both in its development and execution. The subject explores the foundations of services marketing and teaches students how to create, promise, and deliver a successful, interactive customer experience.

24309 Marketing Research

6cp

Requisite(s): 24108 Marketing Foundations AND (((26133 Business Information Analysis OR 26134 Business Statistics)) OR (33130 Mathematical Modelling 1 AND 33230 Mathematical Modelling 2))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject covers the basic marketing research procedures including analytical and interpretive skills that allow marketing analysts and managers to carry out and evaluate practical and useful marketing research. It develops an understanding of the overall process of marketing research design, implementation and control in the contemporary business environment and also develops a basic understanding of data collection and analysis techniques. Students undertaking this subject develop skills necessary for careers in analytical or research fields.

Typical availability

Autumn semester, City campus

24331 Marketing Analytics and Decisions

6cp

Requisite(s): 24108 Marketing Foundations AND 24202 Consumer Behaviour AND 24309 Marketing Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

Several forces are transforming the structure and content of the marketing profession. Marketers are seeing increasingly faster changes in the marketplace and are barraged with an ever increasing amount of information. While many view traditional marketing as art, and some view it as a science, the new marketing increasingly looks like engineering. This subject, combined with a comprehensive collection of leading-edge software models, provides the marketers with the know-how and tools to collect the right information and perform analysis to make better marketing plans, better product designs and better decisions. Taking this subject assists in translating concepts into context-specific operational decisions and actions using analytical, quantitative and computer modelling techniques; linking theory to practice and practice to theory.

Typical availability

Autumn semester, City campus

24415 Marketing Planning and Strategy

6cp

Requisite(s): 24108 Marketing Foundations AND 24202 Consumer Behaviour AND 24309 Marketing Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject covers the knowledge and skills necessary to create and sustain superior performance in the marketplace through market-led strategic management. It focuses on the essential issues in strategy, such as opportunity identification, strategy formulation and strategy implementation. There is almost never one right answer to a business scenario, but strong analysis skills always deliver a much better set of answers than weak analysis skills. The subject develops a competence to develop marketing within organisations as a strategic force rather than just as an operational department.

24510 Advertising Research

6cp

Requisite(s): 24202 Consumer Behaviour AND 24309 Marketing Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

In this subject students undertake a multi-stage group project that initially involves target market research. It later involves advertising strategy and executional development followed by advertising research to determine the effectiveness of those executions. It finally involves presentation of validated campaign recommendations.

Students must attend the first class to be included in a consultancy team.

24667 Qualitative Research

6cp

Requisite(s): 24309 Marketing Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

Qualitative research is a growth area in both academic and commercial marketing research. This subject introduces students to a different methodological approach from that which is commonly emphasised in market research subjects. Alternative research designs are considered, along with the associated instrumentation, data collection and analysis. Communication of results for a range of academic and industry audiences is also considered.

24668 Professional Relationship Selling

6cp

Requisite(s): 24108 Marketing Foundations

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject addresses the key issues relating to the role of a business-to-business salesperson. Topics include the psychology of selling, the role of the sales professional in uncovering customer and competitor intelligence, the sales process, relationship selling and self-management and motivation. The importance of ethical selling practices with respect to the firm, the customer and society is highlighted.

24706 Strategic Services Marketing

6cp

Requisite(s): 24734 Marketing Management OR 24746 Marketing: Concepts and Applications

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The marketing of services poses some unique challenges. This subject provides an integrated managerial and strategic approach that places services issues within a broader general marketing management context and addresses the need for service marketers not only to

understand customer needs and behaviours, but also how to use these insights to develop strategies for competing effectively in the marketplace. Organised around a strategic marketing framework, this subject develops advanced knowledge and practical competencies to develop and implement an effective services marketing strategy.

Typical availability

Autumn semester, City campus

24707 Strategic Business Marketing

6cp

Requisite(s): 24734 Marketing Management OR 24746 Marketing: Concepts and Applications

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The marketing of industrial goods and services in business-to-business contexts poses unique challenges. This subject provides an integrated managerial and strategic approach that places industrial goods and services issues within a broader general marketing management context and addresses the need for business marketers not only to understand buyer needs and behaviors, but also how to use these insights to develop strategies for competing effectively in the marketplace. It covers topics including value generation in business-to-business contexts, value gap analysis, building business networks, and developing, implementing and coordinating business-to-business marketing programs. Organised around a strategic marketing framework, this subject develops advanced knowledge and practical competencies to develop and implement an effective business marketing strategy.

Typical availability

Autumn semester, City campus

Spring semester, City campus

24710 Buyer Behaviour

6cp

Postgraduate

This subject focuses on the issues relating to the understanding of customer behavior and on the application of such understanding to marketing practice. Topics include: individual determinants such as perception, learning and memory, motivation, personality and attitudes, as well as environmental influences such as culture and cross-cultural issues, social influences, social class, and situational influences, and the decision-making process.

24713 Marketing Channel Management

6cp

Requisite(s): [(24734 Marketing Management OR 24746 Marketing: Concepts and Applications) AND 24710 Buyer Behaviour]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject develops advanced knowledge and practical competencies to design, develop, maintain and manage effective relationships among worldwide marketing channels to achieve sustainable competitive advantage by using strategic and managerial frames of reference.

24720 Marketing Research

6cp

Postgraduate

This subject provides a comprehensive account of the marketing research process, from problem recognition and definition through all the procedural steps of findings and recommendations for marketing decision-making. Specific treatment of the nature, role and management of marketing information in a corporate setting provides a basis for discussion and development of research methodology. Topics covered include a fundamental component of the marketing process; the generation and management of the marketing information resources of an organisation. In this sense, the subject is critical to discussion of specific, functional decision areas of marketing in other subjects in the course. The practical emphasis further contributes to the student's understanding of the problems and potentials inherent in the collection and analysis of marketing data.

24730 Marketing Strategy

6cp

Requisite(s): 24734c Marketing Management AND 24710c Buyer Behaviour AND 24720c Marketing Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject covers advanced knowledge and practical competencies to create and sustain superior performance in the market place through market-led strategic management. It focuses on the two essential issues in marketing strategy formulation: the identification of target markets and the creation of a differential advantage. The subject develops a competence to develop marketing within organisations as a strategic force rather than just as an operational department.

Typical availability

Autumn semester, City campus

24734 Marketing Management

6cp

Requisite(s): 21878c Organisational Dialogue: Theory and Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject focuses on the issues relating to the management of effective, ethical, sustainable marketing strategies, marketing mix plans, and tactics for profit and non-profit organisations across various types of industries. Topics include: the role of the marketing functions in current organisations, understanding customers, collection and use of market information, developing marketing strategies and implementation plans, and integration of the marketing function with other functional disciplines within the organisation.

24736 Marketing Communications

6cp

Requisite(s): [(24734 Marketing Management OR 24746 Marketing: Concepts and Applications) AND 24710 Buyer Behaviour]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines advertising, promotion and business communication decisions from an advanced viewpoint based on theory and research findings. It provides managers with systematic approaches to setting advertising and promotion objectives, establishing budgets, identifying relevant target audiences, formulating and testing strategies and evaluating campaign results. It considers contemporary issues in advertising, together with reference to complementary aspects such as publicity and direct marketing and includes an applied project covering these decision factors.

24738 Strategic International Marketing

6cp

Requisite(s): 24734 Marketing Management OR 24746 Marketing: Concepts and Applications

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The marketing of goods and services across cultures and in different international environments poses some unique challenges. This subject provides an integrated managerial and strategic approach that places international issues within a broader general marketing management context and addresses the need for international marketers not only to understand customer needs and behaviours but also how to use these insights to develop strategies for competing effectively in the marketplace. Organised around a strategic marketing framework, this subject develops advanced knowledge and practical competencies to develop and implement an effective international marketing strategy.

Typical availability

Summer session, City campus

24740 Seminar In Research Methods

6cp

For further details, contact UTS: Business.

24742 New Product Management

6cp

Requisite(s): 24734 Marketing Management OR 24746 Marketing: Concepts and Applications

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject has been designed to enable students to develop an in-depth understanding of the processes, philosophies and concepts associated with new product management in contemporary organisations. Although the focus is on new products, the forces driving the process stem from the need for organisations to remain relevant, effective and competitive in a dynamic environment. While the subject matter is primarily from the field of marketing, the nature of successful product and growth management requires sensitivity to other fields of study such as strategic management, finance, manufacturing, information technology and organisational behaviour in order to effectively guide the process. This subject requires students to explore the various fields of study and examine research as a basis for building a strong, practically oriented capability for new product management.

Individual and team projects have been designed into the subject which require students to come to terms with the applied aspects of new product management. Students own work experiences also greatly facilitate class discussion and debate on the topic.

24750 Marketing Analytics

6cp

Requisite(s): 24734 Marketing Management OR 24746 Marketing: Concepts and Applications

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Several forces are transforming the structure and content of the marketing profession. Marketers are seeing increasingly faster changes in the marketplace and are barraged with an ever increasing amount of information. While many view traditional marketing as art and some view it as science, the new marketing increasingly looks like engineering. This subject, combined with a comprehensive collection of leading-edge software models, provides the marketers with the know-how and tools to collect the right information and perform analysis to make better marketing plans, better product designs, and better decisions. This subject assists in translating concepts into context-specific operational decisions and actions using analytical, quantitative, and computer modelling techniques; linking theory to practice and practice to theory.

24756 Philosophy of Science

6cp

Postgraduate

This subject develops an understanding of the philosophy of science and associated implications for theory developments. It helps students develop advanced skills that are critical to both knowledge generation in business theory and problem solving in business practice.

24757 Research Methodology and Data Analysis Tools

6cp

Requisite(s): 24734 Marketing Management OR 24746 Marketing: Concepts and Applications

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject addresses comprehensive and practical considerations of research methodology, data characteristics and processing, multivariate data analysis approaches (statistical considerations and applications), and communication of marketing research results. It helps students develop advanced research skills that are critical to both knowledge generation in marketing theory and problem solving in marketing practice.

24758 Readings in Marketing

6cp

Postgraduate

This subject allows students to undertake a program of reading in a specified area of marketing under the direction of a supervising lecturer. Specific areas of study may vary from semester to semester and depend on availability of supervisory staff. Students meet regularly with the supervising lecturer to discuss reading content, and students must write a major paper as the assessment task, as directed by the supervisor.

24759 Research Design and Data Collection Tools

6cp

Requisite(s): 24734 Marketing Management OR 24746 Marketing: Concepts and Applications

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject covers an advanced consideration of the management of the marketing research process, research designs, sources of marketing data, qualitative and quantitative data collection procedures, measurement, scaling, and questionnaire design. It is a research-focused subject with a strong emphasis on the development of advanced research skills that are critical to knowledge generation in marketing theory, research-driven academic and commercial activities, and problem solving in marketing practice.

24760 Pricing and Revenue Management

6cp

Requisite(s): ([24734 Marketing Management OR 24746 Marketing: Concepts and Applications] AND 24710 Buyer Behaviour)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Managers too often rely on heuristics when setting prices and stay away from rigorous analysis. Pricing, however, directly affects a firm's bottom-line. It is through pricing that managers can affect and maximise revenues and profit. This subject builds the required knowledge and competencies so that managers can generate revenues through the development of profitable value-oriented pricing strategies and tactics.

24770 Thesis in Marketing (Honours) 1

6cp

Undergraduate

This subject requires the student to produce a written thesis research proposal of about 6000 words that forms the basis of the research to be carried out in 24771 Thesis in Marketing (Honours) 2. Students are allocated an academic supervisor from within the School of Marketing, with whom they meet regularly throughout their enrolment in the subject. The subject develops the student's competency in carrying out a critical review of the literature, choosing appropriate research methodologies, and the writing of the research proposal.

24771 Thesis in Marketing (Honours) 2

18cp

Requisite(s): 24770 Thesis in Marketing (Honours) 1

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject requires the student to complete and present a 20,000-word (maximum) thesis based on an original marketing problem of a theoretical or applied nature. The thesis is expected to demonstrate the student's competency to conceptualise, conduct and present research in a scholarly and independent manner. The topic may be derived from any marketing-related area. The replication and extension of a published academic marketing article could also be considered.

24780 Readings in Marketing

6cp

Postgraduate

This subject is undertaken under the direction of a member of staff. The topic must be approved by the head of the School of Marketing. Formal lectures in selected areas may be required, as directed by the supervising lecturer. The subject allows a degree of flexibility in programming for specialised needs of individual students, but can only be undertaken as part of the Master of Business in Marketing program. Topics chosen should be related to other subjects within the student's area of specialisation.

24790 Business Project: Marketing

6cp

Requisite(s): ([24734 Marketing Management OR 24746 Marketing: Concepts and Applications] AND 24710 Buyer Behaviour AND 24720 Marketing Research AND 24730 Marketing Strategy)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is a simulated business consultancy project that allows students to investigate a specific business activity related to marketing, using a company of the student's choice. It covers many aspects of marketing, marketing strategy and specialist marketing subjects. Students are required to apply a range of marketing and non-marketing theories already covered in their degree.

24800 Managerial Marketing

8cp

Postgraduate

Managerial Marketing allows students to develop and execute a marketing strategy for their simulated firm, including product and brand management, research and development, pricing, distribution, and sales force management. The setting for the simulation is a technology-based industry in which teams initiate operations for their firm and receive information on customer needs, customer satisfaction with brands, prices and products. Simulation participants learn to interpret competitors' tactics and how to adjust their firm's marketing strategy to stay ahead of the competition. The consequences of team actions on both brand profitability and firm profitability become apparent throughout the simulation.

24807 Marketing Strategy in Practice

8cp

Postgraduate

This is a highly personalised subject that brings students' classroom learning back to their companies. The project provides an opportunity for candidates to investigate a specific marketing issue faced by their employer (or a firm of their choice), to create competitive advantage in their markets and to add value to their organisations. This life-long learning process starts during classroom sessions and continues after the subject has concluded. Individuals conduct a strategic marketing analysis on their chosen organisation and solicit guidance on marketing issues from their faculty advisers. This process facilitates the development of a valuable, new competitive marketing strategy for each candidate's chosen firm.

24808 Advanced Marketing Strategies

8cp

Requisite(s): 24807 Marketing Strategy in Practice

There are also course requisites for this subject. See access conditions.

Postgraduate

Marketing theory and practice evolve constantly, with new frameworks and tools being developed. This subject provides an overview of the most current marketing thinking and illustrates how recent advances can be applied to the workplace to create value for organisations. It develops general management competencies so that decisions concerning marketing can be made more confidently.

24901 Philosophy of Science and Theory

6cp
Undergraduate

This subject introduces the basics of scientific method and shows how to apply it to the evaluation and development of business theory in teaching, practice and research. The evolution of business thought is used as the primary way of considering what business theories there are, their quality and their usefulness in progressing research in business.

24902 Research Methodology and Data Analysis Techniques

6cp
Requisite(s): 24108 Marketing Foundations AND 24202 Consumer Behaviour AND 24309 Marketing Research AND 24908 Research Design and Data Collection Techniques
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Undergraduate

This subject addresses comprehensive and practical considerations of research methodology, data characteristics and processing, multivariate data analysis approaches (statistical considerations and applications), and communication of marketing research results. It helps students develop advanced research skills that are critical to both knowledge generation in marketing theory and problem solving in marketing practice.

Typical availability

Autumn semester, City campus

24903 Readings for Thesis in Marketing (Honours)

6cp
Undergraduate

This subject provides an opportunity to engage in a structured literature review to assist in selecting a thesis topic. It improves awareness of up-to-date research in marketing by exploring current research activities of recently published authors.

24907 Research Management and Strategy Techniques

6cp
Requisite(s): 24108 Marketing Foundations AND 24202 Consumer Behaviour AND 24309 Marketing Research
There are also course requisites for this subject. See access conditions.
Undergraduate

This subject addresses the integration of all aspects of marketing research into comprehensive plans and courses of action. It includes aspects of project planning, design and execution including client service and management. It helps students develop advanced research skills that are critical to both knowledge generation in marketing theory and problem solving in marketing practice.

24908 Research Design and Data Collection Techniques

6cp
Requisite(s): 24108 Marketing Foundations AND 24202 Consumer Behaviour AND 24309 Marketing Research
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Undergraduate

This subject covers an advanced consideration of the management of the marketing research process, research designs, sources of marketing data, qualitative and quantitative data collection procedures, measurement, scaling and questionnaire design. It helps students develop advanced research skills that are critical to both knowledge generation in marketing theory and problem solving in marketing practice.

Typical availability

Autumn semester, City campus

24982 PhD Thesis: Marketing

0cp
Postgraduate

Students must undertake original research, supervised by a senior member of the school's academic staff. Students must prepare a proposal, present it and gain approval before proceeding. The thesis should advance knowledge in the area of marketing, and should be of a standard publishable in an international refereed journal.

24990 Master of Business Thesis (Marketing)

0cp
Students are required to complete a thesis which is considered to involve an amount of study equivalent to four semesters for full-time study, and six semesters for part-time study. The thesis is expected to present original research of a theoretical or applied nature in marketing. It is not expected to advance knowledge, as is required in the case of a PhD thesis, but it should give evidence of the student's ability to engage in a substantial investigation, identify and analyse research problems and present the results in a coherent and scholarly manner.

24999 Business Internship

6cp; availability: students need to have completed 72 credit points of study at credit average to enrol in this subject
Requisite(s): (72 Credit Points in spk(s): C10026 Bachelor of Business OR 72 Credit Points in spk(s): C10027 Bachelor of Business OR 96 Credit Points in spk(s): C10020 Bachelor of Business Bachelor of Arts in International Studies OR 96 Credit Points in spk(s): C10021 Bachelor of Business Bachelor of Arts in International Studies)) OR ((78 Credit Points in spk(s): C10235 Bachelor of Accounting OR 144 Credit Points in spk(s): C10065 Bachelor of Engineering Bachelor of Business OR 144 Credit Points in spk(s): C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 144 Credit Points in spk(s): C10125 Bachelor of Business Bachelor of Laws OR 144 Credit Points in spk(s): C10162 Bachelor of Science Bachelor of Business OR 144 Credit Points in spk(s): C10163 Bachelor of Medical Science Bachelor of Business OR 144 Credit Points in spk(s): C10169 Bachelor of Biotechnology Bachelor of Business OR 144 Credit Points in spk(s): C10219 Bachelor of Business Bachelor of Science in Information Technology)
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Undergraduate

In this subject, students undertake an internship with an organisation in a capacity relevant to their academic studies. This assists in developing employment skills, knowledge and contacts which can contribute to their career goals. Through their internship, students are exposed to the professional functions and activities relevant to their field of study (major). A written reflection and report on the outcomes of the internship is required. Students must undertake at least 210 hours of work with a host organisation, which is equivalent to six weeks or 30 days of full-time experience. The terms and time frame of the experience are flexible and may be negotiated between the student and host organisation. The internship must be based on an agreed and approved program of work which aims to achieve predetermined learning objectives.

25005 Economics and Finance of the Life Cycle

6cp
Requisite(s): (25567 Intermediate Microeconomics OR 23567 Intermediate Microeconomics)) OR 25562 Economics of the Firm OR (25503 Investment Analysis AND (25566 Economics for Business 2 OR 25555 Macroeconomics: Theory and Applications OR 23566 Economics for Business 2))
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Undergraduate

Economics and Finance of the Life Cycle examines the management of wealth across the life cycles of individuals and households. Unlike corporations and economies, individuals typically plan their spending and saving within a lifetime frame, deciding on education, workforce participation, asset acquisition, retirement and bequests. These decisions are made within the context of national retirement savings

systems. Standard investment risks are complicated by uncertain human capital, uncertain longevity and health risks, among other factors. Economics and Finance of the Life Cycle develops a theoretical framework for managing lifetime wealth in a risky environment.

25050 Financial Valuation and Strategy

6cp

Undergraduate

This subject develops an understanding of the relationship between financial information and multinational corporate strategic decisions. Analytical skills using financial tools are integrated with economic fundamentals to aid in decisions involving cross-border operations and performance evaluation. This subject encourages a broad perspective by focusing on financial implications of decisions.

25051 International Risk Management and Insurance

6cp

The concepts of risk and the management of risk are introduced as both a threat and an opportunity. The relevance of the risk management process within an economy is explored from a socioeconomic and sociolegal perspective. The impact of these processes are then analysed from an international perspective. Key elements of the process are then explored, addressing the variance in the processes at levels within an economy ranging from that of the individual, the corporation and the state.

The role of insurance as an effective risk treatment strategy is explored from both an economy internal and international perspective. The analysis seeks to identify the extent to which this role is impacted upon by external influences.

25052 International Banking Management

6cp

Undergraduate

This subject teaches the fundamentals of managing a financial institution in an international context. The principles are applied in the context of banks, but have a wider relevance to the management of non-bank financial institutions. The structure of the financial system and problems posed by managing financial institutions in today's environment are studied. Students also assess the performance of financial institutions from a creditors, investors and regulators' viewpoint. The principles of asset liability management, capital and foreign exchange risk management are studied in response to a changing environment in prudential supervision and the important of the ending function. The subject topics include: banking risks, performance evaluation, capital adequacy, the formulation of loan policy, loan pricing, project finance, country risk analysis, trade and international finance.

25053 International Financial Management

6cp

Undergraduate

The subject provides students with a general understanding of the financial management aspects of international business as well as the international financial system. It builds on learning outcomes from economics, finance and quantitative methods to provide students with a capability to undertake international finance case studies.

25208 Advanced Financial Planning

6cp

Requisite(s): 25503 Investment Analysis AND 25415 Personal Financial Planning

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces students to the process of developing and implementing a range of personal financial plans designed to meet the needs of a range of personal investors within a contemporary social, economic, legal and regulatory context.

25300 Fundamentals of Business Finance

6cp

Requisite(s): 26100c Integrating Business Perspectives

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

The subject develops an understanding of the core principles of finance and their applications to financial decision-making. Topics include an overview of the financial markets, time value of money, valuation of securities, risk-and-return, capital budgeting decisions and financing decisions.

25410 Corporate Financial Analysis (Capstone)

6cp

Requisite(s): 25557 Corporate Finance: Theory and Practice AND 25503 Investment Analysis

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject examines the use of financial statements in assessing a firm's financial health, its strengths, weaknesses, recent performance and future prospects. It examines financial statement forecasting and modelling with an emphasis on cash flow reconstructions from financial statements. Special issues dealing with financial statement information are emphasised in some depth. These issues include: market efficiency, asset pricing, corporate restructuring and business valuation, debt ratings and financial distress.

25415 Personal Financial Planning

6cp

Requisite(s): (25300 Fundamentals of Business Finance AND (26134 Business Statistics OR 26133 Business Information Analysis)) AND (25115 Economics for Business OR 23115 Economics for Business))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject provides an introduction to the theory and practice relevant to the management of personal financial risks. It provides an understanding of the fundamental techniques and analytical tools used in this process and identifies strategies suitable for securing both short and longer-term objectives in a dynamic social, economic and regulatory environment.

25421 International Financial Management

6cp

Requisite(s): 25557 Corporate Finance: Theory and Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces students to the concepts of international finance and the financial management of international businesses. Topics covered include foreign exchange, global financial markets, foreign exchange risk and its management, and financial decision-making techniques used by international business. Areas considered include trade finance, multinational working capital management, direct foreign investments and global financing.

25491 Investment Analysis and Risk Management

6cp

Requisite(s): 25300 Fundamentals of Business Finance

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject develops a set of tools for making investment and risk management decisions. It introduces the pricing of financial securities and derivatives and provides a foundation for analysing risk and return of financial assets. The topics covered include risk and risk aversion, portfolio optimisation, the pricing of equities, bonds, and derivative contracts. Students learn to use derivative contracts to manage investment risks.

25503 Investment Analysis

6cp

Requisite(s): 25556 The Financial System AND ([35151 Introduction to Statistics AND 35102 Introduction to Analysis and Multivariable Calculus] OR 25622 Quantitative Business Analysis)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces the conceptual and theoretical framework of the portfolio approach to investments and the investment management process. It applies the techniques of mean-variance diversification to portfolio construction and performance evaluation. Asset pricing models and their applications are also reviewed along with other principles of asset valuation and risk management.

25556 The Financial System

6cp

Requisite(s): 25300 Fundamentals of Business Finance

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

The aim of this subject is to develop an understanding of the operations of a modern financial system, covering its payment, financing and market-risk management activities. Its main topic areas are financial institutions, financial markets (such as stocks, bonds and foreign exchange) and derivatives (such as futures and options).

25557 Corporate Finance: Theory and Practice

6cp

Requisite(s): 25556 The Financial System

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject develops the concepts of corporate finance introduced in 25300 Fundamentals of Business Finance. This includes an examination of analytical techniques used in capital budgeting decisions and the capital structure decisions. Capital structure, estimation of the cost of capital and the dividend decision are examined from an empirical and theoretical viewpoint. The effects of working capital management policy and international finance on the value of the firm are also considered.

25558 Issues in Corporate Finance

6cp

Requisite(s): 25557 Corporate Finance: Theory and Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject explores advanced topics in corporate finance. Specific issues covered include the impact of taxation, agency conflicts and option pricing theory on corporate financial decisions; new-start valuation and financing; takeovers, mergers and acquisitions; and corporate restructuring.

25573 Time Series Econometrics

6cp

Requisite(s): 25503 Investment Analysis OR 25571 Introductory Econometrics OR 23571 Introductory Econometrics

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject equips students with a general knowledge of model building, which stands them in good stead for basic empirical work in business environments. It provides the analytic tools required for further study in time series econometrics. The approach to modelling, and the reasoning about multi-variable empirical relationships, strengthens students' analytic skills.

25574 Commercial Bank Management

6cp

Requisite(s): 25556 The Financial System

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject provides a detailed examination of the fundamentals of the management, risk, regulation and operation and performance of a commercial bank. The subject examines the theoretical concepts underpinning the operation of commercial banking in the form of financial intermediation and the unique role of banks in the economy. The structure of the financial system and problems posed by managing commercial banks in today's environment are given real-time practical applications that assess the performance of financial institutions from a creditor's, investor's and regulator's viewpoint.

In addition, the subject covers international banking and regulation. While the focus of the course is commercial banks, that is regulator registered banking institutions, a number of the concepts covered also have suitable application to other non-bank institutions.

25575 Investment Banking

6cp

Requisite(s): 25556 The Financial System

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject provides an accessible introduction to the literature on recent developments in the services and transactions provided by investment banks. It provides a complete, yet concise, synthesis of the recent available literature within a logical, analytical structure. It provides important discussions of the four major areas of investment banking, namely mergers and acquisitions, security issuance, financial engineering and international investment. The subject draws on the experience and expertise of senior industry practitioners.

25576 Wealth Management

6cp

Requisite(s): 25503 Investment Analysis

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject examines the investment and financial issues arising from the personal wealth management activities of private individuals. The subject commences with an introduction of the Australian financial planning industry, and then explores the most important components in personal wealth management — setting financial plans, budgeting, taxation planning, investment planning and strategies (including managed funds), risk management and insurance, consumer credit, home ownership and property investment, superannuation and social security, leveraged investments, and estate planning. Students should be able to develop and manage financial plans of hypothetical clients that meet specific goals and long-term objectives.

25577 Behavioural Finance

6cp

Requisite(s): 25557 Corporate Finance: Theory and Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Behavioural Finance is concerned with the psychology of market participants (i.e. cognitive psychology) and how they make decisions. In addition, the 'limits to arbitrage' is also addressed in explaining how and why markets can exhibit inefficiencies. Behavioural finance has been motivated due to concerns over traditional models and their reliance on rationality of decision makers, utility maximisation and the assumption that markets set efficient prices. As a result, behavioural finance has been considered as an alternative to better understanding agents' activities and anomalies in security returns.

25579 Applied Portfolio Management

6cp

Requisite(s): 25620 Derivative Securities AND 25503 Investment Analysis

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject provides students with an in-depth understanding of both the theoretical and the practical aspects of modern portfolio management. In terms of theory, students learn about the portfolio management process, the various asset classes at a fund manager's disposal, the role of diversification in portfolio management, the asset allocation and asset selection decisions, the use of financial derivatives in portfolio management and the fiduciary responsibilities of a fund manager. The practical aspects of the subject involve implementing and evaluating various asset price models for constructing efficient portfolios, implementing models for equity valuation, using the Black-Scholes option pricing formulae for portfolio insurance, and a substantial simulated portfolio management exercise, using historical price data.

25602 Ethics in Finance

6cp

Requisite(s): 25503 Investment Analysis

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

Ethical practices instil a public trust in the fairness of markets, allowing them to function efficiently. Additionally, ethical practices by finance and investment professionals benefit all market participants and stakeholders and lead to increased investor confidence in global capital markets. The perspectives acquired in this subject are useful to students in their place of work as a framework for ethical conduct in the investment profession is presented by focusing on the CFA Institute Code of Ethics and Standards of Professional Conduct. Citing examples of the scandals that have shaken public confidence in the ethics of Wall Street, this subject explains the importance of ethics in the operation of financial institutions and in the personal conduct of finance professionals.

25606 Financial Time Series

6cp

Requisite(s): ([25906 Portfolio Theory and Investment Analysis (Advanced) OR 25503 Investment Analysis] AND 25557 Corporate Finance: Theory and Practice)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

A number of theoretical models have been developed in the area of corporate finance. Students have been exposed to the major models in preceding subjects. This subject investigates the techniques that are required to empirically test these models and conducts a number of empirical tests using Australian financial markets data.

25620 Derivative Securities

6cp

Requisite(s): 25556 The Financial System

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: algebraic manipulations, basic elements of statistics (mean, variance, covariance and correlation), abstract mathematical concepts, basic principles in finance (the time value of money and risk-adjusted discount rates)

Undergraduate

This subject provides students with a basic understanding of forwards, futures, swaps and options. It covers their valuation by arbitrage arguments, their use and the management of the associated risks. A large part of this subject is devoted to applied problems dealing with situations in which students may expect to encounter derivations in practice.

25622 Quantitative Business Analysis

6cp

Requisite(s): (25115 Economics for Business OR 23115 Economics for Business) AND ([26134 Business Statistics OR 26133 Business Information Analysis]) OR (33130 Mathematical Modelling 1 AND 33230c Mathematical Modelling 2)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

Quantitative Business Analysis provides students with skills essential for studying finance subjects offered by the School of Finance and Economics. Students learn basic mathematics and statistics, and consolidate their knowledge and skills in the context of real world finance problems. The focus of the subject is on the development of practical modelling skills.

25705 Financial Modelling and Forecasting

6cp

Requisite(s): 25742 Financial Management OR 25746 Financial Management: Concepts and Applications

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject allows students to develop an understanding of the issues involved when forecasting in an uncertain world. Students apply statistical methods to identify an appropriate forecasting model and then develop and evaluate the forecasts for use in a typical financial analysis problem.

25721 Investment Management

6cp

Requisite(s): 25742 Financial Management OR 25746 Financial Management: Concepts and Applications

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is designed to provide an understanding of the investment process and to develop a set of tools for making investment and portfolio decisions. It provides an overview of the paradigms of modern portfolio theory, and a foundation for analysing the risks and returns of investment portfolios. Specific topics include the measurement of risk and return, the construction of efficient portfolios, the pricing of risk, equity valuation, market efficiency and investor behaviour.

25728 Bond Portfolio Management

6cp

Requisite(s): 25721 Investment Management OR 25741 Capital Markets

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This is a specialised subject focusing on the conceptual and theoretical aspects of interest rates and risk management in bond markets. The subject includes discussions of the term structure of interest rates, bond pricing and bond portfolio strategies. The subject includes a large applied component involving the construction of yield curves and the analysis of bond market data, as well the construction and management of bond portfolios.

25729 Applied Portfolio Management

6cp

Requisite(s): 25721 Investment Management OR 25741 Capital Markets

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is concerned with the process of constructing and managing a diversified institutional portfolio comprising stocks, fixed-income securities, real and alternative assets, and derivatives. It begins by reviewing the foundations of investment management before continuing to the topics of equity and fixed-income portfolio management. Less traditional asset classes, such as investment companies, exchange-traded funds, real estate, hedge funds and private equity, are also examined. Finally, considerable attention is given to the important issues of asset allocation and performance measurement and attribution.

25731 International Finance

6cp

Requisite(s): 25742 Financial Management OR 25746 Financial Management: Concepts and Applications

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines foreign exchange markets, multinational working capital, international investments and the financing of international operations. On completion, students are able to understand how firms operate in the international financial environment.

25732 Venture Capital and Private Equity: Theory and Practice

6cp

Requisite(s): 25765 Corporate Finance

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an overview of the venture capital and private equity industry and an accessible introduction to the literature on recent developments in venture capital and private equity investments. It provides particular perspectives on the three major areas of venture capital and private equity: fundraising, investing and exit strategies. The subject draws extensively on the experience of senior industry practitioners who use their experience to provide students with insights into real-world venture capital and private equity decision-making processes. The subject also makes extensive use of the case study approach to teaching and learning, focusing on US and Australian venture capital and private equity investment cases in weekly class discussions.

25741 Capital Markets

6cp

Postgraduate

This subject examines the structure and behaviour of Australia's financial system and its main components. Its principal topics are the instruments and processes through which financing is arranged, the pricing of instruments and the associated risks and their management with derivatives. The subject forms part of the finance specialisation in the MBA and Master of Business degree programs where it provides a preparation for more specialised subjects in investment management, international finance and the various subjects that deal with financial institutions and risk management.

25742 Financial Management

6cp

Requisite(s): 21878c Organisational Dialogue: Theory and Practice OR 26001 Business Communication Skills

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject aims to introduce students to finance and helps them acquire the basic analytical skills required to make informed financial decisions. Topics include the goals of financial management, introduction to security market regulation, ethics and the firms investment and financing decisions. Working capital management and international aspects of financial management are also introduced.

25743 Corporate Financial Analysis

6cp

Requisite(s): ((22747 Accounting for Managerial Decisions OR 22784 Accounting: Concepts and Applications) AND 25765 Corporate Finance)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject develops students' abilities to conduct corporate financial analysis both for lending and investment purposes. Students perform industry analysis, identify participants' motivations and accounting deficiencies, forecast financial statements and value companies.

25751 Financial Institution Management

6cp

Requisite(s): ((25742 Financial Management OR 25746 Financial Management: Concepts and Applications) AND 25741 Capital Markets)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject teaches the fundamentals of managing a financial institution. The principles are applied in the context of banks, but have a wider relevance to the management of non-bank financial institutions. The structure of the financial system and problems posed by managing financial institutions in today's environment are given real time practical application in case studies which assess the performance of financial institutions from a creditor's, investor's and regulator's viewpoint. Case studies of bank failure and success are interposed with principles of asset liability management, strategic planning and responses to a changing environment in prudential supervision.

25752 Financial Institution Lending

6cp

Requisite(s): ((25742 Financial Management OR 25746 Financial Management: Concepts and Applications) AND 25741 Capital Markets)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This is a specialised subject in the management of the loan funds assets of financial institutions. It provides students with knowledge of the theory of financial intermediation, information economics and its application in achieving the maximum shareholders return while managing the level of risk associated with the loan products. The subject's topics include: the formulation of loan policy, the managing and selection of loans, loan pricing, portfolio loan risk management, individual loan risk management, problems loans and specialist loan risk areas such as project and infrastructure finance, corporate loans, consumer lending and small and medium enterprise lending and loan structuring and documentation and collateral. The subject includes a number of case studies in major lending disciplines such as project financing, small and medium enterprise lending, consumer lending, corporate lending and problem loans.

25762 Derivatives and Risk Management

6cp

Requisite(s): 25741 Capital Markets

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an introduction to the management of portfolios using options in financial markets. Stock, index, debt and foreign currency options are discussed, as well as forward and futures contracts and options on these instruments. The role of such instruments as risk-transferring devices is also discussed.

25763 Corporate Treasury Management

6cp

Requisite(s): 25762 Derivatives and Risk Management AND 25765 Corporate Finance

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject teaches students the management of financial price risk in a corporate environment. On completion, students are able to understand and identify financial price risk, measure exposures, set objectives, measure performance and adopt appropriate tactics and strategies. This is via use of forwards, futures, swaps and options (separately or, in combination).

25764 Venture Capital Finance

3cp

Requisite(s): 25741 Capital Markets AND 25765 Corporate Finance

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines the nature of the venture capital market and investment processes, and the growing number of financial institutions involved as venture capital suppliers. It analyses the various types of new ventures appropriate for venture capital finance, including start-up, expansion and management buy-out.

25765 Corporate Finance

6cp

Requisite(s): (25742 Financial Management OR 25746 Financial Management: Concepts and Applications) AND (22747 Accounting for Managerial Decisions OR 22784 Accounting: Concepts and Applications)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject exposes students to advanced corporate financial management by initially considering an economy with no risks and no market imperfections and then relaxing these assumptions to consider a more realistic economic environment. Topics covered include capital budgeting, cost of capital, capital structure and valuation, dividend policy and mergers and acquisition. Particular attention is paid to different tax environments and agency relationships within the firm.

25780 Readings in Finance

6cp

Postgraduate

Students wishing to enrol in this subject should seek the approval of the head of the School of Finance and Economics.

25782 Alternative Investments

6cp

Requisite(s): 25721 Investment Management

Postgraduate

This course is designed to furnish students with a broad knowledge of the alternative investments industry. By using current material from the Chartered Alternative Investments Association (CAIA), students study material deemed relevant by the industry. The Journal of Alternative Investments (JoAI) is also used to ensure that students leave the course equipped with meaningful material. As preparation for employment, the course assessments are designed to improve critical thinking, report writing and quantitative abilities. Class discussion and involvement are encouraged.

25783 Behavioural Finance

3cp

Requisite(s): 25765 Corporate Finance

Postgraduate

Behavioural finance has been motivated by concerns about traditional finance theories and their assumption of risk perception, rationality of decision-makers, utility maximisation and market efficiency. This subject questions these assumptions in various financial settings and investigates how behavioural biases influence the way individuals actually behave and make decisions, and the reasons for their behaviour. The subject covers psychological concepts, cognitive errors and emotional biases, and explains how these concepts influence and affect finance and investments. In addition it also focuses on the behavioural aspects of investment decisions, portfolio construction, asset pricing, and the behaviour of financial markets and market anomalies. Finally, the subject familiarises students with the theory and application of various technical analysis methods, techniques and concepts.

25787 Research Techniques in Finance and Economics

6cp

Postgraduate

This subject exposes students to a selection of research techniques of potential relevance in preparing a thesis in the area of finance and economics.

25788 Research Seminar in Finance and Economics

6cp

Postgraduate

This subject provides a forum for students to present an update on their research efforts and review the work of others.

25796 Personal Wealth Management

6cp

Requisite(s): 25721 Investment Management

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

In this subject students study the investment and financial issues arising from the management of personal wealth. They examine the structure of the Australian financial planning industry and analyse the most important components of wealth management: setting financial plans, budgeting, taxation planning, investment planning and strategies (including managed funds), risk management and insurance, home ownership and property investment, superannuation and social security, leveraged investments, retirement planning and estate planning. The subject is designed to provide students with the ability to develop and manage the financial plans of clients in a way that meets their specific goals and long-term objectives.

25797 Real Estate Investment Trusts

3cp

Requisite(s): 25721 Investment Management

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines the structure, management and role of real estate investment trusts in the capital markets. Real estate investment trust business models, and legal, commercial and management structures, are analysed, together with an examination of the links between corporate strategy and property portfolio management within a listed environment.

25798 Ethics and Professional Standards in Finance

3cp

Requisite(s): 25721 Investment Management

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The highest ethical standards are necessary to instil a public trust in the investment profession, thereby ensuring the efficient functioning of the financial system. The principles and guidance presented in the CFA Institute Code of Ethics and Standards of Professional Conduct provide the ethical context for this subject to allow students to follow, promote, and develop the highest ethical standards when pursuing professional careers in all related financial areas such as investments, portfolio management and financial planning.

25807 Mergers and Acquisitions

3cp

Requisite(s): 25741 Capital Markets AND 25765 Corporate Finance

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject looks at all aspects of the mergers and acquisitions process by which one organisation is subsumed into another. Topics covered include valuation, leveraged buyouts, asset sales and restructuring and defeasance. Legal and tax aspects of mergers and acquisitions is also examined.

25809 Technical Analysis

3cp

Requisite(s): 25721 Investment Management

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Technical analysis is a major force in financial markets. This subject familiarises students with all aspects of technical analysis. Topics include types of charts, Elliot wave theory and cross confirmation.

25812 Fundraising in International Markets

3cp

Requisite(s): 25741 Capital Markets AND 25765 Corporate Finance

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines practical aspects of raising funds in offshore markets. The evolution and structure of international financial markets is also examined. Eurocurrency, debt and equity markets are covered in detail. Topics include international bond issues, equity link bonds and euro bonds.

25818 Real Estate Finance and Investment

3cp

Requisite(s): 25721 Investment Management

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines real estate/property as an asset class. Various property sectors are considered as well as mainstream techniques of finance such as discounted cash flow, modern portfolio theory and efficient market hypothesis, which are applied to the selection, evaluation, and management of real estate.

25824 Project Finance

3cp

Requisite(s): 25741 Capital Markets AND 25765 Corporate Finance

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides students with an understanding of the particular risks involved in project financing. It develops abilities to overcome the risks involved in project finance through analytical techniques and looks at the role of project financing in the modern economy with reference to recent projects in Australia and South-East Asia. Topics covered include identification and management of project risk; project financing; evaluation of projects; structuring; and documentation.

25832 Financial Markets Instruments

6cp

Postgraduate

This subject introduces students to the main instruments and markets that comprise the financial system. It discusses the factors that influence the evolution of financial markets, valuation of various securities such as equities and foreign exchange, bond price, forward rate and yield curve calculations, forward rate agreements (FRAs) and interest rate swaps, and interest rate hedging.

25833 Derivatives

6cp

Postgraduate

This subject introduces students to modelling asset price dynamics in discrete time and continuous time. Students also examine arbitrage pricing of derivatives in discrete and continuous times, interpretations of the arbitrage pricing condition leading to the partial differential equation, martingale and integral evaluation viewpoints, and derivative pricing in both deterministic and stochastic interest rate environments.

25834 Portfolio Analysis

6cp

Requisite(s): 25854 Statistical Methods for Quantitative Finance AND 25832 Financial Markets Instruments

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject introduces students to the theory and practice of modern portfolio theory, surveys relevant aspects of capital markets, foundations of investment decision-making, portfolio selection via the mean-variance approach, and theory and empirical tests of equilibrium pricing models. It assists students to understand the theory and principles underlying modern portfolio theory, and develops skills to apply theories to investment decisions.

25835 Computational Finance

6cp

Requisite(s): 25832 Financial Markets Instruments AND 25834 Portfolio Analysis

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject develops students' skills to solve computational problems arising in Quantitative Finance. It investigates solutions for portfolio management, derivatives pricing, equity and yield curve analysis. It also examines basic concepts of procedural and object-oriented programming, and develops the application skills of these concepts to financial problems in Visual Basic/Excel and in C++.

25836 Financial Decision Making Under Uncertainty

6cp

Requisite(s): 25832 Financial Markets Instruments AND 25834 Portfolio Analysis AND 35364 Statistics for Quantitative Finance
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Postgraduate

This subject introduces students to utility theory, arbitrage principles, portfolio formation and efficient markets at an advanced level. Areas such as the development of mean-variance analysis, the capital asset pricing model and arbitrage pricing theory in single-period equilibrium models and multi-period portfolio analysis in discrete time and in continuous time are examined.

25837 Financial Econometrics

6cp

Requisite(s): ((25854 Statistical Methods for Quantitative Finance OR 35364 Statistics for Quantitative Finance) AND 25832 Financial Markets Instruments)

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Postgraduate

This subject exposes students to the main econometric techniques used to estimate models in financial economics. It emphasises that financial economics is a highly empirical discipline. The primary method of inference for the financial economist is examined, and the model analysed is statistical inference-financial econometrics. Students apply a range of econometric techniques to financial theories.

25838 Advanced Instruments

6cp

Requisite(s): 25835 Computational Finance AND 25836 Financial Decision Making Under Uncertainty

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides students with the opportunity to apply the various techniques studied earlier in the course to the valuation and hedging of more advanced derivative instruments. It examines taxonomy of the various exotic derivatives in the log-normal world and then focuses in detail on pricing and hedging issues, particularly binaries, barriers and strongly path-dependant options such as Asians and look-backs. Interest rate derivative products are analysed, and practical implementations within the Hull-White, Heath-Jarrow-Morton and Brace-Musiela representations are undertaken.

25839 Mathematics of Finance

6cp

Requisite(s): 35365 Stochastic Calculus in Finance

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Postgraduate

This subject introduces students to the theory of mathematical finance with applications in derivative pricing, portfolio optimisation and risk management. Techniques of no-arbitrage pricing in finance and financial mathematics are explored. Theoretical problems involving hedging derivatives and change of probability measures and portfolio optimisation are formulated and solved.

25840 Integrated Risk Management

6cp

Requisite(s): 25838 Advanced Instruments

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject introduces students to the theory and practice of integrated risk measurement and management with applications in value at risk, market and credit risk analysis for large diversified portfolios, extreme value analysis and coherent risk measurement. Techniques for large nonlinear diversified portfolios are explored. Theoretical problems related to value at risk, expected shortfall and risk adjusted capital allocation for large nonlinear portfolios are formulated and solved.

25841 Decision Making Tools

8cp

Postgraduate

This subject unifies students' abilities to approach business-related problems by integrating methods and applications. Emphasis is placed on realistic business examples and the processes managers use to analyse business problems. The aim is to provide students with the skills to analyse business problems with tools they have access to and will use in their careers.

25844 Managerial Corporate Finance

8cp

Requisite(s): ((25845 Managerial Economics OR 23845 Managerial Economics) AND 25846 Managerial Finance)

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject introduces and exposes students to corporate financial management by initially considering an economy with no risks and no market imperfections, and then relaxing these assumptions to consider a more realistic economic environment. Topics covered include capital budgeting, cost of capital, capital structure and valuation, dividend policy, mergers and acquisitions and private equity. Particular attention is paid to different tax environments and agency relationships within the firm.

25846 Managerial Finance

8cp

Requisite(s): 25841 Decision Making Tools AND 22814 Accounting Information for Managers

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides students with an understanding of the tools and techniques used in financial decision-making and up-to-date knowledge in financial management. It provides an understanding of the financial forces that influence corporate strategy, offering the opportunity for participants to acquire a range of skills and expertise expected of corporate managers. The outcomes are achieved using learning strategies that foster the application of leading-edge practices to meet the business challenges arising from international forces and technical and knowledge innovation. The subject material draws on an understanding of managerial accounting and economics, provides a basis for subsequent integrative subjects and examines the key areas of financial decision-making such as risk and diversification, capital budgeting, and cost of capital.

25849 Financial Risk Management

6cp

Requisite(s): 25856 Probability Theory and Stochastic Processes

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject provides a comprehensive and rigorous exposition of the theory and practice of financial risk measurement and management. The subject focuses on tools and techniques for identifying, measuring, computing and managing market risk. It covers risk measures including value-at-risk, expected shortfall and earnings-at-risk. The concept of coherent risk measures are also explored. Parametric and non-parametric techniques, including historical and Monte Carlo simulation, are covered in depth. The subject consists of a large practical component involving implementing value-at-risk measures for realistic portfolios, combined with stress testing methods.

25850 Credit Risk

6cp

Requisite(s): 25856 Probability Theory and Stochastic Processes

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

The Global Financial Crisis has highlighted the need for sophisticated credit risk management as well as the danger of blindly applying complex models without a thorough understanding of their underlying assumptions and limitations. This subject addresses these issues, providing insight into what can and can't be done using quantitative models for credit risk — and how to do what can be done. It introduces students to state-of-the-art mathematical models for

credit risk, resulting in an understanding of their relative merits, the issues involved in their implementation and their use in the pricing and risk management of credit risk and credit derivatives.

25851 Mathematical Finance

6cp

Requisite(s): 25856 Probability Theory and Stochastic Processes
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject introduces stochastic calculus and the theory of mathematical finance at an advanced level with applications in derivative pricing, portfolio optimisation and risk management. Techniques of pricing and hedging in finance and insurance are explored. Theoretical problems involving the hedging of derivatives and the change of probability measures and the optimisation of portfolios are formulated and solved.

25852 Numerical Analysis for Quantitative Finance

6cp

Requisite(s): 25851 Mathematical Finance
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject presents various numerical methods used in quantitative finance. It provides a rigorous understanding of advanced numerical, statistical and filtering methods. Emphasis is on simulation methods for solving stochastic differential equations, their systematic application and their links to finite difference and other numerical methods.

25853 Computational Methods and Model Implementation

6cp

Requisite(s): 25849 Financial Risk Management AND 25850 Credit Risk
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject develops skills to solve computational problems arising in quantitative finance. It investigates solutions for risk management, derivatives pricing, equity and yield curve analysis, focusing on model implementation and calibration to market data. Models are implemented on a Microsoft Excel platform (including Visual Basic) and in C++.

25854 Statistical Methods for Quantitative Finance

6cp

This subject reviews the required tools from mathematics, probability and statistics required to describe some stylised facts about asset returns.

25855 Fundamentals of Derivative Security Pricing

6cp

Requisite(s): 25834 Portfolio Analysis AND 25837 Financial Econometrics
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject introduces the basic concepts for the pricing of derivative securities from an intuitive perspective. Topics include basic concepts from probability theory, the fundamentals of stochastic calculus, arbitrage pricing in continuous time, different interpretations of the arbitrage pricing condition, the partial differential equation, martingale and integral evaluation viewpoints. Option pricing under stochastic volatility and jump-diffusion dynamics is also considered.

25856 Probability Theory and Stochastic Processes

6cp

The subject introduces the theory of stochastic processes and stochastic calculus and demonstrates their applicability to solve problems in finance.

25857 Interest Rate Modelling

6cp

Requisite(s): 25855 Fundamentals of Derivative Security Pricing AND 25856 Probability Theory and Stochastic Processes
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject builds on the subject Fundamentals of Derivative Security Pricing to present the various financial and mathematical concepts, techniques and intuition necessary to price derivative securities in a stochastic interest rate environment. The focus is on spot rate models, the Heath-Jarrow-Morton framework and the LIBOR market model.

25860 Advanced Econometric Methods for Finance

6cp

Postgraduate

This subject aims to provide students with advanced theoretical and practical tools for analysing financial data. Building on the foundation of the multiple linear regression model, this subject introduces asymptotic theory, maximum likelihood estimation, the generalised method of moments framework, univariate and multivariate techniques in time series, and, panel data modelling.

For more information, contact your PhD supervisor.

25861 Empirical Asset Pricing

6cp

Postgraduate

The goal of this subject is to establish perspectives, approaches, tools and methods of independent thinking, analysis, and problem solving and their application to essential asset pricing topics. Topics include utility theory, portfolio theory, arbitrage pricing, equilibrium pricing, security prices' informational efficiency, and performance measurement.

For more information, contact your PhD supervisor.

25862 Empirical Corporate Finance

6cp

Postgraduate

The purpose of this subject is to understand the investment and financing decisions made by firms. The main issue is how the delegation of decision-making power and information asymmetry affect outcomes, and how deviations from optimality can be mitigated through various incentive mechanisms. The subject involves game theory and covers some classic papers in finance as well as their empirical tests.

For more information, contact your PhD supervisor.

25863 Empirical Finance

6cp

Postgraduate

The subject introduces students to the empirical methods of modern finance. The topics are chosen to highlight some of the key concepts involved in current empirical work in finance by replicating the results reported in published studies in diverse areas of finance.

For more information, contact your PhD supervisor.

25864 Finance Theory

6cp

Postgraduate

This subject introduces students to the major models of asset pricing and to rational expectations models. Three broad categories of asset pricing models are discussed: single-period static models and discrete time intertemporal models; continuous time models; and rational expectations models.

For more information, contact your PhD supervisor.

25921 Theory of Financial Decision Making

6cp

Undergraduate

This subject introduces the foundations of modern portfolio theory and how it is applied. Topics covered include theory of choice, mean-variance criterion, capital market equilibrium, capital asset pricing model and arbitrage pricing theorem, and equilibrium evaluation of derivative securities.

25922 Financial Econometrics

6cp

Undergraduate

This subject extends knowledge of financial econometrics and model building to enable comprehension of advanced research literature and confident use of econometric techniques in research. Topics include: maximum likelihood estimation and inference in linear and nonlinear models; modern time series methods of dealing with integrated variables; modelling volatility with the ARCH class of models; and models for cross-sectional data.

25923 Derivative Security Pricing

6cp

Undergraduate

This subject covers the following topics:

- pricing methodologies and arbitrage
- key ideas illustrated in a binomial setting
- an introduction to the Ito calculus
- risk neutrality and martingale measures
- the Black/Scholes model and the associated quantitative methods
- the basis of Monte Carlo simulation
- options with early exercise features
- the term structure of interest rates, and
- pricing of interest rate derivatives.

25924 Advanced Corporate Finance

6cp

Undergraduate

Through study of the research literature, this subject provides an understanding of the motivation, construction and empirical testing of theories in corporate finance. It covers a selection of classic papers in corporate finance, some current research work, and a significant quantity of Australian empirical work. Research studied is concerned with the major issues involved in a company's investment and financing decisions and the interaction of these activities with the formation of prices in the markets for the company's securities.

25927 PhD Thesis: Finance

0cp

Postgraduate

Students must undertake original research, supervised by a senior member of the school's academic staff. Students must prepare a proposal, present it and gain approval before proceeding. The thesis should advance knowledge in the area of finance, and should be of a standard publishable in an international refereed journal.

25928 Thesis Proposal in Finance (Honours)

6cp

Honours

This subject enables students to conceptualise, develop and defend a research proposal on an original problem of a theoretical or applied nature in finance.

25929 Thesis in Finance (Honours)

18cp

Requisite(s): 25928 Thesis Proposal in Finance (Honours)

Honours

This subject allows students to research and write a thesis on the proposal developed in Thesis Proposal in Finance (Honours). Students receive regular guidance and feedback from their thesis supervisors. The Honours thesis requires the student to produce a 20,000-word (maximum) thesis based on an original problem of a theoretical or applied nature. The thesis is expected to demonstrate the student's competency to conceptualise, conduct and present research in a scholarly and independent manner.

Each thesis is examined by at least two internal examiners from the Faculty of Business. External examiners may from time to time be appointed at the discretion of the Head of the Discipline Group to support the internal examination process.

25990 Master of Business Thesis (Finance)

0cp

Students are required to complete a thesis which is considered to involve an amount of study equivalent to four semesters for full-time study, and six semesters for part-time study. The thesis is expected to present original research of a theoretical or applied nature in finance or economics. It is not expected to advance knowledge, as is required in the case of a PhD thesis, but it should give evidence of the student's ability to engage in a substantial investigation, identify and analyse research problems and present the results in a coherent and scholarly manner.

25999 Business Internship

6cp; availability: students need to have completed 72 credit points of study at credit average to enrol in this subject

Requisite(s): (72 Credit Points in spk(s): C10026 Bachelor of Business OR 72 Credit Points in spk(s): C10027 Bachelor of Business OR 96 Credit Points in spk(s): C10020 Bachelor of Business Bachelor of Arts in International Studies OR 96 Credit Points in spk(s): C10021 Bachelor of Business Bachelor of Arts in International Studies)) OR ((78 Credit Points in spk(s): C10235 Bachelor of Accounting OR 144 Credit Points in spk(s): C10065 Bachelor of Engineering Bachelor of Business OR 144 Credit Points in spk(s): C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 144 Credit Points in spk(s): C10125 Bachelor of Business Bachelor of Laws OR 144 Credit Points in spk(s): C10162 Bachelor of Science Bachelor of Business OR 144 Credit Points in spk(s): C10163 Bachelor of Medical Science Bachelor of Business OR 144 Credit Points in spk(s): C10169 Bachelor of Biotechnology Bachelor of Business OR 144 Credit Points in spk(s): C10219 Bachelor of Business Bachelor of Science in Information Technology)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

In this subject, students undertake an internship with an organisation in a capacity relevant to their academic studies. This assists in developing employment skills, knowledge and contacts which can contribute to their career goals. Through their internship, students are exposed to the professional functions and activities relevant to their field of study (major). A written reflection and report on the outcomes of the internship is required. Students must undertake at least 210 hours of work with a host organisation, which is equivalent to six weeks or 30 days of full-time experience. The terms and time frame of the experience are flexible and may be negotiated between the student and host organisation. The internship must be based on an agreed and approved program of work which aims to achieve predetermined learning objectives.

26100 Integrating Business Perspectives

6cp

This subject provides students with an overview of the business landscape with its various economic, legal and regulatory dimensions, in the private, public and non-profit sectors. It provides an introduction to the relationship between the various business disciplines and their contribution to the value of the business and society. Students also consider ethical and sustainability issues as they relate to the role of business in society. In addition, the subject incorporates the development of graduate skills for business professionals, in particular those relating to (business) written communication, oral presentations, group work, and critical, integrative and creative thinking.

26134 Business Statistics

6cp

Requisite(s): 26100c Integrating Business Perspectives

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject is designed to develop students' abilities to assess and critically interpret statistics and business information and apply them in changing business environments. The subject places strong emphasis on developing a clear theoretical understanding of various analytical tools as well as an appreciation of the application statistics to business decisions. These skills and competencies provide a foundation for professional practice for further study in the many different majors of the degree.

26703 Introductory Health Economics

6cp
Postgraduate

This subject provides a broad understanding of the economics of health and health care and the skills to apply analytical economics techniques to problems of resource allocation and policy development in the health system. The subject covers key economic issues for the health system and uses economics techniques to understand how the health system operates and to analyse health system reform.

26800 International Business Consulting

8cp
Postgraduate

The subject provides an in-depth practical experience enabling students to develop a better understanding of international business strategies and best practices. During the international study tour, participants are exposed to a series of expert presentations and company visits supporting the course objectives, while solving a business problem for a Sydney-based firm. Academic and industry supervisors are assigned to coach, mentor and assist the participants in the engagement. The scope and nature of the consulting assignment is agreed upon with the client through a proposal process. The findings are delivered to the client in terms of a presentation and a formal report.

27100 Current Issues in Sport Business

6cp
This subject allows students to apply the knowledge they have gained previously to an understanding of contemporary, critical, global issues in sport business. Students examine the local and global relevance of the critical issues, the ethical ramifications and the ways in which they, as sport business professional, might respond. They also reflect and project on how such issues might affect the development of sport. The subject assists students to relate critical sport business issues to a wider understanding of social life and community.

27103 Olympic Games and Mega Events

6cp
Undergraduate
The Olympic Games is a significant phenomenon in contemporary sport, tourism and culture with a growing research literature. This subject covers the cultural, sociological, economic and media impacts on the games, the philosophy of 'Olympism' and impacts of the Sydney 2000 event.

27105 Nutrition for Health and Physical Activity

6cp
Requisite(s): 27175 Energetics of Human Movement
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Undergraduate

This subject examines the role of nutrition in maintaining a healthy lifestyle and optimising exercise and sports performance. It focuses on dietary guidelines for health, exercise prescription and sports performance, and on the relationships between physical activity and eating disorders.

27111 Mechanics of Human Motion

6cp
Undergraduate

This subject investigates the mechanical principles required to produce movement. It analyses both internal and external forces with respect to the human body and its environment, with a view to applying various mechanical principles to optimise human performance.

27115 Arts and Entertainment Industries

6cp
Undergraduate
This subject examines the concepts and structure of non-profit and for-profit arts and entertainment industries. It covers theories of cultural distinction and cultural capital and their relevance to the contemporary analysis of leisure and culture. It analyses the organisation of the arts and the entertainment industry in Australia with particular reference to market segmentation, globalisation, sustainability and creating value and competitive advantage. The subject familiarises students with current issues shaping the future of arts and entertainment in Australia.

27116 e-Marketing and Management of Services

6cp
Requisite(s): 27324 Strategic Management in Leisure, Sport and Tourism Organisations
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Undergraduate

This subject examines how information and computer-mediated communication technology is used in the information-intensive leisure and tourism industries. It examines and analyses the use of this technology in the management and marketing of such organisations to establish why it is used, what efficiencies it brings and the implications for the links in the service distribution chain. It gives students an understanding of how e-commerce in the tourism and leisure industries is changing the way in which such services are promoted and distributed to the consumer.

27126 Event and Leisure Industries

6cp
Undergraduate

This subject provides students with an introduction to leisure and events behaviour, industries and experiences. It builds a framework for analysing the development of 'industrial' responses to this behaviour and provides a grounding on which subsequent contextual knowledge is built. It provides students with the opportunity to learn a range of information retrieval and reporting techniques central to the development of scholarship.

27141 Sport Tourism

6cp
Undergraduate
The subject explores the concepts and practices that underpin the relationship between sport and tourism. This includes sport as an active endeavour for tourist, as well as sport as a commodity for witness and consumption by audiences. Students develop an understanding of management, policy and delivery issues in two of the world's largest and fastest growing industries, and how they combine today. Interplays between sport tourism and the economy, sociocultural dynamics, the environment, urban development, and public policy are critically investigated. The subject also includes discussion of cultural variations in sport and tourism, contemporary developments, and likely trends in the future of sport tourism.

27149 Performance Studies 1: Gymnastics and Dance

6cp
Undergraduate
This subject provides students with the knowledge and skills necessary to understand the relationships between human motor development and performance in physical activity. Competence in a range of dance (including jazz, contemporary and warm-up routines) and gymnastics (including warm-ups, cool-downs, floor routines, apparatus and complete lessons) activities is required.

27152 Measurement and Development of Physical Capacity

6cp
Undergraduate
This subject examines the interrelationships between physical activity and the physiological and anatomical development of the individual. It provides students with proficiency in the skills required to assess fundamental capacities related to human movement and emphasises the development of physical capacity (endurance, strength and flexibility) and basic training methodology.

27154 Readings for Thesis

6cp
Undergraduate
This subject provides honours students with the opportunity to explore in greater depth the major themes and issues pertaining to their area of research. It enables students to recognise the contribution of the literature relevant to their research problem. It also allows students to use the literature to develop the theoretical and conceptual framework of their honours thesis.

27155 Research for Human Movement

6cp

Undergraduate

This subject introduces a variety of research design and statistics procedures to reflect the human movement and sport and exercise management fields. Research methods include both quantitative and qualitative procedures. Computer software packages are used to enter, analyse and report data. Students become familiar with statistical procedures relating specifically to the sport and exercise industry.

27160 Sport and Exercise Psychology

6cp

Undergraduate

This subject examines sport performance and exercise participation in relation to cognitive and social psychological constructs. It emphasises the utilisation of sport psychology for performance enhancement in sport and examines the psychological responses involved in exercise, with an emphasis on how these responses influence future exercise behaviour.

27161 Sport Marketing

6cp

Undergraduate

This subject explores marketing concepts as they relate to the funding, promotion and the commercial development of sport. The subject explores sport marketing strategies, sport research, sport advertising, sport publicity, sport sponsorship and promotion across various levels of sporting organisations.

27171 Applied Kinesiology

6cp

Requisite(s): 27111 Mechanics of Human Motion AND 27180

Functional Kinesiology

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject involves a detailed analysis of human motion and provides the opportunity to advance understanding of musculoskeletal anatomy and biomechanics. This is acquired through a detailed analysis of the anatomical and mechanical principles that surround selected movement patterns.

27172 Applied Sport Psychology

6cp

Requisite(s): 27160 Sport and Exercise Psychology

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject examines the field of applied sport psychology. It focuses primarily on performance enhancement through the understanding and implementation of psychological principles in sport situations.

27173 Human Performance in Sport and Exercise

6cp

Requisite(s): 27175 Energetics of Human Movement

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

Students examine human physiological and biochemical responses and adaptations to human performance with emphasis on the efficiency of human movement, training adaptations, muscle metabolism and exercise training methodology. The subject focuses on developing a strong theoretical understanding, as well as developing proficiency in the skills required for fundamental assessment in exercise physiology.

27174 Analysis of Human Motion

6cp

Requisite(s): 27171 Applied Kinesiology

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject expands upon a variety of mechanical concepts integral to the study of human motion. Quantitative problems are developed further and a major research project involving videography is conducted. Linear and angular kinetics are applied to sporting techniques and other human movements. The use of technical equipment for data collection and analysis is a major component of the subject.

27175 Energetics of Human Movement

6cp

Undergraduate

This subject examines the interactions between the bioenergetic, metabolic, neurological and hormonal aspects of human movement, muscular control and cardiorespiratory function and performance. With a focus on energy system development and the physiological response to exercise, this subject supports the development of competencies in the assessment of physiology in a human movement context.

27178 Exercise Rehabilitation

6cp

Requisite(s): 27180 Functional Kinesiology

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject examines the role of physical exercise as a therapeutic adjunct in the amelioration of certain chronic medical conditions caused by disease, sport or workplace injury. It focuses on developing a strong understanding of the physiological, biomechanical and psychological limitations of these chronic medical conditions as well as developing proficiency in the skills required for individualised prescription of exercise programs for special populations.

27180 Functional Kinesiology

6cp

Undergraduate

This subject incorporates a detailed examination of the structure and function of bones, joints, muscles and nerves with emphasis on the identification of anatomical structures and their relevance to human motion. It forms the basis for subsequent study of the physiological and kinesiological aspects of human movement.

27184 Dimensions of Tourism

6cp; 3hpw (2hr lecture, 1hr tutorial); students are expected to attend a minimum of 80 per cent of class sessions; availability: all first-year tourism students

This is a core foundation subject for any degree that incorporates tourism.

Undergraduate

This subject introduces students to the phenomenon of tourism and the field of tourism studies. It traces two centuries of tourism development and examines the relationships tourism has with sociocultural, economic and natural environments. It also introduces the human element in tourism through a review of key theories of tourism motivation and tourist behavior. The different types of tourism are introduced and key national and international tourism organisations are studied for their functions in managing tourism activity.

27185 The Tourist Experience

6cp

Undergraduate

This subject introduces conceptual and methodological approaches to the study of the experiences of the tourist. It seeks to develop an understanding of the tourist experience as distinct from the 'at home' leisure experience by exploring the unique sociocultural and physical environment of the tourist. A focus is diversity of experience and social inclusion. The subject discusses approaches to managing

tourist experiences. The content of this subject is largely based on contributions from tourism studies, cultural geography, sociology, environmental psychology and social psychology.

27192 Event Impacts and Legacies

6cp
Undergraduate

This subject provides an overview of the events sector, along with the functions and impacts that events have from the perspective of various groups and organisations within a society. Additionally, it examines various approaches that can be used to assess event impacts. The issue of planning for event legacies is also examined. Case studies feature strongly in this subject.

27193 Event Marketing

6cp
Undergraduate

This subject examines the strategic marketing planning process as it applies to events of various types. In moving through this process, this subject deals with: the event marketing environment; setting marketing objectives; understanding event consumers; event marketing strategies; positioning and branding events; managing the quality of event experiences; distributing 'access' to events through the ticketing process; pricing; marketing communications; and approaches to monitoring, controlling and evaluating event marketing efforts. Case studies feature strongly in this subject.

27194 Event Sponsorship and Revenue

6cp
Undergraduate

This subject deals with non-ticket/registration fee-based revenue streams available to public and corporate events. In doing so, it seeks to first identify these income streams before going on to discuss their strategic development. Given its significance to many events, substantial time is given in this subject to examining how events develop and manage sponsorship as a major revenue source. Other revenue streams that are dealt with include merchandising, licensing, concession rights, media rights and grants. Discussion of the evaluation and effectiveness of these revenue streams is also a key aspect of this subject.

27216 Venue Management

6cp
Undergraduate

This subject examines the principles of managing venue and facility operations. Specifically, it addresses how facilities and venues are planned, managed, operated, evaluated and maintained. The subject also covers issues ranging from traffic circulation to security and safety issues. Guest speakers from various venues and facilities are featured and current trends, case studies and future directions are also covered.

27222 Exercise Prescription

6cp
Requisite(s): 27152 Measurement and Development of Physical Capacity
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.
Undergraduate

This subject examines principles related to the prescription of exercise across a wide variety of populations to achieve specific gains in health, strength, power, endurance and speed. It considers the areas of testing physiological function, program development, age and gender in exercise programming.

27226 Analysis of Motor Control

6cp
Requisite(s): 27180 Functional Kinesiology
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.
Undergraduate

This subject examines the structure of the motor control system, the processes underlying movement control, methods of assessing muscle and nerve function, posture and balance control, and the development of coordinated movement patterns.

27227 Critical Issues in Health and Wellbeing

6cp
Undergraduate

This subject explores and examines a range of contemporary health issues that exist in Australian society. It focuses on a social view of public health to deepen knowledge and understanding of the fundamental health principles and explore a range of health models. The social determinants of health are examined to highlight the limitations of medical approaches and introduce the social model of health. Knowledge and understanding of lifestyle, sexual and mental health issues are critically analysed by examining the range of physical, social and cultural determinants that impact on health and wellbeing. The subject enables students to identify and discuss preferred solutions to critical issues in health and wellbeing, and provides an overview of the links between behavioural risk factors and illness and mortality as well as between health behaviours and disease prevention and wellness. Students learn behaviour change principles and strategies for effective implementation of healthy lifestyle goals and habits.

27228 Lifespan Development

6cp
Undergraduate

This subject investigates human growth and development across the lifespan. It examines the effects of age, gender, ethnicity, culture and development stages on physical capacity. It also analyses the effects of physical activity and health behaviours on growth and development.

27249 Performance Studies 2: Dance and Athletics

6cp
Undergraduate

This subject provides students with the knowledge and skills necessary to understand the development of human physical capacities, strength, power, flexibility and cardiorespiratory fitness. Competence in a range of exercise, sport and dance activities is required.

27252 The Sport Industry

6cp
Undergraduate

As the Australian sport industry becomes more professional and complex, the number of agencies involved in the delivery of sport products and services multiplies. This subject examines individual agencies to determine their respective input into the sport environment and explores the relationships and interconnectedness between such groups. It assesses and analyses the impact of business, the various arms of government and volunteers on both mass and elite sport to provide a coordinated perspective of the sport industry.

27253 Sport in the Global Marketplace

6cp
Undergraduate

This subject examines similarities and differences in the production and consumption of sport in the international environment. It provides students with a critical understanding and the essential skills necessary for leaders of sport and leisure industries to prosper in a rapidly emerging global marketplace.

27307 Sport Management

6cp
Undergraduate

This subject examines the scope and role of sport in contemporary society with particular reference to Australia. It seeks to understand and account for policy development and implementation across the commercial, public and voluntary sectors and addresses a number of professional issues surrounding contemporary trends in Australian sport.

27308 Exercise Management for Special Populations

6cp

Requisite(s): 27152 Measurement and Development of Physical Capacity

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject examines the aetiology of lifestyle and clinically relevant diseases with a focus on physical activity and exercise. The course presents information relating to the physical and mental health benefits of physical activity and exercise for health under various physiological and metabolic conditions. Students develop an understanding of the factors that determine, influence and modify the physical activity habits of individuals and whole populations who may present with, or be at risk of, various disease states. This subject reinforces principles and practice of technical skills required of the exercise scientist. Students develop competencies in assessment of cardiorespiratory health, muscular and orthopaedic performance and clinical exercise stress testing central to professional practice in the health and fitness setting.

27323 Government and Policy for Leisure, Sport and Tourism

6cp

Undergraduate

This subject examines the rationale for government involvement in leisure, tourism, sport, the environment and the arts. It also examines political ideology and power processes in the community and methods of policy analysis, including performance indicators, cost benefit, economic impact analysis and performance appraisal. Lastly, the subject reviews policy initiatives.

27324 Strategic Management in Leisure, Sport and Tourism Organisations

6cp

Undergraduate

This subject brings together knowledge gained by students from both generic business and disciplinary subjects via applications to the strategic management of leisure, sport and tourism organisations. It exposes students to strategic management planning tools and processes used in leisure and tourism industry organisations that result in desired outcomes for these organisations. Students are provided with the knowledge and skills to be comfortable with and apply strategic financial and human resource management techniques.

27326 Diversity Management

6cp

Undergraduate

This subject examines the philosophical and theoretical issues related to 'specific populations'. It traces the historical evolution of treatment of specific populations and discusses contemporary practice. Selected specific populations (e.g. people with physical disabilities, gay and lesbian communities) are covered in detail with the focus of study on leisure, lifestyle and opportunities. Students have direct contact with specific populations through field visits.

27327 Tourism and Sustainability

6cp

Undergraduate

This subject examines the relationship between tourism and sustainability, in particular the reasons why there are questions about the long-term sustainability of tourism and ways in which this issue can be addressed. The various meanings and applications of sustainability to tourism are explored. Tourism's major impacts on and relationships with economic, ecological and sociocultural environments are identified and discussed. Both government and industry-initiated policies and practices, designed to enhance tourism's sustainability in the context of attractions, tourism enterprises and destinations, are critically examined.

27331 Skill Acquisition

6cp

Undergraduate

This subject examines the processes underlying skilled motor performance, how skilled performances are learned and how to apply the principles of skilled performance and learning in instructional settings in human movement such as teaching, coaching and rehabilitation.

27341 Health Promotion

6cp

Undergraduate

Health promotion provides the process for increasing awareness of factors that impact on health as well as health enhancement strategies. To reach a state of complete physical, mental and social wellbeing, an individual or group must be able to identify and realise aspirations, satisfy needs, and change or cope with the environment. Health is hence viewed as a valuable resource for life and livelihood. Health promotion, therefore, is not just the responsibility of the health sector, but reaches beyond healthy lifestyles to optimise wellbeing for all.

27342 Sociocultural Concepts for Leisure, Sport and Tourism

6cp

Undergraduate

This subject considers theories and concepts of relevance to the society in which leisure, events, sport, human movement and tourism professionals practise. The subject explores key theoretical concepts such as power, globalisation, commodification, flow, play, sociability, authenticity and diversity and familiarises students with a cross section of literature that informs different aspects of leisure, event, sport, human movement and tourism theory.

27344 Research Foundations for Leisure Sport and Tourism

6cp

Undergraduate

This subject introduces students to the research process and each of its elements. It aims to develop understanding of the approaches to the collection, interpretation and statistical analysis of data within leisure, sport and tourism. Students become proficient in a range of quantitative, qualitative and experimental research methods used in the area. The subject develops skills in entering, analysing and presenting data using standard software packages. The emphasis of this subject is on developing an understanding of how research is conceptualised, actioned and reported.

27345 Creating Event Experiences

6cp

Requisite(s): 27703 Event Management

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject deals with the process of creating and developing concepts for events. It examines the various aspects and stages of the event creation process and the elements and processes available to the event manager in devising and developing quality event concepts. The subject content includes a mix of theory and application, as students design, implement and evaluate an event of their own creation.

27346 Tour Operator and Wholesaling Management

6cp

Undergraduate

This subject seeks to provide students with knowledge and skills associated with management level positions within the tour wholesaler, inbound tour operator and local tour operator sub-sectors of the tourism industry. In doing so it overviews the nature and characteristics of these tourism industry sub-sectors, examines marketplace trends and issues impacting upon them and discusses their marketing, management and operations. A key aspect of this subject is the development of skills and knowledge in students such that they can analyse case specific data and recommend appropriate management/marketing responses.

27347 Hotel Management

6cp

Undergraduate

This subject seeks to develop a sound understanding of strategic and operations management in a hotel context. In performing this role it provides an overview of the Australian and international hotel industry, describes the nature of the hotel product and the markets that this product serves, discusses hotel business and marketing strategy options and examines operational practices associated with the successful conduct of a hotel business. A key aspect of this subject is the development of skills and knowledge in students so they can analyse case-specific data and recommend appropriate management responses.

27348 Critical Issues in Global Tourism

6cp

Requisite(s): 27185 The Tourist Experience

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This is a final year subject which allows students to apply the knowledge they have gained in the course to an understanding of contemporary, critical, global issues in tourism. Students examine the local and international relevance of the issues, the ethical implications and the ways in which they, as tourism professionals, might respond. Students also reflect and project on how such issues might affect the development of tourism. The subject assists students to relate critical tourism issues to a wider understanding of society.

27349 Performance Studies 3: Sport and Aquatics

6cp

Undergraduate

This subject provides students with the knowledge and skills necessary to understand biomechanical and physiological analysis procedures in sport. Competence in various sport and aquatics activities is developed.

27350 Professional Internship (Capstone)

6cp

Requisite(s): ((27184 Dimensions of Tourism AND 27648 The Tourism Business) OR 27703 Event Management)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

In this subject, students undertake a professional internship with an organisation in the sports, tourism leisure or events industry. This assists in developing employment skills, knowledge and contacts identified as essential to career goals. Through their internship, students are exposed to the managerial functions and activities of their chosen industry. A written reflection on each period of internship is required. Students must undertake up to 240 hours of work with an industry organisation and complete an agreed program of work based on predetermined learning objectives.

All students are required to:

- complete a minimum of 210 hours in an approved workplace (this is equivalent to six weeks or 30 days of full-time experience, where the standard working day equals seven hours and excludes lunch breaks)
- complete one placement only
- keep an accurate account of their hours worked and include this as a formal part of the assessment for the subject.

27361 Industry Project 1

6cp

Requisite(s): 27344 Research Foundations for Leisure Sport and Tourism

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject provides students with the knowledge and skills to negotiate and establish a relationship with an industry partner, interpret the partner's needs in relation to a specific management problem, systematically review existing research material and prepare a proposal for researching and solving an industry-based management

problem. Students are provided with the opportunity to learn and integrate industry standard research and project management skills. The research proposal outcome of the subject is operationalised in the following semester through Industry Project 2.

27362 Industry Project 2

6cp

Requisite(s): 27361 Industry Project 1

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject requires students to apply the knowledge and skills they have developed throughout their course to a particular industry-based project. Students carry through the activities outlined in the project proposal they prepared in Industry Project 1, with the aim of solving a selected management problem on behalf of an industry client. Students work closely with the industry client and under the supervision of an academic supervisor. This project is the culmination of the practical, professional stream of the Bachelor of Management in Tourism and Bachelor of Management in Events and Leisure.

27449 Performance Studies 4: Skill Acquisition (Sport)

6cp

Requisite(s): 27171 Applied Kinesiology

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject utilises a practical framework to investigate the theoretical and practical components required for the performance of four individual/team sports.

27523 Planning for Sustainable Destinations

6cp

Requisite(s): 27327 Tourism and Sustainability

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject examines the application of environmental planning principles and practices to the level and quality of provision of facilities and settings for tourism experiences. The need for and role of environmental planning are defined in the context of developing tourist destination sustainably. Those aspects of environmental planning legislation and practice that most directly impinge on tourism are examined in detail, in the context of achieving certain general aims and objectives. Environmental planning practices examined include plan formulation and preparation, processes and mechanisms of development control, including zoning and development standards, and environmental impact assessment. Planning for sustainable tourism is considered in relation to a range of destination types, including cities, protected areas and coastal resorts.

27602 Popular Culture and the Experience Industries

6cp

Undergraduate

Popular Culture and the Experience Industries is an elective subject that provides students with an advanced understanding of the links between popular culture and the experience industries. Through the lens of popular culture theory students examine and gain insights into the impacts popular culture has on the lives of people in western capitalist societies, and the ethical implications of the cultural messages conveyed through the mass media.

27603 Community Service Learning and Social Entrepreneurship

6cp

This subject provides students with experiential learning contexts that allow for the identification of the value of disciplinary specific knowledge and generic graduate attributes for community engagement. Through service learning, community engagement projects with partner organisations are provided to enable students to reciprocally engage with community organisations to contribute to community development and reflect on their contribution, learning and social responsibility.

27608 Prevention and Care of Athletic Injuries

6cp

Requisite(s): 27180 Functional Kinesiology

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject examines the management (recognition, treatment and prevention) of injuries related to sport, the workplace and physical activity. Emphasis is placed on immediate recognition and on-site treatment of injuries and the role of the human movement specialist in rehabilitation and prevention of athletic injuries.

27620 Special Learning Project

6cp

Undergraduate

This subject provides students with the opportunity to develop specific project-based vocational or theoretical knowledge in an area of personal interest. It is open to students who have attained a Credit average or above and who have demonstrated a capacity to engage in self-directed work.

27628 Law for Leisure, Sport and Tourism

6cp

Undergraduate

This subject examines the law as it relates to leisure, sport, tourism and events. It provides students with both the knowledge of fundamental principles of relevant laws as well as the ability to identify and analyse problems from a legal perspective.

27642 Tourism Marketing

6cp

Requisite(s): 24108 Marketing Foundations

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject seeks to develop in students an understanding of how marketing concepts and practices apply in the context of both tourism destinations and tourism services. It describes the environmental and industrial context in which the marketing of tourism services and tourist destinations takes place and examines the characteristics of tourism services and tourist destinations that impact upon the application of marketing theory. It also provides an overview of the broad characteristics of inbound, outbound and domestic tourism markets and the various approaches that can be employed to segment these markets. Considerable time is spent discussing strategic considerations in tourism marketing, (such as demand management, branding and positioning, electronic channels for promotion and distribution) and in examining key considerations in the promotion, pricing and distribution of tourism services/ destinations. The analysis of case-specific data relating to the marketing of tourism services/ destinations is a key aspect of this subject.

In view of the impact of the January 2011 floods and February's Cyclone Yasi on the marketing of Queensland as a destination, some time is devoted to the issue of post-crisis marketing for destinations and tourism businesses.

27647 Airlines and Transportation Management

6cp; 3hpw (2hr lecture, 1hr tutorial)

Recommended studies: introductory tourism subjects and an introductory marketing subject; an understanding of macro-economic concepts on the provision of transport services and the political and regulatory influences on these services

Tourism elective (3rd year)

Undergraduate

This subject introduces students to management within the context of the transportation sector. It covers the airline industry in depth and also explores corresponding issues and concepts within other forms of transport. It deals with the environmental (especially regulatory) context in which transport providers operate, general principles of transport economics, strategic management, marketing, service delivery and collaborative linkages between the sector and other sectors of the tourism industry.

Typical availability

Autumn semester

27648 The Tourism Business

6cp

Undergraduate

This subject focuses on the industrial element of a tourism system. Students complete a comprehensive, systematic analysis and description of essential elements involved in highly industrialised tourism in terms of their functional, structural, operational and interrelational attributes. This subject also introduces students to ways in which industry firms respond to trends, tourist motivations and external influences and at the same time manage their operations to minimise negative impacts on societies and natural environments.

276901 Honours Thesis 1

15cp

Undergraduate

The honours thesis requires students to produce a 20,000-word thesis based on an original problem of a theoretical or applied nature. The thesis is expected to demonstrate students' competency to conceptualise, conduct and present research in a scholarly and independent manner.

276902 Honours Thesis 2

15cp

Undergraduate

The honours thesis requires students to produce a 20,000-word thesis based on an original problem of a theoretical or applied nature. The thesis is expected to demonstrate students' competency to conceptualise, conduct and present research in a scholarly and independent manner.

27700 Sustainable Tourism Management

6cp

Postgraduate

This subject provides students with an awareness of significant contemporary issues arising from tourism's impacts on its economic, natural/ecological, social and cultural environments. It explores appropriate policy, planning and management responses to these issues, encapsulated in the pursuit of sustainable tourism. It critically examines a range of broad tourism industry responses, individual enterprise initiatives and forms of government intervention designed to achieve more sustainable tourism. The need to be mindful of tourism's impacts and the pursuit of sustainability are significant parts of the context in which contemporary tourism operates.

27703 Event Management

6cp

Undergraduate

This subject provides students with the skills and knowledge necessary for management positions within the area of special event management. Particular emphasis is placed on conferences, festivals, community special events, sporting events, and promotional events. The subject describes the broad characteristics of special events, and discusses the roles played by events in the development of tourist destination regions. It examines the broad functions performed by events from the perspective of communities, organisers, marketing departments of firms, participants and attendees and reviews the planning, marketing, organising and evaluation tasks associated with events.

27706 Managing Tourism Services

6cp

Postgraduate

This subject examines management as a social process and applies management theories and empirical studies to various travel and tourism industry settings and management structures. It examines the functions and levels of management in travel and tourism industry organisations and develops students' abilities to formulate management strategies and perform management functions appropriate to sectors of the travel and tourism industry. Ethical responsibilities of travel and tourism industry managers in relation to external environments and publics are also considered.

27715 Sport Business

6cp
Postgraduate

This subject aims to provide students with critical understanding of the theories, knowledge and skills necessary for managers in commercialised sport to operate effectively in increasingly complex sociocultural environments and competitive business markets.

Typical availability

Autumn semester, City campus

27717 Venue and Facility Management

6cp
Postgraduate

This subject examines the principles of managing venue and facility operations. Specifically, it addresses how facilities and venues are planned, managed, operated, evaluated and maintained. The subject also covers issues ranging from traffic circulation to security and safety issues. Guest speakers from various venues and facilities are featured and current trends, case studies and future directions are also covered.

Typical availability

Spring semester, City campus

27721 Sport Globalisation

6cp
Postgraduate

This subject provides a critical understanding of global theories and practices in elite-level sports and within a variety of economic, political and socio-cultural contexts. It examines the impact of globalisation on the meaning, production, consumption and performance of sport. The subject therefore seeks to develop knowledge of and sensitivity to values, customs and traditions of sport management practices in a range of international contexts. It examines how global-local forces produce pressure for the adoption or adaptation of dominant modes of sport organisation. An underlying assumption is that awareness of global-local dynamics of economy, politics, culture and sport performance are necessary for advanced leadership of sport in dynamic international settings.

27726 Event Concepts and Contexts

6cp
Postgraduate

This subject provides an overview of the events sector, along with the functions and impacts that events have from the perspective of various groups and organisations within society. Additionally, it examines the various external environments that impact upon, or are impacted by, events. Key tools that can be employed in assessing event impacts (such as cost-benefit analysis) are also reviewed. Issues associated with public policy and events, and the linkage between events and regional/urban development and sustainable development are examined, often through the vehicle of case studies.

27727 Event Creation Workshop

6cp
Postgraduate

This subject examines the process of creating, developing and implementing an event concept. It deals with the nature of the creative process, responding to client briefs, identifying event objectives, site selection and design, the formation and leadership of creative teams, and the selection, sourcing and management of the creative elements of an event. Case studies by leading industry professionals dealing with the development of creative event concepts are a feature of this subject.

27729 Legal Issues for the Experience and Not-for-Profit Industries

6cp
Postgraduate

This subject considers the laws relevant to sport, tourism, events and arts management. The subject explores legal structures and essential laws, including contracts, torts (negligence), consumer protection, intellectual property, industrial relations and those laws which are specific to sport, tourism, events and the arts. Students are equipped to recognise legal obligations in the management context.

Typical availability

Autumn semester, Kuring-gai campus

27732 Sport Organisations

6cp
Postgraduate

This subject provides a framework for analysing the structure, purposes and roles of sport organisations, their key responsibilities to stakeholders, and the impact of policy factors and sociocultural influences on their operation.

27733 The Experience Economy

6cp
Postgraduate

This subject explores the nature and emergence of the experience economy as the broad context within which the arts, sport, tourism and events sectors operate. The distinctive nature of experiences is explored, particularly with regard to the role of the consumer in the co-creation of value within experiences. The particular characteristics of both the demand and supply side of the experience economy are examined, with some emphasis on the role of collective and collaborative behaviour within and between sectors. An understanding of the dynamics of the experience economy leads ultimately to a consideration of the future challenges within the various sectors.

27734 Marketing for the Experience Industries

6cp
Postgraduate

This subject introduces students to the role of marketing in a firm and the principles and concepts that underpin effective marketing within the industry sectors of arts, sport, tourism and events. The marketing of services underpins marketing activity within each of these sectors. Apart from the generic marketing concepts of segmentation, product positioning, branding, pricing, promotion and distribution, this subject also focuses on sponsorship and revenue management, customer loyalty strategies and destination marketing as applicable to each of these industry sectors.

27735 Tourism and the Industry

6cp
Postgraduate

This subject provides students with an essential underpinning and broad knowledge and understanding of the specific and general contexts within which management in, and management of, tourism are practiced. It systematically analyses all the essential elements of tourism, with particular emphasis on the structure and functions of the tourism industry. It also provides an overview of the nature of the interrelationships between tourism and the significant environments with which it interacts. The subject uses information and case studies from Australian and international contexts.

27737 Event Risk Management

6cp
Postgraduate

This subject seeks to develop in students an understanding of the skills and knowledge associated with the creation, implementation, monitoring and evaluation of risk management strategies in an event setting. Additionally, it seeks to provide students with the capacity to critically review existing approaches used by events for the management of risk.

27753 Arts and Cultural Industries

6cp
Postgraduate

This is a specialised subject that explores social, political, cultural and economic factors in the development of arts and cultural production and consumption. The focus is on the development of arts and cultural industries as a whole, policy development and the structures of arts organisations. Particular issues considered include the politics and history of public support for the arts, analysis of audiences, the economic and social impact of the arts, the convergence of the public and private sectors, entrepreneurialism and the arts, analysis of specific arts and cultural sectors and theories of culture and art.

27755 Arts Organisations and Management

6cp
Postgraduate

This is a specialised subject that develops a critical appreciation of management practices and organisational forms in arts and culture organisations. The subject examines the impact of different modes

of managing and creative problem solving. It aims to create an awareness of behavioural issues within arts organisations including power, control, conflict, negotiation, decision-making and strategic planning. It addresses a range of contemporary issues which impact upon managing within these organisations including leadership, human resource management and entrepreneurialism in not-for-profit arts organisations.

27763 Arts and Cultural Policy

6cp

Postgraduate

The aim of this subject is to explore theoretical and conceptual frameworks with which to discuss and critically evaluate current and ongoing issues within the arts industry and to enable students to pursue their own research interests. These interests are related to ongoing professional arts involvement and supported through regular seminar participation. The fields of cultural management and cultural economy form the basis of the subject's critical focus. It draws broadly upon sociology, cultural economy and management concepts to analyse cultural production and consumption. The subject encourages students to investigate a cultural policy in relation to a specific arts organisation or its audience.

27764 Analysis of the Olympic Games

6cp

Postgraduate

This subject provides students with knowledge and understanding of the Olympic Games phenomenon in general, and its impact on host cities and countries. It covers the history of the ancient Olympics; the origins and development of the modern Olympic Games; political dimensions, including examination of the Olympic Games under fascist, communist, and capitalist regimes; boycotts, terrorism and international politics; cultural, sociological and media aspects of the Games; the idea of the 'Olympism' – its origins, construction and cultural significance; social impacts of the Games in host communities; financing of the Olympic Games and their economic impact; the Games as a tourism phenomenon; political, social and economic analysis of hallmark events (festivals and major sporting events) in general; and issues facing the Olympic Games, such as drugs, discrimination and commercialisation.

27765 Event Management

6cp

Postgraduate

This subject deals with the event project management process. This process involves a series of sequential steps, specifically initiation, planning, implementation, employment of control and monitoring systems, evaluation and legacy management. In discussing these steps, those factors that act to condition how they are undertaken are also addressed. Additionally, matters relating to ethical and socially responsible business practice are dealt with in this subject. A core focus is the development of skills and knowledge associated with the ability to critically assess events in terms of their current management practices.

27767 Tourist Behaviour

6cp

Postgraduate

This subject examines the conceptual and methodological approaches to the study of tourist behaviour. It is based on contributions primarily from sociology, cultural geography, social psychology and environmental psychology. It relates the tourist to their sociocultural context. Application of the knowledge to the management of tourism is central to the subject.

27769 Professional Internship for Graduates

6cp

Postgraduate

This subject is designed for graduate students in arts, events, sport and tourism management and for students in the MBA program with a major in arts. For those students who have limited work experience in the arts, events, sport and tourism industries, the subject provides the opportunity, through a placement, to gain such experience and to relate it to theoretical and applied learning. For those students who are already working in a relevant industry, this subject provides the opportunity for students to diversify their experience

and their theoretical and applied learning. This subject is based on a practical internship of no less than 160 hours, an evaluation of the work experience gained and a report on the internship by way of an individual learning contract developed in association with a supervisor.

27778 Innovative Services Management

6cp

Postgraduate

This subject explores the nature of innovation and entrepreneurship in service industries. It examines creative management theories and applications of entrepreneurial and innovative thinking, activity and advocacy for change within specific industry organisations. Students work on case studies in understanding the challenges facing specific organisations and their ability to move through a life cycle from new entrant, maturity and decline to reinvention. It includes examining skills in identifying, harnessing and further developing resources from public and private sources as well as developing appropriate products and services for trading. Students develop a business case approach for investment in an innovative or entrepreneurial product or service within a specific service organisation.

27800 Applied Leadership and Strategy

8cp

Postgraduate

This subject focuses on issues of leadership, teamwork and strategic thinking in a global business environment. The subject is experientially grounded and uses both computer-based simulations and creative problem-solving activities that involve leadership and teamwork as catalysts for learning. Students assess business risk through an analysis of industry and competitive conditions in a global context, engage in enhanced problem-solving and creative-thinking exercises, think strategically about a company's competitive situation and future prospects, develop and revise strategies in the light of changing conditions, and reflect on their leadership and team-based actions to gain a deeper understanding of personal strengths and development opportunities.

27935 Applied Studies

6cp

Postgraduate

This elective subject allows self-directed students to develop their own program of study based on a defined research or industry project. As such, it allows students to develop specific expertise in a chosen vocational or academic area within the events, arts, sport or tourism field. The subject provides students with the freedom to define their own study agenda and pursue this with the support of a relevant academic staff supervisor.

Typical availability

Autumn semester, Kuring-gai campus

27941 Advanced Research Methods for Leisure, Sport and Tourism

6cp

Requisite(s): ([27707 Applied Research Methods OR ([27344 Research Foundations for Leisure Sport and Tourism OR 27155 Research for Human Movement)])

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject assumes a basic knowledge of the range of qualitative and quantitative research methods used in leisure, sport and tourism research and the ability to use statistical analysis packages such as SPSS. This subject covers two areas: conceptual and theoretical approached to research and qualitative and quantitative research methods. The first of these addresses the nature of research and its relationship to policy and the development of knowledge and conceptualisation and design of research projects. The quantitative area involves the application of statistical methods and exploration of the more advanced capabilities of the SPSS package.

Typical availability

Autumn semester, Kuring-gai campus

27946 Masters Project

6cp

Requisite(s): 27941 Advanced Research Methods for Leisure, Sport and Tourism

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is an elective option in the Master of Management program in the School of Leisure, Sport and Tourism. The subject provides the opportunity for students to apply knowledge learned and skills acquired in a practical or theoretical context. At the completion of the subject students have prepared a research report or an equivalent piece of work for submission to an academic or professional journal.

28723 Research Dissertation 1 (Business)

24cp

For subject description, contact UTS: Business.

28724 Research Dissertation 2 (Business)

24cp

Requisite(s): 28723 Research Dissertation 1 (Business)

There are also course requisites for this subject. See access conditions.

For subject description, contact UTS: Business.

31000 e-Business Trading

6cp

Recommended studies: ability to program in Java, and to work comfortably with Java documentation

Undergraduate

This subject covers the following topics: the structure of electronic markets and their role in electronic business; an analysis of various negotiation mechanisms suitable for deployment in electronic business; take-it-or-leave-it mechanisms, auctions, bargaining (haggling) and contracts; an examination of the mechanisms being used in existing commercial electronic markets; and the design, construction and deployment of negotiation software for both electronic trading agents and electronic markets.

31005 Advanced Data Analytics

6cp

Requisite(s): 31040 Data Mining and Knowledge Discovery OR 31250 Introduction to Data Analytics

Recommended studies: knowledge of database technologies

Undergraduate

Data analytics is an exciting new field combining databases, artificial intelligence, machine learning and visualisation among others. It is applied in many fields of business, industry and science to discover new information and knowledge. At the heart of data analytics are the knowledge discovery algorithms. This subject builds on previous data analytics subjects to give an understanding of how both basic and more powerful algorithms work. It also introduces data analytics approaches for specific domains such as social network analysis and text mining.

31008 Directed Study 1

6cp

Undergraduate

This subject is a small group subject that covers a specialist topic at an advanced level. The topic of an individual subject is chosen by the subject coordinator. There are no set lectures; instead, the students and the coordinator meet once a week to discuss the topic.

31009 Directed Study 2

6cp

Undergraduate

This subject is a small group subject that covers a specialist topic at an advanced level. The topic of an individual subject is chosen by the subject coordinator. There are no set lectures; instead, the students and the coordinator meet once a week to discuss the topic.

31010 Directed Study 3

6cp

Undergraduate

This subject is a small group subject that covers a specialist topic at an advanced level. The topic of an individual subject is chosen by the subject coordinator. There are no set lectures; instead, the students and the coordinator meet once a week to discuss the topic.

31013 Directed Study 4

6cp

Undergraduate

This subject is a small group subject that covers a specialist topic at an advanced level. The topic of an individual subject is chosen by the subject coordinator. There are no set lectures; instead, the students and the coordinator meet once a week to discuss the topic.

31016 Career Management for IT Professionals

6cp

Undergraduate

The aim of this subject is to enable students to understand the culture of the IT workplace, to identify work opportunities, to effectively market themselves to appropriate employers and to develop professional skills and behaviours sought by employers that enable students to transition effectively into the IT workplace. The subject focuses on using information from the workplace to understand typical entry-level IT graduate jobs available, the skills (both technical and generic) required to be competitive job seekers, an understanding of how to develop effective targeted applications and how to perform well in an interview. It prepares IT students to work effectively in groups, to manage meetings and to write well-structured professional reports. The subject supports the development of a skills-based e-portfolio for ongoing career management.

31028 Project

2cp; this subject has no formal classes scheduled, however, students are expected to attend any seminars organised by the subject coordinator and MUST attend any scheduled meetings with their supervisor, client and/or subject coordinator; availability: undergraduate degree students

Requisite elaboration/waiver: Faculty approval required to enrol - student(s) must define a topic, find a supervisor and register the project before being granted permission to enrol in this subject.

Recommended studies: completion of subjects relevant to the project topic

Undergraduate

This subject is intended to give students experience in working independently on a small research or development project. The project may be drawn from any area of information technology or may be part of a multidisciplinary project such as those managed by UTS Shopfront. Students can work on a project individually or in a small group. Each project is supervised by a member of academic staff.

31029 Project

4cp; this subject has no formal classes scheduled, however, students are expected to attend any seminars organised by the subject coordinator and MUST attend any scheduled meetings with their supervisor, client and/or subject coordinator; availability: undergraduate degree students

Requisite elaboration/waiver: Faculty approval required to enrol - student(s) must define a topic, find a supervisor and register the project before being granted permission to enrol in this subject.

Recommended studies: completion of subjects relevant to the project topic

Undergraduate

This subject is intended to give students experience in working independently on a small research or development project. The project may be drawn from any area of information technology or may be part of a multidisciplinary project such as those managed by UTS Shopfront. Students can work on a project individually or in a small group. Each project is supervised by a member of academic staff.

31030 Project

6cp; this subject has no formal classes scheduled, however, students are expected to attend any seminars organised by the subject coordinator and MUST attend any scheduled meetings with their supervisor, client and/or subject coordinator; availability: undergraduate degree students

Requisite elaboration/waiver: Faculty approval required to enrol - student(s) must define a topic, find a supervisor and register the project before being granted permission to enrol in this subject.

Recommended studies: completion of subjects relevant to the project topic
Undergraduate

This subject is intended to give students experience in working independently on a small research or development project. The project may be drawn from any area of information technology or may be part of a multidisciplinary project such as those managed by UTS Shopfront. Students can work on a project individually or in a small group. Each project is supervised by a member of academic staff.

31050 Programming with Patterns

6cp
Requisite(s): [31267 Programming Fundamentals OR 48023 Programming Fundamentals] AND [31271 Database Fundamentals OR 31061 Database Principles OR 31474 Database Fundamentals]
Undergraduate

Patterns are fundamental to many aspects of intelligence. They are produced in pattern recognition systems for image processing and data mining, and are consumed by pattern-matchers to find useful information. Pattern calculus is a new foundation for computation in which patterns are central. It is realised in the programming language bondi (being developed at UTS) that supports a variety of programming styles, including query programming and object orientation. This subject introduces the theory and practice of programming with patterns to students already familiar with a number of programming styles.

31061 Database Principles

6cp; availability: BBus/BComp and non-Faculty of IT students
Recommended studies: it is assumed that students are familiar with basic system analysis concepts and have basic software skills
Undergraduate

This subject introduces the students to basic database design and implementation concepts. Database design techniques, including relational design and E-R analysis, are presented. Database queries using SQL is covered in lectures and supported by practical exercises.

31075 Object-relational Databases

6cp
Requisite(s): 31271 Database Fundamentals
Undergraduate

This subject introduces students to object-oriented and object-relational databases and their application for the management of multimedia and other types of complex data. Following a brief review of relational database and object-oriented principles, the SQL:2003 object-relational model and language features are introduced. This is followed by a description of the multimedia standard SQL/MM. The theoretical discussion of these topics is supported with practical hands-on exercises using the Oracle 11g database management system.

Typical availability

Spring semester, City campus

31080 Digital Multimedia

6cp
Requisite(s): 31267 Programming Fundamentals OR 48023 Programming Fundamentals
Recommended studies: Basic programming skills
Undergraduate

Digital multimedia is a combination of media (text, pictures, audio and video) that is represented digitally and hence can be treated as data by computer programs. The full potential of this fact is yet to be explored, but one facet of it - its interactivity - distinguishes digital multimedia from its predecessors.

Interactive multimedia systems are becoming increasingly widespread and have the potential to provide more complex and engaging experiences for users in many domains, including games, the

arts and business. This subject introduces the fundamental principles of interactive multimedia and associated tools.

Typical availability

Spring semester, City campus

31091 Mobile Computing Project

6cp; availability: undergraduate degree students
Requisite(s): ([31089 Mobile IP and Wireless LANs OR 31088 Mobile Networks] AND 31090 Mobile Programming)
Undergraduate

This subject provides students with an opportunity to participate in a group project, developing a simple wireless application. A member of academic staff supervises each group project.

31096 Managing Client/Vendor Relations

6cp
Requisite(s): 31476 Systems Development Project OR 31485 Systems Development OR 31269 Business Requirements Modelling OR 31475 Requirements Engineering OR 31424 Systems Modelling OR 31281 Systems Development Project
Undergraduate

This subject deals with management, social, legal and financial issues that arise when several parties are involved in the development of an information system. Situations considered are outsourcing, insourcing, development partnerships, support relationships and individual contracting. Students are provided with sufficient resources to plan for and evaluate their position as a client or vendor, and to assess where they need professional advice.

31097 IT Operations Management

6cp
Requisite(s): ([31466 Principles of Distributed Computing OR 31509 Computer Fundamentals OR 31516 Networking Fundamentals OR 31268 Web Systems OR 31270 Networking Essentials] AND [31468 Information, Classification and Control OR 31060 Information Systems Principles OR 31266 Introduction to Information Systems OR 31414 Information Systems OR 31472 Introduction to Collaborative Systems]) OR 31484 Information Systems Foundations]
Undergraduate

This subject allows students to develop the knowledge and skills required for effective management of hardware, software and human resources within an information systems organisation. Major topics are resource acquisition, developing software, workplace environment, recruitment and training policies, hardware and software security, operations management and EDP accounting.

31100 Enterprise Development with .NET

6cp
Requisite(s): [31927 Application Development with .NET AND (31061c Database Principles OR 31271c Database Fundamentals OR 31474c Database Fundamentals)]
Recommended studies: a good understanding of the C# programming language, client-server network concepts; basic HTML skills; basic database design and SQL
Undergraduate

The development of enterprise applications requires knowledge and skills spanning a range of technical areas. This subject focuses on the key components of enterprise applications and their implementation in .NET. Topics include enterprise application design, security and data access. The language used is C#.

Typical availability

Autumn semester, City campus

31102 Game Design Studio 1

6cp
Requisite(s): ([31262 Introduction to Computer Game Design OR 31002 Introduction to Computer Game Design] AND 78 credit points of completed study in C10229 Bachelor of Science in Games Development)
Undergraduate

This subject teaches students how to design, develop and implement a game based on client specifications. Students examine the game mechanics for multiple indie and experimental games in developing their own game mechanics. A player-centric approach to design

is used where new ideas are tested continuously with end users. Students work in teams taking on roles similar to those found in game development companies. They work independently under supervision and with guidance, but are ultimately responsible for the final project delivery and presentation.

31103 Game Design Studio 2

6cp

Requisite(s): 31102 Game Design Studio 1 AND 78 credit points of completed study in C10229 Bachelor of Science in Games Development
Undergraduate

This subject builds on the existing project produced in 31102 Game Design Studio 1. Students work in teams to polish the games and bring them up to commercial quality product standards. Alternatively, students can extend the games from the previous subject and implement them on a different platform. The intellectual property of the games developed belongs to the team and it is expected that some teams market their games after completion of the subject.

31104 Programming for Special Effects

6cp

Requisite(s): 31264 Introduction to Computer Graphics OR 31140 Introduction to Computer Graphics
Undergraduate

This subject examines the architecture and capabilities of modern graphics processing units (GPUs) with a focus on writing shaders to create special effects, such as fog, shadows, fire, water, clouds, lightning, motion blur and reflections that are seen in games and movies. Shader programming in general as well as different shader languages are discussed. Students learn to develop, test and tune shaders independent of the final application that might use them.

31136 Preparation for and Review of IT Experience

6cp; there are no face to face classes for this subject; there are workshops arranged by the IPU which students are encouraged to attend; available only to students of the Diploma of IT Professional Practice
Undergraduate

This subject involves formal planning of and regular reporting on work experience undertaken in 31137 IT Experience 1. There is particular emphasis on the skills students hope to gain.

Typical availability

Autumn semester, City campus

Spring semester, City campus

31137 IT Experience 1

0cp; available only to students of the Diploma of IT Professional Practice
Undergraduate

To pass this subject and 31139 IT Experience 2 students must complete a total of nine months' full-time employment in suitable IT-related work.

31138 Review of IT Experience

6cp; workshops; available only to students of the Diploma in IT Professional Practice
Requisite(s): 31136 Preparation for and Review of IT Experience AND 31137 IT Experience 1
Undergraduate

This subject involves formal planning of and regular reporting on work experience undertaken in 31139 IT Experience 1. There is particular emphasis on the skills students hope to gain.

Typical availability

Autumn semester, city campus

Spring semester, city campus

31139 IT Experience 2

0cp; available only to students of the Diploma of IT Professional Practice
Requisite(s): 31136 Preparation for and Review of IT Experience AND 31137 IT Experience 1
Undergraduate

This subject is a continuation of 31137 IT Experience 1.

31241 3D Computer Animation

6cp

Requisite(s): 31264 Introduction to Computer Graphics OR 31140 Introduction to Computer Graphics
Recommended studies: basic knowledge of drawing and 2D digital image processing (basic Photoshop) is useful
Undergraduate

This subject covers the major areas of 3D computer animation. It provides students with the opportunity to learn a major commercial 3D modelling, animation, and rendering package.

The subject also covers the principles and practice of pre-production planning, production management and post-production of an animation project. The subject is project-based, and each student develops an animation of their choice.

31242 Advanced Internet Programming

6cp

Requisite(s): (31284 Web Services Development OR 31470 Distributed Computing Architecture) AND (31244 Applications Programming OR 31469 Object-oriented Design OR 48024 Applications Programming)
Undergraduate

This subject provides students with knowledge of and skills in advanced Internet technologies particularly related to server-side Internet programming and business-to-business systems. It covers the topics of application servers, n-tier architectures, Internet technology standards, and description and lookup. The subject also approaches these technologies from a business perspective. In doing so it covers the theory and architectures for business-to-business systems and enterprise application integration.

31243 Analytics Capstone Project B

6cp

Requisite(s): 31250 Introduction to Data Analytics
Recommended studies: A thorough understanding of the thesis area and topic
Information Technology: Software
Undergraduate

Data mining and knowledge discovery is the kernel of contemporary computer analytics and intelligence. The process consists of several iterative steps, including data pre-processing and transformation, the actual data mining and pattern discovery steps, and putting discovered information and knowledge into action. This subject is focused on the practical implementation of this process to large data sets from different areas of human endeavour. It provides students with exposure to real-world analytics scenarios, and with expertise and experience in the application of the data mining techniques and in professional communication of analytics results.

Typical availability

Autumn semester, City campus

Spring semester, City campus

31245 Business Process and IT Strategy

6cp

Requisite(s): 31276 Networked Enterprise Architecture OR 31257 Information System Development Methodologies
Undergraduate

A major concern of businesses is the search for competitive advantage, by forming partnerships such as outsourcing, mutual service provision and virtual organisations. For IT managers this raises a number of complex issues not easily understood and managed. Two ways of achieving competitive advantage and improved collaboration are through business process transformation (BPT) and strategic information planning (SIP) which lead to better alignment between information systems and business processes. In this subject, theories and methods of business process transformation and strategic information planning are presented, together with some of the problems that many organisations have encountered with these methods. Students learn and discuss business and strategy processes that lead to learning organisations that can achieve sustainable competitive advantage.

31246 Network Design

6cp

Requisite(s): 31277 Routing and Internetworks OR 31471 Networking 2

Recommended studies: a good understanding of networking technologies and protocols; some experience with router configuration and protocols
Undergraduate

Network design is still as much an art as a science. This subject formalises in a logical manner the step-by-step analysis and design process. Many designs also rely on extending an existing network for emerging requirements. Principles and issues associated with this approach to the network design problem are considered. Assignments take students through a set of cases that deal with real-world network analysis and design problems.

31247 Collaborative Business Processes

6cp

Requisite(s): 31266 Introduction to Information Systems OR 31472 Introduction to Collaborative Systems OR 31484 Information Systems Foundations OR 31060 Information Systems Principles OR 31414 Information Systems
Undergraduate

The subject describes ways to organise teams to create innovative business solutions by sharing knowledge between people and businesses. It describes how teams are organised to collaborate and share knowledge to quickly develop innovative solutions that address current and emergent issues in society and business. It introduces methods that can be used by agile teams to support the creativity, critical thinking and design that characterise innovation and ways to integrate these into everyday activities. It includes ways in which teams function in modern organisations, how businesses can change to support culturally diverse teams, and how systems can enable effective team operation, including decision making and conflict resolution. The subject outlines the collaborative support tools and social networking that allow teams to collaborate across distance and ways to adapt social networking for knowledge sharing and innovation.

31248 Computer Graphics Project

6cp

Undergraduate

This subject gives students experience in working independently on a small computer graphics project. It also gives students the responsibility for the development of the project from initial analysis to user documentation. The project may be in any area of computer graphics, and students gain a detailed knowledge of and experience in the project area.

31249 Computer Graphics Rendering Techniques

6cp; 3hpw, on campus

Requisite(s): 31264 Introduction to Computer Graphics OR 31140 Introduction to Computer Graphics

Recommended studies: C++ or Java, elementary two- and three-dimensional graphics algorithms
Undergraduate

This subject covers the three major rendering techniques used for image synthesis in computer graphics: rasterisation algorithms, ray tracing and radiosity, with an emphasis on ray tracing. Topics covered include reflection models, ray-object intersections, recursive ray tracing, transparency and refraction, textures, anti-aliasing, shadows, acceleration techniques for ray tracing, triangle meshes, global illumination, and radiosity for diffuse environments.

31250 Introduction to Data Analytics

6cp; 3hpw

Recommended studies: knowledge of database technologies
Information Technology: Software
Undergraduate

Data mining is the art and science of turning large quantities of usually incomprehensible data into meaningful and commercially valuable information. It is the basis of modern computer analytics and intelligence. It includes a number of IT areas, such as statistical methods for identifying patterns in data and making inferences; database technologies for managing the data sets to be mined; a range of intelligent technologies that derive automatically patterns from data; and visualisation and other multimedia techniques that

support human pattern discovery capabilities. This subject offers the foundations of data mining and knowledge discovery methods and their application to practical problems. It brings together the state-of-the-art research and practical techniques in data mining, providing students with the necessary knowledge and capacity to initiate and conduct data mining research and development projects, and professionally communicate with analytics experts.

Typical availability

Spring semester, City campus

31251 Data Structures and Algorithms

6cp

Requisite(s): 31244 Applications Programming OR 31469 Object-oriented Design OR 31488 Programming Foundations OR 31508 Programming Fundamentals OR 48024 Applications Programming
Recommended studies: basic programming concepts: variables, loops and decisions;

basic file manipulation in UNIX: directories and files, editing files, re-direction; basic understanding of the standard Von Neumann computer model: the fetch-execute cycle, single memory with byte addressing, input and output with disks, keyboard and screen; understanding of character sets and internal data representations, including ASCII, signed integers, floating point
Undergraduate

This subject teaches students how to design, develop and evaluate data structures and algorithms to meet predefined quality characteristics of functionality (suitability) and usability (understandability, learnability, operability, compliance). Software solutions are implemented using C++. Concepts, theories and technologies underlying the methods and techniques are introduced and explained as required.

31253 Database Programming

6cp

Requisite(s): 31271 Database Fundamentals OR 31061 Database Principles OR 31474 Database Fundamentals OR 31487 Database Management Systems

Recommended studies: it is assumed that students are familiar with basic database concepts; familiarity with the SQL language is mandatory and previous experience with at least one higher-level programming language is required
Undergraduate

This subject teaches students how to design, develop and evaluate database programming and administration solutions to meet pre-defined quality characteristics of functionality (suitability, security), usability (operability), efficiency (time behaviour, resource utilisation), and maintainability (changeability, testability). Database programming and administration solutions are implemented using Oracle 10G, SQL*Plus and PL/SQL. Concepts, theories and technologies underlying the methods and techniques are introduced and explained as required. Students apply all that they have learnt to develop a small application to solve a database problem.

31254 e-Commerce

6cp

Recommended studies: basic internet skills and understanding of the business environment
Undergraduate

This subject develops students' awareness of e-commerce issues and their understanding of the stakeholders, their capabilities and their limitations in the strategic convergence of technology and business. Topics include business models for e-commerce, security, legal and ethical issues. Students develop skills in identifying the advantages and disadvantages of the various electronic payment options, and complete computer-based activities on internet commerce.

31255 Finance and IT

6cp

Requisite(s): 31266 Introduction to Information Systems OR 31472 Introduction to Collaborative Systems OR 31414 Information Systems OR 31060 Information Systems Principles
Undergraduate

This subject provides skills in financial management that are essential to any IT professional working in business today. Students gain knowledge of financial principles and an understanding of reporting requirements which are necessary for the evaluation and design of auditable financial systems. In addition, students develop key

competencies in the financial aspects of IT management and project management including budgeting, job costing, feasibility and risk analysis.

31256 Image Processing and Pattern Recognition

6cp

Requisite(s): 31251 Data Structures and Algorithms OR 31473 Data Structures and Procedural Programming

Undergraduate

Images and videos contain enormous amounts of information that can be extracted automatically by means of image processing and pattern recognition techniques. The extracted information is at the basis of many innovative applications such as video surveillance, diagnosis from medical images, automatic indexing and retrieval of multimedia data, human-computer interaction. This subject gives the students the ability to understand the principles of image processing and pattern recognition and develop software for the automatic analysis and interpretation of images and videos.

31257 Information System Development Methodologies

6cp

Requisite(s): 31269 Business Requirements Modelling OR 31475 Requirements Engineering OR 31488 Programming Foundations OR 31424 Systems Modelling

Recommended studies: knowledge of the software development life-cycle and systems modelling techniques

Undergraduate

Successfully designing and developing information systems is complex and difficult. A number of techniques and approaches have been developed but there are no 'silver bullet' solutions to the problems that plague IT development projects. This subject introduces students to a number of different methodologies and provides them with the skills they need to identify their strengths and weaknesses in key areas. These issues are of critical importance to those wishing to successfully manage software projects.

31258 Innovations for Global Relationship Management

6cp

Requisite(s): 31266 Introduction to Information Systems OR 31472 Introduction to Collaborative Systems OR 31060 Information Systems Principles OR 31414 Information Systems OR 31485 Systems Development OR 31269 Business Requirements Modelling OR 31475 Requirements Engineering

Undergraduate

The computing industry in Australia has passed through a number of stages and is entering a phase where its pivotal role is using computers to maintain relationships, knowledge management and innovation. This has led to competitive advantage becoming the most important goal. This subject places local IT industries firmly within the local and global economic context. The topics covered include: an overview of the global IT industry, including its direction and structure; the value of IT in business; implications of e-commerce, customer relationship and knowledge management, user modelling, outsourcing, and off-shoring; and legal issues in the new economy for formalising those relationships. The subject also looks at ways of organising business information in organisations, with a focus on informal flows found in organisations. Relationships differ in the kind of work undertaken, process followed in team formation and management. This subject covers relationship building by having students using tools such as portals for maintaining customer loyalty and outsourcing collaborations.

31259 Intelligent Agents

6cp

Recommended studies: ability to program in a suitable language such as Java or C#

This subject introduces students to the concepts of agent computing, and applies those concepts in the context of intelligent internet-based systems. A selection of artificial intelligence techniques are reviewed and related to agents. Students gain sufficient knowledge to be able to take more specialised subjects in internet-based computing and artificial intelligence. By the end of this subject the students should be able to design and implement a simple intelligent agent.

Typical availability

Spring semester, City campus

31260 Interface Design

6cp

Requisite(s): 31244 Applications Programming OR 31469 Object-oriented Design OR 48024 Applications Programming

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: knowledge of object-oriented programming and basic web technologies

Undergraduate

This subject teaches students how to design, implement and evaluate user interfaces to meet predefined quality characteristics of functionality (suitability), usability (understandability, learnability, operability, compliance) and portability (adaptability). Concepts, theories and technologies underlying the methods and techniques are introduced and explained as required. Students apply all that they have learned to develop and implement a user interface for a business system.

31261 Internetworking Project

6cp

Undergraduate

This subject provides students with an opportunity to participate in a group project, designing and developing a substantial network or network application. Each project is supervised by a member of the academic staff.

31262 Introduction to Computer Game Design

6cp

Requisite(s): 31264c Introduction to Computer Graphics OR 31080 Digital Multimedia

Recommended studies: familiarity with computer graphics and experience with designing interactive systems

Undergraduate

Designing and building computer games is a challenging task. This subject focuses on the software technologies (such as graphics, networks, software design and artificial intelligence) used in computer games and covers basic interactive design, interface design, game design documentation and play mechanics through hands-on projects.

31263 Introduction to Computer Game Programming

6cp

Requisite(s): 31264 Introduction to Computer Graphics OR 31140 Introduction to Computer Graphics

Recommended studies: trace and debug complex programs using Visual Studio

Undergraduate

Game programming involves a plethora of knowledge from different aspects of computing. This subject covers important game-specific programming techniques and algorithms such as 3D rendering, collisions, pathfinding and agent decision-making. Students gain sufficient knowledge to extend existing computer game engines or build a basic game engine from scratch.

31264 Introduction to Computer Graphics

6cp

Requisite(s): 31080c Digital Multimedia AND 31251 Data Structures and Algorithms

These requisites may not apply to students in certain courses. See access conditions.

Requisite elaboration/waiver: students who have not completed 31251 Data Structures and Algorithms may apply for a prerequisite waiver if they are competent in C or C++

Recommended studies: some experience with an integrated development environment such as Visual Studio with C++ would be an advantage, but is not essential; knowledge of linear algebra (e.g. vector, matrix and their manipulation), data structures (e.g. multi-dimensional arrays, stack) is required; good programming skills in C or C++ are also required to successfully complete the subject.

Undergraduate

This subject provides a thorough introduction to the computer representation, manipulation and display of pictorial information. Topics covered include computer graphics hardware and software systems, graphics programming; mathematical tools for 2D and 3D graphics; 2D and 3D graphics algorithms; rendering algorithms; and application areas of computer graphics.

31265 Communication for IT Professionals

6cp

Undergraduate

This subject focuses on developing the academic written and spoken language skills required for undergraduate study in information technology. Students take a critical and analytical approach to understanding and producing written and spoken texts appropriate for IT professionals in the Australian context. Accordingly, students undertake a range of listening, speaking, reading and writing activities and assigned work to maximise the development of their spoken communication and academic literacy.

First-year experience videos

View commentary from students and academics about this first-year subject at:

- Student video: www.youtube.com/watch?v=ImUDRKL8Jwc
- Academic video: www.youtube.com/watch?v=mLodWzUxL1M

31266 Introduction to Information Systems

6cp

Undergraduate

This subject describes today's business environment and how technology is integrated into businesses, government and community systems. It describes the trends to greater mobility, greater complexity, globalisation and business networking, and ways that technology can deliver services needed to improve business competitiveness in an increasingly global and networked environment. It describes the role of information systems for better managing businesses and the formation of business networks.

The subject provides an introduction of different information systems and how data, information and knowledge access by stakeholders and customers can affect them. Techniques on building effective team collaboration skills, relationship skills and successful stakeholder engagement are applied in this subject. Real world case studies are presented to understand the triangular effect between social value, business value and IS value. Additionally, topics on ethics, social responsibility and IS sustainability are also highlighted.

31268 Web Systems

6cp

Undergraduate

In this subject, skills are developed to use the computer as a tool for information processing, and transfer over the internet. At the core of this activity is learning Unix, the operating system which supports the majority of web applications. After understanding the operating system as the steering mechanism, students investigate the underlying hardware which enables calculations, and learn protocols which enable communication across a network.

31269 Business Requirements Modelling

6cp

Requisite(s): 31266 Introduction to Information Systems OR 31060 Information Systems Principles OR 31472 Introduction to Collaborative Systems OR 31484 Information Systems Foundations OR 31414 Information Systems

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject introduces information system concepts, including their static and dynamic components. It describes how these concepts can be used to model information systems to correctly capture their structure and needs. It outlines how the ability to capture information about the system in ways understood by its eventual users improves the final quality of the system. The subject introduces various analysis approaches found in contemporary system development, including object-oriented methods, entity-relationship modelling and describes the relationships between these techniques and their application.

31270 Networking Essentials

6cp

Recommended studies: some knowledge of computer networking is useful but not essential
Undergraduate

Computer networks are now business critical in all modern organisations and business enterprises. They are important in everyday life. This subject introduces students to the fundamental issues in modern data communications and computer networks. This is essential knowledge for all users of IT, IT professionals and those who wish to specialise in computer networking.

Students learn about the layered networking model and are introduced to networking devices and protocols. They learn how these are used in computer networks and in net-based application programs. The primary focus of this subject is Local Area Networks (LAN). Student practical work includes designing and building simple peer-to-peer networks and LANs that are connected to the Internet. The core set of protocols employed on the global Internet, TCP/IP, is studied.

31271 Database Fundamentals

6cp

Requisite(s): 31267 Programming Fundamentals OR 48023 Programming Fundamentals

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: it is assumed that students are familiar with basic system analysis concepts and have basic software skills
Undergraduate

This subject introduces students to the fundamentals of effective database systems. Students are taught how data is structured and managed in an organisation in a way that can be used effectively by applications and users. They also learn to use the language SQL for effective data retrieval and modification. This subject teaches students to appreciate the significance and challenges of good database design and management, which underpin the development of functional software applications.

31272 Project Management and the Professional

6cp

Requisite(s): (31269 Business Requirements Modelling AND 31266 Introduction to Information Systems AND 31268 Web Systems AND (31265 Communication for IT Professionals OR 48230 Engineering Communication) AND (48023 Programming Fundamentals OR 31267 Programming Fundamentals) AND (31270 Networking Essentials OR 48720 Network Fundamentals) AND (31271 Database Fundamentals OR 31061 Database Principles) AND (54 Credit Points in spk(s): C10229 Bachelor of Science in Games Development OR 31138 Review of IT Experience OR 78 Credit Points in spk(s): C10143 Bachelor of Information Technology OR 78 Credit Points in spk(s): C10148 Bachelor of Science in Information Technology OR 78 Credit Points in spk(s): C10152 Bachelor of Science in Information Technology Diploma in Information Technology Professional Practice OR 78 Credit Points in spk(s): C10219 Bachelor of Business Bachelor of Science in Information Technology OR 78 Credit Points in spk(s): C10239 Bachelor of Science in Information Technology Bachelor of Arts in International Studies OR 78 Credit Points in spk(s): C10245 Bachelor of Science in Information Technology Bachelor of Laws OR 78 Credit Points in spk(s): C10158 Bachelor of Mathematics and Computing OR 78 Credit Points in spk(s): C10224 Bachelor of Mathematics and Computing Bachelor of Arts in International Studies))

Recommended studies: a general awareness of the systems management and development process, the nature of the IT industry and current social and political issues
Undergraduate

This subject covers managing the development and implementation of project solutions with particular emphasis on information systems project management and professionalism. It considers the roles of project and stakeholder management, particularly from the viewpoint of the practitioner as a member of a project team. There is a focus on both organisational and process issues together with the factors that impact quality outcomes associated with different phases of project development. It also considers the professional responsibility of IT workers and the impact of IT on organisations and society.

31274 Network Management

6cp

Requisite(s): 31277 Routing and Internetworks OR 31471 Networking 2

Recommended studies: reasonable familiarity with Windows 2000; some experience with router configuration and protocols
Undergraduate

This subject explains the role of the network manager and the network management system. It discusses the components of network management, i.e. fault management, performance management, configuration management, security management and accounting management. The integration of the components into an enterprise management system is addressed. The lecture material is integrated with laboratory sessions throughout, which allows students to experience aspects of network management including the skills of using basic network management tools and application for network maintenance.

31275 Mobile Networking

6cp

Requisite(s): 31270 Networking Essentials OR 31467 Networking 1 OR 31486 Data Communications OR 31516 Networking Fundamentals OR 48720 Network Fundamentals

Recommended studies: basic understanding of networking and telecommunication concepts
Undergraduate

This subject covers the principles and applications of wireless and cellular telecommunication networks, and their integration with the internet. Various wireless network technologies (WiMAX, IEEE 802.11, Zigbee, Bluetooth) and cellular network technologies (GSM, UMTS, 4G) are introduced. The emphasis is on the concepts, infrastructure and protocols for supporting device/user mobility. The subject also introduces techniques for designing applications for mobile devices, and a mobile application design project at the end of the subject consolidates the learning the student has achieved.

31276 Networked Enterprise Architecture

6cp

Requisite(s): 31269 Business Requirements Modelling OR 31247 Collaborative Business Processes

Recommended studies: knowledge of procedures used to elicit and specify information systems
Undergraduate

Organisations in Australia and around the world are increasingly recognising that they do not operate in isolation and that competitive advantage depends on business networks. This subject introduces ways in which information systems can support business networking, focusing on sharing information and integrating business activities with business partners.

Topics include:

- contractual arrangements and planning
- the role of service and networking standards in the development of inter-organisational networks
- evolving business collaboration
- EDI and exchange of transaction data
- the establishment and management of supply chains.

Students learn how to elicit architectural requirements, develop specifications and design distributed application architectures to support networked business environments.

31277 Routing and Internetworks

6cp

Requisite(s): 31270 Networking Essentials OR 31467 Networking 1 OR 31486 Data Communications OR 48720 Network Fundamentals

Recommended studies: open system interconnection (OSI); transmission control protocol/internet protocol (TCP/IP) and data network models; knowledge of networking terminology, data transmission media, data networking components and devices; internet protocol addressing and variable-length sub-netting mask (VLSM)
Undergraduate

This subject extends the work done in the prerequisite subject. Students who are not interested in networking as a career develop a clear model of how networks can impact network based applications. Students who are interested in a career in networking practice or research develop sound knowledge and skills to pursue a networking

specialisation. Students learn the role of routing protocols and how to compare them; how to design construct and implement small to medium-sized intranets; and how to perform basic management and security tasks. The role of TCP/IP, ICMP and other protocols in IP networks are evaluated. Students also learn how Cisco routers are used for the practical work.

31280 Strategic IT Project

6cp

Requisite(s): 31272 Project Management and the Professional OR 31478 Project Management and Quality Assurance OR 31454 Project Management and the Professional

Recommended studies: systems design; requirements gathering; project planning; networking; report writing; presentations; working in teams

Undergraduate

This subject deals with issues involved in strategic level analysis and design in a corporate information systems environment. Through a major case study, it reinforces material previously studied, while giving groups of students scope to use their own judgment in applying their knowledge. It stresses the development and assessment of alternative approaches to a system strategy. Senior management and communication skills are also developed.

31281 Systems Development Project

12cp

Requisite(s): (31244 Applications Programming OR 31469 Object-oriented Design OR 48024 Applications Programming) AND (31061 Database Principles OR 31474 Database Fundamentals OR 31271 Database Fundamentals) AND (31269 Business Requirements Modelling OR 31472 Introduction to Collaborative Systems OR 31475 Requirements Engineering OR 31424 Systems Modelling)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject teaches students how to design, develop and evaluate a software system meeting predefined quality characteristics of functionality (suitability, accuracy, security), usability (understandability, learnability, operability), and maintainability (analysability, changeability, stability, testability).

A case study approach is used to explore the design and development of a complex set of information systems services. The application domain is a commercial setting with a special focus on integration of new and legacy systems. The project is done in highly autonomous teams that, while supervised and directed, are ultimately responsible for the project and delivery of the expected outcomes.

31282 Systems Testing and Quality Management

6cp

Requisite(s): 31257 Information System Development Methodologies
Undergraduate

This subject provides students with the practical knowledge and skills that are necessary to effectively measure and control the quality of software products. It covers software quality assurance and management principles and practice together with systems and software testing approaches.

31283 WANs and Virtual LANs

6cp

Requisite(s): 31277 Routing and Internetworks OR 31471 Networking 2
Undergraduate

This subject extends the work covered in Networking Fundamentals and Routers, Routing Basics and Internetworking. VLANs (Virtual LANs) and WAN (Wide Area Network) protocols are studied. VLANs connecting to different WAN technologies are implemented. Practical work is on Cisco switches and routers within the UTS Cisco Academy. After completing this subject students should be prepared for sitting the industry certification CCNA (Cisco Certified Network Associate) exam.

31284 Web Services Development

6cp

Requisite(s): [31267 Programming Fundamentals OR 31465 Object-oriented Programming OR 48023 Programming Fundamentals] AND [31268 Web Systems OR 31466 Principles of Distributed Computing]

Recommended studies: understanding of basic distributed computing concepts, an ability to create web pages, and good familiarity with the Java programming language

Undergraduate

Web-based applications play an important role in contemporary commercial software development. This subject introduces concepts and technologies related to the development of modern web applications.

31285 Mobile Applications Development

6cp

Requisite(s): 31244 Applications Programming OR 31469 Object-oriented Design OR 48024 Applications Programming

Recommended studies: basic programming experience is assumed

Undergraduate

This subject covers theory and technologies for the development of distributed applications for mobile devices as well as introducing design principles for applications for small devices. It addresses android for mobile devices. The subject also provides a basis for understanding how different techniques can be used to develop distributed mobile applications.

31335 Extreme Programming

6cp

Requisite(s): [31473 Data Structures and Procedural Programming OR ([31488 Programming Foundations OR 31508 Programming Fundamentals] AND 31485 Systems Development) OR ([31244 Applications Programming OR 48024 Applications Programming] AND [31269 Business Requirements Modelling OR 31475 Requirements Engineering OR 31424 Systems Modelling])]

Recommended studies: the ability to program in a high-level object-oriented programming language such as Java, C# or Visual Basic .NET

Undergraduate

This subject introduces extreme programming practices and, in general, agile methodologies. It covers the topics of analysis, estimation, iteration planning, testing and pair programming within the extreme programming methodology. It also looks at how to introduce extreme programming into an organisation.

31338 Network Servers

6cp; availability: undergraduate degree students

Requisite(s): [31268 Web Systems AND [31270 Networking Essentials OR 48720 Network Fundamentals]]

Undergraduate

Through this subject students gain an understanding of the design principles and implementation issues for the deployment of network servers based on Windows and Linux operating systems. Techniques and skills for system administration are developed through a comprehensive sequence of laboratory activities in combination with mini-lectures and design tasks.

31352 Project

6cp

Undergraduate

For further details, contact UTS: Information Technology.

31482 Honours Project

12cp

Requisite(s): 32931 Technology Research Methods

There are also course requisites for this subject. See access conditions.

Recommended studies: a thorough understanding of the thesis area and topic

Honours

The Honours Project is the second part of the honours program where students undertake a research proposal as developed in the first semester. This involves a substantial investigation under the supervision of a member of academic staff and is examined on the quality of the written report.

31489 Industry Study 1

6cp; distance; availability: Bachelor of Information Technology students

Requisite(s): 24 credit points C10143 Bachelor of Information Technology

There are also course requisites for this subject. See access conditions.

Industry practice

Undergraduate

This subject enables students to consolidate and extend the foundations acquired in first semester by providing 'hands-on' experience in various IT roles (such as Analyst or Programmer) as well as business goals and objectives. It also includes a number of sessions where students share their experiences of various industry sectors and attempt to develop coherent views of their experiences. Students undertake an academic case study of a particular issue in IT during their industry semester. Study topics are chosen in consultation with mentors from the areas: business benefits of IT; business processes; IS design methods; IS usability; and particular technologies used during industry experience.

Typical availability

Spring semester

31490 Industry Study 2

6cp; distance; availability: Bachelor of Information Technology students

Requisite(s): 92 credit points of completed study in C10143 Bachelor of Information Technology

There are also course requisites for this subject. See access conditions.

Industry practice

Undergraduate

Students are allocated a sponsoring organisation for their industry placement. Students undertake an academic study of a particular issue in IT, using their experience in their second industry semester as a case study. Study topics are chosen in consultation with the mentor from: business benefits of IT; business processes; IS design methods; IS usability; and particular technologies used during industry experience. A different topic is chosen from that undertaken by the student in 31489 Industry Study 1.

Typical availability

Autumn semester

31491 Industry Project 1

9cp; availability: Bachelor of Information Technology students

Requisite(s): 24 credit points of completed study in C10143 Bachelor of Information Technology

There are also course requisites for this subject. See access conditions.

Work experience

Undergraduate

The emphasis of this subject is for the student to compare and contrast theory with practice. The student undertakes an academic study of a particular issue in IT, using their experience in their industry semester as a background for the case study, or practical component of the subject.

This subject links theoretical knowledge learnt either in previous subjects or through library research to typical industry practices. In this process the student comes to realise the importance of recognising when theory improves business practices and when business practices are most appropriate. In information technology the latest practices are often trialled, prototyped, or discovered in an industrial setting.

Typical availability

Spring semester, City campus

31492 Industry Project 2

9cp; availability: Bachelor of Information Technology students
Requisite(s): 92 credit points of completed study in C10143 Bachelor of Information Technology

There are also course requisites for this subject. See access conditions.

Work experience

Undergraduate

The emphasis of this subject is for the student to compare and contrast theory with practice. The student undertakes an academic study of a particular issue in IT, using their experience in their industry semester as a background for the case study, or practical component of the subject.

This subject links theoretical knowledge learnt either in previous subjects or through library research to typical industry practices. In this process the student comes to realise the importance of recognising when theory improves business practices and when business practices are most appropriate. In information technology the latest practices are often trialled, prototyped, or discovered in an industrial setting.

Typical availability

Autumn semester, City campus

31675 Thesis (Computing Science)

0cp

Undergraduate

Further information on this subject is available from the UTS: Information Technology research administration officer.

31676 Thesis (Analytics)

0cp

For subject description, contact UTS: Information Technology.

31735 Information Systems and Organisation Development

6cp

Requisite(s): [36 credit points of completed study in Completion of 36 credit points OR ([31484 Information Systems Foundations OR 31266 Introduction to Information Systems OR 31414 Information Systems OR 31060 Information Systems Principles OR 31472 Introduction to Collaborative Systems))]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces theories dealing with the behaviour of people in organisations, the structure of organisations, the nature of technology and the relationships between these three areas. Systems thinking is used to bring these views together as a basis for organisation development in an environment changing through the influence of information systems.

31748 Programming on the Internet

6cp

Requisite(s): [31268 Web Systems AND [31267 Programming Fundamentals OR 31465 Object-oriented Programming OR 31488 Programming Foundations OR 31508 Programming Fundamentals OR 48023 Programming Fundamentals]]

Recommended studies: basic knowledge of programming languages and Unix systems

Undergraduate

This subject introduces students to the specifics of the World Wide Web (WWW) and internet-based programming. The evolution of the internet and its technical foundation is studied as well as basic techniques for presenting data, text and pictures on the WWW. The client/server paradigm is explored in detail featuring website design and construction using HTML (hypertext markup language), CSS (cascading style sheets), PHP (hypertext preprocessor), MySQL (backend database), and JavaScript. This subject provides a sound basis for understanding how the WWW functions, how to construct websites and how to write software for the WWW using scripting techniques.

31777 Human-Computer Interaction

6cp

Requisite(s): [31269 Business Requirements Modelling OR 31475 Requirements Engineering OR 31476 Systems Development Project OR 31485 Systems Development OR 48440 Software Engineering Practice OR 31424 Systems Modelling] AND [78 Credit Points in spk(s): C10229 Bachelor of Science in Games Development OR 78 Credit Points in spk(s): C10152 Bachelor of Science in Information Technology Diploma in Information Technology Professional Practice OR 78 Credit Points in spk(s): C10148 Bachelor of Science in Information Technology OR 78 Credit Points in spk(s): C10143 Bachelor of Information Technology OR 78 Credit Points in spk(s): C10219 Bachelor of Business Bachelor of Science in Information Technology OR 78 Credit Points in spk(s): C10239 Bachelor of Science in Information Technology Bachelor of Arts in International Studies OR 78 Credit Points in spk(s): C10245 Bachelor of Science in Information Technology Bachelor of Laws]

Recommended studies: two years full time study in IT or equivalent
Undergraduate

This subject focuses on the design, evaluation and implementation of interactive computing systems for human use within actual situations. Students gain an understanding of human-computer interaction (HCI) principles, including the main concepts, tools and techniques available to build user-centred systems. The subject considers the effects on use of the different metaphors for human activity that designers use in their systems and how user-centred design and evaluation methods can improve the usability of computer systems.

31927 Application Development with .NET

6cp

Requisite(s): 31267 Programming Fundamentals OR 31488 Programming Foundations OR 31508 Programming Fundamentals OR 48023 Programming Fundamentals

Recommended studies: a good understanding of programming constructs, O-O concepts and programming practices
Undergraduate

This subject introduces C#, Visual Studio and the .NET development environment. The emphasis is on examining the .NET framework and the practicalities of developing software in this setting using the C# language.

Typical availability

Spring semester, City campus

31950 Networked Enterprise Design

6cp

Requisite(s): 31060 Information Systems Principles OR 31472 Introduction to Collaborative Systems OR 31484 Information Systems Foundations OR 31749 Internet Commerce OR 31414 Information Systems OR 31266 Introduction to Information Systems
Undergraduate

This subject describes the evolution of systems towards distributed business environments with an emphasis on processes that require people to work together over distance. It describes how people work together and the changes to work practices resulting from the distribution of such work. The subject covers collaboration technologies such as email, video-conferencing, co-authoring and work-flows needed to support distributed business processes. The subject emphasises the design process, describing how to choose and implement collaborative technologies based on systems such as the World Wide Web or Lotus Notes to provide business benefits.

32001 Mobile Commerce Technologies

6cp; availability: Internetworking program students only

Recommended studies: basic internet knowledge

Postgraduate

This subject introduces students to mobile commerce technologies and applications. It highlights the unique challenges associated with the arrival of mobile technologies in the m-enterprise.

32003 Computer Game Design

6cp; availability: MSc in Computing and Master of IT
Recommended studies: familiarity with computer graphics and experience with designing interactive systems
Postgraduate

Designing and building computer games is a challenging task. This subject focuses on the software technologies (such as graphics, networks, software design and artificial intelligence) used in computer games and covers basic interactive design, interface design, game design documentation and play mechanics through hands-on projects.

32004 Game Programming

6cp; availability: MSc in Computing and Master of IT
Recommended studies: trace and debug complex programs using Visual Studio
Postgraduate

Game programming involves a plethora of knowledge from different aspects of computing. This subject covers important game-specific programming techniques and algorithms such as 3D rendering, collisions, pathfinding and agent decision-making. Students gain sufficient knowledge to extend existing computer game engines or build a basic game engine from scratch.

32005 Strategic Leadership for Innovation

6cp; availability: for Graduate Certificate, Graduate Diploma and Masters in IT Management students only; other students may undertake the subject if they have demonstrated relevant IT management experience and have signed academic approval from the ITMP program leader
Postgraduate

This subject locates organisational leadership practices within a global business context dominated by a revolution in information and communication technology (ICT). Furthermore, it outlines various potential strategic inflection points facing contemporary Australian organisations and suggests leadership practices through which these can be anticipated and addressed effectively. In particular, it advocates strategic leadership practices that adopt innovation as a competitive strategy in response to the challenges of this era.

32009 Advanced Routing Principles

6cp; availability: Internetworking program students only
Requisite(s): 32524 LANS and Routing AND 32521c WANS and VLANs

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: material studied in CCNA 1-4; concepts of LANs, WANs and VLANs; basic configuration skills on Cisco routers and switches for LANs, WANs and VLANs
Postgraduate

This subject complements and extends the theory and practice learned in 32524 LANs and Routing and 32521 WANS and VLANs. It extends skills and knowledge in scalable interior and exterior routing protocols (OSPF, EIGRP, BGP), route optimisation and redistribution, NAT and network security. The subject is run in the UTS Cisco Systems Network Academy. Cisco routers are programmed as part of practical work. The subject is part of a sequence which will allow students to prepare for the CCNP industry certification.

32010 Wide Area Network Implementation

6cp; availability: Internetworking program students only
Requisite(s): 32521 WANS and VLANs

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: knowledge of some routing protocols covered in 32009 Advanced Routing Principals; materials studied in CCNA

Postgraduate

This subject complements and extends the theory and practice learned in 32524 LANs and Routing and 32521 WANS and VLANs. It extends skills and knowledge in WAN issues for part-time and full-time connectivity. Frame relay, ISDN and POTS technologies are deployed.

Emerging WAN technologies are introduced. The course is run in the UTS Cisco Systems Network Academy. Cisco routers are programmed as part of practical work. The subject is part of a sequence which will allow students to prepare for the CCNP industry certification.

32011 Multilayer Switched Networks

6cp; availability: Internetworking program students only
Requisite(s): 32521 WANS and VLANs

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: knowledge of some routing protocols covered in 32009 Advanced Routing Principals is an advantage
Postgraduate

This subject complements and extends the theory and practice learned by completing 32524 LANs and Routing and 32521 WANS and VLANs. This subject extends skills and knowledge in the design and implementation of switched campus networks using VLANs for performance, reliability and security. Inter VLAN routing methods are explored. Multicast protocols, including issues that arise with switched networks, are introduced. Practical work is done on Cisco Systems layer 2 and layer 3 switches. The course is run in the UTS Cisco Systems Network Academy. The subject is part of a sequence which will allow students to prepare for the CCNP industry certification.

32012 Internet Quality of Service (QoS)

6cp
Requisite(s): 32524 LANS and Routing

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: introductory level networking technologies including TCP/IP protocol suit, network protocols and applications
Postgraduate

This subject explores issues and proposed solutions for the provision of Quality of Service (QoS) on the internet. The internet is being slowly transformed from a best-effort delivery architecture to a services architecture on which networked business applications can be deployed with specified performance criteria. This subject provides students with a detailed and precise discussion on issues related with QoS, different mechanisms to achieve end-to-end QoS based on the internet engineering task force (IETF) proposed architectures and explores their limitations. This subject also teaches advanced skills required to optimise the QoS in converged networks that support voice, wireless and security applications.

32013 .NET Enterprise Development

6cp
Requisite(s): 32998 .NET Application Development AND 32606c Database

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject introduces students to the .NET architecture and the Visual Studio development environment. The emphasis is on examining the .Net framework and the practicalities of developing software in this setting. Particular attention is paid to web development, web services and distributed applications. The design of the framework and the support it provides for language development are also considered in depth. The fundamentals of a programming language is introduced as required.

Typical availability

Autumn semester, City campus

32019 Directed Study 1

6cp
Postgraduate

This subject is a small group subject that covers a specialist topic at an advanced level. The topic of an individual subject is chosen by the subject coordinator. There are no set lectures; instead, the students and the coordinator meet once a week to discuss the topic.

32020 Directed Study 2

6cp
Postgraduate

This subject is a small group subject that covers a specialist topic at an advanced level. The topic of an individual subject is chosen by the subject coordinator. There are no set lectures; instead, the students and the coordinator meet once a week to discuss the topic.

32021 Directed Study 3

6cp
Postgraduate

This subject is a small group subject that covers a specialist topic at an advanced level. The topic of an individual subject is chosen by the subject coordinator. There are no set lectures; instead, the students and the coordinator meet once a week to discuss the topic.

32022 Directed Study 4

6cp
Postgraduate

This subject is a small group subject that covers a specialist topic at an advanced level. The topic of an individual subject is chosen by the subject coordinator. There are no set lectures; instead, the students and the coordinator meet once a week to discuss the topic.

32027 Multimedia Systems Design

6cp
Recommended studies: basic programming skills
Postgraduate

Digital multimedia is a combination of media (text, pictures, audio and video) that is represented digitally and hence can be treated as data by computer programs. The full potential of this fact is yet to be explored, but one facet of it – its interactivity – distinguishes digital multimedia from its predecessors.

Interactive multimedia systems are becoming increasingly widespread and have the potential to provide more complex and engaging experiences for users in many domains, including games, the arts and business. This subject introduces the fundamental principles of interactive multimedia and associated tools.

Typical availability

Spring semester, City campus

32029 Interactive Arts

6cp
Postgraduate

This subject explores principles and techniques of creating interactive works: textual, visual, aural and multimedia. It considers both the creativity process and the process of consumption. Of particular interest is the status of the active audience in art creation. Generative art, performance art and participative art are included, as are both narrative and abstract works. Available tools and techniques are emphasised.

32039 Recent Advances in Software Engineering

6cp
Postgraduate

This subject presents material at a high level by internationally recognised specialists. Topics are chosen from object technology, requirements engineering, systems integration, distributed databases, enterprise systems design and development, artificial intelligence, data mining, multiagent systems, high-performance computing, neural networks and machine learning, computer graphics and animation, and cognitive aspects of software design.

Typical availability

This subject is only offered in semesters when the faculty has a visiting academic in residence. Students interested in this subject are advised to consult with the head of the School of Software.

32040 Industry Project

6cp
Recommended studies: Project management, quality management, systems development
Postgraduate

This subject is designed to allow students to undertake short-term IT work experience by being involved in suitable group or individual projects. Most projects are in conjunction with UTS Shopfront clients, however, independent projects are possible. Each project is supervised by a member of academic staff. Availability is dependent on the supply of suitable projects and academic staff.

Typical availability

Summer session, City campus

32050 Programming with Patterns

6cp
Postgraduate

Patterns are fundamental to many aspects of intelligence. They are produced in pattern recognition systems for image processing and data mining, and are consumed by pattern-matchers to find useful information. Pattern calculus is a new foundation for computation in which patterns are central. It is realised in the programming language bondi (being developed at UTS) that supports a variety of programming styles, including query programming and object orientation. This subject introduces the theory and practice of programming with patterns to students already familiar with a number of programming styles.

32106 Agile Method Engineering

6cp; availability: students who have not met the academic requisite but have knowledge of basic object-oriented concepts and basic UML notation may apply to enrol in this subject
Requisite(s): 32536 Advanced Software Modelling
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.
Recommended studies: general computer science/information systems/software engineering
Postgraduate

This subject deals with the use of situational method engineering (SME) in the full life cycle of developing software, addressing both technical and management issues, and focusing on pre-coding issues. These techniques are also explored practically in a project-based systems development assignment. Lectures primarily discuss the third generation OO methodology, OPEN, as an example of SME. There is a software engineering focus throughout the subject, including discussion of project management, metrics and process maturity and SMM-I appropriate for a composite systems development environment.

32109 Troubleshooting Converged Networks

6cp
Requisite(s): 32009 Advanced Routing Principles AND 32011 Multilayer Switched Networks
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.
Postgraduate

In the subjects 32009 Advanced Routing Principles and 32011 Multilayer Switched Networks students have developed knowledge and skills for the design and implementation of a variety of complex internetworking scenarios. This subject consolidates approaches to network maintenance and troubleshooting internetworks that are under-performing or failing by applying sound problem-solving principles to a series of structured laboratory exercises and case studies. On completion of this subject, students are prepared for the troubleshooting (and final) paper of the industry accreditation CCNP (Cisco Certified Network Professional).

32113 Advanced Database

6cp

Requisite(s): 31487 Database Management Systems OR 31271 Database Fundamentals OR 31061 Database Principles OR 31474 Database Fundamentals OR 32606 Database

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: a clear understanding of basic database techniques including relational database technology
Postgraduate

This subject reviews material on relational databases and covers advanced topics such as distributed databases. Data warehousing and mining techniques, implementation and management are covered in detail.

32118 Mobile Communications and Computing

6cp

Recommended studies: basic understanding of networking and telecommunication concepts
Postgraduate

This subject covers the development of the wireless network technology from cellular networks to IP wireless networks. The emphasis is on the concepts, infrastructure, and protocols for supporting device and user mobility. The subject also focuses on the development of a simple mobile application for small devices.

32120 Introduction to e-Business Technology

6cp

Postgraduate

This subject focuses on developing and maintaining e-business technology and environment. It looks at e-business architectures through the latest technologies in networking communications, business models and e-business management principals. It also examines various important issues, such as e-business applications, contents, telecommunication technologies and internet networking security. Finally, it examines the future trend of the e-business in relation to technological advancement and consumer demand.

32130 Fundamentals of Data Analytics

6cp

Postgraduate

Data mining is the art and science of teasing meaningful information and patterns out of large quantities of data. It combines statistical methods for identifying patterns in data and making inferences with a number of IT technologies, including database technologies for handling massive volumes of data, intelligent and smart systems technologies, visualisation and other multimedia techniques that appeal to human pattern discovery capabilities. The subject offers broad background to data mining methods and their application in practice. It brings together the state-of-the-art research and practice in related areas and provides students with the necessary knowledge and capacity to initiate and lead data mining projects that can turn company data into commercially valuable information.

32131 Data Mining and Visualisation

6cp

Requisite(s): 32130 Fundamentals of Data Analytics

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

Modern businesses (including e-commerce and e-business systems) integrate data mining technologies to discover new information and knowledge about products they offer, customers they serve and the relations between them. Data mining incorporates a number of IT technologies for data analysis and visualisation. This subject offers broad coverage of the application of data mining technologies to modern enterprises.

Note(s)

This subject is not currently available to students for enrolment.

32133 e-Market Trading Technology

6cp; availability: Honours and postgraduate degree students

Recommended studies: ability to program in Java, and to work comfortably with Java documentation
Postgraduate

This subject covers the following topics: electronic markets and their role in electronic business; electronic trading and its role in electronic markets; economic mechanisms for trading and bargaining in markets and exchanges; an examination of the mechanisms being used in various existing commercial electronic markets; the significance of strategies, equilibria and efficiency to the design of automated trading systems; and the design, construction and deployment of smart trading systems for electronic markets. This subject reinforces the students' Java programming skills.

32144 Technology Research Preparation

6cp

Postgraduate

This subject provides postgraduate technology students with professional communication skills appropriate to their course. The subject begins with the techniques necessary to develop a literature review and professional ethics is taught in the research context. The class breaks into two streams. Those undertaking research degrees take the Research Stream and produce a complete literature review. Those undertaking coursework degrees take the Professional Stream and produce a project proposal, suitable for implementation in 32933 Research Project.

Typical availability

Autumn semester, City campus

32145 Commercial Environment of IT

6cp

Postgraduate

This subject places local IT industries within the local and global economic context. Topics covered include the history, direction and structure of the global IT industry; typical IT activities such as marketing, support, hardware and software production; various organisation models for IT supply, such as in-house development, contracting and outsourcing; legal and ethical issues; the local economy in the global environment; and local IT opportunities. Local economies covered are Australian and two or three other economies that may be of interest to the majority of students.

Note(s)

This subject is not currently available to students for enrolment.

32146 Data Visualisation and Visual Analytics

6cp

Requisite(s): 32130 Fundamentals of Data Analytics

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject covers the core data and information visualisation technologies that support data mining, and knowledge management and navigation through various visual metaphors. Students examine visualisation systems, tools, techniques and visual metaphors and learn how to evaluate the different visualisation approaches. Students also explore data mining applications that rely on visualisation and learn how to develop new and innovative visualisations to support information exploration, decision-making, communication and information sharing in a variety of domains.

Note(s)

This subject is not currently available to students for enrolment.

32147 Introduction to IT Management

6cp

Postgraduate

This subject provides an introduction to management with an emphasis on information technology (IT) management. The subject covers various management theories of organisations and how these may apply to IT management. Contemporary issues and management topics specific to information technology are also considered.

Note(s)

This subject is not currently available to students for enrolment.

32148 Enterprise Computing

6cp

Recommended studies: basic understanding of internet standards and technologies including HTML, XML, HTTP, and Java; understanding of fundamental database concepts and techniques, including SQL; experience with systems development gained through work experience or university projects

Postgraduate

Computing professionals are facing new challenges as a result of increasing complexity in the enterprise computing environment and fast-evolving technologies. This subject focuses on standards, architectures and technologies used in enterprise computing. Topics include component frameworks, service-oriented architectures, web services, data integration and XML techniques.

32208 Information Systems Strategy

6cp

Recommended studies: basic understanding of information systems and technologies and their use in business

Postgraduate

IS strategy is a key concern for both IT managers and managers of other business functions within enterprises. Through a brief presentation of key issues, case studies and presentations of students' own experiences, this subject deals with the development, evaluation and impact of information systems in organisations; choices that, together, form part of IT and IS strategy.

32209 Advanced Topics in Computer Networks

6cp

Recommended studies: A basic knowledge of statistics and/or experience in programming in C, C++ or Java

Postgraduate

This subject allows students to study several major advanced topics in networking in depth in an informal, small group situation. Learning is based around a series of readings, where a set of readings is discussed each week by the students and the subject coordinator.

32210 Computer Vision and Image Processing

6cp

Recommended studies: Experience in developing programs in the C programming language

Postgraduate

Computer vision is a widespread discipline playing a relevant role in fields such as multimedia, robotics, automated industrial inspection, visual surveillance and medicine. This subject aims to give students the ability to understand how a computer can emulate vision functions. It also enables students to design and implement computer vision and image processing applications.

Note(s)

This subject is not currently available to students for enrolment.

32309 Digital Forensics

6cp

Requisite(s): 32548 Network Security

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: an understanding of the principles and objectives of network security and of the fundamentals of network security technologies; CCNA-level networking concepts and skills, in particular packet analysis skills

Postgraduate

This is a practice-based subject, using material based on the textbooks. Learning is laboratory-based. The emphasis is on digital forensics applications, in particular:

- forensic analysis of a digital storage device where evidence is recovered to support or oppose a hypothesis before a criminal court
- eDiscovery (a form of discovery related to civil litigation)
- intrusion investigation into the nature and extent of an unauthorised network intrusion.

32310 Network Security Appliances

6cp; availability: Internetworking program students only

Requisite(s): 32548 Network Security

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: understanding of the principles and objectives of network security and of the fundamentals of network security technologies; CCNA-level networking concepts and skills, in particular CCNA-level routing and switching skills

Postgraduate

This is a practice-based subject, using material based on the Cisco Network Security course. Learning is laboratory-based. The emphasis is on network security appliances, in particular:

- security technologies, products and solutions
- firewall and secure router design, installation, configuration and maintenance
- AAA implementation using routers and firewalls
- VPN implementation using routers and firewalls.

32405 User-Centred Design Methods

6cp

Postgraduate

There are now a range of design methods that claim to be 'user-centred'. This subject identifies the major methods, defines their similarities and differences, and explores their theoretical backgrounds and commitments. It develops student expertise in the application and use of soft systems methodology, participatory and contextual design methods, action research and ethnographic studies of work practice and technology use. Students also extend their understanding of the development and use of user scenarios, personas, and other representations of work and users in the technology design process.

Note(s)

This subject is not currently available to students for enrolment.

32501 Computer Graphics

6cp

Recommended studies: students must be competent programmers in a high level language such as C, C++, Java, or Visual Basic; some experience with an integrated development environment (IDE) such as Microsoft Visual Studio C++ is an advantage, but is not essential; good programming skills in C or C++ is also an advantage; knowledge of linear algebra (e.g. vector, matrix and their manipulation) and data structures (e.g. multi-dimensional arrays, stack) is required

Postgraduate

This subject teaches students how the representation, manipulation and display of pictorial information can be achieved using computers with a focus on building research skills. Topics covered include computer graphics hardware and software systems, graphics programming; mathematical tools for 2D and 3D graphics; 2D and 3D graphics algorithms; rendering algorithms; and application areas of computer graphics.

32509 Interaction Design

6cp; availability: Honours and postgraduate degree students

Recommended studies: students should have at least two years IT-related work experience

Postgraduate

Interaction Design (ID) is defined as designing interactive products to support people in their everyday and working lives. This entails creating user experiences that enhance and extend the way people work, communicate and interact. ID extends the focus of Human-Computer Interaction (HCI) beyond designing computer systems for a single user sitting in front of a single machine. One of the central challenges is to keep abreast of technological development, to understand the usability issues associated with these and to use this understanding to ensure that technology is harnessed for maximum human benefit. This subject focuses on user-centred approaches to, and methods for, technology design. It provides students with an understanding of the principles of Interaction Design as well as concepts, tools and techniques that can assist in the creation of both useful and usable technology that supports users' activities. The subject introduces both the social and the technological aspects of Interaction Design as well as usability design and evaluation methods.

32510 Principles of Object-oriented Programming in C++

6cp; availability: Honours and postgraduate degree students

Requisite(s): 32106 Agile Method Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Topics in this subject include: review of object-oriented design principles and practice; and objects, classes, run-time instantiation, inheritance, information hiding, polymorphism and libraries, and their implementation in ANSI C++.

32513 Advanced Data Analytics Algorithms

6cp

Requisite(s): 32130 Fundamentals of Data Analytics

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: knowledge of database technologies

Undergraduate

Data analytics is an exciting new field combining databases, artificial intelligence, machine learning and visualisation, among others. It is applied in many fields of business, industry and science to discover new information and knowledge. Central to data analytics are the algorithms themselves. This subject builds on previous data analytics subjects to give an understanding of how basic as well as more powerful and subtle algorithms work. It also introduces data analytics approaches for specific domains such as social network analysis and text mining.

32516 Internet Programming

6cp; 1.5hpw (lecture), 1.5hpw (laboratory)

Recommended studies: basic knowledge of programming languages and Unix systems

Elective subject that is available for all postgraduate course work students

Postgraduate

This subject introduces students to the specifics of the World Wide Web (WWW) and internet-based programming. The evolution of the internet and its technical foundation is studied as well as basic techniques for presenting data, text and pictures on the WWW. The client/server paradigm is explored in detail featuring website design and construction using HTML (Hypertext Markup Language), CSS (Cascading Style Sheets), PHP (Hypertext Pre-processor), MySQL (back-end database) and Java techniques. This subject provides a sound basis for understanding how the WWW functions, how to construct websites and how to write software for the WWW using scripting techniques.

32520 UNIX Systems Administration

6cp; availability: Internetworking program students only

Requisite(s): 32547 UNIX Systems Programming

Recommended studies: students must be competent users of the UNIX operating system before commencing this subject

Postgraduate

UNIX operating systems occupy important roles in the server market and internet infrastructure. Consequently, most inter-networking graduates are exposed to UNIX systems at some point in their career.

In this subject, students learn about UNIX systems administration including: user administration, file systems, installing and administering network services, security, and performance management. This subject builds on the content of the prerequisite subject but focuses on systems administration rather than programming. Thus, students should be competent users of UNIX. There is a strong emphasis on the laboratory component in the subject.

This subject also provides preparation for the Linux Professional Institute Certification (LPIC) Level 1 exams 117-101 and 117-102.

32521 WANS and VLANs

6cp

Requisite(s): 32524 LANS and Routing, and with a minimum mark of 50% OR 31277 Routing and Internetworks OR 31471 Networking 2

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject extends the work covered in 32524 LANS and Routings. WAN and LAN design is introduced. Use of the UTS Cisco Academy resources are used for practical work. After completing this subject students may sit for the industry certification CCNA (Cisco Certified Network Associate).

Note(s)

This subject was formerly called 32521 Internetworking.

32524 LANS and Routing

6cp; availability: Internetworking program students only

Recommended studies: competency in the use of PCs, fundamental knowledge of the working principles of a computer, basic understanding of computer networking and the internet

Postgraduate

This subject provides students with knowledge of LAN hardware and physical layer standards, and basic computer networking concepts and principles, and introduces local area network (LAN) design and the use of routers and routing in autonomous system intranets. It also explains how these access WANS. Use of the Cisco Academies online resources and practical work in wiring and configuring LANs, including Cisco routers, is an integral part of this subject.

32525 Web Services Technologies and Applications

6cp

Requisite(s): 32516 Internet Programming

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: good understanding of Java fundamentals and have a basic understanding of networking concepts

Postgraduate

This subject introduces students to contemporary service-oriented technologies available for building distributed applications. It introduces distributed computing programming techniques such as XML, web services and service-oriented architectures, and discusses further advanced topics.

32527 Internetwork Design

6cp

Requisite(s): 32524 LANS and Routing

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: a good understanding of networking technologies and protocols; some experience with router configuration and protocols

Postgraduate

Network design is still as much an art as a science. This subject formalises in a logical manner the step-by-step analysis and design process. Many designs also rely on extending an existing network for emerging requirements. Principles and issues associated with this approach to the network design problem are considered. Assignments take students through a set of cases that deal with real-world network analysis and design problems.

32528 Network Management

6cp

Requisite(s): 32524 LANS and Routing

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: reasonable familiarity with Windows 2000, and some experience with router configuration and protocols

Postgraduate

This subject explains the role of the network manager and the network management system. It discusses the components of network management, i.e. fault management, performance management,

configuration management, security management and accounting management. The integration of the components into an enterprise management system is addressed. The lecture material is integrated with laboratory sessions throughout, which allow students to experience aspects of network management.

32530 Building Intelligent Agents

6cp

Recommended studies: ability to program in a suitable language such as Java or C#
Postgraduate

This subject introduces students to the concepts of agent computing, and applies those concepts in the context of intelligent internet-based systems. A selection of artificial intelligence techniques are reviewed and related to agents. Students gain sufficient knowledge to be able to take more specialised subjects in internet-based computing and artificial intelligence. By the end of this subject the students should be able to design and implement a simple intelligent agent.

32531 Global Information Systems

6cp

Recommended studies: a general awareness of computers, the internet and modern business issues (particularly globalisation)
Postgraduate

This subject covers new requirements placed on information systems arising out of the globalisation of business operations. It covers new ways of doing business in global environments, including formation of alliances and joint ventures, and ways that information systems must be developed to support them. The interaction of technical issues and social issues, including culture, is studied.

32535 Database in Distributed Environments

6cp

Recommended studies: it is assumed that students are familiar with basic database and network concepts and have a working knowledge of SQL together with some knowledge of programming concepts
Postgraduate

This subject covers a range of topics in distributed databases. The main topics include: discussion of distributed database design; distributed transactions and queries; and data replication strategies. Modern database server techniques are introduced.

32536 Advanced Software Modelling

6cp

Recommended studies: general computer science/information systems/software engineering
Postgraduate

This subject looks at the basic principles of modelling in software engineering. Various modelling languages and notations are used and explained:

- UML (metamodel and notation) including classes, objects, interfaces, relationships and use cases; more advanced modelling (roles, responsibilities and stereotyping); and the use of UML in practice
- BPMN including business process diagrams (an alternative to activity diagrams); the use of modelling with emerging technologies such as cloud computing and mobile computing is also a focus.

32541 Project Management

6cp

Recommended studies: an understanding of IT projects and an awareness of the IT industry
Postgraduate

This subject covers the management of the development and implementation of information technology solutions, with particular emphasis on information systems, project management, and contemporary issues in the delivery of information technology solutions to the business. It considers the role of project management in business and identifies the managerial control and reporting aspects necessary from inception to implementation of a software development project.

32543 3D Animation

6cp; availability: Honours and postgraduate degree students

Recommended studies: some basic computer graphics knowledge is useful; drawing; 2D digital image processing such as basic Photoshop
Postgraduate

This subject covers the major areas of 3D computer animation. It provides students with the opportunity to learn a major commercial 3D modelling, animation and rendering package. It also covers the principles and practice of pre-production planning, production management, and post-production of an animation project. The subject is project-based, and each student develops an animation of their choice.

32544 Advanced Image Synthesis Techniques

6cp; 3hpw, on campus

Recommended studies: C++ or Java, elementary two- and three-dimensional graphics algorithms
Postgraduate

This subject covers the three major rendering techniques used for image synthesis in computer graphics: rasterisation algorithms, ray tracing and radiosity, with an emphasis on ray tracing. Topics covered include reflection models, ray-object intersections, recursive ray tracing, transparency and refraction, textures, anti-aliasing, shadows, acceleration techniques for ray tracing, triangle meshes, global illumination, and radiosity for diffuse environments.

32547 UNIX Systems Programming

6cp

Recommended studies: competent UNIX computer user with some programming experience
Postgraduate

This subject allows students to develop their Perl and UNIX knowledge and skills appropriate for professional practice in a UNIX environment. The subject also exposes students to other high level 'scripting' utilities. This is of general benefit and is not covered elsewhere in the course.

32548 Network Security

6cp

Requisite(s): 32524 LANS and Routing

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: a sound knowledge of computer networking
Postgraduate

This subject consolidates the student's understanding of network security by considering security principles, methodologies and technologies from a technical and management perspective. Issues such as policy-based networking, directory services, IPsec, and basic methodologies such as firewalls, proxies, encryption and authentication are dealt with.

32549 Advanced Internet Programming

6cp

Requisite(s): 32516 Internet Programming

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: basic understanding of HTML/CSS, intermediate Java programming skills
Postgraduate

This subject complements and extends 32516 Internet Programming. It focuses on server side issues and the construction of medium- to large-scale web-based business-to-consumer (B2C) and business-to-business (B2B) applications using Java Enterprise Technology. In this subject, application servers, integration of data from multiple sources, transactions, and delivery of resultant data as XML or WAP to multiple client mechanisms are dealt with. Topics include Java Server Pages (JSP), servlets, Java Data Base Connectivity (JDBC), Java Naming and Directory Interface (JNDI) and Enterprise Java Beans (EJB). Consideration is also given to dealing with legacy systems. RMI and CORBA are discussed.

32550 Advances in Requirements Engineering

6cp

Recommended studies: a good understanding of software development process
Postgraduate

Requirements engineering is a multi-disciplinary, human-centred and communication-rich activity of software and systems development. This subject introduces the foundations of requirements engineering research and practice. The range of advanced techniques, methods and tools that support activities making up the requirements engineering process is also studied.

Note(s)

This subject is not currently available to students for enrolment.

32552 IP Telephony and Voice over IP

6cp; availability: Internetworking program students only

Requisite(s): 32521 WANS and VLANS

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Telephony based around the internet protocol (IP) is a significant issue for modern businesses as well as to traditional voice service providers. This subject provides an introduction to converged voice and data networks as well as to the challenges faced by its various technologies. Practical work allows students to learn about connecting telephone users via the Public Switched Telephone Network (PSTN) using a router, so bypassing traditional PBX devices. Practical work also includes the connecting of IP phones directly across WAN or LAN data links using Voice over IP (VoIP). Cisco Call Manager Express is used in laboratory work. VoIP Quality of Service (QoS) issues and techniques are discussed and implemented. It is assumed students have knowledge of the IP, router configuration and routing protocols.

32553 Leadership and People Management

6cp; availability: Graduate Certificate, Graduate Diploma and Master of Business in IT Management students only; other students may undertake the subject if they have demonstrated relevant IT management experience and have signed academic approval from the ITMP program leader

Postgraduate

This subject explores the phenomenon of organisational leadership within a global knowledge economy dominated by a revolution in information and communication technology (ICT). Its focus is on the leadership practices that generate the intangible capital resources (ICRs) required for success in this knowledge economy; in particular those practices that build a social environment characterised by strong relationships and committed, focused endeavour. In the development and leveraging of these ICRs, and the relationships that generate them, critical practices around the management of power are identified and explored. Furthermore, the subject attempts to develop in students appropriate theoretical and conceptual frames of reference and knowledge bases for the mastery of such practices.

Typical availability

Spring semester, City campus

32555 Fundamentals of Software Development

6cp

Requisite(s): 120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

In this subject students are introduced to a range of object-oriented systems development methodologies used throughout the software development process, from specifications to code generation and testing. Through the use of a case study and work in project teams, the subject aims to develop students': teamwork skills; ability to develop user specifications; ability to design systems that meet the

specifications; and ability to demonstrate that the objectives of the system are met. Topics such as systems requirements determination, system design, object-oriented design and systems testing are covered. The subject also includes a brief introduction to programming.

Typical availability

Autumn semester, City campus

Spring semester, City campus

32557 Enabling Enterprise Information Systems

6cp

Postgraduate

This subject introduces students to the uses of information systems in generating business value for organisations. It deals with the different types of enterprise information requirements, techniques of IS development to accommodate those requirements and managing the ongoing information needs of the enterprise. The emphasis is on requirements gathering, analysis and design activities including working in design teams.

32558 Business Intelligence

6cp

Recommended studies: general knowledge of business organisations and uses of IT and the internet

Postgraduate

This subject deals with information systems as part of business organisations. It addresses the processes of generation, dissemination, retention, application and distribution of corporate information and knowledge. The subject also includes key aspects of information systems development approaches and ways of designing systems that provide business intelligence to enterprises. A range of issues in business organisations with regard to knowledge management is covered. The techniques are explored practically in project-based assignments.

32559 Business Systems Design

6cp

Recommended studies: some knowledge of conceptual modelling techniques are an advantage

Postgraduate

This subject describes ways in which information systems can contribute to managing business systems in contemporary collaborative and complex business environment. It covers ways to propose information system solutions to complex business and social problems aligning system development with mission and vision of the enterprise. The subject considers design from a number of perspectives especially business activity, process workflow, social networking and knowledge sharing, and user design perspectives.

The subject covers the methods now increasingly used to develop information systems to respond to emerging business system requirements, distinguishing between the well-defined organisation-driven methodologies to those that are predominantly user-driven, agile and for solving difficult problems. The subject then describes choosing appropriate emerging technologies to meet the system requirements. The subject also emphasises ways of integrating different system activities into organisation-wide systems and inter-organisational systems.

32560 Information Systems Architecture Design

6cp

Postgraduate

This subject focuses on contemporary organisational environments and describes ways to align business requirements to information systems design by using emerging information technologies. It focuses on trends to information systems and the need to maintain agility and innovation within competitive business environments using emerging information technologies and their impact on the design of information systems architecture. Innovative information systems architectures for combining emerging information technologies into integrated business processes in support of enterprise innovation and cost-effective business operations is studied intensively in this subject. Different kinds of emerging information technologies are analysed on how to support business activities for cost-effective business operations, information exchange and knowledge sharing.

32561 Managing Organisational Change

6cp; availability: Graduate Certificate, Graduate Diploma and Master of Business in IT Management students only; other students may undertake the subject if they have demonstrated relevant IT management experience and have signed academic approval from the ITMP program leader.
Postgraduate

This subject explores a set of fundamental concepts and models relating to change management in the evolving knowledge economy. Central themes include an understanding of core organisational process and structure, and the ways in which people and technology leaders can drive strategic change. The subject presents dilemmas in, and approaches to implementing change in real companies through a set of case studies. Through a collaborative process involving participants, academics and industry experts, students enhance their conceptual understanding of organisational change, and apply this emergent understanding to their workplace practices through the completion of a work-based change management project. This subject challenges students for higher management roles.

32562 Strategic Business Management

6cp; availability: Graduate Certificate, Graduate Diploma and Master of Business in IT Management students only; other students may undertake the subject if they have demonstrated relevant IT management experience and have signed academic approval from the ITMP program leader
Recommended studies: as required for admission to the IT Management program
Postgraduate

Focused on creating sustainable value, strategic management practice is fundamental to the survival and growth of an organisation. It is not only the core concern of the organisation's executive leadership team, but also requires coherent execution by all members of the organisation. This subject examines the theories and practices of strategic business management. It explores emerging theories and frameworks that interlink strategy, innovation and leadership to achieve sustainable competitive advantage and organisational growth in the face of continuous environmental change.

32563 IT Professional and Society

6cp
Postgraduate

This subject covers the body of ideas and commonly held principles that apply to professional standards and ethical behaviour in the information technology industry. The intent is to expose students to standards of professional behaviour and legal responsibility through case studies and current media-related articles featuring potential ethical and/or legal situations/dilemmas. It considers the history of information technology, the impact of information technology on society, the IT profession's codes of ethics and codes of conduct and the legal requirements pertaining to the information technology industry.

32567 Business Intelligence for Decision Support

6cp
Recommended studies: it is assumed that students are familiar with basic information system concepts and have basic software, database and mathematical skills
Postgraduate

Business intelligence is an umbrella term that combines architectures, tools, databases, analytical tools, applications and methodologies. The major objectives of business intelligence is to enable interactive access to data and to give business managers the ability to conduct analysis and make better decisions.

Decision support systems are computer-based information systems that combine models/ methods and data in an attempt to solve semi/ non-structured decision problems with extensive user involvement through a friendly user interface. Business high-level decisions are often semi/ non-structured and require an increased level of intelligent and technical support, in particular, when they become rich in data. Decision support systems can be integrated with variable business intelligence techniques to support related decision problem solving.

This subject introduces business intelligence, decision support systems, group decision support, intelligent decision support, web-based support systems, decision optimisation technologies, personalised recommender systems. The subject also covers how to design, implement and integrate business intelligence techniques with methods to support business decision-making.

32568 Business Intelligence Modelling and Analysis

6cp
Recommended studies: it is assumed that students are familiar with basic system analysis concepts and have basic software, database and mathematics skills
Postgraduate

This subject introduces how multi-data sources are used in the development of strategic direction for businesses. It teaches students how to successfully utilise the information contained in such data and to appropriately extract intelligence from the data to support decision-making through conducting modelling and analysis. It also presents the required business intelligence tools and techniques including statistically based methodologies.

32569 Enterprise Business Requirements

6cp
Recommended studies: basic principles of software engineering and adequate knowledge of software development processes; elementary ability to conduct a critical review and analysis of scholarly research literature
Postgraduate

Requirements engineering (also known in industry as business requirements analysis or requirements management) is a multidisciplinary, human-centred and communication-rich activity of software and systems development. This subject first introduces the foundations of requirements engineering (RE). It then covers the range of advanced techniques, methods and tools that support all the activities that make up the requirements engineering process.

32570 Enterprise Software Architecture and Middleware

6cp
Postgraduate

This subject teaches enterprise software architecture in the context of enterprise architecture; its relationship to other architectures and organisational objectives. As far as possible, this subject deals with current problems being faced by organisations trying to align disparate software architectures to better support their organisational objectives.

This subject is intended for:

- senior and experienced software architects who must solve software architecture problems
- software architects planning a strategy to update and align legacy systems as well as old and new technology platforms with organisational objectives
- software architects who must identify and evaluate which of many competing projects contribute most to organisational objectives.

Typical availability

Spring semester, City campus

32571 Enterprise Software Testing

6cp; 10hpw blended learning, 2hpw classroom tutorial
Postgraduate

This subject teaches how to plan, specify, execute and manage testing of enterprise software systems. Students are introduced to a variety of strategies and situations that may require those strategies to ensure that the complex problem of testing large, complex enterprise software systems is accomplished in the best possible way given the circumstances. Case studies are used to illustrate many of the concepts. Class discussions and assignments exercise many of the skills taught.

This subject is intended for the senior and experienced software developer who must solve enterprise software testing problems.

32572 Reflective Practice in Information Technology

6cp
Requisite(s): 32144 Technology Research Preparation
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

In this subject students acquire understanding, knowledge and skills which develop and enhance their IT professionalism. Students are actively involved in choosing areas of study which are relevant to their own interests and professional future.

Links are made between the theory and practice of research, collaboration, reflection and self-directed learning. Students are introduced to a range of approaches used in IT research, with an

emphasis on those commonly used in professional contexts. Students engage in activities aimed at enhancing their understandings of key attributes of professional practice including a self-directed learning contract, professional report writing, researching, team presenting, peer assessment and a reflective portfolio.

32601 Advanced Project Management

6cp; availability: for Graduate Certificate, Graduate Diploma and Masters in IT Management students only. Other students may undertake the subject if they have demonstrated relevant IT management experience and have signed academic approval from the ITMP

Recommended studies: an understanding of how an IT department operates and familiarity with the management of IT within an organisation, i.e. a minimum of three years experience working in an IT department
Postgraduate

This subject covers advanced topics in project management with emphasis on contemporary issues in the delivery of IT solutions to the business. It considers human and organisational aspects of project management, the importance of project governance, the changing nature of project management and the role of the project manager in the global business environment.

32603 Systems Quality Management

6cp
Postgraduate

This subject provides students with the practical knowledge and skills necessary to manage the software development process required for developing quality software products. It also provides an essential understanding of software quality management and process improvement techniques and covers current areas of research in the software quality area.

32606 Database

6cp
Recommended studies: it is assumed that students are familiar with basic system analysis concepts and have basic software skills
Postgraduate

This subject introduces the basic database design and implementation concepts and presents database design techniques including relational design and E-R modelling. It discusses the implementation of relational database and describes database query techniques using the Structured Query Language (SQL).

32702 Contemporary Telecommunications

6cp; availability: Graduate Certificate, Graduate Diploma and Masters in IT Management and Internetworking program students only. Other students may undertake the subject if they have demonstrated relevant IT management experience and have signed academic
Recommended studies: open system interconnection (OSI) layers; basic understanding of networking and telecommunication concepts
Postgraduate

This subject explores management perspectives on contemporary telecommunications, data communications and networks. Topics covered include: network architecture and standards; new communications technologies; Internetworking; domestic and international communications environments; application-oriented services; network resource architectures; client/server systems; introduction to distributed processing; distributed databases; emerging technologies; and business and telecommunications planning.

32703 Information Technology Strategy

6cp; availability: for Graduate Certificate, Graduate Diploma and Masters in IT Management students only. Other students may undertake the subject if they have demonstrated relevant IT management experience and have signed academic approval from the ITMP
Recommended studies: prior experience or skills in IT/IS management or business information system development, service delivery and support
Postgraduate

IT strategy is a key concern for both IT managers and managers of other business functions within enterprises. Through a brief presentation of key issues, case studies and presentations of students'

own experiences, this subject deals with the development, evaluation and impact of information systems in organisations; choices that, together, form part of IT and IS strategy.

32901 Recent Advances in Computer Systems

6cp
Postgraduate

This subject presents high-level material by internationally recognised specialists. Topics are chosen from combinatorial optimisation, computer-supported cooperative work, data mining and visualisation, e-commerce, high-performance and distributed computing applications, computer vision and image processing, interaction design and usability issues for mobile and web-based applications, networking, search and visualisation methodologies for the internet, virtual worlds and communities, web services and semantic web.

Typical availability

This subject is only offered in semesters when the faculty has a visiting academic in residence. Students interested in this subject are advised to consult with the Head of School of Computing and Communications.

32902 Recent Advances in Information Systems

6cp
Postgraduate

This subject discusses key issues in IS research, and showcases a number of recent research contributions. It considers the place of the information systems discipline in industry and research, and major IS research issues and directions. The featured research varies according to the interests of staff, particularly of visiting academics.

Typical availability

This subject is only offered in semesters when the faculty has a visiting academic in residence. Students interested in this subject are advised to consult with the Head of School of Systems, Management and Leadership.

32903 PhD Thesis: Analytics

0cp
For subject description, contact UTS: Information Technology.

32930 Management Research Methods

6cp; availability: Master of Business in IT Management students only
Requisite(s): 48 credit points of completed study in C04161 Master of Business in Information Technology Management
There are also course requisites for this subject. See access conditions.
Postgraduate

This subject prepares students for research in organisations. The advantages and limitations of different research paradigms are examined as well as their applicability in different organisational contexts. Experience is provided in the design of research studies, in the analysis and interpretation of data, and in report presentation. Participants acquire skills that are useful in the conduct of research agendas in their own organisations and in the critical evaluation of others' research work.

32931 Technology Research Methods

6cp; availability: honours and postgraduate degree students
Requisite(s): 32144 Technology Research Preparation
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

This subject familiarises participants with a range of approaches used in information technology research, with an emphasis on approaches commonly used in practical settings. The advantages and limitations of different research approaches are examined, as well as their applicability in different information technology contexts. Experience is provided in the design of research studies, in the analysis and interpretation of data, and in report presentation. Participants acquire skills that are useful in the conduct of research agendas in their own information technology organisations and in the critical evaluation of others' research work.

Typical availability

Spring semester, City campus

32932 Management Research Project

6cp; availability: master's level

Requisite(s): 32930c Information Technology Management Research Methods

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is the compulsory part of the final master's project. Participants practise the methods and techniques introduced in the prerequisite research methods subject by undertaking a literature review and producing a research proposal.

32933 Research Project

6cp

Requisite(s): 32144 Technology Research Preparation

There are also course requisites for this subject. See access conditions.

Postgraduate

Students undertake research that involves a substantial investigation under the supervision of a member of academic staff. Students apply the research methods and approaches, including a literature review and a formal research project. The subject is examined on the quality of a written report, oral presentation and management of the project work.

32934 Research Project

12cp

Requisite(s): 32931 Technology Research Methods

There are also course requisites for this subject. See access conditions.

Postgraduate

Students undertake research that involves a substantial investigation under the supervision of a member of academic staff. Students apply the research methods and approaches including a literature review and a formal research project. The subject is examined on the quality of a written report, oral presentation and management of the project work.

32986 PhD Thesis: Information Systems

0cp; availability: PhD students only

Postgraduate

Further information on this subject is available from the UTS: Information Technology research administration officer.

32989 Software Project

12cp

Postgraduate

Further information on this subject is available from the head of the School of Software.

Note(s)

This subject is not currently available to students for enrolment.

32990 IT Contracts and Outsourcing

6cp

Postgraduate

This subject deals with the management, social, legal and financial issues that arise when several parties are involved in the development of an information system. Situations considered are outsourcing, insourcing, development partnerships, support relationships and individual contracting. Students are provided with sufficient resources to plan for and evaluate their position as a client or vendor, and to assess where they need professional advice.

32995 People Management for IT

6cp

Postgraduate

This subject introduces theories of organisations such as businesses, government departments and voluntary associations. It deals with the behaviour of people in organisations, the structure of organisations and the relation between the two. While dealing with organisations in general, particular reference is made to studies and examples of the mutual influence of information systems and organisations.

32998 .NET Application Development

6cp

Requisite(s): 32555 Fundamentals of Software Development

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: a good understanding of programming constructs, O-O concepts and programming practices

Postgraduate

This subject introduces C#, Visual Studio and the .NET development environment. The emphasis is on examining the .NET framework and the practicalities of developing software in this setting using the C# language.

Typical availability

Spring semester, City campus

33116 Statistical Design and Analysis

6cp; 5hpw

This subject provides the theory and techniques needed in the design and analysis of experiments in the natural sciences. It covers descriptive statistics, measures of location and dispersion, commonly used discrete and continuous distributions and simple random sampling. Statistical tests, both parametric and distribution free, are presented for a variety of designs, including paired trials, completely randomised design, block designs and designs with interaction terms or covariates. The analysis of linear, multiple and polynomial regression models is also presented, together with appropriate diagnostic techniques to determine the validity of the models.

Typical availability

Autumn semester, City campus

33130 Mathematical Modelling 1

6cp

Recommended studies: 3-unit Mathematics

This subject develops the knowledge and skills necessary for problem-solving and mathematical modelling at an introductory level. Differential calculus is applied to model situations in science and engineering that involve oscillations. Integral calculus is used to solve selected problems involving first- and second-order differential equations, and to calculate areas, volumes, lengths and other physical quantities. Vectors and matrices are introduced and applied to problem solving and modelling.

Typical availability

Autumn semester, City campus

Spring semester, City campus

View commentary from students and academics about this first-year subject at:

- Student video: www.youtube.be/ZNYttDMzzDE
- Academic video: www.youtube.be/gJrzDuJEox0

33190 Mathematical Modelling for Science

6cp; 6hpw

Recommended studies: two units of HSC Mathematics

Topics covered in this subject include functions and their relationship to scientific experiments; differentiability; differential equations arising from scientific problems; solution by series; radioactive decay and exponential functions; oscillatory motion and trigonometric functions; integration; the logarithm function; inverse functions; inverse trigonometric functions; and solution of differential equations by integration and inverse functions. The computer algebra system Mathematica is used for symbolic, graphical and numerical computations.

Typical availability

Autumn semester, City campus

33230 Mathematical Modelling 2

6cp

Requisite(s): 33130 Mathematical Modelling 1 OR 33190 Mathematical Modelling for Science

This subject consists of two parts: multivariate calculus and an introduction to statistics. The mathematical part develops the mathematical skills required for mathematical modelling of systems involving more than one independent variable. The statistics part is an introduction to descriptive statistics, statistical inference and simple linear regression. Topics include linear algebra, solutions to sets of equations resulting from particular problems, eigenvectors and eigenvalues, partial derivatives, optimisation, multiple integrals and their applications, and probability with a focus on the determination of the reliability of a system of components in various engineering contexts.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Summer session, City campus

33290 Statistics and Mathematics for Science

6cp; 6hpw (Spring semester), 9hpw (Summer session in December), 6hpw (Summer session in January)

Requisite(s): 33190 Mathematical Modelling for Science OR 33130 Mathematical Modelling 1

This subject covers studies of simultaneous linear equations and their occurrence in scientific problems; methods for solving these equations using matrices and determinants; eigenvalues and eigenvectors; vectors in two and three dimensions; products of vectors; spatial geometry and coordinate systems; functions of several variables; partial derivatives; optimisation and method of least squares; probability with a focus on the determination of the reliability of a system of components in various engineering contexts; variance, skewness and kurtosis; and probability distributions, conditional probability and bi-variate probability.

The computer algebra system Mathematica is used throughout the subject as an aid to computation, graph plotting and visualisation.

Typical availability

Spring semester, City campus

Note(s)

This subject was formerly called Computing and Mathematics for Science.

33360 Mathematics for Physical Science

6cp; 4hpw

Requisite(s): 33290 Statistics and Mathematics for Science

Topics in this subject include a review of integration techniques; boundary value problems, separation of variables; Fourier series; heat and wave equations; Laplace's equation; the application of double and triple integrals to scientific problems; vector fields; line and surface integrals, and theorems of Gauss and Stokes.

Typical availability

Autumn semester, City campus

33874 PhD Thesis: Software Engineering

0cp; availability: PhD students only

Postgraduate

Further information on this subject is available from UTS: Information Technology.

33875 PhD Thesis: Computer Systems

0cp; availability: PhD students only

Postgraduate

Further information on this subject is available from UTS: Information Technology.

34776 Thesis (Mathematics)

0cp

The Master of Science in Mathematical Sciences (by research) is examined through presentation of a thesis. Further information is available from the course description (see page 541).

Typical availability

Autumn semester, City campus

Spring semester, City campus

34980 PhD Thesis: Mathematics

0cp

The Doctor of Philosophy is examined through presentation of a thesis. Further information is available from the course description (see page 528).

Typical availability

Autumn semester, City campus

Spring semester, City campus

35010 Foundation Mathematics

6cp; 6hpw

This subject aims to increase a student's chance of success at university by developing essential mathematical knowledge. It establishes essential knowledge and skills in the areas of algebra, functions, calculus and probability. Students are required to actively participate in their learning by oral presentations, group activities and individual work.

Typical availability

Autumn semester, City campus

Spring semester, City campus

35100 Introduction to Sample Surveys

6cp; 4hpw

Requisite(s): 35151 Introduction to Statistics OR 33116 Statistical Design and Analysis OR 26134 Business Statistics OR 33290 Statistics and Mathematics for Science OR 33230 Mathematical Modelling 2

These requisites may not apply to students in certain courses. See access conditions.

This subject provides students with basic quantitative research skills applicable in a variety of disciplines and work environments. It focuses on the use of the sample survey as a research tool, placing it in context as part of the range of research methods. The subject addresses aspects such as questionnaire design and wording, mode of survey administration and sampling method. Appropriate methods of statistical analysis are covered using the package SPSS, and emphasis is given to the skill of research report writing. Part of the assessment is the designing and carrying out of a small quantitative research project, and the many practical steps involved are placed within a project management framework.

Typical availability

Spring semester, City campus

35101 Introduction to Linear Dynamical Systems

6cp; 5hpw

Problems as diverse as analysing the effects of interest rates or ecological change involve the study of systems that evolve in various ways. This subject provides an introduction to the modelling of change through difference and differential equations and allows students to see something of the power of mathematics through the interplay between linear algebra and differential equations. Topics include systems of linear equations and their occurrence in everyday problems; methods for solving these equations using matrices and determinants; solution of differential equations by series; methods of integration; eigenvalues, eigenvectors, matrix exponentials and their use in the solution of systems of differential equations. The computer algebra system Mathematica is used for symbolic, graphical and numerical computations.

Typical availability

Autumn semester, City campus

Spring semester, City campus

35102 Introduction to Analysis and Multivariable Calculus

6cp; 5hwp (Spring semester), 9hwp (Summer session)
Requisite(s): [35101 Introduction to Linear Dynamical Systems
OR [(33230 Mathematical Modelling 2 OR 33290 Statistics and
Mathematics for Science)]]

Many problems in business and science involve the study of systems with many interrelated (examples include the study of investment portfolios and the analysis of ecological systems). This subject introduces students to the principles of calculus for functions of several variables required in such applications, and to the theoretical foundations of mathematics that underpin them. Topics include vectors; products of vectors; equations of lines and planes; functions of several variables; partial derivatives and gradient; double integrals; sequences and their convergence; continuous and uniformly continuous functions; properties of continuous functions on a closed interval; differentiability; power series, tests for convergence and radius of convergence; Taylor and Maclaurin series; sequences and series of functions and Weierstrass M-test; upper and lower sums; and the Riemann integral.

Typical availability

Spring semester, City campus
Summer session, City campus

35111 Applications of Discrete Mathematics

6cp; 4hwp

This subject is designed to provide students with an appreciation of the practical benefits that result from the application of discrete mathematics to problems in areas such as data storage, digital communication and DNA sequencing. The subject places a strong emphasis on developing a clear understanding of the common features of problems from diverse areas, with students developing practical skills in problem solving through structured tutorial exercises. Topics are chosen to cover the mathematics underlying recording music on CDs, secret sharing schemes, Sudoku, group testing and Universal Product Codes.

Typical availability

Spring semester, City campus

35112 Mathematical Research Project A

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

35113 Mathematical Research Project B

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the

methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

35114 Mathematical Research Project

24cp

In this subject students undertake a semester-long research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning of the research work. This project is equivalent in level to those undertaken by honours and research master's students. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (10,000–20,000 words approx.) which includes an introduction, which sets the project in the context of the literature, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. 35140 Introduction to Quantitative Management

6cp; 4hwp

This subject is an introduction to quantitative management methodology and modelling. A variety of problems from manufacturing, construction, supply chain management and finance are considered, together with approaches to the formulation of the corresponding mathematical models. Models include linear programs, nonlinear programs, integer programs, game theory, project management, and simulation. Solutions for the models are obtained using commercial decision support software including spreadsheet add-ins and mathematical programming modelling systems such as LINGO.

Typical availability

Autumn semester, City campus
Spring semester, City campus

35151 Introduction to Statistics

6cp; 5hwp

Statistics is the science of collecting, organising and interpreting data. These data may come from designed experiments, may be collected in a questionnaire or may be the result of market activity, but many of the statistical techniques are independent of the source of the data and some of them are introduced in this subject. After a general introduction, some of the common distributions and their usefulness in data summary are presented. Formal tests about the mean and variance are developed and then a number of standard techniques from regression, designed experiments and quality control are introduced.

Typical availability

Autumn semester, City campus
Spring semester, City campus

35212 Computational Linear Algebra

6cp; 4hpw

Requisite(s): 35101 Introduction to Linear Dynamical Systems OR 33230 Mathematical Modelling 2 OR 33290 Statistics and Mathematics for Science OR 33401 Introductory Mathematical Methods

These requisites may not apply to students in certain courses. See access conditions.

In this subject, students develop familiarity with the theory of finite dimensional linear algebra, applications of this theory in areas such as statistical analysis and the solution of differential equations and some of the main computational techniques used in these applications. Topics include systems of linear equations (LU factorisation and iterative methods); vector spaces; inner product spaces; Gram-Schmidt orthogonalisation, QR decomposition; approximation theory; least squares and orthogonal polynomials; the eigenvalue problem; Singular value decomposition and applications.

Typical availability

Autumn semester, City campus

35231 Differential Equations

6cp; 4hpw

Requisite(s): ([35102 Introduction to Analysis and Multivariable Calculus OR 33230 Mathematical Modelling 2 OR 33290 Statistics and Mathematics for Science OR 33401 Introductory Mathematical Methods] AND 35212 Computational Linear Algebra)

These requisites may not apply to students in certain courses. See access conditions.

Differential equations arise in contexts as diverse as the analysis and pricing of financial options, and the design of novel materials for telecommunications. In this subject students develop familiarity with the theory of differential equations, applications of this theory and some of the main computational techniques used in the solution of differential equations. Topics include existence and uniqueness of solutions; method of Frobenius; variation of parameters; the Taylor and Runge-Kutta methods for initial value problems; Fourier series; solving partial differential equations and boundary value problems by separation of variables, transform methods and finite difference methods.

Typical availability

Spring semester, City campus

35232 Advanced Calculus

6cp; 4hpw

Requisite(s): 35102 Introduction to Analysis and Multivariable Calculus OR 33230 Mathematical Modelling 2 OR 33360 Mathematics for Physical Science

These requisites may not apply to students in certain courses. See access conditions.

Transform methods such as the Laplace transform are useful in solving differential equations that arise in many areas of applications including signal analysis, mathematical finance and various queuing models in quantitative management. This subject highlights the areas of advanced calculus needed to justify the use of complex integration to invert the Laplace Transform when solving such problems. Topics include line integrals; Green's theorem; functions of a complex variable; analytic functions; Cauchy-Riemann equations; complex integrals; Cauchy's integral theorem; residues and poles; contour integration; and inversion of Laplace Transform.

Typical availability

Autumn semester, City campus

35241 Optimisation in Quantitative Management

6cp; 4hpw

Requisite(s): 35101 Introduction to Linear Dynamical Systems OR 33401 Introductory Mathematical Methods OR 33230 Mathematical Modelling 2 OR 33290 Statistics and Mathematics for Science

These requisites may not apply to students in certain courses. See access conditions.

This subject introduces methods and ideas that form an indispensable part of commercial decision support systems in such diverse fields as supply chain management, financial analysis, transportation, production planning and scheduling. It introduces classical techniques for linear models in quantitative management and basic concepts of

nonlinear optimisation. Topics covered include the simplex method, the two-phase simplex method, the revised simplex method, the dual simplex method, duality theory, sensitivity analysis, introduction to integer programming, and introduction to nonlinear programming.

Typical availability

Autumn semester, City campus

35252 Mathematical Statistics

6cp; 4hpw

Requisite(s): ([35102 Introduction to Analysis and Multivariable Calculus OR 33401 Introductory Mathematical Methods OR 33230 Mathematical Modelling 2 OR 33290 Statistics and Mathematics for Science] AND 35353 Regression Analysis)

These requisites may not apply to students in certain courses. See access conditions.

Advanced statistical analysis in areas such as marketing, survey design and financial modelling requires insight into the mathematical foundations of statistics. This subject aims to develop such insight and introduces students to the concepts and terminology required in more advanced applications. Topics include probability, random variables and their probability distributions, limiting distributions, multivariate probability distributions, functions of random variables, estimators and their properties, hypotheses and their tests, and order statistics.

Typical availability

Autumn semester, City campus

35255 Forensic Statistics

6cp; 3hpw

Requisite(s): 35151 Introduction to Statistics OR 33116 Statistical Design and Analysis OR 33230 Mathematical Modelling 2 OR 33290 Statistics and Mathematics for Science

These requisites may not apply to students in certain courses. See access conditions.

This subject covers the application of statistical techniques and probability models to forensic cases in the areas of uncertainty, significance and coincidence probabilities, discrimination in discrete and continuous data, relevant population grouping and the analysis of genetic profiles and lineages. The above is illustrated with reference to practical examples and databases of forensic evidence.

Typical availability

Autumn semester, City campus

35322 Advanced Analysis

6cp; 4hpw

Requisite(s): 35232 Advanced Calculus AND 35212 Computational Linear Algebra

These requisites may not apply to students in certain courses. See access conditions.

This subject introduces some of the most important and powerful mathematical tools developed over the last one hundred years. These are essential for the modern theory of probability and stochastic processes that underpin the pricing of derivative securities traded in international financial markets as well as the mathematical foundations of quantum physics. Topics include measure spaces; Lebesgue measure; borel sets and sigma algebra; Lebesgue integrals; product measures; probability as a measure; metric spaces; normed linear spaces; Banach spaces; Hilbert spaces; Lp spaces; applications to problems in probability and Fourier series.

Typical availability

Spring semester, City campus

35335 Mathematical Methods

6cp; 4hpw

Requisite(s): 35231c Differential Equations

This subject introduces students to the advanced techniques that are used to formulate and solve problems in the physical and biological sciences, as well as problems in finance and economics. Topics include: vector integral theorems; the Gamma function and other special functions; Bessel and Legendre equations with applications to boundary value problems; integral transform methods for solving boundary value problem.

Typical availability

Spring semester, City campus (odd years only)

35340 Quantitative Management Practice

6cp; 4hpw

Requisite(s): 35241 Optimisation in Quantitative Management

These requisites may not apply to students in certain courses. See access conditions.

This subject is concerned with practical aspects of quantitative management, and covers recent developments in various areas of application. Applications considered include personnel scheduling, supply chain management (including logistics and inventory control), production planning and control, transportation problems and financial applications. The subject involves various case studies and study of recent journal publication.

Typical availability

Autumn semester, City campus

35342 Nonlinear Methods in Quantitative Management

6cp; 4hpw

Requisite(s): 35241 Optimisation in Quantitative Management

These requisites may not apply to students in certain courses. See access conditions.

This subject presents a range of ideas and methods commonly used in solving various nonlinear optimisation problems in quantitative management and portfolio management. Methods presented include interior point methods for linear programming; Newton's and conjugate direction methods for unconstrained nonlinear programming; feasible direction methods, and penalty and barrier methods for constrained nonlinear programming; and an introduction to stochastic programming.

Typical availability

Spring semester, City campus

35344 Network and Combinatorial Optimisation

6cp; 4hpw

Requisite(s): 35241 Optimisation in Quantitative Management

These requisites may not apply to students in certain courses. See access conditions.

Network and combinatorial optimisation methods are among the main tools used in solving problems that arise in supply chain management, personnel planning and scheduling, production scheduling and choosing the best route for vehicles. This subject has three components: network models and solution methods; complexity theory; and an introduction to modern heuristic techniques for discrete optimisation. The network component includes the minimum cost network flow problem, the maximum flow problem and the shortest path problem. The subject introduces the concepts of local search and other heuristic techniques such as tabu search, genetic algorithms and simulated annealing.

Typical availability

Spring semester, City campus

Note(s)

This subject was formerly called Network Optimisation.

35353 Regression Analysis

6cp; 4hpw

Requisite(s): 35151 Introduction to Statistics OR 33116 Statistical Design and Analysis OR 33230 Mathematical Modelling 2 OR 33290 Statistics and Mathematics for Science OR 26134 Business Statistics

These requisites may not apply to students in certain courses. See access conditions.

Regression analysis provides a way to model the relations among a set of quantitative variables. This subject focuses on the most common situation of one response variable and several explanatory variables, a situation encountered in many areas in science, engineering, medicine and business. Models for several explanatory variables are developed and tested, and ways for deciding which of a set of variables give the best model are developed. Other related models such as time series models are briefly considered.

Typical availability

Spring semester, City campus

35355 Quality Control

6cp; 4hpw

Requisite(s): 35353c Regression Analysis OR 35252 Mathematical Statistics

These requisites may not apply to students in certain courses. See access conditions.

This subject shows how to use statistical methods to improve the quality of manufactured goods and services. The topics covered include control charts, acceptance sampling plans, process capability and reliability measures. Applications to health and health-related quality of life are also discussed.

Typical availability

Spring semester, City campus (even years only)

Note(s)

This subject is replaced by 35393 Seminar Statistics in odd years.

35356 Design and Analysis of Experiments

6cp; 4hpw

Requisite(s): 35353c Regression Analysis

These requisites may not apply to students in certain courses. See access conditions.

Experiments are an important part of research in all areas including science, medicine, engineering and marketing. Many ideas on how to design a good experiment are independent of the area of application and this subject covers standard principles of good design applicable to all areas. It covers standard designs (completely randomised, randomised complete block, Latin squares and factorial designs) for testing hypotheses about treatment means, discusses how to design experiments to study variances, and discusses assumption checking and transformations. Designs for various special purpose applications such as longitudinal studies, crossover trials and analysis of covariance are also outlined.

Typical availability

Autumn semester, City campus

35361 Stochastic Processes

6cp; 4hpw

Requisite(s): 35252 Mathematical Statistics AND 35363 Stochastic Models

These requisites may not apply to students in certain courses. See access conditions.

This subject has applications across a very wide range of disciplines, from finance and economics, to physics and biology. It introduces the mathematics of random processes which are used to describe and predict the behaviour of complex systems. Topics include: Gaussian-Markov processes; Markov chains, birth-death processes; Compound Poisson processes, Levy processes, stable and Variance-Gamma processes; Time Series; Martingales and their application to ruin probabilities and financial modelling; Black-Scholes formula.

Typical availability

Spring semester, City campus

35363 Stochastic Models

6cp; 4hpw

Requisite(s): (35151 Introduction to Statistics OR 26134 Business Statistics) AND 35101 Introduction to Linear Dynamical Systems) OR ([33230 Mathematical Modelling 2 OR 33290 Statistics and Mathematics for Science]

These requisites may not apply to students in certain courses. See access conditions.

Stochastic models allow many situations involving uncertainty to be analysed. This subject provides students with the knowledge required to use such models successfully in practice. Students acquire experience in using state-of-the-art commercial software for simulation, Markov decision process methods and various queueing models. Topics covered include Markov chains, Poisson processes, the birth-and-death process, and non-birth-and-death queueing models. The simulation component of the subject includes: pseudorandom number generation and corresponding statistical tests; evaluation of integrals using Monte Carlo simulation; generation of continuous and discrete random variables, including inverse transform technique, convolution method, and acceptance-rejection technique.

Typical availability

Autumn semester, City campus

35364 Statistics for Quantitative Finance

6cp

This subject provides a foundation in probability and statistics, and introduces the basic concepts of stochastic processes and time series. Topics include random variables, expectations, law of large numbers, central limit theorem, estimation of parameters, testing hypothesis, linear regression, Gaussian and Markov stochastic processes, and basic time series analysis.

Typical availability

Autumn semester, City campus

35365 Stochastic Calculus in Finance

6cp

Requisite(s): 35364 Statistics for Quantitative Finance

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

The aim of this subject is to present and deepen the various mathematical concepts, techniques and intuition necessary for modern financial modelling, derivative pricing, portfolio optimisation and risk management. It provides the foundations for a sufficiently rigorous mathematical treatment of these topics. It also enables students to confidently apply the theory of stochastic processes and stochastic calculus.

Typical availability

Autumn semester, City campus

35366 Numerical Methods of Finance

6cp

Requisite(s): 25839 Mathematics of Finance

These requisites may not apply to students in certain courses. See access conditions.

This subject presents various numerical methods used in quantitative finance. It provides a rigorous understanding of advanced numerical, statistical and filtering methods. Emphasis is on simulation methods for solving stochastic differential equations and finite difference methods for partial differential equations.

Typical availability

Autumn semester, City campus

Note(s)

This subject was previously owned by the Faculty of Business.

35383 High Performance Computing

6cp; 4hpw

Requisite(s): ([31267 Programming Fundamentals OR 48023 Programming Fundamentals] AND 35212 Computational Linear Algebra)

Many quantitative problems, such as the pricing of exotic financial options or modelling large-scale ecological systems, cannot be solved analytically. Instead, computational solutions must be found, sometimes by methods that require high-performance parallel computers or grid computing techniques. This subject introduces students to the structure and characteristics of the major types of parallel computer systems and to methods for the design and implementation of parallel numerical codes in a modern scientific programming language. Topics include: the Fortran 95 language including arrays and array operations; procedures and interface blocks, modules, recursive procedures, pointers and dynamic data structures; practicalities of programming in a batch environment; debugging; checkpointing; the MPI library and MIMD programming in a distributed memory environment; OpenMP and shared memory MIMD programming with thread.

Typical availability

Autumn semester, City campus

35391 Seminar (Mathematics)

6cp; 4hpw

Requisite(s): 35231c Differential Equations

The subject involves group studies in mathematics. The topics vary from year to year and are chosen in accordance with the interests of students and staff, and the availability of staff.

Typical availability

Spring semester, City campus (even years only)

35393 Seminar (Statistics)

6cp; 4hpw

Requisite(s): 35353 Regression Analysis

These requisites may not apply to students in certain courses. See access conditions.

The subject involves group studies in statistics. The topics vary from year to year and are chosen in accordance with the interests of students and staff, and the availability of staff.

Typical availability

Spring semester, City campus (odd years only)

35457 Multivariate Statistics

6cp; 3hpw

This subject covers multivariate normal distribution, definition, moments, characteristic function, estimation of mean and covariance matrices, Wishart distribution, Hotelling's T^2 , multivariate linear regression, principal components, factor analysis and cluster analysis.

Typical availability

Autumn semester, City campus

35466 Advanced Stochastic Processes

6cp; 3hpw

This subject aims to introduce honours students to the mathematical theory and some financial applications of Brownian motion and related processes. It covers the following topics: formal definition of probability space and stochastic processes; Martingales; Riemann-Stieltjes integration; Brownian motion and related processes; stochastic calculus and stochastic differential equations; and financial applications.

Typical availability

Autumn semester, City campus

35472 Honours Seminar 1

6cp

This is one of four seminar subjects that allow students to engage in intensive study of an advanced topic in the mathematical sciences. The choice of topics is based on the student's interests and staff availability. Recent topic areas include advanced design and analysis of experiments, advanced mathematical methods, boundary value problems, discrete optimisation, electromagnetic wave theory, finite difference methods, log-linear and nonlinear statistical models, nonlinear dynamical systems, optimal control, scheduling theory, and time series analysis.

Some honours subjects offered by the Australian Mathematical Science Institute via Access Grid Room are also available.

35473 Honours Seminar 2

6cp

This is one of four seminar subjects that allow students to engage in intensive study of an advanced topic in the mathematical sciences. The choice of topics is based on the student's interests and staff availability. Recent topic areas include advanced design and analysis of experiments, advanced mathematical methods, boundary value problems, discrete optimisation, electromagnetic wave theory, finite difference methods, log-linear and nonlinear statistical models, nonlinear dynamical systems, optimal control, scheduling theory, and time series analysis.

Some honours subjects offered by the Australian Mathematical Science Institute via Access Grid Room are also available.

35474 Honours Seminar 3

6cp

This is one of four seminar subjects that allow students to engage in intensive study of an advanced topic in the mathematical sciences. The choice of topics is based on the student's interests and staff availability. Recent topic areas include advanced design and analysis of experiments, advanced mathematical methods, boundary value problems, discrete optimisation, electromagnetic wave theory, finite difference methods, log-linear and nonlinear statistical models, nonlinear dynamical systems, optimal control, scheduling theory, and time series analysis.

Some honours subjects offered by the Australian Mathematical Science Institute via Access Grid Room are also available.

35475 Honours Seminar 4

6cp

This is one of four seminar subjects that allow students to engage in intensive study of an advanced topic in the mathematical sciences. The choice of topics is based on the student's interests and staff availability. Recent topic areas include advanced design and analysis of experiments, advanced mathematical methods, boundary value problems, discrete optimisation, electromagnetic wave theory, finite difference methods, log-linear and nonlinear statistical models, nonlinear dynamical systems, optimal control, scheduling theory, and time series analysis.

Some honours subjects offered by the Australian Mathematical Science Institute via Access Grid Room are also available.

35476 Thesis: Mathematics and Finance (Hons) A

6cp; independent research under supervision

The honours thesis subjects require students to produce a thesis based on an original problem of a theoretical or applied nature. The thesis is expected to demonstrate the student's competency to conceptualise, conduct and present research in a scholarly and independent manner. The project on which the thesis is based is conducted over two semesters in two consecutive subjects of which this is the first. The subject 35477 Thesis: Mathematics and Finance (Hons) B is the second subject and the result in this subject is determined on completion of that subject.

35477 Thesis: Mathematics and Finance (Hons) B

6cp; independent research under supervision

This subject is a continuation of 35476 Thesis: Mathematics and Finance (Hons) A. The honours thesis subjects require students to produce a thesis based on an original problem of a theoretical or applied nature. The thesis is expected to demonstrate the student's competency to conceptualise, conduct and present research in a scholarly and independent manner.

35493 Thesis (Mathematics) Honours Part A

12cp

The thesis is an individually supervised subject with no formally scheduled classes. Regular meetings are arranged between the supervisor and student. Students are required to give oral presentations and/or seminars during the course of the subject. Students perform an independent investigation of an area of the mathematical sciences chosen in consultation with a supervisor who is appointed by the head of department. The subject is preparation for 35494 Thesis: Mathematics (Honours) Part B and results are only allocated on completion of that subject.

Typical availability

Autumn semester, City campus

35494 Thesis (Mathematics) Honours Part B

12cp

The thesis is an individually supervised subject with no formally scheduled classes. Regular meetings are arranged between the supervisor and student. Students are required to give oral presentations and/or seminars during the course of the subject. Students perform an independent investigation of an area of the mathematical sciences chosen in consultation with a supervisor who is appointed by the head of department.

Spring semester, City campus

35502 Seminar A

6cp

This is one of four subjects which allow students to engage in intensive study of an advanced topic in the mathematical sciences. The choice of topics is based on the area of specialisation of the lecturer/presenter/facilitator. Recent topic areas include: advanced design and analysis of experiments; advanced mathematical methods; boundary value problems; discrete optimisation; electromagnetic wave theory; finite difference methods; log-linear and nonlinear statistical models; nonlinear dynamical systems; optimal control; scheduling theory; and time series analysis.

35503 Seminar B

6cp

This is one of four subjects which allow students to engage in intensive study of an advanced topic in the mathematical sciences. The choice of topics is based on the area of specialisation of the lecturer/presenter/facilitator. Recent topic areas include: advanced design and analysis of experiments; advanced mathematical methods; boundary value problems; discrete optimisation; electromagnetic wave theory; finite difference methods; log-linear and nonlinear statistical models; nonlinear dynamical systems; optimal control; scheduling theory; and time series analysis.

35504 Seminar C

6cp

This is one of four subjects which allow students to engage in intensive study of an advanced topic in the mathematical sciences. The choice of topics is based on the area of specialisation of the lecturer/presenter/facilitator. Recent topic areas include: advanced design and analysis of experiments; advanced mathematical methods; boundary value problems; discrete optimisation; electromagnetic wave theory; finite difference methods; log-linear and nonlinear statistical models; nonlinear dynamical systems; optimal control; scheduling theory; and time series analysis.

35505 Seminar D

6cp

This is one of four subjects which allow students to engage in intensive study of an advanced topic in the mathematical sciences. The choice of topics is based on the area of specialisation of the lecturer/presenter/facilitator. Recent topic areas include: advanced design and analysis of experiments; advanced mathematical methods; boundary value problems; discrete optimisation; electromagnetic wave theory; finite difference methods; log-linear and nonlinear statistical models; nonlinear dynamical systems; optimal control; scheduling theory; and time series analysis.

35511 Fundamentals of Analysis and Multivariable Calculus

6cp

For further details, contact UTS: Science.

35512 Fundamentals of Linear Dynamical Systems

6cp

For further details, contact UTS: Science.

41001 Cloud Computing and Software as a Service

6cp

Requisite(s): 48440 Software Engineering Practice OR 31244 Applications Programming OR 31281 Systems Development Project OR 31061 Database Principles OR 48024 Applications Programming Undergraduate

This subject introduces students to cloud computing fundamentals, case studies and their applications for the development of software as a service in the cloud. Following a brief introduction to cloud computing, the cloud architecture, infrastructure as a service, platform as a service, software as a service (SaaS), virtualisation and multi-tenancy features are explained. The theoretical discussion of these topics is supplemented with practical introductory exercises for SaaS development in the cloud.

Typical availability

Autumn semester, City campus

41002 Professional Engineering Practice Preparation

6cp

For further details, contact UTS: Engineering.

41004 Analytics Capstone Project

6cp

Requisite(s): [31250 Introduction to Data Analytics AND (90 Credit Points in spk(s): C10148 Bachelor of Science in Information Technology OR 90 Credit Points in spk(s): C10152 Bachelor of Science in Information Technology Diploma in Information Technology Professional Practice OR 90 Credit Points in spk(s): C10219 Bachelor of Business Bachelor of Science in Information Technology OR 90 Credit Points in spk(s): C10239 Bachelor of Science in Information Technology Bachelor of Arts in International Studies OR 90 Credit Points in spk(s): C10245 Bachelor of Science in Information Technology Bachelor of Laws)]

Further information on this subject is available from UTS: Engineering and Information Technology.

41005 Cloud-based Enterprise Application Development

6cp

Requisite(s): 41001 Cloud Computing and Software as a Service

This subject builds on prior knowledge of cloud computing and aims to provide students with practical and relevant knowledge to develop enterprise applications using an available cloud platform. It enables students to develop an in-depth understanding of the two major paradigms for developing applications in the cloud, namely, declarative application development and programmatic application development. Students develop an understanding of the issues, such as governance limits, that are frequently encountered during cloud-based application development. It methodologically empowers students with the knowledge to make decisions on using an appropriate development paradigm, depending on the requirements or capabilities. It provides students with the relevant skills and knowledge to carry out analytics using an existing cloud platform.

41010 Energy and Water

6cp

Requisite(s): 87 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 87 Credit Points in spk(s): C10062 Bachelor of Engineering Bachelor of Arts in International Studies Diploma in Engineering Practice OR 87 Credit Points in spk(s): C10063 Bachelor of Engineering Bachelor of Arts in International Studies OR 87 Credit Points in spk(s): C10065 Bachelor of Engineering Bachelor of Business OR 87 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 87 Credit Points in spk(s): C10067 Bachelor of Engineering OR 87 Credit Points in spk(s): C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 87 Credit Points in spk(s): C10073 Bachelor of Engineering Bachelor of Science OR 87 Credit Points in spk(s): C10074 Bachelor of Engineering Bachelor of Science Diploma in Engineering Practice OR 87 Credit Points in spk(s): C10075 Bachelor of Engineering Bachelor of Medical Science OR 87 Credit Points in spk(s): C10076 Bachelor of Engineering Bachelor of Medical Science Diploma in Engineering Practice OR 87 Credit Points in spk(s): C10078 Bachelor of Engineering Bachelor of Biotechnology OR 87 Credit Points in spk(s): C10079 Bachelor of Engineering Bachelor of Biotechnology Diploma in Engineering Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject introduces students to the key challenges facing the energy and water sectors and analytical modelling and framework to redress these challenges. Specific emphasis is placed in the subject on issues that arise at the interface of technology, economics and policy, in the context of energy and water industries.

41011 Environmental Chemical Processes

6cp

Requisite(s): 48860 Pollution Control and Waste Management

The subject covers the chemical processes behind environmental problems dealing with air, energy, climate change, toxic chemicals, water and other issues. Topics include the source, reactions, transport, effects, and fates of chemical materials in air, water and soil

environments. It has an emphasis on training students to learn basic knowledge and skills of environmental engineering processes. This includes working individually and in small teams. The fundamental and practical investigations of environmental chemical processes are focused on laboratory skills. The subject combines both environmental chemical processes and practical lab-oriented engineering processes.

41012 Programming for Mechatronic Systems

6cp

Requisite(s): 48623 Mechatronics 2

The objectives of this subject are to introduce students to object-oriented programming and design using C++ and to describe and explain factors that contribute to design and implementation object-oriented applications of moderate complexity. This subject familiarises students with approaches to design and constructs classes that are re-usable, reliable and maintainable.

Topics include: objects, classes, abstraction, inheritance, polymorphism, run-time instantiation, threading, thread communication, event handling, error handling, use of generic features of C++ such as the STL and utilising APIs.

41013 Robotics

6cp

Requisite(s): 48623 Mechatronics 2

The objectives of this subject are to introduce students to the multidisciplinary field of robotics engineering in practice. It aims to familiarise students with the more traditional robotics topics such as motion planning, mobile mechanisms, kinematic and dynamic models, perception and control, and also more modern probabilistic techniques including machine learning for intelligent robots operating in the real world.

41014 Sensors and Control for Mechatronic Systems

6cp

Requisite(s): 48623 Mechatronics 2 AND 48660 Dynamics and Control

The objectives of this subject are to develop the student's theoretical and practical understanding on active and passive sensing and feedback control techniques, ability to select and evaluate sensors, process the sensor data, and apply computer-based tools for practical control system design using the sensory information. Topics include visual imaging and image processing, infrared imaging, time of flight (TOF) measurements, detection and tracking, state-space modelling of linear systems, stability, controllability and observability, linear quadratic control, observer design, H-infinity control, and model predictive control. Case studies of engineering applications are also covered.

41101 Fundamentals of Biomedical Engineering

6cp

Requisite(s): 48541 Signal Theory AND 48520 Electronics and Circuits AND 91400 Human Anatomy and Physiology

The objectives of this subject are to introduce students to the field of biomedical engineering and familiarise them with the many areas and applications of this multidisciplinary field. The subject covers basics of biomedical signals and systems, biomedical images, biomedical instrumentation, biomechanics and bioinformatics. Topics include description of the different biomedical and physiological signals, sensors, data acquisition process, systems analysis, processing medical 2D images, medical motion models, biomedical instrumentation and molecular biology databases.

41105 Biomedical Signal and Image Processing

6cp

Requisite(s): 31256 Image Processing and Pattern Recognition AND 41101 Fundamentals of Biomedical Engineering

This subject covers the concept of signal and image processing related to biomedical signals and images along with methods of acquisition and classification. Basics of electro-cardiography, electro-encephalography, electro-myography and electro-retinography will be discussed along with discrete signal processing algorithms for analysis and monitoring. Measurement of amplitude and time intervals of ECG signals, QRS detection (different methods), ST segment analysis, removal of baseline and power line interferences, arrhythmia analysis etc will be included, along with algorithms for data reductions. The linear prediction and adaptive signal processing methods for analysis, detection and estimation of EEG and other neurological signals, sleep EEG, study of pattern of brain waves etc will be included. The EEG

signal analysis using spectral estimation, the maximum entropy method and AR method, moving average method, the ARMA methods and moving likelihood method will also be covered. Wavelet signal processing methods will be introduced. Image processing methods for image analysis, segmentation, classification and reconstruction will be discussed. All the concepts will be introduced using MATLAB simulations.

41889 Application Development in the iOS Environment

6cp; 1.5hwp (lecture), 1.5hwp (laboratory), UTSONline Discussion Board

Requisite(s): 48023 Programming Fundamentals OR 31267

Programming Fundamentals

Recommended studies: students would benefit from completing other programming subjects, particularly 31251 Data Structures and Algorithms which introduces them to some C and pointers

Disciplinary Strand - Software Engineering

Undergraduate

This subject introduces students to Objective C, the Cocoa Framework and the iOS environment. The emphasis is on learning to develop software for this environment.

Typical availability

Spring semester, City campus

41890 Applying Network Security

6cp; 3hwp, on campus

Requisite(s): ([31252 Network Security OR 48730 Network Security] AND 31283 WANs and Virtual LANs)

Disciplinary Strand - Communication Technologies

Undergraduate

In the network security subject students learn about the theory underlying computer-security. This subject applies this theory to practice by using material based on the Cisco Network Security course. The emphasis is on network security appliances and networking infrastructure such as firewalls, access control, secure network design and Virtual Private Networks.

Typical availability

Spring semester, City campus

41891 Cloud Computing Infrastructure

6cp; 3hwp, on campus

Requisite(s): 31277 Routing and Internetworks OR 48740 Communications Networks

Recommended studies: 41001 Cloud Computing and Software as a Service; 41005 Cloud-based Enterprise Application Development; 31338 Network Servers (or equivalent Linux/Microsoft certification); 31246 Network Design

This subject introduces the concepts and implementation of cloud computing infrastructure, and complements the existing cloud computing subjects. Topics such as cloud architecture, virtualisation and storage technologies, and data centre fundamentals, as well as security and compliance in the cloud, are explored. This subject is heavily influenced by industry interaction, and includes hands-on labs and workshops using commonly found tools within the cloud infrastructure industry.

Typical availability

Spring semester, City campus

41900 Fundamentals of Security

6cp; 3hwp, on campus

Requisite(s): 31268 Web Systems OR 48410 Introduction to ICT Engineering OR 31270 Networking Essentials OR 48720 Network Fundamentals OR 48721 Strategic e-Business Technologies
Recommended studies: Foundation Mathematics or equivalent ICT Engineering program

Security is a major issue for enterprises, with breaches leaving them vulnerable to legal sanctions, financial loss or reduced customer confidence. This subject introduces students to modern security issues and technologies by considering various aspects, from security principles and policies, to network and system security, as well as intrusion detection and cyber security.

42001 Bioinformatics

6cp

Requisite(s): [31005 Advanced Data Analytics AND 41101

Fundamentals of Biomedical Engineering AND (120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10065 Bachelor of Engineering Bachelor of Business)]

These requisites may not apply to students in certain courses. See access conditions.

This subject covers four main topics related to genomic sequence data, gene expression profiling, structural bioinformatics and network biology. Students learn to download freely-available genomic sequence data such as DNA sequences, RNA sequences, and protein sequences and learn to conduct sequence data analysis for motif discovery by using BLAST-based methods and algorithms. Students learn to understand gene expression principles and databases and learn to conduct data analysis for disease diagnosis and prognosis by using data mining and machine learning algorithms. Students are also taught to understand molecular structures of proteins and protein complexes and make use of data for binding site detection. Further, students learn to use graph models to detect functional modules from various biological networks such as protein-protein interactions, residue-residue networks, and genotype-phenotype associations.

42002 Enterprise Application Development Using Cloud Platforms

6cp

Requisite(s): 42904 Cloud Computing and Software as a Service

This subject builds on prior knowledge of cloud computing and aims to provide students with practical and relevant knowledge to develop enterprise applications using an available cloud platform. It enables students to develop an in-depth understanding of the two major paradigms for developing applications in the cloud, namely, declarative application development and programmatic application development. Students develop an understanding of the issues, such as governance limits, that are frequently encountered during cloud-based application development. It methodologically empowers students with the knowledge to make decisions on using an appropriate development paradigm, depending on the requirements or capabilities. It provides students with the relevant skills and knowledge to carry out analytics using an existing cloud platform.

42889 iOS Application Development

6cp

Requisite(s): 48023 Programming Fundamentals OR 32555 Fundamentals of Software Development

This subject introduces students to Objective C, the Cocoa Framework and the iOS environment. The emphasis is on learning to develop software for this environment.

Typical availability

Spring semester, City campus

42890 4G Mobile Technologies

6cp; 3hwp, on campus

Requisite(s): [48750 Network Planning and Management AND (120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: 49048 Wireless Networking Technologies, or equivalent

Postgraduate coursework

This subject provides an introduction to LTE networks as well as details of the architecture including quality of service, voice and data services. It also provides a solid grounding in the LTE air interface structure and mechanisms. Students can also undertake a globally recognised industry certification - Alcatel Lucent Certified Network Associate in LTE Networks - by undertaking an additional external examination. The subject is vendor agnostic and is based on LTE standards.

Typical availability

Autumn semester, City campus

42891 Infrastructure for Cloud Computing

6cp; 3hpw, on campus

Requisite(s): 32524 LANS and Routing OR 48740 Communications Networks

Recommended studies: 42904 Cloud Computing and Software as a Service; 32520 UNIX Systems Administration (or equivalent Linux/Microsoft certification); 32527 Internetwork Design

This subject introduces the concepts and implementation of cloud computing infrastructure, and complements the existing cloud computing subjects. Topics such as cloud architecture, virtualisation and storage technologies, and data centre fundamentals, as well as security and compliance in the cloud, are explored. This subject is heavily influenced by industry interaction, and includes hands-on labs and workshops using commonly found tools within the cloud infrastructure industry.

Typical availability

Spring semester, City campus

42900 Sustainability and Information Systems

6cp; 3hpw (1.5hr lecture and 1.5hr tutorial)

Elective

Postgraduate

This subject explores the arising and complex challenges effecting organisational sustainability in the 21st century. Sustainability here is viewed from multidimensional perspectives to encompass environmental, technological, social, and economic sustainability of contemporary organisations and their operations. To achieve sustainability objectives, collaboration among a wide range of stakeholders, often mediated through the use of information technologies and collaborative media, is essential. This however poses significant and often existential challenges to many organisations attempting to apply traditional, structured, and short-term approaches in their operations, as well as considerable opportunities for innovative, collaborative, technology savvy, and long-term focused organisations.

Consequently, the subject invites students to proactively and innovatively reflect on these issues and their effect on organisational leadership and management. In such reflection, students are encouraged to consider various real and hypothetical case-based scenarios, where they identify and evaluate challenges to sustainability, and recommend informed, innovative, collaborative, and rigorously supported arguments and policy initiatives.

Typical availability

Spring semester, City campus

42901 Object-Relational Databases

6cp; 3hpw

Requisite(s): 32606 Database

Recommended studies: practical experience with database design and implementation

Elective

Postgraduate

This subject introduces students to advanced post-relational database topics including cloud databases, management of XML data and management of complex data objects. Following a brief review of relational databases and object-oriented principles, the SQL: 2003 object-relational model and language features are described in detail. The theoretical discussion of these topics is supported with practical hands-on exercises using the Oracle11g database management system.

Typical availability

Spring semester, City campus

42902 Interior Routing and High Availability

6cp; block, attendance at laboratory sessions is compulsory

Requisite(s): (49202 Communication Protocols AND (in spk(s):

C10061 Bachelor of Engineering Diploma in Engineering Practice

OR in spk(s): C10066 Bachelor of Engineering Science OR in spk(s):

C10067 Bachelor of Engineering))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Students examine the intricacies of standards-based routing protocols, such as open shortest path first (OSPF) and intermediate system-to-intermediate system (IS-IS). Students then analyse and compare these routing protocols, highlighting their valuable insights into the design decisions necessary for the successful implementation of these protocols in large-scale, service-oriented networking infrastructures for mobile, managed communication and triple play networks.

This subject is based on the Alcatel-Lucent course 3FL30633AAAAZZZZA which forms part of the service router certification program. Additional material has been added by UTS for further clarification and deepening of understanding.

Typical availability

May session, City campus

42903 Multi Protocol Label Switching

6cp; block

Requisite(s): (49202 Communication Protocols AND (in spk(s):

C10061 Bachelor of Engineering Diploma in Engineering Practice

OR in spk(s): C10066 Bachelor of Engineering Science OR in spk(s):

C10067 Bachelor of Engineering))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject teaches students about multiprotocol label switching (MPLS) concepts, terminology, signalling protocols, design considerations such as resiliency, and the implementation, monitoring and basic troubleshooting of an MPLS network. On successful completion, students are able to demonstrate a good understanding of MPLS and the establishment of label switched paths (LSPs) using either label distribution protocol (LDP) or resource reservation protocol (RSVP) and resource reservation protocol with traffic engineering (RSVP-TE).

This subject is based on the Alcatel-Lucent course 3FL30635AAAAZZZZA which forms part of the service router certification program. Additional material has been added by UTS for further clarification and deepening of understanding.

Typical availability

October session, City campus

42904 Cloud Computing and Software as a Service

6cp

Postgraduate

This subject introduces students to cloud computing fundamentals, case studies and their applications for the development of software as a service in the cloud. Following a brief introduction to cloud computing, the cloud architecture, infrastructure as a service, platform as a service, software as a service (SaaS), virtualisation and multi-tenancy features are explained. The theoretical discussion of these topics is supplemented with practical introductory exercises for SaaS development in the cloud.

42905 Marketing Technology

6cp; 3hpw; availability: offered only to students enrolled in Graduate Certificate in Information Technology Management (C11138), Graduate Certificate in Strategic IT Leadership (C11190), Graduate Diploma in Information Technology Management (C06060) and Master of Business in Information Technology Management (C04161) Elective Postgraduate

This subject gives non-marketers, especially managers with a technical background, a new way of thinking about customers and their organisation. In this respect, it treats marketing as the process of accessing new customers and understanding their needs, thereby creating value for the organisation. This subject covers the fundamentals of marketing with special emphasis upon the marketing of technology and the way technology is changing the practice of marketing. The subject also challenges students to critically analyse the field of marketing's contribution to environmental sustainability and social change. After introducing essential marketing concepts, the subject relates these to technology industries, focusing on the way innovation in technology is changing marketing practice. Throughout the subject, participants are challenged to consider the wider socioeconomic and environmental impacts and challenges facing contemporary marketing practices.

Typical availability

Spring semester, City campus

42990 Organisational Design for the Knowledge Era

6cp; 3hpw, on campus

Institutions are under increasing pressure to adapt to 21st century technological and socioeconomic forces. Successful leaders need appropriate frames of reference and new practices to manage these revolutionary forces. The execution of these practices, however, depends on the structural form of the organisation. This subject addresses the design aspects of the effective organisation of the 21st century by exploring the concept of 'enterprise logic' and how a particular form of logic has underpinned the dominance of certain institutional forms during different eras. Furthermore, the subject explores how the 21st century organisation's strategic imperatives necessitate the development of a new set of key capabilities which, in turn, depend upon new structural forms for their effective execution. Analysing the implications of structural form for governance, leadership and work practices in a knowledge economy where stakeholders (especially customers and staff) have new needs – needs that require an alternative enterprise logic to that which has dominated the functional-hierarchical organisations for more than 100 years – the subject offers a variety of alternative designs for the organisation of the future.

42991 Advanced Water and Wastewater Treatment

6cp; 3hpw, on campus

Requisite(s): 120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Environmental Engineering

Postgraduate

The use of conventional water and wastewater treatment processes becomes increasingly challenged with the identification of emerging pollutants, swift growth of population and industrial activities, and lessening availability of water resources. This subject focuses on training students to learn how to design an advanced water and wastewater treatment process using membrane technology based on fundamental principles to real applications and process design parameters. A practical computer-based design tool is demonstrated to aid in the design of a membrane-based treatment process. The subject brings both science (chemistry, physics and biology) and engineering together on a number of levels, such as in terms of learning from nature, applying engineering and design solutions.

Typical availability

Autumn semester, City campus

48001 Project BEngSc

6cp; weekly

Requisite(s): [96 credit points in C10066 Bachelor of Engineering Science OR 96 credit points in C10077 Bachelor of Engineering Science in Engineering Innovation] AND [48250c Engineering Economics and Finance OR [22107c Accounting for Business Decisions A AND 25311c Financial Management for New Enterprises]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This project subject provides students with the opportunity to consolidate their prior learning in an open-ended, multidisciplinary engineering project. Students work as part of a team that integrates most aspects of a full engineering design cycle, and contemporary engineering project management methodologies.

They are expected to develop client requirements through consultative processes, and to develop engineering specifications appropriate to the various stages in the project cycle. They assess alternative solutions and develop preferred options. Students gain experience in defining and articulating needs and evaluating engineering responses.

They produce a comprehensive report documenting the engineering process and project outcomes, and are also required to present aspects of the project through a variety of communication media, including online and face-to-face modes.

Typical availability

Autumn semester, City campus

48006 Capstone Project

6cp

Requisite(s): [48260 Engineering Project Management OR 16912 Site Management] AND [48142 Engineering Practice Review 2 OR 144 credit points in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 144 credit points in C10062 Bachelor of Engineering Bachelor of Arts in International Studies Diploma in Engineering Practice OR 144 credit points in C10063 Bachelor of Engineering Bachelor of Arts in International Studies OR 144 credit points in C10065 Bachelor of Engineering Bachelor of Business OR 144 credit points in C10067 Bachelor of Engineering OR 144 credit points in C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 144 credit points in C10073 Bachelor of Engineering Bachelor of Science OR 144 credit points in C10074 Bachelor of Engineering Bachelor of Science Diploma in Engineering Practice OR 144 credit points in C10075 Bachelor of Engineering Bachelor of Medical Science OR 144 credit points in C10076 Bachelor of Engineering Bachelor of Medical Science Diploma in Engineering Practice OR 144 credit points in C10078 Bachelor of Engineering Bachelor of Biotechnology OR 144 credit points in C10079 Bachelor of Engineering Bachelor of Biotechnology Diploma in Engineering Practice OR 144 credit points in C10080 Bachelor of Engineering in Civil Engineering OR 144 credit points in C10084 Bachelor of Engineering in Electrical Engineering OR 144 credit points in C10085 Bachelor of Engineering in Computer Systems Engineering OR 144 credit points in C10086 Bachelor of Engineering in Telecommunications Engineering OR 144 credit points in C10087 Bachelor of Engineering in Mechanical Engineering OR 144 credit points in C10088 Bachelor of Engineering in Manufacturing Engineering OR 144 credit points in C10091 Bachelor of Engineering in Manufacturing Systems Engineering] Undergraduate

Objectives of the Capstone Project are: to bring together and integrate knowledge and skills gained in the course as a whole, including engineering principles, planning and design, ethics, management, and communication, and to apply these to an initially unstructured problem formulated by each student in consultation with an adviser; to reinforce and develop competencies that have not been sufficiently emphasised in the student's choice of subjects or engineering practice to date; to define a substantial engineering study or design task, place it in context, and carry it to completion within a specified time and to a professional standard; to complete a comprehensive written and bound report that places the project in context, defines its objectives,

and describes the work done and the resulting conclusions or recommendations; to provide a bridge to the student's professional future, and the opportunity to demonstrate professional competencies and capabilities; and to provide scope to demonstrate initiative and creativity, and take pride in achievement.

Each student is required to undertake a substantial engineering project, normally during their final year of study, and to prepare a formal report describing the work performed and the resulting conclusions and recommendations. The work is planned and carried out under the supervision of a member of academic staff. Both the work and the report must meet professional engineering standards. The project may be in any area of engineering. Students may choose a topic relating to their experience in engineering practice, or an area of interest which they wish to study in detail. Typical projects might take any of the following forms: literature review - a study of the available literature and a state-of-the-art appraisal of an area of engineering; design - the complete design of a substantial engineering artefact or system; experimental investigation - a comprehensive laboratory investigation or testing program; research and development - original research of a fundamental or applied nature, or development of a new application of a particular technology; computer-based analysis - development or use of computer software to study the behaviour of an engineering solution; project management - planning and management of a substantial engineering project, normally in a workplace, business or community context; combining technical and management skills; impact analysis, planning, system design - study and analysis of an engineering solution in its economic, social and environmental context, integrating the engineering dimension with cross-disciplinary interfaces, and optimising overall system design, normally interactive with other professions.

Spring semester, City campus

48016 Capstone Project Part A

6cp

Requisite(s): [48260 Engineering Project Management OR 16912 Construction Management 1 Site Management] AND [48142c Engineering Practice Review 2 OR 144 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 144 credit points of completed study in C10062 Bachelor of Engineering Bachelor of Arts in International Studies Diploma in Engineering Practice OR 144 credit points of completed study in C10063 Bachelor of Engineering Bachelor of Arts in International Studies OR 144 credit points of completed study in C10065 Bachelor of Engineering Bachelor of Business OR 144 credit points of completed study in C10067 Bachelor of Engineering OR 144 credit points of completed study in C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 144 credit points of completed study in C10073 Bachelor of Engineering Bachelor of Science OR 144 credit points of completed study in C10074 Bachelor of Engineering Bachelor of Science Diploma in Engineering Practice OR 144 credit points of completed study in C10075 Bachelor of Engineering Bachelor of Medical Science OR 144 credit points of completed study in C10078 Bachelor of Engineering Bachelor of Biotechnology OR 144 credit points of completed study in C10079 Bachelor of Engineering Bachelor of Biotechnology Diploma in Engineering Practice OR 144 credit points of completed study in C10080 Bachelor of Engineering in Civil Engineering OR 144 credit points of completed study in C10084 Bachelor of Engineering in Electrical Engineering OR 144 credit points of completed study in C10085 Bachelor of Engineering in Computer Systems Engineering OR 144 credit points of completed study in C10086 Bachelor of Engineering in Telecommunications Engineering OR 144 credit points of completed study in C10087 Bachelor of Engineering in Mechanical Engineering OR 144 credit points of completed study in C10088 Bachelor of Engineering in Manufacturing Engineering OR 144 credit points of completed study in C10091 Bachelor of Engineering in Manufacturing Systems Engineering OR 144 credit points of completed study in C10076 Bachelor of Engineering Bachelor of Medical Science Diploma in Engineering Practice]

Undergraduate

Refer to the subject description for 48006 Capstone Project (6cp) and 48012 Capstone Project (12cp). This subject is intended for students who wish to undertake a 12cp Capstone Project over two semesters. Such students enrol in this subject (48016) in the first semester and 48026 Capstone Project - Part B in the second semester.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48023 Programming Fundamentals

6cp

Undergraduate

This subject provides basic skills in Java programming and software design, with no assumed knowledge of programming. It covers the topics of object-oriented (OO) programming concepts, data flow, control flow, arrays, and the basics of sorting and searching algorithms. The subject teaches and illustrates a design process using a set of design notations and design rules, and shows how to develop a correct, readable and reusable solution from a problem specification.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48024 Applications Programming

6cp

Requisite(s): 48023 Programming Fundamentals OR 31267

Programming Fundamentals OR 31465 Object-oriented

Programming

Recommended studies: basic skills in Java programming

Undergraduate

This subject teaches students how to design, develop and evaluate software systems to meet predefined quality characteristics of functionality (suitability) and usability (understandability, learnability, operability, compliance). Software solutions are implemented using Java. Concepts, theories and technologies underlying the methods and techniques are introduced and explained as required. Students apply all that they have learned to develop and implement the architecture of a business system.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48026 Capstone Project Part B

6cp

Requisite(s): 48016 Capstone Project Part A

Undergraduate

Refer to the subject description for 48006 Capstone Project. This subject is intended for students who wish to undertake a 12-credit-point Capstone Project over two semesters. Students enrol in 48016 Capstone Project Part A in the first semester and this subject in the second.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48027 Language and Contexts of Australian Engineering

6cp; availability: the Faculty may require students who are identified as needing additional English language preparation to undertake a preparatory English language course. Enrolment is by permission of the Subject Coordinator or nominee

This subject focuses on providing an overview and appreciation of the range of topics relevant to engineering study, and academic strategies for interpreting, planning, organising, researching and presenting written and oral assignments. The subject provides an introduction to the cultural and linguistic factors that affect the academic study of engineering in Australia. It aims to facilitate students' effective participation in university life and provide a foundation for further academic studies. It addresses the cultural and social knowledge and the literacy and oral skills required in critical reading, report writing, tutorial participation, listening, note taking and other aspects relevant to student participation in the study of engineering at UTS.

Typical availability

Spring semester, City campus

48033 Wireless Sensor Networks: Technology and Applications

6cp

Requisite(s): [31267 Programming Fundamentals OR 31465 Object-oriented Programming OR 31508 Programming Fundamentals

OR 31488 Programming Foundations OR 48023 Programming

Fundamentals]] OR [(31270 Networking Essentials OR 31467

Networking 1 OR 31516 Networking Fundamentals OR 31486 Data

Communications OR 48720 Network Fundamentals OR 48740

Communications Networks]

Wireless sensor networks are distributed systems, in which autonomous devices, sometimes called Motes, collect environmental data (such as location, speed, temperature, humidity and sound level) or, more recently, medical data (such as heart rate, blood oxygen level and pulse rate). The data is collected across the network, aggregated and fed into business applications. Sensor networks are an enabler

for very different applications, including environmental monitoring, agricultural monitoring, medical monitoring, habitat monitoring and military surveillance.

48071 Engineering Analytical Modelling

6cp

Undergraduate

This subject builds on students' knowledge of mathematics from the TAFE and polytechnic Diploma. It assumes a knowledge of introductory calculus. It provides students with an understanding and use of numerical methods in the engineering environment. It lays the foundations to enable students to confidently use numerical techniques in subsequent subjects and the work environment.

Topics include: applications of sequences and series; linear algebra; matrices, vectors and determinants; applications of matrices and vectors; vector algebra in 2-space and 3-space; introduction to vector calculus and applications; curve fitting using least squares methods for polynomials, log-linear and log-log relationships; engineering applications of differential equations (first and second order); numerical methods in linear algebra and in the solution of differential equations; graph theory and optimisation; use of the Simplex method; introduction to combinatorial optimisation; probability and statistics including probability theory, permutations and combinations, probability distributions, binomial, Poisson and normal distributions; sampling, confidence intervals and hypothesis testing.

48080 Introduction to Innovation

6cp

This subject aims to provide students with an overview of innovation in engineering and technology. Students develop an awareness of the processes of innovation and commercialisation and an understanding of technology life cycles and technological change. Technology management skills are developed through a focus on the scientific concepts, development processes as well as commercial applications for selected technologies. Case studies are used to investigate particular applications, their underlying scientific basis, and the relevant aspects of the commercialisation process from a science and engineering perspective. External speakers with direct experience in the innovation process contribute to this subject.

Typical availability

Spring semester, City campus

48081 Innovation Processes

6cp

Requisite(s): [48080 Introduction to Innovation OR (48240 Design and Innovation Fundamentals AND (120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering))]

Successful technological innovation - the development and application of new technologies and ideas - is essential for maintaining and improving quality of life. Technological innovation is the primary driver of economic growth in developed nations. In addition, new technologies have the potential to address many of the world's problems such as hunger, disease, and energy and environmental challenges. However, processes for innovation are complex and successful technological innovation requires a systems-level multidisciplinary approach. Innovation processes must consider needs, priorities for funding, standards and policies, risks, skills and capabilities, technology development trends and likely future scenarios to inform decisions related to engineering projects and scientific research. This subject develops students' ability to apply a multidisciplinary perspective to manage technological innovation. It is the final engineering innovation subject for the Innovation

Engineering major and is available as an elective to late-stage engineering students. The subject brings together the main innovation themes and introduces new technology management methods and tools. Students gain experience with engineering innovation processes through class activities, assignments and an individually designed innovation project or research task.

Typical availability

Spring semester, City campus

48100 Professional Practice (BE)

Ocp; availability: Bachelor of Engineering Bachelor of Arts in International Studies, Bachelor of Engineering Bachelor of Business, Bachelor of Engineering, Bachelor of Engineering Bachelor of Science, Bachelor of Engineering Bachelor of Medical Science, Bachelor of Engineering Bachelor of Biotechnology
Requisite(s): 126 credit points of completed study in C10067 Bachelor of Engineering OR 126 credit points of completed study in C10063 Bachelor of Engineering Bachelor of Arts in International Studies OR 126 credit points of completed study in C10065 Bachelor of Engineering Bachelor of Business OR 126 credit points of completed study in C10073 Bachelor of Engineering Bachelor of Science OR 126 credit points of completed study in C10075 Bachelor of Engineering Bachelor of Medical Science OR 126 credit points of completed study in C10078 Bachelor of Engineering Bachelor of Biotechnology

Engineers Australia requires that all students graduating from accredited professional engineering courses have a minimum of 12 weeks (or equivalent) of professional practice. This subject assesses students' claims to meeting this requirement. It involves the writing of a report demonstrating learning outcomes and reflecting on experience as well as a seminar presentation to share experiences with other students and learn from them. The assessment tasks and the subject are assessed as pass/fail.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48110 Engineering Experience 1

Ocp; availability: This subject is only available to students admitted in professional engineering courses which include the Diploma in Engineering Practice

Requisite(s): 48121 Engineering Practice Preview 1

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Engineering educators, as well as engineering employers, have long recognised the value of integrating practical experience with academic studies. Each student's experience is unique. Employer or host organisations are not expected to provide formal training although some may choose to do so. Students are instead required to become active learners and seek opportunities to fulfil the objectives of this experience module. It is expected that students gain this level of experience early in their academic program.

This is a 0-credit-point subject that supports students while they are working in industry or the community for the purpose of gaining experience in the practice of engineering. It provides students with the opportunity to discover engineering workplace culture and to develop their basic technical skills. One semester prior to undertaking the experience in this subject, students must enrol in 48121 Engineering Practice Preview 1. Students are assisted in this process through engineering core and fields-of-practice subjects and specifically through the Engineering Practice Review subject.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48120 Review of Engineering Practice 1

6cp

Engineering Practice
Undergraduate

This subject has been introduced for the purpose of assisting students who commenced before 1998 in the Bachelor of Engineering course and wish to transfer to the BE DipEngPrac. It is a substitute for the first internships and the associated preview and review subjects.

Students who have completed 44 weeks of industrial experience under the old course can apply for an exemption in this subject as a means of simplifying the transfer to the BE DipEngPrac. This subject is also relevant for new students starting the engineering degree at UTS with significant work experience. These students may apply for an exemption. By completing this subject, students accelerate their progress in the DipEngPrac.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48121 Engineering Practice Preview 1

3cp

Requisite(s): [48230c Engineering Communication AND (1 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 1 credit points of completed study in C10062 Bachelor of Engineering Bachelor of Arts in International Studies Diploma in Engineering Practice OR 1 credit points of completed study in C10063 Bachelor of Engineering Bachelor of Arts in International Studies OR 1 credit points of completed study in C10065 Bachelor of Engineering Bachelor of Business OR 1 credit points of completed study in C10067 Bachelor of Engineering OR 1 credit points of completed study in C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 1 credit points of completed study in C10073 Bachelor of Engineering Bachelor of Science OR 1 credit points of completed study in C10074 Bachelor of Engineering Bachelor of Science Diploma in Engineering Practice OR 1 credit points of completed study in C10075 Bachelor of Engineering Bachelor of Medical Science OR 1 credit points of completed study in C10076 Bachelor of Engineering Bachelor of Medical Science Diploma in Engineering Practice OR 1 credit points of completed study in C10078 Bachelor of Engineering Bachelor of Biotechnology OR 1 credit points of completed study in C10079 Bachelor of Engineering Bachelor of Biotechnology Diploma in Engineering Practice)]
Engineering Practice
Undergraduate

This subject helps initiate students to the engineering workplace by guiding them through the employment process; developing the communication and documentation skills appropriate to engineering practice; showing them how to learn through experience; exploring the nature and culture of the workplace; introducing ethical and social issues; and helping them to plan for their own personal and professional development. Students negotiate their learning options from a range of compulsory and optional topics including ethics and social responsibility; industrial relations; workplace, health and safety; and the culture of engineering. Some tasks include preparing a personal résumé, job application letters, employment interviewing, learning style assessment, ethics case study, and industrial relations case study.

Assessment is essentially formative to assist students in achieving an acceptable level. However, students are not able to undertake the engineering experience first internship until they have passed all the compulsory components of this subject.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48122 Engineering Practice Review 1

3cp

Requisite(s): 48110 Engineering Experience 1

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Engineering Practice
Undergraduate

Engineering Practice Review 1 guides students through a process of thoughtful reflection and review of their engineering practice. Workplace issues are examined and students are assisted in developing appropriate professional strategies. Students identify the technical and professional advancement that has occurred as a consequence of their experience, and integrate these new ideas with their existing knowledge frameworks. This learning is documented for peer and professional review.

Since each student's work experience is unique, all students benefit from sharing and discussing their experiences. However, this subject assists all students to receive a firm grounding in the fundamentals of engineering workplace practice, including the nature and culture of the engineering workplace, the employment process, ethics and social responsibility, communication and documentation, the application of engineering method, occupational health and safety, industrial relations, and personal and professional development.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48130 Engineering Experience 2

0cp; availability: This subject is only available to students admitted in professional engineering courses which include the Diploma in Engineering Practice

Requisite(s): 48141 Engineering Practice Preview 2 AND 129 credit points of completed study in Completion of 129 credit points

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This is a 0-credit-point subject that supports students while they are working in industry or the community for the purpose of gaining experience in the practice of engineering. It expects that students are advanced in their academic studies and working closely with engineering professionals in order to extend their understanding of the practice of professional engineering and to apply, test and further develop their technical skills. One semester prior to undertaking the experience, students must enrol in 48141 Engineering Practice Preview 2.

Each student's experience is unique. Employer or host organisations are not expected to provide formal training although some may choose to do so. Instead students are required to become active learners and seek opportunities to fulfil the objectives of this experience module. Students are assisted in this process through engineering core and fields of practice subjects and specifically through the associated Engineering Practice Review subject.

6cp

Engineering Practice

Undergraduate

This is a transition subject that has been introduced for the purpose of assisting students who commenced before 1998 in the BE course and who have transferred to the BE DipEngPrac. It is used with the permission of the program head of the Engineering Practice Program where the normal process of enrolling in the second internship and associated preview and review subjects would unreasonably delay graduation.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48141 Engineering Practice Preview 2

3cp

Requisite(s): 48122 Engineering Practice Review 1 OR 48120 Review of Engineering Practice 1

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject assists students to develop as professional engineers and supports preparation for the second stage of the Engineering Practice Program. Through participation in six weekly workshops students develop and demonstrate their understanding of employment-related processes; ethical decision making; social responsibility; opportunities for leadership and followership; and the complexities of workplace culture. The workshops offer a range of collaborative and experiential learning activities in which students actively engage with their peers, reflect on their learning and refine their communication skills

appropriate for professional engineering practice. Students review their past practice and consider their future development needs against the requirements of the Australian Engineering Competency Standards. Reflective practice is embedded throughout the subject to foster the development of students' strategies for continued professional development and lifelong learning.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48142 Engineering Practice Review 2

Requisite(s): 48130 Engineering Experience 2 AND 48141 Engineering Practice Preview 2

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

Engineering Practice Review 2 helps students to develop as professional engineers by reflecting on their workplace practice and documenting their learning for peer and professional review.

Since each student's work experience is unique, all students benefit from sharing and discussing their experiences. However, this subject assists all students to appreciate the dimensions of professional engineering workplace practice, including: engineering in a global environment, organisational behaviour, commercial practice, industrial relations and human resource issues, ethics and social responsibility, communication and documentation, the extension and application of engineering knowledge, occupational health and safety, industrial relations, and personal and professional development and recognition.

Spring semester, City campus

48210 Interrogating Technology: Sustainability, Environment and Social Change

6cp; block

Requisite(s): 48250 Engineering Economics and Finance OR 25115 Economics for Business

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Field of practice: ICT Engineering Program

Undergraduate

This subject focuses on developing engineering students' approaches to understanding the interactions between engineering and society from a philosophical, sociological and political perspective. The subject introduces students to theoretical frameworks and research tools for researching these interactions. Topical case studies of new technologies and engineering projects are examined to ground the learning in students engineering contexts.

48211 Review of External Course

2cp

The subject description is available from UTS: Engineering.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48221 Engineering Computations

6cp

Requisite(s): 33130 Mathematical Modelling 1

Recommended studies: 48321 Engineering Mechanics; 48331

Mechanics of Solids

Core

Undergraduate

This subject provides engineering students with necessary computing knowledge, numerical techniques and programming skills as well as an understanding of using knowledge, skills and tools for engineering problem solving. The subject introduces students to basic knowledge and skills on computational numerical methods, excel spreadsheets and Visual Basic programming with no assumed

knowledge of programming. It requires students to develop an understanding of the application of such knowledge and skills for civil and mechanical engineering problem solving. Examples are chosen with an engineering bias and serve to reinforce material covered in other subjects in civil and mechanical engineering.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48230 Engineering Communication

6cp; 3hpw (tutorial), 1hr lecture in weeks 1,2 and 14

Core

Undergraduate

Engineering Communication aims to develop communication skills in an engineering workplace setting. Some of these include understanding basic principles and theories of human communication; researching within the various discipline areas that inform the study of communication; write competently in a number of different genres; performing competently in a variety of oral communication situations; understanding basic principles and practices of graphic communication; expressing engineering concepts through graphical communication; 'conversing' mathematically; leading and participating in group processes; and appreciating the central role of communication in engineering practice.

48240 Design and Innovation Fundamentals

6cp

Requisite(s): 33130 Mathematical Modelling 1 AND 48230

Engineering Communication

Design is explored as a fundamental engineering activity, applying the scientific principles learned in field of practice subjects to the solution of contextual problems. Students examine models of the design process and critique designed products, processes and systems. They define and formulate problems using creative and analytical processes. The responsibilities of engineers for assessing and managing different types of risk are explored, and safe design, ethics and intellectual property are also discussed. Topics addressed include:

- design context and requirements: approaches to design, problem framing and creativity; requirements analysis involving legal, regulatory, technical and business requirements; designing for sustainability, safety, innovation and intellectual property outcomes; risk management and design communication, documentation and review
- design analysis: concepts of risks and uncertainties in engineering; use of engineering and system modelling approaches and methods and fundamental statistical techniques used in engineering modelling
- design synthesis: engineering decision-making in the presence of risks and uncertainties and optimisation
- new process and product development: role of engineers in evaluation and delivering new process and products.

48250 Engineering Economics and Finance

6cp

Requisite(s): (((48110 Engineering Experience 1 OR 48120 Review of Engineering Practice 1)) OR ((87 Credit Points in spk(s): C10063 Bachelor of Engineering Bachelor of Arts in International Studies OR 87 Credit Points in spk(s): C10073 Bachelor of Engineering Bachelor of Science OR 87 Credit Points in spk(s): C10075 Bachelor of Engineering Bachelor of Medical Science OR 87 Credit Points in spk(s): C10078 Bachelor of Engineering Bachelor of Biotechnology OR 72 Credit Points in spk(s): C10067 Bachelor of Engineering)) OR 72 Credit Points in spk(s): C10066 Bachelor of Engineering Science) AND (48230 Engineering Communication AND 48240 Design and Innovation Fundamentals)

Core

Undergraduate

The objectives of this subject are to provide engineering students with an understanding of and the capacity to deal with workplace concerns and the business side of engineering, and to provide them with an awareness of the language of accounting and engineering economy. The themes addressed in this subjects include:

- Economic context: the creation of wealth; a description of the sectors in the economy, the circulation of money and goods, the system of national accounts, current account deficit, the budget, economics of international trade.
- Engineering economy: discounted cash flow analysis, cash flow diagrams, interest, time value of money, net present value calculations, rates of return, project costing methods (cost estimating), etc.
- Cost-benefit analysis: cost-benefit analyses taking intangibles into account; types of intangibles and costing methods, and shadow pricing.
- Financial accounting: balance sheets and profit and loss statements, cash flow statements, and performance ratios.
- Management accounting: cost categories, break even analysis, contribution margin calculations, budgets.
- Engineering and sustainability: the relationships between engineering practice, economics and sustainability.

This subject adopts a holistic view of project management, considering issues throughout a project lifecycle. It considers the legal, contractual and managerial responsibilities of engineering managers and organisations, from the definition phase of a project until the project reaches its conclusion. The perspective of stakeholders, particularly the project manager, are considered. The emphasis is interdisciplinary, of relevance to all fields of engineering. Topics addressed include: modern project management practices; organisational strategy, structures and culture; project delivery; definition, timing, costing, planning; managing risk and scheduling resources; project leadership, teams and interorganisational relationships; project management contract law; conflict resolution, progress and performance and project measurement, evaluation, audits and closure.

Advances in technology and technology-based businesses are a fundamental and increasing component of the sustainable economic wellbeing of developed nations. Engineering and science are the disciplines that underwrite technology advances, most of which occur within small businesses and new ventures. This subject develops students' understanding of the various roles within an enterprise, and enhances their ability to function effectively in a business environment - with a particular focus on the challenges posed by new ventures and small businesses. A technology feasibility framework is

used to present topics such as marketing, sales, negotiation, service, financial manager, market research and organisational leadership. This is an intensive subject with strong practical orientation, using contemporary case studies to broaden students' perspectives and demonstrate the application of the concepts covered.

Topics addressed include: introduction to entrepreneurship and innovation; introduction to strategy; research and analysis tools - scanning the environment; evaluation of societal, technological, political and financial considerations; intellectual property protection; customers and marketing and opportunity analysis and business planning.

48271 Aerospace Operations: Overview of the Aviation Industry

6cp

This is the first subject in the Aerospace Operations major. It provides an overview of aerospace operations in the aviation industry. Aerospace operations are not seen as unique but as a particular example of a transport system which operates in a commercial, economic and regulatory environment.

Topics include: defining the aerospace industry; what is meant by aerospace operations; historical evolution of air transport with trends in transport aircraft design; fuels; supersonic transport; travel away from earth; energy and materials as key factors; aspects of management and business practice; and an introduction to strategic planning applied at the company and national levels in the context of technological change.

Typical availability

Autumn semester, Singapore

Spring semester, Singapore

Summer session, Singapore

Winter session, Singapore

48273 Managing Aerospace Processes

6cp

This subject provides students with a global view of aerospace operations and allows them to contribute to aerospace operations through integration of material covered throughout the course. The subject considers aerospace as an integral part of the total transport system, aviation law and regulations, and systems engineering theory as it applies to aerospace operations.

This subject also integrates material from other elements of the course to give an overview of aerospace operations. The view in this subject is that aerospace operations are not unique, but a particular example of a transport system which operates in a commercial, economic and regulatory environment.

48274 Aerospace Design Processes

6cp

This subject provides students with an understanding and appreciation of the design process in general, with particular reference to the aerospace industry. Engineering technologists are primarily concerned with the management of technology. Students must, however, be aware of the design process and the constraints and compromises involved, and this subject gives them that awareness. Topics include: the principles of design; design philosophies; design practice; design for strength; mechanical element design; introduction to FEA and CFD; concurrent engineering; design for maintainability; and aircraft design philosophies and implications, including basic aircraft strength, systems analysis and materials applications.

48310 Introduction to Civil and Environmental Engineering

6cp

Fields of practice: Civil Engineering program

Undergraduate

The objectives of this subject are to ensure a general understanding of the role of the civil engineer in the provision of basic infrastructure necessary to support the development and maintenance of urban and rural settlement; to provide a sound foundation for further education in the processes of design, construction, operation and maintenance of community infrastructure; to ensure an understanding of the need to develop the necessary individual and multidisciplinary skills in civil engineering project analysis and development; and to develop effective verbal and written communication skills.

Lecture content includes civil engineering and the environment, orthographic and isometric drawings and AutoCAD drawing, loads and deflection, uses and behaviour of construction material (concrete and steel), building dynamics, soils and civil engineering, soil retention structures, road and traffic engineering and water engineering.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48320 Surveying

6cp

Fields of practice: Civil Engineering program

Undergraduate

The objectives of this subject are to enable students to: become competent in the theory and practice of basic surveying skills; be able to use basic surveying equipment such as levels and theodolites and perform the calculations and reductions of observations associated with such equipment; be aware of the likely errors that may occur during observations and of methods to eliminate or minimise such errors; be competent in making distance measurements accurately over short distances using tapes and wires and be aware of the advantages of modern developments in this field such as Electronic Distance-measuring Equipment; be able to perform a simple traverse and associated calculations to find the misclose and proportional accuracy, and the bearing and distance of one missing line; understand and be able to perform relevant calculations for the engineering applications of surveying (horizontal curves, vertical curves, and areas and volumes); and be aware of field techniques used to enable preparation of a detail and contour plan. The stadia method is discussed in class and is used as a data-gathering tool in a practical exercise. The applications of modern computer programs to reduce data for and the plotting of detail and contour plans are introduced. Services of professional surveyors are explained, as are engineering situations where surveyors must be engaged.

Topics include: use of equipment such as levels, theodolites and tapes and wires; calculations related to this equipment, as well as traversing, horizontal curve setting out, design of vertical curves, areas and volumes and stadia and contouring; modern developments in surveying; and the role of the professional surveyor.

48321 Engineering Mechanics

6cp

Requisite(s): 33130c Mathematical Modelling 1 AND 68037c

Physical Modelling

Fields of practice: Civil Engineering program

Undergraduate

The subject aims to assist students to acquire a fundamental understanding of static equilibrium concepts commonly used in analysis and design of engineered structures. It also aims to develop their skills to analyse simple structures such as statically determinate beams and trusses subjected to various loading and support conditions. On completion of this subject, students should be able to apply static equilibrium conditions as tools to analyse simple structures, and have developed an appreciation of design in civil engineering. The principles developed in this subject form the basis of structural analysis and design. It introduces students to the fundamental aspects that are a basis for subsequent fields of dynamics in civil engineering such as fluid mechanics, hydraulics and road design.

48330 Soil Behaviour

6cp

Requisite(s): 48331c Mechanics of Solids

Fields of practice: Civil Engineering program

Undergraduate

The objective of this subject is to give a broad-based introduction to the geosciences and a more rigorous introduction to soil as an engineering material. The subject concludes with a detailed study of the problems of soil settlement and soil shear strength. At the completion of the subject students should: be familiar with the natural processes occurring on the surface of the earth; be able to communicate with geologists, earth scientists and others involved in studying the ground; understand the fundamentals of the behaviour of soil as an engineering material; be aware of those aspects of soil behaviour which have a significant environmental impact; be able to solve a range of soil-related problems, especially those involving water flow and soil settlement; and have a solid basis for further formal study and self-study in the geotechnical area. Topics include introduction to soil engineering – typical problems, the engineer's role; geological fundamentals – classification, composition and structure of rock, engineering properties; geomorphology – soil formation, landforms; nature of soil – particulate nature, classification, clay mineralogy; introduction to soil mechanics – overview, state of vertical stress, effective stress; water in soil – groundwater, seepage and permeability; soil environmental impacts – problems, environmental behavioural aspects and properties; settlement of soils – settlement theory, consolidation testing, 1D settlement estimation, elastic deformations, rate of settlement; and soil shear strength – Mohr Coulomb failure law, strength testing, drained and undrained strength.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48331 Mechanics of Solids

6cp; 6hpw, on campus

Requisite(s): 48321 Engineering Mechanics OR 48620 Fundamentals of Mechanical Engineering

Recommended studies: It is recommended that students revise the subjects Engineering Mechanics, and Fundamentals of Mechanical Engineering before the beginning of the term.

Fields of practice: Civil Engineering program

Undergraduate

The objectives of this subject are to enable students to: acquire fundamental understanding of the behaviour of structural components commonly used in engineered structures and machines; develop skills to help them model and analyse the behaviour of

structural and machine components subjected to various loading and support conditions based on principles of equilibrium and material constitutional relationships.

Content includes: pure bending of beams – flexural stress and strain, calculation of beam loads; shear flow and shear stresses in beams – distribution of shear stresses in beam sections, forces and stresses in shear connectors; composite beams – composite short columns; slope and deflection of simple beams; column buckling – Euler's equation, end conditions and effective length, combined axial and bending stresses for short columns; torsion of circular shafts, thin-walled closed sections and solid rectangular sections; transformation of plane stresses – Mohr's circle of plane stresses, principal stresses and planes; inelastic bending – stress resultants, yield moment and ultimate moment capacity of elastoplastic sections, elastic and plastic section modulus, plastic hinges; product of inertia, principal axes and principal moments of inertia; unsymmetric bending; combined stresses due to axial force, shear force, bending moments and twisting moment; shear centre; transformation of plane strains - measurement of strains, strain rosette, relationship between elastic modulus, shear modulus and Poisson's ratio.

Typical availability

Spring semester, City campus

48340 Construction

6cp; 4hpw, on campus, weekly

Requisite(s): 48310 Introduction to Civil and Environmental Engineering

Fields of practice: Civil Engineering program
Undergraduate

The objective of this subject is to give a broad-based introduction to the construction industry and to emphasise the technical and managerial skills needed by engineering professionals working in this area. Much of the value and strength of the subject relates to the development of an understanding that a leadership role in engineering construction projects requires a holistic approach that blends technical skill, logical reasoning, judgment and managing activities and people. The construction industry requires all of these aspects to be constantly applied to a myriad of issues both large and small.

48342 Structural Behaviour and Design

6cp

Requisite(s): 48331 Mechanics of Solids AND 48352c Construction Materials

All engineers who wish to practise as civil engineers in Australia must have knowledge of structural behaviour and design, including design to the relevant Australian Standards. However, practitioners in some of the fields in the broad range of civil engineering do not undertake detailed structural design or are involved in the construction of structures. These civil engineers do not require the depth involved in the detail of structural design (assessment of loads, structural analysis, structural behaviour of different structural materials and the design requirements for different structural materials, in accordance with the relevant Australian Standards). This subject introduces students in certain streams of the civil engineering offerings – civil and environmental, civil/water – to the fundamentals of structural behaviour and design of reinforced concrete, structural steel and timber elements. This builds on the knowledge and competence already achieved on the structural analysis of statically determinate structures, internal actions induced by applied loads (axial force, shear force and bending moment) and the response of elements to these internal actions, such as strain and stress distributions across cross-sections. The detail and depth of this subject does not allow the students to attain a sufficient competence to undertake the structural analysis and basic design of anything more complex than simple structural components. The students should achieve sufficient understanding of structural behaviour and design to be able to recognise the basic structural implications that are reflected in the design and construction of structures that they may encounter in their careers as civil engineers in their particular field away from structural engineering. The topics to be covered include Limit State Design

philosophy, loads (G, Q, W) and load tributary areas, material design properties of reinforced concrete, structural steel and timber, method of moment distribution for structural analysis for continuous beams, behaviour and design of flexural members for strength (moment and shear) and serviceability (deflection) in reinforced concrete, steel and timber, of tensile members in steel and timber and of columns and beam-columns in reinforced concrete, steel and timber.

48349 Structural Analysis

6cp; 6hpw, on campus, weekly

Requisite(s): 48331 Mechanics of Solids AND 33230 Mathematical Modelling 2

Fields of practice: Civil Engineering program
Undergraduate

This subject covers methods and concepts which are fundamental to the analysis of linear elastic structural frameworks. Students learn how load bearing structures respond to the actions of directly applied loads as well as environmental effects such as temperature and foundation settlements. Topics covered include: computing deformations in plane frames using the principle of virtual work; the analysis of statically indeterminate structures using both, the force method as well as the method of moment distribution; and how to establish influence lines and how to use them in finding maximum load effects. A brief introduction to non-linear analysis of structures is also given.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Autumn semester, Hong Kong

Spring semester, Hong Kong

48350 Environmental and Sanitation Engineering

6cp; 3hpw, on campus

Requisite(s): 60101 Chemistry and Materials Science OR 65111 Chemistry 1

Fields of practice: Civil Engineering program
Undergraduate

This subject introduces civil engineering students to basic environmental concepts and the environmental consequences of typical engineering activities. It applies material learnt in 48210 Interrogating Technology: Sustainability, Environment and Social Change and 60101 Chemistry and Materials Science to real-life situations encountered during planning, designing and implementing civil engineering projects. The subject helps students: develop an awareness of environmental issues; understand the implication of certain processes such as construction within a natural system and to become familiar with both preventive and management strategies to minimise air, water, soil and noise pollution; become familiar with the main aspects of environmental legislation; and understand concepts and design of water pollution control mechanisms.

The main topics are environmental issues and their importance; pollution due to man-made activities, their types and their effect on natural ecosystems; an introduction to local and global environmental problems; environmental legislation and the importance of conducting environmental impact assessment; problems of waste generation and principles of landfill management; generation and management of toxic wastes; contaminated sites and their remediation; concepts of water pollution control; design of water and wastewater treatment works; and project case studies emphasising environmental issues.

48352 Construction Materials

6cp

Requisite(s): ([60101 Chemistry and Materials Science OR 65111 Chemistry 1] AND 33230 Mathematical Modelling 2)

Fields of practice: Civil Engineering program
Undergraduate

Civil engineers design, construct, maintain, inspect and manage private and public work projects. The common materials used in civil engineering applications and construction are timber, concrete, bitumen, masonry, and reinforcing and structural steel. It is essential

for civil engineers to have a basic understanding of these construction materials, in relation to their production, properties, testing and application. The main objectives of this subject are to help students acquire fundamental knowledge of the production, physical and engineering properties of construction materials; understand the effects of environments on the properties and performance of these materials; familiarise themselves with the relevant Australian and other specifications and standards, in relation to the requirements and testing methods and interpretation of test results; improve analytical and communication skills by presenting test reports; select material in relation to specified requirements; and develop an awareness of the use of waste materials in construction. Topics include:

- Requirements, selection and standards relating to use of construction materials
- Steel and aluminium: production, forms, grades, usage, mechanical properties and testing, failure theories and fatigue of metals
- Binders: production, types, composition, properties and testing
- Aggregate: classification, properties and testing
- Admixtures: types and effects on concrete properties
- Concrete: types, specification, mix design, testing and properties
- Degradation of construction materials and methods of protection
- Wood and composites: production, properties and forms
- Road making materials: production, properties and testing
- Masonry: clay, concrete, calcium silicate and stone
- Glass and safety glass and adhesives and sealants.

48353 Concrete Design

6cp; 3 x 2hrs

Requisite(s): 48349 Structural Analysis AND 48352c Construction Materials

UTS: Engineering: Civil and Environmental Engineering
Undergraduate

All engineers who wish to practise as civil engineers in Australia must have knowledge of structural design, including the behaviour and design of reinforced concrete (RC) and, to a lesser extent, of prestressed concrete (PSC) elements as parts of overall structures. This subject builds on the knowledge of statics, solid mechanics and structural analysis of indeterminate structures that the students have learnt in the previous structural strand subjects.

Students learn about the behaviour and design of RC beams, slabs and columns and PSC beams, for both serviceability and strength. Initially, the students are introduced to the Limit State Design philosophy of Australian Standards for structural design and to the material properties of concrete, reinforcement and prestressing steel used for design.

RC topics include uncracked section analysis of beams, cracked section analysis of beams (linear-elastic, Desayi-Krishnan, ultimate) for strength and design for strength to AS3600, serviceability design of beams, ductility of singly and doubly reinforced sections, design for shear, T-beams, approximate analysis and design of one-way, two-way slabs and flat slabs/plates, columns (interaction diagrams and slenderness effects), pad footings, cantilever retaining walls and reinforcement detailing.

PSC beam topics include history, uncracked section analysis, equivalent loads, load-balancing, cracked section analysis (linear-elastic and ultimate), design for bending, shear, transfer, anchorage.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48359 Structural Design 1

6cp

Requisite(s): 48349 Structural Analysis AND 48352c Construction Materials

Fields of practice: Civil Engineering program
Undergraduate

All engineers who wish to practice as civil engineers in Australia must have a competent knowledge of structural design to the relevant current Australian Standards, and a competent knowledge of structural analysis to allow the design to be done. Structural analysis is an integral part of the structural design process because it allows engineers to model the behaviour of structures under load and to determine the design actions induced by the applied loads. The prior structural subjects that students have completed have introduced them to statics, solid mechanics, simple aspects of the (structural) design process, the structural behaviours of materials (in the prerequisite subject) and methods of structural analysis. Structural design then builds on prior fundamental knowledge of material properties and structural analysis and allows the engineer to design a safe and economical structure complying with the requirements of the relevant Australian Standards, based on his or her knowledge of and experience in structural behaviour.

Students learn about structural behaviour and become competent in the structural design of reinforced concrete elements (beams, slabs and columns) and of timber elements (beams, columns, tension members, beam-columns and bolted and nailed connections) in accordance with the relevant Australian Standards. The competence gained in structural analysis assists students in gaining experience and competence in the structural design of these structural components.

Topics include: reinforced concrete - introduction to reinforced concrete behaviour, uncracked and cracked section analyses, linear elastic and ultimate behaviour in beams, serviceability of beams and ultimate strength design for moment and shear in beams, one-way, two-way and flat slab analysis and design, punching shear, column design (stocky and slender) and reinforcement detailing; timber - introduction to timber behaviour, material properties and supply, design of tension and compression members, design for moment, shear, bearing and deflection in beams, design for combined actions, design of nailed and bolted Type 1 connections and durability-based design.

48360 Geotechnical Engineering

6cp

Requisite(s): 48330 Soil Behaviour

Fields of practice: Civil Engineering program
Undergraduate

The aim of this subject is to develop students' technical competence in the analysis of soil masses and of structures associated with the soil. The analysis of footings, retaining walls and soil slopes are examples. By completing this subject, students should be able to understand the concept of failure in soil and apply it to the analysis of soil masses; critically appraise a problem in order to decide which particular analysis should be used; identify the limitations of their analyses and carry out appropriate solution validation; be responsible for the analysis component of a design team; study the relevant literature and learn to apply new or more complex methods of analysis; and carry out fieldwork in association with subsurface investigations. Topics include introduction to geotechnical design – criteria, codes, engineering judgment; site investigation – planning, fieldwork, techniques; shallow foundations – types, bearing capacity theories, retaining structures; earth pressure theories – Rankine and Coulomb, analysis of gravity walls, cantilever walls, braced excavations; deep foundations – types, load-carrying capacity, settlement, group behaviour, lateral loading; slope stability – failure mechanisms, infinite slopes, rotational failure, remedial measures; and soil improvement – compaction, soil stabilisation, dewatering, preloading.

Winter session, Hong Kong

48362 Hydraulics and Hydrology

6cp; 6hpw, on campus, weekly
Requisite(s): 48641 Fluid Mechanics
Fields of practice: Civil Engineering program
Undergraduate

The objective of this subject is to give students a knowledge of open channel hydraulics and hydrology, leading to understanding of the scientific foundations and basic principles of these fields, and the ability to apply hydraulic and hydrological methods to engineering applications in an integrated way. Knowledge of fluid mechanics is consolidated and problem-solving skills in dealing with water engineering tasks are acquired.

Topics include: open channel hydraulics - types of flow (e.g. steady, uniform), friction equations, rapidly-varied flow, continuity, energy and momentum conservation, gradually varied flow, water surface profiles, software packages, hydraulic structures (channel appurtenances, culverts, bridge waterways); hydrology - the hydrological cycle, water balances, meteorology and climatology, data collection, statistics, hydrological models, design rainfalls, rainfall-runoff processes, flood estimation models and procedures, software packages, yield analysis, groundwater, environmental hydrology; and integration of hydraulics and hydrology case studies.

48364 Materials Testing

6cp
Requisite(s): 48331 Mechanics of Solids

Construction materials used by engineers, independent of their disciplines, vary significantly in their compositions, properties and service performance. Failure of these materials to function effectively in service conditions may lead to extensive damage to components, equipment and structures. In many cases, with the failure of the materials, public safety is also affected. It is important for the engineers to have sound knowledge on the construction materials used in relation to their specification, testing methods, analysis and interpretation of test results. Material testing experience is needed to familiarise test methods and the use of modern equipment. In addition, it provides a practical understanding of design concepts such as stress, strain, strength, stiffness, failure, durability, etc. This subject provides an in-depth knowledge and understanding of test methods for civil engineering materials and recognises the applications and limitation of the testing techniques. This subject is designed to provide opportunity to understand a variety of testing techniques used to evaluate the properties of materials. Techniques include destructive testing, non-destructive testing, durability testing, thermal analysis and scanning electron microscopy, etc. Principles of the techniques, data analysis and applications of the techniques to engineering problems such as failure analysis and phase transformations are studied. After successfully completing this subject, students are able to: (i) discuss the principles of a variety of standard and non-standard testing techniques used to assess materials; (ii) explain the applications and limitations of these techniques; (iii) demonstrate a basic level of proficiency in the use of selected testing methods; (iv) select appropriate techniques to assess engineering materials or investigate problems; and (v) present the test results confidently and in a professional manner.

48365 Materials Performance

6cp
Requisite(s): 48366 Steel and Timber Design AND 48364 Materials Testing AND 48353c Concrete Design

This subject develops an understanding of the performance of civil engineering materials in relation to their material properties and manufacture processes. It is essential for civil engineers to appreciate the variations and limitations of the performance of civil engineering materials. These materials are dictated by the structure-property relationships based on microstructural and molecular phase morphologies which in turn affect the macroscopic engineering properties, and especially their application to design and construction applications.

Topics covered include: engineering materials such as metals (including steel, aluminium, titanium), ceramic and glasses, polymers, composites and nanomaterials with a main focus on metals. This subject describes the material science principles required for a fundamental understanding of engineering materials and related processes, including in-service durability. After the basic physical and mechanical properties of these materials on both the microstructural and the structural scale are presented (encompassing composition of the materials, phase transformations and mechanical properties), the emphasis is on the performance of the materials in civil engineering design and construction applications. The concepts of material failure, including fracture, fatigue and creep, are introduced. The corrosion and degradation of materials exposed to environmental conditions are presented. There is a strong emphasis on relating the materials science principles to applications of interest in civil and environmental engineering, thereby illustrating the importance of fundamental theoretical knowledge in everyday processes and applications. The manufacturing and engineering application of selected construction materials, including steel, aluminium, concrete and bricks, is introduced and integrated with the fundamental concepts described above.

48366 Steel and Timber Design

6cp; 6hpw, on campus
Requisite(s): 48349 Structural Analysis AND 48352c Construction Materials
Civil and Environmental Engineering

Civil engineers who wish to practise in Australia must have knowledge of structural design. This subject builds on the knowledge of statics, solid mechanics and structural analysis of indeterminate structures that the students have learnt in the previous structural strand subjects. Initially, students review the Limit State Design (LSD) philosophy of Australian Standards for structural design and the LSD load combinations of AS1170.0 Structural Design Actions, Part 0: General Principles. They are introduced to the material properties of structural steel and of timber and engineered wood products and their supply.

Steel design topics are tension member design, compression member design including in-plane effective lengths of rigid-jointed frames, beam and three-plate girder design for serviceability (deflection) and strength (bending, shear, web-crippling and web-buckling), beam-columns (combined actions incorporating second-order effects) and bolted and fillet-welded connection design, all in accordance with the requirements of AS4100 Steel Structures.

Timber design topics are tension member design, compression member design, beam design for serviceability (deflection) and strength (bending, shear, bearing), combined actions and nailed and bolted Type 1 joints, all in accordance with the requirements of AS1720.1 Timber Structures, Part 1: Design Methods.

48369 Structural Design 2

6cp
Requisite(s): 48359c Structural Design 1
Fields of practice: Civil Engineering program
Undergraduate

All engineers who wish to practise as civil engineers in Australia must have a competent knowledge of structural design to the relevant current Australian Standards, and a competent knowledge of structural analysis to allow the design to be done. Structural analysis is an integral part of the structural design process because it allows engineers to model the behaviour of structures under load and to determine the design actions induced by the applied loads.

The prior structural subjects that students have completed have introduced them to statics, solid mechanics, methods of structural analysis, the structural behaviour of materials and structural design of reinforced concrete and timber elements. Structural design then builds on the prior fundamental knowledge of material properties and structural analysis and allows the engineer to design a safe and economical structure complying with the requirements of the relevant Australian Standards, based on his or her knowledge of and experience in structural behaviour.

Students learn about the structural behaviour and become competent in the structural design of steel elements (tension and compression members, beams, beam-columns and bolted and welded in-plane connections), reinforced concrete pad footings and cantilevered retaining walls and of prestressed concrete flexural elements in accordance with the relevant Australian Standards, AS4100-1998, AS3600-2001 and AS1170-2002. The competence gained in structural analysis assists students in gaining experience and competence in the structural design of these structural components.

Topics include: structural steel - material properties, tension and compression members, in-plane effective lengths, beam design (section moment capacity, lateral-torsional buckling, shear, web crippling, web buckling and three-plate girders, beam-columns, bolted and welded in-plane connections, fracture and fatigue behaviour and design; reinforced concrete - isolated pad footings and cantilevered retaining walls; prestressed concrete - introduction to prestressed concrete behaviour, load-balancing and equivalent load techniques, uncracked and cracked section analyses, linear elastic and ultimate behaviour in beams, serviceability of beams and ultimate strength design for moment and shear in beams, strength at transfer and end block reinforcement.

48370 Road and Transport Engineering

6cp

Requisite(s): 48330 Soil Behaviour

Fields of practice: Civil Engineering program

Undergraduate

The objectives of this subject are to enable students to understand the relationship between transport and land use; the basic concepts of transportation relating to modelling and design; and the relationship between urban form, energy use and sustainability. Students also learn to design feasible transport schemes using a variety of modes and to evaluate transportation projects in terms of their capacity, cost, environmental impact and equity. Topics include land-use transportation interaction; the transportation planning system; environmental impact of transport and issues in ecologically sustainable transport; design principles used in public transport; transport economics, privately funded infrastructure and freight issues; the geometric design, pavement design and the capacity of roads; and the needs of pedestrians and cyclists and the overall road safety issue.

The objective of this subject is for students to develop competencies in advanced computational methods used in civil engineering, particularly in the preparation and analysis of mathematical models that are frequently applied in structural engineering. The subject also develops modelling and programming skills using a wide range of software tools.

48372 Water Quantity and Quality Processes

6cp

Requisite(s): 48362 Hydraulics and Hydrology

The subject aims to teach students the investigation and analysis skills expected of a practising water or environmental engineer. There are three basic strands which are estuarine environments, surface water environments, and groundwater environments. The estuarine environment strand focuses on the physical and biochemical processes which occur in estuaries and wetlands and how to measure, model and predict those processes. The surface water strand focuses on contamination of surface waters and how to measure, model and predict any contamination. The groundwater environments strand focuses on quantification of the groundwater resource, its sustainability and contamination of that resource.

This subject introduces senior civil engineering students to the preparation and analysis of computer models of load bearing structures. Students learn how to establish loads on buildings in compliance with Australian standards and how to apply them correctly to the computer models they prepare. Building on subjects completed earlier for the design of structures, students extend their design skills by being introduced, in hands-on lab sessions, to commercial software programs for structural analysis and drafting.

Typical availability

Spring semester, City campus

48410 Introduction to ICT Engineering

6cp

This subject introduces students to the foundations of information and communication technology (ICT) engineering. This includes the nature of the ICT industry and basic concepts and terminology used in ICT. Particular emphasis is given to the way in which the ICT industry has developed and is continuing to evolve, and the way in which this industry can benefit from (and in turn help shape) the practice of engineering.

Case studies are undertaken as problem-based assessment items which offer students opportunities to delve into the specialties of telecommunications engineering, computer systems engineering and software engineering.

48430 Embedded C

6cp

Requisite(s): 48441c Introductory Digital Systems

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Fields of practice: Computer Systems Engineering program
Undergraduate

This subject introduces students to procedural programming in the C programming language. Students analyse and develop programs that could run in an embedded environment (which may not necessarily support an operating system). In addition, structured analysis and design techniques are introduced and developed.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48433 Software Architecture

6cp

Requisite(s): 48440 Software Engineering Practice OR 31469 Object-oriented Design OR 31279 Software Development and Processes OR 31244 Applications Programming OR 48024 Applications Programming

Undergraduate

This subject teaches students how to design, develop and evaluate software architecture meeting predefined quality characteristics of functionality (suitability, security), usability (operability), efficiency (time behaviour, resource utilisation) and maintainability (changeability, testability). Concepts, theories and technologies underlying the methods and techniques are introduced and explained as required. Students apply all that they have learned to develop an architecture of a business system.

Typical availability

Spring semester, City campus

48434 Embedded Software

6cp

Requisite(s): 48430 Embedded C

Recommended studies: knowledge of the C language and digital systems is essential for this subject

Field of practice: Electrical Engineering major

Undergraduate

This subject presents the theoretical and practical basis for the structure, operation and design of embedded software with an in-depth treatment of modern software design methodology. Software development involves some assembly language. The subject covers compiler and debugger tools; serial I/O and protocols; non-volatile memory; arithmetic operations; timing and interrupts; digital and analog interfacing; concurrent software; program optimisation; multi-module and multi-language programs; numerical techniques specific for certain tasks (such as the FFT and fuzzy logic control); real-time operating systems and Internet connectivity.

The technical content is contextualised in a project in which students analyse the requirements of an embedded system and design the software to meet those requirements. Skills in debugging software are also developed through the practice-based nature of the subject.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48436 Digital Forensics

6cp

Requisite(s): 31252 Network Security OR 48730 Network Security

Recommended studies: an understanding of the principles and objectives of network security and of the fundamentals of network security technologies; CCNA-level networking concepts and skills, in particular packet analysis skills

This is a practice-based subject, using material based on the textbooks. Learning is laboratory-based. The emphasis is on digital forensics applications, in particular:

- forensic analysis of a digital storage device where evidence is recovered to support or oppose a hypothesis before a criminal court
- eDiscovery (a form of discovery related to civil litigation)
- intrusion investigation into the nature and extent of an unauthorised network intrusion.

48440 Software Engineering Practice

6cp

Requisite(s): 48024 Applications Programming OR 31244

Applications Programming

Undergraduate

This subject introduces students to the fundamentals of software engineering. An overview of the software development life cycle and the processes, methodologies and tools that support it is presented. Current trends and challenges in the practice of software engineering are explored. Students apply the principles and methods of software engineering to project work in small teams.

Typical availability

Spring semester, City campus

48441 Introductory Digital Systems

6cp

Requisite(s): 48510 Introduction to Electrical Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Fields of practice: Computer Systems Engineering program

Undergraduate

The objectives of this subject are to enable students to master the fundamentals of digital and programmable electronic circuits and their engineering applications; master the hardware architecture of a typical small computer system; and understand the principles of low-level programming and gain an ability to write simple assembly

code. Students are introduced to the basics of concurrent and real-time application programming. Topics include digital sequential circuits; state diagram and its application in the design of digital circuits; basic hardware architectures of the digital computer in terms of its building blocks; how hardware integrates with software at the machine level; low-level language programming; internal architecture and design of a typical register-based central processing unit and a main memory subsystem, and their interdependence; concepts of computer system buses, as well as different types of input and output devices; interrupts; input and output; micro-controller theory; and hardware interfacing design techniques.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48450 Real-time Operating Systems

6cp

Requisite(s): 48434 Embedded Software

Fields of practice: Computer Systems Engineering program
Undergraduate

This subject addresses the purposes, design alternatives and uses of computer operating systems. After several weeks studying the areas of responsibility that an operating system possesses in the context of a conventional computing environment, a treatment of operating systems in support of meeting real-time computing requirements is completed.

Topics include: process management, scheduling and inter-process communication, memory management and I/O device management. Comparisons of designs including monolithic and microkernel approaches. Embedded systems are explored as case studies for investigating operating systems modifications. The Linux kernel is studied as an example of a UNIX environment and programming exercises are completed in POSIX compliant C. Real-time systems are studied with treatments of rate monotonic, deadline monotonic and dynamic scheduling strategies.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48451 Advanced Digital Systems

6cp

Requisite(s): 48441 Introductory Digital Systems

Fields of practice: Computer Systems Engineering program
Undergraduate

The subject has two major components: (i) analysis/design, and (ii) implementation, of an advanced computing node. The components are integrated and are reflected in the percentage of the subject mark. The subject provides an in-depth understanding of the analysis/design and implementation of advanced digital hardware at medium scale computer system building block level. It builds on the basics of 48441 Introductory Digital Systems introduced in the earlier fields of practice subject. Topics include: digital design process, functional design, implementation technologies, advanced digital architectures, and memory and I/O systems. It emphasises computer-aided design, including the use of VHDL specification, simulation and programmable VLSI implementation technologies.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48471 ICT Analysis

6cp

Requisite(s): (48240 Design and Innovation Fundamentals AND 48260c Engineering Project Management AND (120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10062 Bachelor of Engineering Bachelor of Arts in International Studies Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10063 Bachelor of Engineering Bachelor of Arts in International Studies OR 120 Credit Points in spk(s): C10065 Bachelor of Engineering Bachelor of Business OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering OR 120 Credit Points in spk(s): C10073 Bachelor of Engineering Bachelor of Science OR 120 Credit Points in spk(s): C10074 Bachelor of Engineering Bachelor of Science Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10075 Bachelor of Engineering Bachelor of Medical Science OR 120 Credit Points in spk(s): C10076 Bachelor of Engineering Bachelor of Medical Science Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10078 Bachelor of Engineering Bachelor of Biotechnology OR 120 Credit Points in spk(s): C10079 Bachelor of Engineering Bachelor of Biotechnology Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice))

This problem-based subject focuses on the specification and analysis of assigned, complex information and communication technologies (ICT) projects. Formal, plenary sessions of lecture/tutorials are used to teach project theory whereas problem-based learning is used for the specification and analysis of the assigned projects. Problem-based learning requires students to participate and take the initiative in researching topics not necessarily dealt with by formal sessions but required by the project.

In this subject, it is the students' responsibility to work out what they need to learn. Students learn to deal with the analysis phase of the ICT project lifecycle - planning; specification and analysis; architecture and high-level design. In the subsequent design subject (48481), students learn to deal with the development phase of the ICT project lifecycle - low-level design; implementing/building the product; plus associated testing. Skills gained include: teamwork; the use of technical planning strategies; experience in the use of standards and industry best practices; formal project specification; system performance analysis; reliability analysis; project risk abatement strategies; quality assurance factors including the quality of product and quality of process; system architecture development; system build and integration strategies; formal project development processes; assessment of managerial, financial, ethical and social issues; verification and validation; and user interfacing issues.

Students are organised into large groups of typically 15 to 20 students per group. Each group is then usually subdivided into teams of about three or four. A team focuses on one component of the group assignments. Group subdivision, structure and overall project management is decided by the group members. There are usually three group assignments: Assignment 1 is often the draft of the analysis deliverable, which allows students to prepare and plan for the actual deliverable; Assignment 2 is often the actual deliverable. In Assignment 3, students are usually required to review and critique another group's actual deliverable, which may be used in the subsequent design subject, for development and implementation purposes.

48481 ICT Design

6cp

Requisite(s): 48471 ICT Analysis

Recommended studies: proficiency with programming in at least one OO language (e.g. C#, Java, C++) is required

This subject organises students into large groups (typically 15 to 20 students a group), which undertake to develop information and communication technologies (ICT) projects previously specified and analysed in the subject 48471 ICT Analysis. The emphasis of this subject is one of commitment and self-management. Students choose the subdivision, structure and overall project management of their group; commit to a project plan that is self-actuated; track and

control artefacts of their project development using a configuration management system; and objectively assess project outcomes in a presentation and demonstration to an audience that often consists of academic and industry luminaries. Students develop a project within the subject's duration, using ICT engineering / project processes and methodologies, including time and budget management. The project is then used for group assessment once completed. The group decides on all development methodologies and processes for the project; identifies several design solutions, which meet project requirements; and assesses the value of each on the basis of functionality, performance and cost to implement. Students learn to write clear, concise documentation and learn to be effective group members through understanding the essentials of team organisation and how to be productive within a group project. Students constantly examine what they do, in self-critical exercises, and are invited to review existing development artefacts, making decisions about their value to their ICT project development by reviewing their impact on the established architecture and high-level design, making changes as necessary in a series of supplementary design documents. The final component is the presentation and demonstration of the developed project. The subject is facilitated by an academic team whose responsibilities include formal lectures as required, tutorials, laboratories, workshops and seminars, and provide conflict resolution for any difficulties that may arise from the group activities.

48510 Introduction to Electrical Engineering

6cp

Fields of practice: Electrical Engineering program
Undergraduate

The subject material is organised around two modules.

In Module 1 (The Basics) basic electrical concepts such as voltage, current, resistance and power are introduced; simple circuit analysis techniques for DC and AC circuits are studied; and an analysis of the types, properties and functions of components commonly found in a linear DC power supply is used as an application of this basic knowledge. The practical aspects of this module include learning how to use basic equipment such as a multimeter and digital storage oscilloscope (DSO), learning some simple 'tinkering' skills, and building and testing of simple circuits.

In Module 2 (Signals in Electrical Engineering) an application called the Filter Challenge is used to provide a context for presentation of material related to time and frequency domain representation of electrical signals including Bode plots and simple first-order RC filters.

Typical availability

Autumn semester, City campus
Spring semester, City campus

48520 Electronics and Circuits

6cp

Requisite(s): 48510 Introduction to Electrical Engineering AND 33130 Mathematical Modelling 1
Recommended studies: basic physics and single variable calculus are essential for this subject
Fields of practice: Electrical Engineering
Undergraduate

The main objective of this subject is to familiarise students with basic electronic circuits, mainly with op-amps as active elements, and their applications. By the end of the subject, students should have acquired reasonable proficiency in the analysis of basic electronic circuits and be able to build and test circuits in the laboratory. Particular emphasis is placed on the practical, hands-on aspect of electronics to provide a solid foundation of working knowledge for basic analog electronic circuits using op-amps. Laboratory work is a significant proportion of in-class delivery so as to make students proficient in circuit construction, testing, troubleshooting and to give them a sound knowledge of the use of test instruments. Another objective is to show that practical electronic applications are relevant to other engineering and technical disciplines and may often be placed within a wider social or commercial context.

Typical availability

Autumn semester, City campus
Spring semester, City campus

48521 Fundamentals of Electrical Engineering

6cp

Requisite(s): 48510 Introduction to Electrical Engineering AND 68037 Physical Modelling AND 33230c Mathematical Modelling 2
Recommended studies: basic physics and single variable calculus are essential for this subject, as well as basic electric circuit theory
Field of practice: Electrical Engineering major
Undergraduate

The subject revises the concepts covered in the subject Introduction to Electrical Engineering. It introduces basic electrostatic and electromagnetic theory, magnetic devices, semiconductor devices, electronic amplifiers and electrical measurements. An additional objective of the subject is to cover the essential theory and basic practical skills needed by students in their first Engineering Experience internship.

Typical availability

Autumn semester, City campus
Spring semester, City campus

48530 Circuit Analysis

6cp

Requisite(s): 48520 Electronics and Circuits AND 48521 Fundamentals of Electrical Engineering
Recommended studies: students are assumed to have knowledge of basic electrical circuits and devices and basic circuit analysis skills
Fields of practice: Electrical Engineering program
Undergraduate

In this subject students are assumed to have knowledge of basic devices such as ideal and real voltage and current sources and loads; resistors; capacitors, inductors and coupled coils; diodes and operational amplifiers, and basic circuit analysis skills such as Kirchhoff's current and voltage laws, Thevenin's and Norton's theorems, mesh and nodal analysis, symmetry, circuit transformation and superposition. Using this understanding as a starting point, the subject introduces the basic theoretical models that underpin signals and system analysis. Topics covered are sinusoidal steady-state analysis using phasor technique, Laplace transforms; solution of ODEs using Laplace transforms; power in AC circuits, electrical distribution networks and devices, multiphase systems; transfer (network) functions, poles and zeros, s-plane analysis, Bode plots; first- and second-order systems; response to periodic and non-periodic inputs, time domain solution, frequency domain solution; and arbitrary systems analysis, response to an arbitrary input using convolution; frequency selective circuits; Fourier series, the Fourier transform; two-port circuits. Students use experimental design and testing, MATLAB and analytical modelling to investigate real-world devices. Comparison of experimental results and model predictions is emphasised in the laboratory sessions.

Typical availability

Autumn semester, City campus
Spring semester, City campus

48531 Electromechanical Automation

6cp

Requisite(s): ([48520 Electronics and Circuits OR 48660 Dynamics and Control]) AND 33230 Mathematical Modelling 2
Field of practice: Electrical Engineering major
Undergraduate

The objectives of this subject are to consolidate fundamental knowledge of electric and magnetic fields; electric and magnetic circuits; how electric, magnetic and electromagnetic energy are interchanged; to model an electromechanical automation system using DC and AC motors and simulate its performance in open-loop and closed-loop control. Students also acquire skills in working with machines and equipment at normal mains supply voltage, in power instrumentation and control, PLCs and in experimental design and recording. Technical and theoretical content is expected to be acquired by students to the levels of 'know' (essential), 'familiar' (can solve problems if required) and 'aware' (have read / seen). Laboratory skills, ranging from electrical safety, measurements, design validation and experimental verification are an important focus of this subject.

Typical availability

Autumn semester, City campus
Spring semester, City campus

48540 Signals and Systems

6cp

Requisite(s): 48530 Circuit Analysis

Recommended studies: circuit analysis in both the time and frequency domains, utilising mathematics involving solutions to differential equations using time-domain techniques as well as transform methods

Fields of practice: Electrical Engineering program

Undergraduate

This subject presents the theoretical basis for system analysis and gives students skills in using the techniques to design components of real control/communication systems. The derivation of models from real-world devices through measurement and the comparison of model predictions with experimental results is emphasised in the laboratory component of the course. A group project that requires the design and implementation of part of a control/communication system allows students to apply their knowledge to a real-life problem. Topics include signal types and their representation in the time and frequency domains; modelling systems with differential or difference equations and transforms of the equations; signal operations and processing; the relationship between discrete and continuous quantities and the mathematical techniques applicable to each; the effects of feedback; time and frequency domain performance of systems; system stability; and control design techniques and simple communication systems. Through learning activities students also gain study skills, including academic literacy skills, and an appreciation of the different fields of practice of engineering and the interdisciplinary nature of engineering. Class time is used for lectures, tutorials, laboratories and project work. There are a number of formal laboratory sessions that apply control and communication theory, which also familiarise students with the laboratory equipment. The subject culminates in the design and implementation of a control system and communication system for a remote-controlled robot.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48541 Signal Theory

6cp

Requisite(s): 33230 Mathematical Modelling 2

Fields of practice: Electrical Engineering program

Undergraduate

This subject provides the theoretical cornerstone for the telecommunications thread in the course. Later telecommunications subjects rely heavily upon the mathematical groundwork and system framework of this subject. A strong laboratory component is emphasised in order to provide the student with exposure to a number of common telecommunication systems.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Note(s)

This subject was formerly called Signals and Systems (Telecommunications).

48550 Renewable Energy Systems

6cp

Requisite(s): 48531 Electromechanical Automation

Field of practice: Electrical Engineering major

Undergraduate

This subject aims to introduce students to contemporary renewable energy technology, including sustainability and environmental issues, energy resources, electric power generation from renewable energy sources, such as solar, wind, geothermal, wave, tide, hydro and fuel cells. Understanding of energy storage and system integration is needed and, as an example, developments in electrical utilisation in electric and hybrid vehicles are also studied. Design techniques for renewable energy systems are discussed in detail. Students are able to practise their design skills of renewable energy systems through three assignments specified as system specification, analysis of options and system design, respectively. By studying this subject, students gain knowledge and essential skills to design a renewable energy system.

Typical availability

Spring semester, City campus

48551 Analog Electronics

6cp

Requisite(s): 48530 Circuit Analysis AND 48570 Data Acquisition and Distribution

Field of practice: Electrical Engineering major

Undergraduate

This subject draws on, and brings together, the knowledge and skills developed in earlier subjects such as Electronics and Circuits and Circuit Analysis, and teaches students to analyse, understand and design complex electronic circuits and systems. Particular emphasis is placed on developing the ability to model real-life devices, to understand their imperfections and limitations. The principal goal of this subject is to give all students - whether destined to become circuit designers or engineers who simply use electronics - the tools necessary to make intelligent choices in the design of modern electronic circuits and systems.

On completion of this subject students should be able to: understand the operation and characteristics of BJTs and MOSFETs in integrated circuits; understand the internal structure of typical IC Op-Amps and the operation of its basic building blocks; understand the character and sources of non-idealities in IC Op-Amps; select an appropriate device type for a specific application; understand the frequency-domain behaviour of circuits and systems; understand the feedback principle and use it to advantage in circuit and system design; be familiar with other analog circuits like oscillators, converters, multipliers, etc.; use computer simulation to analyse and design circuits and systems; and be familiar with basic techniques used in CAD of electronic circuits and systems. The project brings together three fundamental stages of electronic circuit development: preliminary design, verification and refinement by simulation as well as building and testing a prototype.

Topics include: review of basic BJT, MOSFET and Op-Amp circuits; computer-aided design (tools and principles); differential and multistage amplifiers; non-ideal characteristics of Op-Amps; output stages and power amplifiers; review of different Op-Amp types; frequency response of linear circuits and systems; feedback principles and applications; signal generation and waveform shaping; filter design principles; other analog circuits (data converters, multipliers, etc.); noise in integrated circuits; and grounding, coupling and decoupling techniques.

Typical availability

Spring semester, City campus

48560 Introductory Control

6cp

Requisite(s): 48540 Signals and Systems

Field of practice: Electrical Engineering major

Undergraduate

The objective of this subject is to enable students to model with validation control systems and to analyse, design and implement both analog and digital controllers so that the controlled systems conform with given specifications. Emphasis is placed on laboratory work, the theoretical content of the subject being only that required to produce successful designs. Students are required to work on reduced scale models of actual industrial processes. The equipment is based upon experience gained with authentic control applications and is suitably modified for student use. Students follow the usual sequence adopted in industry, i.e. they start with the calibration of transducers and actuators leading on to dynamic response testing, physical modelling, model verification and finally to controller design, implementation and testing. Topics include linear and nonlinear modelling of control systems using Newton's rules, analogous networks or Lagrangian techniques; linearisation and development of linear, time-invariant transfer functions; development of lead-lag compensators or PID controllers using classical control design techniques such as root locus, Bode gain and phase diagrams, Nyquist plots and Nichols chart; development of state-variable equations from differential equations; development of state-variable feedback controllers and state observers; open-loop pulse transfer functions and discrete-time state models; discretisation using backward difference, bilinear, step-invariance or pole-zero mapping; development of digital PID controllers, deadbeat controllers and discrete-time state-variable feedback controllers; describing functions and limit cycles for nonlinear control systems; and the development of linear controllers for nonlinear systems using describing function techniques.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48561 Power Electronics and Drives

6cp

Requisite(s): 48531 Electromechanical Automation

Field of practice: Electrical Engineering major

Undergraduate

The objectives of this subject are to enable students to: acquire an understanding of the nature of power semiconductor devices and their control and use in switch-mode; understand the arrangement and topology of the circuits in which switch-mode devices are used; appreciate the use of power electronic circuits in high-power applications such as motor drives; be aware of the electromagnetic interference problems associated with power electronic systems; use commercial software for the rigorous circuit analysis of real power electronic systems; analysis and design circuits to meet specific specifications; and fabricate basic power electronic circuits such as a chopper. Topics include: topology and switching characteristics for IGBT, MOSFET, GTO, Thyristor and other devices; gate drive circuit requirements; power conversion circuits including DC-DC choppers, AC-DC controlled rectifiers, and DC-AC inverters; pulse-width modulation techniques; snubbers and thermal design for power devices; voltage and current controlled inverters; applications such as switch-mode power supplies, DC drives, AC drives, UPS systems, HVDC; recent advances in device technology; control techniques; and EMC and electromagnetic interference.

Typical availability

Autumn semester, City campus

48570 Data Acquisition and Distribution

6cp

Requisite(s): ([48541 Signal Theory AND 48520 Electronics and Circuits] OR 48540 Signals and Systems) AND 48441 Introductory Digital Systems

Recommended studies: basic electronics and circuits using operational amplifiers are essential

Fields of practice: Electrical Engineering program

Undergraduate

By the end of this subject students should be able to analyse, design, build and test data acquisition and distribution systems (DADS), measurement systems, and intelligent instrumentation systems; characterise, specify and select to satisfy the requirements of a DADS: sensors/transducers and associated circuits, transducer analogue interfacing and signal conditioning circuits, and data conversion devices and systems; interface DADS to computers, plant and installations; and write, test and embed control and programming software for DADS interfacing. Material to be taught and learnt includes applications, requirement specifications and typical architectures of DADS; general performance characteristics of DADS components and subsystems; physical principles and design fundamentals of sensors and transducers; mechanical, temperature, pressure, flow-rate, level transducers and applications; optoelectronic transducers and applications; transducer analogue interfacing; precision amplifiers and low-level signal conditioning; noise, guarding and shielding in instrumentation systems; data conversion devices and systems; DADS design; time and error budget of DADS; computer structures for DADS; DADS interfacing to computers and control software; intelligent instrumentation systems; and data integrity.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48571 Electrical Machines

6cp

Requisite(s): 48531 Electromechanical Automation AND 48530

Circuit Analysis AND 68038 Advanced Mathematics and Physics

Recommended studies: advanced physics and calculus are essential for this subject, as well as an understanding of circuit theory and machine principles

Field of practice: Electrical Engineering major

Undergraduate

This subject aims to introduce to students modern electrical machines and drives, including introduction of electrical machine technology and applications, Matlab/Simulink models of power electronic converters, single phase and three phase transformers, high frequency transformers used in power electronic circuits, fundamentals of electrical drives, DC machines and drives, synchronous machines and drives, induction machines and drives, and switched reluctance

machines. Issues such as variable speed drive and energy efficiency are addressed. The numerical simulation of various modern drive systems is presented. The subject is delivered through lectures, tutorials, laboratory experiments and assignments.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48572 Power Circuit Theory

6cp

Requisite(s): 48530 Circuit Analysis

Recommended studies: an understanding of electric circuit theory is essential to this subject, as well as the solution to ordinary differential equations. It is assumed that the students have prior knowledge in the following: Complex numbers and its application to the analysis of AC circuits. Circuit analysis. Fundamentals of electrical machines. MATLAB programming to solve simple problems

Field of practice: Electrical Engineering major

Undergraduate

The subject introduces the basic methods used in the analysis and design of electric power networks. Its purpose is to give students a working knowledge of modern power system theory and practice. Techniques introduced in earlier circuit analysis subjects are further developed and applied to power system problems.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48580 Advanced Control

6cp

Requisite(s): 48560 Introductory Control

Recommended studies: previous study of simple control systems using transfer functions and state-variables is essential

Field of practice: Electrical Engineering major

Undergraduate

This subject covers advanced techniques for analysis and design of modern control systems. The objectives of this subject are to consolidate fundamental knowledge of state space and state feedback, how to design pole placement, state observers and output feedback control. Topics include also nonlinear systems and Lyapunov stability theory, adaptive control, optimal control and robust control. Project work is conducted on a continuous basis throughout the semester.

Typical availability

Autumn semester, City campus

48581 Digital Electronics

6cp

Requisite(s): 48530 Circuit Analysis AND 48570 Data Acquisition and Distribution

Recommended studies: basic electronics and circuit theory knowledge and experience with digital systems is required for this subject

Field of practice: Electrical Engineering major

Undergraduate

The objective of this subject is for students to design, build and test hardware for an embedded application that utilises a modern digital integrated circuit, such as a field programmable gate array (FPGA), a microcontroller or a digital signal processor (DSP). It draws together many elements of engineering - system specification, design, implementation, testing, documentation and management - all in the context of a modern digital electronic system.

This subject presents the theoretical and practical basis for the structure, operation and design of embedded systems with an in-depth treatment of modern hardware components. The integrated circuits introduced are field programmable gate arrays, microcontrollers, digital signal processors, embedded PCs; memory subsystems; I/O subsystems; serial I/O subsystems; and some analog subsystems. Modern computer-aided hardware design software is used extensively. Topics such as PCB manufacturing, surface-mount technology and EMC compliance are also treated in depth.

Typical availability

Autumn semester, City campus

48582 Power Systems Analysis and Design

6cp

Requisite(s): 48572 Power Circuit Theory

Recommended studies: power circuit theory knowledge is essential for this subject

Field of practice: Electrical Engineering major

Undergraduate

The primary objective of this subject is the development of a working knowledge of power systems analysis and design. Emphasis is placed on the derivation of equivalent circuits, mathematical models of devices and the system, and on methods of analysis and measurement. Material covered includes electricity supply chain building blocks, system analysis, real/reactive power and load flow analysis, dynamic and transient stability.

Typical availability

Autumn semester, City campus

48583 Power Systems Operation and Protection

6cp

Requisite(s): 48572 Power Circuit Theory

Recommended studies: power circuit theory knowledge is essential for this subject; complex numbers and its application to the analysis of AC circuits; power circuit analysis and fault calculations; fundamentals of electrical machines; MATLAB programming to solve simple problems

Field of practice: Electrical Engineering major

Undergraduate

The primary objective of this subject is the development of a working knowledge of power systems operation and protection. The subject aims to provide students with a knowledge and understanding of elements of the supply chain and how they function in the National Electricity Market; demand-side management options including smart meters; load forecasting and optimal load scheduling for secure energy supply and use; protection schemes for transmission and distribution networks; communications in power systems, including communication media, architectures, automation, standards, protocols and security; and basic design, connection and standards of current and voltage instrument transformers for protection and metering applications.

Typical availability

Spring semester, City campus

48600 Mechanical Design 1

6cp; 3hpw (lecture), 2.5 hpw (workshop)

Requisite(s): 48331 Mechanics of Solids AND 48621 Manufacturing Engineering AND 48240 Design and Innovation Fundamentals

Recommended studies: 48510 Introduction to Electrical Engineering

Field of practice: Mechanical Engineering program and Mechanical and Mechatronics Engineering program

Undergraduate

This subject is the first in a set of three engineering design subjects. It builds on and brings together the concepts introduced in earlier subjects (e.g. the prerequisite subject). Topics covered include the mechanical design process, graphical presentation of engineering ideas and components, computer-aided design, engineering materials and processes and aspects of engineering knowledge. A prototype design-and-build project is a major component of this subject.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48601 Mechanical Vibration and Measurement

6cp

Requisite(s): 48640 Machine Dynamics AND 48660 Dynamics and Control

Field of practice: Mechanical Engineering program

Undergraduate

This subject aims to develop students' fundamental knowledge and understanding of the dynamics of various mechanical systems; provide students with knowledge and skills in vibration testing and

data acquisition; facilitate students' in-depth learning of the theory and methods, including modelling, modal analysis, system identification and numerical approaches; familiarise students with techniques and data acquisition system used in vibration testing, measurement, signal processing for determining the dynamic characteristics of a physical system; and enable students to apply the learnt methods to real world applications which include vehicle suspension design, vibration analysis and condition monitoring of rotating machines. The subject contains basic vibration theory for the analysis of two or more degrees of freedom multi-body mechanical systems, basic topics on widely-used engineering measurements, data acquisitions, spectrum analysis, signal processing and their applications in vibration control and machine condition monitoring. Case studies of engineering applications are also covered through special lectures and projects.

Typical availability

Spring semester, City campus

48610 Introduction to Mechanical and Mechatronic Engineering

6cp

Fields of practice: Mechanical Engineering program

Undergraduate

The subject introduces the student to engineering sketching and drawing, computer-aided design and solid modelling, engineering design, engineering mechanics, mechanical systems and components, mechatronics, and wind power and energy conversion. Students learn to graphically represent engineering components by sketching, using drawing instruments and/or computer methods using standard representation techniques such as orthogonal projection. Students learn basic engineering mechanics and how to apply this to analyse simple machines, mechanisms and structures. Students also learn basic mechatronics principles and apply them in a mechanical system that they design and build themselves.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48620 Fundamentals of Mechanical Engineering

6cp

Requisite(s): 48610 Introduction to Mechanical and Mechatronic Engineering AND 68037 Physical Modelling AND 33130

Mathematical Modelling 1

Fields of practice: Mechanical Engineering program

Undergraduate

This subject builds on and brings together the concepts introduced in the Mathematical and Physical Modelling subjects and in Introduction to Mechanical and Mechatronics Engineering. It is intended to provide students with a comprehensive overview of elementary mechanics, and lay the basis for further work in this area in later subjects. In particular, material discussed in this subject is taken further in Machine Dynamics and Mechanics of Solids subjects in subsequent stages.

Newtonian mechanics depends upon the development of a series of increasingly complex models, based on Newton's Laws of Motion. The purpose of this modelling concept is to set up an orderly development that is conducive to mathematical analysis. The methodology relies upon diagrammatically isolating a physical entity (or body) from all constraints or contacts with other bodies and replacing these contacts with external forces. This relies in turn in discriminating between what are defined as internal and external forces. The mechanically isolated body is referred to as a Free Body Diagram. It requires a graphical, diagrammatic or visual approach to problem analysis, unlike other analytical systems, which relies on more sophisticated mathematical analysis.

The topics discussed in this subject include equilibrium in 2D plane and 3D space, centroids and moments of inertia, the concepts of stress and strain, plane kinematics and kinetics, force and acceleration, work and energy, impulse and momentum, and the relationships between them. These comprise the basis of a comprehensive course in Newtonian mechanics.

Typical availability

Spring semester, City campus

48621 Manufacturing Engineering

6cp

Requisite(s): 48610 Introduction to Mechanical and Mechatronic Engineering

Fields of practice: Mechanical Engineering program

Undergraduate

The objectives of this subject are to: explain and provide examples of manufacturing processes involved in casting, forming machining and joining of materials; identify and describe the manufacturing process by which products are made of different materials: metals, polymers, ceramics and composites; demonstrate improved technical written and graphical communication skills by completion of specified laboratory reports and site visit reports; and demonstrate basic problem-solving skills relating to manufacturing and production.

Students learn the processes and materials available, as well as a competent and practical approach to evaluating, selecting and recognising the connections between the materials/processes and engineering design.

Typical availability

Spring semester, City campus

48622 Mechatronics 1

6cp

Requisite(s): 48510 Introduction to Electrical Engineering

Fields of practice: Mechanical and Mechatronics program

Undergraduate

The objectives of this subject are to enable students to: master the fundamentals of digital and programmable electronic circuits and their engineering applications; master the hardware architecture of a typical small computer system; and understand the principles of low-level programming and gain an ability to write simple assembly code. Students will be introduced to the basics of concurrent and real-time application programming.

Topics include: digital sequential circuits; state diagram and its application in the design of digital circuits; basic hardware architectures of the digital computer in terms of its building blocks; how hardware integrates with software at the machine level; low-level language programming; internal architecture and design of a typical register-based central processing unit and a main memory subsystem, and their interdependence; concepts of computer system buses, as well as different types of input and output devices; interrupts; input and output; micro-controller theory; hardware interfacing design techniques; and aspects of real-time programming, concurrency and multiple processing, the design of a basic multi-tasking operating system and the solution of a concurrent application.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48623 Mechatronics 2

6cp

Requisite(s): 48441 Introductory Digital Systems OR 48622 Mechatronics 1

This subject builds on and brings together the concepts introduced in Mechatronics 1. It is intended to provide students with comprehensive hands-on experience in mechatronics system design. The concepts of sensing, actuation, control, hardware and software are demonstrated through a commercially available robotics platform. Subject matter includes: sensing, actuation, path planning, control, memory and interfacing circuits, tools for microprocessor-based system design, development and testing of prototype systems. The subject includes a major project where groups of students design, develop and commission a microprocessor-based product.

Typical availability

Spring semester, City campus

48640 Machine Dynamics

6cp

Requisite(s): 48620 Fundamentals of Mechanical Engineering

Fields of practice: Mechanical Engineering program

Undergraduate

The objectives of this subject are to give students an understanding of the kinematics and dynamics of rigid bodies in general planar motion, which is typically encountered in design and analysis

of mechanical systems, and an elementary understanding of the vibration of mechanical systems, in particular the dynamic behaviour of single-degree-of-freedom mechanical systems with various damping and applied forces. Students should be able to: model problems in rigid body planar and spatial kinematics and rigid body planar dynamics; understand energy methods in contrast to direct applications of Newton's second law of motion for setting up a model; understand the physics of a problem formulated from a real mechanical system; appreciate the role of vibration in machines and structures in the engineering world; understand the procedures required to evaluate a vibration problem; and analyse the dynamic response of single-degree-of-freedom mechanical systems. The subject also covers the concept of a rigid body, full nomenclature used in kinematics, two-body velocity equations and velocity diagrams of planar motion; two-body acceleration equations and acceleration diagram; three-body velocity equations and acceleration equations including Coriolis acceleration term; angular velocity acceleration equations including three-dimensional problems; $F=ma$ applied to a rigid-body-dynamics, significance of 'centre of mass', the 'moment' relationship ($M=Ia$, etc.); angular momentum, conservation of angular momentum (general case, centre of mass moving, no 'fixed' point); linear and angular impulse problems; energy methods for general planar motion; elementary principles of vibration theory, free vibration of undamped single-degree-of-freedom system; free decay vibration of damped single-degree-of-freedom system; and the forced vibration of single-degree-of-freedom system.

48641 Fluid Mechanics

6cp

Requisite(s): 33230 Mathematical Modelling 2

Fields of practice: Mechanical Engineering program

Undergraduate

This subject aims to enable students to: understand key concepts and fundamental principles, together with the assumptions made in their development, pertaining to fluid behaviour, both in static and flowing conditions; deal effectively with practical engineering situations, including the analysis and design of engineering systems and devices involving fluids and flow; appreciate possible applications and links to other disciplines; and engage in further specialised study or research. The subject also aims to enhance interests in fluid phenomena and applications. Topics include: fluid properties and statics; conservation laws of mass, momentum and energy; flow in pipes; external flow (lift and drag); boundary layers; flow measurements; and environmental fluid mechanics.

48642 Strength of Engineering Materials

6cp

Requisite(s): 48331 Mechanics of Solids

Fields of practice: Mechanical Engineering program

Undergraduate

This subject draws on, and brings together, the knowledge and skills developed in earlier subjects such as 48620 Fundamentals of Mechanical Engineering, 60101 Chemistry and Materials Science, and 48331 Mechanics of Solids. It also prepares students for the more dedicated design subjects to come and exposes them to practical aspects of mechanical engineering design. The objectives are that students should be able to: understand, describe and use the methodology of modelling material properties and behaviour; understand and describe the fundamental differences in the behaviour of different types of materials; understand and describe how and why things fail; realise the importance of material selection in engineering

design; predict, or design to avoid, failure given the material, environment and loading conditions; and use analytical skills in stress analysis and knowledge of material properties in mechanical design. Topics include: the use of stress analysis and material properties in materials selection and mechanical design; stress analysis - revise concept of normal and shear stress; combined stress; structures and m/c components; impact; material behaviour - time dependent material properties; strength; failure modes - theories, criteria for static failure (e.g. Tresca, von Mises, Mohr), fracture, creep, and fatigue; and strain energy methods.

48651 Thermodynamics

6cp

Requisite(s): 33230 Mathematical Modelling 2 AND (68037 Physical Modelling OR (68042 Physical Modelling A AND 68043 Physical Modelling B))
Fields of practice: Mechanical Engineering program
Undergraduate

The objectives of this subject are to develop a fundamental understanding of applied thermodynamics in an engineering perspective, use thermodynamics effectively in the practice of engineering, lay the groundwork for subsequent studies in the fields related to energy systems and increase an awareness and emphasis on energy resources and environmental issues.

Topics include thermodynamic properties of pure substances, work and heat, the first law of thermodynamics, applications to closed systems, applications to open systems, the second law of thermodynamics, irreversibility, entropy, Rankine cycle and steam engines, refrigeration cycle, Brayton cycle and gas turbine engines, Otto cycle and spark ignition engines, and diesel cycle and compression ignition engines.

Typical availability

Autumn semester, City campus
Spring semester, City campus

48660 Dynamics and Control

6cp

Requisite(s): 48640 Machine Dynamics
Fields of practice: Mechanical Engineering program
Undergraduate

The objectives of this subject are to: have an understanding of the behaviour of linear (or approximately linear) dynamic systems that are typically encountered in the practice of mechanical engineering; and gain an understanding of how such systems can be controlled, or have their dynamics altered, so as to achieve desired outcomes. Topics covered include:

- dynamic models: component block diagram, laplace transform, undamped free and forced vibration of SDOF systems, damped free and forced vibration of SDOF systems, resonance and beats, logarithmic decrement, response under the harmonic motion of the base, coupled-tank systems, vibration of 2DOF systems, vibration isolation, vibration absorbers
- Matlab and Simulink
- dynamic response: system modelling diagrams, poles and zeros, effect of pole locations, first order systems, second order systems, effects of zeros and additional poles, stability
- basic properties of feedback: the basic equations of control, control of steady-state error, PID control, pole placement method
- the root-locus design method: root-locus of a basic feedback systems, dynamic compensation, examples
- control system implementation and introduction to advanced control systems.

48661 Heat Transfer

6cp

Requisite(s): 48641 Fluid Mechanics
Fields of practice: Mechanical Engineering program
Undergraduate

This subject provides a solid grounding in key concepts and fundamental principles, along with the assumptions made in their development, relating to heat transfer and to the operation of various machines associated with thermal energy (such as heat exchangers). It aims to develop expertise in applying these principles, in rational combination with the necessary empiricism, to practical engineering situations involving heat transfer and such machines, including their selection, application, performance prediction and design. The subject also reinforces an appreciation of the links between different subject areas and engineering disciplines. Topics covered include fundamentals of heat transfer covering conduction, convection and radiation, and heat exchangers.

Typical availability

Spring semester, City campus

48662 Mechanical Applications

6cp

Requisite(s): 48640 Machine Dynamics AND 48642 Strength of Engineering Materials
Fields of practice: Mechanical Engineering program
Undergraduate

The objectives of this subject are to teach students to: apply some of the basic concepts of rigid and deformable body mechanics learnt in previous subjects, and the more advanced concepts developed in this subject, to various mechanical applications; understand the interdependence of motion, forces, vibration and stress in mechanical applications; see how computer methods can complement a good understanding of the underlying theory when solving problems related to the previous point; and develop an aptitude in multiple-approach problem solving.

Specific subject content varies from semester to semester as it reflects student needs and interests and style of teacher, but is likely to include: elementary spatial kinematics and the design of unconstrained mechanisms such as constant velocity joints and

guidance linkages; systems of shafts and gears geometry together with associated lubrication, vibration and stress characteristics; the application of spatial dynamics to machine component motion where appropriate; problems associated with vehicle dynamics; stress analysis and methods of solid mechanics applied to various mechanical engineering applications; and modelling and computer methods including finite element analysis.

48663 Advanced Manufacturing

6cp

Requisite(s): 48650 Mechanical Design 2 AND 48621 Manufacturing Engineering

Fields of practice: Mechanical Engineering program
Undergraduate

The objectives of this subject are to: understand the design and manufacturing processing of products in various environments ranging from low volume to high volume and with various levels of capital investment in the manufacturing system. The student is introduced to the modern concepts of quality management, including Taguchi methods, after looking at process quality control and its origins. Modern metrology equipment and methods are treated in a similar manner: modern equipment and methods and their origins.

The main part of the course is about the influence of the computer and computer systems on manufacturing. Firstly, students gain some experience with manufacturing in a CAD/CAM environment. Following this they investigate the viability of industrial robots in environments such as fabrication, welding and assembly. Topics such as: CIM, CAPP, JIT, GT, FMS, MRP, Toyota and Kanban are introduced in a project environment.

Typical availability

Autumn semester, City campus

48670 Mechanical and Mechatronic Design

6cp

Requisite(s): 48650 Mechanical Design 2

Fields of practice: Mechanical Engineering program
Undergraduate

This subject aims to extend students' competence in the design of engineered systems and components, as well as familiarising them with modern design approach methodologies. While the emphasis is on realistic engineering-team/client/boss interactions, need exploration, project development and delivery, this subject draws heavily on the expertise the students have developed up until this stage of the course. Furthermore, the subject aims to enhance and polish students' capabilities in dealing with human-centric aspects of the design process.

48720 Network Fundamentals

6cp

Recommended studies: some knowledge of computer networking is useful but not essential

The objectives of this subject are to introduce students to the basic concepts and terminology used in telecommunication networks and a system-level view of network operation. Topics include: major players in telecommunication networks in Australia and the Asia-Pacific (operators, vendors, standard bodies, regulators, consumers, investment bankers); evolution of telecommunication networks; services and applications (voice, video, data, location-based services, multimedia, gaming, etc.); network protocols (TCP/IP, OSI); transmission and switching basics; transmission media; access

networks, PSTN, internet (dial up, broadband and ISP), network security, mobile networks (2G, 2.5G, 3G, 4G), data networks (LANs and wireless LANs, WANs, SANs, PANs, enterprise networks), VoIP networks; and convergence in telecommunication networks, next generation networks (NGN), digital identity in networks.

48721 Strategic e-Business Technologies

6cp

The objectives of this subject are to introduce the basic concepts and terminology used in telecommunications engineering; to give basic, up-to-date, hands-on, technical skills; to familiarise students with the technology underlying the internet, telecommunications and electronic business, and to allow the students to make informed decisions about technology and system security.

Topics covered include: software (applications and operating systems, make or buy, ERP solutions, estimating, software engineering), PCs and office networks, analogue/digital, bandwidth, compression, codes, human factors, data communications, protocols, OSI model, the Public Switched Telephone Network, switched circuit and packet switching (T channels, ISDN, X25, Frame Relay, ATM, SONET, modems, ADSL), the internet (history, TCP/IP, WWW, Java, CGI, architectures, sockets, services, DNS, routing), wireless technologies (satellites, GSM), and security (purpose, threats, trust, authentication, encryption, SET, signatures, certificates).

48730 Network Security

6cp

Requisite(s): 48740 Communications Networks OR 31277 Routing and Internetworks OR 31471 Networking 2

Fields of practice: Telecommunications Engineering program
Undergraduate

Network security is a major issue for enterprises, with breaches of security possibly being punished by legal sanctions, financial loss, or loss of customer confidence. This subject consolidates the student's understanding of security by considering security principles from both a people management and a technical perspective. Topics covered include network security theories, such as RSA algorithm, security appliances such as firewalls, and Intrusion Detection Systems; security services such as confidentiality, integrity and authentication; and technologies such as IPSec, SSL, etc. Students doing this subject are well placed to contribute to the security solution of a modern organisation.

Typical availability

Autumn semester, City campus
Spring semester, City campus

48740 Communications Networks

6cp

Requisite(s): 48720 Network Fundamentals OR 31270 Networking Essentials

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Fields of practice: Telecommunications Engineering program
Undergraduate

This subject has been designed as a second subject in the networking thread of the ICT engineering undergraduate program. On completion of this subject, students have learned the skills to systematically analyse network operations and performance, and also have the ability to appreciate approaches in designing communication and computer networks. The first half of the subject concentrates on the study of communication architecture. Lectures provide students with the necessary background in understanding operations of TCP/IP, the mostly widely implemented protocol stack in computer networks, on a layer-by-layer basis. Topics include flow control; error detection and correction; packet switching; and routing and transport protocols. The second half of the subject concentrates on broadband switching technologies, networking design concepts and performance measures associated with integrated services networks. Topics include local area networks (LANs); wide area networks (WANs); networking devices (bridges, hubs and switches); internetworking; internet protocol; network security; distributed applications; and multimedia services. Students acquire a reasonable understanding of current standards and their role in relation to future developments.

Typical availability

Autumn semester, City campus
Spring semester, City campus

48750 Network Planning and Management

6cp

Requisite(s): 48740 Communications Networks AND 33230 Mathematical Modelling 2

Fields of practice: Telecommunications Engineering program

Undergraduate

The objectives of this subject are for students to develop competencies needed for the planning and management of networks, particularly in the areas of traffic source modelling, performance analysis, dimensioning, simulation and management.

Students acquire a foundation in: modelling of traffic, including packet based systems; dimensioning of fixed networks and mobile networks; performance analysis of networks based on queuing theory; circuit switching networks; and packet switching networks.

Topics include: traffic source modelling; Markov chain theory; network design, planning, and dimensioning; introduction to teletraffic engineering; basics of traffic system design; traffic models for loss and delay systems; network optimisation through both stochastic and deterministic methods; client and server placement; mobile network optimisation; management based on SNMP and the MIB; and reliability of networks.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48770 Continuous Communications

6cp

Requisite(s): 48541 Signal Theory OR 48540 Signals and Systems

Fields of practice: Telecommunications Engineering program

Undergraduate

The objectives of this subject are to enable students to develop insight and understanding into continuous / analog communication systems including, but not limited to, the following topics:

- communications systems, spectrum and channel characteristics
- classes of signals, phasor representation and spectral analysis
- analysis and transmission of signals
- amplitude modulation and demodulation
- angle modulation and demodulation
- noise performance of analogue communication systems.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48771 Discrete Communications

6cp

Requisite(s): 48541 Signal Theory

Fields of practice: Telecommunications Engineering program

Undergraduate

This subject aims to introduce the fundamental principles of efficient digital communication systems. Analog-to-digital conversion is introduced as a precursor to the discussions of digital data transmission modulation and digital transceiver design techniques. After completing the subject, students are able to:

- convert analog signals and process digital information for digital communication systems
- choose a digital modulation which is suited to the system requirements
- understand the techniques for multi-carrier digital communication systems
- analyse and understand linear distortive channels in digital communication systems
- choose an error detection or correction code which is suited to the system requirements, and understand the fundamentals of synchronisation in digital communication systems
- simulate a digital communication systems end-to-end (from the transmitting antenna to the receiver and display of the received data), and
- simulate the bit error rate performance of digital communication systems.

Topics include sampling of signals, digital modulation and demodulation, optimal detection, line coding and pulse shaping, digital transceivers and regenerative receivers determination, bit error rate analysis, simulation of digital transceivers, basic principles of information theory, error detection and correction coding, the power

and bandwidth trade-off of digital modulation and coding types and multi-carrier systems in digital communication systems.

Typical availability

Spring semester, City campus

48780 Mobile Communications

6cp

Requisite(s): 48770 Continuous Communications

This subject aims to develop a coherent systems view of mobile communication systems, which is one of the fastest growing fields in the engineering world. It gives further context to telecommunications theory developed in prerequisite subjects by exploring practical examples of wireless communications systems. It particularly emphasises technical and other issues that distinguish mobile systems from other systems. Technical concepts which are at the core of design, and implementation of wireless cellular mobile communication systems are presented in order to help understand, appreciate and design current and evolving systems.

Throughout the subject students are encouraged to develop broader skills in methods of design, systems engineering, simulation, technical reading, teamwork and communications as well as developing and applying technical knowledge.

Broadly, the subject attempts to cover the fundamental design concepts behind cellular mobile communications. Topics include frequency reuse, macro, micro and pico cells, hand off, co-channel and adjacent channel interference, which are at the core of providing wireless communication service to subscribers on the move using limited radio spectrum are covered. Also issues such as trunking efficiency and how trunking and interference issues between mobiles and base stations combine to affect the overall capacity of cellular systems are highlighted. Also covered is how electromagnetic wave propagation concepts in outdoor and indoor environments are linked to the design of wireless communication systems. Propagation effects such as large scale path loss, log-normal shadowing, small scale fading, time delay spread and Doppler spread, etc., is highlighted from the point of view of design and analysis. The subject also covers digital modulation concepts, bit error rate analysis of fading channels, equalisation and diversity techniques. Access techniques such as FDMA, TDMA, CDMA and SDMA are introduced with a view to demonstrate as to how the capacity of the cellular systems are impacted by multiple access techniques. Design and standardisation issues of existing and evolving systems are also introduced.

Typical availability

Autumn semester, City campus

48821 Ecological Engineering

6cp

Requisite(s): 65111 Chemistry 1

Increasingly biological principles are being integrated as part of engineered systems to create innovative and effective design solutions. This subject teaches fundamental chemical, physical and biological principles which can be used to analyse data and formulate design solutions to environmental problems particularly related to water quality. The subject covers hydrology, soils, ecosystems, material balances, nutrient cycles, risk and water quality engineering. The way this knowledge is utilised by engineers for ecosystem restoration and engineered treatment systems is examined.

48840 Water Supply and Wastewater Engineering

6cp; 6hpw

Requisite(s): 48821 Ecological Engineering

Fields of practice: Civil Engineering and Environmental Engineering major

Undergraduate

This subject provides civil and environmental engineering students with a detailed knowledge of: (i) water pollution control objectives, (ii) the design of potable water and sewage treatment processes, (iii) sewerage and water reticulation systems, (iv) total water cycle management, and (v) the advanced technologies used in the upgrading of water and wastewater treatment plants, desalination and water and biosolids re-use.

At the completion of this subject, students understand: public health and environmental objectives in water supply and wastewater disposal; the design concepts for drinking water and sewage treatment plants; sewerage systems and water reticulation systems; and new technologies developed to meet the new water quality and water re-use objectives.

Typical availability

Spring semester, City campus

48850 Environmental Planning and Law

6cp

Requisite(s): 87 credit points in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 87 credit points in C10062 Bachelor of Engineering Bachelor of Arts in International Studies Diploma in Engineering Practice OR 87 credit points in C10063 Bachelor of Engineering Bachelor of Science OR 87 credit points in C10065 Bachelor of Engineering Bachelor of Business OR 87 credit points in C10066 Bachelor of Engineering Science OR 87 credit points in C10067 Bachelor of Engineering OR 87 credit points in C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 87 credit points in C10073 Bachelor of Engineering Bachelor of Science OR 87 credit points in C10074 Bachelor of Engineering Bachelor of Science Diploma in Engineering Practice OR 87 credit points in C10075 Bachelor of Engineering Bachelor of Medical Science OR 87 credit points in C10076 Bachelor of Engineering Bachelor of Medical Science Diploma in Engineering Practice OR 87 credit points in C10078 Bachelor of Engineering Bachelor of Biotechnology OR 87 credit points in C10079 Bachelor of Engineering Bachelor of Biotechnology Diploma in Engineering Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Fields of practice: Environmental Engineering program Undergraduate

The objectives of this subject are: to introduce key environmental law relating to water, waste, energy and land use issues; to give a sound understanding of the history of planning with particular emphasis being placed on the NSW experience; to develop awareness of planning legislation in NSW and the need to engineer within the constraints of that legislation; to provide knowledge of the planning process and constraints on land use planning; to develop skills to identify and deal with legal problems confronting engineers in industry; to develop the capacity to communicate in both written and verbal form when dealing with legal matters relating to the environment and land use planning; and to equip students with the skills necessary to deal with legal issues in the absence of detailed lecture material. This helps students to know when to ask questions or seek professional legal advice and to introduce them to the operation of the Land and Environment Court of NSW. Students cover the following topics.

- Environmental law: the operation of the Environment Protection Authority of NSW, water and waste legislation (*Clean Waters Act, Waste Minimisation Act*), air and noise legislation (*Clean Air Act, Noise Control Act*), miscellaneous environmental legislation addressing pollution issues (*Independent Pricing and Regulatory Tribunal Act, Sydney Water Corporatisation Act*), and selected court decisions relating to pollution and land use issues (*Protection of the Environment Operations Act 1997*).
- Environmental planning: evolution of human settlement, NSW environmental planning legislation, urban planning and sustainability, planning the neighbourhood, environmental studies, environmental impact assessment in NSW, project control and the environment.

Tutorial sessions are scheduled twice each week to discuss environmental law and planning issues using case studies. Students have to present a 10–15 minutes discussion paper on an environmental issue of an engineering nature, which assists in developing verbal communication skills and audiovisual equipment usage skills, as well as developing interdisciplinary teamwork skills.

Typical availability

Autumn semester, City campus

48860 Pollution Control and Waste Management

6cp

Requisite(s): 48840 Water Supply and Wastewater Engineering OR 48350 Environmental and Sanitation Engineering

Fields of practice: Environmental Engineering program Undergraduate

The main objective of this subject is to provide the opportunity to understand the principles of pollution control and waste management in modern society. The subject develops an understanding of air

and noise pollution control technologies, as well as better product or process design to mitigate the problems of air and noise pollution both in the automobile industry and other manufacturing industries. It also begins to tackle the problems of solid and hazardous waste minimisation, generation, treatment and disposal. Topics include solid waste characterisation, generation and composition analysis, development of optimum collection routing networks, transfer stations, design, operation and maintenance of sanitary landfills, and related social and environmental issues; hazardous waste generation, regulatory process, process information, toxicology, design of treatment and stabilisation methodologies, methods of disposal and related environmental issues, community perspective and education; soil contamination, chemical, biological and thermal remediation methodologies, site characterisation, planning, monitoring, containment and case studies; air pollutants and their types, sources, generation, measurements and estimations. Other topics include: control of the generation of specific air pollutants from the projects such as wastewater treatment works and waste management disposal sites. Some aspects of noise pollution and its control are also covered.

Typical availability

Autumn semester, City campus

48881 Water and Environmental Design

6cp

Requisite(s): 48362 Hydraulics and Hydrology AND 48840 Water Supply and Wastewater Engineering AND 144 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 144 credit points of completed study in C10062 Bachelor of Engineering Bachelor of Arts in International Studies Diploma in Engineering Practice OR 144 credit points of completed study in C10063 Bachelor of Engineering Bachelor of Arts in International Studies OR 144 credit points of completed study in C10065 Bachelor of Engineering Bachelor of Business OR 144 credit points of completed study in C10066 Bachelor of Engineering Science OR 144 credit points of completed study in C10067 Bachelor of Engineering OR 144 credit points of completed study in C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 144 credit points of completed study in C10073 Bachelor of Engineering Bachelor of Science OR 144 credit points of completed study in C10074 Bachelor of Engineering Bachelor of Science Diploma in Engineering Practice OR 144 credit points of completed study in C10075 Bachelor of Engineering Bachelor of Medical Science OR 144 credit points of completed study in C10076 Bachelor of Engineering Bachelor of Medical Science Diploma in Engineering Practice OR 144 credit points of completed study in C10078 Bachelor of Engineering Bachelor of Biotechnology OR 144 credit points of completed study in C10079 Bachelor of Engineering Bachelor of Biotechnology Diploma in Engineering Practice]

This subject provides students with the opportunity to undertake an integrated investigation and design of a water or environmental engineering project. This subject is the culmination of the study in environmental and water-related engineering subjects and seeks to teach students the investigation and design skills that are expected of an engineer. Students undertake problem investigation, requirements analysis, system design and detailed design for an engineered system which addresses an environmental/water problem. The design process requires integrating technical performance with social, environmental and economic outcomes. As part of this process, students develop team skills, an ability to incorporate system-wide requirements (e.g. safety, quality, maintenance) into an engineering design, and develop an appreciation of the impact of economic, legal, management and environmental influences on the engineering design process.

48901 Professional Service Project A

6cp; 6hpw, on campus

Engineering Practice Undergraduate

This subject assists students enrolled in BE courses without the DipEngPrac to find a 12-week professional practice placement and prepare for the experiential learning that results from the placement.

As an Engineering-specific industry preparation subject – more applied than many traditional academic subjects – students are encouraged throughout to conduct themselves as if they are already in a professional work environment.

The subject is delivered as a series of seminars rather than in lecture-plus-tutorial format. As well as providing core knowledge, sessions incorporate skills development and other activities relevant to succeeding in a professional engineering environment.

Students should check their availability before enrolling in this subject, as failure to attend every scheduled seminar jeopardises both their learning and assessment success. Conversely, participating actively in all scheduled sessions permits students to take full advantage of a subject designed to enhance competence and confidence in professional practice and, ultimately, their employability as graduates.

The subject is delivered by UTS: Careers Service, and coordinated and owned by the Faculty of Engineering and IT.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48902 Professional Service Project B

6cp

This suite of subjects develops an appreciation of the service obligations and non-financial rewards associated with the award of professional status. Students participate in one or more professional service activities and thus build their understanding of the culture of engineering and the current debates surrounding it.

Students are required to analyse the impact of the activity on the recipient organisation and to evaluate the competence they need to be able to perform the service in a manner consistent with the Code of Ethics. In many cases, students work with professionals from non-engineering disciplines. This increases their awareness of engineers' interdependence on other professions as well as enhancing their experience in managing group dynamics.

Students gain an understanding of the role engineering plays in society and in particular the perception that the community at large has about engineering.

Students are able to volunteer for professional service projects throughout their course for which they receive a certificate.

Typical availability

Autumn semester, City campus

Spring semester, City campus

48903 Professional Service Project C

49001 Judgment and Decision Making

6cp; 3hpw; distance mode; availability: all courses (core for MEM)

Postgraduate

This subject develops understanding of rational decision aids in light of modern descriptive theories of judgment, choice and decision in organisations. The methods of management science, decision analysis and judgment analysis are presented, and models of individual, group and strategic decision-making are critically assessed.

Drawing on the insights of psychology, sociology and management science, this subject aims to inform you about the many facets of good judgment associated with decision-making.

49002 Managing Projects

6cp; 3hpw on campus, distance; availability: all courses (core for MEM)

Engineering: Systems, Management and Leadership

Postgraduate

The subject introduces project management principles and tools. Students develop an understanding of management practices and their application to the successful performance of engineering projects and engineering works. What students learn in this subject enhances their ability to make and implement decisions for strategic and operational management within an engineering setting.

This subject is offered in two modes: standard and distance.

- In standard mode, students are expected to attend lectures and participate in class and group activities. Classes are three hours per week for one semester. Students are expected to enrol and remain in a particular session all semester.
- In distance mode, students undertake the subject without attending classes thus enabling those who would have difficulty attending, for geographic or other reasons, to undertake the study of the subject.

The subject's learning objectives and content are the same for both modes. There are, however, some differences in emphasis and assignment work because of the specific nature and constraints presented by the distance mode such as participating in presentations to staff and peers. While these aspects are mandatory for students participating in standard mode, they are not required for distance mode students.

The subject outline must be read in conjunction with any subject instructions posted on UTSOnline in any specific semester. The instructions provide additional information and advice on any facet of the subject content, its administration and students' obligations.

It is mandatory that students obtain, read and comply with requirements of both the subject outline and any instructions posted on UTSOnline during the semester.

Students are expected to regularly check the UTSOnline page of the subject.

Typical availability

Autumn semester, City campus

Spring semester, City campus

49003 Economic Evaluation

6cp; 3hpw; distance mode; availability: all courses (core for MEM), not available for undergraduate students
Postgraduate

This subject deals with the application of economic concepts to engineering decision-making. Main topics include: macroeconomic issues and policies; microeconomic market theory; theory of the firm; project evaluation and cost-benefit analysis; intangibles and risk.

Typical availability

Autumn semester, City campus
Spring semester, City campus

49004 Systems Engineering for Managers

6cp; standard; availability: all courses (core for MEM)
Postgraduate

In the multidisciplinary process of problem solving in engineering, systems engineering is seen as a unifying discipline. Drawing on contemporary scholarship and best practice, the philosophy, concepts, techniques and tools of the systems engineering process are examined in the context of engineering management, and their domain of applicability explored. The subject provides extensive opportunity for individual and group encounter with the challenges of the systems approach, and is illustrated by case studies presented by guest lecturers.

Typical availability

Autumn semester, City campus
Spring semester, City campus

49006 Risk Management in Engineering

6cp; on campus, block mode; availability: all courses
Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

This subject develops students' capability to identify, assess, improve and limit risk in the management and practice of engineering through the application of concepts and tools of risk engineering. On completion, students are able to identify hazards in an engineering project and design an appropriate risk management strategy.

Topics include: semantics of risk and hazard; risk as a social construct; principles of risk management; risk engineering; integrating risk controls within the engineering process; risk perception, risk communication and the acceptability of risk; legal principles relating to engineering risks; risk identification and assessment; hierarchy of risk control; risk benefit analysis; positive risk; and quantitative and qualitative risk assessment methods.

Typical availability

Autumn semester, City campus and distance
Spring semester, City campus and distance

49013 Managing Information Technology in Engineering

6cp; distance mode and Internet support; availability: all courses
Postgraduate

The aim of this subject is to explore the influence of information technology (IT) on organisations and management and in particular engineering management. Students critically examine both past and recent IT innovations. Issues in information technology extend into groupware, computer-aided logistic support, decisions support systems, tools for systems engineering, and communications technology including the internet. Students use a computer-mediated conferencing tool on the internet to participate in group project work either on or off campus. Most of the support material such as lectures is on the internet.

49016 Technology and Innovation Management

6cp; 3hpw; availability: all courses
Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

The goal of technology and innovation management is to effectively manage the invention, design, development, production, transfer and use of technology within an organisation. This subject brings together knowledge from engineering and management disciplines. Emphasis is placed on the importance of managing the performance of the entire product and process development cycle. Topics include: technological change management, assessment and evaluation of technology, technology policy development, and new product and process development. Within this framework, specific technology management tools and techniques are evaluated and applied. These include quality function deployment, design for manufacture, concurrent engineering and robust design methods.

Typical availability

Autumn semester, City campus
Spring semester, City campus
Summer session, Hong Kong

49017 Graduate Project (30cp in 1 semester)

30cp; individual supervision; availability: Master of Engineering
Postgraduate

A graduate project is a significant body of engineering work that is conducted in a professional engineering manner and is professionally documented in a comprehensive report. The aims of the graduate project are to provide an opportunity for the student to demonstrate their capacity to bring together their advanced skills and knowledge that have been gained as part of their coursework and apply these to a real-world engineering problem. The depth and extent of the project can vary with credit point requirements. The project may involve the development of a new technology, product and/or process, or the application of existing technologies, products and methods in a new way to solve a problem. In certain cases it may be appropriate to undertake a critical review of a method, ideas, a technology or combinations of these. In all cases it is vital that the project can demonstrate a 'value-added' component that the student has originated. The planning, implementation and documentation of the project are supervised by a member of academic staff from the Faculty of Engineering and Information Technology. The scope of the work, the deliverables for assessment and the assessment criteria are negotiated between the student and the academic supervisor and documented in a learning contract that is signed by the student and supervisor(s) (and approved by the director of postgraduate coursework programs). Industry-based projects are highly encouraged and an additional industrial supervisor may be involved. The responsibility of finding a suitable project topic and an academic supervisor rests with the student.

Typical availability

Autumn semester, City campus
Spring semester, City campus

49021 Evaluation of Infrastructure Investments

6cp; three modules, each two days; availability: all courses
Postgraduate

This subject develops the capability to appraise, analyse and evaluate energy investments within a multidisciplinary framework. Topics include: the context and rationale of project evaluation; characteristics of energy project investments; concepts and methods of financial and economic evaluation of energy investments; issues in cost-

benefit evaluation; treatment of risk, intangibles, and externalities; environmental considerations in project evaluation; multi-attribute evaluation frameworks; and case studies. Emphasis is placed on achieving depth and balance in all aspects of the evaluation process, with topical case studies providing an application focus.

Typical availability

Autumn semester, City campus

49022 Energy Resources and Technology

6cp; block attendance; availability: all courses
Postgraduate

Topics covered in this subject include energy resources and reserves; concepts and principles of resource assessment; regional, national and international resource requirements and availability; resource technology evaluation; and the economic and environmental impacts of resource use.

49023 Energy and Environmental Economics

6cp; three modules, each two days; availability: all courses
Postgraduate

Topics include: energy-economy-environment interactions; the micro model (demand, supply and markets); short-run and long-run energy pricing; shadow pricing of energy; the economics of non-renewable and renewable energy resources; intertemporal allocation of resources; the economics of the environment; and economic and non-economic principles for environmental valuation. Emphasis is placed on achieving depth and balance in all aspects of the valuation principles, with topical case studies providing an application focus.

49024 Energy Modelling

6cp; three modules, each two days; availability: all courses
Postgraduate

This subject covers models and modelling; macroeconomic settings of energy-economy modelling; energy balances; energy input-output analysis; energy aggregating; energy system modelling, energy demand modelling; and modelling of energy economy interactions.

Typical availability

Spring semester, City campus

49025 Methods for Energy Analysis

6cp; three modules, each two days; availability: all courses
Postgraduate

This subject covers: probability concepts; sampling and estimation; regression analysis; statistical tests; analysis of variance; simultaneous equations; time series methods; econometric models and applications; and introduction to statistical packages.

Typical availability

Autumn semester, City campus

49026 Electricity Sector Planning and Restructuring

6cp; three modules, each two days; availability: all courses
Postgraduate

Topics covered in this subject include nature of electricity planning; economic and technological dimensions of power systems; generation planning and production costing; integrated resource planning; electricity sector restructuring – rationale, models and frameworks; electricity sector privatisation; electricity sector productivity; electricity markets; selected topics on issues relating to the environment, institutional structures, renewable resources, regulation, etc. Emphasis is placed on all aspects of electricity sector planning, restructuring and policy, with topical case studies providing an application focus.

Typical availability

Autumn semester, City campus

49027 Energy Demand Analysis and Forecasting

6cp; block attendance; availability: all courses
Postgraduate

This subject looks at the theoretical and analytical concepts and tools used for the understanding of energy demand generation and evolution in relation to socioeconomic development. Students learn methods and models of energy demand projections and explore the various considerations which must be made in the design, implementation and monitoring of an energy demand management policy.

Typical availability

Autumn semester, City campus

49028 Policy and Planning of Energy Conservation

6cp; block attendance; availability: all courses
Postgraduate

This subject introduces students to the rationale and context for energy conservation planning and policy; historical perspective of energy conservation; public and private sector interventions and mechanisms for rationalising the design of energy conservation policies; examples and case studies of energy conservation programs at national, sectoral and enterprise levels in developing and industrialised countries; and decision methods for program design.

Typical availability

Spring semester, City campus

49029 Environmental Policy for Energy Systems

6cp; block attendance; availability: all courses
Postgraduate

This subject introduces students to policy context; energy resource system analysis; approaches to environmental impact assessment; analysis of pollution effects and control technologies; risk analysis of energy systems; costs and benefits of environmental management; and institutional and regulatory issues.

Typical availability

Spring semester, City campus

49038 Professional Service Project (4cp)

4cp
Postgraduate

For further details, contact UTS: Engineering.

49047 Finite Element Analysis

6cp; 3hpw; availability: all courses

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120

credit points of completed study in C10066 Bachelor of Engineering

Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The Finite Element Method (FEM) provides the theoretical basis for computer simulation and analysis of a vast spectrum of engineering problems. The method is used primarily in the field of structural mechanics, to solve stress and vibration problems. Other non-structural mechanics applications of the method include thermal-, acoustic-, diffusion-, electrostatic- and electro-magnetic problems. This subject is intended as a first subject in finite elements and extends understanding of the method and its application to problems in solid / structural mechanics. Apart from an introduction to the theory of the FEM, it develops problem formulation and modelling skills using state of the art software. Topics include: matrix analysis methods; the derivation of element stiffness matrices of bar and beam elements as well as stiffness matrices of triangular and quadrilateral elements for plane elasticity; work equivalent loads and force matrices; the concept of natural coordinates and isoparametric element formulation; numerical integration and gauss points; finite element modelling techniques; and limitations, errors and solution accuracy of the FEM. The subject is also oriented toward users of the FEM and includes a hands-on laboratory component that requires the use of general purpose finite element programs in assignments or project work.

Typical availability

Spring semester, City campus

This subject is offered in odd years only; it will next be offered in 2013.

49048 Wireless Networking Technologies

6cp

Requisite(s): (48740 Communications Networks AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering))

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject aims to use knowledge about networks and protocols to develop a detailed understanding of how network functions, such as radio resource management, mobility management, and traffic management, are realised in current wireless networks. Students study the evolution, architecture, functionality, and operation of wireless networking technologies that exist in the market today. These technologies include GSM (Global System Mobile), GPRS (General Packet Radio System), 3G UMTS (Universal Mobile Telecommunication System), 4G, Wireless Local Area Networks (WLAN), and Mobile Network Layer.

Typical availability

Autumn semester, City campus

Spring semester, City campus

49049 Air and Noise Pollution

6cp; block mode

Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject has two components: air pollution and noise pollution.

The air pollution topics include: introduction to air pollution; air pollution effects on human health and the environment; air pollution measurement; air pollution control; indoor air quality; and air pollution and global climate change.

The noise pollution topics include: introduction to noise pollution; noise control engineering; vibration control; noise measurement; noise-induced hearing loss; and traffic noise.

Typical availability

Spring semester, City campus

49050 Graduate Project (12cp in 1 semester)

12cp; availability: not available in the MEng (C04090)

Postgraduate

A graduate project is a significant body of engineering work that is conducted in a professional engineering manner and is professionally documented in a comprehensive report. The aim of the graduate project is to provide an opportunity for students to demonstrate their capacity to bring together their advanced skills and knowledge that have been gained as part of their coursework and apply these to a real-world engineering problem. The depth and extent of the project can vary with credit point requirements. The project may involve the development of a new technology, product and/or process, or the application of existing technologies, products and methods in a new way to solve a problem. In certain cases it may be appropriate to undertake a critical review of a method, ideas, a technology or combinations of these. In all cases it is vital that the project can demonstrate a 'value-added' component that the student has originated. The planning, implementation and documentation of the project are supervised by a member of academic staff from the UTS: Engineering. The scope of the work, the deliverables for assessment and the assessment criteria are negotiated between the student and the academic supervisor and documented in a learning contract that is signed by the student and supervisor(s) (and approved by the director

of postgraduate coursework programs). Industry-based projects are highly encouraged and an additional industrial supervisor may be involved. The responsibility of finding a suitable project topic and an academic supervisor rests with the student.

Typical availability

Autumn semester, City campus

Spring semester, City campus

49052 Graduate Project (18cp in 1 semester)

18cp; individual supervision; availability: Master of Engineering

Postgraduate

The project is a course requirement taken over one or two semesters or, in exceptional circumstances, three. It is undertaken on an individual basis, except in special circumstances approved in advance by the Faculty Board in Engineering and Information Technology, and provides opportunity for the integration and application of advanced skills and knowledge gained in part through other subjects taken during the course. The depth and extent of the project are set on the basis of an agreed project plan submitted by the student to the supervisor, and approved by the director of postgraduate coursework programs. The project may involve: the development of new technology (hardware and/or software); the application of technology; research addressing a significant technical or engineering management issue or in special circumstances; and a critical review in the area of students' concentration, describing key contributions in the field covered by the project work undertaken, results achieved and a discussion of their significance and implications.

Typical availability

Autumn semester, City campus

Spring semester, City campus

49058 Graduate Project (24cp in 1 semester)

24cp; individual supervision; availability: Master of Engineering

Postgraduate

A graduate project is a significant body of engineering work that is conducted in a professional engineering manner and is professionally documented in a comprehensive report. The aims of the graduate project are to provide an opportunity for students to demonstrate their capacity to bring together their advanced skills and knowledge that have been gained as part of their coursework and apply these to a real-world engineering problem. The depth and extent of the project can vary with credit point requirements.

The project may involve the development of a new technology, product and/or process, or the application of existing technologies, products and methods in a new way to solve a problem. In certain cases it may be appropriate to undertake a critical review of a method, ideas, a technology or combinations of these. In all cases it is vital that the project can demonstrate a 'value-added' component that the student has originated.

The planning, implementation and documentation of the project are supervised by a member of academic staff from the UTS: Engineering. The scope of the work, the deliverables for assessment and the assessment criteria are negotiated between the student and the academic supervisor and documented in a learning contract that is signed by the student and supervisor(s) (and approved by the director of postgraduate coursework programs). Industry-based projects are highly encouraged and an additional industrial supervisor may be involved. The responsibility of finding a suitable project topic and an academic supervisor rests with the student.

Spring semester, City campus

49069 Leadership and Responsibility

6cp

Postgraduate

This subject develops an understanding of the role of engineering managers as responsible leaders in organisations. It focuses on the need to work through other people, not only subordinates and supervisors, but other managers and leaders. The subject provides a comprehensive review of leadership theory. It teaches that there exists many complex facets of leadership and emphasises the belief that one should not accept a position of trust without accepting the responsibility that goes with it.

However, the art of leadership cannot be learned solely from books or virtual cafes; it needs to be experienced and practised face-to-face. A central teaching element of this subject is class-based activities that require engagement, motivation, critical thinking, verbal communication, group participation and performance under time pressure.

Spring semester, City campus

49098 Engineering Financial Control

6cp
Postgraduate

This subject introduces students to the basics of accounting and financial transactions. The subject is practice based and the transaction section is assessed by input accounting entries into the MYOB accounting system. Financial statements are then examined in detail and the process of accounting for equity and assets is explained. Ratio, breakeven and sensitivity analyses are performed on companies' financial statements to determine how well the businesses are performing.

A budgeted project plan is prepared and costed as part of the assessment and the working capital cycle is explored. Microsoft Project is used for the project budgeting assignment. Financial mathematics and discounted cash flow techniques are used to assess projects and investment decisions. Debt and equity from angels, venture capitalists, banks and informal investors are outlined as potential sources of funding for new projects and opportunities.

Autumn semester, City campus

Spring semester, City campus

49102 Traffic and Transportation

6cp; block; availability: all courses

Requisite(s): (48370 Road and Transport Engineering AND (120 credit points into C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering))

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

The objective of this subject is to provide students with the knowledge to implement traffic engineering principles in local government in accordance with current practice in NSW. Student are introduced to standards adopted by the Roads and Traffic Authority NSW and Austroads. The subject provides the basic principles of transportation planning and comprehensive traffic engineering, including technical aspects and the influence of environmental legislation and political factors.

Typical availability

Autumn semester, City campus

49105 Water Supply and Wastewater Management

6cp; distance only; availability: all courses

Postgraduate

This subject concentrates on the design, operation and maintenance of municipal wastewater treatment plants, sewerage systems and water supply systems. At the completion of the subject, students understand drinking water and sewage treatment plants, sewerage systems and water reticulation systems in terms of purpose, basic design concepts, operation and maintenance, identifying and quantifying major problems, and operating these systems to avoid or overcome problems. Subject content includes statutory requirements, constituents and quality of wastewaters, description, operation and control of treatment process, performance monitoring, sewerage and water reticulation systems, troubleshooting and problem solving.

Typical availability

Autumn semester, City campus

49106 Road Engineering Practice

6cp; block; availability: all courses

Requisite(s): (48370 Road and Transport Engineering AND (120 credit points in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering))

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

The aim of this subject is to equip students with the ability to design, construct and maintain roads in accordance with current practice in NSW. This includes pavement design, as well as the geometric design of roads. The subject embraces the standards adopted by the Roads and Traffic Authority NSW, AUSTRROADS and the Australian Road Research Board. Particular attention is paid to the requirements of the residential street network. Students also develop an understanding of current issues in road engineering, particularly quality assurance contracts, road safety needs of pedestrians and cyclists, and the use of innovative techniques in road construction and maintenance.

Typical availability

Spring semester, City campus

49107 Urban Stormwater Design

6cp; block; availability: all courses

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject aims to teach students to design urban drainage structures such as culverts, WSUD and OSD systems. Students also learn to design property, street pipe and trunk drainage systems. A further objective is to familiarise students with methods of urban drainage design set out in recent manuals, with an emphasis on flood protection and integration with stormwater quality enhancement. The subject also provides an overview of rural design flood estimation, erosion protection, flood mitigation and coastal engineering.

Typical availability

Autumn semester, City campus

49108 Local Government Powers and Practice

6cp; distance; availability: all courses

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Note: This subject is not suitable for international and/or exchange students unless they plan to practise in NSW.

This subject aims to provide the local government engineer with the necessary skills to operate within the legal framework of legislative requirements and procedures governing local government in NSW; provide appropriate knowledge of the law, to operate effectively within environmental, economic, social and physical constraints; and provide the knowledge and expertise to manage the environment in a practical and effective manner. It covers the history of local government in NSW, the local government engineer as a senior officer, the *Local Government Act 1993* and companion legislation, Local Government Regulations and the *Roads Act 1993*.

Typical availability

Autumn semester, City campus

49109 Engineered Natural Water Treatment Systems

6cp; block, distance

Requisite(s): 120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Current approaches to environmental management of land and water resources increasingly focus on engineered natural systems for many types of wastewaters. They seek to enhance the natural biogeochemical environment for the treatment of hazardous contaminants. These systems include stabilisation ponds, effluent irrigation and wetlands. They are applied to stormwater management, septic effluent, and polluted surface and groundwater. The effective design of these systems requires the ability to predict the behavior of a chemical substance in a soil- or aquatic-based system. This subject examines a range of engineered natural systems and how the characteristics of various wastewaters impact upon contaminant reactivity within those engineered environmental systems. Students develop an understanding of the selection, design and operation of these systems.

Typical availability

Autumn semester, City campus and distance

49110 3G Mobile Communication Systems

6cp

Requisite(s): [49048 Wireless Networking Technologies AND 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering]]

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject aims to use fundamental knowledge of 3G and UMTS (Universal Mobile Telecommunications System) to develop a detailed understanding of how services, network functions, radio and other network management techniques are realised in current UMTS networks. Participants study the evolution, architecture, functionality, and operation of 3G and UMTS technologies and future 4G technologies. The subject covers evolution of mobile communication, standardisation, UMTS services and applications, network architecture, WCDMA: principles, radio resource management, UMTS traffic management, UMTS signalling, UMTS network planning, HSDPA and LTE.

Typical availability

Spring semester, City campus

49113 Water Quality Modelling

6cp; block attendance; availability: all courses

Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject aims to develop students' understandings of the nature of pollution processes and of engineering systems for the reduction of pollution, particularly in receiving waters. Modelling using appropriate software packages such as MUSIC, STORM, QUAL2E and AQUALM-XP is undertaken in the computer laboratory and is also required in the assignments for this subject. The subject also teaches students how to develop their own application-specific, simple computer models for water quality using either spreadsheets or Microsoft VisualBasic, however prior programming experience with VisualBasic is not required for this subject. Pollution management systems are also explained in terms of social and technical requirements, investigation techniques such as monitoring and modelling, and the rationale for design and implementation of remedial measures. Students should gain an appreciation of the integration between pollution prevention and flood protection measures. They will become familiar with commonly used procedures and aware of problems encountered in practice. Hands-on experience with the MUSIC, STORM, QUAL2E and AQUALM-XP computer model will be provided.

Typical availability

Spring semester, City campus

49115 Facade Engineering

6cp

Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject introduces students to the concepts and techniques involved in facade engineering and their application to the design and procurement of cladding systems. A building's facade needs to satisfy a complex range of performance criteria, including the exclusion of adverse weather (wind and rain) and the moderating of heat, light, and sound. At the same time the facade needs to be durable and safe (structurally sound).

Students in this subject develop an understanding of the various types of facades such as masonry, concrete and glazed curtain walls, and the fundamental design principles that underpin their performance. In addition, this subject intends to bridge the gap between consultant and contractor in order to adopt a holistic approach toward the design and procurement of a building's facade.

The subject also aims to apply the principles learnt in structural engineering to building materials such as aluminium, glass, and structural adhesives that are commonly used in facade construction, together with the compatibility and durability issues that they must satisfy.

Typical availability

Autumn semester, City campus

Offered in even years only. This subject will next be offered in Autumn 2012.

49116 Contaminated Site and Waste Remediation

6cp; block, distance

Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

There is an increasing need to remediate contaminated sites and manage hazardous wastes. It can be technically challenging due to complex biogeochemical interactions between waste, rocks, water and microbes in response to physical and chemical manipulation. There is a need for remediation practitioners to be able to conceptualise these systems and simulate the processes involved. This subject examines a range of contaminant remediation systems, important geochemical processes and contaminants. An integral part of the subject is the application of geochemical modelling codes to practical remediation problems.

Typical availability

Spring semester, City campus

49117 Floodplain Risk Management in NSW

6cp; block; availability: postgraduate students only

Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject aims to teach students the main elements of floodplain risk management (FRM) as practised in New South Wales. The FRM process in NSW provides for informed decision-making in the strategic management of flood risk through an appropriate:

- understanding of flood behaviour in the catchment in its current condition and in considering the long term development of the catchment
- understanding of the variation in hazard across the floodplain and its different sources and the associated consequences for existing and future development
- assessment of options to manage flood risk to existing development through mitigation measures from a broad perspective consistent with the NSW Flood Prone Land Policy
- assessment of options to develop the floodplain in consideration of flood hazard and behaviour to ensure that development extents and conditions are consistent with the maintenance of flood behaviour, the residual flood hazard and the objectives of the policy.

The subject is aimed at a wide body of students seeking a detailed knowledge and background in FRM and associated land use planning issues in NSW. The subject is supported by the NSW Department of Environment and Climate Change and the Floodplain Management Authorities of NSW.

Typical availability

Spring semester, City campus

49118 Applied Geotechnics

6cp

Requisite(s): (48330 Soil Behaviour AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering))

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

The purpose of this subject is to provide practical awareness and advanced problem solving techniques to students who wish to widen their analysis and design skills in the field of geotechnical engineering. The subject comprises lectures, design studies, laboratory sessions, detailed design projects and individual technical presentations. The syllabus covers revision of soil mechanics, foundation design, introduction to rock mechanics, geotechnical aspects of pavements, excavation methods and supporting systems, introduction to embankment dams, geotechnical aspects of landfills, tunnelling and laboratory testing techniques and limitations.

Typical availability

Spring semester, City campus

49119 Problematic Soils and Ground Improvement Techniques

6cp

Requisite(s): ((120 credit points in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering) AND 48360 Geotechnical Engineering AND 48330 Soil Behaviour)

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

The main purpose of this subject is to study the properties of problematic soils and the associated difficulties related to the construction of structures on these soils and also to introduce the design principles in ground improvement techniques. Major emphasis of this subject is on understanding the concept of failure in soil mechanics and being able to recommend suitable ground improvement methods for a range of problematic soils. Topics include classification of problematic soils, and the associated problems; design and construction methods including compaction, reinforcement, preloading, grouting, dynamic replacement, deep soil mixing, concrete columns, design and construction methods of slope stabilisation methods; as well as design and installation of monitoring devices to observe behaviour of the improved ground.

Typical availability

Autumn semester, City campus.

49121 Environmental Assessment and Planning

6cp; block, distance; availability: all courses (core for MEEM)

Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject analyses the principles of sustainable development and the expectations it places on various aspects of human interaction with the environment. Existing and proposed measures by governments are examined in the areas of environmental legislation, environmental economics and land use planning in relation to sustainable development.

Typical availability

Spring semester, City campus

49122 Ecology and Sustainability

6cp; block, distance; availability: all courses (core for MEEM)

Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The aim of this subject is for students to examine the fundamental principles of ecological systems and biodiversity, and in the context of ecological sustainable development gain an understanding of the effect of human impact on these systems. Environmental problems relating to air, water, soil and noise pollution, greenhouse and the disposal of solid and hazardous waste will be studied. Using local and regional case studies, students will learn to evaluate and develop strategies and management practices to achieve sustainable solutions for these problems and examine other areas such as ecotourism and industrial ecology.

Typical availability

Spring semester, City campus

49123 Waste and Pollution Management

6cp; block, distance; availability: all courses (core for MEEM)

Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

In this subject waste minimisation and pollution control are treated in an integrated and comprehensive manner, permitting evaluation of benefits of waste minimisation to industry and of pollution reduction in the environment. Students are introduced to leading edge technologies of waste minimisation and pollution control such as membrane processes; raw materials extraction and refinement; product development including design, manufacture, use, re-use/ recycling and environmental auditing of the product life cycle. An understanding of management techniques for solid /hazardous and liquid wastes is developed. Other topics comprehensively covered include institutional barriers to improving the technologies of waste technology and management practices adopted in domestic waste, the paper industry, metal plating industry, food and dairy industry, household waste and water recycling in buildings.

Typical availability

Autumn semester, City campus

49124 Water Quality Management

6cp; block, distance; availability: all courses (core for MEEM)

Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The focus of this subject is integrated catchment management. It examines water systems including natural water bodies (streams, estuaries, groundwater), and related human infrastructure (water supply, sewerage and stormwater drainage systems), and provides an assessment of the impacts and methods of monitoring pollution in these environments in relation to water quality, natural flora and fauna, aesthetics and public health. It provides students with a general knowledge of these systems, their vulnerability to pollution and degradation, and remedial measures. Particular emphasis is given to water quality in urban environments.

Typical availability

Spring semester, City campus

49125 Environmental Risk Assessment

6cp; 3hpw; distance; availability: all courses (core for MEEM)

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The objectives of this subject are to introduce graduates working in environmental engineering, auditing or impact assessment, and senior undergraduates from any faculty, to the study of risk assessment in relation to environmental issues. Students gain an understanding of the concepts of risk perception, risk communication, risk acceptability and risk modification, and their application to impact assessment and environmental management planning decisions. Students also learn how to undertake as well as critically review risk assessment.

Typical availability

Spring semester, City campus

49126 Environmental Management of Land

6cp; block, distance; availability: all courses (core for MEEM)

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines the basic concepts and principles of land resource compilation requirements for environmental planning and management.

Topics include management strategies for wetland development, coastal rehabilitation, as well as for landscapes with acid sulphate soil, salinity and contamination problems. Knowledge is also gained in environmental auditing and in visual assessment used in landscape design. On completion the student should be able to interpret and critically evaluate the affects of physical and social limitations on urban and semi-urban land use change and devise sustainable development and management strategies.

Typical availability

Autumn semester, City campus

49127 Decentralised Water and Wastewater Treatment

6cp; block attendance; availability: all courses

Requisite(s): (120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering) AND (48350 Environmental and Sanitation Engineering OR 48840 Water Supply and Wastewater Engineering)

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

Due to increased urban sprawl, the development of decentralised water and wastewater treatment systems is becoming more commonplace in unsewered parts of Australia. Decentralised systems have many advantages compared to centralised systems, for some circumstances. This subject introduces students to the differences in using centralised and decentralised systems and discusses different types of decentralised systems available for water supply and wastewater management for single households or small complexes of units. The subject introduces students to the different technical aspects and allows them to develop skills in the design and operation of these systems. This subject will also look at the overall management of water from water supply to wastewater generation, treatment, and re-use

on-site through irrigation. One aspect of the subject is to look at the different types of systems available in Australia and understand the technology that is applied. Current environmental legislation related to decentralised wastewater treatment and disposal, its strengths and its shortcomings are also covered in this subject.

Typical availability

Spring semester, City campus

49131 Bridge Design

6cp; 2hpw block attendance; availability: all courses

Requisite(s): (48389 Computer Modelling and Design AND (120

Credit Points in C10061 Bachelor of Engineering Diploma in

Engineering Practice OR 120 Credit Points in spk(s): C10066

Bachelor of Engineering Science OR 120 Credit Points in spk(s):

C10067 Bachelor of Engineering))

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject introduces students to the fundamentals of design, maintenance and management of road bridges, using a problem-based learning approach that focuses on extensive use of examples from practice and detailed case studies. Three essential themes are used to cover the course material: overview of appropriate structural forms for bridges; load and analysis models/methods for designing bridges and quantifying structural behaviour; and management of bridge assets, including inspection and assessment techniques and maintenance and rehabilitation technologies. The subject is unique in that it not only covers design issues for Australian conditions, but also addresses the critical area of maintenance and rehabilitation using 'state of the art' technologies. The course material has been developed jointly by specialist bridge engineers from the Centre for Built Infrastructure Research at UTS and bridge section of the Roads and Traffic Authority NSW.

Typical availability

Spring semester, City campus

49133 Steel and Composite Design

6cp; 3hpw; availability: all courses

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120

credit points of completed study in C10066 Bachelor of Engineering

Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: assumed knowledge is of structural steel design to AS4100 Steel Structures for beams, columns and beam-columns and also of the fundamentals of solid mechanics and of the structural analysis of indeterminate structures.

Postgraduate

Assumed knowledge is of structural steel design to AS4100 Steel Structures for beams, columns and beam-columns. With this basis of assumed knowledge, this subject introduces students to the plastic analysis of statically indeterminate steel beams and simple frames and the consequent design requirements of AS4100. The subject also introduces students to the analysis and design of composite steel and concrete beams to AS2327 Composite Structures, of concrete slabs acting compositely with permanent steel formwork, with some reference to AS4600 Cold Formed Steel Structures and, briefly, of composite columns and composite connections. Further, there may be an introduction to structural steel design for torsion.

Typical availability

This subject is not currently offered. Students interested in this subject are advised to consult with the head of the School of Civil and Environmental Engineering.

Note(s)

The requisite information presented in this subject description covers only academic requisites. Full details of enforced rules, covering both academic and admission requisites, are available at Access_conditions and My Student Admin.

49134 Structural Dynamics and Earthquake Engineering

6cp; 3hpw or block attendance; availability: all courses
Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

This subject introduces students to the concepts and techniques of structural dynamics and their application to the design and analysis of dynamically sensitive structures such as tall buildings, towers, chimneystacks and footbridges. Students develop: an understanding of the nature of dynamic (time varying) loads, with particular emphasis on earthquake loads; the ability to assess the response of civil engineering structures to such loads, taking into account load-structure interaction; and structural design approaches satisfying both strength and serviceability requirements.

Typical availability

Spring semester, City campus

49135 Wind Engineering

6cp; 3hpw; availability: all courses
Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

This subject introduces basic concepts and fundamental principles in wind engineering and their application to structural design and analysis of structures, such as buildings, towers, chimney stacks and bridges, in accordance with strength and serviceability limit-states design criteria. On completion, students understand the nature of wind loads acting on buildings due to along and cross-wind actions, and be able to prevent aerodynamic instabilities such as flutter, galloping, torsional divergence and others by proper design. Wind tunnel testing techniques for determining wind-induced dynamic response of structures and cladding pressures are introduced, and the environmental effects of severe winds around buildings and other structures are studied in terms of human safety and comfort.

49136 Application of Timber in Engineering Structures

6cp; 3hpw; availability: all courses
Requisite(s): [48389 Computer Modelling and Design AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering)]
These requisites may not apply to students in certain courses. See access conditions.
Postgraduate

This subject presents recent advances that have enhanced the role of timber as a versatile renewable resource with a wide range of applications in engineered structures. It familiarises students with the structural behaviour of timber and timber-based manufactured products to facilitate the choice of materials, design, construction and maintenance procedures to produce cost-effective, durable and aesthetically pleasing structures. Quality control and reliability issues form an important focus. Particular requirements of residential large span industrial structures (including connection design), and multistorey buildings and bridges and the use of the limit-states version of AS1720 are addressed.

Typical availability

Spring semester, City campus

49143 Civil Engineering Review 1

6cp
Postgraduate
The subject description is available from UTS: Engineering.

49144 Civil Engineering Review 2

6cp
The subject description is available from UTS: Engineering.

49147 Graduate Project 30cp (Part 1 of 3) (6cp + 12cp + 12cp)

6cp; individual supervision; availability: Master of Engineering
Postgraduate

A graduate project is a significant body of engineering work that is conducted in a professional manner and documented in a comprehensive report. It provides an opportunity for the student to demonstrate their capacity to bring together their advanced skills and knowledge gained as part of their coursework, and apply these to a real-world engineering problem. The depth and extent of the project can vary with credit point requirements.

The project may involve the development of a new technology, product and/or process, or the application of existing technologies, products and methods in a new way to solve a problem. In certain cases it may be appropriate to undertake a critical review of a method, ideas, a technology or combinations of these. In all cases it is vital that the project can demonstrate a 'value-added' component that the student has originated.

The planning, implementation and documentation of the project are supervised by a member of UTS: Engineering academic staff. The scope of the work, the deliverables for assessment and the assessment criteria are negotiated between the student and the academic supervisor and documented in a learning contract that is signed by the student and supervisor(s) (and approved by the director of postgraduate coursework programs). Industry-based projects are highly encouraged and an additional industrial supervisor may be involved. The responsibility of finding a suitable project topic and an academic supervisor rests with the student.

Typical availability

Autumn semester, City campus

Spring semester, City campus

49148 Graduate Project 30cp (Part 2 of 3) (6cp + 12cp + 12cp)

12cp; individual supervision; availability: Master of Engineering
Postgraduate

A graduate project is a significant body of engineering work that is conducted in a professional manner and is documented in a comprehensive report. 49150 Prestressed Concrete Design

6cp; 3hpw; availability: all courses

Requisite(s): [48353 Concrete Design AND (120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: knowledge of linear-elastic analysis of cracked and uncracked PSC sections, equivalent loads and load-balancing techniques for PSC beams, design to AS 3600 Concrete Structures for ultimate moment capacity, shear and strength at transfer of statically determinate PSC beams, and the fundamentals of the structural analysis of indeterminate structures
Postgraduate

It is assumed that students have a knowledge of linear elastic analysis of uncracked and cracked sections, equivalent loads and load balancing techniques and design for ultimate moment capacity and strength at transfer. On the basis of this assumed knowledge, analysis and design for shear and end block reinforcement in prestressed concrete beams will be covered initially; analysis and design of tension members, compression members, continuous beams and continuous flat slabs, in accordance with the requirements of the current version of AS3600 Concrete Structures will then be covered. In addition, the subject may also cover analysis and design for torsion or of bandbeam slab systems.

Typical availability

Spring semester, City campus

49151 Concrete Technology and Practice

6cp; 3hpw; availability: all courses

Requisite(s): [(120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering) AND 48352 Construction Materials]

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject develops advanced engineering knowledge and capabilities pertaining to the specification, production, properties, testing and application of concrete as a construction material. Mini individual projects focusing on topics related to the subject content will form part of the learning process.

Topics include concrete fundamentals, concrete production and quality control, environmental concrete, deformation and cracking of concrete, testing of concrete and special concrete.

Typical availability

Spring semester, City campus

This subject is offered in odd years only; it will next be offered in 2013.

49153 Graduate Project 30cp (Part 1 of 2) (2 x 15cp)

15cp; individual supervision over one semester; availability: Master of Engineering, Master of Engineering Studies (Honours)
Postgraduate

The project is a course requirement taken over one or two semesters or, in exceptional circumstances, three. It is undertaken on an individual basis, except in special circumstances approved in advance by the Faculty Board in Engineering, and provides opportunity for the integration and application of advanced skills and knowledge gained in part through other subjects taken during the course. The depth and extent of the project varies with credit-point requirements. These are set on the basis of an agreed project plan submitted by the student to the supervisor, and approved by the Director, Postgraduate Coursework Programs. The project may involve: the development of new technology (hardware and/or software); the application of technology; research addressing a significant technical or engineering management issue or in special circumstances; and a critical review in the area of the student's concentration, describing key contributions in the field covered by the project work undertaken, results achieved and a discussion of their significance and implications.

Typical availability

Autumn semester, City campus

Spring semester, City campus

49154 Graduate Project 30cp (Part 2 of 2) (2 x 15cp)

15cp; individual supervision over one semester; availability: Master of Engineering, Master of Engineering Studies (Honours)
Postgraduate

49195 Graduate Project 18cp (Part 1 of 2) (6cp + 12cp)

6cp; individual supervision; availability: Master of Engineering
Postgraduate

A graduate project is a significant body of engineering work that is conducted in a professional manner and is documented in a comprehensive report. It provides an opportunity for students to demonstrate their advanced skills and knowledge that have been gained as part of their coursework and apply these to a real-world engineering problem. The depth and extent of the project can vary with credit point requirements. The project may involve the development of a new technology, product and/or process, or the application of existing technologies, products and methods in a new way, to solve a problem. In certain cases it may be appropriate to undertake a critical review of a method, ideas, a technology or combinations of these. In all cases it is vital that the project can demonstrate a 'value-added' component that the student has originated. The planning, implementation and documentation of the project are supervised by a member of academic staff from the Faculty of Engineering and Information Technology. The scope of the work, the deliverables for assessment and the assessment criteria are negotiated between the student and the academic supervisor and documented in a learning contract that is signed by the student and supervisor(s) (and approved by the director of postgraduate coursework programs). Industry-based projects are highly encouraged and an additional industrial supervisor may be involved. The responsibility of finding a suitable project topic and an academic supervisor rests with the student.

Typical availability

Autumn semester, City campus

49201 Integrated Services Networks

6cp; 3hpw; availability: all courses

Requisite(s): [48740 Communications Networks AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: familiarity with TCP/IP and general networking concepts

Postgraduate

This subject gives students a thorough understanding of the fundamental concepts of telecommunication networks designed to carry multiple classes of traffic simultaneously, with the focus being on the provision of services for carrier-class networks. Design and analysis techniques are studied, as well as particular technologies such as ISDN, ATM, SONET, SDH, HFC, ADSL, FTTC, FTTH, PON, GigE, MPLS and IP-VPNs, with the emphasis being on IP/MPLS infrastructures and services.

Typical availability

Spring semester, City campus

49202 Communication Protocols

6cp; 3hpw; availability: all courses

Requisite(s): [48740 Communications Networks AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

Students completing this subject have a good understanding of the theory of communication protocols, its application to popular protocols, in particular TCP/IP, and in the analysis of performance and troubleshooting protocol issues in large carrier-grade networks. A significant laboratory component allows students to gain deeper insights into the theory through the use of the Wireshark packet sniffing application. The Alcatel-Lucent course from the service router certification program (www.alcatel-lucent.com/src/3FL30632AAAAZZZZA) (called scalable IP networks) has been integrated into this subject and allows students (together with an optional two-day short course and external exam) to gain the Networking Routing Specialist 1 (NRS1) industry certification.

Study of an additional three UTS subjects (49201, 42902, 42903), another two-day short course, three external exams and one lab exam allows students to gain the NRS2 industry certification.

Typical availability

Autumn semester, City campus

49203 Telecommunications Signal Processing

6cp; 3hpw, distance; availability: Telecommunications major only

Requisite(s): [48770 Continuous Communications AND (120 credit points in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject focuses on one aspect of telecommunications signal processing: source coding of images and audio. Incorporated in this main topic are characterisation of random signals using autocorrelation function and power spectral density, optimal linear prediction of signals (including Wiener filtering), quantisation of signals using pulse coding modulation, and differential pulse code modulation, linear transforms (Discrete Fourier Transform, Discrete Cosine Transform, Karhunen-Loeve Transform), sub-band coding transforms and lossless compression. These topics are brought together with an in-depth examination of JPEG coding of images. Finally, the implementation of various other compression methods, including MPEG-2, MPEG-4, MPEG-audio and various techniques of speech coding, is discussed.

Typical availability

Autumn semester, City campus

49205 Transmission Systems

6cp; 3hpw; availability: all courses

Requisite(s): [48750 Network Planning and Management AND (120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject aims to give students a thorough understanding of the physical layer of modern telecommunication systems. This includes systems that transmit through wires, free space (both terrestrial and satellite systems), co-axial cables and optic fibres. The subject focuses on current technologies such as Ethernet, broadband access technologies, passive optical networks, and to some extent, cellular wireless systems (although these are covered in much more detail in other subjects).

Typical availability

Autumn semester, City campus

49215 Telecommunications Industry Management

6cp; 3hpw; availability: all courses

Requisite(s): [48750 Network Planning and Management AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

The subject provides an understanding of commercial issues with particular reference to the global telecommunications industry. It is the subject objective to help engineers in their working careers to participate in business discussions within larger organisations and to assume a wider managerial and organisation role. In smaller enterprises or in individual engineering projects, financial and commercial knowledge will allow engineers to gauge the economic and marketing viability of a technical undertaking. The subject covers the socioeconomic environment and commercial and managerial aspects of a telecommunications enterprise. Financial considerations of the telecommunications sector and of interconnect issues are discussed.

Typical availability

Spring semester, City campus

49223 Satellite Communication Systems

6cp; availability: Telecommunications Engineering program only

Requisite(s): [48740 Communications Networks AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject focuses on satellite and earth station design principles including geostationary, medium earth orbit, and low earth orbit communication systems. Topics include an introduction to communication satellites, tracking, satellite system architecture, and design and performance trade-off issues.

Typical availability

Spring semester, City campus

49225 Software Project Management

6cp; 3hpw or block attendance or part-time; availability: all courses
Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.
Recommended studies: 49265 Software Technologies
Postgraduate

This subject aims to present and develop the confidence and software project management skills required to become effective project team leaders and potential project managers. The course covers such concepts as team constitution, business aspects, technical organisations charts and cost estimates, scheduling and monitoring, and maintenance. The course proposes an analysis of existing software project management tools and groupware technologies. Apart from the theoretical presentations, much time is given to participants reviewing their past experience and doing illustrative exercises.

Typical availability

Spring semester, City campus

49227 Wireless Sensor Networks

6cp
Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering
These requisites may not apply to students in certain courses. See access conditions.
Postgraduate

Wireless sensor networks are distributed systems, in which autonomous devices, sometimes called Motes, collect environmental data (such as location, speed, temperature, humidity and sound level) or, more recently, medical data (such as heart rate, blood oxygen level and pulse rate). The data is collected across the network, aggregated and fed into business applications. Sensor networks are an enabler for very different applications, including environmental monitoring, agricultural monitoring, medical monitoring, habitat monitoring and military surveillance.

49228 Enabling e-Business Technology

6cp
Postgraduate
For further details, contact UTS: Engineering.

49238 Telecommunication Networks Management

6cp; 3hpw; availability: Telecommunications Engineering program only
Requisite(s): (48740 Communications Networks AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering))
These requisites may not apply to students in certain courses. See access conditions.
Postgraduate

This subject is designed for telecommunications engineers working with telecommunications carriers and suppliers of hardware and software infrastructure that supports the provision of telecommunications services to clients. It begins with an historical overview of the evolution of telecommunications networks with particular emphasis on the deregulated environment that has been the characteristic of the last decade. The role of standards making bodies to ensure inter-operability is highlighted. The bulk of the subject examines the technical details of particular standards such as SNMP, TMN and CORBA. The subject concludes with an examination of future challenges associated with the operation of very large scale distributed systems and a look at current vendor solutions.

Typical availability

Spring semester, City campus

49247 Object-oriented Technology

6cp; 3hpw
Requisite(s): 120 credit points of completed study in Completion of 120 credit points in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in Completion of 120 credit points in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in Completion of 120 credit points in C10067 Bachelor of Engineering
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.
Postgraduate

This subject utilises Java Language and aims to equip students with techniques and knowledge of methods of building small to large software systems using an object-oriented focus, based on standards, common industry practices and formal methods. OOT&J employs object orientation from requirements analysis, software design (high and low level) represented in standard notation as employed by UML, then by using automatic techniques as employed by modelling systems, such as Rational Rose, into software classes, methods and data structures. All this is taught independently of any object-oriented (OO) software language. From this beginning, the subject then has three basic streams: the teaching and practice in an OO software language - the Java Language; various methods in data structuring using an OO database system and the definition and use of software class libraries (for the Java language).

49249 Telecommunications Engineering Review

6cp
Postgraduate

The subject description is available from UTS: Engineering.

Typical availability

Autumn semester, City campus
Spring semester, City campus

49254 Advanced Soil Mechanics and Foundation Design

6cp
Requisite(s): ((120 credit points in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering) AND 48360 Geotechnical Engineering)
These requisites may not apply to students in certain courses. See access conditions.

The main purpose of this subject is to study the latest theoretical and experimental approaches for solving problems in the broad area of soil mechanics including stress-strain analysis and consolidation theory as well as design of shallow and deep foundations under combined vertical and horizontal loads. This subject covers many interesting issues including: critical state soil mechanics, soil plasticity, unsaturated soil mechanics, soil dynamics and earthquake geotechnics, elastic and visco-plastic deformation of footings, pile group and piled raft design, pile driving test and design and construction of caissons.

Typical availability

Spring semester, City campus

49255 Catchment Modelling

6cp
Requisite(s): ((120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering) AND 48362 Hydraulics and Hydrology)
These requisites may not apply to students in certain courses. See access conditions.
Postgraduate

This subject is an introduction to the concepts and reductionist approach involved in the modelling of catchment processes influencing the quantity and quality of surface runoff from a catchment. Also introduced are the different forms of models, how these models are combined to provide a catchment modelling system, and implementation of catchment modelling systems inclusive of the

calibration and validation of the system. Included in this discussion is an introduction to the processes influencing the generation and movement of surface runoff and pollutant constituents, and the routing of these flows and constituents along the channels and rivers in a catchment drainage network. Finally, the information and data required for operation of these modelling systems and sources of this information are also discussed.

Typical availability

Spring semester, City campus

49256 Flood Estimation

6cp

Requisite(s): (48362 Hydraulics and Hydrology AND (120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering))

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

The first part of the subject provides an introduction to and background on design flood estimation. Following on from this is a discussion of the frequency analysis of hydrological data (inclusive of climatic and flow data). Some of the more popular statistical models using flood frequency analysis are presented together with their application. Finally, techniques for flood flow estimation in the absence of historical data is presented; these techniques include aspects related to design rainfall data; regional flood methods; and estimation of extremes.

Typical availability

Autumn semester, City campus

49257 Geographic Information Systems

6cp

Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject introduces students to the use and potential of geographic information systems (GIS) mostly in engineering projects. The lectures cover general concepts of GIS and introduce the material of the exercises that are designed to provide hands-on experience using the ArcGIS software package. The subject also covers data acquisition using mobile GIS and GPS for the purpose of site selection, site mapping, data processing and analysis. In addition, principles of environmental and spatial modelling are discussed and illustrated by case studies including water balance modelling, groundwater modelling and digital terrain modelling.

Typical availability

Autumn semester, City campus

49258 Pavement Analysis and Design

6cp

Requisite(s): ((120 credit points in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering) AND 48330 Soil Behaviour)

These requisites may not apply to students in certain courses. See access conditions.

Solid knowledge of and ability to analyse and design different types of pavements together with their material characterisation, construction aspects, maintenance and management are considered necessary for those who would like to work in the field of geotechnical engineering. The syllabus covers: an introduction to basic types of pavements (bituminous, concrete and interlocking concrete pavers); stress and strain analysis of rigid and flexible pavements; pavement materials; drainage design; design of rigid and flexible pavements; pavement maintenance and management systems; and also pavement construction techniques and limitations.

Typical availability

Spring semester, City campus

49261 Biomedical Instrumentation

6cp; 3hpw; availability: all courses

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject covers general concepts applicable to the design of all medical instrumentation systems, the measurement of biopotentials and critical-care analyses for diagnostic purposes, and the design of biomedical devices for therapeutic purposes. The subject includes three modules covering sensors and amplifiers, vital sign monitoring for diagnostic purposes, and physiological intervention/closed-loop control.

Typical availability

Spring semester, City campus

49262 Web Technologies

6cp; 3hpw

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: 49265 Software Technologies

Postgraduate

This subject covers current and future web technologies and the design, development and management of web-based systems.

The following material is covered: information concepts; web development processes; web system design models and methods; web modelling frameworks; web system architectures; web system quality; web evaluation; scoping of web projects; development risks; social issues; web programming languages and web application frameworks; PHP and MySQL; internet of things; cloud computing and big data; mobile computing; and HTML5.

Typical availability

Autumn semester, City campus

Spring semester, City campus

49274 Advanced Robotics

6cp; 3hpw; availability: all courses

Requisite(s): ((120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering OR 120 Credit Points in spk(s): C10062 Bachelor of Engineering Bachelor of Arts in International Studies Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10063 Bachelor of Engineering Bachelor of Arts in International Studies OR 120 Credit Points in spk(s): C10065 Bachelor of Engineering Bachelor of Business OR 120 Credit Points in spk(s): C10068 Bachelor of Engineering Bachelor of Business Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10073 Bachelor of Engineering Bachelor of Science OR 120 Credit Points in spk(s): C10074 Bachelor of Engineering Bachelor of Science Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10075 Bachelor of Engineering Bachelor of Medical Science OR 120 Credit Points in spk(s): C10076 Bachelor of Engineering Bachelor of Medical Science Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10078 Bachelor of Engineering Bachelor of Biotechnology OR 120 Credit Points in spk(s): C10079

Bachelor of Engineering Bachelor of Biotechnology Diploma in Engineering Practice) AND (48430 Embedded C OR 48623 Mechatronics 2) AND 48531 Electromechanical Automation)
These requisites may not apply to students in certain courses. See access conditions.
Postgraduate

This subject presents a broad overview of the technologies associated with mobile and industrial robots. Major topics covered are sensing, mapping, navigation and control of mobile robots and kinematics and control of industrial robots. The subject consists of a series of lectures on robot fundamentals and case studies on practical robot systems. Material covered in lectures is illustrated through laboratory assignments. The objective of the course is to provide students with the essential skills necessary to be able to develop robotic systems for practical applications.

Typical availability

Spring semester, City campus

49275 Neural Networks and Fuzzy Logic

6cp; 3hpw, on campus; availability: all courses
Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

The principal objective of this subject is to introduce students to neural networks and fuzzy theory from an engineering perspective. In the identification and control of dynamic systems, neural networks and fuzzy systems can be implemented as model-free estimators and/or controllers. As trainable dynamic systems, these intelligent control systems can learn from experience with numerical and linguistic sample data.

Typical availability

Autumn semester, City campus

49285 Emergency Management

6cp; 3hpw
Requisite(s): 120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

This subject aims to teach students the main elements of emergency management for natural disasters and, to a lesser degree, terrorist attack. Students gain an understanding of the principles involved in emergency management, their application and interaction with the disaster recovery process of an affected community after a natural disaster or terrorist attack. The subject also provides insight into planning issues deployed to minimise disaster incidents. Areas of speciality within the emergency management guidelines such as floods, bushfires, etc., are covered and tailored in each course to the majority of students' working backgrounds. A practical demonstration of emergency exercise planning relating to a building collapse is also provided.

49286 Vehicle Design

6cp
Requisite(s): 48640 Machine Dynamics AND 48642 Strength of Engineering Materials AND 48650 Mechanical Design 2
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

For subject description, contact UTS: Engineering.

49306 Quality and Operations Management Systems

6cp; 3hpw; on campus, distance (distance mode is not suitable for international students); availability: all courses
Postgraduate

This subject helps students understand how to design, develop and implement operational management systems including the quality, environmental, safety, and risk management systems and how to achieve certification of the operational management systems according to the Australian and International Standards (ASNZS and ISO). The subject develops an understanding of the means of defining the structure of operational management systems in manufacturing and service organisations, determining what resources are needed to complete the documentation and the evaluation of operational management systems. It also highlights the use of an effective operational management system for continuous quality improvement.

Students with limited work experience and knowledge of these systems may find the study of ASNZS and ISO standards somewhat challenging. Thus, although this subject is available in distance study mode, it is highly recommended that these students enrol in the on campus mode and regularly attend the lectures where standards and other study materials are thoroughly discussed and studied in a team learning environment (group class exercises).

Typical availability

Autumn semester, City campus

Spring semester, City campus

49307 Internal Combustion Engines

6cp; 3hpw; availability: all courses
Requisite(s): (48651 Thermodynamics AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering))
These requisites may not apply to students in certain courses. See access conditions.
Postgraduate

This subject emphasises solutions to environmental and energy resource problems related to internal combustion (IC) engine design, development and utilisation. It introduces a pragmatic engineering field of internal combustion engines and provides opportunities to students to develop an understanding of the applications of IC engines in environmental protection, transportation, electricity generation and other areas.

49309 Quality Planning and Analysis

6cp; 3hpw; on campus, distance (distance mode is not suitable for international students); availability: all courses
Postgraduate

Quality is one of the main success factors for organisations, whether they operate in manufacturing or service and transactional sectors. A sound quality management system, based on modern and up-to-date quality planning and analysis tools and techniques, reduces rejects, warranty claims and the need for costly rework. It helps to preserve customer goodwill and builds a brand loyalty based on objective criteria rather than illusions.

Topics covered in this subject include:

- quality and its modern definition
- analysis of customer needs and customer satisfaction
- integrating quality into design of products and services
- managing supplier relations and quality of supplies
- monitoring and statistical analysis of process quality, and
- continuous quality improvement methods and programs.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Autumn semester, Hong Kong

Spring semester, Hong Kong

Summer session, Hong Kong

Winter session, Hong Kong

49312 Advanced Flow Modelling

6cp; 3hpw; availability: all courses

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

Computational fluid dynamics (CFD) is a cornerstone of modern engineering and a technology which is regarded as crucial to the success of the major economies. Along with more traditional modelling techniques, this subject provides exposure to the numerical methods in CFD computer codes and experience in the practical application of commercial CFD packages. Importantly, it develops in students skill in the evaluation of the solution integrity. The subject culminates in a major project of the students' own choosing. On completion, students should have proficiency to undertake leadership roles in this exciting new field across the entire engineering spectrum and, in particular, in the mechanical, aeronautical, civil and environmental context. The subject has particular relevance to the design of vehicles, buildings, structures, engines, turbomachinery, manufacturing processes, heat transfer, combustion behaviour, pollutant dispersal, weather patterns, ocean currents and biomedical phenomena.

49316 Materials Handling

6cp; 3hpw; availability: all courses

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The materials handling industry is very broad, covering almost all industries including mining, mineral processing, agricultural production, food processing, power production, chemical processing, manufacturing, packaging, pharmaceutical production and many others. Since the industrial revolution, people have made increasing use of mechanical methods of handling materials. This has been to such an extent that in the Western world almost everything, including food, raw materials, building materials and finished products, has probably been mechanically handled many times before it reaches the consumer.

This subjects covers the main systems and methods of mechanical handling of materials, both bulk solids handling and discrete handling of products and goods.

Topics include: screw, belt and bucket conveyors and elevators; pneumatic and hydraulic conveying of bulk solids; storage systems; and feeding, sampling and weighing of materials and systems for handling artefacts, factory products and packaged goods.

Typical availability

Autumn semester, City campus

49321 Energy Conversion

6cp; 3hpw

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Topics for the subject include three kinds of conversion systems: renewable (direct and indirect solar, wind, hydro, biomass and tidal), alternative (hydrogen and methanol) and non-renewable (coal, petroleum and natural gas) systems. Aspects to be covered include technological (thermal design concepts), economic (cost and efficiency) and environmental (climate changes, greenhouse effects, pollution and life cycle) analysis of energy conversion systems.

From an Australian perspective, the subject considers future developments for energy supply, using solar energy, wind turbines, water turbines, steam turbines, gas turbines, internal combustion engines and fuel cells relevant to social and environmental criteria.

Typical availability

Autumn semester, City campus

49322 Airconditioning

6cp; 3hpw; availability: all courses

Requisite(s): [48651 Thermodynamics AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

Airconditioning systems are required by modern society and promoted by high technology to be functional, well-controlled, energy-efficient and environmentally friendly, in maintaining human comfort and health as well as industrial productivity. The objectives of this subject are: to advance student understanding of refrigeration and airconditioning systems; to develop basic skills for carrying out the design and construction of airconditioning for buildings; and to enhance knowledge of energy conservation and management as applicable to airconditioning systems.

Topics include principles of thermodynamics and heat transfer, airconditioning systems and components, design criteria and standards, psychometry and airconditioning processing, refrigeration, load estimation, computer software for load estimation, duct and pipe design, control system, noise and pollution.

Typical availability

Autumn semester, City campus

49323 Vibration Analysis

6cp; 3hpw; availability: all courses

Requisite(s): [(120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering) AND 48642 Strength of Engineering Materials AND 48660 Dynamics and Control]

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: 48660 Dynamics and Control; 48642

Strength of Engineering Materials

Postgraduate

This subject extends students' understanding of vibration theory and its application to problems encountered in mechanical and structural engineering. It focuses on learning and practising the techniques and skills most frequently used in engineering practice. After a brief revision of basic vibration theory for single-degree-of-freedom systems, the subject moves on to multiple-degree-of-freedom systems, modal analysis, torsional vibration, approximation and numerical methods for transverse vibration including influence coefficient methods, transfer matrix method and finite element methods. Applications include vibration reduction by passive and active means, design of vehicle suspension systems, experimental modal analysis, rotor dynamics and spin stability and analysis.

Typical availability

Autumn semester, City campus

49325 Computer-aided Mechanical Design

6cp; 3 x 1.5 days (block mode); availability: all courses

Requisite(s): 120 Credit Points in spk(s): C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject extends the development of students' design skills. Students use computer-aided methods to complement and enhance the analytical and theoretical skills and knowledge obtained in

undergraduate subjects and in practice. Mechanical system simulation software is used for designing mechanical systems and controls, and to introduce virtual prototyping. A finite element analysis program is used for analysing stresses in mechanical components. Although commercially available software is used, students are not simply trained in the use of that particular program. Rather, the objective of the subject is that students understand the general approach to computer-aided engineering and the importance of having a sound knowledge of the fundamental mechanics.

Typical availability

Spring semester, City campus

49328 Turbomachines

6cp; 3hpw; availability: all courses

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Turbomachines like pumps, fans, turbines and compressors constitute a large class of fluid-moving and energy-transfer machines which are found virtually everywhere in modern societies. This subject aims to develop competence in the analysis and design of these machines and the systems of which they are parts. Key concepts and fundamental principles underlying their operation and design are covered. Factors pertaining to their selection and performance prediction are treated.

Typical availability

Spring semester, City campus

49329 Control of Mechatronic Systems

6cp

Requisite(s): [48660 Dynamics and Control AND (120 credit points of completed study in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 credit points of completed study in C10066 Bachelor of Engineering Science OR 120 credit points of completed study in C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

The objectives of this subject are to develop students' skill in understanding fundamental principles in the analysis and control of mechatronic systems, familiarise students with different advanced control techniques and teach students to be able to apply computer-based tools for practical control system design applications. Topics include state-space modelling of linear and nonlinear systems, stability, controllability and observability, linear quadratic control, observer design, H-infinity control, model predictive control, neural network control and fuzzy logic control. Case studies of engineering applications are also covered.

Typical availability

Spring semester, City campus

49330 Sensors and Signal Processing

6cp

Requisite(s): [48623 Mechatronics 2 AND (120 credit points in C10061 Bachelor of Engineering Diploma in Engineering Practice OR 120 Credit Points in spk(s): C10066 Bachelor of Engineering Science OR 120 Credit Points in spk(s): C10067 Bachelor of Engineering)]

These requisites may not apply to students in certain courses. See access conditions.

The objectives of this subject are to develop students' theoretical and practical understanding on active and passive sensing, sensor selection, evaluation, modelling, interfacing, signal processing, imaging and image processing. Topics include modulation techniques, filtering and convolution, frequency domain analysis, visual imaging and image processing, infrared imaging, passive microwave imaging, time of flight (TOF) measurement, radio tags and transponders, range tacking, doppler measurement and phase measurement. Some advanced topics such as probability of detection, angle measurement and tracking, frequency modulation, wide aperture methods, Synthetic Aperture Methods (SAR) and 3D imaging are also included.

Typical availability

Autumn semester, City campus

49655 Integrated Logistic Support

6cp; block (typically 2 x 2-day blocks)

Postgraduate

Effectiveness of engineered systems is often judged by the extent to which they fulfil their intended purpose. In order for any engineered system to fulfil its purpose in a sustained manner, the system itself must be sustained and supported. This role invariably is assigned to a 'support system'. This means that this support system must be envisaged, created and used with just as much care, thought and rigour as the system it supports. Integrated Logistics Support (ILS) is a key discipline that allows dealing with this requirement when developing, using and managing a support system. It allows the highlighting of the factors that are crucial to mission success at an early stage, using a life-cycle-based approach, and ensures that these factors are appropriately encapsulated in any system acquisition and operation.

This subject provides students with an introduction to ILS. It uses concepts from systems thinking and engineering to contextualise ILS and its importance in systems development, management and support. Students are encouraged to consider the applicability of concepts and techniques used to support various systems and their value in dealing with complexity.

49678 Reliability Availability and Maintainability

6cp; 2 x 2-day blocks; availability: postgraduate students only

Postgraduate

Effectiveness of engineered systems is often judged by the extent to which they fulfil their intended purpose. For this to happen a system must be available when required and be able to be used reliably, consistent with operational needs. This subject explores the concepts of Reliability, Availability and Maintainability (RAM), and the relationships between them. RAM directly affect the effectiveness of a system.

The approach taken to understanding the concepts include a treatment of each of the factors separately, together with a consideration of the relationships between them, so that a systemic view of RAM is obtained. Students are encouraged to consider the applicability of concepts and techniques used to their own experience in system acquisition and support.

Typical availability

Spring semester, City campus

49679 Logistic Support Analysis

6cp

For further details, contact UTS: Engineering.

49680 Value Chain Engineering Systems

6cp

Postgraduate

Value chains have become the central feature of operations management in applying engineering systems to commercial and industrial processes in the modern economy. The emphasis in this subject is on the action 'to engineer' through holistically drawing upon the full range of sciences from engineering, information technology and service sciences, management and operations strategy. The goal is to engineer value chains for productivity, quality, performance, compliance, growth, risk-sharing and learning improvement.

49701 Gas Sector Planning

6cp; block attendance; availability: all courses

Postgraduate

This subject aims to develop an understanding of the nature, characteristics and methods of gas sector planning. Topics include: nature of gas sector planning; planning perspectives; planning concepts and methods; economic and technological dimensions of gas sector planning and operation; integrated resource planning; institutional structures and ownership of the gas industry; regulatory issues; gas pricing; social, environmental and political dimensions of gas planning; and other selected topics. Emphasis is placed on achieving depth and balance in all major aspects of gas sector planning and policy, with topical case studies providing an application focus.

49702 Gas Distribution Technology and Management

6cp; block attendance; availability: all courses

Postgraduate

This subject aims to introduce the principles, concepts and methods of designing, operating and managing gas distribution systems with due regard for security, safety and other related aspects. Topics include general overview of gas distribution; typical features of gas distribution systems; gas distribution technologies; gas distribution network design; construction of gas distribution systems; network operational practices and procedures; maintenance and safety issues; management of gas distribution networks; marketing issues and technological trends. Emphasis is placed on achieving depth and balance in all aspects of the design and development of gas distribution networks, with topical case studies providing an application focus.

49703 Selected Topics (Energy Pricing)

6cp; block attendance; availability: consent of subject coordinator required

Postgraduate

This subject aims to develop in students an understanding of the microeconomic principles and methods of energy pricing. Topics include microeconomic foundations of energy pricing; demand, supply and demand-supply interactions under various market conditions; pricing as a planning tool; pricing and efficiency; methods of pricing; and case studies on the pricing of electricity, gas, oil and other energy resources.

49706 Regulatory Economics

6cp; block attendance; availability: Energy Planning and Policy core subject

Postgraduate

This subject focuses on developing an understanding of the economics of regulation, and methods and principles of regulation design for the energy sector and other sectors of the economy. Topics include: historical overview of regulation; drivers for regulation; costs and benefits of regulation; impacts of regulation; institutional structure, ownership and regulation; regulatory frameworks; regulation design; policy issues and politics of regulation; case studies on regulatory aspects will be provided from the energy section and other sectors of the economy.

Typical availability

Spring semester, City campus

49723 Research Dissertation 1 (EIT)

24cp; availability: research students from overseas universities

This subject is designed for research students from overseas universities who wish to complete part of their degree at UTS and to do so by continuing to develop and work on their ongoing thesis under the supervision of UTS academics.

49724 Research Dissertation 2 (EIT)

24cp; availability: research students from overseas universities

Requisite(s): 49723 Research Dissertation 1 (EIT)

There are also course requisites for this subject. See access conditions.

This subject is designed for research students from overseas universities who wish to complete part of their degree at UTS and to do so by continuing to develop and work on their ongoing thesis under the supervision of UTS academics. The subject extends or complements the work undertaken in Research Dissertation 1.

49776 Master of Engineering Thesis

0cp

Postgraduate

The subject description is available from UTS: Engineering.

Typical availability

49928 Design Optimisation for Manufacturing

6cp; 3hpw; availability: all courses

Requisite(s): 120 credit points of completed study in C10061

Bachelor of Engineering Diploma in Engineering Practice OR 120

credit points of completed study in C10066 Bachelor of Engineering

Science OR 120 credit points of completed study in C10067 Bachelor of Engineering

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: knowledge of computer programming

Postgraduate

The increasing demand on engineers to make their 'best' possible decisions in product design and manufacturing process at decreasing costs and a faster pace requires knowledge of methods in design optimisation. Optimisation has become a necessary part of product design and decision-making activities in mechanical, manufacturing and mechatronic engineering. This subject emphasises applications of advanced optimisation techniques in product design, manufacturing and project planning. It introduces students to an array of optimisation techniques and enables students to learn to use advanced techniques applicable in solving real product design and manufacturing problems such as machine scheduling, flexible assembly system scheduling, supply chain planning, job shop scheduling, project planning and scheduling, etc. On successful completion of this subject, students are able to understand the fundamentals of optimisation techniques and apply appropriate optimisation techniques in various applications.

Typical availability

Autumn semester, City campus

49986 PhD Thesis: Engineering

0cp

Postgraduate

The subject description is available from UTS: Engineering.

Typical availability

Autumn semester, City campus

Spring semester, City campus

49989 Operations Engineering

6cp

Every organisation has to provide value to its customer in order to survive in the current business environment. The value is an outcome of numerous processes that form the operations of an organisation. It is crucial for business success to design sound operations that are well maintained and continually improved.

In this subject, students learn how to design, manage and optimise operations in manufacturing and non-manufacturing environments. Emphasis is placed on 'lean operations' which has become the best practice for both manufacturing and service organisations. Topics include: Toyota production system, just-in-time, types of waste, managing supply chain and inventory, total productive maintenance, and six sigma improvement system. Case studies from world-class organisations in manufacturing and non-manufacturing industries are provided.

50001 Online Documentary

8cp

Elective

Recent developments in digital media platforms and technologies are enabling emerging opportunities for online digital communication by a wide range of individuals, media producers, communities and organisations. This subject allows students to develop their research and production skills in online digital content production by exploring a range of relevant conceptual, creative, and production concerns and approaches. Students engage with issues such as online documentary, Web 2.0, platform delivery, social media integration, community building and digital project planning. They expand their production skills through technical workshops and by working in small teams to develop an online digital media project, with a focus on socially relevant, factual or documentary contents and approaches.

Typical availability

Autumn semester, City campus

Spring semester, City campus

50190 Information Research Project

8cp; availability: not offered to exchange and study abroad students
Requisite(s): 40 Credit Points in spk(s): MAJ10023 Information and Media major BAComm
Professional Strand - Information Management - 300 level

This is the capstone subject in the Information Professional Strand. In this subject, students plan, carry out and evaluate a major professional information activity for a client. Concepts and techniques for the planning and management of projects to meet client needs are introduced at the beginning of the subject. A contract for the project is negotiated between the student, their client and their academic supervisor. Students are expected to work independently on their project, guided by consultations with their supervisor and discussion with a peer support group. This subject must be taken in the final semester of study.

Typical availability

Spring semester, City campus

50251 Genocide Studies

8cp; elective
Elective

This subject focuses on two of the major genocides of the 20th century: the Armenian and Jewish experiences. Students may select a second option for study and assignment – a choice ranging from genocide in the ancient world through to considerations of, for example, Aboriginal Australia, events in contemporary Tibet, Burundi, Rwanda, Bosnia, Kosovo, the Kurds in the Middle East, the issue of East Timor and Cambodia.

Typical availability

Autumn semester, City campus

50260 Parliamentary Placement

8cp; availability: not offered to exchange and study abroad students
Professional Strand - Social Inquiry - 300 level

This subject is a professional attachment subject arranged with the Parliament of New South Wales. It is limited to 10 students. Students are attached to the office of a Member of Parliament or a Parliamentary Officer. Students participate in a learning contract between themselves, UTS and the Parliament. Students are selected for the placement on the basis of criteria agreed with the Parliament.

Typical availability

Spring semester, City campus

50428 MA Writing Project

0cp; availability: not offered to exchange and study abroad students
Students complete, under supervision, the substantial piece of creative writing that has been approved as their thesis topic, along with and accompanying 3,000-word essay.

Typical availability

Autumn semester, City campus
Spring semester, City campus

50720 Exchange Subject A

8cp
The UTS International Exchange program, administered by UTS: International Studies, offers students the option of completing part of their study in another country and receiving credit towards their degree at UTS. UTS: Communication participates in this program, under which students have the opportunity to undertake study at an exchange partner university. Applicants for exchange must have their study at the exchange partner university approved by UTS: Communication's international coordinator. The subject studied at the exchange partner university should have relevance to a student's course of study, and be taught and assessed in an acceptable format. Further information is available from UTS: Communication.

50830 Contemporary Music 1

6cp; availability: not offered to exchange and study abroad students

This subject provides a contextual historical overview of contemporary music since 1950. It investigates the social environment, theoretical climate and influences that shaped contemporary music, examining genres as diverse as rock, jazz, experimental avant-garde, early electronic music to contemporary classical composers and non-Western music. Students are introduced to major schools of thought and the descriptive language, styles, genre, forms and origins in music history with particular focus on the nexus of acoustic and electronic sound and music based on listening. The subject also looks at sonic, harmonic and other structural elements as they draw on traditional cultural heritage, retrospective origins and new directions.

Typical availability

Autumn semester, City campus

50831 Sonology

6cp; availability: not offered to exchange and study abroad students

This subject explores the fundamental concepts behind the representation, synthesis, and manipulation of sound in the digital domain. These are multi-faceted topics and they are examined in a diverse range of contexts, including the physical nature of sound, digital signal processing theory, human physiology and psychoacoustics, computing technology as well as the aesthetic concerns of a contemporary sound designer. This subject examines basic techniques for synthesising digital audio signals, including additive and subtractive synthesis. It introduces a variety of visual representations of digital audio, and show how they relate to human auditory perception. Finally, this subject covers a selection of techniques for modifying digital audio, including filtering, panning and amplitude modulation. Study of the theoretical aspects of each technique is reinforced by practice-based laboratory sessions and assessments.

Typical availability

Autumn semester, City campus

50832 Electronic Music Composition

6cp; availability: not offered to exchange and study abroad students

This subject takes a conceptual and practical approach to composing music in a number of 'non-traditional' ways. It examines generative and algorithmic music, form and structural strategies for organising sound and music, harmonic theories, spatial design and approaches to creativity, challenging limitations of the conventional notions of the 'score'. Students explore a breadth of methods for developing time-based sonic structures, generating sonic content and organising elements cohesively through projects. The subject does not assume or require musical, notational literacy but rather looks at electronic ways of composing beyond the traditional score, as well as software environments that facilitate creative practice.

Typical availability

Autumn semester, City campus

50833 Speech, Music, Sound

6cp; availability: not offered to exchange and study abroad students

The subject draws on a wide range of phonetic, linguistic, pragmatic, semiotic and musicological sources to introduce the communicative use of sound. It examines the communicative roles of aural perspective, rhythm, melody and timbre in music as well as in speech, everyday soundscapes and film and television soundtracks.

Typical availability

Spring semester, City campus

50834 Audio Production

6cp; availability: not offered to exchange and study abroad students

This subject provided an introduction to the basic concepts and production procedures involved in professional audio across a range of media. Students work in digital formats, focusing on idea development, composition, and experimentation. Conceptual and technical skills include listening, location recording, recording voices, interviewing, editing and mixing.

Typical availability

Spring semester, City campus

50835 Audio Culture

6cp; availability: not offered to exchange and study abroad students

The subject focuses on the meaning and significance of sound in different cultural contexts and historical settings. It addresses questions of aesthetics, poetics and politics. The aim is to study the emergence of sound as a specific object of theoretical analysis and to understand the impact of audio culture on wider culture. Subject areas covered may include methodological approaches to sound; ethnography of sound; voice; sound in various media; and the politics and aesthetics of sonic practices.

Typical availability

Autumn semester, City campus

50836 Sonic Art

6cp; availability: not offered to exchange and study abroad students

Requisite(s): 40 Credit Points in C10269 OR 40 Credit Points in C10270

This subject explores theories and practices of sound art across various contexts including performance, installation, radio and online. Issues around the intersections of art, music and design are investigated, along with concepts such as noise and the influence of space on the presentation of work. Students research these ideas in the development of their own sonic artworks.

Typical availability

Spring semester, City campus

50837 Contemporary Music 2

6cp; availability: not offered to exchange and study abroad students

Requisite(s): 50830 Contemporary Music 1

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Building on the historic foundations of Contemporary Music 1, this subject focuses more specifically on philosophy, form and theory as it informs approaches to composing music and organising sound. These ways of thinking potentially provide methodologies for students in their creative practice. Learning by example, students consider works by master composers. The subject covers approaches to soundscape and environmental sound founded by Murray Schaffer; philosophies of silence, re-thinking form and chance with John Cage; relationships between physical, spatial and musical structures; microcosmic investigation by the Spectral composers; Stochastic and theoretical practices; digital and music concrète; post-digital music; world music influences in the orchestra and transforming notions of structure and sonority. The primary objective of this subject is to develop ways of transforming abstract thinking, philosophy and theory into practical approaches for creating music.

Typical availability

Spring semester, City campus

50838 Professional Practice (SMD)

6cp; availability: not offered to exchange and study abroad students
Requisite(s): 40 Credit Points in C10269 OR 40 Credit Points in C10270

This subject introduces students to a variety of views and critiques of professionalism in the fields of music and sound design including: the roles and responsibilities of the creative professional; case studies of practice/studios; business management and planning; preparation for and modes of employment; legalities and liabilities; the ethical professional; the client/creative professional relationship; existing and emerging work practices in the industry; the role of professional bodies. Topics are covered through site visits, guest lectures, workshops and where possible and/or appropriate short term work experience placements.

Typical availability

Spring semester, City campus

50839 Sound for Time-based Media

6cp; availability: not offered to exchange and study abroad students

Sound plays an important role as supporting modality for many time-based media. The subject covers basic understanding of media such as film, video and games, and the role of sound and cross-modal issues. The practical element of the subject covers context-specific issues, such as film sets (Foley theatre, sound effects).

Typical availability

Autumn semester, City campus

50840 Notation and Scoring

6cp

Requisite(s): 50832 Electronic Music Composition

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

For students specialising in composition, this subject investigates a wide array of scoring and notation techniques, including traditional, graphical, symbolic and computer or screen-based scores. Expanding the notion of score as a set of directives for conveying the intention of the composer and for rendering performance and interpretation, techniques for documenting, annotating and communicating music are explored. A diversity of methods are considered in order to match the diversity of music and sound generation performative techniques available to the contemporary music composer, such as for electronic, acoustic, gestural, ensemble, theatrical and interactive works (even non-linear and generative works). Students also gain an in-depth knowledge of a professional notation program appropriate for commercial music engraving and dissemination.

50841 Orchestration and Timbre

6cp

Requisite(s): 50832 Electronic Music Composition

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject is particularly directed at the composer and creative, exploring the most didactic understanding of orchestration as the organisation of sounds in register, space, texture, sound quality, intensity, combinations and innovations. It concerns clustering, structuring, organising in time, space, pitch and colour and requires knowledge of the materials or instruments utilised. The subject spans acoustic instrumental, orchestral, ensemble writing through to electronic music and electro-acoustic music that generates sounds from the ground up. A significant part of the compositional process is positioning, grouping and choosing sounds to create a certain impression through a detailed understanding of timbre (tone colour). Students examine seminal masterworks from a range of eras, styles and ethnicities and develop works of their own that demonstrate fluency in different presentation scenarios.

50842 Electro-acoustic Composition

6cp; availability: not offered to exchange and study abroad students

Requisite(s): 50832 Electronic Music Composition

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

For students specialising in music creation and sonic composition, this directed individual project allows the composer/designer/artist to develop a major creative work of computer/electronic, electro-acoustic, art music performance or interactive sonic performance with a view to establishing the graduation portfolio and professional dissemination. The student is guided in tools of practice (software and techniques), and aesthetic and structural development of the work. In addition to creating a substantive creative work, students hone their presentation and professional delivery skills through a public outcome. Style, genre, and medium are intentionally extremely flexible to promote experimentation, creative thinking, innovative mixed-modality, performative or interactive works.

Typical availability

Spring semester, City campus

50843 Live Sound

6cp; availability: not offered to exchange and study abroad students

Sound design for live performance is a broad area that covers basic musical and theatrical understanding, insight in sound system technology and microphone techniques. This subject focuses on aspects of sound design for live performance and live sound practice. It identifies the differences between live sound practice and studio recording practice, and equips students with knowledge about PA systems, multi-channel sound systems and live mixing. Students also learn techniques, such as parametric filtering and delay line, and practise the relationships between microphones, instruments and hall acoustics in a live performance setting.

Typical availability

Spring semester, City campus

50844 Musical Instrument Design

6cp; availability: not offered to exchange and study abroad students

Musical instruments are examples of very sensitive and precise interfaces, allowing rich expression. Traditional mechanical instruments have been developed over centuries, evolving towards profound tools for musical expression. With electronic technologies, the development has been accelerated while the possibilities of the sound sources have increased, leading to a need for a more structured approach to musical instrument design. The subject covers history of musical instruments including taxonomies, electronic interface design principles, interaction frameworks, interface techniques (sensors, actuators and converters), and structured instrument design. The theoretical background is applied and further expanded in a practical design project, resulting in new instrument forms.

Typical availability

Autumn semester, City campus

50845 Sound Systems

6cp

This subject focuses on the design of sound systems for live performance and theatre. It covers issues of acoustics and open-air venues, timing and the spread of sound over large areas using multiple loudspeakers. Students learn to configure and calibrate PA and performance situations for specific physical venues and spatial characteristics and to tailor sound system design for various cultural, technological, architectural situations. Students explore the technical effect of different speaker arrays, configurations, specifications and their interplay in live performance. Students also learn how to respond to dynamic features such as audience, environment, climate and instantaneous, unpredictable events.

50846 Situated Media Installation Studio

12cp; availability: not offered to exchange and study abroad students

This studio-based subject explores situated media through installation. The interaction and experience of media is human-scale and occurs in gallery and museum installations, public places, in ambient (informative or responsive) displays, re-configurable architecture and large spatial environments. The objective of the interdisciplinary collaborative studio is to encourage dialogue across media boundaries and paradigms of designing, to facilitate trans-literacy in a spectrum of medium. Thus photographic and design students collaborate with sound and music students to investigate real-time interaction and the mediation of the human-scale experience, with interfaces such as sensors, camera-tracking, game controllers, wireless technologies, and methods of capturing user engagement. Versatile purposes for installation include informative display, modes of inquiry in public places, entertainment, ambient information display (visualisation and sonification of social and contextual data relating to the spatial, climatic or cultural environment) and dynamic architectural spaces. Students develop innovative ways to integrate different media from specialist design fields, to situating media according to its environment, perspective and context.

Typical availability

Spring semester, City campus

50847 Visualisation and Sonification Studio

12cp; availability: not offered to exchange and study abroad students

Visualisation and sonification are alternatives to textual analysis of abstract information. This studio explores a variety of ways of transforming data into both information visualisation and auditory information for the creation of formal structures, visual and auditory artefacts, or to influence generative processes and ambient display in architectural and public places. In this subject, students investigate effective mapping strategies and alternate modalities for communicating information or using information as the source of creative practice to develop aesthetic and clear methods of representation.

Typical availability

Autumn semester, City campus

50852 Sound Design for Interaction

6cp

This subject explores the use of sound as an interaction modality in interface design. It examines the purpose of sonification, for example, as a source of information and feedback or an added modality, and the use of sound in current products and systems, such as mobile phones, printers, cars and websites. Students learn the theory and skills needed to develop effective, efficient and pleasurable interactions using sound. User-centred design, ergonomics, engagement, practicality and interface design contribute to the user experience and interactive responsiveness developed in this subject.

50853 Wearable Media and e-Fashion

6cp

Ambient display and pervasive computing permeates wearable communicative technology. Innovations in conductive fibres, motion and bio-data sensors, miniature microprocessors and wearable communication use technology as the enabler in body-worn designs: e-textiles, e-fashion, clothing, jewellery and other adornments as wearable, smart e-fashion. The purposes for wearable electronic media range from the purposeful and informative (such as health and fitness monitors, eco-aware, persuasive devices) to communicative and sociable (interactive and responsive visual, auditory, tactile and sensory interfaces) and expressive (fashion, art, craft and individualising designs using contemporary knowledge and materials). This subject fosters design collaboration between students from visual communication, textiles, fashion, craft, computing, sound and situated media experience. Students learn the material characteristics, fabrication and technical requirements of designing for innovative textiles while considering user-centred practical concerns such as wearing, washing, communicating and interacting with the e-fashion artefact. This includes programming for physically responsive and sensing technologies.

51984 Master of Arts Thesis

0cp; availability: not offered to exchange and study abroad students

55058 Honours Thesis Part B

12cp; availability: not offered to exchange and study abroad students
Requisite(s): 55057 Honours Thesis Part A
Honours - 400 level

The Honours Thesis is the major component of the Bachelor of Arts (Honours) in Communication program. It provides an opportunity for students to undertake original work informed by advanced theoretical study and independent research, relevant to the academic, professional and/or creative goals they have identified. Students work with an academic supervisor to produce a thesis which may be presented in one of a variety of traditional and/or non-traditional formats.

Typical availability

Autumn semester, City campus

Spring semester, City campus

55061 Honours Thesis (Production) Part A

12cp; availability: not offered to exchange and study abroad students
Requisite(s): 55069 Honours Workshop
Honours subject - 400 level

The Honours Thesis (Production) is the major component of the Bachelor of Arts (Honours) in Communication program. It provides an opportunity for students to undertake original work informed by advanced theoretical study and independent research, relevant to the academic, professional and/or creative goals they have identified. Students work with an academic supervisor to produce a thesis which may be presented in one of a variety of traditional and/or non-traditional formats. The production thesis may require use of technical support facilities or equipment.

Typical availability

Autumn semester, City campus

Spring semester, City campus

55062 Honours Thesis (Production) Part B

12cp; availability: not offered to exchange and study abroad students
Requisite(s): 55061 Honours Thesis (Production) Part A

Spring semester, City campus

55066 Writing Studies Honours Seminar

12cp; availability: not offered to exchange and study abroad students

In this seminar students are asked to engage with a range of contemporary practices and contemporary ideas to do with writing. Students work both critically (theoretically) and creatively. The seminar focuses on current and, for the most part, innovative approaches to writing. These contemporary forms of textuality may include experimental or poetic or hybrid or experimentally essayistic or fictional or interactive writing practices. The main material of the seminar is distributed across generic practices to do with various poetic or interactive or fictional forms of composition. At the same time, the seminar asks students to consider these practices in the context of major types of contemporary critical analysis, such as ecological criticism, language theory, cultural theory, digital aesthetics and theories to do with online types of composition. The seminar is designed to be a 'thinking space' and a 'practising space' for students undertaking major honours projects in composition, contemporary essay, poetry, fiction, internet-related writing and critical thought.

Typical availability

Autumn semester, City campus

55067 Communication and Information Honours Seminar

12cp; availability: not offered to exchange and study abroad students

This subject examines a selection of contested key terms in the Australian intellectual, public policy and professional fields by reference to the theoretical resources offered by journalism, media studies, communication and information studies. Students explore how specific communication and information technologies, practices and impacts are interwoven with social organisation and processes of social change. The development of comparative analyses of key terms draws on different intellectual traditions and explores their usage in different contexts. The subject also facilitates students' capacity to understand their own theoretical constructs, to locate their own usage of key terms in relation to contemporary debates in intellectual policy and professional fields and to pursue research that contributes to those debates.

Typical availability

Autumn semester, City campus

55068 Cultural Studies Honours Seminar

12cp; availability: not offered to exchange and study abroad students

This subject explores some of the methodologies that characterise the contemporary practice of cultural studies. This involves a re-examination of the work of major cultural theorists whose work has influenced cultural studies research; situating their theoretical writings historically and politically, and investigating how they have been used to explicate individual, cultural and social practice. As well students are formally introduced to the research methods of cultural studies, ranging from discourse analysis to new ethnography and sensory analysis, and how they are used in cultural research. Students are encouraged to explore the interactions of, and sometimes conflicts between, theories and methods so that they can act as informed, critically aware and creative researchers; able to design the methodology (combination of theories and methods) that is most appropriate to a given project or issue.

Typical availability

Autumn semester, City campus

55069 Honours Workshop

12cp; availability: not offered to exchange and study abroad students

This is the foundational subject for all honours students in communication. It provides students with the opportunity to develop skills that enhance their capacity for undertaking research and independent scholarship and for successfully producing their thesis/production item in the second semester. Working closely with their academic mentors and peers, students deepen their understanding of the theoretical underpinnings of their chosen field and further develop the theoretical framework of their projects.

Typical availability

Autumn semester, City campus

55073 Social Sciences Honours Seminar

12cp; availability: not offered to exchange and study abroad students

This seminar provides an opportunity for students to critically engage with claims to truth made within the social sciences by exploring key epistemological, theoretical and methodological debates held within, and sometimes between, relevant disciplines. As well as providing a critique of processes of knowledge production, the seminar also offers a range of critical theoretical tools as potential starting points for students' own research work. It aims to assist students in developing a theoretically reflexive and analytical approach to their own research knowledge practices, as well as to those of others.

Typical availability

Autumn semester, City campus

57008 Digital Libraries and Collections

8cp

Graduate subject - Information Management - 400 level

This subject focuses on digital information resources and services and virtual collection building and management. The student is introduced to the role and functions of new and emerging technologies associated with the virtual library or digital library environment like electronic journals, electronic repositories and web-based digital information resources and services. Topics covered by this subject include virtual information system coordination and management and principles of collection building and management in electronic environments. Issues related to the development of digital information collections, such as access versus ownership, resourcing and legal issues, are also addressed.

Typical availability

Spring semester, City campus

57009 Information and Knowledge Management Project

16cp; availability: not offered to exchange and study abroad students

Requisite(s): 57089c Information Research and Data Analysis AND

48 credit points of completed study in C04203 Master of Arts in

Information and Knowledge Management

Graduate subject - Information Management - 500 level

This is a core subject for the Master of Arts in Information and Knowledge Management. The subject involves the implementation of a professional project that is aimed at integrating theoretical knowledge and practical skills. A combination of learning frameworks is used (e.g. learning contracts, information project management, information consolidation) to enable the student to develop, with academic supervision, an individually tailored program or project.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57011 Research and Reporting for Journalism

8cp

Graduate subject - Journalism - 400 level

This subject aims to develop sound basic practices in professional journalism. It focuses on news and current affairs research and reporting, the role of journalism in liberal democracies, and journalistic techniques, ethics and standards. Students develop a series of stories in a chosen round. Through group discussion and a close analysis of news and current affairs, students develop an understanding of, and ability to contribute to, contemporary debates in journalism. Students also work to deadlines researching and reporting news stories for journalism publications.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57012 Regulation of the Media

8cp

Graduate subject - Journalism - 400 level

This subject examines the ways in which the production and distribution of media and cultural products are regulated, in the context of broader economic, political, historical and social processes. An underlying theme is a critique of the development of and contradictions among different ideas of free speech, and how these are used to promote or defend a range of communication

practices, in particular historical and cultural contexts. The subject aims to develop a working knowledge of relevant areas of media law, such as defamation, copyright and contempt, with an emphasis on understanding the way the law works in practice and the policy issues which arise. A comparative approach is used to explore legal systems in different parts of the world.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57013 Journalism Studies

8cp; availability: not offered to exchange and study abroad students

Graduate subject - Journalism - 400 level

The aim of the subject is to explore the scholarly debates that address news organisations, journalism practices, and the processes of production and consumption of news and current affairs. A comparative theoretical approach is used to critically examine questions about journalism – both from the point of view of those involved in producing media products and from the point of view of audiences. The subject considers the relationship between the media and ideas about democracy, and the relevance of media theory for professional journalism.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57014 Feature Writing

8cp; availability: postgraduate Journalism students are permitted to

undertake this subject concurrently with the subject Research and

Reporting for Journalism

Requisite(s): 57011c Research and Reporting for Journalism

These requisites may not apply to students in certain courses. See access conditions.

Graduate subject - Journalism - 400 level

This subject aims to develop skills in feature story writing through a comparative approach to the work of contemporary practitioners. The emphasis is on developing and improving research and writing skills. Students aim to produce publishable work. The subject offers students insights into the breadth of style and genre available to non-fiction writing, including social-realist writing, essays, columns, profiles, 'new journalism' and more complex in-depth features. A range of techniques of researching, interviewing and writing are practised and critiqued. Ethical considerations are explored in the context of particular examples of production.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57021 Journalism Internship

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 57011 Research and Reporting for Journalism

These requisites may not apply to students in certain courses. See access conditions.

Graduate subject - Journalism - 400 level

This subject gives students opportunities for structured professional work placement in which journalism is produced. Those participating in this subject produce a portfolio of journalism, a written report and a diary of the time and work details during the attachment. Students build on and develop skills they have acquired during their studies and apply those skills in a practical environment. The subject is aimed at self-directed learning and regular academic supervision. Students are also asked to present a seminar paper that reflects their knowledge and learning experience with other students.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57022 Foundations of Communication

8cp; availability: not offered to exchange and study abroad students

Graduate subject - Public Communication - 400 level

This subject introduces the concept of the management arenas within which communication is practised. It analyses the communication issues raised by different organisational contexts and applies the

models and metaphors of dominant and alternative perspectives in communication studies. Meaning-making processes in communication management practice are studied to develop an understanding of communication as negotiated meaning. Students learn to approach workplace situations critically and creatively and develop their communication management expertise in interpersonal and mediated communication to handle change, uncertainty and complexity.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57023 Communicating with Publics

8cp

Graduate subject - Public Communication - 400 level

In this subject students analyse the social construction of publics and organisation-public relationships. They study different models of public relations practice and draw on current theories about publics, audience and media to help them understand the development of strategies to communicate with internal and external publics. There is a strong focus on identifying the ethical implications of decisions, actions and outcomes in communicating with publics. Students are encouraged to participate in a discussion on approaches to empowering or influencing publics. The attitudes, knowledges, behaviours and issue positions of various publics are studied to enable students to assess how best to communicate with them. Students learn about different research strategies for understanding communicating with publics.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57024 Managing Public Communication Strategies

8cp

Requisite(s): 57023 Communicating with Publics

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Graduate subject - Public Communication - 400 level

This subject explains the concept of public relations as communication management and demonstrates the contribution and relevance of public relations to modern organisations. A range of perspectives provides thoughtful and challenging approaches to the work of a public relations practitioner. Students learn to set goals and objectives and to plan and implement campaigns for internal and external publics. They become confident in evaluating all aspects of their work and develop competency in cost-benefit analysis and the analysis of the financial implications of their work. Public relations principles are applied to examples from students' own professional practice to develop a reflective understanding of why as well as how to approach particular issues and problems.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57025 Intercultural and International Communication

8cp

Graduate subject - Public Communication - 400 level

Drawing on latest research and developments, this subject introduces core concepts, debates and vocabularies in the interdisciplinary, and relatively new field of intercultural communication. Intercultural communication is a necessary part of personal and professional lives as a result of global restructuring of economic, social and cultural relations. As a result of new communication technologies, the movement of people across borders, overseas study, global media, transnational jobs, tourism, global migration, international conflicts, global economies, transnational organisations, people from different backgrounds come into contact with one another across a range of culturally diverse contexts: home and neighbourhood, places of leisure, community organisations, workplaces, and regions.

The subject moves away from simplistic ways of understanding culture to test new ways of working on intercultural communication personally and professionally. Students study intercultural communication as constructed through sociopolitical and cultural processes. This means understanding intercultural communication against a backdrop of stereotyping and othering where international

communication takes place (communities, workplace, business, politics), and the wider issues of inclusion and social justice in relation to education, mobility and work. The approach adopted on the subject is pragmatic, critical, ethical and interdisciplinary.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57026 Strategic Communication and Negotiation

8cp

Graduate subject - Public Communication - 400 level

This subject analyses and critiques communication campaigns and develops expertise in using strategic planning and applying it to communication management. This involves applying understandings of environmental scanning, stakeholder analysis and issues management. There is an emphasis on understanding consultative processes and learning effective approaches to community consultation. Students develop an understanding of and expertise in negotiation strategies. They study techniques of negotiation and conflict to enhance the development of expertise in managing different expectations and results. Students learn a practical approach to negotiating agreement and apply it to their communication and public relations work.

Typical availability

Spring semester, City campus

57028 Research for Communication Professionals

8cp

Graduate subject - Public Communication - 400 level

This subject introduces a range of research methods useful for communication practice and ensures that students can choose and use appropriate research methodologies. Using examples drawn from industry, research is presented as a tool to make the practice of communication and public relations more responsive, effective, useful and professional. Students develop expertise in designing research, making observations, taking measurements, and interpreting and reporting their findings, all with a focus on the kinds of research they are likely to encounter in their own careers. It provides those enrolling in the Communication Management Project with the necessary knowledge of research to design and manage their projects.

Typical availability

Autumn semester, City campus

57031 Non-fiction Writing

8cp; availability: not offered to exchange and study abroad students

Graduate subject - Writing - 400 level

Non-fiction writing takes many forms, and each of these has its own generic conventions, limitations and potentials. This subject explores the similarities and differences between such genres as the essay, technical and scientific writing, writing history (and recording oral histories), writing about place, cultural criticism and feature journalism. In any one semester, the genres considered depend on the availability of expert staff and on student interest.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57034 Professional Writing Project

12cp; availability: not offered to exchange and study abroad students

Requisite(s): 57033c Writing Seminar

Graduate subject - Writing - 500 level

This subject is designed for students who have substantial experience in writing and are ready to work independently. Working under the supervision of an appropriate member of staff, students devise, research, draft and revise to a high standard a substantial (15,000 words or equivalent) work of professional writing. The writing may be in any appropriate genre, depending on the viability of the proposed project and the availability of appropriate supervision.

Typical availability

Autumn semester, City campus

57035 Organisational Change and Communication

8cp

Graduate subject - Public Communication - 400 level

In this subject students analyse differing perspectives on communication in organisations and the ways in which group processes affect organisational life. The subject focuses on the communication features of management and leadership and aims to provide students with the ability to evaluate and critically discuss their own and others' leadership and communication styles. It enables students to make connections between theories and practice so they can develop successful team building and team management strategies. Conflict management, change management, culture creation, problem solving and decision-making are some of the workplace challenges explored in this subject. Approaches to leadership, communication climate and motivation of staff are analysed in the context of ever-changing organisational environments, including technology and globalisation.

Typical availability

Autumn semester, City campus

57041 Narrative Writing

8cp

Graduate subject - Writing - 400 level

This subject emphasises narrative development, with close attention to the relationship between structure and content in fiction. Craft skills appropriate to narrative writing are developed through exercises and sustained work on pieces of fiction, along with consideration of principles of editing and revision. The focus of the class is the students' own work. A range of exemplary contemporary narrative writing is read and discussed, integrating practical work with critical reflection on the processes of narrative writing. This is a core subject for postgraduate writing students and is suitable for students in other areas wishing to develop their writing through exercises and sustained work.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57046 Professional Editing

8cp

Graduate subject - Writing - 400 level

This subject is offered to postgraduate students who wish to gain a practical understanding of the process of editing written texts, so that they may edit works themselves, or so that they have an understanding of the process when their own work is edited. The subject focuses on the editing of literary fiction and non-fiction manuscripts. The emphasis is on editing book-length manuscripts but the skills can be applied to editing any written texts.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57053 Book Publishing and Marketing

8cp

Graduate subject - Writing - 400 level

This subject is offered to students who wish to gain an understanding of production and marketing in the book publishing industry in print and digital forms. The subject examines the stages of the book production process from the acquisition of a title through to its marketing and promotion. The subject shows students how to identify and understand a target audience and the most effective ways to reach it. In this subject the focus is on the literary book publishing industry, though many of the principles discussed could be applied to other forms of text publications such as magazines and textbooks.

Typical availability

Spring semester, City campus

57061 Issues in Documentary

8cp

Graduate subject - Media Arts and Production - 400 level

This subject introduces students to contemporary debates in documentary through a study of documentary history, genre, ethics and changing forms. It develops skills in critically analysing documentary film and its evolution from silent film through to the digital online environment. Students present critical documentary case studies via screenings and analysis using contemporary documentary film scholarship. Students develop documentary proposals for film, television and/or the online environment from research to treatment or first draft stage. Students participate in project workshops to discuss their proposals and essays. Students may also produce in-depth critical analyses of documentary film(s) and/or contemporary issues in documentary.

Typical availability

Autumn semester, City campus

57084 Information Architecture and Design

8cp

Graduate subject - Information Management - 400 level

This subject introduces students to user-centred information design and architecture principles. These are applied specifically to the development of information products and services that facilitate a variety of communication interactions. Content management and organisation is examined in relation to models for designing and structuring information and communication products. These models are evaluated in terms of their appropriate application to the opportunities and capabilities available for distributing information across a range of print and multimedia. Policies and key issues such as accessibility, ethics, intellectual property, privacy and security, publishing, usability and online teaching and learning are related specifically to implications for accessing, using and sharing knowledge. On a practical level, students develop professional capabilities for translating information architectures into web materials using web authoring and HTML skills. They also develop professional communication and collaboration skills by working in teams to meet collectively negotiated goals.

Typical availability

Autumn semester, City campus

57087 Knowledge Management and the Organisation

8cp

Graduate subject - Information Management - 400 level

This subject explores notions of information and knowledge, critically examining the range of viewpoints and concepts within knowledge management. Students examine a variety of types of organisations, and practice techniques for analysing and evaluating the internal and external information and knowledge environments of these organisations. From this analysis of information and knowledge production, flows and processes can be identified and evaluated. The subject emphasises the human characteristics of generating, communicating and using knowledge, and the way these can be integrated with the organisational strategy and processes. Students will have an understanding of the knowledge components of organisational processes and cultures, and the role of the information professional in knowledge-based organisations. The value of knowledge within organisations is explored via knowledge management case studies.

Typical availability

Autumn semester, City campus

57089 Information Research and Data Analysis

8cp

Requisite(s): 57100 People, Information and Knowledge

Graduate subject - Information Management - 400 level

This is a core subject for the Master of Arts in Information and Knowledge Management. Students are introduced to a range of the quantitative and qualitative research methods used in the study of people and information and develop skills in analysing and presenting data using standard software packages. Students apply their knowledge and skills to designing and executing a pilot research project. The ethics and politics of research are covered and the differing views of reality, the roles of the researcher and the establishment of knowledge claims are introduced.

Typical availability

Spring semester, City campus

57100 People, Information and Knowledge

8cp

Graduate subject - Information Management - 400 level

This subject begins with an examination of the fundamental philosophies of information and knowledge relevant to the areas of information management and knowledge management. It also serves as an introduction to frameworks for exploring and analysing people's information behaviour. Students develop a detailed understanding of the theoretical underpinnings that link people, information and knowledge. The subject introduces the concepts of information ecologies and communities of practice as part of the skill set for working with and understanding the implications of people needing, using and adding value to information. These concepts draw on multidisciplinary theories articulated within the social, cognitive, management and computing sciences.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57101 Advanced Screenwriting

8cp

Requisite(s): 50359c Screenwriting OR 50309 Advanced

Screenwriting OR 57142 Writing for the Screen

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Graduate subject - Writing - 400 level

This subject explores the creative and complex storytelling potential of the cinematic image. It examines the relationship between the eye of the camera and the written text and offers students an opportunity to investigate both sound and image as metaphor while developing an existing piece of screenwriting. It explores adaptation from a literary source as well as storytelling possibilities opened up by digital technology and contemporary experiments in narrative structure. Students with an existing treatment or draft may develop a feature or short feature. Students with a short drama may develop a shooting script.

Typical availability

Spring semester, City campus

57103 Knowledge Management Strategies

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 57087 Knowledge Management and the Organisation

OR 32534 Knowledge Management Systems OR 21860 Managing

Knowledge

Graduate subject - Information - 400 level

This subject builds on an understanding of organisational drivers for managing information and knowledge. Students investigate the characteristics of a broad range of strategies within the current rhetoric of knowledge management. This investigation considers the roles of enablers such as people, process, content and technology in planning and managing knowledge initiatives to reinforce, support and/or strengthen the knowledge environment. Topics covered are largely driven by current developments within knowledge management and include building knowledge cultures, creativity and innovation, organisational memory, facilitating communities of practice, managing content, value creation and knowledge transfer. At end of the subject students will be able to propose appropriate strategies for creating, sharing and using knowledge to achieve goals at both a group and organisational level.

Typical availability

Spring semester, City campus

57104 Information and Knowledge Management Project Part A

4cp; availability: not offered to exchange and study abroad students

Requisite(s): 48 credit points of completed study in C04203 Master

of Arts in Information and Knowledge Management AND 57089

Information Research and Data Analysis

Graduate subject - Information Management - 500 level

This is a core subject for the Master of Arts in Information and Knowledge Management. The subject involves planning a professional project that is aimed at integrating theoretical knowledge and practical skills. A combination of learning frameworks is used (e.g. learning contracts, information project management, information consolidation) to enable the student to plan and develop, with academic supervision, an individually tailored program or project.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57105 Information and Knowledge Management Project Part B

12cp; availability: not offered to exchange and study abroad students

Requisite(s): 57104 Information and Knowledge Management Project

Part A

Graduate subject - Information Management - 500 level

This is a core subject for the Master of Arts in Information and Knowledge Management. The subject involves the implementation of a professional project that is aimed at integrating theoretical knowledge and practical skills. A combination of learning frameworks is used (e.g. learning contracts, information project management, information consolidation) to enable the student to implement, with academic supervision, an individually tailored program or project.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57108 Film Animation

6cp

Graduate subject - Master of Animation (Faculty of Design,

Architecture and Building)

This subject introduces students to all the major styles of traditional film animation and to the study of film animation techniques. Students are introduced to flip books, claymation, drawing on cells, pixillation and collage animation styles through hands-on exercises and detailed study of animation films. Equipment used includes 16 mm non-sync cameras and 16 mm and 35 mm Oxberry Animation Stands.

Typical availability

Autumn semester, City campus

57109 Film Animation

8cp

Graduate subject - Media Arts and Production - 400 level

This subject introduces students to all the major styles of traditional film animation and to the study of film animation techniques. Students are introduced to flip books, claymation, drawing on cells, pixillation and collage animation styles through hands-on exercises and detailed study of animation films. Equipment used includes 16 mm non-sync cameras and 16 mm and 35 mm Oxberry Animation Stands.

Typical availability

Autumn semester, City campus

57122 Short Fiction Workshop

8cp

Requisite(s): 57041 Advanced Narrative Writing OR 57031 Non-fiction Writing

Graduate subject - Writing - 400 level

This is an advanced workshop subject for students who are interested in short fiction, and keen commence work on a collection of short stories. The focus of this subject is on form: what makes a short story? How do I turn a simple narrative or even an anecdote into a short story? We also focus on redrafting and editing.

Typical availability

Autumn semester, City campus

57124 Novel Writing

8cp

Requisite(s): 57041 Advanced Narrative Writing OR 57031 Non-fiction Writing

Graduate subject - Writing - 400 level

This is an advanced workshop for students who have some background in fiction writing and who are either commencing work on a novel or have already commenced. The aim of this subject is to produce the opening section of a potential novella or novel, or a substantial portion of a work in progress, minimum 5000 words and maximum 10,000 words. Contemporary and experimental forms of the novel are studied and encouraged as well as more traditional narratives. Students study a range of short novels that enhance their understanding of the form and help develop their critical skills. Workshop participation and peer assessment are a vital part of this subject.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57130 Animation Concepts Seminar

6cp

Graduate subject – Master of Animation (Faculty of Design, Architecture and Building)

This subject covers some key concepts of animation. Students will be able to study and research these concepts in relation to major and experimental methods for generating animation (including optical toys, stop frame, pixillation, procedural, motion capture, genetic algorithms, cel, claymation, rotoscoping, interactive, real-time, 2D and 3D computer animation). Learning is by lectures, seminars and in-class presentation by students.

Typical availability

Autumn semester, City campus

57131 Inventive Media Advertising

8cp

Graduate subject – Public Communication – 400 level

This subject explores the importance of ideas in communication and building brands, the challenges posed by a diverse media landscape and the efficiency of advertising. Against a backdrop of technological change, students examine the consumer's interactions with the media, brands, ideas and advertising. As a component of finding insights and recognising ideas, students examine what changes occur in ideas as they migrate from one channel to another and the associated issues for practitioners. In pursuit of innovative approaches to idea generation, a critical research and practice-based approach is taken in which students explore experimental and industry techniques and critique their value in uncovering ideas with practical potential for advertising. Students develop creative solutions for a variety of channels representative of today's complex media environment.

Typical availability

Spring semester, City campus

57132 Media Relations

8cp

Graduate subject – Public Communication – 400 level

In this subject, students explore the role and uses of media relations for communication management. They explore the relationship between journalism and public relations and the structures, regulatory frameworks and processes relevant to developing media strategies. They review mass communication research traditions such as media effects theories and agenda setting, applying their understanding to issues for professional public relations practice. Public opinion and diffusion of ideas and innovations are examined, along with the concept of the public interest. Students investigate ways in which new media have changed the landscape for communicating with publics and for media relations. They practise developing media plans and products to broaden their awareness of the diversity of media channels. In their final project, they develop briefing notes and perform as interviewees in the UTS television studios.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57133 Writing Poetry

8cp

Graduate subject – Writing – 400 level

In this subject students write extensively and read widely in a variety of genres of contemporary and modern poetry. The subject is designed for students who, interested in writing, have a sustained interest in poetry or who, while not being poets themselves, wish to develop a working knowledge of recent and contemporary practices in poetry. The approach stresses the student's own creative practice and the exploration of genre and technique in the composition of poetry. The unit also introduces the work of a number of contemporary Australian and international poets as part of a field of creative and professional contexts in which poetry is written today. The unit is a workshop designed to encourage participants to enhance their skills as poets and also to develop a critical ability in editing and revising their own work and that of other writers in the class. At the same time, broad issues to do with the work of the contemporary poet, whether to do with specific aspects of creative practice, publishing, experimentation, or the presence of poetry in performance oriented or other non-literary formats, will feature in the workshop.

Typical availability

Spring semester, City campus

57134 Theory and Creative Writing

8cp

Graduate subject – Writing – 400 level

This is a core subject for two of the graduate writing programs and one which provides valuable theoretical and historical contexts for students' own writing. It introduces students to major developments in literary theory and examines in close detail a number of key texts from several genres that illuminate the use of theory for the practising writer. It also introduces students to some of the major developments in western literature, such as realism, modernism and postmodernism, as well as to the narrative theories that underlie these developments, particularly in relation to contemporary writing. Students critically explore ideas on writing directly arising from their theoretical and other reading, both in classroom discussion and in their written work. Students also workshop their creative writing, which is expected to reflect aspects of writing and literary theory that has been explored in the subject.

This subject:

- contextualises writing by examining literary movements, ideas and developments
- promotes essential critical and creative thought in relation to reading and writing
- enables a practical understanding of aesthetics and cultural debates
- enables exploration and experimentation of ideas in writing practice.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57138 International and Comparative Journalism

8cp

Graduate subject - Journalism - 400 level

This subject is concerned with the ways in which the philosophical basis, role and activities of journalism have developed in relation to social context. It takes a comparative approach to historical and contemporary forms of journalism in western liberal democracies, post-colonial multi-party states and single-party states, and relates professional and community practice in journalism to developments in the political, economic and coercive fields. Among other themes it will consider internationalisation of news flows, development journalism, policy initiatives such as NWICO (the New World Information and Communication Order), free speech and censorship, and public/private sector media. It emphasises the specificity of historical and geographic factors within larger structural developments, and takes a comparative and critical approach to the use and evaluation of social theory.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57142 Writing for the Screen

8cp

Graduate subject – Writing – 400 level

This subject offers postgraduate students the opportunity to develop advanced skills in writing for the screen. Students can develop short or long-form drama or animation. Students develop an idea through industry-accepted stages of development and formats and through workshops with professional actors. Students gain skills in research, visualisation, structuring, storytelling and character development. Students also improve their ability to read, develop and script-edit their own work and the work of their colleagues.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57144 Popular Fiction

8cp

Requisite(s): 57041 Narrative Writing OR 57031 Non-fiction Writing OR 57142 Writing for the Screen OR 50359 Screenwriting OR 50309 Advanced Screenwriting

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Graduate subject – Writing – 400 level

This subject provides a theoretical understanding of, and practice in, the writing of three popular genres: crime/adventure, romance, and science fiction/fantasy. It offers students the opportunity to work in a specific genre while simultaneously exploring the wider codes, conventions, structures and possibilities of writing popular fiction. It examines the historical and contemporary importance of popular fiction as a literary form and ways in which generic forms may be used or subverted. Several key popular fiction texts are examined with critical reflection on linear narrative and the concept and construction of plot.

Typical availability

Autumn semester, City campus

57145 Freelance Writing

8cp

Graduate subject – Writing – 400 level

This subject provides theoretical and practical understanding of writing in the key genres of the professional freelance world: literary journalism, essay writing, reviewing (particularly book reviewing) and cultural criticism. Students are introduced to examples of critical writing in magazines and journals as well as in the major newspapers, and are encouraged to engage in informed critical reading in relation to contemporary writing. The subject aims to increase understanding of how appropriate critical writing responds to significant literary and other cultural issues, and how it may usefully contribute to debate over these issues within institutional, publishing and media contexts.

Typical availability

Spring semester, City campus

57146 Organising Information

8cp

Graduate subject – Information and Knowledge Management – 400 level

This subject explores the interrelationship between processes and principles of information/knowledge organisation and information access. Students learn advanced skills of information organisation and apply them to the design and development of a database created in response to particular client requirements. The subject covers topics such as database structures, content analysis, indexing, abstracting, classifying, content management, architecture and metadata creation. The major project involves database creation and usability testing.

Typical availability

Spring semester, City campus

57147 Enterprise Content Management

8cp

Graduate subject – Information and Knowledge Management – 400 level

Enterprise content management (ECM) includes the strategies, processes and tools used to capture, manage, store, preserve, and deliver content to support organisational outcomes. This subject provides an overview and explanation of ECM and its key components. It explores how ECM contributes to the management and use of an organisation's structured and unstructured information, wherever that information exists.

Students explore frameworks of ECM and are introduced to the strategies and techniques for managing records, documents, email, web-based and collaboration content, business applications such as customer relationship management and enterprise resource planning, business processes and workflow. The subject explores key strategic drivers for ECM, such as governance and information sharing, and shows how organisations effectively deploy ECM to improve relationships between people, content, processes and technology and contribute to organisational outcomes.

Typical availability

Spring semester, City campus

57148 Discovering and Accessing Information

8cp

Graduate subject – Information and Knowledge Management – 400 level

This subject explores the nature, functions and characteristics of a range of resources and collections in diverse settings. It examines the interrelationship between processes and principles of information/knowledge organisation, selection and retrieval practices and information seeking behaviours. Students develop an understanding of the theory and practice of information retrieval and collection management in networked information environments. Students learn to apply client-centred approaches to information retrieval and develop specialised search strategies that enable them to improve client access to electronic and print resources. The subject covers topics such as: Boolean logic, thesauri tools, keyword searching, metadata and mediating relationships. Information retrieval interactions (including interpreting the needs of information seekers, negotiating, question analysis, searching and evaluating retrieval effectiveness) are also examined. These principles are put into practice in specific client contexts in the workshops and assessable tasks.

Typical availability

Autumn semester, City campus

57149 Information and Knowledge Management Major Paper

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 57089 Information Research and Data Analysis AND 48 credit points of completed study in C04203 Master of Arts in Information and Knowledge Management

Graduate subject – Information and Knowledge Management – 500 level

In this subject, students explore in depth a topic relevant to a specific area of information or knowledge management theory or practice and prepare a major paper for publication in a refereed journal of the field. Students critically analyse and synthesise theoretical and professional literature on the topic; they also have the opportunity to theorise their own practice. Students demonstrate their understanding of the topic through the presentation and discussion of their major paper and extend this understanding to the topic areas chosen by others in the student group.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57150 Editing and Design

8cp

Requisite(s): 57011 Research and Reporting for Journalism
Graduate subject - Journalism - 400 level

This subject introduces students to the basic principles, techniques and professional practice of editing, layout, design and production across print and online media. The subject covers print in all its forms as well as aspects of editing for online publications. The subject takes as its premise that whatever information is to be delivered, and by whatever sophisticated means, it remains imperative this is achieved by applying professional principles such as accuracy, clarity, fairness and balance and that the scrupulous eye and rigorous standards of a trained sub-editor are essential to that outcome. The subject covers the theory and practice of editing, the role of the sub-editor, and basic design and layout for print and online media.

Typical availability

Spring semester, City campus

57151 Storytelling with Sound and Image

8cp

This subject explores the production of news and current affairs in the audio visual domain within the context of a critical examination of current professional practice. Students develop skills in audio and video recording, interviewing, scripting, editing and presentation while devising and producing short news and current affairs reports. Students develop an understanding of the impact of online media developments on audio and visual journalism and the ethical implications that arise in the production of broadcast materials. A focus on issues relevant to cultural diversity is maintained throughout the course. Students log their stories in their e-portfolios, exploring the prospect of publishing more broadly.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57152 Investigative Research in the Digital Environment

8cp

This subject introduces advanced skills and methods for doing investigative research in the electronic environment, often referred to as computer-assisted research, not only for advanced information retrieval, but also for data mining and data and information analysis. Students develop their capacity to use contemporary computer-based methods of investigation in combination with other methods of inquiry and analysis to produce new knowledge and insights in relevant fields of practice that include information and knowledge management, journalism and other forms of social research. As well, students develop PIM (personal information management) techniques, including the creation of databases and digital repositories and explore how these can be used in the writing of research briefings for clients, reports for a range of publics, or investigative stories for audiences. This subject is designed for postgraduate students who already have basic information discovery and retrieval skills developed in information management, journalism, business, or other relevant field of practice.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57153 Digital Curation

8cp

Postgraduate

Increasingly vast amounts of digital data, content and objects are being created in a multitude of formats, in many organisational and cultural contexts, including museums, archives, film and media organisation, government, corporate and research institutions. As well, there has been huge investments in digitisation and purchase of digital content and information. In this subject students are introduced to both the theory and applied knowledge of storing and preserving this digital content so that future generations are able to access and understand it. Students are introduced to a range of techniques for

digitising analogue materials, for migrating these file formats to newly developed technologies, for preserving the original context of the content and to provide mechanisms for this content to be accessed. In a collaborative and interactive learning environment, students develop specifications for digital curation projects and prototype trusted digital curation models, taking into consideration the social-economic and legal aspects of digital curation, such as digital rights managements, archival evidence and specialised social and cultural contexts.

Typical availability

Spring semester, City campus

57154 Writing Television Drama

8cp

This subject offers postgraduate students a comprehensive overview of, and active participation in, the practical processes involved in developing and writing long form television character-based drama and comedy, from initial idea through to script production. The subject is project-based, taking students from the basic elements of screenwriting, through the particular collaborative process of television series and serial writing, and acquainting them with the idiosyncrasies of dealing with producers, story liners, editors and directors. Students view and critically analyse a wide range of television drama and comedy, and hybrid forms, from Australia and overseas. Working in groups, each student generates an idea for a television series which is then developed into a formal, 'series outline', or 'production bible'. This includes a complete draft of a sample episode. Students learn how to pitch an idea to producers/directors and from it produce the type of follow-up document that has currency within the industry. Students are assessed on both group and individual work.

Typical availability

Spring semester, City campus

57155 Online Journalism

8cp

Requisite(s): 57011 Research and Reporting for Journalism

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject introduces students to the application of internet technologies to journalism practice. It builds on the journalism skills of research, reporting, interviewing and analysis and applies them to the World Wide Web. The subject explores changes in professional journalism practice and the major issues related to sourcing and publishing journalism on the web. It teaches web publishing skills for journalism and explores content management systems for the publication of text, video, stills, audio and soundslides.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57156 Radio Journalism

8cp

Requisite(s): (57011 Research and Reporting for Journalism AND 57151 Storytelling with Sound and Image) OR (57168 Sound and Interaction AND 57167 Moving Image)

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject develops the editorial, technical and presenting skills involved in the production of radio current affairs journalism. Students study a range of current affairs formats as they produce short- and long-form current affairs packages for broadcast on radio station 2SER-FM. As the students learn practical radio journalism skills, they explore the editorial and ethical issues that exist in the professional broadcast environment.

Typical availability

Spring semester, City campus

57158 Television and Video Journalism

8cp

Requisite(s): [57011 Research and Reporting for Journalism AND 57151 Storytelling with Sound and Image] OR [57167 Moving Image AND 57168 Sound and Interaction]

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject develops the editorial, technical and presenting skills involved in the production of television and video news and current affairs journalism. Students study a range of news and current affairs formats as they produce short- and long-form news and current affairs packages suitable for broadcast on the internet and / or television. As the students learn practical television and video journalism skills, they explore the editorial and ethical issues that exist in the professional broadcast environment.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57161 Investigative Journalism

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 57011 Research and Reporting for Journalism

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject introduces students to investigative reporting, a style of journalism which probes deeper than most daily news journalism. Students familiarise themselves with research techniques which have proved useful to journalists pursuing in-depth stories, analyse and learn from investigative reporting by others, and solve problems which arise in stories through group discussion. The subject emphasises problem solving in the context of hands-on experience in developing stories from conception to finished product. The subject is designed to: demonstrate a wide variety of practical research techniques, especially the use of public records; to show the distinctiveness of investigative reporting; and to use students' own problems and experience in researching their assignments as practical examples of the way to apply investigative techniques.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57162 Memory and Life Writing

8cp; availability: not offered to exchange and study abroad students

The study and writing of a life is now one of the most popular and dynamic fields in non-fiction scholarship. This subject introduces students to the interdisciplinary study of life writing in forms such as biography, autobiography, family history, oral history, memoir, TV, radio, drama and portraiture, and engages with the critical and methodological issues raised by these various approaches. In scoping the field, this subject engages with central issues of memory, agency, identity, self-representation, and so on. Life writing can encapsulate the relation between the individual and society, the local and the national, the past and present, and the public and private experience. Through its various activities, the subject aims to air such topics for both academic and 'general' audiences, especially through a consideration of how life writing contributes to our broader cultural heritage.

Typical availability

Spring semester, City campus

57163 Non-fiction Project Development

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 57031 Non-fiction Writing AND ([57061 Issues in Documentary OR 57162 Memory and Life Writing]) AND 8 Credit Points in spk(s): SMJ10042 Media Arts and Production Sub-major

There are also course requisites for this subject. See access conditions.

This subject requires students to plan and structure their major project through research and development, and in consultation with their allocated academic advisor. The subject is conducted by individual guidance and group work, and students are required to regularly present the progress of their research and development throughout

the semester. Students critically explore the most appropriate and effective methods for realising their substantial work of non-fiction.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57164 Non-fiction Writing Project

16cp; availability: not offered to exchange and study abroad students

Requisite(s): 57031 Non-fiction Writing AND 57061 Issues in Documentary AND 57162 Memory and Life Writing AND 57163

Non-fiction Project Development

There are also course requisites for this subject. See access conditions.

This subject requires students to synthesise the knowledge and skills they have developed in the Master of Arts in Non-fiction Writing. The completion of a substantial work of non-fiction writing is the capstone of the course, and demonstrates the students' ability to work professionally and independently. On completion of this subject students are expected to be able to demonstrate high-level skills in researching, developing, structuring and completing a major written project in a selected non-fiction genre. Students respond to critical feedback throughout the supervision of the process, to re-write and edit their work.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57165 True Crime

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 57041 Narrative Writing OR 57031 Non-fiction Writing

This subject focuses on true crime writing. Students are asked to engage with the history, contexts, conventions and contemporary debates around the notion of true crime. The subject aims to develop students' awareness of the wide possibilities and scope of writing creatively in the true crime genre, and to produce an extended piece of true crime writing in a workshop environment.

Typical availability

Spring semester, City campus

57166 Documentary Production

8cp; availability: not offered to exchange and study abroad students

This subject explores conceptual and production approaches to documentary media forms. Students are introduced to key documentary modes, and examine documentary strategies and forms from photo essay to video and sound documentary, to emerging online and interactive documentary. Students undertake a series of hands-on exercises to advance their skills in producing, directing, shooting and editing for documentary. They also take a short documentary from idea to treatment. Throughout the subject, students investigate the issues facing media producers seeking to work with the creative interpretation of reality.

Typical availability

Spring semester, City campus

57167 Moving Image

8cp; availability: not offered to exchange and study abroad students

This subject introduces students to the creative challenges and technical demands of making moving images using a range of digital imaging technologies. The subject explores essential concepts and craft skills needed for moving image production in fields such as camera, lighting, directing, sound recording and editing. Students are introduced to concepts of montage, rhythm, juxtaposition and structure, in addition to learning practical skills connected with editing audiovisual media. The subject is structured to encourage students to learn through hands-on learning, experimentation and collaboration. The delivery of the teaching and learning is through a series of seminars, in-class and out-of-class exercises, and practical workshops. While introductory in assumed knowledge, the subject is designed for postgraduate-level students who are interested in developing moving image production skills.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57168 Sound and Interaction

8cp; availability: not offered to exchange and study abroad students

In this subject, students explore the history, theory and production of new media and sound, involving key historical sound texts, contemporary audio practices, the rise of interactive new media forms and the emergence and impacts of social media, podcasting and other approaches. Students research and examine a range of creative works involving sound and interaction, and utilise social media tools to investigate aspects of sound and digital media culture and production. Students develop basic production skills in audio recording, mixing, and online media development. Students also develop critical, conceptual and technical skills, producing a series of short works with audio and online outcomes.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57169 Moving Image

6cp; availability: not offered to exchange and study abroad students

This subject introduces students to the creative challenges and technical demands of making moving images using a range of digital imaging technologies. The subject explores essential concepts and craft skills needed for moving image production in fields such as camera, lighting, directing, sound recording and editing. Students are introduced to concepts of montage, rhythm, juxtaposition and structure, in addition to learning practical skills connected with editing audiovisual media. The subject is structured to encourage students to learn through hands-on learning, experimentation and collaboration. The delivery of the teaching and learning is through a series of seminars, in-class and out-of-class exercises, and practical workshops. While introductory in assumed knowledge, the subject is designed for postgraduate-level students who are interested in developing moving image production skills.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57170 Sound and Interaction

6cp; availability: not offered to exchange and study abroad students

In this subject students explore the history, theory and production of new media and sound, involving key historical sound texts, contemporary audio practices, the rise of interactive new media forms and the emergence and impacts of social media, podcasting and other approaches. Students research and examine a range of creative works involving sound and interaction, and utilise social media tools to investigate aspects of sound and digital media culture and production. Students develop basic production skills in audio recording, mixing, and online media development. Students also develop critical, conceptual and technical skills, producing a series of short works with audio and online outcomes.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57171 Writing for the Screen

6cp; availability: not offered to exchange and study abroad students

This subject offers animation students the opportunity to develop screenwriting skills. Students develop a screenplay, 5–10 minutes in length, and suitable for any kind of animation. Students may produce a written screenplay and/or a storyboard-based screenplay. Students develop an original idea and gain skills in storytelling through exploring character development, structure, research and visualisation. Students also improve their ability to read, develop and edit their own work and the work of their peers.

Typical availability

Spring semester, City campus

57172 Advanced Moving Image

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 57167 Moving Image OR 57094 Film and Video 1

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject extends and develops ideas, concepts and technical skills in the context of team-based media production workflows. Students further their understanding of the techniques and conceptual skills required for professional moving image production through a series of seminars, in-class and out-of-class exercises and practical workshops. These skills include film and digital cinematography, data wrangling, production design, directing, location sound recording and production management. Students are introduced to advanced moving image acquisition and hands-on exercises are designed to take students through the technical and conceptual issues involved in realising an idea through moving images. The subject stresses the importance of collaboration in professional media production and students learn skills that help them to be effective crew members and work as part of a creative team. The subject enables students to develop production skills as a basis for future media projects.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57173 Advanced Post Production

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 57167 Moving Image OR 57094 Film and Video 1

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject extends and develops ideas, issues, concepts and techniques around post-production, and the concept of the editor as creator of the story. Students further their understanding of these skills in the context of team-based media production workflows through a series of introductory seminars, in-class and out-of-class exercises, and practical workshops. These techniques and theories include non-linear editing, special effects, title design, sound design, data management, collaborative workflow, and a broad range of delivery formats including digital. The subject introduces students to advanced pre-visualisation and post-production techniques involved in various production formats. The subject stresses the importance of collaboration in professional media production and students learn skills that help them to collaborate with directors and producers, working as part of a creative team. The subject enables students to develop post-production skills as a basis for future media projects.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57175 Creative Producing

8cp; availability: not offered to exchange and study abroad students

This subject introduces students to the role and strategies of the creative producer in fields spanning animation, games, film and television, installation art, and cross-media works. Students examine the key issues and concerns of producers working in the creative industries in varying local, national and international contexts. Students are also introduced to key concepts and approaches to funding and finance; marketing and distribution; intellectual property and copyright; budgeting; collaboration; creativity; and sustaining a fruitful and viable creative practice. The subject also covers the pitching of short project proposals. Following a series of introductory in-class seminars and guest lectures, students complete a learning contract outlining their proposal for the remainder of the semester. Typically, this involves a case study and an in-class presentation about a working creative producer. It also involves a self-directed research assignment based on a media, art or industry matter identified by the student. These research findings are presented to the whole class and, where feasible, are also published or presented to other students and media, art or industry bodies.

Typical availability

Spring semester, City campus

57176 Directing

8cp; availability: not offered to exchange and study abroad students
Requisite(s): 57167 Moving Image
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

The subject explores the role of the director, with an emphasis on narrative drama. The teaching and learning of the subject is delivered through a series of seminars, in-class and out-of-class exercises, and practical workshops that are designed to develop students' skills as directors. Through a focus on visual storytelling, mise-en-scène, performance and script analysis, the subject explores techniques to elicit performance and determine visual style and coverage relevant to a variety of filmed scenes.

Typical availability

Autumn semester, City campus

57177 Media Arts and Production Minor Project

8cp; availability: not offered to exchange and study abroad students

In this subject, students have the opportunity to develop their professional skills and creative expertise in media arts program making. Students may choose to develop their professional practice through undertaking specialised technical or production roles on other student projects and profiling this work through a resulting show reel or equivalent. For example, students may work as producer, cinematographer or sound designer on a film or video project. Students develop a learning contract that is approved by their allocated academic adviser.

Students may choose instead to complete a short original minor media project in film, video, television, online, sound, radio, performance and installation or multi-platform. The project must be feasible and be able to be completed within one semester. A drama project should not exceed 7 minutes in length. The proposed minor project must be approved by the academic adviser. Students are required to submit critical documentation (approximately 1500 words) of their research, production development and production process to accompany the final project. This documentation should show evidence of the student's critical relationship to their media production practice.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57178 Digital and Multiplatform Storytelling

8cp; 3hpw (seminar) plus relevant digital media technical/production workshops; availability: not offered to exchange and study abroad students

This subject allows students to develop their conceptual and production skills in digital storytelling and multiplatform production, such as for online, mobile, transmedia, social media, locative, e-book, electronic publishing and other emerging media formats. The subject explores a range of storytelling forms for digital media such as multiplatform and transmedia storytelling; narrative in networked and application (app) formats; episodic media; locative narrative; electronic literature; and other emerging media formats. Building on earlier knowledge, students explore a range of creative, technical and production issues concerning digital narrative, content and multiplatform development. They develop production skills in the new modes of storytelling, publishing and distribution that online, networked and app formats make possible.

Students engage conceptually with issues such as structure, design, user experience, multiplatform project scoping, and digital treatment development for digital and multiplatform storytelling. They expand their production skills through a series of technical workshops and by working in small teams to develop a digital creative work such as a multiplatform or transmedia narrative, episodic media, electronic literature, locative narrative or other relevant digital storytelling project. Where approved, students may choose to work on the multiplatform component of other relevant media projects produced in postgraduate subjects in the Faculty of Arts and Social Sciences.

Typical availability

Spring semester, City campus

57179 Project Development and Creative Practice

8cp; availability: not offered to exchange and study abroad students

This subject develops advanced skills for the research and development of creative media projects. Students learn to take an idea through research to a form ready for production. In this subject students workshop scripts and develop skills in production design and planning. They also develop advanced skills in research and development in media arts through one of the following: by developing specialised knowledge of a particular technical or production area of the media industries; through research and writing a detailed treatment or script for a creative project intended to be taken into 57177 Media Arts and Production Minor Project, 57180 Media Arts and Production Major Project, or intended for production after the subject or through undertaking creative led research into an area of innovation that experiments with the interplay between media forms. The subject is taught by a combination of seminar and learning contract. Students are required to complete seminar assignments and present the progress of their research or development during the seminar. Students are required to work in a crew role on at least one project in production during the semester.

Typical availability

Spring semester, City campus

57180 Media Arts and Production Major Project

16cp; availability: not offered to exchange and study abroad students

In this subject students complete an original short project in film, video, television, online, sound, radio, performance and installation or multi-platform. The completed project should demonstrate the student's advanced professional skills and creative expertise. The project must be successfully completed during the semester, although it may have been developed and commenced during the Research and Development subject or equivalent Scriptwriting subject. It must be feasible to be produced within the resources available both through UTS and those provided by the student from outside UTS. The proposed project must be approved by the academic adviser. Students are required to submit critical documentation (approximately 3000 words) of their research, production development and production process to accompany the final project. This documentation should demonstrate the student's critical relationship to their media production practice. This subject differs from Media Arts and Production Minor Project in that it is expected that the completed project work is conceptually and creatively challenging. The production and/or post-production process should be considerably more demanding and the resulting project should show evidence of the student as a media arts program maker. The subject is conducted by individual or small group supervision.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57181 Recordkeeping Fundamentals

8cp

This subject provides an overview of the key concepts and practices in recordkeeping and the role of records and recordkeeping systems in an organisational and societal context. Students are introduced to theoretical frameworks of the record life cycle and the record continuum as well as the key components of a best practice recordkeeping system within the current Australian legal and regulatory environment. Key recordkeeping practices and tools such as functional classification, metadata schema, records retention and disposal, implementation methodologies and records management policies and processes are explored with reference to current best practice.

Typical availability

Autumn semester, City campus

57182 Rethinking Media

8cp; availability: not offered to exchange and study abroad students
Requisite(s): 57023c Communicating with Publics AND 57022c Foundations of Communication

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

In this subject, students explore the roles and functioning of media in society and engage in critical thinking about media models from 'mass media' to 'social media' and social networks. They review major frameworks for understanding media including the First Media Age and Second Media Age, and examine key concepts from the various traditions of media studies focused on media ownership and control, media texts, media technologies, media effects, media audiences, and media practices. They investigate dysfunctions as well as functions of media, and contemporary shifts such as interactivity, convergence, and hybridisation, as they explore ways in which media are used in the public sphere, for cultural production, and for public communication by organisations. Students read about media, consume media, analyse media, and produce media as part of their learning, including engaging in online research and contributing to an online forum and blog.

Typical availability

Spring semester, City campus

57183 Soundtrack

8cp

Requisite(s): 57168 Sound and Interaction AND 57167c Moving Image

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject focuses on the design and composition of sound for moving image, radio and digital media. Emphasis is placed on location sound recording, track laying and mixing dialogue, effects and atmospheres for both synchronous and non-synchronous media, and critical listening. As a project, students undertake a collaborative work to develop a soundtrack from design to final mix. To facilitate this students are encouraged to work on the soundtrack of projects produced in other subjects of media arts and production, either from the undergraduate and postgraduate project subjects or an assignment as set by their lecturer.

Typical availability

Spring semester, City campus

57184 Documentary: Expanded, Mobile and Networked

8cp

Requisite(s): 57151 Storytelling with Sound and Image

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject allows students to develop their conceptual and production skills in expanded forms of documentary involving social media, online, mobile and app formats. The subject will explore new modes of conceptualising, producing and distributing documentaries; covering online documentary, social media, mobile and locative projects and other relevant emerging technologies and formats. Building on earlier knowledge, students will explore a range of creative, technical and production issues concerning expanded online documentary production. They will develop production skills in new modes of storytelling, publishing and distribution that online, networked and app formats make possible.

Typical availability

Spring semester, City campus

57185 Journalism Major Project 1

8cp

Requisite(s): (57011 Research and Reporting for Journalism AND (57151 Storytelling with Sound and Image OR 57014 Feature Writing) AND 57013c Journalism Studies)

There are also course requisites for this subject. See access conditions.

This subject is designed for students who have substantial experience in journalism and are ready to work independently. Working under the supervision of an appropriate member of staff, students devise,

research, and draft a plan for a journalism major project and/or exegesis, which is completed and polished to a high standard in Journalism Major Project 2. Students are encouraged in this subject to explore and extend, through reading and redrafting, the possibilities of their chosen form and genre.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57186 Journalism Major Project 2

8cp

Requisite(s): 57185 Journalism Major Project 1

There are also course requisites for this subject. See access conditions.

This subject is designed for students who have substantial experience in journalism and are ready to work independently. Students devise, research, and draft a substantial (10,000 words or equivalent) work of journalism. The writing may be in any platform, depending on the viability of the project and the availability of academic advice. Students are encouraged in this subject to explore and extend, through reading and redrafting, the possibilities of their chosen form and genre. They are also encouraged to work independently.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57187 Specialist Journalism

8cp

Requisite(s): 57011 Research and Reporting for Journalism

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject aims to flexibly develop analysis and/or advanced practices in professional journalism. It allows journalism students to critically engage in issues relevant at particular and appropriate points of time; generated by national or international events, political, social or economic developments, debates, data or document releases. Students work to deadlines, creating scholarly works and/or researching and reporting stories for journalism publications.

Typical availability

Autumn semester, City campus

57188 Writing Project 1

8cp

Requisite(s): 57041 Narrative Writing AND 57134 Theory and Creative Writing

There are also course requisites for this subject. See access conditions.

This subject is designed for students who have substantial experience in writing and are ready to work independently. Working under the supervision of an appropriate member of staff, students devise, research, and draft a substantial (7,500 words or equivalent) work of creative writing, which will be completed to 15,000 words and polished to a high standard in Writing Project 2. The writing may be in any genre, depending on the viability of the project and the availability of academic advice. Students are encouraged in this subject to explore and extend, through reading and redrafting, the possibilities of their chosen form and genre. They are also encouraged to independently form their own writing groups in which to discuss their work.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57189 Writing Project 2

8cp

Requisite(s): 57188 Writing Project 1

There are also course requisites for this subject. See access conditions.

This subject is designed for students who, having completed Writing Project 1, have substantial experience in writing and are ready to work independently. Working under the supervision of an appropriate member of staff, students complete and polish their 15,000-word (or equivalent) creative project to a high standard (this

15,000-word project includes the 7,500-word, or equivalent, project undertaken in Writing Project 1, though these may be substantially rewritten, if desirable). The writing may be in any genre, depending on the viability of the project and the availability of an appropriate supervisor. Students are encouraged in this subject to explore and extend the possibilities of their chosen form and genre. They are also encouraged to independently form their own writing groups in which to discuss their work.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57190 Writing Seminar

8cp

Requisite(s): 57031 Non-fiction Writing AND 57041 Narrative Writing AND 57134 Theory and Creative Writing

There are also course requisites for this subject. See access conditions.

This is an advanced subject for students in the Master of Arts in Creative Writing. It brings together graduate writing students from a number of areas to workshop their own and each others' creative work, provide and receive productive feedback on work-in-progress, and to explore aspects of contemporary writing practice and theory that are both directly related to and/or challenge their own practice. It also prepares students for independent professional practice as writers.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57989 Mise-en-Scene

8cp

Graduate subject – Media Arts and Production – 400 level

In this subject, students develop advanced skills in visual style. Students have the opportunity to examine mise-en-scène in a range of audio-visual screen works. They study in depth the inter-relationship of elements which comprise a particular style and the way this contributes to genre. Through individual research, seminar presentations and production exercises, students develop skills in planning a visual and sound style for their film, video or new media work.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57994 Managing Organisational Communication

8cp; availability: not offered to exchange and study abroad students

In this subject students develop their understanding and capacities for working in an internal communication management role. They develop strategies for employee/member communication for an organisation and produce plans and budgets for their implementation. Students address the strategy by creating e-newsletters for internal organisational publics, demonstrating their writing and design skills and their understandings of internal issues identification and management.

Typical availability

Autumn semester, City campus

57995 Learning in Organisations

8cp; availability: not offered to exchange and study abroad students

This subject seeks to orientate students to current practices in organisational learning. It examines the various theories of organisational learning from the perspectives of the individual, organisational unit and whole organisation. The application of these theories to organisations in various sectors is critically examined and case studies of organisational learning are used to illustrate the impact of organisational learning on the long-term performance of the organisation. The future of organisational learning in the contexts of economic, social, demographic and technological change is also examined.

Typical availability

Autumn semester, City campus

57996 Marketing and Corporate Communication

8cp; availability: not offered to exchange and study abroad students

In this subject students focus on integrative communication strategies that link stakeholders to an organisation. They examine the intersection of public relations and marketing. They research, design, plan and budget integrated communication strategies for clients in the commercial and not-for-profit sectors. Campaigns may include product promotion, social marketing or corporate identity and reputation.

Typical availability

Autumn semester, City campus

57997 Professional Communication Project

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 57022 Foundations of Communication AND 57023 Communicating with Publics AND 57028 Research for Communication Professionals

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject allows students to pursue further studies in their area of professional and/or scholarly interest in the field of communication management. Students further develop their critical and analytical skills in communication management appropriate to working in consultancy and advanced management roles, extend and deepen their conceptual understandings of communication management, and develop competencies in research and theory building. The body of work undertaken may include an internship or critical production or a small independent research project and a reflective journal. The project enables students to link their professional work to the theories and skills covered in modules undertaken during the subject. The reflective journal provides a framework for developing the ability to reflect critically on practice through the application of different models of reflection.

Typical availability

Autumn semester, City campus

Spring semester, City campus

57999 Digital and Multiplatform Storytelling

6cp; 3hpw (seminar) plus relevant digital media technical/

production workshops, weekly, on campus; availability: not offered to exchange and study abroad students

This subject allows students to develop their conceptual and production skills in digital storytelling and multiplatform production, such as for online, mobile, transmedia, social media, locative, e-book, electronic publishing and other emerging media formats. The subject explores a range of storytelling forms for digital media, such as multiplatform and transmedia storytelling; narrative in networked and app formats, episodic media; locative narrative; electronic literature and other emerging media formats. Building on earlier knowledge, students explore a range of creative, technical and production issues concerning digital narrative, content and multiplatform development. They develop production skills in the new modes of storytelling, publishing and distribution that online, networked and app formats make possible.

Students engage conceptually with issues such as structure, design, user experience, multiplatform project scoping and digital treatment development for digital and multiplatform storytelling. They expand their production skills through a series of technical workshops and by working in small teams to develop a digital creative work such as a multiplatform or transmedia narrative, episodic media, electronic literature, locative narrative or other relevant digital storytelling project. Where approved, students may choose to work on the multiplatform component of other relevant media projects produced in postgraduate subjects in the Faculty of Arts and Social Sciences.

Typical availability

Spring semester, City campus

58101 Understanding Communication

8cp

In this foundation subject students investigate the role of communication in society and the different ways in which communication is understood and practised interpersonally, socially, culturally and professionally. Students examine communication from the perspectives of writers, producers, journalists, creative artists,

advertising and public relations practitioners, information managers, and from social, cultural and political perspectives. The interrelated roles of authors/producers, audiences, texts and contexts are explored through research, reading, projects and discussions. Students also gain practical experience through conducting interviews and presenting their findings in writing, photography and video, and in various online forms using digital media.

Typical availability

Autumn semester, City campus
Spring semester, City campus

58102 Language and Discourse

8cp

This subject introduces three key communication concepts, develops a thematic study and teaches skills in the medium of sound. The concepts are Discourse, Genre and 'Multimodality'. Through multimodal analysis and practice, students understand communication as combinations of representations, cultural forms and specific communicative resources (verbal and non-verbal, visual and auditory, etc), assembling complex relations of thoughts and feelings. The thematic research explores the different ways in which important social and cultural issues are represented in a range of media. Students extend their learning by experimentation in multimodal writing in different genres, such as 'report', 'story', 'argument', 'appeal', etc, and they reach out for different audiences with sound practice. The subject equips students with the concepts and methods to reflect critically on their own experience of language phenomena through the issues systematically explored.

Typical availability

Autumn semester, City campus

58103 Ideas in History

8cp

This subject engages students in critical examination, discussion and reflection on some of the key ideas and intellectual movements in world history and how these inform current social, cultural, economic and political thought and practice. In particular, it explores how ideas and worldviews frame and influence communication socially, culturally and politically. Students explore non-Western as well as Western ideas and viewpoints and ways of understanding human history including those ideas and intellectual traditions attached to the categories of the 'modern' and modernity, the 'post-modern' and post-modernity and 'tradition' – culture, custom and community. These are examined through various themes from multiple cultural perspectives and activities which include those based in museums and other sites where ideas and their histories are represented.

58110 Introduction to Journalism

8cp

Students are introduced to principles of professional journalism and its theoretical and ethical dimensions. Students examine the practice of journalism in relation to its historical, economic, political and social contexts with a focus on the impact of the internet on contemporary news media practice. Students research and produce original news stories to deadline and build online ePortfolios. They are introduced to Newsday, the real-time UTS newsroom. Through a critical examination of the process of research and reporting, students develop the rigorous skills required for journalism in the public interest.

Typical availability

Autumn semester, City campus
Spring semester, City campus

58111 Reporting with Sound and Image

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58110 Introduction to Journalism

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

The use of sound and image in journalism professional practice is explored. Students develop their sound and video recording, interviewing, writing and editing skills to produce short news and current affairs reports for broadcast media. Students build an understanding of how changes in online media are impacting on audio/visual journalism. They critically analyse professional and ethical issues that arise in the context of broadcast journalism, including their own. The relationship between publishing formats and storytelling is explored. Students develop ideas and produce current affairs reports, drawing on a range of sources and build on basic news reportage, both in form and content. Students edit, package and publish reports on NewsDay.

Typical availability

Spring semester, City campus

58112 Reporting and Editing for Print and Online Journalism

8cp

Requisite(s): 58110 Introduction to Journalism

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject develops skills in research and reporting and introduces editing for online and print media. Students extend their abilities as reporters by developing more advanced research skills and interviewing and writing techniques appropriate for the production of longer stories. Students are introduced to basic skills and strategies for the editing and publishing of stories for publication. They learn to shape stories for specific audiences by writing introductions, headlines, captions and adding links and other online elements. Students develop an appreciation of the importance of accuracy and clarity for publishing and consider ethical and legal implications that arise during the publishing process. Throughout the semester, students develop their ability to critically analyse contemporary news and current affairs practices in local and international contexts. They publish reflections on their own and others' journalism practice in their ePortfolios. Students research, write and edit stories to deadlines in a newsroom environment.

Typical availability

Autumn semester, City campus
Spring semester, City campus

58113 Exploring Media Arts

8cp; availability: exchange and study abroad students with faculty approval

This subject explores creative media arts practices across moving image, audio and participatory forms. It introduces students to relevant media arts histories and contexts in addition to a range of technologies, media practices and production techniques. Each semester is based around a specific theme, such as time, speed, place or memory, which is explored through creative play. Working on creative exercises, students are introduced to core skills and understandings in media arts practice. They gain basic skills in synopsis writing, production planning, content gathering in image and sound, mixing and editing, safety issues, and collaborative work practices. Students publish and reflect on their creative practice online, a process which is continued in subjects throughout the major.

Typical availability

Autumn semester, City campus

58114 Fictions: Storytelling, Narrative and Drama

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58113 Exploring Media Arts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject is an exploration of narrative storytelling and drama in media. Students are introduced to narrative forms in media including concepts of structure, suspense and drama along with scriptwriting for narrative works. Student learning in this subject focuses on ways of working with the interplay between visual and aural style, and performance and narrative form across a variety of media. Assessment tasks include writing concept documents for media projects, group narrative exercises and online reflection and self and peer feedback.

Typical availability

Autumn semester, City campus

58115 Composing the Real

8cp

Requisite(s): 58113 Exploring Media Arts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject explores conceptual and production approaches to documentary media forms. Students are introduced to key documentary modes and examine and develop documentary projects involving a range of outcomes from photo essay to video and sound documentary to emerging online and interactive documentary projects. Activities include short documentary exercises across a range of media and the development of a short documentary treatment. Hybrid forms and boundary blurring such as reality TV, blogging and other cross-overs between fiction and non-fiction are also examined. Throughout the subject, students investigate the issues facing media producers seeking to work with the 'creative interpretation of reality'.

Typical availability

Spring semester, City campus

58116 The Ecology of Public Communication

8cp

Students explore the field of public communication and the major areas of practice. They gain an understanding of the role of communication in the public sphere, of audiences, environments and contexts of communication, including professional communication practices and issues around integration and convergence. Students learn how public communication, public relations and advertising are conceptualised and practised in various types of organisations and interest groups including organisational communication and marketing communication. They explore issues and controversies in the field such as social representations, agendas and advocacy. Students also begin to produce their own work in advertising, public relations and organisational communication including using new media.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58117 Principles of Public Relations

8cp

Requisite(s): 58116 The Ecology of Public Communication

These requisites may not apply to students in certain courses. See access conditions.

In this subject, students learn about theories, models and principles of contemporary public relations, tracing the historical evolution from technical function to strategic management. Major areas of employment such as media, community and stakeholder relations, public sector and internal communication are reviewed. Case studies and professional issues are used to analyse current practice, developing understanding of ethics and socially responsible practice. Students are introduced to writing and research skills essential for practice.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58118 Principles of Advertising

8cp

Requisite(s): 58116 The Ecology of Public Communication

These requisites may not apply to students in certain courses. See access conditions.

Students are introduced to the principles and practice of advertising and its unique role in business and society. Creativity in advertising is examined through an exploration of the art and science of advertising and how these apparent contradictions influence principles and industry practice. Students learn how to develop and present a range of creative ideas appropriate to the various stages of effectively promoting a product, service or idea in sectors as diverse as public, private and not-for-profit.

Typical availability

Spring semester, City campus

58120 Creativity and Culture

8cp

Requisite(s): 58119 Text and Context

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject prepares students with a reflective knowledge about contemporary directions and debates in current creative practice. Students research, design, write and publish a creative project in essay, non-fictional or fictional form. They analyse a range of different perspectives (philosophical, psychological, inspirational and practical) on the connection between creativity and invention and on generic forms of creative, essayistic, fictional and non-fictional writing. Theories of narrative and voice, relationships between identity, subject and the representation of the self in the creative text, as well as contemporary approaches to the essay and to experimental forms of critical discourse, are discussed throughout the subject. Students respond to these contexts in the creative work they complete during the semester.

Typical availability

Autumn semester, City campus

58121 Fictional Forms

8cp

Students are brought into close contact with creative practice in both mainstream and emergent forms of fiction and narrative as they investigate the question 'what is fiction?'. The subject introduces a wide range of recent and modern forms of fiction writing as technical examples and thematic models. Throughout the semester students produce and collectively workshop their own writing in fiction or script. At the same time, critical debate within the class explores the limits and the possibilities of the contemporary text together with the functional operation of categories such as 'author', 'genre', 'narrative', 'performance', 'subjectivity', 'meaning', 'reading', 'writing' and 'text', including in relation to innovative formats such as hypertext or other electronic formats. Students are encouraged to choose within a wide range of fictional forms for their creative writing.

Typical availability

Spring semester, City campus

58122 Introduction to Social Inquiry

8cp

How do we understand the structure and changing nature of the social world? This subject provides an introduction to key ideas in social and political thought which enable the critical interpretation of social life. It focuses on concepts such as gender, race and social class, and explores how they can be applied to understand society and the life-paths of individual social actors. As a core activity of the subject, students undertake their own empirical biographic or 'life-story' analysis as a vehicle through which to begin to develop their social research skills and to concretely explore the ways the social structures explored shape the possibilities of individual agency.

Typical availability

Autumn semester, City campus

58123 Society, Economy and Globalisation

8cp

Requisite(s): 58122 Introduction to Social Inquiry

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

To understand the problems of global society and develop possible solutions, we must try to understand the political dimensions of 'the economy', or in other words to consider how political power shapes and is shaped by changing distributions of wealth and poverty. This subject introduces students to key concepts and debates in political economy and the study of globalisation. In particular, it assesses the rise of the ideology of the 'free market' to global pre-eminence in recent decades, and the increased capacity of transnational corporations to influence political institutions and democratic governance. A snapshot of international trade is developed, with students focusing on a specific commodity, such as coffee, soy or uranium, to chart its passage through global society. These global networks are explored from sites of extraction to manufacture, retail, consumption and disposal. Social, political and ecological impacts are highlighted using quantitative and qualitative data drawn from internationally available data. Students use insights gained from these investigations to explore popular perceptions of globalisation and consumer culture, and of the globally traded commodities by which we are made interdependent. Throughout the subject, students consider: (a) the problem of measurement in the social sciences, and the way measurements and statistics are made and deployed as evidence in policy debates, and (b) alternative goals for social development, such as equity and sustainability.

Typical availability

Autumn semester, City campus

58124 Local Transformations

8cp

Requisite(s): 58122 Introduction to Social Inquiry

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

The way we think about relationships between the individual, local community life and the wider social order is addressed in this subject through investigation of the intersections between time, place and agency. Students investigate issues such as how the historical legacies of locality are connected to present possibilities and future hopes, how localities are produced in relation to each other in cross-national and trans-local interactions, and how local capacity or agency is linked to local, national and transnational power hierarchies, whether in terms of dominance or marginality. This subject introduces students to survey research methods. Students engage a range of theoretical approaches and integrate them with survey methods, developing communication skills to present resulting insights.

Typical availability

Spring semester, City campus

58125 User Experience Design

8cp

This subject introduces students to the principles of creative information design: audience analysis, contextual writing, colour, typography and layout. Students design, create the content and produce for selected clients useful information products in a range of digital and non-digital formats and media. The design process introduces students to creative problem-solving, collaborative work practices and the principles of usability and self-assessment. Students begin the development of their course-wide ePortfolio which contains examples of work such as specialised written texts, brochures, images and webpages.

Typical availability

Autumn semester, City campus

58126 Information Discovery and Analysis

8cp

Requisite(s): 58125 User Experience Design

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Students are introduced to a range of techniques that enable them to conduct sophisticated searches and analysis in digital environments. Using case-based approaches and a real-life scenario, they learn to apply these skills to a particular problem. By analysing and reflecting upon approaches to the execution of searches as well as the significance of the content of information located through these searches, students develop an understanding of information systems and an appreciation of their strengths and current limitations. To develop an understanding of potential strategic uses of information, they learn how to analyse information to create compact syntheses that suit the needs of different audiences in different contexts. In a collaborative learning environment, students also critically examine themes associated with information practices in a digital world. Students continue to contribute to their course-wide ePortfolio.

Typical availability

Spring semester, City campus

58127 Information Cultures

8cp

Requisite(s): 58125 User Experience Design

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Students are introduced to the conceptual and methodological tools they need to actively engage with the organisations and communities they will work with in the information, communication and creative industries. They develop a critical understanding of the complex interrelationship between people, information, knowledge and culture and of the central role of theory and research in effective professional practice. The subject introduces students to theories and empirical research from a range of disciplines including information behaviour, communication theory, philosophy and sociology, as well as to a range of research methodologies for exploring and analysing both individual and collective information/knowledge behaviour and practices. Students apply their theoretical and methodological learning to the development of a practice-based pilot research project. In doing so, students develop an appreciation of the importance of practice-based research as the basis for research-based professional practice. Students make further contributions to their ePortfolio.

Typical availability

Autumn semester, City campus

58128 Strategic Public Relations

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58117c Principles of Public Relations

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject equips students with knowledge and practical skills in research, planning and budgeting for strategic communication campaigns. They learn to assess and develop strategy by identifying issues, publics and options for communication and relationship management. They develop their expertise in designing, writing and managing innovative, multimedia campaigns to address client and communication problems and opportunities. Students design and present a professional client pitch.

Typical availability

Autumn semester, City campus

58129 Advertising Campaign Practice

8cp

Requisite(s): 58118c Principles of Advertising

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Students gain insight into the various agency disciplines and their contribution to campaign research and strategy, creation and production of ideas, media planning, and pitching as an agency team. Topics include the significance of strategic planning in campaign development, conceptual issues involved in the production of advertising ideas, and the development and selling of an integrated campaign to a client. Students engage in scriptwriting and the production of storyboards for broadcast media.

Typical availability

Autumn semester, City campus

58201 Communication and Cultural Industries and Practices

8cp

Requisite(s): 58101 Understanding Communication OR 58102

Language and Discourse OR 58103 Ideas in History

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Looking back and forth between theory and practice (individually and collectively), this subject examines ways that media, information and communication figure in our everyday practices. It examines the development of the communication and cultural industries and practices with a particular focus on current practices and technologies of convergence, and on ways of theorising and understanding the relationship between producers, texts and audiences. Students are introduced to practice and the roles of communication professionals in different contexts. The subject provides an overview of important historical and political developments within communication and cultural industries, critically interrogating how communication and information products are produced, in what organisational and economic contexts, and for what purposes. The Australian situation is placed in its international context and with reference to the changing roles of digital technologies, public and private sector production/distribution and the role of governments.

Typical availability

Autumn semester, City campus

58202 Regulating Communication: Law, Ethics, Politics

8cp

Requisite(s): 58101 Understanding Communication OR 58102

Language and Discourse OR 58103 Ideas in History

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Public, organisational and everyday communication practices are shaped through laws, policies and ethical codes. Investigating and comparing different regulatory approaches tells us much about our own assumptions about communication and its role in shaping our lives. Contests over law and ethics reflect underlying social, economic and political conflicts that shape political agendas and define public policy. The subject explores communication regulation in a range of Australian and international contexts and from historical and cross-cultural perspectives. Students investigate how codes and laws relate to communication practices by selecting from a range of topics such as defamation, censorship, intellectual property, privacy, data protection, surveillance, racial vilification, whistle-blowing, confidentiality, freedom of information, and the role of inter-state organisations, such as the United Nations, and non-government organisations. Students develop their practical understanding of these topics through a simulation role-playing game based on a hypothetical scenario designed to raise regulatory issues of contemporary relevance.

Typical availability

Spring semester, City campus

58210 Storytelling, Narrative and Features

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58110 Introduction to Journalism OR 58111 Reporting with Sound and Image OR 58112 Reporting and Editing for Print and Online Journalism

These requisites may not apply to students in certain courses. See access conditions.

This subject is designed to move students from news production to storytelling through longer form journalism, focusing on the production of features and other forms of non-fiction narrative in a range of media. Genres such as investigative and literary journalism are considered. The subject aims to give students an insight into a range of styles and their applications across the mediums and the implications for storytelling of convergence and interactivity including the 'packaging' of feature stories for online publication. An understanding of voice, story structure, interviewing technique, language and, where relevant, the use of visual images and sound are further developed in the context of students' own story production. Through a reflective approach, students develop a critical appreciation of the role played by narrative and language in media discourse and how this relates to the work of journalists.

Typical availability

Spring semester, City campus

58211 Specialist Reporting, Audiences and Interactivity

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58210 Storytelling, Narrative and Features

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject introduces specialist genres and 'rounds' in journalism. Students are introduced to investigative research techniques within specialist rounds such as environment, health, technology, arts, sports, law, media, business and politics. Students form reporting and editing teams around specific rounds. By developing their own chosen round and monitoring how the round is covered by professional journalists they develop a critical understanding and ability to develop relationships with sources, produce interactive journalism for specific audiences and work in collaborative teams. Students build their own eportfolios and specialist reporting teams contribute to the UTS media hub by producing work using a range of media forms.

Typical availability

Spring semester, City campus

58212 Aesthetics

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58114 Fictions: Storytelling, Narrative and Drama OR 58115 Composing the Real

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject explores how media arts aesthetics work through engaging the senses and emotions. It provides students the opportunity to develop the potential impact of a work through experimenting with form, composition, and poetics. The subject examines how aesthetics are both culturally determined and dynamic.

During the subject, students explore these ideas using techniques such as remixing and experimental approaches to composition and form. The resulting works may be cross-platform and cross-media, including installation works, time-based and interactive media, and sound art.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58213 Research and Practice

8cp; availability: not offered to exchange and study abroad students
 Requisite(s): 58114 Fictions: Storytelling, Narrative and Drama OR 58115 Composing the Real
 These requisites may not apply to students in certain courses.
 There are also course requisites for this subject. See access conditions.

Students have the opportunity to develop their creative practice and capacity for critical reflection through conceptualisation, research and writing. This subject allows students to develop their final projects and /or to undertake research and targeted skill development towards that project. Students undertake skill and conceptual development in modules from a number of choices offered each semester. These modules have a practical and conceptual development focus. Students work in an intensive mode within specialised areas of media arts production and undertake case study research within this framework.

Typical availability

Spring semester, City campus

58214 Media Writing and Production

8cp; availability: exchange and study abroad students with faculty approval
 Requisite(s): 58117 Principles of Public Relations OR 58128 Strategic Public Relations
 These requisites may not apply to students in certain courses.
 There are also course requisites for this subject. See access conditions.

Students develop knowledge and practice in writing and producing materials such as media releases, feature articles, newsletters, brochures, speeches, profiles, websites and print, and online production. The requirements of different genre and styles of public communication writing are explored together with issues rhetoric and persuasion in public relations. Students enhance their skills in writing, design production and the application of these skills to the internet. Student work integrates theories and principles of effective public communication with technical skills in their fields of focus.

Typical availability

Autumn semester, City campus
 Spring semester, City campus

58216 Imagining the Real

8cp; availability: exchange and study abroad students with faculty approval
 Requisite(s): 58121 Fictional Forms
 These requisites may not apply to students in certain courses.
 There are also course requisites for this subject. See access conditions.

This subject focuses on the concept of the real. Students are asked to engage with the history, contexts, conventions and current debates centred on the notion of 'the real'. Students choose different approaches to these issues in terms of creative and theoretical perspectives. The subject aims to develop students' awareness of the wide possibilities and scope of non-fiction writing and enables them to produce an extended piece of non-fiction writing in a workshop environment. The laboratory acts as a context for researching how the notions of the real are associated with questions to do with society, culture and globalisation no less than to do with issues of subjectivity, the senses and corporeal knowledge. Each class acts as a space in which students test out received and experimental approaches to writing and thinking about the real. Truth telling, the use of fictional mode in non-fictional forms of writing, concepts of simulacrum, verisimilitude, revelation and authenticity, and the ethical contexts of documentation are key features of each class's work. Students are asked to nominate the area in which they intend to write and are assisted in researching and contextualising that area.

Typical availability

Autumn semester, City campus
 Spring semester, City campus

58217 Experiments in Culture

8cp; availability: exchange and study abroad students with faculty approval
 Requisite(s): 58119 Text and Context OR 58121 Fictional Forms OR 58120 Creativity and Culture
 These requisites may not apply to students in certain courses. See access conditions.

Students have the opportunity to study and write within one of the following forms: non-linear and interactive writing, poetry, critical and theoretical writing, or screenwriting for innovative film and image. This subject challenges students to create situations or events in which forms of culture are composed in such a way as to propel them into new situations, for instance to find new audiences. During the subject examples are given of how, in various other times and places, artistic and intellectual movements have gathered impetus and evolved as historical cultural forms. Students work in different workshops within these forms over the semester, sharing key readings and references. An emphasis is placed throughout the semester on original and innovative subject matter, on the capacity of the student to become familiar with and expert in the technical range of the chosen form of writing and to research its recent and longer term history.

Typical availability

Spring semester, City campus

58218 Ideology, Beliefs and Visions

8cp; availability: exchange and study abroad students with faculty approval
 Requisite(s): 58122 Introduction to Social Inquiry OR 58123 Society, Economy and Globalisation OR 58124 Local Transformations
 These requisites may not apply to students in certain courses.
 There are also course requisites for this subject. See access conditions.

Social change produces ideas but ideas also produce or prevent social change. The ideologies we live under, the beliefs we may hold and the visions to which we aspire are rooted in our experiences but they also transcend them. The capacity to change society can hinge on this ability to inspire people to action. Students examine matters such as what produces beliefs and ideologies and how they are built into coherent worldviews through successive generations, the differences between religious cosmologies, political ideologies and visions and the ways they transform peoples' lives and the source of their potency and danger. They explore different types of ideas in the context of political ideologies, religious values and visions for a better society. Students develop and investigate a research question relevant to the role of ideas in social change, using participant observation and qualitative interviews to analyse ideational dynamics in real world contexts.

Typical availability

Autumn semester, City campus
 Spring semester, City campus

58219 Policy and Advocacy

8cp; availability: exchange and study abroad students with faculty approval
 Requisite(s): 58122 Introduction to Social Inquiry OR 58123 Society, Economy and Globalisation OR 58124 Local Transformations
 These requisites may not apply to students in certain courses.
 There are also course requisites for this subject. See access conditions.

Policy making takes place in the interaction between governments, communities, business and other interest groups at local, regional, national and international levels. Contending players deploy differing communication strategies to gain influence over the policy process and its outcomes. This subject engages with the processes of communication associated with the development, contestation, implementation and evaluation of social change strategies. It encompasses activities by movements, organisations and institutions such as international and local NGOs, national, state and local governments, political parties, action groups and various groups of mobilised citizens. Students develop critical and analytical perspectives drawing on relevant theory and learn to apply them through advocacy, policy development and communication practices. Students become practised in action research and communicative advocacy and through strategic application of digital resources and media.

Typical availability

Spring semester, City campus

58220 Designing for the Web

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58125 User Experience Design OR 58127 Information Cultures OR 58126 Information Discovery and Analysis

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject examines the conceptual and aesthetic aspects of designing for the web: creating content, writing for the web environment and designing website architecture including structuring and tagging content to enable browsing and searching, as well as developing basic skills in designing database-driven web sites and Web 2.0 technologies. Students, applying acquired web skills work both individually and in small groups to develop creative projects and exercises throughout the subject. Students also learn to critically evaluate website usability and accessibility and to reflect on issues of web-based communication. Students also make further contributions to their e-portfolio.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58221 Social Informatics

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58125 User Experience Design OR 58126 Information Discovery and Analysis OR 58127 Information Cultures

These requisites may not apply to students in certain courses. See access conditions.

This subject critically examines the interplay between society and technologies. Students develop an advanced understanding of the key social issues associated with the design, uses and consequences of information and communication technologies that takes into account human interaction with technology in a range of institutional and cultural contexts of development and deployment. The subject builds on understandings of the interpretation and representation of knowledge; how particular knowledges are privileged and translated; and the relationship between issues of access and power. Students develop critical analysis skills required to understand the dynamic nature of relationships affecting the transfer and use of knowledge and information in emerging social and technological contexts.

Typical availability

Not offered in 2013.

58222 Global Politics from Above and Below

8cp

Requisite(s): 99201c Global Histories

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

World order hierarchies pattern world politics. From above, dominant Northern states, militaries and corporations reproduce the status quo. From below, social movements, non-government organisations and Southern states seek alternative models for world order. Conflicts between dominant and subordinate forces shape central issues of world politics including issues of world peace, global poverty, environmental change, international migration and women's status. These and other issues are addressed in this subject, which aims to convey the dynamics driving change and transformation in global politics. Ways of understanding world politics from traditional international relations approaches to post-colonial and southern perspectives are evaluated against key issues and problems.

Typical availability

Spring semester, City campus

58223 Social Bodies

8cp

This subject unravels the body as the key site through which the reproduction of social structures and norms are secured and contested. The socio-biological matter of the body is interrogated, including an examination of habitual body competencies and feeling-states. The subject questions the 'geography closest in', setting in train a progressively broadening consideration of how body-formation is intimately linked to the formation of culture and states.

Typical availability

Spring semester, City campus

58224 Australian Pasts and Places

8cp

In this subject, students investigate the idea of 'Australia' through an exploration of the idea of place and the embodied pasts that become known to us through place. They study the ways in which landscape, country and spatial poetics have given rise to a particular way of imagining Australia through various disciplinary approaches. In this subject they question not just how does Australia 'appear' but how can we write the affective force of a placed Australia over time? They research ways in which ideas of belonging to country or attempting an embodied history challenge ideas of both place and the past as well as a unitary notion of 'Australia'.

Typical availability

Spring semester, City campus

58225 Introduction to Film Studies

8cp

This subject provides students with a comprehensive introduction to key movements and directors in the history of cinema, and key theories and debates that have defined film studies as a discipline. Through a detailed engagement with films from a diverse range of political, historical and national contexts, students develop the vocabulary and skills to think and write about film in an informed, critical and scholarly way.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58226 Media, Mediation, Power

8cp

This introduction to media studies examines significant debates about the social, political and psychological power and effects of modern (post-WWII) media: the press, radio, television, and the internet. The course investigates what constitutes a medium of communication and how this has changed through time. It considers how each medium uniquely mediates among key social agencies, the state, communities, and citizens. It investigates the questions: How do people use media? How do the media use people? How are the media involved in social and historical change? Through the study of individual and converging media (including television, the press and the internet), students engage with the principal theoretical approaches to understanding media and mediation, technological determinism, and the increasingly active use of digital, converging media in students' own lives.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58227 Balancing World Views: Introduction to Aboriginal Cultures

8cp

This subject explores Indigenous and non-Indigenous peoples worldviews and draws upon a range of intellectual disciplines, Indigenous studies, history, anthropology, and sociology.

The aim of the subject is to establish a critical learning framework for appreciating different ways of knowing, being and doing as explored through a backdrop of colonial and current experiences in Australia and internationally. Indigenous and non-Indigenous worldview encounters provide opportunities to examine and comprehend these experiences.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58228 Climate Change: Politics and Ecology

8cp

With climate change the ecological crisis is visible as a global crisis. Worldwide, it is already exhausting nourishing landscapes, causing extinction of species and displacements of peoples. The possibility of catastrophic climate change is now on the international policy agenda. Low-income societies are in the immediate firing-line, while global elites, about a fifth of the world's population (including most Australians), continue to reap the benefits of carbon-intensive development. Such asymmetries raise profound issues of environmental ethics and justice. These foreground relations between species, between nature and livelihood, between generations, and between young and old, pose a fundamental challenge to notions of sustainable development. To find new possibilities and transformations, this subject engages with climate politics, from global frameworks to local actions. Students analyse climate discourses from scientists, corporate executives, social activists and governments. They investigate key sites of climate politics, such as climate governance and emissions trading, adaptation to new climate conditions, climate action, and mobilisation for climate justice.

Typical availability

Spring semester, City campus

58229 Brand Advertising Strategies

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58118 Principles of Advertising OR 58129 Advertising Campaign Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Students explore consumer relationships with brands, the factors driving change and the use of brand equity models in their management and advertising strategy. A practice-based approach to consumer research develops students' skills in using creative and experimental techniques to uncover ideas for brand advertising. Students present their recommendations for communication as an integrated campaign with creative work in two media/channels.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58230 Professional Advertising Practice

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58118 Principles of Advertising OR 58129 Advertising Campaign Practice OR 58229 Brand Advertising Strategies

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Students examine the image of their chosen profession and the impact of social and industry perceptions on professional conduct within the advertising industry. Examining the relevant codes of conduct, legal, ethical and regulatory frameworks that govern and guide professional advertising practice, students identify the responsibilities affecting the professional pathway they plan to pursue, and assess their suitability for it. Topics include professional service firms, responsibilities to clients, career profiling, objectivity and independence, competence, public interest, integrity, confidentiality, reporting, and accountability.

Typical availability

Spring semester, City campus

58231 Organisational Communication

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58117 Principles of Public Relations OR 58128

Strategic Public Relations OR 58214 Media Writing and Production

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Students develop their understanding of interpersonal, group and organisational communication. They develop knowledge of organisational culture and use metaphor as an analytical tool for understanding organisations and communicating with internal publics. Students apply organisational communication theory to a change scenario and develop communication strategies, including special events, issues management and internal communication.

Typical availability

Spring semester, City campus

58301 Communication Practice Project

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 96 Credit Points in spk(s): C10246 Bachelor of Arts in Communication (Journalism) OR 96 Credit Points in spk(s):

C10247 Bachelor of Arts in Communication (Media Arts and

Production) OR 96 Credit Points in spk(s): C10248 Bachelor of Arts in Communication (Public Communication) OR 96 Credit Points

Bachelor of Laws OR 96 Credit Points in spk(s): C10311-C10319 OR

96 Credit Points in spk(s): C10332-C10337

This is the capstone subject in the BA in Communication, designed to bring together knowledge and skills gained by students throughout their entire course. Students have the opportunity to work on projects that develop creative and innovative responses to communication and/or media issues and problems. Students work collaboratively in cross-program teams which may also work with external 'clients' or partners in projects. At the beginning of the semester, a contract for the project is negotiated between the student group and their 'client'. Students need to assess their progress and write critical reflections and evaluations on the projects and project processes. There may be opportunities for students to organise symposia or conferences to present these reflections. Course professional portfolios – in electronic and other media – are finalised.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58310 Media Hub

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58210 Storytelling, Narrative and Features AND 58211 Specialist Reporting, Audiences and Interactivity

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject draws together the threads of all other subjects in the Journalism major in a final project that showcases students' skills in one or more mediums of their choice. This project includes both journalism production and critical reflection. It may include producing individual pieces of journalism, taking on individual editing and publishing roles in the UTS Media Hub or other UTS Journalism publications, or designing and producing a pilot issue of new publications. To commence the subject students produce a critical reflection of their achievements so far and develop a plan for a final project, either individual or collaborative. Each student finalises their ePortfolio for presentation at a final seminar.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58311 Media Arts Project

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58212 Aesthetics OR 58213 Research and Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject flows from the development and research undertaken in the previous subject. Students develop and complete a small media arts project, e.g. sound, video, interactive media, installation or performance. They can consider a range of distribution modes for the project such as online, broadcast, theatrical or other hybrid models. Students may undertake this subject in a variety of ways: producing a short media work in either sound, video, interactive media, installation, performance or film with encouragement to explore the possibilities of convergent media; forming small collaborative associations and working as a team to produce a work of greater scope or complexity; or developing their skills in a specific production area or crew role and undertaking this role on several projects across the semester.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58312 Integrated Communication

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58214 Media Writing and Production OR 58229 Brand Advertising Strategies OR 58230 Professional Advertising Practice OR 58231 Organisational Communication

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Students respond to a client brief to develop a communication strategy and produce a major piece of work. Projects can be tailored to students' particular fields of interest in advertising or public relations or one of their specific sub-disciplines such as social marketing, internal communication, community relations or media relations, or integrated campaigns. The industry collaboration gives students experience in working with clients and producing a major piece of communication.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58313 Writing Laboratory

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58216 Imagining the Real OR 58217 Experiments in Culture

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject is a laboratory in thinking, writing, the senses and experiment. Students may compose in any medium they choose: fiction, non-fiction, screen-writing, graphic or multimedia, poetry, philosophical and ficto-critical writing or other innovative forms. The laboratory is an environment of experimental elements working towards the networking of concepts, senses and practices. The group's collaborative study offers a context in which students may choose to produce individual original works of an intellectual, creative or hybrid nature. A lecture series positions a series of core themes from cultural, critical and literary debate, stressing themes which address how we conceive contemporary experience in terms of the senses, media representations, the environment and in relation to key questions in critical, philosophical and art practice. Dissemination of student work is envisaged as a core part of the laboratory's creative study and students present their final work in a published, electronically published, screening, exhibition, seminar or performance context.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58314 Social Inquiry Placement

8cp; availability: not offered to exchange and study abroad students

Requisite(s): 40 credit points in MAJ09395 Social Inquiry major BAComm

These requisites may not apply to students in certain courses. See access conditions.

Social Inquiry works for social change at the nexus between research, advocacy, policy and communication. Accordingly, the subject culminates with the 'real life' challenges of a specific workplace or community-based placement designed to develop written and verbal communication skills and interpersonal relationships in a non-university setting. In this final-year subject students bring to bear the thematic insights, research capacities and communicative skills they have gained through the subject. It allows them to integrate and synthesise these abilities and, in the process, to produce a distinct and practical contribution for an external partner organisation. A discrete and manageable placement project is negotiated between the student, partner organisation and academic supervisor. Partner organisations range from state parliamentarians, government departments, commercial organisations and non-government civil society organisations including indigenous, community and campaign groups. Placements are usually undertaken as individual projects, although there is scope for collaboration.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58315 Managing Digital Information

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58220 Designing for the Web OR 58221 Social Informatics

These requisites may not apply to students in certain courses. See access conditions.

This subject examines theories, models and techniques for storing a wide range of text and non-text digital objects in many institutional contexts, including corporate, cultural and heritage environments. Students use international and national standards and unique solutions for describing digital objects and design web-enabled interfaces for effective retrieval and display of the stored content. The subject explores a range of digital storage issues, including preservation, curatorial processes and digital rights management and Web 2.0 issues such as user-created content and social tagging. Students also make further contributions to their ePortfolio.

Typical availability

Autumn semester, City campus

Spring semester, City campus

58316 Sex, Race and Empire

8cp

Requisite(s): 58222 Global Politics from Above and Below

These requisites may not apply to students in certain courses. See access conditions.

Making sense of today's globalised world means recognising the continuing impact of the flows of people, ideas and trades, as well as the conflicts, generated by colonial power relations. Decentring Europe, this subject focuses on the innovations of and challenges to colonialism in regions around the Indian and Pacific Oceans, linking Africa, the Middle East, South Asia, Australia, SE Asia, East Asia and the southern Pacific. In colonial politics, sexual relationships often demonstrated the entanglement of gender and race in the most momentous conflicts over identity, labour, trade or borders. To explore these themes, students study in depth some of many perspectives: including those of colonised indigenous peoples; of invading 'settlers' moving to the countries of the colonised; of anti-colonial political and military struggles; and of diasporas, the populations dispersed by invasion, slavery, indentured labour and voluntary migration. Students deepen their knowledge of the political, economic, social and cultural processes of colonial expansion, imperialism and their links to contemporary global relations.

Typical availability

Spring semester, City campus

58317 Transnational Media

8cp

Requisite(s): 58222 Global Politics from Above and Below OR 58226 Media, Mediation, Power

These requisites may not apply to students in certain courses. See access conditions.

This subject discusses media practice in a globalising economy to question the effects of developments such as trade liberalisation, technological change and global war on the organisation and operation of media and the significance of such changes for understanding transnational communication. Students canvass the international communication and media history literature, critically engage with approaches to theorising international communication and global media practice, and explore the politics of both transnational media mega-corporations including advertising agencies and their counterpart, alternative, DIY and community-based media including the blogosphere. Students focus on the specific issues of electronic journalism and the possibility of a transnational public sphere of debate; internet advertising and the difficulties of creating viable business models in the online environment; and new forms of social networking and interaction found in virtual communities and the possibilities for new kinds of political and social engagements and media practices.

Typical availability

Autumn semester, City campus

58318 Gender, Culture, Power

8cp

Requisite(s): 58223 Social Bodies

These requisites may not apply to students in certain courses. See access conditions.

In this subject students undertake a rigorous and detailed analysis of the notions of sex, gender and sexuality in a wide variety of cultural and social contexts. Students examine in depth how social and political institutions function to regulate sex, gender and sexuality, how gender analysis helps us understand contemporary social and political issues, and how gender and sexual identities are embodied and performed in everyday life.

Typical availability

Spring semester, City campus

58319 Rights and Territories

8cp

Requisite(s): 58223 Social Bodies

These requisites may not apply to students in certain courses. See access conditions.

'Rights' – human, cultural, social, economic and political – sit centre-stage in global and local debates about justice and power. 'Territories' – states and nations, sovereignty and authority – are the basis upon which 'rights' claims are generated and pursued. This

subject interrogates the historical and contemporary development of 'rights' and examines, in particular, the ways in which 'territories' are organised and disorganised (institutionally and discursively) through the politics of these 'rights' claims. In doing this, students engage with ideas and fields of practice that traverse legal, political, economic and social theory and institutions.

Typical availability

Autumn semester, City campus

58320 Australian Fiction

8cp

Requisite(s): 58224 Australian Pasts and Places

These requisites may not apply to students in certain courses. See access conditions.

This subject combines the in-depth study of Australian literature with the practice of literature. It examines key tropes in Australian fiction over the past 100 years with particular emphasis on 'the city', 'the outback', and 'the road'. It also explores the ways in which indigenism, diaspora, class and gender have influenced and continue to shape Australia's literary identity.

Typical availability

Spring semester, City campus

58321 Australian Film

8cp

Requisite(s): 58224 Australian Pasts and Places OR 58225

Introduction to Film Studies

These requisites may not apply to students in certain courses. See access conditions.

Students explore the imaginary in Australian film through the study of key moments in Australia's film history such as the revival of the Australian feature film industry in the 70s, the new wave of avant garde, documentary and feminist film practice in the 70s and 80s, and the latest wave of Indigenous and transnational filmmakers in the 90s through to the present. This subject follows on from Pasts and Places with its exploration of how we might know and therefore imagine Australia.

Typical availability

Autumn semester, City campus

58322 Screening the Past

8cp

Requisite(s): 58225 Introduction to Film Studies

These requisites may not apply to students in certain courses. See access conditions.

Through a detailed engagement with a broad range of different media (including film, video, television and new media) this subject explores the various channels through which we come to know, understand and engage with the past, memory and historical experience. Drawing on extensive scholarship in the field, students analyse how, and with what effects, certain texts from the historical blockbuster to experimental video confirm, challenge and/or complicate our understanding of the past and its relationship to the present.

Typical availability

Autumn semester, City campus

58323 Contemporary World Cinema

8cp

Requisite(s): 58225 Introduction to Film Studies

These requisites may not apply to students in certain courses. See access conditions.

This subject focuses on key developments in contemporary world cinema, with a particular emphasis on films that are innovative, challenging and/or experimental. Drawing closely on recent debates in film studies on the relationship between politics, aesthetics, affect and experience, students analyse and engage critically and creatively with an eclectic collection of contemporary films from a diverse range of national and cultural contexts.

Typical availability

Spring semester, City campus

58324 Investigating Media, Reflective Practices

8cp

Requisite(s): 58226 Media, Mediation, Power

These requisites may not apply to students in certain courses. See access conditions.

This subject explores key research traditions and methodologies through practical projects investigating diverse media and the people who use them. Students explore approaches including semiotic methods for analysing the meaning and significance of programs and formats (such as 'reality television'); objective and subjective approaches to audiences/consumers; how to study the ways people actively use various media in their daily lives ('ethnomethodology'); 'political economy' analyses of media industries; and self-reflective and critical approaches to understanding what it means to work as a media professional in contemporary Australian media industries. In this subject, students further develop their ability to report and present research findings using research communication techniques rather than conventional essays. It provides practical experience in formulating and investigating research questions, preparing students for successful Honours-level research, and building pathways to careers in the media and in media research.

Typical availability

Spring semester, City campus

58325 Audiences, Users, Publics, Communities

8cp

Requisite(s): 58226 Media, Mediation, Power

These requisites may not apply to students in certain courses. See access conditions.

This subject equips students to analyse changing concepts of the media audience and critically evaluate claims about the relationships between media and people individually and collectively. It explores magazines, newspapers, television and online and mobile media, their 'content' (such as programs, as information, as models for defining identity), the various ways they are used (such as memory supports, as agents of virtual travel, as archives, as networking tools), and considers how audiences as active 'readers' increasingly produce their own meanings from the resources the media provide. Students explore developments including 'virtual' communities, virtual publics and political online activism as examples of how audiences are evolving into dynamic meaning-makers and 'producers'. This subject provides an implicitly historical overview of changing theorisations of audiences. It gives students further experience in formulating and conducting their own research focused on people's actual relationships to diverse media.

Typical availability

Autumn semester, City campus

58326 Australian Aboriginal Politics and History

8cp

This subject focuses on the various ways Aboriginal people have sought to exercise power. This approach seeks to understand, through detailed case studies, the demands Aboriginal people have made since colonisation. In doing this students develop an understanding of the impact of colonisation/dispossession as it occurred at different times across NSW, the shifting and changing political rationalities and wider intellectual influences that shaped this process and how this in turn has shaped Aboriginal social, cultural, economic and political life. The subject is organised around studies of key moments in the NSW Aboriginal political rights movement/s and the changing government policy and administration of Aboriginal affairs.

Typical availability

Spring semester, City campus

58327 Indigenous Futures

8cp

Requisite(s): 58227 Balancing World Views: Introduction to Aboriginal Cultures

These requisites may not apply to students in certain courses. See access conditions.

In this subject students learn the normative and legal bases for the protection of Indigenous rights. The objective is not only to understand the legal and political language of Indigenous rights with a view to engaging in the advocacy and debates that promote those rights but also to think critically about these ideas and institutions.

Areas investigated include comparative studies of Australian and international cases such as cultural rights, land rights and native title rights and legislation, rights and institutions of self-government, Indigenous land use agreements and joint management strategies, and economic enterprise and social development frameworks and practices.

Typical availability

Autumn semester, City campus

58328 The New Economy of Post-Nature

8cp

Requisite(s): 58228 Climate Change: Politics and Ecology

These requisites may not apply to students in certain courses. See access conditions.

The Western academy is organised around a fundamental distinction between nature and society, with nature defined as that which is independent of human action. What can this idea of nature mean in our Anthropocene era, when chemical and thermal pollution are universal, when human cells are cultured and can achieve immortality outside the body, when 'wilderness' exists only in legally designated protected areas, when evolution itself is driven by human caused extinctions, and the recombination and design of species to order in commercial laboratories? Introducing key debates at the intersection of science and technology studies and environmental policy, this subject enables students to evaluate the vexed concept of 'sustainability' and the utopian prospect of a transformation from fossil-fuelled industrial modernity to a 'post-industrial' mode of production, sometimes called the 'knowledge-based bioeconomy'. Students undertake an informed critical analysis of the social, political, economic and ethical issues associated with the 'life industries' from the level of molecular biotechnology to global ecological management.

Typical availability

Spring semester, City campus

58329 Culture, Science and Nature

8cp

Requisite(s): 58228 Climate Change: Politics and Ecology

These requisites may not apply to students in certain courses. See access conditions.

The subject introduces students to the relationships between cultures and environments including theory and debates about the relationship between culture, science and nature. Drawing on cultural expressions from graphic art and imagery, film and music through to oral and literary forms, students consider how understandings of nature have been shaped by a range of cultures, including Australian Indigenous place making and perceptions of nature in religious or philosophical traditions. Students investigate changing understandings of 'nature', 'the environment' and related terms, from the early modern emergence of sciences challenging theological ideas of nature, to present articulations of a crisis of 'the biosphere' by environmentalists, challenging neoliberal economics. These changing conceptions of nature are considered in the light of cross-cultural comparison across Indigenous and non-Indigenous contemporary societies, inflected by class and gender, in order to analyse the ecological consequences of dominant ideas about nature.

Typical availability

Autumn semester, City campus

58330 Narrative and Theory

8cp

Based on practice, and oriented towards the production of writing, this subject focuses on the large field of narrative and its essential elements. Students study and practice aspects of narrative theory including point of view, temporality, story and plot development. A range of narrative writing is studied and discussed, integrating practical work with critical reflection and enabling students to produce their own piece of narrative writing. Students write a narrative piece in a genre of their choice.

58331 Creative Writing Project

8cp

The capstone in the Creative Writing major, this subject enables students to complete a portfolio of work, in a chosen genre, to a professional standard. Working under supervision as well as in groups, and with input from industry professionals, students gain an understanding of the literary and other creative industries. They

develop skills in editing and revision and acquire the confidence to enable them to submit their work for publication. Students write in a genre and for a publication of their choice.

58332 Defining Cultures

8cp

This subject explores the debates about culture that underpins the development of the cultural and creative industries, beginning with a study of the meanings of the term 'culture'. It introduces students to the different ways that cultural analysis has been undertaken since the 19th century. It also considers the relationship between culture and power, the notion of the sub-culture, culture and the body, culture and the media, providing students with the cultural literacy with which to explore emergent cultural and creative industries.

58333 Introduction to Cultural Research

8cp

Requisite(s): 58332 Defining Cultures

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject introduces students to the key ways in which diverse cultural forms and practices can be explored and analysed. It does so through an introduction to key contemporary theories and methodologies, including discourse analysis, archival research and critical ethnography. Students are introduced to key terms used in contemporary research, including race and ethnicity, sex and gender, class, embodiment, subjectivity, and culture in order to build critical literacy. Students learn how to use those terms as part of cultural research through a series of exercises in cultural research.

58334 Research Studio

8cp

This studio focuses on the practical use of research theories and methodologies by using them to collaboratively explore major social and cultural issues, and in the process developing further the research skills introduced in Year 1. It includes study of traditional, multimedia and emerging media forms and products in order to examine political, cultural, social and ethical issues. The subject engages with issues of representation, cultural politics, sociality and social justice across and within various media communities and productions.

58335 Digital Communities

8cp

This subject encourages students to examine localised cultural practices and to present their findings through the use of commonly used digital and mobile media and written text. The subject focuses on case studies of creative interventions in urban contexts and invites students to research and learn about the social, historical, cultural and economic aspects of the city as a physical and digital reality at the intersection of lived and mediated spaces.

58336 Cultural Research Practicum

8cp

In this subject, students spend time working in a cultural analysis placement or producing a major collaborative research project. The placement or project is complemented by training in appropriate workplace skills, documentation methods and classes in which students discuss and present their experiences and obtain feedback in preparation of a final report.

58337 Engagement, Participation, Gamification

8cp

Requisite(s): 58125 User Experience Design

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Game-like processes and 'gamification' are becoming more and more widespread as a mode of interaction, participation and communication design for engagement with diverse audiences or publics. In this subject students are introduced to theories of technological mediation of communicative ecologies and of interactions through social media. They undertake place-based research about global locations and events (both contemporary and historical) and then use this knowledge in a design process to create a hybrid online/offline game. The design of interactive tasks within the game develops research skills and introduces concepts and contextual knowledge, as

well as algorithmic thinking and scripting of rule-based interaction. Considerations of accessibility and inter-cultural communication are introduced, as well as methods of evaluating digital environments along lines of aesthetics, usability and resource efficiency.

58338 Representing Complexity

8cp

This subject extends on students' knowledge and understanding of how to engage with diverse communities and audiences through researching and communicating an innovative solution to a complex real-world problem in the form of a virtual exhibition. Students explore how software and technologies (as constellations of affordances) structure our experience and interactions and therefore our relationships with them and with each other. Critical analysis of case studies is used to explore processes, dynamics and interacting factors in digital production environments and demonstrate how creativity is deployed in response to complexity and underpins processes of innovation. Implementation of the virtual exhibition develops skills in requirements gathering, user experience design, project management, appropriate technology choice, and communicating with technical specialists.

58339 Digital Futures

8cp

This subject develops students' understanding of how new technologies interact with existing technologically and socially structured environments through exploring how a work-based context might respond to the transformative shifts brought about by the emergence of a new disruptive technology. Technological change is a given in workplaces of the future and this subject aims to equip students with theoretical and practical tools to remain agile in responding to these inevitable shifts. Students design and prototype solutions to a problem-based scenario, including gaining experience in presenting to clients and workplace management, advocating for design solutions, and building a business case.

58340 Creative Cities, Cultural Communities and Entrepreneurs

8cp

This subject builds on the student's skills in research and analysis and their studies of cultural and creative industries and communities in a major project that explores cultural experimentation at individual, cultural or social level. At individual level this includes a diverse range of artistic and intellectual practices that are deployed as part of the new creative economy; culturally it explores the ways that cultural communities deploy creative thinking and practice to challenge the status quo and create new identities; socially, it addresses strategies such as the 'Creative Cities' initiative that are used as part of contemporary urban renewal.

58723 Research Dissertation 1 (Communication)

24cp; availability: not offered to exchange and study abroad students

For subject description, contact UTS: Communication.

58724 Research Dissertation 2 (Communication)

24cp

Requisite(s): 58723 Research Dissertation 1 (Communication)

There are also course requisites for this subject. See access conditions.

For subject description, contact UTS: Communication.

58900 Poetry

8cp; availability: not offered to exchange and study abroad students

This subject offers students the opportunity to develop skills in writing poetry. Students write extensively and read widely in a variety of genres of contemporary and modern poetry, with a special emphasis on the contemporary and the Australian context. As well as introducing aspects of traditional techniques in poetic composition, students will have an opportunity to explore their creative work across both literary and performance-based facets of writing. In the context of writing and workshoping, students enhance not only their creative skills as poets but also their critical ability to edit and revise their own work and that of other writers in the class.

Typical availability

Spring semester, City campus

58901 Screenwriting

8cp; availability: not offered to exchange and study abroad students

This subject is an introduction to both the theory and practice of writing for the screen. It focuses on storytelling for a visual medium with an emphasis on the creative process, imagination, character development and structure. The process of writing a short film, from initial concept to second draft, is explored through industry-accepted stages of development and formats and through workshopping. Students improve their ability to critically assess their own work and the work of their colleagues.

Typical availability

Autumn semester, City campus

58902 Writing Through Genre

8cp; availability: not offered to exchange and study abroad students

In this subject students engage with the conventions of genre, in both its broad and specific applications, building upon knowledge and skills gained in other subjects. Genre is the conceptual and structural heart of writing, either in traditional manifestations (romance, crime, fantasy) or as a blend of genres (verse narratives, literary mash-ups). Students study a range of genre writing forms, and produce and collectively workshop their own writing in a chosen genre, demonstrating both an understanding of the conventions of their genre as well as a willingness to challenge and extend it.

Typical availability

Spring semester, City campus

58999 Professional Internship

8cp; availability: not offered to exchange and study abroad students.

Requisite(s): 40 credit points in MAJ10020 Journalism major BAComm OR 40 credit points in MAJ10021 Media Arts and Production major BAComm OR 40 credit points in MAJ10024 Public Communication major BAComm OR 40 credit points in MAJ10022 Writing and Cultural Studies major BAComm OR 40 credit points in MAJ10037 Creative Writing OR 40 credit points in MAJ10038 Digital and Social Media

These requisites may not apply to students in certain courses. See access conditions.

Students develop a structured industry experience project in the area of their major study. This involves the negotiation of a learning contract to identify the outcomes of such experience and to design a detailed program of activities to achieve these outcomes. Supervision is provided to assist students in identifying the capabilities they need to develop and to provide support and advice during their industry involvement. Students are assisted to reflect on their learning from experience in the workplace in the context of their chosen field of study.

Typical availability

Autumn semester, City campus

Spring semester, City campus

59330 Advertising Practice

6cp; availability: not offered to exchange and study abroad students
Elective

Students are introduced to the principles and practice of advertising and its unique role in business and society. Creativity in advertising is examined through an exploration of the art and science of advertising and how these apparent contradictions influence principles and industry practice. Students learn how to develop and present a range of creative ideas appropriate to the various stages of effectively promoting a product, service or idea in sectors as diverse as public, private and not-for-profit.

Typical availability

Spring semester, City campus

59333 Advertising Strategies

6cp; availability: not offered to exchange and study abroad students
Elective

This subject advances students' knowledge and understanding of principles of strategic creativity in advertising practice. It develops students' ability to analyse creative approaches and address the debate on 'award' vs. 'strategic' creativity. Students gain an understanding of advertising agency disciplines and their contribution to campaign planning, production and pitching. Topics include the significance

of strategic planning in campaign development, conceptual and production issues involved in radio and TV advertising, the evaluation of advertising effectiveness, and the development and selling of an integrated advertising idea. Students engage in scriptwriting and the production of storyboards for broadcast media and develop their concepts through to finished form using current digital technologies taught within the subject.

Typical availability

Autumn semester, City campus

59343 Experiencing Australian Language and Culture

6cp; intensive: 3 week intensive (weekly on campus: 4hrs a day, 4 days per week; block: 2 x 2hr day blocks); availability: non-English-speaking background international, exchange or study abroad students who meet the requisite IELTS score
Undergraduate

This is one of five subjects specifically for international students in the Australian Language and Culture program. This subject consists of two components: the in-class segment, and facilitated field trips to specific sites in order for students to develop a deeper understanding of Australian society and culture.

59709 Australian Conversations

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14)
Undergraduate

This subject is designed for international students as part of an Australian Language and Culture Studies program. The subject aims to develop students' oral and written English and their sociolinguistic awareness of Australia through the study of a range of topics related to Australian society and culture. The subject also provides an overview of the Australian education system and introduces the key genres relevant to participation in an Australian tertiary education environment. Students who have successfully completed this one-semester subject are eligible to audit a mainstream FASS subject in their second semester.

59710 Performing Australia

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14)
Undergraduate

This subject is designed for international students as part of an Australian Language and Culture Studies program. In this subject, students investigate the way key concepts in Australian cultural identity are expressed in writing, performing and visual arts. Students engage with key texts and images, with key figures in arts production, and with key places in arts presentation. These studies aim to develop students' cultural literacies.

59711 Natural Australia

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14)
Undergraduate

This subject is designed for international students as part of an Australian Language and Culture Studies program. The subject focuses on the development of students' written and oral academic literacies, and introduces a range of texts that are appropriate for participation in an English language tertiary context. In this subject, academic literacies are approached through topics that relate to

Australia's natural environment. These may include meanings attached to land, landscape, beach and bush; concepts of native, introduced, companion and feral species; patterns of population, consumption and waste; and the ways in which Australians participate in green cultures and organisations.

59712 Australian Language Studies

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/ waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14)

Undergraduate and Postgraduate

This subject is designed for international students as part of an Australian Language and Culture Studies program. The subject aims to develop students' oral and written English, and their sociolinguistic awareness of Australia, through the study of a range of topics related to Australian society and culture. The subject also provides an overview of the Australian education system and introduces the key genres relevant to participation in an Australian tertiary education environment. Students who have successfully completed this one-semester subject are eligible to audit a mainstream FASS subject in their second semester.

59713 Australian Media

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/ waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14)

Undergraduate and Postgraduate

This subject is designed for international students as part of an Australian Language and Culture Studies program. In this subject, students investigate texts and genres in Australian film, television, and websites, and engage with recurring themes and issues that reflect Australian Indigenous and migrant identities. Through these investigations, students develop practices for interpreting and responding to cultural texts in written and spoken discussions.

59714 Australians at Work

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/ waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14)

Undergraduate and Postgraduate.

This subject is designed for international students as part of an Australian Language and Culture Studies program. The subject is designed to develop students' critical reading, writing and oral skills. These skills are developed through a range of studies that relate to Australian workplace and business cultures. These studies may include: patterns of labour, migration and employment in the Australian economy; workplace practices; sociocultural issues of gender, age, ethnicity and language in the Australian workplace; and Australia's place in the global economy.

59715 Australian Workplace Cultures

8cp

This subject is designed for students who are identified by their faculty as requiring additional English language consolidation. In this subject, students investigate issues in Australian workplace and business cultures. These studies may include: patterns of labour, migration and employment in the Australian economy; issues of gender, age, ethnicity and language in the Australian workplace; and Australia's place in the global economy. Through engagement with these topics, students develop critical reading, writing and oral skills.

59716 Australian Environment

8cp

Requisite elaboration/ waiver: Students from a non-English speaking background. Referral by student's home faculty.

Undergraduate and Postgraduate

This subject is designed for international students as part of an Australian Language and Culture Studies submajor, and aims to develop students' written and oral academic skills and literacies. These skills are developed through a range of studies that relate to Australia's natural environment and may include the meanings attached to: land, landscape, beach and bush; concepts of native, introduced, companion and feral species; patterns of population, consumption and waste; and the ways in which Australians participate in green cultures and organisations.

59717 Indigenous and Migrant Cultures

8cp

Undergraduate and Postgraduate

This subject is designed for students who are identified by their faculty as requiring additional English language consolidation. In this subject, students are introduced to Australian Indigenous cultures; the history of migration; and the development of multiculturalism. These aspects of Australian identity are explored through a variety of media texts as well as Australian films. Students use a range of research techniques to develop selected topics, and present their research in both seminar and written form.

59718 Academic English

6cp; availability: restricted to students who are admitted to C22028, C22029, C50006 or C50007.

Requisite elaboration/ waiver: Non-English-speaking background international, exchange or study abroad students who almost meet the requisite UTS English proficiency score for entry into a mainstream course but are required to undertake English language consolidation.

Undergraduate

This subject is designed to consolidate students' written and oral academic skills and literacies. These skills are developed through a range of studies that relate to Australia's natural environment, and may include: the meanings attached to land, landscape, beach and bush; to concepts of native, introduced, companion and feral species; to patterns of population, consumption and waste; and to the ways in which Australians participate in green cultures and organisations.

59719 English for University Study

6cp

For further details, contact UTS: International Studies.

60101 Chemistry and Materials Science

6cp

This subject develops a solid science foundation for further materials and engineering-related studies and facilitates the working relationship between engineers, materials scientists and other scientists; an ability to identify and solve chemical and materials problems; and an ability to relate properties of engineering materials to technical applications. Topics covered in this subject are: chemical bonding of materials and general chemistry, classification of materials, structure-property relationships, mechanical properties, heat treatment and strengthening mechanisms, ferrous and non-ferrous alloys, ceramics, polymers and composites, materials degradation, materials recycling and materials selection. Numerous applied examples are discussed. Laboratory work imparts practical skills and reinforces the underlying theories. This is an integral part of the subject along with tutorial workshops.

Typical availability

Autumn semester, City campus

Spring semester, City campus

60700 Undergraduate Project (Scientific Practice)

6cp

This subject is designed to enhance development of students' ability to undertake a professionally based scientific project. This subject can only be undertaken following prior negotiation on the part of the student with a full-time member of academic staff regarding supervision. Students contribute, in collaboration with their academic and, where relevant, industry supervisor, to the formulation of the project, including planning the work within an appropriate time scale. Students are responsible for appropriate analysis and critical evaluation of the data or information obtained and presentation of their findings in a formal written report.

Students should approach potential supervisors in the first instance. Before enrolment can be approved, the student and supervisor must provide the head of department with a short written project proposal, including assessment criteria and, where the project involves laboratory or field work, a completed risk assessment form. In addition, approval by the subject coordinator is required.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Summer session, City campus

60701 Undergraduate Project (Research Internship)

6cp

This subject is recommended for students wishing to undertake a career in research. It offers the opportunity to complete a short supervised research project either in a research laboratory at the University or with an industry partner.

This subject can only be undertaken following prior negotiation on the part of the student with a full-time member of academic staff regarding supervision, and, where relevant, with an industry co-supervisor. Students should approach potential supervisors about project availability in the first instance. Before enrolment can be approved, the student and supervisor must provide the head of department with a short written project proposal, including assessment criteria and, where the project involves laboratory or field work, a completed risk assessment form. Normally, a weighted average mark of 75 per cent or more is required for approval to enrol in this subject.

Students contribute, in collaboration with their UTS supervisor and, where appropriate, their industry co-supervisor, to formulation of the scope of the research project, including planning of the research work within an appropriate time scale and establishment of effective channels of communication. They are responsible for carrying out the work productively and cooperatively, for appropriate and critical analysis of the data or information obtained, and are required to present their findings in a formal written report. They may also be required to present a seminar to other students, staff and industry partners.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Summer session, City campus

60901 Advanced Communication Skills in Science

6cp; 3hpw

The aim of this subject is to provide postgraduate science students with ongoing integrated academic language skills, in both written and oral communication, and text-based research skills. Students are encouraged to take a critical/analytical approach to understanding and producing written and spoken texts appropriate for different professional contexts.

In particular, the subject focuses on critical reading skills; effective paraphrasing and summarising; selecting, evaluating and using a variety of sources of information; citation and referencing of literature; developing written arguments; presenting seminars; text drafting and editing; workplace communication skills; and communication in the media. Students examine the various styles of professional documents (journal articles and reviews, short communications, technical reports, etc.) and their purposes, and are guided in the use of library and internet resources.

60902 The Scientific Method

6cp

The ability to apply experimental methods to a diverse range of scientific applications is an essential capability of all those pursuing a career in science. This subject provides students with a logical framework for conducting or assessing scientific research beginning with standard principles of designing a good experiment. Students gain an understanding of how hypotheses should be framed for testing, how to design appropriate data collection, how to determine if the sample size is adequate, and how to analyse the data collected. An introduction to the ideas of uncertainty and international guidelines relating to these, and consideration of ethical issues are also covered. This subject aims to impart a deep understanding of the concept of the scientific method which is invaluable for all students destined for a research, research management, research training or other science-oriented career.

60903 Project Management in Science

6cp

This is a foundation-level subject which provides: an overview of the terminology, tools, techniques and processes in project management; an understanding of project integrative process; the know-how to develop a project plan and implement and control a project; and an understanding of stakeholder management and organisational structures and their influences.

60904 Innovation, Entrepreneurship and Commercialisation

6cp

This subject covers topics that lead to an understanding of the basis for scientific innovation, commercialisation and entrepreneurship. It includes how to come up with new projects, develop a product and establish a start up company. In addition, the management of intellectual property is presented along with ways in which to pitch a new company or concept to investors, the media and the general public.

60905 Leadership and Teamwork in Science

6cp

This subject is an introduction to management in a science context. The particular areas focused on are the main ideas of leadership, issues of motivation, the influence of personality and the use of teamwork in the workplace. The management and motivation of staff, team work and team leadership, and strategic management are important competencies of managers in science-based enterprises. An important aspect of this subject is utilising case studies and student experience in leadership and teamwork to provide stimulus for discussion. This subject provides the essential knowledge and concepts in teamwork and leadership to facilitate skills development in these areas relevant to each student's career.

60906 Science in Practice

6cp

In this subject a major scientific breakthrough is studied in considerable detail in order to build an appreciation of the way in which science operates. The elucidation of the double-helical structure of DNA provides an ideal case study on which to base an in-depth investigation on scientific research. There is opportunity to consider the issues involved in collaborations: both the advantages and the pitfalls. It is also an outstanding case for considering how science progresses: there were some blind alleys that dominated thinking for some time and may have delayed progress but flexible minds were able to work around the roadblocks. Overall the 'DNA story' is an excellent example of a major scientific breakthrough that had far-reaching consequences and came about because of a concerted campaign by many researchers working in a spirit of competition and friendly rivalry.

60907 Managing Science-based Enterprises

6cp

Cross-cultural management, career management of staff, management of research and development programs and projects, intellectual property management, management of creativity, and risk management are critical competencies of managers in science-based enterprises. This subject provides the essential knowledge and concepts to facilitate skill development that is appropriate for managers in science-based enterprises. Case studies of different organisational structures and cultures is discussed.

60908 Science and Industrialisation

6cp

The impact of science on economic growth and society is the major focus of this subject. Science has been intimately involved in the development and implementation of new technologies that have transformed the economics and lifestyles of citizens. The early adoption of new technology has often had a major impact on national and global economies. In this subject, there is an examination of several case studies that estimate the cost of a new development in terms of the background science that has been funded in order to establish a new product or process. The importance of mergers and acquisitions in certain industries, e.g. pharmaceuticals, are shown to be necessary to ensure a sufficient capital base for the huge investment in bringing new product to market. There are also case studies that show that development of new processes gave nations a considerable economic advantage for a time. A further issue is the legacy of old large-scale manufacturing processes that were environmentally damaging and the continuing impact that has on society.

60909 Professional Science Project

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

0cp

Information on this subject is available from UTS: Science.

65032 Forensic Science Research Project A

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project

proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

65033 Forensic Science Research Project

24cp

In this subject students undertake a semester-long research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. This project is equivalent in level to those undertaken by honours and research master's students. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (10,000–20,000 words approx.) which includes an introduction, which sets the project in the context of the literature, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

65034 Introduction to Forensic Science

6cp; 4hpw

This subject is designed to introduce forensic science as a coherent discipline to students with pre-existing scientific backgrounds. Crucial forensic science concepts, philosophies and principles are presented in their historic context, and their impact on modern forensic science is emphasised. The various forensic science sub-disciplines are presented in a descriptive and logical manner. The subject intends to familiarise students with forensic science and also enhance the learning experience of other specialised forensic science subjects.

The subject covers, in the forensic context, the following areas: history, general definitions and concepts, sub-disciplines, methodology and methods, introduction to interpretation and Bayesian statistics, crime scene, trace typology, function of the expert, legal system, judicial admissibility and ethical considerations. Lectures are complemented by tutorials/ workshops involving guest speakers.

65072 Forensic Science Research Project B

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

65111 Chemistry 1

6cp; 6hpw

The study of chemistry is central to an understanding of the world around us and is relevant to all other science areas, such as physics, biology, geology and the environment at the fundamental level. This subject is designed to develop a student's understanding of the basic principles of chemistry. Topics covered are an introduction to matter, chemical reactions, atomic structure, stoichiometry, the periodic table, bonding, intermolecular forces and crystal structures, molecular geometry, introductory carbon chemistry, equilibrium, and acid-base equilibria. The subject provides the requisite knowledge and skills for 65212 Chemistry 2.

Typical availability

Autumn semester, City campus

Spring semester, City campus

65202 Organic Chemistry 1

6cp; 6hpw

Requisite(s): 65201 Chemistry 2C OR 65022 Chemistry 2A OR 65212 Chemistry 2

This subject introduces students to the reactions characteristic of the common families of carbon compounds, and explores the details and implications of the reaction mechanisms involved. A primary objective is for students to gain an appreciation of the relationship of molecular structure to reactivity across a wide range of functional groups.

Students have the opportunity to perform many of these reactions in the laboratory, and to evaluate critically the success of their experiments by analysis of their reaction products using gas chromatography and infra-red spectroscopy as well as mp, bp and refractive index measurements.

Typical availability

Autumn semester, City campus

65212 Chemistry 2

6cp; 6hpw

Requisite(s): 65111 Chemistry 1 OR 65101 Chemistry 1C OR 65012 Chemistry 1A

This subject builds on and develops further the material introduced in 65111 Chemistry 1. Physical chemistry topics include acidic and basic salts, acid-base titrations, buffers, solubility equilibria, complex ion equilibria; introduction to chemical thermodynamics, enthalpy of reactions, Hess's Law, entropy and Gibbs free energy; chemical kinetics; coordination chemistry; redox chemistry, electrode potentials, electrolysis, corrosion, Galvanic cells. Carbon chemistry topics include: structures and reactions of the common families of carbon compounds, alkanes, alkenes, alkynes, arenes, halogen compounds, alcohols, ethers, alkanals, alkanones, carboxylic acids, amines, amides, esters; stereochemistry, chirality and optical isomerism; biological molecules and biopolymers, amino acids, peptides, proteins, carbohydrates, nucleic acids.

Typical availability

Spring semester, City campus

Summer session, City campus

65213 Chemistry 2 (Advanced)

6cp

This subject develops the material introduced in 65111 Chemistry 1. Physical chemistry topics include: acidic and basic salts, acid-base titrations, buffers, solubility equilibria, complex ion equilibria; introduction to chemical thermodynamics, enthalpy of reactions, Hess's Law, entropy and Gibbs free energy; chemical kinetics; coordination chemistry; redox chemistry, electrode potentials, electrolysis, corrosion, Galvanic cells. Carbon chemistry topics include: structures and reactions of the common families of carbon compounds, alkanes, alkenes, alkynes, arenes, halogen compounds, alcohols, ethers, alkanals, alkanones, carboxylic acids, amines, amides, esters; stereochemistry, chirality and optical isomerism; biological molecules and biopolymers, amino acids, peptides, proteins, carbohydrates, nucleic acids.

This subject also covers extension topics in areas such as inorganic chemistry, analytical chemistry and forensic chemistry.

65242 Principles of Forensic Science

6cp; 4hpw

This subject is designed to introduce the different disciplines, principles and concepts peculiar to forensic science. It covers, in the forensic context, the following areas: history, general definitions and concepts, sub-disciplines, methodology and methods, introduction to crime scene, trace typology, function of the expert, legal system, judicial admissibility, ethical considerations, and interpretation of forensic evidence. Lectures are complemented by tutorials/workshops involving guest speakers. This is a core subject for the forensic science courses and an elective for students in other related courses.

Typical availability

Spring semester, City campus

65306 Analytical Chemistry 1

6cp; 6hpw

Requisite(s): 65202 Organic Chemistry 1

Lecture, laboratory and tutorial components of this subject cover spectroscopic methods of analysis including mass spectrometry (MS) and infra-red (IR), ultraviolet-visible (UV-Vis) and nuclear magnetic resonance (NMR) spectroscopy; general chromatographic methods for separation; volumetric techniques including acid-base and complexometric titrations; and errors, calibration and statistical interpretation of analytical data.

Typical availability

Spring semester, City campus

65307 Physical Chemistry 1

6cp; 4.5hpw

Requisite(s): [(65022 Chemistry 2A OR 65201 Chemistry 2C OR 65212 Chemistry 2) AND 33190 Mathematical Modelling for Science]

This subject is designed to provide students with a working knowledge of chemical thermodynamics, optical spectroscopy, and chemical kinetics, which can then be applied to other subjects within the course. Students are introduced to fundamental concepts in these areas and learn how to apply their principles in problem-solving situations.

Typical availability

Autumn semester, City campus

65342 Crime Scene Investigation

6cp; 6hpw

Requisite(s): {65242 Principles of Forensic Science OR 65241 Principles of Forensic Science} AND {65212 Chemistry 2 OR 65201 Chemistry 2C OR 65022 Chemistry 2A}

These requisites may not apply to students in certain courses. See access conditions.

This subject provides a sound teaching in crime scene investigation. It is designed to introduce the different principles and concepts peculiar to a crime scene. It covers the following areas: aims of the crime and related investigation; preservation, recording and processing of a crime scene; preservation, search and collection of evidence; on-site screening tests; scene reconstruction; examples of scenes (break-entry, homicide, sexual assault, traffic and other accidents, fire, explosion, disaster); common types of evidence; ad-hoc forms and software assisting crime science investigation. Lectures are complemented by tutorials/workshops involving guest speakers.

Typical availability

Autumn semester, City campus

65409 Analytical Chemistry 2

6cp; 6hpw

Requisite(s): 65306 Analytical Chemistry 1

This subject includes topics such as separation techniques, gas chromatography and instrumentation. The subject also covers sample preparation and derivatisation, columns-packed and bonded phase, GC detectors and their application, HPLC: basic theory and instrumentation, normal and reversed phase columns, ion-pair chromatography and gel permeation chromatography, ion exchange

resins and chromatography, method validation and quality assurance, electrophoresis: plate and capillary, laboratory automation: robotic techniques, auto samplers and post-column derivatisation methods.

Typical availability

Autumn semester, City campus

65410 Chemical Safety and Legislation

6cp; 3hpw

Requisite(s): 65201 Chemistry 2C OR 65022 Chemistry 2A OR 65212 Chemistry 2

This subject covers identification of laboratory hazards and prevention; roles of government organisations (Safe Work Australia, WorkCover, DECCW, NICNAS, and APVMA); toxic effects of chemicals (carcinogens, mutagens and teratogens, sensitisers); exposure to chemicals, local and systemic reactions, acute and chronic toxicity; classification of dangerous goods (ADG class code and class labels); flammability limits (flammable liquids and solids); fire safety and fire prevention; precautionary labels and material safety data sheets; conducting risk assessments; NSW *Occupational Health and Safety Act* and the Regulations; safe storage of chemicals; safe handling of corrosives, oxidisers and explosives; class 6 poisons (scheduling, NSW *Poisons and Therapeutic Goods Act*; compressed gases (classification, hazards, storage and safe handling); cryogenics and safe handling; personal protective equipment (respiratory, eye, head and face, and hand protection); workplace atmospheric monitoring; waste (safe handling of chemical, biological, and microbiological waste).

Typical availability

Autumn semester, City campus

65411 Inorganic Chemistry 1

6cp; 4.5hpw

Requisite(s): 65201 Chemistry 2C OR 65022 Chemistry 2A OR 65212 Chemistry 2

This subject covers the following topics: transition metals - electron configurations and oxidation states; fundamentals of coordination chemistry; crystal field theory; spectral and magnetic properties of metal complexes; chelating agents and applications in analytical chemistry, industrial processes and medicine.

Typical availability

Spring semester, City campus

65412 Physical Evidence

6cp; 6hpw

Requisite(s): 65242 Principles of Forensic Science AND 65307 Physical Chemistry 1 AND 65306c Analytical Chemistry 1 AND 65342 Crime Scene Investigation

These requisites may not apply to students in certain courses. See access conditions.

This subject covers the nature, value and relevance of several types of physical evidence. It follows on from the prerequisite subject and covers the following topics: fingerprint detection and identification; miscellaneous individual traces, tooth marks, lip prints, nail marks, etc.; path marks, footwear impression, tyre impression, etc.; weapons including firearms, bullet/ cartridge identification, gunshot residues, firing distance; motor vehicle globes and other light; and miscellaneous trace evidence, matches, cigarettes/ tobacco, building and safe insulation materials cordage, buttons, wood, and other types of physical evidence. Lectures are complemented by a practical program involving mock cases.

Typical availability

Spring semester, City campus

65508 Organic Chemistry 2

6cp; 6hpw

Requisite(s): 65202 Organic Chemistry 1

The subject builds on previous studies of functional group reactions and spectroscopic techniques and illustrates applications of these concepts for organic synthesis. Topics covered include aromaticity and chemistry of benzene and heterocyclic compounds; carbanion chemistry and multi-step synthesis of new aromatic compounds; chemistry of phenols and aryl halides; palladium-catalysed coupling reactions and modern synthetic methods used in academia and industry; molecular orbital theory, pericyclic reactions and 1,3-dipolar [2+3] cycloadditions. The subject also emphasises the practical applications of organic chemistry in the synthesis of

many important compounds. Chemical research literacy in organic chemistry is implemented, using *SciFinder Scholar*, with an emphasis on differentiate and use of chemical literature.

In the laboratory, students have the opportunity to perform multi-step reactions to synthesise bioactive molecule and natural products as well as carrying out other useful synthetic transformations.

Typical availability

Spring semester, City campus

65509 Inorganic Chemistry 2

6cp; 5hpw

Requisite(s): 65411 Inorganic Chemistry 1

This subject covers structures of crystalline inorganic solids including relevance of crystal field theory to advanced structures; reaction mechanisms and redox processes of d-block metal complexes; some applications of metal phthalocyanine complexes; electrode materials for lithium ion batteries; bioinorganic chemistry including metalloproteins and biominerals; and crystallographic and spectroscopic properties of bone.

Typical availability

Autumn semester, City campus

65544 Chemical Criminalistics

6cp; 6hpw

Requisite(s): 65412 Physical Evidence AND 65409c Analytical Chemistry 2

These requisites may not apply to students in certain courses. See access conditions.

This subject complements the material covered in 65412 Physical Evidence by presenting evidence types that require a high level of analytical skills. It covers forensic analysis of glass, soil, paint, fibres, hairs and documents. Lectures are complemented by an extensive practical program involving mock cases. At the end of this subject, students should be able to select appropriate analytical procedures, analyse, interpret and write an expert witness report describing the forensic analysis of the material covered in this subject and its prerequisite subjects.

Typical availability

Autumn semester, City campus

65545 Forensic Toxicology

6cp; 6hpw

Requisite(s): 65508 Organic Chemistry 2 AND 65409c Analytical Chemistry 2

These requisites may not apply to students in certain courses. See access conditions.

This subject examines the underpinning science of drugs and poisons relevant to matters that arise in judicial proceedings — that is forensic toxicology. The lecture component covers general pharmacology and toxicology. Topics covered include mechanisms of action, the absorption, distribution metabolism and elimination of drugs and poisons from the body as well as the signs and symptoms associated with the use of common drugs and poisons. The subject also provides an overview of state and federal laws relevant to licit and illicit drugs and poisons. The practical component is designed to reinforce topics covered in lectures and seeks to give student experience in solving problems associated with the analysis of a wide range of matrices including human tissues and various biological fluids. The subject also includes workshops and tutorials on the interpretation of the meaning of analytical results.

Typical availability

Autumn semester, City campus

65606 Analytical Chemistry 3

6cp; 6hpw

Requisite(s): 65409 Analytical Chemistry 2

This subject covers lecture topics such as: method validation, chemometrics (including principal component analysis and artificial neural networks), experimental design; advanced analytical techniques including Raman spectroscopy, X-ray diffraction, X-ray fluorescence and microfluidics; and guest lectures from industry including Agilent Technologies, Waters Chromatography, National Association of Testing Authorities (NATA) and the Royal Australian Chemical Institute (RACI).

The practical component requires students to develop, validate and apply an analytical method to a given sample using a variety of techniques including High Performance Liquid Chromatography (HPLC), Gas Chromatography (GC), Capillary Electrophoresis (CE), Nuclear Resonance Spectroscopy (NMR) and Inductively Coupled Plasma-Mass Spectrometry (ICP-MS).

Typical availability

Spring semester, City campus

65607 Physical Chemistry 2

6cp; 4.5hpw

Requisite(s): 65307 Physical Chemistry 1

The subject builds on 65307 Physical Chemistry 1, exploring more advanced topics in chemical kinetics, electrochemistry, and spectroscopy. The principles of infra red and Raman spectroscopic instrumentation are included, along with the application of these techniques to chemical imaging.

Typical availability

Spring semester, City campus

65621 Environmental Chemistry

6cp; 6hpw

Requisite(s): 65201 Chemistry 2C OR 65022 Chemistry 2A OR 65212 Chemistry 2

This subject focuses on the importance of chemical changes in the natural environment, and those resulting from human activity. Chemical changes are examined for both inorganic matter (soil clays) and organic matter (plant materials), having as their end products humic substances, petroleum, and coal. Particular emphasis is placed on changes in organic molecular structure. Important pollutants including halogenated hydrocarbons, and the oxides of nitrogen, sulphur and carbon are discussed, in the contexts of their origins and their effects on the geosphere, hydrosphere and biosphere.

Typical availability

Spring semester, City campus

65643 Chemistry and Pharmacology of Recreational Drugs

6cp; 6hpw

Requisite(s): 65545 Forensic Toxicology

These requisites may not apply to students in certain courses. See access conditions.

This subject provides greater detail on the chemistry, pharmacology and societal context of a number of substances covered in 65545 Forensic Toxicology. The focus of the subject is those substances used for recreational purposes, that is stimulants, depressants, hallucinogens and mixed effect drugs (e.g. opiates, solvents, amphetamines, alcohol and nicotine). Other topics covered include routes of synthesis; profiling of drugs to determine the method of manufacture and/or geographical origin; construction and operation of clandestine laboratories; sampling and analysis protocols; examination of relevant state and federal legislation regarding the possession, supply, manufacture and importation of certain drugs; the use of drugs in sport; the 'war on drugs'; case studies and social issues relating to the recreational use of drugs. The laboratory component includes experiments in natural product chemistry and two cognate syntheses based on procedures carried out in clandestine laboratories, as well as workshops and tutorials on the elucidation of the structure and purity of an unknown substance and those synthesised during practical sessions.

Typical availability

Spring semester, City campus

65644 Fire and Explosion Investigation

6cp

Requisite(s): 65544 Chemical Criminalistics AND 65606c Analytical Chemistry 3

These requisites may not apply to students in certain courses. See access conditions.

This subject seeks to show how a systematic scientific examination of a fire or explosion scene can lead to the establishment of its origin and cause. It covers the following topics: general definitions; fire insurance and crime statistics; combustion process, external and internal scene

examination, fire origin and cause determination; physical properties of materials, gases, aerosols; spontaneous combustion; kitchen fires, cigarettes, heaters, motor vehicle fires, electric appliances, analysis of accelerants and explosives; and sniffers and canines.

Typical availability

Spring semester, City campus

65743 Complex Forensic Cases (Chemistry)

6cp; 6hpw

Requisite(s): [(65412 Physical Evidence AND 65544 Chemical Criminalistics) OR 65864c Honours (Forensic Science) 1]

These requisites may not apply to students in certain courses. See access conditions.

This subject is designed as an advanced practical course where the students apply techniques and principles gained in previous forensic subjects to the analysis of mock cases. It aims to familiarise the students with the management of a complex forensic case involving more than one type of evidence. It involves forensic analysis of material previously studied, preparation of expert witness reports and preparation for presenting evidence in a court environment.

Typical availability

Autumn semester, City campus

65861 Honours (Chemistry) 1

24cp

Study in this subject is designed to enhance the skills and knowledge necessary for research in chemistry. The principal activity is an individual research project in which the student, under supervision, plans and undertakes investigations in an area of interest. The data collected is then subjected to analysis and interpretation under the guidance of the supervisor. Students learn to define objectives and aims, work to available time and resources, use appropriate research methods, critically assess information and develop complex arguments in detail. The findings of the research project are presented in a structured and integrated thesis, which comprises the main assessment component.

Typical availability

Autumn semester, City campus

65862 Honours (Chemistry) 2

24cp

Requisite(s): 65861 Honours (Chemistry) 1

For subject description, refer to 65861 Honours (Chemistry) 1.

Typical availability

Spring semester, City campus

65863 Expert Evidence Presentation

6cp; 6hpw

Requisite(s): 65865c Honours (Forensic Science) 2

These requisites may not apply to students in certain courses. See access conditions.

This subject deals with the legal issues involving forensic science in the field and the impact of scientific evidence on the legal system. Students receive some training in the preparation of reports and in the presentation of evidence in court and participate in a mock trial at the end of the subject in order to consolidate these skills (the mock trial is not assessable). This subject is studied under the following broad topic areas: introduction to the Australian legal system, criminal law, tort law, *Crimes (Forensic Procedures) Act 2000* (NSW), evidence, *Uniform Civil Procedure Rules 2005* (NSW), the role of the expert, advocacy and coronial law. This subject aims to provide an understanding of:

- the legal and practical issues of forensic science
- the impact of forensic science on the legal system, and
- the traditional and emerging admissibility standards involving forensic science evidence.

In addition the subject consolidates crucial communication skills.

Typical availability

Spring semester, City campus

65864 Honours (Forensic Science) 1

18cp

A research project on specific aspects of forensic science is conducted under the supervision of a member of the academic staff of the University. Some projects are conducted externally in conjunction with an external co-supervisor. This subject is designed to enhance the skills and knowledge necessary for research in forensic science. The principal activity is an individual research project in which the student, under supervision, plans and undertakes investigations in an area of interest. The data collected is then subjected to analysis and interpretation under the guidance of the supervisor. Students learn to define objectives and aims, work to available time and resources, use appropriate research methods, critically assess information and develop complex arguments in detail. The findings of the research project are presented in a structured and integrated thesis which comprises the main assessment component.

Typical availability

Autumn semester, City campus

65865 Honours (Forensic Science) 2

18cp

This subject is the second component of a program designed to enhance the skills and knowledge necessary for research in forensic science. The principal activity is an individual research project in which the student, under supervision, plans and undertakes investigations in an area of interest. The data collected is then subjected to analysis and interpretation under the guidance of the supervisor. Students learn to define objectives and aims, work to available time and resources, use appropriate research methods, critically assess information and develop complex arguments in detail. The findings of the research project are presented in a structured and integrated thesis which comprises the main assessment component.

Typical availability

Spring semester, City campus

66513 Marine Geosciences

6cp

Requisite(s): 91107 The Biosphere

These requisites may not apply to students in certain courses. See access conditions.

This elective subject is suitable for any student undertaking study in the environmental sciences. It deals with the structure and morphology of ocean basins and their margins, including their origin and evolutionary history. Physical and chemical processes operating in the oceans and their interaction with the atmosphere and climate systems are examined. The nature and origin of seafloor sediments and the history of ocean and climate change are covered in detail, including the relationships between continental drift, ocean currents and climate variation. In particular the role of tertiary and quaternary ocean sediments in an understanding of climate and environmental change are assessed as part of an overall examination of the evidence for climate and climate change throughout geological history. The subject then examines in more detail quaternary alloccyclic factors that influence earth systems and their consequences. The subject covers milankovitch cycles, ice ages, eustatic fluctuations and climate change: recordings of these in earth systems, and the consequences of these and other major influences on the geosphere-biosphere; and greenhouse concepts and their relationship and responses to natural and anthropogenic input. As part of the subject, an examination of relevant methods of determining age, collecting and analysing field data and the application of modelling techniques are dealt with.

Typical availability

Autumn semester, City campus

67305 Polymer Science

6cp; 6hwp

Requisite(s): 65212 Chemistry 2 OR 65201 Chemistry 2C OR 67101 Introduction to Materials OR 60101 Chemistry and Materials Science OR 65022 Chemistry 2A OR 68070 Introduction to Materials

This subject provides an introduction to the chemistry and physics of polymers and includes comprehensive coverage of the structures, polymerisation mechanisms and characterisation techniques of polymers. Practical classes provide experience with relevant techniques and complement the theory presented in lectures. The applications of polymers are also addressed. This subject gives students a solid grounding in the field of polymers and the practical foundation for work in the polymer industry.

Typical availability

Autumn semester, City campus

67509 Molecular Nanotechnology

6cp; 6hwp

Requisite(s): 65212 Chemistry 2 OR 65201 Chemistry 2C OR 65022 Chemistry 2A

These requisites may not apply to students in certain courses. See access conditions.

The subject focuses on the chemical basis of nanotechnology and the atomic and molecular interaction of small and large molecules, and how these forces can be used to assemble molecular devices. The preparation, characterisation and uses of molecular devices are discussed. Existing molecular devices, such as liquid crystals and biological and synthetic ion-channels are also discussed.

Typical availability

Autumn semester, City campus

67510 Surface Processes

6cp; 6hwp

Requisite(s): 65307 Physical Chemistry 1

This subject is based on the chemistry of surfaces and interfaces and covers such topics as surface thermodynamics yielding concepts of surface energy and tension, adsorption isotherms, surfactants and micelles, wetting spreading and surface energy of solids and liquids and colloidal (or nanoparticulate) systems. The subject uses concepts introduced in 65212 Chemistry 2 and 65307 Physical Chemistry 1 to aid the development of models for the understanding of the observed properties of interfaces. The emphasis on the chemistry of interfaces is important in providing an underpinning of the development of nanoscale systems.

Typical availability

Spring semester, City campus

68001 Advanced Physics

6cp; up to 4hwp

The aim of this coursework subject is to enhance students' understandings of physical principles and build the capacity to engage at an advanced level in several areas of contemporary significance in physics. The subject develops the theoretical background for experimental techniques such as x-ray and neutron diffraction and advanced electron microscopy and develops student skills in computational science applied to physical systems.

Typical availability

Autumn semester, City campus

68002 Advanced Nanomaterials

6cp; 3-4hwp

The aim of this coursework subject is to develop students' awareness and competency in the specific components of nanoscience and nanotechnology relevant to material-related research. It combines topics in nanostructures and nanomaterials with the necessary foundations that underlie the nanoscience and technology of materials. The subject covers topics selected from: nanomaterials synthesis and characterisation, advanced spectroscopic techniques, surface science, optical characterisation and modelling techniques, technology transfer from the laboratory to the industrial world.

Typical availability

Spring semester, City campus

68003 Nanotechnology Honours Research 1

18cp

Study in this subject is designed to enhance the skills and knowledge necessary for research in nanoscience and nanotechnology. The principal activity is an individual research project in which the student, under supervision, plans and undertakes investigations in an area of nanotechnology or nanoscience of interest. Typically, the data collected are then subjected to analysis and interpretation under the guidance of the supervisor. Students learn to define objectives and aims, work to available time and resources, use appropriate research methods, critically assess information and develop complex arguments in detail. The two Nanotechnology Honours Research subjects, one taken in each semester, combine to form a single, continuous research project. The findings of the research project are presented in a structured and integrated thesis, which comprises the main assessment component.

Typical availability

Spring semester, City campus

68037 Physical Modelling

6cp; 6hpw

This is a foundation physics subject. It covers the fundamentals of mechanics, thermal physics, electricity, fluids, waves and optics. Students are introduced to the basic techniques of measurement and technical communication.

This subject aims to develop an appreciation of the physical principles governing natural processes is an essential foundation experience for all engineers. Through this subject, students appreciate that physics is not just a body of knowledge to be learned and understood. Together with mathematics, it provides a framework for understanding and modelling natural phenomena that is carried over into design and analysis in engineering.

Students see that physics both enables and restrains engineering. Designs that are inconsistent with the laws of physics cannot be realised while much engineering innovation demands new physical insight or innovative uses of existing physical and mathematical models.

The subject also seeks to give students insights into the processes and pleasures of physics itself as a professional discipline. This includes basic experiences with the analytical, problem solving, observational and technical as well as measurement skills needed to model natural processes. The strong link to mathematics is integral to this aspect of the subject, as is the laboratory program which also links to mathematical modelling. The technical communication and other generic skills developed in this subject are further developed in later subjects. Graduates and later stage students, whether using physics themselves, working with physicists in a research or design team, or using new products based on advanced physics concepts, need to function in a world of innovation in which physical understanding and new physics plays a key role. This subject initiates the insights and attitudes relevant to this goal.

Spring semester, City campus

68038 Advanced Mathematics and Physics

6cp; 5hpw

Requisite(s): 68037 Physical Modelling AND 33230 Mathematical Modelling 2 AND 48520 Electronics and Circuits

Advanced Mathematics and Physics represents a partnership between the Electrical Engineering Group in the Faculty of Engineering, the Department of Mathematical Sciences and the Department of Physics and Advanced Materials in the Faculty of Science. This subject provides knowledge of mathematical methods needed for analysis of electric and magnetic fields and for circuit analysis and signal processing. It also provides an introduction to quantum physics and its application to semiconductor electronic and opto-electronic devices. The mathematics and physics components complement each other so that students develop both their theoretical and experimental skills. Topics covered are: vector calculus; functions of a complex variable; partial differential equations and boundary value problems; the concepts of quantum mechanics and Schrödinger's equation; and applications of quantum mechanics to semiconductors and electronic devices.

Spring semester, City campus

68041 Physical Aspects of Nature

6cp; 6hpw

This subject provides a general introduction to movement, wave motion, optics, thermal effects, properties of solid and fluid matter, electrical and atomic concepts, with a view to developing an appreciation and understanding of how to model physical aspects of nature. The material is presented with a focus on application to all areas of science and life science and integrates as a key component hands-on laboratory work and analysis of experimental data.

68044 Characterisation of Energy Efficient Materials

6cp

The concept of energy efficient materials is introduced to define the range and application of materials to be studied in this subject. This includes semiconductor materials used in light emitting diodes and photovoltaic applications, and thin film materials relevant to window coatings. Techniques for characterising these materials are then discussed in detail with demonstration of the practical application of these techniques. These include techniques such as x-ray diffraction for structure characterisation, optical characterisation using spectroscopy and ellipsometry, and measurement of electrical resistivity.

This subject contains a mix of coursework, experimental exercises and projects.

The aim of the subject is to provide a thorough grounding in the physical basis and practical application of these techniques in the context of energy efficient materials at a level appropriate to conducting research in this field.

68046 Physics Research Project A

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

68047 Physics Research Project B

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

68048 Physics Research Project

24cp

In this subject students undertake a semester-long research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. This project is equivalent in level to those undertaken by honours and research master's students. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (10,000–20,000 words approx.) which includes an introduction, which sets the project in the context of the literature, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

68070 Introduction to Materials

6cp; 6hpw

This subject develops a solid science foundation for further materials and engineering-related studies and facilitates the working relationship between engineers, materials scientists and other scientists; an ability to identify and solve materials problems; and an ability to relate properties of engineering materials to technical applications. Topics covered in this subject are: chemical bonding of materials, classification of materials, structure-property relationships, mechanical properties, heat treatment and strengthening mechanisms, ferrous and non-ferrous alloys, ceramics, polymers and composites, materials degradation, materials recycling and materials selection. Numerous applied examples are discussed. Laboratory work imparts practical skills and reinforces the underlying theories. This is an integral part of the subject along with tutorial workshops.

Typical availability

Spring semester, City campus

68075 Nanomaterials

6cp; 5hpw

Requisite(s): 68070 Introduction to Materials OR 60101 Chemistry and Materials Science OR 60103 Nanosciences 1

These requisites may not apply to students in certain courses. See access conditions.

This subject contains two complementary strands. The first deals with methods for producing nanostructures, nanostructured materials and nanoscale devices, using deposition, growth and self-assembling processes. The second uses real-world examples to demonstrate how the unique properties of these materials can be tailored for a wide range of applications from novel building materials and medical prosthetics to the next generation of electronic devices.

Typical availability

Autumn semester, City campus

68101 Foundations of Physics

6cp; 4–6hpw

This is a foundation physics subject primarily for students in the physical sciences. It covers the fundamentals of dynamics and statics, fluid mechanics, thermal physics, waves and electricity. A strong emphasis is placed on the investigative nature of physics research with an integrated laboratory program developing further the problem-solving skills of the lecture and tutorial material to an appreciation of good experimental design and significance in information obtained under real-life modelling situations.

Typical availability

Autumn semester, City campus

68201 Physics in Action

6cp; 6hpw

Requisite(s): 68101 Foundations of Physics OR 68041 Physical Aspects of Nature OR 68037 Physical Modelling

This subject is a foundation for later stage subjects. In this subject students learn about: electrostatics, dc circuits, magnetism, electromagnetism and induction, geometrical optics, physical optics, introductory atomic physics, and quantum theory. Research linked to each of the topic areas, and which is happening within the School of Physics and Advanced Materials at UTS, is integrated into this subject.

Typical availability

Spring semester, City campus

68315 Imaging Science

6cp; 5hpw

Requisite(s): 68201 Physics in Action OR 68037 Physical Modelling AND 33290c Statistics and Mathematics for Science OR 33230 Mathematical Modelling 2

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: knowledge of calculus and of complex numbers

This subject builds upon the study of waves, optics and electromagnetics undertaken in an introductory physics subject. It assumes knowledge of calculus and of complex numbers. The subject considers how light is used to observe the world from the molecular scale upwards. It

introduces the electromagnetic description of light as well as the description based on photons. Different sources and detectors are considered. The design of imaging systems and their resolution limits are analysed. The subject includes a significant experimental component, which emphasises the importance of careful analysis and clear presentation of observations.

Typical availability

Spring semester, City campus

68316 Applied Electronics and Interfacing

6cp; 5hpw

Requisite(s): 68201 Physics in Action OR 68037 Physical Modelling

These requisites may not apply to students in certain courses. See access conditions.

This subject builds upon the foundation studies of electricity undertaken in an introductory physics subject. It assumes knowledge of calculus and of complex numbers. The subject develops practical and theoretical skills in the application of electronic circuits in the laboratory with particular emphasis on the development of computer interfacing applications. Op-amps and digital circuit components are treated as building blocks to functional interfacing systems. The Labview environment is used to build skills in programming a computer interface.

Typical availability

Autumn semester, City campus

68320 Scanning Probe and Electron Microscopy

6cp; 6hpw

Requisite(s): 68413 Quantum Physics AND 68606 Solid-state Science and Nanodevices

These requisites may not apply to students in certain courses. See access conditions.

Characterisation and production of materials, devices, biological systems with nanoscale features requires analysis and manipulation tools with extreme precision. This is a central issue in nanotechnology and many contemporary areas of materials science. The advent of techniques such as scanning tunnelling or atomic force microscopy allows us to view and manipulate objects at this level. Electron microscopy has a more established history, but in more recent times has turned out to be an invaluable tool to the nanotechnologist. This is a hands-on subject that introduces the concepts behind these techniques, their use and application in many areas of science and technology. Recent developments in the techniques are introduced, and students have the opportunity to gain hands-on experience using a variety of scanning probe and electron microscopes.

Typical availability

Spring semester, City campus

68412 Energy Science and Technology

6cp; 4hpw

Requisite(s): 68201 Physics in Action OR 68037 Physical Modelling) AND (33290c Statistics and Mathematics for Science OR 33230 Mathematical Modelling 2)

This subject explores the physics and thermodynamics of energy systems. It builds on the fluids and thermodynamics studied in introductory level subjects, and develops an understanding of the physics and thermodynamics underlying conventional and renewable energy systems. The subject builds problem-solving skills in practical applications of energy science. These systems and related issues are explored through lectures, tutorials and project-based work.

Typical availability

Autumn semester, City campus

68413 Quantum Physics

6cp; 6hpw

Requisite(s): 68201 Physics in Action OR 68037 Physical Modelling) AND (33360c Mathematics for Physical Science OR 68038 Advanced Mathematics and Physics)

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: some knowledge of complex numbers, matrices and differential equations

This subject builds on introductory material on waves and classical mechanics. The subject examines how the behaviour of our world at an atomic level differs from our everyday experience of the macroscopic world. It introduces concepts and quantum mechanical tools needed to describe the structure and interactions of atoms, molecules and solids. The unique properties of matter at this scale can be exploited in the creation of new materials and devices in nanotechnology. This subject explores emerging technologies such as quantum computing, scanning tunnelling microscopy, and spectroscopic tools used to characterise and investigate the atomic world. It provides material which is fundamental to understanding many areas of physics and chemistry together with contemporary applications which are relevant to nanotechnologists.

Typical availability

Spring semester, City campus

68414 Advanced Mechanics

6cp; 4hpw

Requisite(s): 68201 Physics in Action OR 68037 Physical Modelling) AND (33360c Mathematics for Physical Science OR 68038 Advanced Mathematics and Physics)

This subject builds upon the foundation studies of mechanics and fields undertaken in an introductory physics subject. It takes advantage of the methods of vector analysis and differential equations to analyse the motion of particles and bodies under influence of forces and fields. Topics include coupled oscillators, the Lagrangian description of particle motion, rotational body dynamics, central force dynamics, and relativity.

Typical availability

Spring semester, City campus

68415 Measurement and Analysis of Physical Processes

6cp; 5hpw

Requisite(s): 68201 Physics in Action OR 68037 Physical Modelling) AND (33290c Statistics and Mathematics for Science OR 33230 Mathematical Modelling 2)

These requisites may not apply to students in certain courses. See access conditions.

This is predominantly an experimentally based subject. It builds upon the approach to experimentation introduced in the first year and provides a firm foundation for later experimental work. In particular, a focus is brought to methods of measurement and principles of data analysis of relevance to laboratory-based experimentation. The subject reinforces basic principles with practical applications drawn from various areas of applied physics. An experimentally based project is a major feature of this subject, where experimental design, data analysis and faithful and accurate reporting are emphasised.

Typical availability

Spring semester, City campus

68416 Computational Physics

6cp; 5hpw

Requisite(s): 33360 Mathematics for Physical Science OR 68038 Advanced Mathematics and Physics

These requisites may not apply to students in certain courses. See access conditions.

This subject introduces the key elements of computational physics such as methods for solving physical problems numerically and the use of computers for simulating the dynamics of large or complex systems. Numerical techniques including matrix manipulation, iterative optimisation and differential equation solvers. These are developed and applied to practical problems such as quantum mechanical simulations, statistical mechanics, electrodynamics and fields and molecular dynamics. Project work leads students to advanced simulation work including processing and visualisation of results.

Typical availability

Autumn semester, City campus

68513 Optics and Nanophotonics

6cp; 4hpw

Requisite(s): (68201 Physics in Action OR 68037 Physical Modelling) AND (33360c Mathematics for Physical Science OR 68038 Advanced Mathematics and Physics)

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: 68315 Imaging Science; 68606 Solid-State Science and Nanodevices

This subject builds upon the foundation studies of waves and optics undertaken in an introductory physics subjects. It takes advantage of the methods of vector calculus and differential equations to analyse how propagating fields interact with matter. The subject shows that field distributions at the nanoscale play an important role in many well-established and developing biological and chemical nanoscale analytic tools. Topics include: Maxwell's equations, interaction of electromagnetic waves and matter, diffraction and holographic gratings, near-field optics and bionanophotonics.

Typical availability

Spring semester, City campus

68606 Solid-state Science and Nanodevices

6cp; 5hpw

Requisite(s): 68413 Quantum Physics

These requisites may not apply to students in certain courses. See access conditions.

This subject provides an introduction to the quantum mechanics of electrons in solids and shows how the basic principles are used to guide the development of nanodevices which have technological applications. The subject has a substantial laboratory component which provides an opportunity to work with nanostructured materials.

Typical availability

Autumn semester, City campus

68723 Research Dissertation 1 (Science)

24cp

For subject description, contact UTS: Science.

68724 Research Dissertation 2 (Science)

24cp

Requisite(s): 68723 Research Dissertation 1 (Science)

There are also course requisites for this subject. See access conditions.

For subject description, contact UTS: Science.

69337 Special Reading Subject

3cp

This subject can only be undertaken following prior negotiation on the part of the student with a full-time member of academic staff regarding individual supervision. In addition, special permission of the Associate Dean (Teaching and Learning) is required.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Summer session, City campus

69500 Career Management for Scientists

6cp; 4hpw

The aim of this subject is to enable students to research and understand the requirements of employers of science graduates and to review and effectively promote both discipline specific skills and graduate attributes to employers in their fields of interest. It develops professional skills and behaviours sought by employers that enable graduates to transition effectively into science or other industries. It requires students to research relevant work opportunities in the local or global workplace, to analyse their capacities in relation to employer requirements in that field and review education and training needs for ongoing employment. It enables students to analyse and apply effective interpersonal skills in teamwork and develop confidence in

their business communication and presentation skills. Students clarify career goals, identify relevant professional capacities and graduate attributes and learn to successfully articulate these capacities and experiences to employers. The subject also supports the development of a skills based e-portfolio for ongoing career management.

Typical availability

Spring semester, City campus

70102 Foundations of Law

8cp

This subject aims to engage students with the concepts of law and legal systems, the Australian legal framework, and legal method and research in a legal context. Students are introduced to the Australian legal system – its origins, institutions, culture and theoretical foundations – and legal method and research. Students begin to develop skills in: case analysis, statutory interpretation, critical analysis and evaluation, legal reasoning, legal discourse and legal problem solving. Students are also introduced to a range of research skills necessary to locate and evaluate resources and develop an effective research strategy.

Typical availability

Autumn semester, City campus

Spring semester, City campus

70103 Ethics Law and Justice

6cp

This subject aims to engage students with an awareness and understanding of the role of ethics in the legal system and in the legal profession.

Students are introduced to theories of values, morals and ethics within the context of professionalism. The ethical responsibilities of legal practitioners, established through the common law, legislation and conduct rules, including the obligations relating to a solicitor's trust account, are addressed. An understanding of the role of lawyers in society and in the promotion of access to justice enables students to reflect on their own ethical approach to being a law student and a member of the legal profession.

Students are provided with a grounding in skills, including identification of ethical challenges, critical analysis of the role of lawyers in the administration of justice, reflective practice and ethical decision-making.

The integration of practical and theoretical approaches to legal ethics provides a framework in which students can better integrate ethical priorities within their own moral framework. These approaches also include self-management strategies and skills to assist students to be resilient and reflective lifelong learners.

Ethics complements the learning undertaken in 70102 Foundation of Law through its focus on the ethical perspectives on the concepts of law and legal systems and the Australian legal framework. As well students are also introduced to international ethics together with emerging ethical issues.

70104 Civil Practice

6cp

This subject deals with the area of civil practice. The application of civil practice in New South Wales is addressed to enable students to have an understanding of the legal and ethical context in which lawyers operate within the civil jurisdiction.

Areas of study in this subject follow the interpretation and application of civil practice governed by the *Civil Procedure Act 2005* and the *Civil Procedure Rules 2005* (UCPR).

Civil practice follows the scope of the Act and Rules, such as the resolution and settlement of disputes, the commencement of proceedings, representation and advocacy, the drafting and filing of documents, service, interlocutory applications and resolution, including alternative processes for dispute resolution. Preparation of client and their matters are presented and discussed within a problem-solving framework.

The Act and Rules form the framework for caseload management in the Supreme, District and Local courts. The legislation gives power to judicial officers to firstly direct the business of the court and caseload manage all matters, and secondly to direct the parties as to the management of their individual case. Statute law is supported by relevant case law.

Case law is relevant when it is applicable to the issues before the NSW courts. Some of the cases looked at in the subject concern the uniform civil procedure legislation. The cases that do not come within the legislation have similar legislation or principles. The purpose of referring to these cases, outside the NSW civil procedure regime, is to determine and discuss the relevant link between the principles and the current civil procedure framework.

Three of the significant results of the uniform civil procedure regime are:

- the increased resolution of disputes through non-adversarial processes
- the more active role of the courts in the conduct of proceedings, and
- the additional roles and duties of legal practitioners acting for the parties in civil disputes.

Typical availability

Autumn semester, City campus

Spring semester, City campus

70106 Principles of Public International Law

6cp

International Law is a well-established and important branch of law which has a wide scope of application and far-reaching implications for almost every aspect of human activity. This subject introduces students to the fundamental concepts and principles of public international law. It pays particular attention to the development of the law through the machinery of the United Nations in its relationship with states, other international organisations and individuals.

The topics covered in the subject include nature, sources and subjects of international law; the relationship between international and national law; personality and recognition; state jurisdiction and immunities; law of treaties; state responsibility; peace settlement of disputes; and use of force.

This subject would benefit students intending to take subjects in the areas of international humanitarian law, human rights law; international criminal law; international environmental law; international organisations law; law of the sea; WTO law, and the Jessup International Moot.

70107 Principles of Company Law

8cp

This subject examines the role and operation of companies in Australia and in modern commercial practice. The internal operation of companies is discussed, particularly the role of members; meetings, the corporate constitution, the board of directors and the duties of corporate directors and other officers. The topic of separate corporate personality is also discussed, together with the role of the limited liability principles.

The subject also considers the role of state regulation of corporate activity using a range of social, political and theoretical perspectives. Both for profit and not-for-profit companies are examined, but the primary focus is on companies registered under the *Corporations Act 2001* (Cwlth).

70108 Public International Law

6cp

International Law is a well-established and important branch of law which has a wide scope of application and far-reaching implications for almost every aspect of human activity. This subject introduces students to the fundamental concepts and principles of public international law. It pays particular attention to the development of the law through the machinery of the United Nations in its relationship with states, other international organisations and individuals.

The topics covered in the subject include nature, sources and subjects of international law; the relationship between international and national law; personality and recognition; state jurisdiction and immunities; law of treaties; state responsibility; peace settlement of disputes; and use of force.

This subject would benefit students intending to take subjects in the areas of international humanitarian law, human rights law; international criminal law; international environmental law; international organisations law; law of the sea; WTO law, and the Jessup International Moot.

70109 Evidence

6cp

Undergraduate and Postgraduate

This subject is based around the provisions of the *Evidence Act 1995*. Students study aspects of criminal procedure, as well as the rules about the admissibility of evidence. Topics include arrest, bail, police interrogation, the right to silence, types of evidence and the thresholds to the admissibility of evidence including relevance, hearsay, opinion, credibility, character, tendency and coincidence, discretionary exclusions, directions and warnings. Students examine the law reform processes that underpin the rules in NSW and federal courts and study the interpretation of these rules in judicial decisions.

Typical availability

Autumn semester, City campus

Spring semester, City campus

70110 Introduction to Law

6cp

Undergraduate

The subject is designed for non-lawyers and lawyers from legal traditions other than the common law tradition who need to acquire an understanding of the Australian legal system and fundamental principles within main areas of Australian law to assist them to undertake more specialised studies including those in a range of disciplines and fields other than law. It is designed to provide, in a module of nine out of a total of 12 topics, an introduction to the Australian legal system and an understanding of the western legal traditions and common law foundations for the legal system, followed by an introduction to principles of legal research and legal problem-solving, and to legal principles in the main areas of the law. This provides a foundation for students to undertake the research and learning in the last three topics of the subject which are specific to students' courses. It is intended that these nine topics are offered as an adjunct to a number of courses both internal and external, and it is designed to give an overview of those areas required to underpin the more specific and in-depth course materials which are taught in the remaining three topics. By combining the teaching of an understanding of the Australian legal system and major legal concepts with teaching the skills of research and legal problem-solving, the first nine topics of the subject equip students to move effectively into the specialised learning required not only in the last three topics but in their other subjects and their future studies.

Typical availability

Autumn semester, City campus

Spring semester, City campus

70114 Criminal Law and Procedure

8cp

Undergraduate and Postgraduate

This subject deals with the substantive criminal law, the doctrines and rules that define the conditions of criminal liability and some aspects of procedural criminal law. Australian common law doctrine and the *Crimes Act 1900* (NSW) are considered. Topics include: the nature of crime; the doctrines of mens rea and actus reus; burden of proof; strict liability; offences against the person; property offences; complicity and criminal defences.

Typical availability

Autumn semester, City campus

Spring semester, City campus

70115 Perspectives on Law

8cp

Undergraduate and Postgraduate

This subject aims to introduce students to the law and the Australian legal system through the lens of a variety of perspectives, including: ethical, philosophical, historical, indigenous, constitutional, international and cultural perspectives. In this way students not only develop an understanding of the fundamental concepts which underpin our legal system, as well as an appreciation of the interrelationships between its various institutions, but moreover acquire an insight into the workings of and tensions within our legal system and so be in a position to critically evaluate the strengths and weaknesses of the Australian legal system and the role of law in the Australian community. Students are given the opportunity to read and critically assess a range of materials from a variety of sources. Students are also introduced to a range of legal assessment skills relevant to their studies in law.

Typical availability

Autumn semester, City campus

Spring semester, City campus

70116 Principles of Public International Law

8cp

International law is a well-established and important branch of law which has a wide scope of application and far-reaching implications for almost every aspect of human activity. This subject introduces students to the fundamental concepts and principles of public international law. It pays particular attention to the development of the law through the machinery of the United Nations in its relationship with states, other international organisations and individuals.

The topics covered include the nature, sources and subjects of international law; the relationship between international and national law; personality and recognition; state jurisdiction and immunities; the law of treaties; state responsibility; peace settlement of disputes; and use of force.

This subject would benefit students intending to study the following unit areas: international humanitarian law; human rights law; international criminal law; international environmental law; international organisations; law of the sea; world trade law; and the Jessup international moot competition.

70120 Legal Method and Research

6cp

Requisite(s): 70110 Introduction to Law AND 76006 Public International Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The aim of this subject is to engage students with legal systems, legal reasoning, legal problem solving and legal research. Firstly, students are introduced to the Australian legal system, legal reasoning and the legal method skills of case analysis, statutory interpretation, legal problem solving and legal research. Legal method skills are fundamental to both the study and practice of law and students are able to develop these skills in a range of contexts. Students are also given opportunities to explore different approaches to legal reasoning and the contentious issue of judicial law-making.

Secondly, students are introduced to and develop a range of legal research skills. Students learn to distinguish between and locate primary and secondary sources of law using a number of library resources. Students also learn to develop research strategies and apply effective methodologies that suit the circumstances of the research tasks. Legal method and research are essential in the study of all subjects in the law program.

70311 Torts

8cp

Requisite(s): ([70113 Legal Process and History AND 70105c Legal Research] OR 79203 Business Law and Ethics OR 70120c Legal Method and Research)

Undergraduate and Postgraduate

This subject covers the functions and aims of the law of torts. The law of torts deals with claims for redress for civil wrongs. Students examine the nature of tortious liability in the light of a selection of specific torts, namely, trespass to the person, goods and land; detainment and conversion, the action on the case for wilful injuries; negligence; nuisance and statutory workers compensation and motor vehicle accident schemes. Negligence is the most significant tort and it is the primary focus of this subject. Students engage with and develop an understanding of the common law development of doctrine and rules through reading cases. In 2002 and 2003 there were significant legislative reforms to tort law and the impact of this legislation, in particular the *Civil Liability Act 2002* (NSW), and its relationship to the common law is examined.

A law of torts subject is required for admission as a legal practitioner in all Australian jurisdictions. This subject is part of the core program for the Bachelor of Laws and provides students with foundational knowledge required for more advanced 'private law' subjects in the law degree. Subjects covering areas such as commercial law, and equity and corporate law also require a sound knowledge of tort law as a basis for the legal concepts learned in those subjects.

Typical availability

Autumn semester, City campus

Spring semester, City campus

70317 Real Property

8cp

Requisite(s): ([70211 Contracts AND 70311c Torts] OR 79203 Business Law and Ethics)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject deals with the law relating to transactions and title in land. The topics covered in this subject include torrens title and priorities; old system, possessory, qualified and limited title; fixtures; trespass to land; co-ownership; easements; covenants; mortgages, tenures and estates; and native title and leases.

70327 Commercial Law

6cp

Requisite(s): 70211 Contracts AND 70311c Torts

Undergraduate and Postgraduate

In this subject students develop an understanding of aspects of commercial transactions. They also examine the law relating to chattel leases, cheques, negotiable instruments, guarantees, sale of goods, product liability and the application of key provisions of the *Australian Consumer Law*.

Typical availability

Autumn semester, City campus

Spring semester, City campus

70417 Corporate Law

8cp

Requisite(s): 70317c Real Property AND 70517c Equity and Trusts

Undergraduate and Postgraduate

Corporations are an all-pervading presence in contemporary society. An understanding of corporate law is essential for students intending to enter a commercial legal practice or aspiring to a senior appointment within a company. Awareness of the different rights and responsibilities of corporate stakeholders, such as directors, employees, creditors and shareholders, is also important for any prospective lawyer, since so many legal issues involve one or more corporations as parties to the action or transaction.

This subject is an introduction to the field of corporate law and corporations, and their role in commerce and society. It looks at that mode of business activity conducted in the form of a vehicle known as a company or a corporation and asks 'What/why/how/who is it?'. It looks at the various actors involved: shareholders, directors, creditors, regulators and the public, and the web of relationships between these parties. It also looks at the legal system and laws, corporate laws, and how they provide dispute resolution mechanisms. In addition, the increasing role of laws as regulatory and prescriptive is explored with a tilt towards understanding and utilising theoretical models of the body corporate and public policies.

This subject is taught from a student-centred perspective, with an emphasis on case and policy analysis, which may involve lectures, seminars and online exercises. It is Australian-laws focused and cases chosen for readings and discussion reflect this bias.

Typical availability

Autumn semester, City campus

Spring semester, City campus

70517 Equity and Trusts

8cp

Requisite(s): 70317 Real Property

Undergraduate and Postgraduate

This subject covers two related fields of study.

In 'equity' students examine the doctrines and remedies which were originally developed in the Courts of Chancery in England prior to 1873 to ameliorate the harshness of the common law and which are still applied today to the largely same effect, with some modification from time to time. Equitable doctrines and remedies do not replace the common law but supplement it in significant ways by recognising and enforcing obligations which are not known to the common law and by granting remedies in respect of those obligations which are not available at common law. These doctrines and remedies are

now administered in the same courts in which the common law is administered. Many areas of law are touched by equitable doctrines and remedies. In particular, the law of contract and property law are significantly affected by equity. Through the study of equity, students examine the range of discretionary remedies which are available for breach of particular obligations.

In 'trusts' students explore the concept of a trust which was developed in the Courts of Chancery, whereby an interest in property is legally owned by one party but held for the benefit of another person or purpose permitted by law. The obligations of the party owning the interest at law, and the rights of the beneficiary to that interest, continue to be recognised and enforced in equity. Trusts are now commonly used in both private arrangements and for commercial purposes, having particular consequences for taxation and insolvency. The relevant principles and modern applications of trusts are considered.

70616 Australian Constitutional Law

8cp

Requisite(s): ([70105 Legal Research AND 70113 Legal Process and History] OR [70115 Perspectives on Law AND 70120 Legal Method and Research]) AND 70211c Contracts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject aims to provide an understanding of:

- the philosophies and principles which shape Australian constitutional law
- the nature and content of the Commonwealth and state constitutions
- the role and methods of the High Court in interpreting the Constitution
- the distribution of legislative power under the Constitution
- the scope of particular grants of legislative power to the Commonwealth
- the role of international law, including treaties, in shaping Australian domestic law
- the relationship between the Commonwealth and the states under the Constitution
- the scope of the executive, parliamentary and judicial powers of the Commonwealth, the states and the territories
- the relationship between the three arms of government in Australia
- those rights and freedoms guaranteed by the Constitution, both express and implied, and
- the nature of 'representative government'.

Spring semester, City campus

70617 Administrative Law

8cp

Requisite(s): 70616c Australian Constitutional Law

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject deals with the control of government decisions. The primary focus is on the various mechanisms designed to achieve accountability on the part of officials who exercise broad discretionary powers, including decisions of the Governor-General, Ministers of the Crown, department heads, public servants and other public officers. (Judicial review ensures supervision by the executive arm of government of decisions made by the executive. Accountability of the executive is also achieved through other mechanisms such as the role of the ombudsman, freedom of information legislation, and privacy and anti-corruption legislation.) The subject deals principally with judicial review by the courts of decisions and actions of government. It also deals with some aspects of administrative law relating to non-governmental bodies. Administrative law is studied under the following broad topic areas: grounds of review of administrative decisions, in particular procedural fairness, ultra vires and jurisdictional error; and remedies available upon judicial review,

including prerogative writs and equitable remedies. The subject also deals with judicial review; administrative review, especially the jurisdiction of the *Administrative Appeals Tribunal Act 1975* (Cwlth) and comparable state legislation. The role of the Ombudsman, freedom of information and anti-corruption legislation is also reviewed. This subject aims to provide an understanding of:

- the central principles and the rights of the individual in dealing with government through administrative law, including the ideals of preservation of order, the welfare of the citizen, natural justice and the rights of the individual in contrast to governmental power
- the processes of institutions, both administrative and judicial, which regulate administrative action, and
- the institutions, legal principles, reasoning, constructs and techniques of administrative law.

70717 Evidence and Criminal Procedure

6cp

Requisite(s): (70218 Criminal Law OR 70217 Criminal Law) AND 70417c Corporate Law AND (70517c Equity and Trusts OR 70516c Equity and Trusts)

Undergraduate and Postgraduate

This subject is based around the provisions of the *Evidence Act 1995*. Students study aspects of criminal procedure, as well as the rules about the admissibility of evidence. Topics include arrest, bail, police interrogation, the right to silence, types of evidence and the thresholds to the admissibility of evidence including relevance, hearsay, opinion, credibility, character, tendency and coincidence, discretionary exclusions, directions and warnings. Students examine the law reform processes that underpin the rules in NSW and federal courts and study the interpretation of these rules in judicial decisions.

Typical availability

Autumn semester, City campus

Spring semester, City campus

71116 Remedies

6cp

Requisite(s): 70516c Equity and Trusts OR 70517c Equity and Trusts
Undergraduate

This subject deals with the range of self-help and court-ordered private remedies available to a plaintiff in civil proceedings. It brings together what students have studied or are studying in subjects such as equity, contract and tort into one coherent subject. A plaintiff often has more than one cause of action, and more than one remedy, and complete advice requires a comparison and evaluation of the alternatives. This subject aims to provide an understanding of the remedies available at common law, in equity and under statute, their interrelationship and the practical and theoretical considerations that underpin them.

Following an introduction to the subject and discussion of self-help remedies and declarations, the principal forms of damages for civil wrongs are then considered: compensatory damages reflecting the plaintiff's loss; and restitutionary damages referenced by the defendant's gain. Damages which do not depend on the commission of a wrong are then covered, in particular restitution for unjust enrichment. Non-monetary remedies are then covered: the general equitable remedies of injunction and specific recovery; and the mostly contract-specific remedies of specific performance, rectification, rescission and their statutory extensions. Finally, discretionary damages (nominal, exemplary and equitable) for civil wrongs and the principal forms of interlocutory relief are considered.

Typical availability

Autumn semester, City campus

Spring semester, City campus

72104 Insolvency, Restructuring and Turnaround Management

6cp

For further details, contact UTS: Law.

75402 Property Transactions

6cp; offered either on campus (lecture: 1hpw, workshop: 2hpw) or by distance requiring no on-campus attendance (lectures are taped for distance students)

Requisite(s): (75412c Legal Skills AND (75420c Ethics and Professional Conduct OR 75415c Professional Conduct 1) AND (132credit points in C04148 Master of Law and Legal Practice OR 132 credit points in C04148 Master of Law and Legal Practice OR 108credit points in C04236 Juris Doctor OR 108 credit points in C04236 Juris Doctor OR 156credit points in C10124 Bachelor of Lawsc 156 credit points in C10124 Bachelor of Laws OR 156credit points in C10125 Bachelor of Business Bachelor of Lawsc 156 credit points in C10125 Bachelor of Business Bachelor of Laws OR 156credit points in C10129 Bachelor of Laws Bachelor of Arts in International Studies OR 156 credit points in C10129 Bachelor of Laws Bachelor of Arts in International Studies OR 156credit points in C10131 Bachelor of Medical Science Bachelor of Lawsc 156 credit points in C10131 Bachelor of Medical Science Bachelor of Laws))

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

The subject explores the legal practitioner's role in property transactions, including torrens title and strata title conveyancing transactions, commercial and residential leases, mortgages, finance, powers of attorney and options. Students learn and practise tasks in preparation for professional practice as an entry-level lawyer including a practice file for a residential conveyance and preparation of a commercial lease. Students develop their skills in applying their knowledge and understanding of the law in the context of property transactions. The subject encourages students to experience and reflect on some of the graduate attributes developed by the faculty.

Typical availability

Autumn semester, City campus

Spring semester, City campus

75403 Commercial and Estate Practice

6cp; distance

Requisite(s): ((132credit points in C04148 c Master of Law and Legal Practice OR 108credit points in C04236 c Juris Doctor OR 156credit points in C10124 c Bachelor of Laws OR 156credit points in C10125 c Bachelor of Business Bachelor of Laws OR 156credit points in C10129 c Bachelor of Laws Bachelor of Arts in International Studies OR 156credit points in C10131 c Bachelor of Medical Science Bachelor of Laws) AND 75412c Legal Skills)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

The subject explores the legal practitioner's role in commercial and estate practice, including the sale and purchase of businesses, planning business structures, employer obligations, drafting and analysing wills, applying for probate or letters of administration and administering estates. Students learn and practise tasks in preparation for professional practice as an entry-level lawyer in the areas of commercial and estate practice. The subject encourages students to experience and reflect on some of the graduate attributes developed by the faculty.

Typical availability

Autumn semester, City campus

75411 Practical Experience

0cp

Requisite(s): (((132Credit Points in spk(s): C04148 c Master of Law and Legal Practice OR 108Credit Points in spk(s): C04236 c Juris Doctor OR 156Credit Points in spk(s): C10124 c Bachelor of Laws OR 156Credit Points in spk(s): C10125 c Bachelor of Business Bachelor of Laws OR 156Credit Points in spk(s): C10129 c Bachelor of Laws Bachelor of Arts in International Studies OR 156Credit Points in spk(s): C10131 c Bachelor of Medical Science Bachelor of Laws) AND 75424c Legal and Professional Skills) OR 75424c Legal and Professional Skills)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

Students in this subject undertake a minimum of 16 weeks of full-time or equivalent part-time work experience in a legal office environment. Practical experience placements must be approved in advance by the UTS Faculty of Law Practical Experience Committee and completed in accordance with the practical experience rules. Students must complete their practical experience work placement within five semesters of enrolling in this subject.

75412 Legal Skills

6cp; offered either on campus (1.5hpw lecture, 2hpw workshops as timetabled) or by distance requiring students to attend on Saturdays as timetabled for two days of workshops (all day) and two days for assessment in short blocks (1-2hrs); lectures are recorded and available on UTS online

Requisite(s): (70417 Corporate Law AND (70717 Evidence and Criminal Procedure OR 71216 Law of Evidence) AND (132credit points in C04148 c Master of Law and Legal Practice OR 108Credit Points in spk(s): C04236 c Juris Doctor OR 156Credit Points in spk(s): C10124 c Bachelor of Laws OR 156Credit Points in spk(s): C10125 c Bachelor of Business Bachelor of Laws OR 156Credit Points in spk(s): C10129 c Bachelor of Laws Bachelor of Arts in International Studies OR 156Credit Points in spk(s): C10131 c Bachelor of Medical Science Bachelor of Laws))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject introduces students to the skills and awareness that together form the professional persona of an effective legal practitioner. The skills of interviewing and advising, writing, drafting and negotiating are covered. The subject also examines the areas of human behaviour and practices that a lawyer needs to be sensitive to in order to be an effective practitioner. These include work management, legal aid, access to justice and disability and EEO issues.

The approach to problem solving is explored, discussed and developed as a law student is refined and redirected to become client centred. A lawyer's most valuable tool is the ability to communicate. Participation in workshops dealing with drafting, interviewing and negotiation tasks are designed to enable students to practise these key skills in a client-focused environment.

Typical availability

Autumn semester, City campus

Spring semester, City campus

75413 Advocacy

6cp; off-campus students must participate in UTSONline workshops during semester, and are also required to attend a two-day intensive during the UTS: Law non-teaching week and a three-day intensive during the final exam week

Requisite(s): ((132credit points in C04148 c Master of Law and Legal Practice OR 108Credit Points in spk(s): C04236 c Juris Doctor OR 156Credit Points in spk(s): C10124 c Bachelor of Laws OR 156Credit Points in spk(s): C10125 c Bachelor of Business Bachelor of Laws OR 156Credit Points in spk(s): C10129 c Bachelor of Laws Bachelor of Arts in International Studies OR 156Credit Points in spk(s): C10131 c Bachelor of Medical Science Bachelor of Laws) AND 75412c Legal Skills AND (70717 Evidence and Criminal Procedure OR 71216 Law of Evidence) AND 75421c Civil Litigation)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject develops the skills necessary to prepare for and present evidence and argument in court. The primary focus of the subject is on the techniques involved in examination-in-chief, cross-examination, re-examination, making objections to evidence and the presentation of an opening and closing address. On-campus students practice skills through attending workshops, participating in exercises, presenting a local court mention, a bail application, a plea of guilty, a defended hearing and preparing an interlocutory application in the District Court. Off-campus students participate in these activities online and demonstrate the skills in an intensive week on campus during the faculty non-teaching week and at the end of the semester. This subject aims to provide the skills necessary to:

- present a mention, bail application and plea of guilty
- develop persuasive argument and submissions
- prepare a defended matter for court using the 'proof making model', and
- conduct a defended matter including the presentation of evidence.

Typical availability

Autumn semester, City campus

Spring semester, City campus

75420 Ethics and Professional Conduct

6cp; on campus

Requisite(s): 70120c Legal Method and Research AND 70115c Perspectives on Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject provides a basis for the understanding of the ethical responsibilities of legal practitioners, including obligations relating to a solicitor's trust account. The lectures focus on the practical applications of admission to practice, including the basic requirement for the operation of a solicitor's trust account and alternative approaches to applying legal ethics. The practice of law requires an understanding of the *Legal Profession Act 2004* (NSW) and *Legal Profession Regulation 2005* (NSW), the Professional Conduct Rules and case law. The integration of practical and theoretical approaches to legal ethics provides a framework in which students can better integrate ethical priorities within their own moral framework. The tutorials provide scenarios in which students can better understand and discuss the application of the common law and rules as well as giving an opportunity to explore the various approaches to legal ethics.

Typical availability

Autumn semester, City campus

Spring semester, City campus

75422 Transactional Practice

6cp

Requisite(s): ([75420c Ethics and Professional Conduct AND 75421c Civil Litigation AND 75424c Legal and Professional Skills AND (108 Credit Points in spk(s): C04236 Juris Doctor OR 156 Credit Points in spk(s): C10124 Bachelor of Laws OR 156 Credit Points in spk(s): C10125 Bachelor of Business Bachelor of Laws OR 156 Credit Points in spk(s): C10129 Bachelor of Laws Bachelor of Arts in International Studies OR 156 Credit Points in spk(s): C10131 Bachelor of Medical Science Bachelor of Laws)] OR 75424c Legal and Professional Skills)

These requisites may not apply to students in certain courses. See access conditions.

This subject covers the skills, practice areas and values required of a law student to be admitted to practise law as prescribed by the 'competency standards' set out in the Sixth Schedule to the Legal Profession Admission Rules 2005. The subject assumes an understanding of disciplinary knowledge taught in core law subjects in a relevant degree. Students learn and practise tasks in preparation for professional practice as an entry-level lawyer.

This subject focuses on law, practice, procedure and skills to enable students to:

- conduct and advise on property transactions such as conveying torrens title and strata title residential property; advise on, create and release securities; advise on, create and transfer leases; identify revenue issues of property transactions; advise on land use, powers of attorneys, residential tenancies and options
- conduct and advise on commercial transactions such as the sale and purchase of a business; set up and advise on business structures and the continuing obligations in relation to those structures; identify revenue implications of commercial transactions and refer clients to appropriate expert advisers; advise on loans, securities and financing arrangements for commercial transactions.

Students also draft relevant documentation and analyse issues in clients' problems as well as offering options and solutions.

The subject encourages students to experience and reflect on the targeted Graduate Attributes developed by the faculty.

Typical availability

Autumn semester, City campus

Spring semester, City campus

75423 Litigation and Estate Practice

6cp

Requisite(s): ([75420c Ethics and Professional Conduct AND 75421c Civil Litigation AND 75424c Legal and Professional Skills AND (108 Credit Points in spk(s): C04236 Juris Doctor OR 156 Credit Points in spk(s): C10124 Bachelor of Laws OR 156 Credit Points in spk(s): C10125 Bachelor of Business Bachelor of Laws OR 156 Credit Points in spk(s): C10129 Bachelor of Laws Bachelor of Arts in International Studies OR 156 Credit Points in spk(s): C10131 Bachelor of Medical Science Bachelor of Laws)] OR 75424c Legal and Professional Skills)

These requisites may not apply to students in certain courses. See access conditions.

This subject covers the skills, practice areas and values required of a law student to be admitted to practise law as prescribed by the 'competency standards' set out in the Sixth Schedule to the Legal Profession Admission Rules 2005. The subject assumes an understanding of disciplinary knowledge taught in core law subjects in a relevant degree. In this subject, students learn and practise tasks in preparation for professional practice as an entry-level lawyer.

This subject has three components.

1. **Civil Litigation Practice:** this subject component deals with the theory of civil practice and procedure in NSW governed by the Civil Procedure Act and Uniform Civil Procedure Rules. Areas of study include identification of case theory, the merits of a case, litigation and alternative dispute resolution options, drafting of court documents including pleadings and affidavits, gathering of evidence and preparation for and engagement in an alternative dispute resolution activity (interests-based negotiation).
2. **Wills and Estate Practice:** this subject component covers drafting and advising on wills, obtaining grants, administering deceased estates, identifying issues and problems that arise in will drafting and estate administration and resolving and advising on these issues and problems.

3. A choice of either:

- **Option A (Family Law Practice component):** this subject component covers advising clients about matters following the breakdown of a relationship, marriage or de facto. Students draft appropriate documents to be filed with the court and appear before the court, or
- **Option B (Criminal Law Practice component):** this subject component covers preparing and presenting a bail application, a plea of guilty and a case theory analysis document based on allocated fact situations.

The subject encourages students to experience and reflect on the targeted graduate attributes developed by the faculty.

Typical availability

76001 Comparative Law

6cp

Requisite(s): ([70120 Legal Method and Research OR 70105 Legal Research]) OR (70110 Introduction to Law AND 76006c Public International Law)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject focuses on how different legal systems function in the world today. It examines current and past theories of comparative law in the context of globalisation and the internationalisation of law. It provides an introduction to each of the world's major legal systems in their various manifestations and the way in which they are adapting to modern challenges. As well as the traditional comparisons of common, civil and socialist law, the subject considers the theory and practice of legal pluralism and the place of indigenous and religious based laws within state legal systems.

76002 Sports Law

6cp

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice AND 70211 Contracts AND 70311 Torts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The law of sport and recreation is a commercial law subject. This is to be expected in an industry that is a major economic driver. Moreover, sport-based disputes seem to have an urgency about them that sees them litigated within a few weeks of a cause of action arising. With the growth of professionalism, the internationalisation of sport, media influence, sporting sponsorship and high profile sporting cases, sport once quarantined from the impact of the law, is now at the forefront.

Any sporting event generates a number of legal concerns, for example: what rights of appeal exist for non-selected athletes; issues concerning doping; to whom does a team doctor owe their duty of care; are athletes illegally exploited by major sporting organisations; when can an athlete be criminally charged for violent acts; do sporting disciplinary tribunals function legally; how should the sporting organisation deal with claims of discrimination; are coaches and clubs legally liable for the actions of their athletes; is it legal to exclude an athlete or member of the public from a sporting venue; when is a referee legally liable in tort.

This subject considers the law as it relates to sport in Australia and several areas of international interest. It is hoped that, where appropriate, a number of guest speakers from the sporting world will present mini-lectures on matters of interest in sport and its relationship with law.

76003 Asian Law and Legal Systems

6cp; one semester

Requisite(s): ((70120 Legal Method and Research OR 70105 Legal Research)) OR (76006c Public International Law AND 70110 Introduction to Law)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

The subject exposes students to another legal system. It is designed to introduce students to the reception of legal systems in the countries of East and South-East Asia, with special reference to the reception of English law and Islamic law by these countries.

76005 Islamic Law

6cp

Requisite(s): (60 credit points of completed study in C04148 Master of Law and Legal Practice OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The aim of this subject is to provide an introduction to Islamic law in theory and its practice as implemented in the modern world. Topics covered include:

- jurisprudence – reviews the origins and development of Islamic law, current issues such as codification and modernisation, and application of these principles in modern Muslim countries such as Malaysia and Pakistan
- family law and inheritance – examines the rules regarding marriage and divorce, custody of children and maintenance, the importance of the extended family, and developments in family planning law
- commercial, property and banking law – reviews new developments in these fields and looks at the model of an Islamic bank. Intellectual Property law is also considered.
- criminal law and evidence – looks at the classification of crimes, prescribed and discretionary punishments and evidence required for conviction, and
- Islam in Australia – gives an overview of the Muslim population in Australia today.

76007 International Human Rights Law

6cp

Requisite(s): (70616 Australian Constitutional Law OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

International human rights law seeks to address a range of contemporary issues in global politics, economics and society. While it draws on a long conceptual history of thinking through the rights of the human, this subject focuses more on the practical history and development of the current international human rights regime. Students become familiar with the substantive and procedural elements of international human rights law, and gain practical experience in debating the applicability of human rights instruments to specific situations. Students engage with a range of case studies which include consideration of the human rights issues raised by the Northern Territory Intervention, the Australian system of mandatory detention of those seeking to exercise their right to asylum, torture and ill-treatment, and corporations and human rights. The subject aims to provide students with a sophisticated appreciation of the wide range of issues that encompass human rights concerns; and to allow reflection upon the significance of international human rights law in order to develop an understanding of its usefulness, its limits and its future potential for emancipatory change.

Typical availability

Autumn semester, City campus

Spring semester, City campus

76008 Jurisprudence

6cp

Requisite(s): (70311 Torts OR (76006c Public International Law AND 70110 Introduction to Law))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject deals with theoretical questions that are relevant to an understanding of the notion of law (e.g. What is the law of the state? Is there any other command, convention or the like that can also be called 'law'?). It also includes a discussion of different approaches to the study of law (e.g. philosophical, sociological, historical, analytic, international, comparative) to determine its derivation, nature and function, as well as a discussion of the doctrines and techniques of legal analysis and evaluation. The various approaches are compared and criticised in the context of sociopolitical problems, conflicts and other phenomena. Topics here include sovereignty and the law, legal rights and duties, and law and ideology. Their treatment in the common law is examined. A number of theorists are considered, e.g. Austin and Dworkin.

76009 Introduction to Chinese Business Law

6cp

Requisite(s): (70211 Contracts OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

With China's emergence as a new economic superpower, and with ever-deepening business ties between Australia and China, it is crucial that students gain an up-to-date understanding of Chinese business law and an awareness of major differences between Australian and Chinese legal and business cultures.

This subject adopts a case-based, problem-solving approach to focus on the following areas:

- current legal system and legal/business culture of China
- Chinese investment law environment and how it differs from Australia
- corporate structures and the status of business corporations in China since China's accession to the World Trade Organization (WTO)
- the legal environment for foreign entities doing business in and with China, potential risks and case studies

China's WTO compliance and Australia-China Free Trade Agreement — case studies. The subject is important for students wishing to understand the interactions between law, business, politics and culture in China today. Students are able to develop practical and research skills that assist them in understanding the business law environment in China in contrast to that of Australia.

Typical availability

Autumn semester, City campus

Spring semester, City campus

76010 Disability and the Law

6cp

Requisite(s): (70120 Legal Method and Research OR (76006 Public International Law AND 70110 Introduction to Law))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject explores disability and impairment as a legal category. Students are introduced to the various competing models of disability including: the medical model, the social construction model, the human rights model and bioethical, feminist and postmodern approaches to disability. In so doing, the subject takes an interdisciplinary and international comparative approach to conceptions and theories of disability and impairment. Students examine the practical implications of these models for the construction of legal rights and responsibilities with respect to persons with disabilities in a number of key areas of law. These include health law, tort law, criminal law, international law and anti-discrimination law. Specific issues examined include: treatment-limiting decisions for newborns, constraints on reproductive decision making, abortion for disability, end of life decision making; the therapy/enhancement distinction and body modification, the UN Declaration of Human Rights, the UN Declaration of the Rights of Disabled Persons and various state and federal anti-discrimination legislation. Key issues that students need to examine are the concepts of normal and disabled, healthy and diseased and able-bodied and impaired. This subject examines and evaluates how law can best achieve the goals of social justice and equality for individuals with disabilities.

76012 Criminology

6cp

Requisite(s): 70217 Criminal Law OR 70218 Criminal Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

Criminology is a broad subject encompassing both theoretical and practical approaches. Theoretical aspects of criminology include analyses of why people commit crime, appropriate responses to the commission (or potential commission) of crime, and theoretical justifications for punishment. Research in criminology focuses on specific topics, providing a combination of quantitative and qualitative analysis of factors such as the impact of ethnicity, gender, sexuality, etc., on the commission of crime and the criminal justice system's responses to crime.

Students are invited to consider traditional and emerging analyses of criminology both in the abstract and applied to specific examples.

76013 World Trade Law

6cp

Requisite(s): ((70120 Legal Method and Research OR 70105 Legal Research)) OR (76006c Public International Law AND 70110 Introduction to Law)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The rules of the World Trade Organization (WTO) underpin the conduct of international trade in about 150 countries and have direct relevance for governments, businesses and individuals. The WTO rules cover not just customs and tariffs, but also agriculture, industry development, quarantine and health, and environmental protection. This is a specialist subject on the WTO.

The second half of the subject focuses on the Australian application of trade rules and domestic and international laws governing international transactions. On completion of this subject, students have a developed understanding of the basic legal principles underpinning the multilateral trading system; the key agreements; the dispute settlement mechanism of the WTO; and its institutional structure and the decision-making processes. Students also have an understanding of the application of the law to international transactions.

76015 Labour Law

6cp

Requisite(s): 70211 Contracts AND 70311 Torts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines 'individual' aspects of Australian labour law under both judge-made law and selected legislation. Labour law is an important component of studies in the legal regulation of commerce. Students are introduced to the key aspects of laws which determine the rights, entitlements and responsibilities governing the relationship between an employer and an individual worker. Both practical and theoretical perspectives on individual labour law are examined. Topics covered include: employment and other categories of work relationships; formation and content of the employment contract; post-employment restraints; implied duties of employers and employees; employment terms and conditions under legislation; termination of the employment contract; unfair dismissal legislation; and unfair work contracts legislation.

76016 Advanced Revenue Law

6cp

Requisite(s): (76212 Revenue Law AND (70516c Equity and Trusts OR 70517c Equity and Trusts))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject builds on the understanding obtained in previous study. It focuses on a deeper analysis in relation to a number of taxation issues including the taxation of companies, trusts and partnerships, further capital gains tax issues, aspects of international taxation, tax administration, and tax planning, with a consideration of anti-avoidance and ethical issues in tax planning.

76019 Broadcasting and Telecommunications Regulation

6cp

Requisite(s): 70120 Legal Method and Research OR 70105 Legal Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject addresses the law regulating the structure of electronic communications in Australia. The subject covers the regulation of broadcasting, telecommunications and online content.

It provides students with an understanding of the policy and legal framework and addresses such questions as who can provide these services; what regulatory obligations are imposed on businesses providing these services; how are these sectors regulated to ensure that competition is promoted and no persons have undue influence over communications in Australia; what rules are in place to ensure that Australians, regardless of wealth, location, etc. have access to communications services; and how does the law respond to the impact of new technology.

This is a very topical course with a changing menu of current issues. Some current issues include provision of broadband services and access across Australia, the switch to digital technology and the regulatory response as traditional broadcasting and telecommunications frameworks give way to a global multi-platform delivery environment.

76020 Entertainment Law

6cp

Requisite(s): 70211 Contracts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject aims to provide students with a detailed and practical understanding of the legal environment of the entertainment industries in Australia. The focus of the subject is the transactions concerned with the production and distribution of content - film and television, recordings, music publishing and new media. The discussion of laws relating to the entertainment industries is placed within the broader commercial and artistic context of the entertainment business, including the impact of new media in creating new formats and a more global market, the roles of different parties, the structure and major players in the Australian industry and the processes of production and distribution. In particular, this subject aims to provide students with an understanding of the role of the entertainment lawyer and the practical knowledge and skills required to handle the transactional issues associated with the production and distribution of creative content.

76021 Advanced Remedies

6cp

Requisite(s): (70311 Torts AND 70211 Contracts AND (70516 Equity and Trusts OR 70517 Equity and Trusts))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject deals with the range of self-help and court-ordered private remedies available to a plaintiff in civil proceedings. It brings together what students have studied or are studying in subjects such as equity, contract and tort into one coherent subject. A plaintiff often has more than one cause of action, and more than one remedy, and complete advice requires a comparison and evaluation of the alternatives. This subject aims to provide an understanding of the remedies available at common law, in equity and under statute, their interrelationship and the practical and theoretical considerations that underpin them.

Following an introduction to the subject and discussion of self-help remedies and declarations, the principal forms of damages for civil wrongs are then considered: compensatory damages reflecting the plaintiff's loss; and restitutionary damages referenced by the defendant's gain. Damages which do not depend on the commission of a wrong are then covered, in particular restitution for unjust enrichment. Non-monetary remedies are then covered: the general equitable remedies of injunction and specific recovery; and the mostly contract-specific remedies of specific performance, rectification, rescission and their statutory extensions. Finally, discretionary damages (nominal, exemplary and equitable) for civil wrongs and the principal forms of interlocutory relief are considered.

76022 Insurance Law

6cp

Requisite(s): 70211 Contracts AND 70311 Torts

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject examines the principles and rules that make up Australian insurance law. Its central focus is on the rights and liabilities of the insurer and the insured, as determined by their contract of insurance, the general law and statute. Concepts such as indemnity, subrogation, utmost good faith, the duty of disclosure, insurable interest, conditions and warranties lie at the heart of most insurance arrangements. The role of insurance intermediaries is examined. Some forms of insurance are mandatory under statute (e.g. motor vehicle compulsory third party insurance, workers compensation insurance, home warranty insurance), but are not studied in detail. The impact of the *Insurance Contracts Act 1984* (Cwlth) on the rights and liabilities of insurer and insured is substantial, affects most insurance contracts commonly entered into today, and is closely studied. In the final lecture the subject also overviews some of the specialist areas of insurance law in Australia and internationally.

Note(s)

This subject was formerly called Law of Insurance.

76023 Deceptive Trade Practices and Product Liability

6cp

Requisite(s): 70211 Contracts AND 70311 Torts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

In this subject students consider the operation of the action for misleading and deceptive conduct under the Australian Consumer Law (ACL) including its nature, limitations, comparison and inter-operation with other causes of action, remedies and enforcement.

76024 Environmental Law

6cp

Requisite(s): 70211 Contracts AND 70311 Torts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

As a field of study, environmental law deals with the rules, relationships, systems and processes by which environmental protection is achieved. This subject grounds students in an introduction to the foundations of environmental law at the international, federal, state and local government levels. It introduces students to the nature and conceptual notions of environmental law with a view to enabling them to undertake more specialised courses in environmental law, either at the undergraduate or postgraduate level, such as water law and policy, international environmental law and international trade law and the environment. Topics covered in the subject include:

- the philosophy of environmental law
- international environmental law and domestic implementation of multinational environmental agreements
- constitutional support for environmental actions
- legislative framework at the federal, state and local government levels
- principles of ESD and courts interpretation of these principles
- the *Environmental Protection and Biodiversity Conservation Act 2000* (Cwlth)
- NSW pollution legislation, the *Protection of the Environment Operations Act 1997*
- system of regulation and management of natural resources in NSW
- case studies of current environmental issues
- environmental institutions and resolution of environmental disputes.

76025 International Organisations

6cp

Requisite(s): 70115 Perspectives on Law AND 70120 Legal Method and Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

The proliferation of intergovernmental and non-governmental organisations is one indicator of the internationalisation of social life and the interdependence of states in the early 21st century. This subject examines the principal legal issues concerning organisations composed of states. These include the legal status and powers of organisations, membership and participation, norm-creation, dispute settlement, enforcement of decisions, peace and security activities and finally the organisations' privileges and immunities as well as their legal status and powers under national law.

At the same time, the subject addresses real-world problems such as the creation of international criminal courts, the 'succession' of Russia to the USSR's seat on the UN Security Council, the response to the break-up of Yugoslavia, the jurisdictional issues in the Lockerbie-case, the possibility of judicial review of acts of the UN Security Council, the success of WTO dispute settlement, NATO action against Serbia in 1999, the military intervention in Afghanistan and Iraq in the aftermath of 9/11 and the UN administration of Kosovo and East Timor.

Primary consideration is given to the development of the United Nations. Other universal organisations such as ILO, the Bretton Woods institutions, WTO or ICAO, as well as regional ones such as the Council of Europe, the EU and others are also dealt with. This subject does not try to provide a comprehensive picture of all of these organisations, rather it aims at helping students understand the common legal problems faced by international institutions.

76027 Competition Law

6cp

Requisite(s): 70211 Contracts AND 70311 Torts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject provides a comprehensive, in-depth and engaging examination of the economic and legal principles of competition law (also known as antitrust law or restrictive trade practices law) in Australia. It examines statute law, Part IV of the *Competition and Consumer Act 2010* (Cwlth) (CCA) (formerly Part IV of the *Trade Practices Act 1974* (Cwlth) (TPA)), the decisions of the common law Courts in interpreting the Act, as well as some international treaties on antitrust law enforcement, of which Australia is a party. Current issues and recent cases on competition laws and policies in Australia are also examined.

The subject covers the economic functioning of markets, market power and competition; the relationship between antitrust-related statute law, common law and economics; the evolution and objectives of Australian competition law and the administration and enforcement of competition law, both nationally and internationally.

The subject also covers:

- an overview of the evolution of competition law, including the reasons for the competition law, the economic functioning of markets, market power and competition, the relationship between economics and competition laws, and the legislative feature of the Australian competition law
- an in-depth examination of major anti-competitive statutory conduct in Part IV of the CCA, including mergers/acquisitions, misuse of market power, exclusionary conduct, monopolistic agreements/arrangements, exclusive dealing, and resale price maintenance
- examination of the administration and enforcement of competition law in Australia, including the roles of the Australian Competition and Consumer Commission, the Australian Competition Tribunal and the Courts. It includes also authorisation and notification regimes, remedies for private litigants and other related matters
- examination of major international treaties on antitrust law enforcement, of which Australia is a party, and major international antitrust cases in which Australia is involved.

Typical availability

Spring semester, City campus

76030 Genetics and the Law

6cp

Requisite(s): 70115 Perspectives on Law AND 70120 Legal Method and Research

There are also course requisites for this subject. See access conditions.

This subject examines the scope and limitations of existing regulation of genetic technologies with respect to humans. It also considers recent scientific and technological innovations in the area of human genetics and the role and effectiveness of law in managing these new developments. The role of law as a means to control both the development of new genetic technologies and the utilisation of existing technologies is also evaluated. This includes a specific focus on individual decision-making versus responsibility for genetic risk, individual versus group rights, genetic privacy, genetic discrimination, reproductive autonomy, and ownership and control of genetic information and research developments. Specific issues covered include regulatory limits on the use of genetic screening of adults, children and newborns; prenatal genetic testing and genetic testing of adults and children; the regulation of genetic registers, protecting genetic information privacy and the problem of familial information; measures to control genetic discrimination in employment and insurance; the regulation of genetic research through the NHMRC guidelines and other means; the regulation of genetics in medical research including gene therapy, inheritable genetic modification, stem cell research and human somatic cell nuclear transfer (cloning technologies); and the establishment of biobanks and the concept of genomic property.

76033 Animal Law and Policy in Australia

6cp

Requisite(s): 70115 Perspectives on Law AND 70120 Legal Method and Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject examines the effectiveness of existing regulation in Australia with respect to animal welfare. Topics covered include: consideration of animals in the context of morality, science and the law; the historical development of animal law as well as an overview of animal regulation in Australia; the prevention of cruelty; and the legal status of animals. The material is presented against the backdrop of the animal welfare and rights debate, encouraging students to consider and evaluate whether the current regime fosters accountability and ethical standards. In order to appraise Australia's regime more effectively, the subject also includes consideration of two topics at international and comparative levels. The first relates to advances in animal welfare introduced by the European Union, and the second relates to the impact on animal welfare by the rules of the international trade law regime, as typified by the World Trade Organization. The subject is designed to provide students with a sound understanding of the fundamentals of animal law including its application to companion animals, farm animals, wild animals and animals in laboratories.

76034 Law of Slavery and Human Trafficking

6cp

Requisite(s): 70616 Australian Constitutional Law AND 70120 Legal Method and Research AND 70115 Perspectives on Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Slavery and human trafficking are transnational crimes. This subject comprehensively explains and evaluates international and domestic responses to slavery and human trafficking within an international law and human rights framework. While the subject addresses international law, it does so with an appreciation of the practical application of the law. The subject draws students to a critical evaluation of the state's responsibility to protect and support, and develop effective criminal justice responses. Areas covered include: the legal definitions; the international legal framework; the intersection between migrant worker exploitation, slavery and trafficking; the gender implications of slavery; trafficking and refugee law; and trafficking as a crime against humanity. State responsibility at international law is reviewed to develop a sound knowledge of the state's obligations to protect and support as well as to promote the application of effective remedies. An effective domestic and international criminal justice response is critical in the development of a framework to prevent trafficking and ensure prosecution of transnational crimes. The dimension of slavery and trafficking — the link between such transnational crimes, economic opportunities, substandard working conditions and migration — is explored. Vulnerability to trafficking, the issues of demand and the supply chain, and corruption are addressed, as well as compliance standards, monitoring mechanisms and the role of civil society. Finally, the course concludes with consideration of a body of international literature which is critical to the implementation of anti-trafficking measures.

At the end of the course, students are expected to have a deep understanding of the principles of international law and their application within the Australian domestic context. Students also gain sophisticated insight and understanding of the application of international law through a comprehensive evaluation of selected areas of law.

76036 International Trade Law and the Environment

6cp; distance

Requisite(s): 70115 Perspectives on Law AND 70120 Legal Method and Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

The trade and environment debate conceals the problematic relationship between two legitimate interests of the international community. This subject introduces students to the significant interface between international trade liberalisation and the environmental imperative of ecologically sustainable development.

Initially the subject provides an overview of the frameworks of international trade law and environmental law and an insight into the philosophical underpinnings of both institutions. The subject considers the important role of developing countries in shaping the trade/environment debate.

The subject also considers the obligations imposed by the World Trade Organization (WTO) including the Agreements on Food Safety Standards, Technical Barriers to Trade and the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS). The scope and operation of environmental exceptions that have been the subject of recent trade environment disputes in the WTO provide valuable insights into the area. The position of multilateral environmental agreements and the WTO is considered along with the serious implications for developing countries.

Particular specialty areas of concern are covered including ecolabelling, invasive species and intellectual property issues.

Upon completion of this subject students should be able to understand and analyse the current relationship between trade and environment, reflect in an informed manner on the future of the protection of the environment in the multilateral trade and investment regime and be able to critically assess the prospects for future harmonisation of global free trade regimes and ESD principles.

76037 Advanced Criminal Law

6cp

Requisite(s): (60 credit points of completed study in C04148 Master of Law and Legal Practice AND (70217 Criminal Law OR 70218 Criminal Law))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject critically examines the major forms of crime which affect society today. In analysing such crime and society's response to it, the subject begins with an examination of the principles around which criminal laws are constructed and are said to operate. In this regard, the subject focuses not only on the law itself but also on its structures and institutions of control. Particular emphasis is placed on current law and order politics and the effect this has had on criminal law. To a certain extent the subject is also comparative, focusing in particular on crimes and social responses which are global in nature.

76038 Law and Mental Health

6cp

Requisite(s): 70311 Torts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject is designed to give students an introduction and overview of the interface between the disciplines of psychiatry and law. It examines how the empirical research and theories of psychiatry intersect with the application of legal principles and practices. As a result of successfully completing this subject, students should be able to translate personal and/or social issues concerning the study of mental illness into the practice of mental health law, and evaluate the efficacy of different perspectives in relation to contemporary debates about mental illness. Students should also demonstrate successful teamwork, involving the ability to participate in collaborative learning activities face-to-face as well as the development of independent learning skills.

76039 Jessup International Moot

6cp; availability: by invitation only

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This elective encourages participation in the Jessup International Moot. The moot is organised by the Association of Student International Law Societies, which operates under the auspices of the American Society of International Law in Washington. The workload involved is particularly demanding: the problems circulated are on complex and current issues of international law. Detailed research into both international and comparative law is essential to prepare complex pleadings for both sides with a maximum size prescribed. The work involved is certainly no less than that for a large research project.

The memorials are assessed by memorial judges, often including distinguished teachers of international law. In addition, there is the opportunity to present oral submissions in the four preliminary rounds. The top eight teams move on to the final rounds. Because of the rules of the Jessup Moot, no assessment is available until after the conclusion of the Australian finals of the Jessup Moot each year. Further information about the mooting competitions that UTS: Law is involved in is available at:

www.law.uts.edu.au/students/current.html

76040 Research Thesis

6cp; availability: all students in LLB and LLB combined programs,

and who are in line to receive their law degree with Honours

Requisite(s): 70120 Legal Method and Research OR 70102

Foundations of Law

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject comprises the research and writing of a supervised thesis on an approved topic in law. The thesis is in the range of 8000 to 12,000 words in length. Undertaking this subject provides an opportunity for undergraduate law students to further develop and refine their legal research and writing skills, as well as explore and analyse a topic of law of their own choosing.

It is a requirement under the UTS: Law honours rule (see page 100) that this subject must be undertaken before a student can be awarded an undergraduate law degree with honours. Undergraduate students who are not in line to receive their law degree with honours are not normally approved to enrol in this subject. Students should consult the honours rules in the UTS: Handbook for information about requirements for the award of honours at graduation (note: from 1 January 2010 marks received for law exchange subjects are not included in any determination of marks either for application to undertake a research thesis or for the final award of the LLB with honours).

Early submission of the proposal and form is encouraged. Forms are accepted and processed from Week 12 of the preceding semester. The last date to submit forms is the Friday, two weeks before the start of semester, to allow for processing.

Typical availability

Autumn semester, City campus

Spring semester, City campus

Note(s)

This subject was formerly called Research Project 4.

76041 Climate Law and Carbon Markets

6cp

Requisite(s): 70115 Perspectives on Law AND 70120 Legal Method and Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject examines climate change, which is one of the most pressing environmental problems of our era. It is a major business issue that is affecting law, policy and corporate behaviour. The Intergovernmental Panel on Climate Change (IPCC) has said that to avoid irreversible harm to the planet, we must stabilise greenhouse gas emissions, and this will involve a significant and rapid reduction in 'business as usual'. It will involve unprecedented cooperation at the international level as well as innovative national responses. This subject examines the potential role of the international and policy communities as well as the legal and business communities in confronting climate law. It analyses the existing and emerging legal rules and frameworks, both internationally and in Australia, the impacts of these on business and the response from industry. It critically evaluates the incentives for firms to comply and over-comply with environmental laws and participate in voluntary programs, and examines the role of business in adaptation measures and climate justice issues.

76043 Building and Construction Law

6cp

Requisite(s): 70517 Equity and Trusts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject examines the legal and commercial relationships that typically are brought into existence during residential and commercial building and construction projects. It examines the roles of the various project participants such as clients, project managers, design and engineering professionals, cost consultants, contractors and subcontractors with particular reference to their contractual roles and responsibilities. The subject canvases the various ways in which projects are procured with reference to various forms of contract and the risks associated with each procurement method. Students are also made aware of the various ways in which the practical and legal risks can be managed through effective risk distribution and contract drafting. Some aspects of the legislative framework within which both the residential and commercial sector operates will be considered together with examples of various practical applications. Suitable dispute resolution processes are explained together with the use of expert evidence in the litigation of building and construction disputes.

Typical availability

Autumn semester, City campus

Spring semester, City campus

76045 Medicine and Law

6cp

Requisite(s): 70311 Torts AND 70617c Administrative Law

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subjects deals with the aspects of law relevant to health care. There are many issues that can arise as health law is an ever evolving and diverse area. It is subject to both local and overseas influences and regulation is challenging. When studying health law, many areas must be considered, such as: human rights, ethical practice, the advancement of medical technology, social policy, governance and the many vested interests. The subject examines the issues that confront health-care professionals and their patients and peers, in particular in the context of continuing systemic and resource problems. This includes the handling of complaints against health-care practitioners, the regulation of the various health professions, the outcome of parliamentary inquiries and the history and findings of the various royal commissions. Other important areas such as medical negligence, consent to treatment, access to and ownership of medical records, privacy and confidentiality, euthanasia, wrongful birth, wrongful life and abortion, complementary and alternative medicine, organ donation, public health law issues such as tobacco, alcohol and obesity are examined and discussed.

76047 Advanced Contracts

6cp

Requisite(s): (60 credit points of completed study in C04148 Master of Law and Legal Practice AND 70211 Contracts AND (70516 Equity and Trusts OR 70517 Equity and Trusts))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject focuses on how contract law assists in the negotiation and enforcement of agreements, as well as the resolution of disputes arising out of agreements. It deals with selected areas of practical relevance and legal difficulty in the application of principles of contract law to various transactions (electronic transactions, uncertainty, the exercise of judicial discretion to fill gaps in agreements, implied terms, good faith, breach and termination of contracts); the intervention of equity (estoppel, penalties, restitution, unconscionability); legislative intervention (*Competition and Consumer Act 2010* (Cwlth) (including schedule 2, Australian Consumer Law), *Fair Trading Act 1987* (NSW), *Contracts Review Act 1980* (NSW)); and the relationship between tort law and contract law.

76048 Citizenship and Immigration Law

6cp

Requisite(s): 70617 Administrative Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject promotes an analytic examination of major legal and policy issues in Australia. The subject deals with the development of a distinct Australian citizenship and Australian immigration law. A primary focus is on the analysis of constitutional law issues, the legislative framework, policy responses and examination of international law principles. Recent developments in Australian nationality and citizenship law are evaluated within the context of acquisition of Australian citizenship, passport control and the statutory concept of entry to Australia. Australian migration law is about the control of those who are not Australian citizens. This subject examines the legal and policy framework controlling Australian immigration including the development of the universal visa system, the operation of the *Migration Act 1958* and Migration Regulations 1994, the distinction between lawful and unlawful non-citizens, visa acquisition and cancellation, the controversial character and deportation provisions and administrative and judicial review of adverse citizenship and immigration decisions. Specific themes include an analysis of the migration program, immigration detention, skilled and temporary visa entry, the national skill shortage, comparative guest worker schemes, humanitarian considerations, ministerial discretion, refugee visas, irregular migration, global trends, the status of migrant workers, people smuggling and human trafficking. The statutory scheme established to regulate migration agents is also reviewed. This subject aims to provide an understanding of:

- the historical development of citizenship and immigration law in Australia
- the effectiveness and fairness of Australian migration legislation and policy
- the legislative schemes: primarily the Migration Act and Migration Regulations, the *Australian Citizenship Act 1973*, relevant policy and case law
- the major permanent visa programs and temporary entry visas
- visa refusal, cancellation and review
- acquisition, grant, loss and deprivation of Australian citizenship
- the operation of the Migration Agents Registration Authority.

76050 Commercial Trade and Transport Law

6cp

Requisite(s): 70211 Contracts AND 70317 Real Property

There are also course requisites for this subject. See access conditions.

This subject examines the various sources of law that govern and impact upon the trade and transport of goods to and from Australia. The first part covers commercial maritime law. Topics examined include an overview of international trade processes; Australia's trade and transport industry; the international and Australian sources of law that regulate commercial shipping activities; maritime law concepts on the ownership, financing and arrest of ships; maritime transport documentation including bills of lading and charter parties; sources of liability; liability limitation; and marine insurance. The second part covers commercial aviation law. Topics examined include the international and Australian sources of law regulating the carriage of goods by air and aviation insurance. The subject concludes by examining recent international developments relating to the multimodal transport of goods.

Typical availability

Autumn semester, City campus

Spring semester, City campus

76052 Dispute Resolution Advocacy

6cp

Requisite(s): 70516c Equity and Trusts OR 70517 Equity and Trusts
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject deals with the jurisprudence of dispute resolution, and the theory, dynamics and essential characteristics of the major dispute resolution processes, so that effective strategies for resolving a wide range of disputes can be formulated. There is a two-day intensive weekend component in the course for negotiation and mediation exercises and simulations. The subject's emphasis is on the role of lawyers in dispute resolution processes; advising clients on, and preparing clients for, suitable dispute resolution processes; the institutionalising of dispute resolution processes; the nature of disputes and the theoretical, ethical and practical issues.

Typical availability

Autumn semester, City campus

76053 Industrial Law

6cp

Requisite(s): 70616 Australian Constitutional Law AND 70311 Torts
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines collective aspects of Australian work law with a principal focus on the federal legislative collective work relations system. Industrial law is an important component of studies in the legal regulation of commerce. Students are introduced to the key aspects of law which determine the rights, entitlements and responsibilities governing the relationship between employers, on the one hand, and groups of workers and their trade unions on the other. Both practical and theoretical perspectives on industrial law are examined, and where appropriate, comparison of Australian industrial law with relevant international standards and law in overseas jurisdictions is made. Topics include: the history and constitutional basis of Australian industrial law; international standards and Australian industrial law; the safety net of minimum terms and conditions; agreement-making; collective bargaining; industrial action; freedom of association; transfer of business; and information, consultation and decision-making rights.

76055 Mining Law and Regulation

6cp

Requisite(s): 70417 Corporate Law AND 70317 Real Property
There are also course requisites for this subject. See access conditions.

This subject examines the various Australian laws and regulations that govern and impact upon investment in the mining industry. Topics examined include: the history, development and current status of mining regulation in Australia; key mining law concepts - such as the ownership of minerals, mining tenements, mining claims, and the regimes for the payment of royalties; the State and Territory licensing regimes governing mineral exploration and extraction; and the laws governing investment across the life cycle of mining operations (exploration, set up of mining operations, extraction of minerals, the sale and export of minerals, and the sale of mining assets). This includes the relevant provisions of the *Corporations Act 2001* (Cwlth) relating to corporate fundraising (Ch 6D) and mergers and acquisitions (Ch 6); the *Foreign Acquisitions and Takeovers Act 1975* (Cwlth); the ASX Listing Rules, and the JORC Code for the Reporting of Mineral Resources and Ore Reserves. The subject also examines the use of joint venture structures in the mining industry.

Other issues examined include native title, environmental law considerations, infrastructure access, the regimes for the onshore and offshore extraction of petroleum and gas, and the legal framework for dispute resolution. The subject concludes by briefly examining some of the current issues impacting on the Australian mining industry such as carbon taxing and trading, and the proposed Mining Resources Rent Tax.

The subject involves a comparative consideration of the laws across the Australian states and territories and is not limited to New South Wales.

76056 Intellectual Property Commercialisation Overview

6cp

Requisite(s): 78025 Intellectual Property: Law and Policy
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

This subject aims to provide a comprehensive survey of much of the law and some of the business and economics of commercialising and licensing intellectual property (IP) rights. The scope is interdisciplinary, exploring the business and economic aspects of IP licensing and investment in IP development in the context of a detailed legal framework for IP licensing and investment. It includes consideration of relevant IP laws, competition law, compulsory and voluntary licensing, contract and consumer laws, and selected issues in international practice. Moreover, the subject involves practical skills training in drafting and negotiating licenses as well as practice-focused exercises that give students a better sense of the deal-making process in licensing transactions both in Australia and abroad.

The subject is in three parts. Part I explores the connection of IP and economic development, and provides a comprehensive survey of major IP laws, such as copyright, patent, confidential information, trademark, and domain name. Part II discusses possible business structures for commercialising IP and other special laws related to IP commercialisation, such as the enforcement of completion law, contract law and consumer law in the IP area. Part III involves practice or skills training in negotiating and drafting licenses and getting a 'sense of the deal' in licensing transactions.

Spring semester, City campus

76057 Judgement and the Rule of Law

6cp

A central tenet of legal systems, founded in common law traditions, is the rule of law. Concepts which are foundational to the rule of law include consistency, neutrality and objectivity. The rule of law is founded on two essential principles. The first being that law making powers are not exercised arbitrarily and the second that laws sustain a normative order and thereby stability, security and order in a community. To maintain normative order, laws must be more than predictable, well administered and understood by the community. They also need to be meaningful and generally accepted by the community. These principles raise fundamental questions about the relationship between the rule of law and values which underpin legal judgments.

Drawing on Kantian and Arendtian scholars, this subject critically explores the faculty of judgment and if there is something particular about legal judgments which differentiates them from judgments in other spheres such as politics, art or more routine decision-making. A second core theme explored is the philosophical foundations which underpin objectivity and how these relate to legal judgments. This theme is explored through the ideas of Martin Heidegger, Michel Foucault and critical legal theorists.

These ideas are applied to investigate relationships between precedent, tradition/history and change, judging against one's community and dissent, and how different communities of values and opinion, in particular minority communities, can be considered within legal judgments. The themes are explored through case analysis and case studies drawing on international, national and comparative laws.

76063 Media Law

6cp

Requisite(s): 70311 Torts
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject looks at legal regulation of media content. Throughout the subject, students analyse laws that restrict what the media can publish or distribute. Topics include freedom of speech, defamation, contempt, hate speech and vilification, obscenity and pornography, sedition and the regulation of the internet. Through close examination of cases and literature, students are required to critically consider the nature of power, democracy and liberalism, as they relate to law and the mass media.

76066 Children and the Law

6cp

Requisite(s): ([70217 Criminal Law OR 70218 Criminal Law] AND 70311 Torts AND 70616 Australian Constitutional Law)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This elective subject is designed to enhance undergraduate studies in core law subjects as they relate to children; in particular constitutional law, criminal law, contracts, torts and the law of evidence. It also complements elective studies in family law and succession. The subject has been designed to combine both a theoretical and a vocational approach to the study of these issues and not only benefits students interested in these issues, but also those students considering a career in legal practice and/or the delivery of children's legal services.

The emphasis is on issues such as child development theory, children's rights, juvenile justice, care and protection, education rights and responsibilities, and the legal representation of children. Issues such as adoption, employment, property ownership and succession issues, civil liability, and medical procedures and treatment may be covered in assessment options. This is not a strictly 'black letter' subject; the present law in New South Wales is considered as well as the historical development of laws relating to children, proposed reforms, and comparative material from other jurisdictions. Material from other disciplines, such as criminology, sociology, and developing brain research is also incorporated, as appropriate.

76068 Indigenous Peoples and the Law

6cp

Requisite(s): ([70120 Legal Method and Research OR 70105 Legal Research]) OR ([70110 Introduction to Law AND 76006c Public International Law])

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The relationship between Indigenous peoples and the law goes to the foundation of Australia's legal and political identity. This subject considers a range of historical and current issues between Indigenous peoples and the law. Competition for land ownership has defined and driven race relations in Australia. This subject examines the historical dispossession of Indigenous people with reference to how this has impacted on current legal relations and debates. Aboriginal and Torres Strait Islander peoples' dispossession by law and war, together with the Mabo decision, is evaluated. Land rights legislation, native title legislation and subsequent common law developments are also considered. Indigenous Australians are also the most incarcerated people in the world.

Considering this, their relations with the criminal justice system with particular reference to community police relations is discussed. Also, the policies of dispersal of communities and the forced removal of children from their families are considered, with particular reference to current impacts in areas such as welfare law, juvenile justice and family law. The issue of self determination is also considered in depth. Between 1972 and 1995 all federal governments had a policy of self determination with regard to Indigenous peoples. The meanings and implications of this policy are examined in the context of self determination policies in comparable countries such as Canada and the United States. Consideration is given to the formation and role of Indigenous corporations, Australian and Canadian models of self government, the Aboriginal and Torres Strait Islander Commission (ATSIC) and international standards and developing norms with respect to self determination. In light of the Australian Government's decision in 2004 to abolish ATSIC, the shift from policies of self determination to 'practical reconciliation' is also evaluated.

76069 Community Justice Studies

6cp

Requisite(s): 70617 Administrative Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

Community Justice Studies fosters vital legal skills. The subject is taught in two parts. First, students review contemporary literature about the practice of public law within a social justice and community context. Key areas include the ethics of practice, identification of areas

of legal need in the community and access to justice. Second, students choose to engage in a public law or community activity from a broad range of options. For example, students are encouraged to engage in practice-based learning and may elect to further their experience through a relevant work placement. Students may also prepare community legal education for community groups. Students in this elective research, develop and deliver plain language presentations or short courses about legal issues for communities. Community legal education focuses on practical law, affecting members of communities in their daily lives, including consumer protection law, tenancy law, health law, domestic violence, dispute resolution, apprehended violence orders, succession, immigration law and other areas. Research is a critical skill and this subject allows students to develop policy, analytical and legal skills by completing a research publication such as a law reform submission or submission to a parliamentary committee. The subject introduces students to the dynamics of law reform and community engagement and fosters an understanding of the practice of public or community-based law by giving students an experience and direct knowledge of the law in practice.

Typical availability

Autumn semester, City campus

Summer session, City campus

76070 Biomedical Law and Bioethics

6cp

Requisite(s): 70120 Legal Method and Research OR 70105 Legal Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject analyses the effectiveness of law in regulating new medical developments. The subject examines the impact that emerging biomedical technologies have on society and explores legal solutions that deal with the challenges presented by such technologies. A diverse and wide range of biomedical issues are considered, such as genes, cloning, euthanasia, medical experimentation and research, reproductive technology and surrogacy.

76074 Australian Civil Liberties Law

6cp

Requisite(s): ([70217 Criminal Law OR 70218 Criminal Law] AND 70616 Australian Constitutional Law)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject aims to provide an advanced understanding of:

- case and statute law relevant to the protection of civil liberties in Australia
- the relationship and dynamic between the individual and the state in a legal and political framework
- the institutions (both Commonwealth and state) and organisations established to protect civil liberties and legal issues associated with their operation
- current legal issues in the protection of civil liberties in Australia.

76075 Contemporary Legal Studies 1

6cp

For subject description, contact UTS: Law.

76076 Contemporary Legal Studies 2

6cp

For subject description, contact UTS: Law.

76080 Finance Law

6cp

Requisite(s): 70417 Corporate Law AND 70517 Equity and Trusts AND 70327 Commercial Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject considers the legal framework within which commercial enterprises raise debt finance. Various forms of secured and unsecured finance are considered, including project and asset financing arrangements and securitisation. Methods for protecting unsecured

loans are also covered including negative pledge lending, guarantees and debt subordination agreements. The subject provides a detailed examination of the new *Personal Property Securities Act 2009* (Cwlth). Key aspects of tax and insolvency law as well as cross border issues are also discussed.

76081 Gender, Law and Sexuality

6cp

Requisite(s): ((70120 Legal Method and Research OR 70105 Legal Research)) OR (70110 Introduction to Law AND 76006c Public International Law)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject explores legal issues regarding sexuality and gender in a cross-doctrinal and interdisciplinary context. The subject introduces students to legal scholarship that takes a feminist perspective and considers the multitude of ways in which law constructs and regulates individuals and families by reference to their gender and sexuality. In doing so, the subject traverses and re-traverses various legal doctrinal areas, such as criminal law, international law, family law, anti-discrimination law and so on. However, the focus is not on the legal rules as such, rather the purpose of the subject is to provide a solid theoretical foundation that enables students to understand links between various legal doctrines and practices that have contributed to inequality.

76083 Ngiya - Talk the Law: Editorial Role

6cp

Ngiya means 'talk the law' in Kamillaroi. The idea for Ngiya came from a group of Indigenous lawyers who were frustrated that there was no unique voice for critique of the dominant legal system and its impact on Indigenous peoples. Ngiya allows for these voices to be heard.

Ngiya is published twice a year and its articles are subject to rigorous peer review. It provides a mix of general and thematic editions. There are generally eight articles per edition, which are approximately 5000 words each.

The subject is offered in Autumn and Spring semesters under joint supervision of:

- a staff member from Jumbunna Research Unit responsible for Ngiya, and
- a staff member from the Faculty of Law.

The student works closely with the Jumbunna staff responsible for Ngiya in relation to the editing and proofreading tasks of one article accepted for publication in Ngiya.

The student is supervised by a member of the Law Faculty to undertake research for an article written with the intention of publication in Ngiya. Staff at Jumbunna may also provide input into the nature and scope of the article.

The unit is limited to eight students per semester (although this may be lower, depending on the needs of the journal). They are selected on the basis of academic merit and interest in Indigenous issues. Preference may be given to Indigenous students and students in their final year of a law program.

Students selected for this unit must be prepared to serve for approximately six months (1 December - 30 May or 1 June - 30 November).

76084 Copyright and Designs

6cp

The subject provides an introduction and overview of the legal principles of copyright law, industrial design rights and confidential information law in Australia. It also provides an overview of the policy issues which inform the development of this law. It is designed as an introductory subject for students completing their undergraduate law degrees. Classes consider the historical development of these areas of law, as well as their justifications and objectives, the international framework setting standards, including WIPO, WTO and AUSFTA, and the main legal principles and doctrines which determine the scope and operation of the law in Australia.

76085 Trademarks and Patents

6cp

The subject provides an introduction and overview of the legal principles of patent law, trade mark law and passing off in Australia, as well as covering certain related areas of law such as consumer law, geographical indications of origin and plant varieties. It provides an overview of the policy issues which inform the development of this law. It is designed as an introductory subject for students completing their undergraduate law degrees. Classes consider the historical development of these areas of law, as well as their justifications and objectives, the international framework setting standards, including WIPO, WTO and AUSFTA, and the main legal principles and doctrines which determine the scope and operation of the law in Australia.

76112 Conflict of Laws

6cp

Requisite(s): 70311 Torts AND 70616 Australian Constitutional Law

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines the interaction of two or more legal systems, specifically focusing on the international jurisdiction of the Australian courts, the recognition and enforcement of foreign judgments and decrees, and the problem of choice of law as it arises with respect to areas such as marriage, matrimonial causes, contract, torts, inter vivos property transactions and succession.

The subject also deals with choice-of-law issues as they arise between the Australian states.

76115 Insolvency

6cp

Requisite(s): 70417 Corporate Law OR 70120 Legal Method and Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject provides an introduction into the protection and regulation of insolvent individuals and corporations. The subject aims to discuss insolvency within the social context and impact of insolvency law. Students examine the legal procedure involved in insolvency law (such as bankruptcy petitions, lodging proofs of debt and distribution of insolvent estates) as well as the impact of insolvency upon stakeholders such as employees, unsecured creditors, and individual and corporate debtors.

Both individual and corporate insolvency are examined. All aspects of personal and corporate insolvency will be discussed but the subject places particular emphasis on discussing powers of insolvency administrators, voluntary administration, liquidation and the rights of creditors.

76212 Revenue Law

6cp

Requisite(s): ((70417 Corporate Law AND 70617 Administrative Law) OR 70327 Commercial Law)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

In this subject students examine the legal principles that relate to revenue law in Australia. Topics covered include the structure and sources of tax law in Australia; tax policy and tax reform; income - concepts of income, income from labour, property and business, statutory extensions to the income base; deductions - general and specific deductions, substantiation; capital gains tax; fringe benefits tax; tax accounting; tax administration; tax avoidance and ethics.

76516 Family Law

6cp

Requisite(s): 70616 Australian Constitutional Law AND 70317c Real Property

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This elective subject introduces undergraduate students to the principles that govern the laws, rights and obligations of parties in parenting and/or interpersonal relationship disputes. The legal recognition and regulation of different types of domestic relationships and families, including married, de facto (same-sex and opposite-sex) and other domestic relationships is considered. The subject covers four main areas:

- the historical and current development of family law, including constitutional and jurisdictional issues; and principal relief (divorce and nullity)
- children and parental responsibility (parenting disputes)
- spousal maintenance and child support (family support)
- claims and agreements in relation to property (property settlement).

The subject combines both a theoretical and a vocational approach to the study of these issues, which not only benefits students interested in these issues, but also those students considering a career in legal practice and/or the delivery of family law-related services. Emphasis is also given to the practical and social policy issues in each of these areas, including the impact of family violence and the growing awareness of children's rights.

76517 Succession

6cp

Requisite(s): 70516 Equity and Trusts OR 70517 Equity and Trusts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject takes both a theoretical and practical approach to the study of the law of wills. The formal requirements for a valid will are considered, as well as the circumstances where those requirements may be dispensed with by the Court, such as death bed or suicide notes which purport to pass property upon death.

The legislative framework for the law of succession in NSW is considered in detail, including the consequences of the failure to have made a will or where a Court determines that a will was invalid, for example where the will-maker (testator) was suffering from a dementing-type illness at the time the will was made.

There is particular focus on the tension between the concept of freedom of testamentary disposition and the provisions of Chapter 3 of the *Succession Act*, which permit certain classes of eligible person to make a claim to part of an estate even if cut out of a will by a displeased testator. This focus on the themes of testamentary freedom, forced succession and familial responsibility invites students to consider what is meant by 'family', including blended families and the status of adopted, IVF and surrogate children in the scheme of succession in NSW.

76521 Intellectual Property and Traditional Knowledge

6cp

Requisite(s): 70516 Equity and Trusts OR 70517 Equity and Trusts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject considers the nature of traditional knowledge, how intellectual property in this area is protected under the Australian legal framework, and the development of strategies for its protection. The subject includes an overview of the international treaty framework, relevant Australian legislation and concerns for Australian Indigenous peoples such as appropriation of Indigenous arts and culture, language, spirituality, biodiversity, biotechnology, medicinal knowledge, film and music.

76703 Indigenous Peoples, the Environment and Property

6cp

Requisite(s): (70317 Real Property OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines the relationship of Aboriginal and Torres Strait Islander customary rights and the development of Indigenous land rights. The subject examines developments in land rights legislation, the recognition of native title and legislative and common law developments in land rights and native title. Topics include the evidence of Aboriginal and Torres Strait Islander customs and traditional law; statutory recognition of aspects of customary law including traditional interests in land or items of cultural heritage, traditional hunting, fishing and gathering rights; issues as to the admissibility of evidence pertinent to the veracity of Aboriginal and Torres Strait Islander customs and traditional law; legal proceedings relating to Aboriginal land claims; assertion of common law title to land; legal proceedings relating to Aboriginal land claims, the effect of the decision of the *High Court in Mabo v Queensland (No 2) 1992*, the *Native Title Act 1993* (Cwlth), amendments to the *Native Title Act 1993* (Cwlth) and recent developments.

76801 Exchange Subject 1

6cp

Requisite(s): 70516 Equity and Trusts OR 70517 Equity and Trusts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

International exchange offers students the option to complete part of their study in another country and receive credit towards their degree at UTS. UTS: Law participates in the UTS international exchange program that is administered by UTS: International Studies. Under the program, law students have the opportunity to undertake three or four law options at an exchange partner university. Applicants for exchange must have their study at the exchange partner university approved by UTS: Law's exchange director. The subject studied at the exchange partner university should have relevance to a student's course of study, and be taught and assessed in an acceptable format. Subjects of an international or comparative nature are preferred. Further information is available at:

www.uts.edu.au/international/exchange

Typical availability

Autumn semester, City campus

Note(s)

Enrolment in additional international exchange subjects requires enrolment in additional exchange subject numbers: 76802, 76803, 76804.

76802 Exchange Subject 2

6cp

Requisite(s): 70516 Equity and Trusts OR 70517 Equity and Trusts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

76900 Moot

6cp; availability: by invitation only

Undergraduate and Postgraduate

UTS: Law offers students the opportunity to participate in a variety of moot competitions, both within Australia and overseas. Students enrol in this subject in cases where participation in a moot team is counted as credit towards their degree. UTS: Law calls for expressions of interest from students to participate in a variety of moot competitions.

76901 Vis Arbitral Moot

6cp; availability: by invitation only

Undergraduate and Postgraduate

The Willem C Vis International Commercial Arbitration Moot is an international moot that takes place every April in Vienna. Named in honour of Professor Willem Vis, a world-recognised expert in international commercial transactions and dispute settlement procedures, this moot is an acknowledgment of the business community's marked preference for resolving international commercial disputes by arbitration. This method of dispute resolution is offered as the clinical tool to train law students through two crucial phases: the writing of memorandums for claimant and respondent, and the hearing of oral argument based upon the memorandums. The forensic and written exercises require determining questions of contract - flowing from a transaction relating to the sale or purchase of goods under the United Nations Convention on Contracts for the International Sale of Goods and other uniform international commercial law - in the context of an arbitration of a dispute under specific arbitration rules. There are currently 79 law schools from 30 countries that send teams to Vienna. It is an excellent opportunity for students to learn an extremely valuable commercial skill, and a rare chance to meet and to form valuable professional friendships with a range of law students from around the world. Further information is available at:

www.cisg.law.pace.edu/vis.html

76902 Law and Literature

6cp

Requisite(s): 70120 Legal Method and Research AND 70115

Perspectives on Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject approaches important questions from jurisprudence, philosophy and legal theory through a consideration of law's relationship to literature. Lectures relate key cases of the last hundred years to key works of literature, indicating ways in which we might think of the relationship between law and literature. Students engage in a rigorous process of reading and discussion that includes some of the most fascinating and thought provoking literary works of the last century, including works by Franz Kafka, Toni Morrison, Truman Capote and Harper Lee. Using these texts students will think about questions of justice related to central problems and traumas of recent times: the Holocaust, the death penalty, slavery and the Stolen Generations.

Students develop important skills in critical thinking and writing as part of these investigations, and their own deep responses to the following questions. What is justice, and how do law and literature provide different answers to justice? What is the law's relationship to violence? How does the law regulate the individual's relationship to their community? How are moral questions addressed by the law? In what ways can it be said that literature judges the law, and what might we do with these judgments?

76903 International Commercial Transactions

6cp

Requisite(s): 70327 Commercial Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject provides an overview of international business transactions and the framework for international regulation of commercial transactions. Furthermore, the subject provides an overview of international trade organisations (e.g. WTO, EU) and the uniform law applicable to international sale of goods (CISG).

Other key themes in the subject include aspects of the international regulation of trade in goods: WTO; an overview of licensing transactions and licensing into the EU; an overview of foreign direct investment and issues of investing in Europe.

The subject also provides an introduction to dispute resolution issues; and an overview of trans-boundary dispute resolution.

76904 Price International Media Law Moot

6cp; availability: by invitation only

The Monroe E. Price International Media Law Moot aims to expand knowledge in international media law and policy.

Students will develop expertise in arguing a case before an international bench of judges from different legal systems and backgrounds.

Participants in the international rounds operate in a world where a Universal Court of Human Rights has been established to ensure the citizens of the United Nations are enjoying the rights enshrined in the Universal Declaration of Human Rights. In this world, the Universal Court of Human Rights substitutes all jurisdictions of all other regional courts and becomes the final adjudicator when all national remedies have been exhausted.

Students participating in the moot gain an understanding of issues of international human rights, US constitutional law and the law of various nations as they impact on freedom of speech, privacy and regulation of media content.

The international rounds are held at Oxford University and involve teams from law schools in Europe, Asia, the Middle East and the US.

UTS: Law calls for expressions of interest from students in July each year.

Typical availability

Autumn semester, City campus

Spring semester, City campus

77688 Doctoral Dissertation (SJD)

77697 Higher Degree Research Seminar

8cp

This subject is designed to prepare higher degree research students in law for undertaking and writing a research thesis. Through a series of seminars and workshops, students are provided with a thorough grounding in the components of an effective research strategy and positioned to produce a written research proposal directed towards preparation for their Candidature Assessment at the end of stage one.

77698 Thesis (Law)

0cp

This subject develops theoretical understandings and practical applications of research across the discipline of law and related fields. Emphasis is placed on currency in legal research and the application of appropriate research methodologies. Further information is available from:

Faculty research officer

telephone +61 2 9514 3753

77701 International Economic Law (PG)

6cp

Requisite(s): [(70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77885c Legal Process and Legal Research OR 60 credit points of completed study in C04148 Master of Law and Legal Practice]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Increasing globalisation of commercial and social engagements is creating a greater need for lawyers to understand the nature and extent of global legal regulation and, in the commercial context, the operation of various domestic and transnational laws in relation to international trade. This subject is designed to help students develop an understanding of the law governing the international economy and relations between participants in that economy. The concept of international economic law is examined. Topics include specific resource issues such as the common heritage; international legal regulation of investment, finance and trade; relevant institutions such as the International Monetary Fund, the World Trade Organization; and the relationship between national and international economic law involving such concepts as extraterritoriality and sovereign immunity.

77704 European Union Law

6cp

Requisite(s): (70616c Australian Constitutional Law OR 77885c Legal Process and Legal Research OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject deals with the laws and institutions of this supra-rational organisation. Topics discussed include the activities of the European institutions; the political and economic origins of the EU and its institutional structures (with emphasis on the European Court of Justice); the interrelationship between community law and the law of the member states; and the free movement of goods, workers, capital and services.

The subject concentrates on the emerging transnational protection of social and economic rights and the jurisprudence of the European Court of Justice.

77715 Banking Law

6cp

Requisite(s): [(70327c Commercial Law OR 70318c Personal Property)] OR 77885c Legal Process and Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject concentrates on relations between banking institutions and their customers. Additional topics examined are drawn from the following: the regulatory framework within which banking institutions operate and the activities of banking institutions including cheques, bills of exchange, foreign currency transactions and secured and unsecured lending.

77716 International Trade Law

6cp

Requisite(s): 70616c Australian Constitutional Law OR 77885c Legal Process and Legal Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The rules of the World Trade Organization (WTO) underpin the conduct of international trade in about 150 countries and have direct relevance for governments, businesses and individuals. This subject covers a brief introduction of the WTO followed by a more detailed analysis of private international trade transactions.

The subject primarily focuses on the Australian application of trade rules and domestic and international laws governing international transactions.

On completion of this subject, students have developed an understanding of the basic legal principles underpinning the multilateral trading system and an understanding of the application of the law to international transactions.

Typical availability

Autumn semester, City campus

Spring semester, City campus

77724 International Banking and Finance Law

6cp

Requisite(s): ([70120 Legal Method and Research AND 70115 Perspectives on Law] OR 77885c Legal Process and Legal Research OR 60 credit points in C04148 Master of Law and Legal Practice)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is important for students wishing to understand the transnational nature of corporate finance and regulation, and the central place of banks and other financial intermediaries in the globalisation of commerce. The subject is an advanced study of types of cross-border finance, regulation of banking between countries and regions, foreign exchange and derivative markets, and international financial and banking policy. Case studies cover the US, European Union, East Asia and emerging markets, with a focus on whether globalisation of banking and finance has beneficial or detrimental social consequences and whether convergence to a single international financial system is desirable or even possible. Topics covered in the subject include:

- international banking/finance systems
- US securities/banking markets: international aspects
- the Bank for International Settlements, Basel Accord and capital adequacy
- East Asia: Japanese and Chinese banking/capital markets
- risk control: foreign exchange, hedging, derivatives, operational risk
- emerging markets and the debt crisis
- privatisation and the IMF/World Bank
- Europe: Monetary Union and securities/banking markets
- convergence and the globalisation of banking and finance.

777251 Research Project 1 (PG)

6cp; availability: must be completed by Master of Legal Studies, Master of International Law, Master of Dispute Resolution, Master of Law and Legal Practice; candidates should have completed at least 24 credit points (60 credit points for Master of Law and Legal Practice) and maintained an average grade of 75 per cent or greater, and Master of Laws (only for LLM students enrolled in 2007 and prior)

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Candidates must research and write a paper of approximately 12,000-15,000 words at a standard suitable for publication on a topic approved by UTS: Law. In most cases, the research project extends

and develops research done in one or more of the elective subjects already undertaken, but in appropriate circumstances a candidate may undertake a new topic. Students are not permitted to enrol in the research project until written approval has been obtained from the subject coordinator.

The research project is completed over two consecutive semesters. Candidates enrol in this subject in the first semester of enrolment and 777252 Research Project 2 in the following semester. A final grade is not recorded against this subject until completion of 777252 Research Project 2.

Early submission of proposal and form is encouraged. Forms are accepted and processed from Week 12 of the preceding semester. The last date to submit forms is the Friday, two weeks before the start of semester, to allow for processing.

777252 Research Project 2

6cp; availability: must be completed by Master of Legal Studies, Master of International Law, Master of Dispute Resolution, Master of Law and Legal Practice; candidates should have completed at least 24 credit points (60 credit points for Master of Law and Legal Practice) and maintained an average grade of 75 per cent or greater, and Master of Laws (only for LLM students enrolled in 2007 and prior)

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: 777251 Research Project 1 (PG)

Candidates must research and write a paper of approximately 12,000-15,000 words at a standard suitable for publication on a topic approved by UTS: Law. In most cases, the research project extends and develops research done in one or more of the elective subjects already undertaken, but in appropriate circumstances a candidate may undertake a new topic.

The research project is completed over two consecutive semesters. Candidates enrol in 777251 Research Project 1 (PG) in the first semester of enrolment and this subject in the following semester. A final grade is not recorded against 777251 Research Project 1 (PG) until completion of this subject.

Only students enrolled in 777251 Research Project 1 (PG) are eligible to enrol into this subject by lodging an eRequest

77734 Law and Medicine

6cp

Requisite(s): 70311 Torts AND 70617c Administrative Law

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject deals with the aspects of law relevant to health care. There are many issues that can arise as health law is an ever evolving and diverse area. It is subject to both local and overseas influences and regulation is challenging. When studying health law, many areas must be considered, such as: human rights, ethical practice, the advancement of medical technology, social policy, governance and the many vested interests. The subject examines the issues that confront health-care professionals and their patients and peers, in particular in the context of continuing systemic and resource problems. This includes the handling of complaints against health-care practitioners, the regulation of the various health professions, the outcome of parliamentary inquiries and the history and findings of the various royal commissions. Other important areas such as medical negligence, consent to treatment, access to and ownership of medical records, privacy and confidentiality, euthanasia, wrongful birth, wrongful life and abortion, complementary and alternative medicine, organ donation, public health law issues such as tobacco, alcohol and obesity are examined and discussed.

77740 Research Paper

6cp; availability: Master of Laws, Master of Law and Legal Practice, Master of International Law, Master of Industrial Property, Master of Dispute Resolution, Master of Legal Studies, Graduate Diploma in Legal Studies, Graduate Certificate in International Law, Graduate Certificate in Dispute Resolution; candidates should have completed at least 24 credit points (60 credit points for Master of Law and Legal Practice) and maintained an average grade of at least 65 per cent. Requisite(s): (((78101c Postgraduate Legal Research OR 78100c Postgraduate Legal Research)) OR 77896 Legal Process and Intellectual Property Overview OR 77905 Preparing for Intellectual Property Practice OR 70717 Evidence and Criminal Procedure). These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject comprises the research and writing of a supervised thesis on an approved topic in law. The thesis length must be within the range 8000 to 12,000 words. Undertaking this subject provides an opportunity for undergraduate law students to further develop and refine their legal research and writing skills, as well as explore and analyse a topic of law of their own choosing.

Early submission of the proposal and form is encouraged. Forms are accepted and processed from Week 12 of the preceding semester. The last date to submit forms is the Friday, two weeks before the start of semester, to allow for processing.

More information regarding the honours degree is available at Juris Doctor with honours (see page 101).

Note(s)

This research paper may be used toward partial fulfilment of the award of honours for Juris Doctor (C04236) (see page 405) students only.

77745 Negotiation

6cp

Requisite(s): 60 credit points in C04148 Master of Law and Legal Practice AND 79771c Dispute Resolution

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is taught in a four-day intensive block which is designed to provide an understanding of the theory and skills of negotiation. It covers the diverse approaches to negotiation, with a focus on principled negotiation as taught by the Harvard Law Faculty's Negotiation Project. This subject brings together the current theories and practice in negotiation skills and analysis with an emphasis on identifying effective negotiation strategies.

This subject covers topic areas that include:

- distributive and integrative bargaining
- principled negotiation theory and practice
- pre-negotiation analysis, preparation and participation
- the challenges of complex negotiations including agency and team issues, negotiating behaviour and communication issues
- coalition dynamics
- risk assessment
- trust and good faith issues.

The assessment is centred on the opportunity to workshop and evaluate a chosen scenario developed in conjunction with a supporting critique of selected negotiation theories.

77746 Advanced Mediation

6cp

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice AND 79771 Dispute Resolution (PG) AND 78029 Mediation Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject builds on the introductory theory and practice presented in the prerequisite subjects and draws on the expertise of experienced mediators. It concentrates on the micro-skills of mediation at an

advanced level. And is designed to provide an in-depth understanding of skills, strategies and techniques used by experienced mediators and to explore a range of major mediation models. Topics included for study are:

- micro-skills of mediation at an advanced level
- the skills and techniques used by experienced mediators
- a range of mediation models including co-mediation and the 'Understanding' model developed by Harvard Law School and the New York Centre for Mediation in Law
- the practice of narrative mediation and the concepts of externalising, deconstructing and careful listening
- the practice of forgiveness as a strategy in a mediation context.

The subject is taught in a three-day intensive mode with opportunities in selected exercises to develop reflective practice and understand the application of theory to mediation practice. Assessment includes a paper based on critiquing the theories and concepts explored in the course, a case study and a reflective journal.

77751 International Commercial Arbitration

6cp

Requisite(s): 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice AND 79771 Dispute Resolution

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject covers commercial arbitration in the international arena in-depth and includes the following topics:

- ad hoc arbitrations
- relevant legislation and international conventions
- international institutional arbitration associations
- scope, formal requirements and validity of agreements to arbitrate
- drafting in relation to ICSID arbitrations
- curial intervention
- compulsory reference of an international commercial dispute to arbitration in Australia
- award of damages in international arbitration
- sovereign immunity
- international standard construction contracts
- power of the international arbitral tribunal to deal with defaults, delaying tactics or refusal of a member to participate in the making of an award
- provisions for correcting an international commercial arbitration award
- recourse against award under the UNCITRAL model law
- recognition and enforcement of foreign arbitral award under the UNCITRAL model law and the New York Convention
- liability of the arbitrator for negligence and/or wilful neglect of duty.

77752 Commercial Arbitration (Domestic)

6cp

Requisite(s): 60 credit points in C04148 Master of Law and Legal Practice AND 79771 Dispute Resolution

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Topics covered in this subject include the arbitration agreement and its scope; the arbitrator's jurisdiction; reference by the court to a referee or arbitrator; the inherent jurisdiction of the court to interfere in arbitral proceedings; agreement binding on the Crown; the appointment of arbitrators and other related matters; the umpire entering upon the reference; the distinction between an arbitration certificate, valuation, assessment, an exception clause, reference to arbitrator, or quasi-arbitrator; powers and duties of the Arbitration Tribunal; subpoenas; evidence; legal representation; amiable compositeur or ex aequo et bono; interim awards; specific performance; extension of ambit of arbitration proceedings; duties of parties; right of appeal; exclusion agreements; misconduct; remission of award; removal of umpire or arbitrator; sundry provisions; Scott v Avery clause; and foreign awards.

77760 Family Dispute Resolution

6cp

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice AND 79771c Dispute Resolution (PG)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides instruction in the theoretical and practical aspects of the use of non-adversarial techniques for resolving family disputes. Different approaches and skills are presented together with a critical evaluation of the use of such techniques. Less adversarial approaches to trials relating to disputes over children and the impact of new legislation is considered in the context of the new family law framework. The subject covers such topics as:

- the nature of family disputes
- the legal system and the new family law framework for the resolution of family disputes
- the less adversarial approach to trials in the Family Court of Australia
- dispute resolution processes in relation to financial aspects of family disputes
- children's issues in family disputes
- the effects of domestic violence and the power dynamic in family disputes
- ethical issues in conducting family dispute resolution processes
- developments in dispute resolution practice including collaborative law practice and compulsory community-based services.

Students are introduced to the legal, psychological and social aspects of family disputes through formal information giving and also through experiential teaching techniques. They are expected to research in the area to further their understanding of this complex and challenging area of law and social policy. Students may choose their area of research for a written paper and seminar presentation.

Note(s)

This subject was formerly called Interpersonal Conflict Resolution.

77761 Dispute Resolution in Commerce

6cp

Requisite(s): 79771c Dispute Resolution (PG) AND 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an overview of dispute management and complaints handling systems, together with further consideration of the developing body of dispute resolution and negotiation theory and practice in the commercial context.

There is an increasing demand for the development of dispute resolution systems that avoid an adversarial approach in commercial environments where delay, high legal costs and limited possible outcomes are being perceived as counterproductive in the highly competitive commercial environment. Increasingly there have been legislative responses for providing both processes and process providers for resolving and settling commercial disputes. These developments are also studied in the context of changing corporate structures and cultures and the demands for effective, accessible, cost efficient and ethical methods for dealing with commercial disputes.

77767 Taxation Administration

6cp

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

Access to timely and relevant tax-related information is crucial to the Australian Taxation Office's attempts to correctly assess taxpayers and to taxpayers' attempts to resist assessments. In this subject students critically analyse the rationale for, and structure of, the current tax

administration system, and then proceed to a detailed analysis of the key strategic elements of that system including tax audits, self-assessment, objections and appeals, and collection and recovery of unpaid tax. Alternatives for reform are also examined.

77783 International Commercial Dispute Resolution

6cp

Requisite(s): 70616 Australian Constitutional Law AND 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject covers negotiation in international commercial disputes, cross-cultural commercial negotiations, negotiating with Japan and a Middle-Eastern country, the role of dispute resolution centres, international commercial mediation, arbitration as contract, drafting and analysing arbitration agreements, transnational aspects of arbitration, international arbitration law, UNCITRAL initiatives on international commercial arbitration, statutory regulation of international commercial arbitration in Australia, enforcement of arbitral awards, international commercial litigation, enforcement of international commercial judgments and institutions for international commercial dispute resolution.

77792 Crisis Negotiation

6cp

Requisite(s): 79771c Dispute Resolution (PG) AND 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

The subject provides a theoretical overview of, and instruction in, the process of crisis negotiation. The aim of the subject is to develop the students' skills in negotiating crisis situations and in dealing with hard-bargainers and 'dirty tricks'. It also addresses the use of negotiation in critical incidents such as crisis management in the corporate sector and the use of the process in counter-terrorism.

The topics included in this subject are:

- overview and understanding of crisis negotiation skills and techniques
- psychiatric and psychological considerations
- risk and crisis management as part of the preparation
- key factors in crisis negotiation
- face-to-face crisis negotiations
- the stages of crisis negotiations, the preparation and the planning
- team approach and use of communication techniques
- dealing with an aggressive person
- choosing the right negotiator
- briefing and debriefing a critical incident
- third person in a critical incident
- strategic planning.

77794 International Environmental Law

6cp

Requisite(s): ((70110 Introduction to Law AND 76006c Public International Law) OR (60 Credit Points in spk(s): C04148 Master of Law and Legal Practice AND 70616 Australian Constitutional Law) OR 77885 Legal Process and Legal Research)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject introduces students to international law relating to conservation and management of the environment. Particular areas that may be considered include the precautionary principle, sustainable development, marine pollution, climate change, conservation of biological diversity, marine pollution, trade in hazardous substances, climate change, conservation and biological diversity, protection of world heritage. The impact of international environmental law on domestic legal systems is also considered, including questions of domestic incorporation of principles of international and civil law.

77796 Taxation of Business Entities

6cp

Requisite(s): 60 credit points in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides a theoretical and practical overview of the taxation of partnerships and trusts and the taxation of partners and beneficiaries in respect of their interests in those entities. The topics include the calculation of net income or losses of partnerships and trusts and the allocation of net income/losses to partners and net income to beneficiaries. The impact of variations in partnership and trust interests and the application of the capital gains tax provisions to dealings with these entities are also considered.

77800 International Commercial Dispute Resolution

8cp

Requisite(s): (78100c Postgraduate Legal Research AND 78136 Dispute Resolution) OR ((46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject covers negotiation in international commercial disputes, cross-cultural commercial negotiations, negotiating with Japan and a Middle-Eastern country, the role of dispute resolution centres, international commercial mediation, arbitration as contract, drafting and analysing arbitration agreements, transnational aspects of arbitration, international arbitration law, UNCITRAL initiatives on international commercial arbitration, statutory regulation of international commercial arbitration in Australia, enforcement of arbitral awards, international commercial litigation, enforcement of international commercial judgments and institutions for international commercial dispute resolution.

77850 Psychology and Dispute Resolution

6cp

Requisite(s): 79771c Dispute Resolution (PG) AND 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is an introduction to key concepts in psychology that have relevance for dispute resolution practise. A main focus of this subject is the application of psychological concepts to disputes and conflict situations in order to understand what is going on and to start to learn to harness new skills and paradigms to work more effectively with ongoing conflict and within the dispute resolution process.

It is presented in an intensive program of three full-day sessions on campus plus a day of seminar presentations. These four day sessions are supplemented by readings and research in an area of the subject that interests the student.

During the full-day sessions each psychological concept is explored using the following format:

- theory: past and current
- research: evidence for and against the theory
- application of the concept to dispute resolution
- practice: exercises, homework, role-play
- discussion: as a student/practitioner how can I apply this?; what is its value?; what have I learnt?
- future directions: how is the concept evolving?; what are the implications for the practice of dispute resolution?
- as a student/practitioner: where do I go from here?; what action can I take?

77867 Workplace Dispute Resolution

6cp

Requisite(s): 79771c Dispute Resolution AND 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject explores the applications of dispute resolution theory and practical skills in the workplace. It explores the causes of conflict within the workplace setting and some legislative requirements for dealing with workplace disputes. The relevance of a range of dispute resolution processes and the possible challenges to their implementation are explored. Impediments to changing the dispute resolution culture in the workplace are identified and dispute resolution models and the design of systems for implementation in both the private and public sectors are studied. The subject covers the following topics:

- analysis of workplace conflict and its sources
- the legal, political and historical contexts within which workplace conflict has been managed and how it is changing
- the existing dispute resolution cultures in Australian workplaces
- the types of disputes within the workplace, including grievances and management disputes, and the dispute resolution processes that are applicable
- the theory of the role of dispute resolution processes in effecting behavioural change in the workplace
- the theory shaping mediation techniques for resolving workplace disputes
- designing, implementing and evaluating a dispute resolution system for a workplace
- the relationship between organisational change and dispute resolution processes
- the difference in managing disputes in the public and private sectors
- the negotiation dynamic of enterprise and employment contract bargaining.

77885 Legal Process and Legal Research

6cp; online and on-campus components

Postgraduate

In this subject students are introduced to the common law and its place in the Australian legal environment. The skills of legal research, case analysis, statutory interpretation, legal problem solving and critical analysis – which are essential to the study and practice of the law – are also developed in the course of students' learning.

Students begin their inquiry by considering primary and secondary sources of the common law, the development of common law, courts and lawyers, and the spread and reception of common law. They then examine contract law in the common law, public law and the common law, and business transactions in the common law.

77889 Trade Marks Law

6cp; offered either by distance, requiring no attendance, or on-campus

Requisite(s): (77896c Legal Process and Intellectual Property Overview OR 70115 Perspectives on Law AND 70120 Legal Method and Research) OR 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR 77905c Preparing for Intellectual Property Practice)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an understanding of the principles of trade marks and the trade mark system in Australia. Topics covered include passing off and unfair competition, registrability issues, comparison of trade marks and assessment of deceptive similarity, ownership and authorship of trade marks, requirements of use in relation to trade marks, grounds of opposition, and infringement and post-registration maintenance of trade marks.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney or Trade Mark Attorney in Australia.

77890 Trade Marks Practice

6cp; offered by distance requiring no on-campus attendance
Requisite(s): 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice AND 77889c Trade Marks Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject concentrates on the ability to advise and to handle the interests of a client in prosecution and maintenance of trademark applications, including advice on the desirability of seeking trademark protection and provision of alternative protection in Australia and other countries. Topics covered include classification systems, searching, types of application and registration, Trade Marks Office practice and procedure, removal for non-use, rectification, registration of security interests, border controls, exploitation, misuse and criminal sanctions, and international issues.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney or Trade Mark Attorney in Australia.

77891 Patent Systems

6cp; offered by distance requiring no on-campus attendance
Requisite(s): 77898 Patent Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject concentrates on the ability to handle the interests of a client in prosecution and maintenance of a patent application, including advice on the desirability of seeking patent protection and provision of alternative protection in Australia and other countries. Topics covered include: types of application; Patent Office practice; amendment; opposition; re-examination; maintenance; extension of term; extension of time; revocation; treaties and conventions; searching; assignment; licensing; compulsory licenses; Crown use; restrictions on exploitation; circuit layout legislation and practice; plant protection legislation and practice; patentability in other countries (particularly with reference to New Zealand, the United States, the European Union, the People's Republic of China and Japan); and innovation patents.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney in Australia.

77892 Professional Conduct (Intellectual Property)

6cp; offered wholly online, requiring no on-campus attendance
Requisite(s): 77896c Legal Process and Intellectual Property Overview

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an understanding of the rights, privileges and responsibilities of a patent or trade marks attorney. Topics covered include: conflict of interest; privilege; confidentiality; professional liability and negligence; code of conduct; maintenance of rights and monitoring systems; and fiduciary obligations to clients.

Typical availability

Spring semester, City campus

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney or Trade Mark Attorney in Australia.

77893 Designs Law and Practice

6cp; offered wholly online requiring no on-campus attendance
Requisite(s): (77885c Legal Process and Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77896 Legal Process and Intellectual Property Overview OR 60

Credit Points in spk(s): C04148 Master of Law and Legal Practice

OR 77905c Preparing for Intellectual Property Practice]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject concentrates on the ability to advise and to handle the interests of a client in prosecution and maintenance of a design application, including advice on the desirability of seeking design protection and provision of alternative protection in Australia and overseas. Topics covered include registrability, newness, registration procedure, maintenance, office practice, third-party objection, infringement, expunction, copyright, and international aspects of design practice.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney in Australia.

77894 Drafting of Patent Specifications

6cp; offered wholly online requiring no on-campus attendance

Requisite(s): 77898 Patent Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

On completion of this subject, candidates should have acquired ability to obtain relevant information about an invention and from that, given the prior art, draft a patent specification to accompany a provisional application, a standard complete application, an international application or an innovation patent application. In particular, candidates should be able to draft claims that define an invention that is novel over the given prior art and, arguably, includes an inventive step. The support for the claims are also considered in light of the given description of the invention. Various common practice-based aspects of drafting of patent specifications are also considered.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney in Australia.

77895 Interpretation and Validity of Patent Specifications

6cp; offered either wholly online requiring no on-campus

attendance, or on-campus

Requisite(s): 77898 Patent Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

On completion of this subject, students have acquired an ability to express an understanding of a patent specification and what it covers for the purpose of advising on infringement validity over given prior art, s 40 of the *Patents Act 1990* and other grounds of revocation and amendment.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney in Australia.

77896 Legal Process and Intellectual Property Overview

6cp; offered wholly online and requires no on-campus attendance
Postgraduate

This introductory subject provides non-law graduates with an understanding of the Australian legal system and how intellectual property rights may be protected.

Topics covered include parliament and the courts, appeal and review systems under the Australian legal system, the doctrine of precedent and principles of statutory interpretation.

The subject also provides students with an introduction to patents, trademarks, designs copyright, circuit layouts, plant breeders' rights, confidential information and trade secrets, trade practices and anti-competitive practices, and international intellectual property treaties.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney or Trade Mark Attorney in Australia.

77898 Patent Law

6cp; offered wholly online and requires no on-campus attendance
Requisite(s): (77885c Legal Process and Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77896c Legal Process and Intellectual Property Overview OR 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR 77905c Preparing for Intellectual Property Practice)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an understanding of the principles of patents and the patent system in Australia. Topics covered include subject matter, s 40 of the *Patents Act 1990* (specifications), infringement, inventorship, ownership and breach of confidence.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney in Australia.

77900 Goods and Services Tax

6cp
Requisite(s): (60 credit points of completed study in C04148 Master of Law and Legal Practice AND (70516 Equity and Trusts OR 70517 Equity and Trusts))

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

The course canvasses some basic principles and associated legal issues and issues relating to matters such as administration, liability, supply, taxable supply, GST-free supplies, input tax credits, bad debts, anti-avoidance and comparable jurisdictions.

77901 Securities Markets Law

6cp
Requisite(s): 70417 Corporate Law OR 77885 Legal Process and Legal Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject builds on the compulsory company law subject by examining key issues in the Australian scheme for the regulation of markets for corporate securities. Topics include an introduction to corporate finance, regulation of major equity and debt capital transactions such as reductions, buy-backs and the raising of new capital through equity and debt issues. The subject has a particular focus on the role of disclosure in securities market regulation, including the regulation of continuous disclosure, misleading statements to the market and insider trading. The subject also provides an introduction to takeover regulation with an emphasis on the role of disclosure in takeovers and the regulation of takeover disputes.

77903 Copyright Law

6cp
Requisite(s): (77885c Legal Process and Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR 77896c Legal Process and Intellectual Property Overview OR 77905c Preparing for Intellectual Property Practice)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject covers the principles of copyright, the development of case law and the structure and ambit of the legislation. Students are required to develop a good working knowledge of the *Copyright Act 1968* (as amended), and associated regulations, and to have a sound knowledge of relevant case law.

77905 Preparing for Intellectual Property Practice

6cp

This subject provides students with an understanding of the:

- Australian legal system, courts and legislative processes
- protection of intellectual property rights by Australian and international legal systems
- principles involved in efficient and effective management, commercialisation and exploitation of intellectual property assets
- legal entities and processes used in licensing, franchising, assignment and securing intellectual property rights, and
- the rights, privileges and responsibilities of practising patent or trade marks attorneys towards their clients, the profession and the community.

When completed, this subject ensures that students satisfy the knowledge requirements prescribed by Regulation 20.8 and Parts 2 and 3 of Schedule 5 of the *Patent Regulations 1991* (Cwlth).

77924 Superannuation and Retirement Planning

6cp

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject concentrates on the taxation aspects of superannuation at the contribution stage, while superannuation money is held in a fund, and when benefits are paid. The subject deals with related topics such as the regulatory requirements of the *Superannuation Industry (Supervision) Act 1993*, the superannuation guarantee scheme and the interaction of GST and superannuation.

Note(s)

Students who have completed 77979 Retirement Planning (PG) are not permitted to enrol in this subject. This subject was formerly named Superannuation Law.

77930 Insurance Law

6cp

Postgraduate

This subject looks at insurance from the perspective of a business buying insurance. It begins with risk management and, in the context of the function of insurance in risk management, considers the design of an insurance program and how business buys and sells insurance. The subject looks at the public regulatory regime governing the insurance industry, including products and markets. The approach examines in some detail the private law principles governing the relationship between insurer and insured in particular, the pre-contract matters of disclosure, terms on the risk and claims, and the structure and documentation of a typical policy. There is a focus on the main insurance principles: duty of utmost good faith, insurable interest, indemnity, subrogation, risk, non-disclosure, misrepresentation and cancellation of cover. There is also material on the resolution of insurance disputes. The role of intermediaries, such as agents and brokers, is also examined. The subject concludes with case studies on the insurance market in crisis.

77938 Introduction to Taxation Law

6cp
Postgraduate

This subject acquaints students with Australian taxation law in a practical business environment. The focus of the syllabus is on the application of tax law concepts in a professional accounting setting. It aims to develop students' conceptual and analytical skills and an appreciation of the Australian tax system. It provides a general analysis of the current tax system and consideration of the many changes it is presently undergoing with an emphasis on the implications for the commercial world. The subject looks at the *Income Tax Assessment Act*, the Tax Law Reform Project and the New Tax System. Particular concepts to be considered include: taxable income, income, deductions, capital gains tax, trusts, partnerships, companies and shareholders, tax accounting, tax planning and anti-avoidance provisions, fringe benefits tax and goods and services tax.

77942 Legal Aspects of Contracts Administration

6cp
Postgraduate

This subject aims to provide students with an understanding of legal issues that arise when negotiating complex contracts, as well as the difficulties that can occur once such contracts are entered.

77945 Current Issues in Taxation

6cp
Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

This subject is concerned with taxation practice. It is not intended to be prescriptive, and variations will be made by the lecturer to cater for the interests of students and to take account of current developments in revenue law. Topics covered include: recent amendments and case law; fundamentals of tax planning; advanced problems; partnerships; trusts; taxation and stamp duty problems in estate management; company distributions, losses, superannuation and employee benefits; foreign source income and tax havens; alienation of income; legislative and judicial techniques to minimise tax avoidance; objections and appeals; and other revenue laws.

77947 Companies and Securities Law

6cp
Postgraduate

This subject explores company law in its applied context, addressing the needs of business practitioners and professionals such as accountants. The subject comprises four main sections. The first examines the principal provisions affecting the formation and operation of companies. The second concerns the main roles, responsibilities and duties of corporate directors, officers and other employees. The third section considers the protection of shareholders including in the process of corporate fundraising through the issue of new share capital; the section also looks at measures to protect creditors through provisions concerning the maintenance of share capital. The final section contains an introduction to securities regulation and deals with other major events in the corporate lifecycle such as external administration and takeovers.

Specific topics covered in the subject include:

- the framework of Australian corporations legislation and the role of the Australian Securities and Investments Commission
- the process of company registration and its consequences; the range of legal forms of association available for the conduct of business enterprise
- the corporate constitution
- the company's liability in contract and under criminal law
- the allocation of responsibility between shareholders, directors and company officers
- directors' and officers' duties and liabilities
- minority shareholder protection and remedies
- the regulation of major equity capital transactions such as capital reductions, share buy-backs and dividend payments
- an introduction to the legal structure of securities market regulation
- corporate fundraising - prospectus disclosure obligations and liabilities

- external administration of failing companies - voluntary administration, receivership, liquidation and winding up
- an introduction to takeovers law.

The subject seeks to:

- provide an overview of corporate law in Australia
- highlight the roles, responsibilities and duties of key personnel involved in corporations
- develop skills in identifying, analysing and understanding corporate legal problems, and
- build an appreciation of the commercial implications of the legal framework in which corporations operate.

77953 International Taxation Law

6cp
Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

A comprehensive explanation of the important issues within the international environment of business is provided. The subject places emphasis on the more important taxation issues, and responds to new issues as they arise.

77976 World Trade Organisation Law and Practice

6cp
Requisite(s): (77885c Legal Process and Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR (70616 Australian Constitutional Law AND 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice))
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Postgraduate

This is a specialist subject on the World Trade Organization (WTO). Students develop an understanding of the basic legal principles underpinning the multilateral trading system; the three pillars of the multilateral trading system, namely the General Agreement on Tariffs and Trade, General Agreement on Trade in Services and the Agreement on Trade-related Aspects of Intellectual Property Rights; the dispute settlement mechanism of the WTO; and the institutional structure and the decision-making process of the WTO.

Note(s)

LLB students require a minimum weighted average mark (WAM) of 65 per cent to undertake this subject (this requirement may be reviewed in future). If a student enrolls with a WAM of less than 65 per cent they will be withdrawn from the subject after the last date to add subjects and consequently will not be able to enrol in an alternative subject in that semester.

77980 Estate Planning and Trusts

6cp
Postgraduate

This subject gives an introduction to the law of wills and estates and explores the efficient utilisation of same to achieve beneficial estate planning. Presently, succession law in Australia varies on a state by state basis – this poses additional challenges for those working with all but the simplest testamentary dispositions.

78008 Law of the Sea

6cp
Requisite(s): (77885c Legal Process and Legal Research OR (70616 Australian Constitutional Law AND 60 credit points of completed study in C04148 Master of Law and Legal Practice) OR (70110 Introduction to Law AND 76006c Public International Law))
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.
Undergraduate and Postgraduate

The Law of the Sea (LOS) is one of the most diverse and interesting areas of international law. This subjects examines in detail not only the status of the LOS today, but also its history and development which can be traced back to around 1650 and which has traditionally reflected shipping and navigation interests. The LOS has today been

codified and is contained in the 1982 United Nations Convention on the Law of the Sea (UNCLOS), a treaty that clearly represents one of the greatest achievements of international law making. The UNCLOS now contains many additional and dynamic areas of international law such as delineation of various maritime boundaries, including those for archipelagic states; pollution from various sources of marine pollution including land-based sources; exploitation of valuable resources such as high seas fisheries, the minerals of the continental shelf beyond national jurisdiction and of the deep seabed; marine scientific research; as well as dispute resolution.

78010 International Criminal Law

6cp

Requisite(s): (70120 Legal Method and Research AND 70115 Perspectives on Law) OR 77885c Legal Process and Legal Research OR (70616 Australian Constitutional Law AND 60 credit points of completed study in C04148 Master of Law and Legal Practice)
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject provides an overview of international criminal law, with particular focus on conceptual and historical issues arising from the prosecution of war criminals, the establishment of international criminal authority, and the legalisation of 'justice'.

The subject charts the origins of international criminal law from the postwar settlements of Versailles, and the Nuremberg and Tokyo trials, to national-level prosecutions of war crimes and the establishment of international tribunals. It examines international criminal law by assessing its purported objectives – its claims to provide redress, historical narrative (or memory) and deterrence – in light of its substantive achievements and failures, and its continued progress in the contemporary world.

The subject examines the core crimes set out in the Rome Statute (war crimes, crimes against humanity, genocide and aggression). It also examines the functioning of the principal international institutions – the ad hoc tribunals, the International Criminal Court and the 'hybrid' tribunals. Several currently topical questions are also covered including universal jurisdiction and immunities. Finally, students have the opportunity to explore in depth a number of areas of interest in the field, including piracy, torture, terrorism and corporate complicity.

Typical availability

Autumn semester, City campus

Spring semester, City campus

78011 International Sale of Goods

6cp

Requisite(s): (70120 Legal Method and Research AND 70115 Perspectives on Law) OR 77885 Legal Process and Legal Research OR (60 credit points of completed study in C04148 Master of Law and Legal Practice AND (70318 Personal Property OR 70327 Commercial Law))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines certain practical, theoretical and methodological issues concerning the proper interpretation of the provisions of the UN Convention on Contracts for the International Sale of Goods 1980 (CISG). The CISG is the uniform sales law of countries that account for two-thirds of total world trade. However, the enactment of a uniform law text carries no guarantee of its subsequent uniform application in practice. This subject provides a comparative analysis of the main provisions of the CISG and the UNIDROIT Principles of International Commercial Contracts 1994 and the Principles of European Contract Law 1998, in order to determine whether consideration of such general principles of international commercial law could aid in the proper interpretation and application of the CISG as uniform international sales law – a positive step towards substantive legal uniformity.

78013 Refugee Law and Practice

6cp

Requisite(s): 70616c Australian Constitutional Law AND 70617c Administrative Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject surveys contemporary legal issues in refugee protection both within Australia and internationally. Focusing initially on the 1951 Convention Relating to the Status of Refugees and the 1967 Protocol, this subject explores the key controversies in interpreting the refugee definition and extent of international protection afforded to refugees. In reviewing exclusion mechanisms in the international context, we consider the impact of terrorism on asylum procedures and eligibility, as well as issues involved in processing child soldiers.

This international law background provides a framework for considering the implementation of the Refugee Convention in Australian domestic law. We proceed to examine Australian constitutional power with respect to 'aliens' and the relevant provisions of the Commonwealth *Migration Act 1958*, focusing particularly on the procedures for decision-making in Australian refugee law, including merits review before the RRT and judicial review of administrative decisions. In this context, time is spent considering special issues which arise in working with refugee clients. Specific case studies in the domestic context include the detention and offshore interception of asylum seekers, as well as the overlap between refugee law and Australian responses to trafficking in persons. The subject concludes by considering proposals to reformulate the international refugee protection regime.

78015 Global Aspects of Intellectual Property Law

6cp

Requisite(s): (60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR 77896 Legal Process and Intellectual Property Overview OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77885 Legal Process and Legal Research OR 77905 Preparing for Intellectual Property Practice)

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject considers the international framework of intellectual property law. Topics covered include the international institutions dealing with intellectual property (the World Trade Organization, World Intellectual Property Organization, International Union for the Protection of New Varieties of Plants and the United Nations), particularly considering their treaties and dispute mechanisms; bilateralism and the future of multilateralism in international intellectual property including the Australia-US Free Trade Agreement; and emerging issues likely to affect international intellectual property over the coming years – health and access to pharmaceuticals, access to and protection of genetic resources and biodiversity, protection of traditional knowledge, the possibility of harmonisation and the digital agenda.

78016 International Humanitarian Law

6cp

Requisite(s): (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77885 Legal Process and Legal Research OR 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR (70110 Introduction to Law AND 76006 Public International Law)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines all the major areas of international humanitarian law. It covers the traditional topics of the laws of armed conflict and the laws in war, in addition to considering more recently emerged fields such as refugee law, peacekeeping operations and international crimes. The subject aims to situate each of these areas within the historical, philosophical and political contexts in which they have, and continue to be, developed. Moreover, there is an emphasis on the analysis of international humanitarian law through issues that have arisen by virtue of recent events, such as the proliferation of internal conflicts and the reaction to international terrorism.

78021 Contemporary Issues in Constitutional Law

6cp; mixed mode, including field trips to the High Court, guest lectures from practitioners and judicial officers and opportunities for students to negotiate assessment tasks with the lecturer
Requisite(s): 60 credit points in C04148 Master of Law and Legal Practice AND 70616 Australian Constitutional Law
These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject aims to provide an advanced understanding of:

- the philosophies and principles which shape Australian constitutional law
- the role and methods of the High Court in interpreting the Constitution
- the scope of particular grants of legislative power to the Commonwealth
- the scope of the executive, parliamentary and judicial powers of the Commonwealth
- the relationship between the three arms of government in Australia
- those rights and freedoms guaranteed by the Constitution, both express and implied.

Note(s)

LLB students require a minimum weighted average mark (WAM) of 65 per cent to undertake this subject (this requirement may be reviewed in future). If a student enrolls with a WAM of less than 65 per cent they will be withdrawn from the subject after the last date to add subjects and consequently will not be able to enrol in an alternative subject in that semester.

78023 International Trade Law and the Environment

6cp; distance

Requisite(s): ([70115 Perspectives on Law AND 70120 Legal Method and Research] OR 77885 Legal Process and Legal Research OR 60 credit points of completed study in C04148 Master of Law and Legal Practice)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The trade and environment debate conceals the problematic relationship between two legitimate interests of the international community. This subject introduces students to the significant interface between international trade liberalisation and the environmental imperative of ecologically sustainable development.

Initially the subject provides an overview of the frameworks of international trade law and environmental law and an insight into the philosophical underpinnings of both institutions. The subject considers the important role of developing countries in shaping the trade/environment debate.

The subject considers the obligations imposed by the World Trade Organization (WTO) including the Agreements on Food Safety Standards, Technical Barriers to Trade and the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS). The scope and operation of environmental exceptions that have been the subject of recent trade environment disputes in the WTO provide valuable insights into the area. The position of multilateral environmental agreements and the WTO is considered along with the serious implications for developing countries.

Particular specialty areas of concern are covered including ecolabelling, invasive species and intellectual property issues.

Upon completion of this subject students should be able to understand and analyse the current relationship between trade and environment, reflect in an informed manner on the future of the protection of the environment in the multilateral trade and investment regime and be able to critically assess the prospects for future harmonisation of global free trade regimes and ESD principles.

78025 Intellectual Property: Law and Policy

6cp

Requisite(s): 70120 Legal Method and Research OR 70105 Legal Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject provides an introduction to and overview of the legal principles of intellectual property law and the policy issues which inform the development of this law in Australia. It is designed as an introductory survey subject for graduates, practicing lawyers and students completing their first law degrees. Classes consider the historical development of intellectual property subject matters, the international framework setting standards including WIPO, WTO and AUSTFA, and the different forms of intellectual property including copyright, designs, patent, plant breeders protection, trade marks law, passing-off and related actions, moral rights, and performers' protection.

78026 Business and Law in China

6cp

Requisite(s): (77885 Legal Process and Legal Research OR (60 credit points in C04148 Master of Law and Legal Practice AND 70211 Contracts))

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

With China's emergence as a new economic superpower, and with ever-deepening business ties between Australia and China, it is crucial that students gain an up-to-date understanding of Chinese business law and an awareness of major differences between Australian and Chinese legal and business cultures. This subject focuses on areas of Chinese law that are most relevant for foreign businesses and for law firms with a China practice. Topic areas covered include:

- Chinese legal culture/business culture
- challenges of doing business in China — politics, bureaucracy, corruption, personal connections
- Chinese business enterprise law — state-owned enterprises, companies limited by shares, township and village enterprises, private entrepreneurs, foreign-invested enterprises
- pitfalls surrounding contracts and business transactions with Chinese enterprises
- foreign investment regime in China
- Chinese banking/finance system and capital markets
- business dispute resolution and litigation.

Note(s)

1. This subject was formerly called Chinese Corporate Commercial Law.
2. Students who have completed an introductory subject in Chinese law need not attend the first class but are welcome to attend if they wish.

78029 Mediation Practice

6cp

Requisite(s): 79771c Dispute Resolution AND 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject studies the philosophy, theory and practice of mediation as a dominant generic dispute resolution process. It considers the roles of all parties in the mediation process and the legal, ethical and normative framework in which the process is provided. The subject looks at the selection criteria for mediation, both by private parties and by curial reference, and the institutionalisation of mediation by

courts and public bodies. Also covered are the stages in the mediation process and the skills required for competent mediation practice. Mediation practice is the frame for the following topics:

- the development of mediation practice and philosophies in the Australian context
- the mediation process and the roles of the participants
- critical appreciation of the trend to institutionalise mediation
- the legal, ethical and normative issues that relate to mediation practice
- critical appraisal of the current debates surrounding training, accreditation and accountability of mediators.

This subject is taught in intensive mode with an emphasis on the use of simulations to explore theory. The prime assessment is a research paper selected from a list of current issues and the secondary is a case study presented in a seminar format.

Note(s)

Students who completed 79771 Dispute Resolution before Autumn 2006 should not enrol in this subject. This subject was previously taught as part of 79771 Dispute Resolution.

78030 Criminal Sentencing Law

6cp

Requisite(s): 70218 Criminal Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The law of sentencing is without doubt one of the most interesting aspects of criminal law. It is also a critical element of the criminal justice system in New South Wales. This subject begins with a brief revision of how the criminal justice system works. It then plunges into the purpose and science of sentencing, and factors that the court may take into account when exercising its discretion in the sentencing exercise. The subject covers sentencing in the local, district and supreme courts. Students are given a practical idea of what actually happens, how the law is actually applied and what is expected of lawyers, prosecutors and judges during the sentencing exercise.

78039 Wickedness and Vice

6cp

Requisite(s): (70311 Torts OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The legal system organises and expresses multiple meanings. This subject considers the structure of wickedness and vice it communicates. The approach taken is consistent with traditional jurisprudential concerns such as natural law theory and positivism, and theorising about the criminal legal system as a system of blaming. The subject introduces students to various jurisprudential and general philosophical accounts of the legal system's approach to wickedness and vice. These theories are applied to specific issues, including questions about our duty to obey, the regulation of morality, the malice of the law and the characterisation of terrorism. This subject is particularly timely, given increasing international reliance on a 'discourse of evil'. Theory is essential to the law. Theory gives us a way of thinking about issues differently. This is particularly important when a legal problem appears to be insurmountable. Theory offers the possibility of imagining the world differently.

78040 The Law and Education

6cp

Requisite(s): (70113 Legal Process and History AND 70105 Legal Research) OR (70115 Perspectives on Law AND 70120 Legal Method and Research)

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The object of this subject is to examine the law as it applies to compulsory and higher education today. It is designed to encourage thought and excite debate in the many areas where the law currently impacts upon both education sectors. The subject begins by outlining the legal framework for the provision of education and the governance and management of schools and universities. It then considers many

of the legal issues which arise in education today in a wide range of areas such as tort, contract and consumer law, administrative law and human rights law. Current issues are examined comparatively with jurisdictions such as the United States, the United Kingdom, Canada and New Zealand.

78041 New Families, New Technologies

6cp

Postgraduate

This subject explores the multiple legal dimensions regulating families formed with the assistance of reproductive technologies. These dimensions include health and legal regulations governing the provision of reproductive technologies, ethical practice and contractual rights of individuals during treatment, direct legal regulation of practices such as surrogacy and the parental status of children.

While this subject complements subjects such as the biomedical law subjects and 77734 Law and Medicine, its focus is firmly on the recipients rather than the providers of new reproductive technologies. The subject's approach centers family formation and recognition of family relationships formed through non-traditional means. Adoption and international adoption are also considered for this reason.

The main focus is on current Australian law, but international comparative material and future Australian reform options are also discussed.

78042 Environmental Planning and Development Law

6cp

Requisite(s): 70617 Administrative Law

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject introduces students to the basic rules of environmental planning and development law in New South Wales. The primary focus is on the 'development control and assessment process' in NSW, which is part of the system of statutory environmental planning contained in the *Environmental Planning and Assessment Act 1979*.

In addition to the *Environmental Planning and Assessment Act 1979*, other legislation is covered as well including, but not limited to, the *Local Government Act 1993*, the *Land and Environment Court Act 1979*, the *Environment Protection and Biodiversity Conservation Act 1999*, the *Protection of the Environment Operations Act 1997*, the *Rivers and Foreshores Improvement Act 1948*, the *National Parks and Wildlife Act 1974*, the *Heritage Act 1977*, the *Threatened Species Conservation Act 1995* and the *Water Management Act 2000*.

The subject covers the following topic areas: the making of environmental planning instruments, the meaning of development, the different categories of development, the development control process, development applications and development consents, existing use rights, part 3A major development, part 4A certificates, part 5 environmental assessment, enforcement of environmental planning laws, the powers of NSW local councils and decision-making by councils.

In order to properly understand and appreciate the law in relation to environmental planning and the development control and assessment process, it is essential that students gain an understanding of the institutions, legal principles, thought-forms, constructs and techniques of local government in NSW. Accordingly, the subject also includes such fundamental topic areas as the legal nature and role of NSW councils, their organisational structure, the roles and functions of the various 'players', decision-making mechanisms (including the conduct of meetings), delegations, sub-delegations and authorisations.

78100 Postgraduate Legal Research

8cp

Requisite(s): 75420c Ethics and Professional Conduct

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject develops theoretical understandings and practical applications of research across the discipline of law and related fields. It explores the traditional boundaries of legal research within the development and application of empirical methodologies. Emphasis is placed upon currency in legal research; the application of quantitative and qualitative methodologies to legal research and refining research skills in interdisciplinary areas with application to legal research.

Typical availability

Autumn semester, City campus

Spring semester, City campus

78101 Postgraduate Legal Research

6cp

Postgraduate

This subject develops theoretical understandings and practical applications of research across the discipline of law and related fields. It explores the traditional boundaries of legal research within the development and application of empirical methodologies. Emphasis is placed upon currency in legal research; the application of quantitative and qualitative methodologies to legal research and refining research skills in interdisciplinary areas with application to legal research.

78102 LLM Project by Research

8cp

Requisite(s): (78100c Postgraduate Legal Research OR (70717 Evidence and Criminal Procedure AND (46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject comprises the research and writing of a supervised thesis on an approved topic in law. The thesis is between 8000-12,000 words providing an opportunity for postgraduate law students to further develop and refine their legal research and writing skills as well as explore and analyse a topic of law of their own choosing at a high level to produce a superior quality piece of academic work. In most cases, the thesis extends and develops research done in one or more of the electives already undertaken, but in appropriate circumstances a candidate may undertake a new topic.

While LLM students may undertake this subject as a law option subject, it is not necessary under the honours rules that LLM students complete the LLM Project by Research for the award of honours to be conferred. LLM students may qualify for the award of honours if they have received a percentage mark of at least 80 per cent in all subjects.

Enrolment in this subject for Master of Laws students is generally appropriate for students in their final semester of study.

Juris Doctor and Juris Doctor/MBA students who commenced studies in 2012 or after, are required to have provisional WAM of 73 across all subjects attempted in order to undertake this subject. The application form can be found online at www.law.uts.edu.au/honours/forms.

Early submission of proposal and form is encouraged. Forms are accepted and processed from Week 12 of the preceding semester. The last date to submit forms is the Friday, two weeks before the start of semester, to allow for processing.

78103 Common Law Legal Traditions

8cp

Requisite(s): 78100c Postgraduate Legal Research

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This intensive subject provides the bridge between the civil law and the common law. It is a comprehensive subject aimed at lawyers from countries with civil or dual civil and common law legal systems. It opens with expert tuition and practical exercises in the research skills and methodology of the common law. The topics covered include primary and secondary sources of the common law; the development of the common law; courts and lawyers; the spread and reception of the common law; law finding in the common law; contract law in the common law; public law and the common law; and business transactions in the common law.

Spring semester, City campus

Note(s)

1. Requires Faculty of Law approval.

2. Eligible students must enrol in their first semester of study.

78104 Genetics and the Law

8cp

Requisite(s): (78100c Postgraduate Legal Research OR ((46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)))

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines the scope and limitations of existing regulation of genetic technologies with respect to humans. It also considers recent scientific and technological innovations in the area of human genetics and the role and effectiveness of law in managing these new developments. The role of law as a means to control both the development of new genetic technologies and the utilisation of existing technologies is also evaluated. This includes a specific focus on individual decision-making versus responsibility for genetic risk; individual versus group rights; genetic privacy; genetic discrimination; reproductive autonomy; and ownership and control of genetic information and research developments. Specific issues covered include regulatory limits on the use of genetic screening of adults, children and newborns; prenatal genetic testing and genetic testing of adults and children; the regulation of genetic registers, protecting genetic information privacy and the problem of familial information; measures to control genetic discrimination in employment and insurance; the regulation of genetic research through the NHMRC guidelines and other means; the regulation of genetics in medical research including gene therapy, inheritable genetic modification, stem cell research and human somatic cell nuclear transfer (cloning technologies); and the establishment of biobanks and the concept of genomic property.

78106 Climate Law and Carbon Markets

8cp

Requisite(s): [78100c Postgraduate Legal Research OR ([46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)]]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines climate change, which is one of the most pressing environmental problems of our generation. It is a major business issue that is affecting law, policy and corporate behaviour. The Intergovernmental Panel on Climate Change has said that to avoid irreversible harm to the planet, greenhouse gas emissions must be stabilised, and this will involve a significant and rapid reduction in 'business as usual' reductions. This will involve unprecedented cooperation at the international level as well as innovative national responses.

This subject examines the potential role of the international and policy communities as well as the legal and business communities in confronting climate law. It analyses the existing and emerging legal rules and frameworks, both internationally and in Australia, the impacts of these on business and the response from industry. It critically evaluates the incentives for firms to comply and over-comply with environmental laws and participate in voluntary programs and examines the role of business in adaptation measures and climate justice issues.

Postgraduate

This subject examines key issues in the law and regulation relating to securities within Australia. It begins by developing an understanding of the nature of securities as a form of corporate fundraising, and then briefly examines how their issuance and trading is regulated within Australia. The regulatory roles of ASIC and ASX in relation to the issuance and trading of securities are then examined. From the basis of this foundational knowledge, the course is structured into three parts.

- Part 1 examines the regulation of securities offerings, including the objectives and focus of Australia's investor protection laws, the documentation and procedural requirements for securities offerings, and the liability issues that might arise from deficient disclosure. Part 1 concludes with an examination of the continuous disclosure requirements applying to entities that are listed on Australia's financial markets.
- Part 2 undertakes an overview of the regulation of significant transactions involving securities, including share reductions, share buy-backs, self-acquisitions and payments of dividends. It then undertakes an overview of the regulation of merger and acquisition activity within Australia.
- Part 3 focuses on the regulation of financial markets within Australia upon which securities are traded, and the various forms of prohibited conduct involving dealings in securities, including insider trading, market manipulation and short selling.

The subject draws upon recent and current case studies relating to the issuance of, and dealing in, securities both within Australia and overseas to further develop students' knowledge of the various topics examined. Throughout the subject, the significance of several key themes are reinforced, including the importance of timely and accurate disclosure, responsible handling of confidential information, and the potential consequences that might follow from illegal conduct. The subject also develops an appreciation of the commercial considerations that drive and influence significant transactions involving securities, and the various factors which impact upon the operation of financial markets.

Postgraduate

With China's emergence as a new economic superpower, and with ever-deepening business ties between Australia and China, it is crucial that students gain an up-to-date understanding of Chinese business law and an awareness of the major differences between Australian and Chinese legal and business cultures. This subject adopts a case-based, problem-solving approach to focus on the areas of:

- current legal system and legal/business culture of China
- Chinese investment law environment and how it differs from Australia
- corporate structures and the status of business corporations in China since China's accession to the World Trade Organization
- the legal environment for foreign entities doing business in and with China, potential risks and case studies
- China's WTO compliance and Australia-China Free Trade Agreement – case studies.

The subject is important for students wishing to understand the interactions between law, business, politics and culture in China today. Students develop practical and research skills that assist them in understanding the business environment in China in contrast to that of Australia.

Postgraduate

This subject aims to provide students with a detailed and practical understanding of the various insolvency and restructuring options that are available to companies in financial distress. The discussion of corporate insolvency laws is placed within the broader commercial and social context of business failure, including the impact of insolvency on secured and unsecured creditors, employees and tort victims. In particular, this subject discusses the range of formal and informal debt restructuring techniques that may be used to assist a company in financial distress. Where relevant, the subject materials provide a comparison between Australia's corporate insolvency and restructuring laws and corresponding laws in Europe, North America and Asia.

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an overview of dispute management and complaints handling systems, together with further consideration of the developing body of dispute resolution and negotiation theory and practice in the commercial context.

There is an increasing demand for the development of dispute resolution systems that avoid an adversarial approach in commercial environments where delay, high legal costs and limited possible outcomes are being perceived as counterproductive in the highly competitive commercial environment. Increasingly there have been legislative responses for providing both processes and process providers for resolving and settling commercial disputes. These developments are also studied in the context of changing corporate structures and cultures and the demands for effective, accessible, cost efficient and ethical methods for dealing with commercial disputes.

This subject deals with topics of central importance to the governance of the large, especially the publicly-held, business corporation. As a field of study, corporate governance deals with the rules, relationships, systems and processes within a corporation by which authority is allocated and its exercise reviewed and controlled. Corporate governance provides a framework which shapes the dealings and relationships between directors, managers, shareholders and others with a stake in the corporation's success. In this subject, topics are studied from a comparative perspective that takes account of developments in the principal markets and legal systems.

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject builds on the introductory theory and practice presented in 79771 Dispute Resolution and 78029 Mediation Practice. This subject provides an overview and examination of a range of innovative mediation processes that have recently been developed to demonstrate the wide theoretical bases underpinning the development and application of mediation practice. Mediation models including narrative, transformative, relational, holistic, insight and bio-ethical are studied as well as culturally significant models that have been developed. The philosophies, theories and practice attaching to these models is also examined in the context of the diversity of their originating disciplines, including psychology, anthropology, sociology, theology and contemporary community norms.

Postgraduate

This subject enhances and builds upon law studies as they relate to children; in particular, constitutional law, criminal law, contracts, torts and the law of evidence. The subject includes issues ranging from children's rights, child development theory, care and protection (including fostering), preschool and school education, civil liability, juvenile justice, legal representation, access to medical treatment and procedures. The present law in New South Wales is considered as well as the historical development of laws relating to children, proposed reforms and comparative material from other jurisdictions. The subject combines both a theoretical and a vocational approach to the study of these issues and is not only of benefit to students interested in these issues, but also to those students considering a career, or enhancing their career, in legal practice and / or the delivery of children's legal services.

Postgraduate

This subject addresses issues arising in complex children's cases in family law through a series of detailed case studies. It addresses disputes and intractable conflict in areas of:

- health and medical decision-making where the parents or parent and child have divergent views
- claims involving non-parents
- sexual and physical abuse allegations
- impaired parenting capacity
- care and protection proceedings.

The subject is of interest to anyone practising in the areas of family law and child protection. The main focus is on current Australian law, but international comparative material and future Australian reform options are also discussed.

Postgraduate

This subject is an introduction to the philosophy, theory and practice of dispute resolution, an area of increasing importance in all professions, business, and government. The new legal advocacy is based on the principles and processes studied in this subject.

The subject content reflects the changes in the many state and federal jurisdictions necessary to integrate a range of voluntary and compulsory dispute resolution processes with adversarial proceedings. The subject also covers the development and application of an ever-widening range of private and public situations dispute resolution processes required under legislation or government and professional requirements.

This emerging practice of professional dispute resolution is examined both within and outside the legal profession. Overall, the subject encourages students to think critically and reflexively about this emerging area of practice, the legal, professional and policy issues, and to learn the core practical skills.

Postgraduate

This subject covers the range of facilitative processes and techniques applied to the resolution of disputes in both the public and private arenas. Students are introduced to the extensive scholarship, strategies and skills that are required for the resolution of disputes using consultative, consensus-seeking and restorative processes with the assistance of a facilitator. The subject focuses on the use of these processes in the resolution of a broad range of multi-party disputes where mediation and conciliation processes are not indicated. The subject examines the design and use of these processes in:

- the public arena, such as environmental and other multi-party disputes involving governmental and quasi-governmental, social and community concerns
- the juvenile and adult criminal justice system
- family and civil law systems, such as in the resolution of family welfare disputes and multi-party family or community-based disputes
- schools and other educational organisations and other institutions where the needs of community behaviour require disciplinary systems that are both restorative and educational.

In addition, the subject examines, generally, where a process, required to address concerns of parties to a dispute, is able to provide a satisfying and effective outcome that also has the possibility of being transformative for the participants and for the community. In particular, the subject involves students in the critical study of the scholarship, the philosophy and values, the skills and the issues arising out of the application of these facilitative processes.

Requisite(s): [78100c Postgraduate Legal Research AND 78136 Dispute Resolution] OR [78136 Dispute Resolution AND [46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration]]]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is an introduction to the theory and practice of the emerging family law framework that is supported by new legislation and developing practice in family dispute resolution.

This subject studies the evolving alternatives to adjudication of family law matters and the demand for new dispute resolution systems and processes to avoid an adversarial approach to family disputes. The influence of the social sciences in this field and the growing body of research that examines the negative impact of protracted litigation on families, and in particular, children, is examined.

As well as the legislative and theoretical aspects of family dispute resolution, this subject comprehensively explores the combination of voluntary and compulsory dispute resolution processes, supported by government policy and legislation, in this new family law framework. The quality and complementary aspects voluntary and compulsory approaches are also examined in terms of the accessibility and effectiveness of the new family law framework.

This subject also examines the emerging practice of collaborative law and the impact this will have on modern legal advocacy and professional practice.

78140 International and Comparative Family Law

8cp

Requisite(s): [78100c Postgraduate Legal Research AND 78136 Dispute Resolution] OR [78136 Dispute Resolution AND [46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration]]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject explores issues in family law from an international and comparative perspective. It examines the legal relationship among children, families and the state, with special emphasis on the United Nations Convention of the Rights of the Child 1989 and other human rights documents that govern the role of government and the law in family life. The course compares and contrasts Australian family law with one or more international jurisdictions (e.g. the United States, the United Kingdom, New Zealand and Canada) on a number of issues including relationships (formation and recognition), parenting and parenting disputes, and financial disputes following relationship breakdown. The subject specifically examines how international treaties (such as the Hague Conventions) have shaped the development of family law.

8cp

Requisite(s): [78100c Postgraduate Legal Research AND 78136 Dispute Resolution] OR [78136 Dispute Resolution AND [46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration]]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject explores laws that regulate and impact upon 'new families'; those formed through non-normative means. It primarily focuses on legal issues for families formed with the assistance of reproductive technologies, but also examines surrogacy and adoption, using a family law perspective. The issues include:

- health policy and legal regulations governing the provision of reproductive technologies
- the rights of prospective parents and gamete donors during treatment
- direct legal regulation of practices such as surrogacy
- the parental status of children born through assisted reproductive technologies, and
- domestic and international law, government policy and practice around adoption (in particular, inter-country adoption).

While this subject complements subjects such as BioMedical Law and Law and Medicine, its focus is firmly on the recipients rather than the providers of new reproductive technologies. The approach centres family formation and examines avenues for legal recognition of family

relationships formed through non-traditional means. Adoption and international adoption is also considered for this reason. The main focus is on current Australian law, but international comparative material and future Australian reform options is also discussed.

78143 Psychology and Dispute Resolution

8cp

Requisite(s): [78100c Postgraduate Legal Research AND 78136 Dispute Resolution] OR [78136 Dispute Resolution AND [46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration]]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is an introduction to key concepts in psychology that have relevance for dispute resolution practise. A main focus of this subject is the application of psychological concepts to disputes and conflict situations in order to understand what is going on and to start to learn to harness new skills and paradigms to work more effectively with ongoing conflict and within the dispute resolution process.

It is presented in an intensive program of three full-day sessions on campus plus a day of seminar presentations. These four day sessions are supplemented by readings and research in an area of the subject that interests the student.

During the full-day sessions each psychological concept is explored using the following format:

- theory: past and current
- research: evidence for and against the theory
- application of the concept to dispute resolution
- practice: exercises, homework, role-play
- discussion: as a student/practitioner how can I apply this?; what is its value?; what have I learnt?
- future directions:
 - how is the concept evolving?; what are the implications for the practice of dispute resolution?
 - as a student/practitioner: where do I go from here?; what action can I take?

Postgraduate

This subject deals with current issues in health law. The area of health is dynamic and ever evolving and the law must recognise the rapid developments and impact of new technologies, treatments and consider the future impact of current policies. Class discussion focuses on the need for regulation; the current systems in place; the responses to the ethical and legal dilemmas that may arise and the contribution that the law makes. Topics include the rapid advancement and future direction of medical technology; neuroscience and law; public health issues such as obesity, alcohol, pandemics; aged care and tobacco; responses to emergencies; drug policy and the effects on the health system; the pharmaceutical industry; International perspectives; discrimination and access to treatment; e-health and the cosmetic surgery industry.

Postgraduate

This subject provides an in-depth exploration of select current issues in the way in which the legal system responds to new biomedical developments. It is often assumed that law reform solves many of the dilemmas which society faces through technological advances in areas such as genetic testing and cloning. This subject examines such traditional assumptions as to the efficacy of legal regulation through an analysis of the strengths and limitations of differing regulatory choices. From hard law through to soft law, this subject uses the issues that arise in biomedical law and the principles of bioethics to examine policy choices and practical outcomes. In particular, the subject seeks to examine the impact which emerging medical developments may have on society, and to explore possible legal solutions to deal with the challenges presented by such innovations.

Postgraduate

This subject is designed to give students an introduction and overview of the interface between the disciplines of psychiatry and law. It examines how the empirical research and theories of psychology intersect with the application of legal principles and practices. As a result of successfully completing this subject, students should be able to translate personal and/or social issues concerning the study of mental illness into the practice of mental health law. Furthermore, students should be able to evaluate the efficacy of different perspectives in relation to contemporary debates about mental illness. Students should also demonstrate successful teamwork, involving the ability to participate in collaborative learning activities, both face-to-face and also demonstrate the development of independent learning skills.

Postgraduate

International human rights law seeks to address a range of contemporary issues in global politics, economics and society. While it draws on a long conceptual history of thinking through the rights of the human, this subject focuses more on the practical history and development of the current international human rights regime.

Students become familiar with the substantive and procedural elements of international human rights law, and gain practical experience in debating the applicability of human rights instruments to specific situations. Students engage with a range of case studies which include consideration of the human rights issues raised by the Northern Territory Intervention, the Australian system of mandatory detention of those seeking to exercise their right to asylum, torture and ill-treatment, and corporations and human rights.

The subject aims to provide students with a sophisticated appreciation of the wide range of issues that encompass human rights concerns; and to allow reflection upon the significance of international human rights law in order to develop an understanding of its usefulness, its limits and its future potential for emancipatory change.

There are also course requisites for this subject. See access conditions.

Postgraduate

The subject provides an overview of international criminal law, with particular focus on conceptual and historical issues arising from the prosecution of war criminals, the establishment of international criminal authority, and the legalisation of 'justice'.

The subject charts the origins of international criminal law from the postwar settlements of Versailles, and the Nuremberg and Tokyo trials, to national-level prosecutions of war crimes and the establishment of international tribunals. The course examines international criminal law by assessing its purported objectives—its claims to provide redress, historical narrative (or memory) and deterrence—in light of its substantive achievements and failures, and its continued progress in the contemporary world.

The subject examines the core crimes set out in the Rome Statute (war crimes, crimes against humanity, genocide and aggression). The course also examines the functioning of the principal international institutions—the ad hoc tribunals, the International Criminal Court, and the 'hybrid' tribunals. The course also covers a number of currently topical questions including universal jurisdiction and immunities. Finally, students have the opportunity to explore in depth a number of areas of interest in the field, including piracy, torture, terrorism and corporate complicity.

This subject addresses the nature, scope, structure and implementation of international environmental law. It introduces students to treaty law, soft law and customary international law relating to the protection, conservation and management of the world's environment. Concepts and principles that have been employed for environmental protection are examined. This subject gives special attention to contemporary environmental problems. These include global warming, ozone depletion, marine pollution, trans-boundary movements of hazardous wastes, biodiversity and trade and the environment. The role of the UN and other multilateral organisations and the role of the international court of justice in formulating and developing international environmental law is highlighted. Selected domestic implementation is also explored.

Postgraduate

This subject provides a theoretical overview of, and instruction in, the process of crisis negotiation. This subject aims to develop the student's skills in negotiating crisis situations and in dealing with a hard-bargainer and 'dirty tricks'. It also addresses the use of negotiation in critical incidents, such as crisis management in the corporate sector, up to the use of the process in counter terrorism. This subject builds on the subject content of 77745 Negotiation, in particular, knowledge of the negotiation process and communication techniques. The subject aims to give the student knowledge and practical skills in negotiation to deal peacefully with potentially volatile situations. The subject is designed for students that may be working in a profession that has exposure to these types of situations (e.g. front line counter staff, psychiatric nurses, community mediators, crisis team workers, social workers, ambulance officers, police officers) and those students interested in the specific application of the negotiation process in critical situations.

Postgraduate

This subject is an introduction to the philosophy, theory and practice of dispute resolution, an area of increasing importance in all professions, business, and government. The new legal advocacy is based on the principles and processes studied in this subject. The subject content reflects the changes in the many state and federal jurisdictions necessary to integrate a range of voluntary and compulsory dispute resolution processes with adversarial proceedings. The subject also covers the development and application of an ever-widening range of private and public situations dispute resolution processes required under legislation or government and professional requirements. This emerging practice of professional dispute resolution is examined both within and outside the legal profession. Overall, the subject encourages students to think critically and reflexively about this emerging area of practice, the legal, professional and policy issues, and to learn the core practical skills.

Postgraduate

Changes in technology and the growth of digital delivery have meant that established means of regulating the media are under strain because of innovation and changes in audience expectations and behaviour. Media regulation has traditionally been siloed and platform-based. Broadcast media are presently regulated by statute, the press by self-regulation, and online and digital media by little specific regulation at all.

Several recent inquiries have attempted to address this asymmetrical approach to media regulation in an increasingly converged environment. Media convergence changes the regulatory paradigm. The focus shifts from platforms to ubiquitous content and from regulating technology to serving the interests of audiences wherever they read, watch or listen. Audiences are no longer passive but interactive with their contributions forming part of the media's value proposition.

This subject explores the legal and regulatory consequences of a converged media space. If the existing media regulatory framework is now inadequate, what are the principles and practices whereby appropriate cross-platform regulation can be put in place? In this new converged world does the purpose and reach of regulatory intervention need review? Where appropriate, this subject makes use of comparative analysis with particular reference to the United Kingdom, Canada and New Zealand. By completing this subject a student is equipped to think and work in a converged media environment.

Postgraduate

Telecommunications Law and Regulations provides an introduction to the law and regulation governing the provision of communications services and the operation of communications networks in Australia by companies such as Telstra, Optus, Vodafone and NBN Co, the entity responsible for building and operating the Government's promised super fast National Broadband Network. The subject explores the policy objectives behind the rules and the regulatory framework developed to achieve those goals.

78180 Converging Media Industries: Regulatory Challenges

6cp

Postgraduate

Changes in technology and the growth of digital delivery have meant that established means of regulating the media are under strain because of innovation and changes in audience expectations and behaviour. Media regulation has traditionally been siloed and platform-based. Broadcast media are presently regulated by statute, the press by self-regulation, and online and digital media by little specific regulation at all.

Several recent inquiries have attempted to address this asymmetrical approach to media regulation in an increasingly converged environment. Media convergence changes the regulatory paradigm. The focus shifts from platforms to ubiquitous content and from regulating technology to serving the interests of audiences wherever they read, watch or listen. Audiences are no longer passive but interactive with their contributions forming part of the media's value proposition.

This subject explores the legal and regulatory consequences of a converged media space. If the existing media regulatory framework is now inadequate, what are the principles and practices whereby appropriate cross-platform regulation can be put in place? In this new converged world does the purpose and reach of regulatory intervention need review? Where appropriate, this subject makes use of comparative analysis with particular reference to the United Kingdom, Canada and New Zealand. By completing this subject a student is equipped to think and work in a converged media environment.

Autumn semester, City campus

Spring semester, City campus

78182 Human Rights Law

6cp

Postgraduate

International human rights law seeks to address a range of contemporary issues in global politics, economics and society. While it draws on a long conceptual history of thinking through the rights of the human, this subject focuses more on the practical history and development of the current international human rights regime. Students become familiar with the substantive and procedural elements of international human rights law, and gain practical experience in debating the applicability of human rights instruments to specific situations. Students engage with a range of case studies which include consideration of the human rights issues raised by the Northern Territory Intervention, the Australian system of mandatory detention of those seeking to exercise their right to asylum, torture and ill-treatment, and corporations and human rights. The subject aims to provide students with a sophisticated appreciation of the wide range of issues that encompass human rights concerns; and to allow reflection upon the significance of international human rights law in order to develop an understanding of its usefulness, its limits and its future potential for emancipatory change.

78183 Global Aspects of Intellectual Property Law

8cp

Requisite(s): (78100c Postgraduate Legal Research OR 78203c Communications and Intellectual Property Law Overview OR ([46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)])

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject considers the international framework of intellectual property law. Topics covered include the international institutions dealing with intellectual property (the World Trade Organization, World Intellectual Property Organization, International Union for the Protection of New Varieties of Plants and the United Nations), particularly considering their treaties and dispute mechanisms, bilateralism and the future of multilateralism in international intellectual property including the Australia-US Free Trade Agreement and emerging issues likely to affect international intellectual property over the coming years - health and access to pharmaceuticals, access to and protection of genetic resources and biodiversity, protection of traditional knowledge, the possibility of harmonisation and the digital agenda.

78184 Intellectual Property: Law and Policy

6cp

Postgraduate

This subject provides a comprehensive, in-depth and engaging examination of the legal principles of intellectual property (IP) law and the policy issues which inform the development of this law in Australia. It is designed as an introductory survey subject for graduates, practicing lawyers and students completing their first law degrees.

Each class considers a different form of intellectual property including copyright; designs; patent and trade marks law; passing-off and related actions; moral rights and performer's protection; as well as a consideration of the proposed protection indigenous cultural property. In addition, this subject touches on how to deal in IP, globalisation of IP and emerging issues in IP.

78185 Intellectual Property: Law and Policy

8cp

Requisite(s): (78100c Postgraduate Legal Research OR 78203c Communications and Intellectual Property Law Overview OR ([46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)])

These requisites may not apply to students in certain courses.

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject covers much of the law and some of the business and economics of buying, selling and licensing intellectual property (IP). IP is a broad field, including patents, trade secrets, copyrights, semiconductor chip protection, trademarks, trade dress, Internet domain names, and rights of publicity.

Licensing of intellectual property takes many different forms in different types of businesses. Research and manufacturing businesses typically buy, sell and license technology, such as patents and trade secrets. They also may trade in copyrights (for example, in computer programs) and protected semiconductor chip designs. Multimedia licenses, such as those for films, video games, and multimedia websites, often involve a number of copyrighted properties, and virtually every business has a trademark or trade name that might or must be licensed and sometimes is sold (for example, in a merger or acquisition).

The subject discusses most, if not all, major types of businesses and their practices in buying, selling and licensing IP. It also touches on some of the basic principles of using IP as collateral or security for other transactions, for example, bank loans. No single subject, however, can cover all the nuances of law and practice affecting all of the industries that involve IP. This subject focuses primarily on technology licensing (of patentable inventions and trade secrets), but also discusses 'soft' IP, including such things as copyrights in literary and entertainment properties, websites and computer software and multimedia properties like video games.

The subject is interdisciplinary. About one-third of its substance explores the business and economic aspects of licensing, including the scope of a license, how licensors make money, and how business people estimate the economic value of IP and licensing rights. Another third discusses legal considerations in licensing, including relevant IP law, antitrust or competition law, involuntary licensing by operation of law, standing to sue and the problems of co-ownership, the problem of 'clearing' legal rights in IP, and selected issues in international practice, such as jurisdiction and enforcement. The final third involves practice or 'skills' training in drafting and negotiating licenses and getting a 'sense of the deal' in licensing transactions.

Much of the readings involve US law, with some European Union law included. Class discussion uses the readings as a spring board for discussing licensing in more general and international contexts, and students' using their own business and/or personal experience is encouraged.

78189 Intellectual Property Commercialisation

78190 Patent Law

8cp

Requisite(s): [78100c Postgraduate Legal Research OR [(46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)]]

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: students who have previously not completed a basic intellectual property subject are recommended to enrol in 78185 Intellectual Property: Law and Policy before this subject Postgraduate

This subject provides an understanding of the principles of patents and the patent system in Australia. Topics covered include subject matter, section 40 of the *Patents Act 1990* (specifications), infringement, inventorship, ownership and breach of confidence. Patents have been the subject of much controversy in recent times. Biotechnology challenges our traditional distinction between nature and invention; the health demands of developing countries come into conflict with the private interest of patent owners; the use of traditional knowledge of indigenous communities in biodiscovery processes can complicate the availability of patent protection; US pharmaceutical companies demand a greater role in determining what drugs should be available under Australia's Pharmaceutical Benefits Scheme; the computer

software industry demands patent protection to supplement their rights in copyright; and in a growing number of cases patents can be granted for 'business methods'. In this subject, students are introduced to the law of patents - what is patentable subject matter, what are the threshold requirements of patentability, what level of disclosure is required to justify the grant of the patentee's monopoly rights, the rights of the patent holder, exploitation of patent rights, and actions for infringement. In addition, special issues relating to biotechnology patents and the international context in which Australia's patent law operates are considered. There is some attention to plant varieties rights and the use of the action for breach of confidence to protect trade secrets.

78191 Patent Systems

8cp

Requisite(s): [78100c Postgraduate Legal Research AND 78190 Patent Law] OR [78190 Patent Law AND [(46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)]]

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: students who have previously not completed a basic intellectual property subject are recommended to enrol in 78185 Intellectual Property: Law and Policy before this subject Postgraduate

The subject is designed to equip students with knowledge and skills appropriate to representing the interests of a client in the prosecution and maintenance of patent applications - including advising on the desirability of seeking patent protection and provision of alternative protection in Australia and other countries. Topics covered include types of patent applications; claiming priority; Patent Office practice; amendment practice; opposition; re-examination; the maintenance of patents and patent applications; extension of term; extension of time; revocation; treaties and conventions including the Patent Cooperation Treaty (PCT), the Paris Convention and the Budapest Treaty; searching; assignment; licensing; compulsory licenses; Crown use; restrictions on exploitation; circuit layout legislation and practice; plant protection legislation and practice; patentability in other countries (particularly with reference to New Zealand, the United States, European Union, People's Republic of China, Japan); and petty patents.

78192 Trade Marks Law

8cp; offered either by distance, requiring no attendance, or on-campus

Requisite(s): [78100c Postgraduate Legal Research OR [(46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)]]

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an understanding of the principles of trade marks and the trade mark system in Australia. Topics covered include passing off and unfair competition, registrability issues, comparison of trade marks and assessment of deceptive similarity, ownership and authorship of trade marks, requirements of use in relation to trade marks, grounds of opposition, and infringement and post-registration maintenance of trade marks.

78193 Trade Marks Practice

8cp

Requisite(s): [78100c Postgraduate Legal Research AND 78192 Trade Marks Law] OR [78192c Trade Marks Law AND [(46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)]]

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: students who have previously not completed a basic intellectual property subject are recommended to enrol in 78185 Intellectual Property: Law and Policy before this subject Postgraduate

This subject gives students an understanding of the practice and procedure in respect of trademarks in Australia and abroad, covering the filing of trademark applications and the examination, opposition and registration of them, as well as removal and cancellation. The

subject also provides an overview of international treaties and conventions and of the trademark practice and procedure in foreign jurisdictions such as New Zealand, Canada, the United States, various South Pacific countries, selected countries of Asia and the European Union.

78194 Designs Law and Practice

8cp

Requisite(s): (78100c Postgraduate Legal Research OR [(46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)])

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: students who have previously not completed a basic intellectual property subject are recommended to enrol in 78185 Intellectual Property: Law and Policy before this subject Postgraduate

This subject concentrates on the ability to advise and to handle the interests of a client in prosecution and maintenance of a design application, including advice on the desirability of seeking design protection and provision of alternative protection in Australia and overseas. Topics covered include registrability, newness, registration procedure, maintenance, office practice, third-party objection, infringement, expunction, copyright and international aspects of design practice.

78195 Copyright Law

8cp

Requisite(s): (78100c Postgraduate Legal Research OR [(46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)])

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: students who have previously not completed a basic intellectual property subject are recommended to enrol in 78185 Intellectual Property: Law and Policy before this subject Postgraduate

This subject covers the principles of copyright, the development of case law and the structure and ambit of the legislation. Students are required to develop a good working knowledge of the *Copyright Act 1968* (as amended), and associated regulations, and to have a sound knowledge of relevant case law.

78196 Insurance Law

8cp
