The Honours Thesis is the major component of the Bachelor of Arts (Honours) in Communication program. It provides an opportunity for students to undertake original work informed by advanced theoretical study and independent research, relevant to the academic, professional and/or creative goals they have identified. Students work with an academic supervisor to produce a thesis which may be presented in one of a variety of traditional and/or non-traditional formats

Autumn semester, City campus Spring semester, City campus

55066 Writing Studies Honours Seminar

12cp; availability: not offered to exchange and study abroad students

In this seminar students are asked to engage with a range of contemporary practices and contemporary ideas to do with writing. Students work both critically (theoretically) and creatively. The seminar focuses on current and, for the most part, innovative approaches to writing. These contemporary forms of textuality may include experimental or poetic or hybrid or experimentally essayistic or fictional or interactive writing practices. The main material of the seminar is distributed across generic practices to do with various poetic or interactive or fictional forms of composition. At the same time, the seminar asks students to consider these practices in the context of major types of contemporary critical analysis, such as ecological criticism, language theory, cultural theory, digital aesthetics and theories to do with online types of composition. The seminar is designed to be a 'thinking space' and a 'practising space' for students undertaking major honours projects in composition, contemporary essay, poetry, fiction, internet-related writing and critical thought.

Typical availability

Autumn semester, City campus

55067 Communication and Information Honours Seminar

12cp; availability: not offered to exchange and study abroad students

This subject examines a selection of contested key terms in the Australian intellectual, public policy and professional fields by reference to the theoretical resources offered by journalism, media studies, communication and information studies. Students explore how specific communication and information technologies, practices and impacts are interwoven with social organisation and processes of social change. The development of comparative analyses of key terms draws on different intellectual traditions and explores their usage in different contexts. The subject also facilitates students' capacity to understand their own theoretical constructs, to locate their own usage of key terms in relation to contemporary debates in intellectual policy and professional fields and to pursue research that contributes to those debates.

Typical availability

Autumn semester, City campus

55068 Cultural Studies Honours Seminar

12cp; availability: not offered to exchange and study abroad students

This subject explores some of the methodologies that characterise the contemporary practice of cultural studies. This involves a reexamination of the work of major cultural theorists whose work has influenced cultural studies research; situating their theoretical writings historically and politically, and investigating how they have been used to explicate individual, cultural and social practice. As well studies, ranging from discourse analysis to new ethnography and sensory analysis, and how they are used in cultural research. Students are encouraged to explore the interactions of, and sometimes conflicts between, theories and methods so that they can act as informed, critically aware and creative researchers; able to design the methodology (combination of theories and methods) that is most appropriate to a given project or issue.

Typical availability

Autumn semester, City campus

55069 Honours Workshop

12cp; availability: not offered to exchange and study abroad students

This is the foundational subject for all honours students in communication. It provides students with the opportunity to develop skills that enhance their capacity for undertaking research and independent scholarship and for successfully producing their thesis/production item in the second semester. Working closely with their academic mentors and peers, students deepen their understanding of the theoretical underpinnings of their chosen field and further develop the theoretical framework of their projects.

Typical availability

55073 Social Sciences Honours Seminar

12cp; availability: not offered to exchange and study abroad students

This seminar provides an opportunity for students to critically engage with claims to truth made within the social sciences by exploring key epistemological, theoretical and methodological debates held within, and sometimes between, relevant disciplines. As well as providing a critique of processes of knowledge production, the seminar also offers a range of critical theoretical tools as potential starting points for students' own research work. It aims to assist students in developing a theoretically reflexive and analytical approach to their own research knowledge practices, as well as to those of others.

Typical availability

Autumn semester, City campus

57008 Digital Libraries and Collections

8ср

Graduate subject - Information Management - 400 level

This subject focuses on digital information resources and services and virtual collection building and management. The student is introduced to the role and functions of new and emerging technologies associated with the virtual library or digital library environment like electronic journals, electronic repositories and web-based digital information resources and services. Topics covered by this subject include virtual information system coordination and management and principles of collection building and management in electronic environments. Issues related to the development of digital information collections, such as access versus ownership, resourcing and legal issues, are also addressed.

Typical availability

Spring semester, City campus

57009 Information and Knowledge Management Project

16cp; availability: not offered to exchange and study abroad students Requisite(s): 57089c Information Research and Data Analysis AND 48 credit points of completed study in C04203 Master of Arts in Information and Knowledge Management

Graduate subject - Information Management - 500 level

This is a core subject for the Master of Arts in Information and Knowledge Management. The subject involves the implementation of a professional project that is aimed at integrating theoretical knowledge and practical skills. A combination of learning frameworks is used (e.g. learning contracts, information project management, information consolidation) to enable the student to develop, with academic supervision, an individually tailored program or project.

Typical availability

Autumn semester, City campus Spring semester, City campus

57011 Research and Reporting for Journalism

8ср

Graduate subject - Journalism - 400 level

This subject aims to develop sound basic practices in professional journalism. It focuses on news and current affairs research and reporting, the role of journalism in liberal democracies, and journalistic techniques, ethics and standards. Students develop a series of stories in a chosen round. Through group discussion and a close analysis of news and current affairs, students develop an understanding of, and ability to contribute to, contemporary debates in journalism. Students also work to deadlines researching and reporting news stories for journalism publications.

Typical availability

Autumn semester, City campus Spring semester, City campus

57012 Regulation of the Media

8cp

Graduate subject - Journalism - 400 level

This subject examines the ways in which the production and distribution of media and cultural products are regulated, in the context of broader economic, political, historical and social processes. An underlying theme is a critique of the development of and contradictions among different ideas of free speech, and how these are used to promote or defend a range of communication

practices, in particular historical and cultural contexts. The subject aims to develop a working knowledge of relevant areas of media law, such as defamation, copyright and contempt, with an emphasis on understanding the way the law works in practice and the policy issues which arise. A comparative approach is used to explore legal systems in different parts of the world.

Typical availability

Autumn semester, City campus Spring semester, City campus

57013 Journalism Studies

8cp; availability: not offered to exchange and study abroad students Graduate subject - Journalism - 400 level

The aim of the subject is to explore the scholarly debates that address news organisations, journalism practices, and the processes of production and consumption of news and current affairs. A comparative theoretical approach is used to critically examine questions about journalism – both from the point of view of those involved in producing media products and from the point of view of audiences. The subject considers the relationship between the media and ideas about democracy, and the relevance of media theory for professional journalism.

Typical availability

Autumn semester, City campus Spring semester, City campus

57014 Feature Writing

8cp; availability: postgraduate Journalism students are permitted to undertake this subject concurrently with the subject Research and Reporting for Journalism

Requisite(s): 57011c Research and Reporting for Journalism These requisites may not apply to students in certain courses. See access conditions.

Graduate subject - Journalism - 400 level

This subject aims to develop skills in feature story writing through a comparative approach to the work of contemporary practitioners. The emphasis is on developing and improving research and writing skills. Students aim to produce publishable work. The subject offers students insights into the breadth of style and genre available to non-fiction writing, including social-realist writing, essays, columns, profiles, 'new journalism' and more complex in-depth features. A range of techniques of researching, interviewing and writing are practised and critiqued. Ethical considerations are explored in the context of particular examples of production.

Typical availability

Autumn semester, City campus Spring semester, City campus

57021 Journalism Internship

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57011 Research and Reporting for Journalism

These requisites may not apply to students in certain courses. See access conditions.

Graduate subject - Journalism - 400 level

This subject gives students opportunities for structured professional work placement in which journalism is produced. Those participating in this subject produce a portfolio of journalism, a written report and a diary of the time and work details during the attachment. Students build on and develop skills they have acquired during their studies and apply those skills in a practical environment. The subject is aimed at self-directed learning and regular academic supervision. Students are also asked to present a seminar paper that reflects their knowledge and learning experience with other students.

Typical availability

Autumn semester, City campus Spring semester, City campus

57022 Foundations of Communication

8cp; availability: not offered to exchange and study abroad students Graduate subject - Public Communication - 400 level

This subject introduces the concept of the management arenas within which communication is practised. It analyses the communication issues raised by different organisational contexts and applies the

models and metaphors of dominant and alternative perspectives in communication studies. Meaning-making processes in communication management practice are studied to develop an understanding of communication as negotiated meaning. Students learn to approach workplace situations critically and creatively and develop their communication management expertise in interpersonal and mediated communication to handle change, uncertainty and complexity.

Typical availability

Autumn semester, City campus Spring semester, City campus

57023 Communicating with Publics

8cr

Graduate subject - Public Communication - 400 level

In this subject students analyse the social construction of publics and organisation-public relationships. They study different models of public relations practice and draw on current theories about publics, audience and media to help them understand the development of strategies to communicate with internal and external publics. There is a strong focus on identifying the ethical implications of decisions, actions and outcomes in communicating with publics. Students are encouraged to participate in a discussion on approaches to empowering or influencing publics. The attitudes, knowledges, behaviours and issue positions of various publics are studied to enable students to assess how best to communicate with them. Students learn about different research strategies for understanding communicating with publics.

Typical availability

Autumn semester, City campus Spring semester, City campus

57024 Managing Public Communication Strategies

8cp

Requisite(s): 57023 Communicating with Publics

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Graduate subject - Public Communication - 400 level

This subject explains the concept of public relations as communication management and demonstrates the contribution and relevance of public relations to modern organisations. A range of perspectives provides thoughtful and challenging approaches to the work of a public relations practitioner. Students learn to set goals and objectives and to plan and implement campaigns for internal and external publics. They become confident in evaluating all aspects of their work and develop competency in cost-benefit analysis and the analysis of the financial implications of their work. Public relations principles are applied to examples from students' own professional practice to develop a reflective understanding of why as well as how to approach particular issues and problems.

Typical availability

Autumn semester, City campus Spring semester, City campus

57025 Intercultural and International Communication

8cp

Graduate subject - Public Communication - 400 level

Drawing on latest research and developments, this subject introduces core concepts, debates and vocabularies in the interdisciplinary, and relatively new field of intercultural communication. Intercultural communication is a necessary part of personal and professional lives as a result of global restructuring of economic, social and cultural relations. As a result of new communication technologies, the movement of people across borders, overseas study, global media, transnational jobs, tourism, global migration, international conflicts, global economies, transnational organisations, people from different backgrounds come into contact with one another across a range of culturally diverse contexts: home and neighbourhood, places of leisure, community organisations, workplaces, and regions.

The subject move away from simplistic ways of understanding culture to test new ways of working on intercultural communication personally and professionally. Students study intercultural communication as constructed through sociopolitical and cultural processes. This means understanding intercultural communication against a backdrop of stereotyping and othering where international

communication takes place (communities, workplace, business, politics), and the wider issues of inclusion and social justice in relation to education, mobility and work. The approach adopted on the subject is pragmatic, critical, ethical and interdisciplinary.

Typical availability

Autumn semester, City campus Spring semester, City campus

57026 Strategic Communication and Negotiation

8cr

Graduate subject - Public Communication - 400 level

This subject analyses and critiques communication campaigns and develops expertise in using strategic planning and applying it to communication management. This involves applying understandings of environmental scanning, stakeholder analysis and issues management. There is an emphasis on understanding consultative processes and learning effective approaches to community consultation. Students develop an understanding of and expertise in negotiation strategies. They study techniques of negotiation and conflict to enhance the development of expertise in managing different expectations and results. Students learn a practical approach to negotiating agreement and apply it to their communication and public relations work.

Typical availability

Spring semester, City campus

57028 Research for Communication Professionals

8cp

Graduate subject - Public Communication - 400 level

This subject introduces a range of research methods useful for communication practice and ensures that students can choose and use appropriate research methodologies. Using examples drawn from industry, research is presented as a tool to make the practice of communication and public relations more responsive, effective, useful and professional. Students develop expertise in designing research, making observations, taking measurements, and interpreting and reporting their findings, all with a focus on the kinds of research they are likely to encounter in their own careers. It provides those enrolling in the Communication Management Project with the necessary knowledge of research to design and manage their projects.

Typical availability

Autumn semester, City campus

57031 Non-fiction Writing

8cp; availability: not offered to exchange and study abroad students Graduate subject – Writing – 400 level

Non-fiction writing takes many forms, and each of these has its own generic conventions, limitations and potentials. This subject explores the similarities and differences between such genres as the essay, technical and scientific writing, writing history (and recording oral histories), writing about place, cultural criticism and feature journalism. In any one semester, the genres considered depend on the availability of expert staff and on student interest.

Typical availability

Autumn semester, City campus Spring semester, City campus

57034 Professional Writing Project

12cp; availability: not offered to exchange and study abroad students Requisite(s): 57033c Writing Seminar Graduate subject - Writing - 500 level

This subject is designed for students who have substantial experience in writing and are ready to work independently. Working under the supervision of an appropriate member of staff, students devise, research, draft and revise to a high standard a substantial (15,000 words or equivalent) work of professional writing. The writing may be in any appropriate genre, depending on the viability of the proposed project and the availability of appropriate supervision.

Typical availability

57035 Organisational Change and Communication

8cp

Graduate subject - Public Communication - 400 level

In this subject students analyse differing perspectives on communication in organisations and the ways in which group processes affect organisational life. The subject focuses on the communication features of management and leadership and aims to provide students with the ability to evaluate and critically discuss their own and others' leadership and communication styles. It enables students to make connections between theories and practice so they can develop successful team building and team management strategies. Conflict management, change management, culture creation, problem solving and decision-making are some of the workplace challenges explored in this subject. Approaches to leadership, communication climate and motivation of staff are analysed in the context of ever-changing organisational environments, including technology and globalisation.

Typical availability

Autumn semester, City campus

57041 Narrative Writing

8ср

Graduate subject - Writing - 400 level

This subject emphasises narrative development, with close attention to the relationship between structure and content in fiction. Craft skills appropriate to narrative writing are developed through exercises and sustained work on pieces of fiction, along with consideration of principles of editing and revision. The focus of the class is the students' own work. A range of exemplary contemporary narrative writing is read and discussed, integrating practical work with critical reflection on the processes of narrative writing. This is a core subject for postgraduate writing students and is suitable for students in other areas wishing to develop their writing through exercises and sustained work.

Typical availability

Autumn semester, City campus Spring semester, City campus

57046 Professional Editing

8cn

Graduate subject - Writing - 400 level

This subject is offered to postgraduate students who wish to gain a practical understanding of the process of editing written texts, so that they may edit works themselves, or so that they have an understanding of the process when their own work is edited. The subject focuses on the editing of literary fiction and non-fiction manuscripts. The emphasis is on editing book-length manuscripts but the skills can be applied to editing any written texts.

Typical availability

Autumn semester, City campus Spring semester, City campus

57053 Book Publishing and Marketing

8ср

Graduate subject - Writing - 400 level

This subject is offered to students who wish to gain an understanding of production and marketing in the book publishing industry in print and digital forms. The subject examines the stages of the book production process from the acquisition of a title through to its marketing and promotion. The subject shows students how to identify and understand a target audience and the most effective ways to reach it. In this subject the focus is on the literary book publishing industry, though many of the principles discussed could be applied to other forms of text publications such as magazines and textbooks.

Typical availability

Spring semester, City campus

57061 Issues in Documentary

8cp

Graduate subject - Media Arts and Production - 400 level

This subject introduces students to contemporary debates in documentary through a study of documentary history, genre, ethics and changing forms. It develops skills in critically analysing documentary film and its evolution from silent film through to the digital online environment. Students present critical documentary case studies via screenings and analysis using contemporary documentary film scholarship. Students develop documentary proposals for film, television and/or the online environment from research to treatment or first draft stage. Students participate in project workshops to discuss their proposals and essays. Students may also produce indepth critical analyses of documentary film(s) and/or contemporary issues in documentary.

Typical availability

Autumn semester, City campus

57084 Information Architecture and Design

8ср

Graduate subject - Information Management - 400 level

This subject introduces students to user-centred information design and architecture principles. These are applied specifically to the development of information products and services that facilitate a variety of communication interactions. Content management and organisation is examined in relation to models for designing and structuring information and communication products. These models are evaluated in terms of their appropriate application to the opportunities and capabilities available for distributing information across a range of print and multimedia. Policies and key issues such as accessibility, ethics, intellectual property, privacy and security, publishing, usability and online teaching and learning are related specifically to implications for accessing, using and sharing knowledge. On a practical level, students develop professional capabilities for translating information architectures into web materials using web authoring and HTML skills. They also develop professional communication and collaboration skills by working in teams to meet collectively negotiated goals.

Typical availability

Autumn semester, City campus

57087 Knowledge Management and the Organisation

8ср

Graduate subject - Information Management - 400 level

This subject explores notions of information and knowledge, critically examining the range of viewpoints and concepts within knowledge management. Students examine a variety of types of organisations, and practice techniques for analysing and evaluating the internal and external information and knowledge environments of these organisations. From this analysis of information and knowledge production, flows and processes can be identified and evaluated. The subject emphasises the human characteristics of generating, communicating and using knowledge, and the way these can be integrated with the organisational strategy and processes. Students will have an understanding of the knowledge components of organisational processes and cultures, and the role of the information professional in knowledge-based organisations. The value of knowledge within organisations is explored via knowledge management case studies.

Typical availability

Autumn semester, City campus

57089 Information Research and Data Analysis

8ct

Requisite(s): 57100 People, Information and Knowledge Graduate subject - Information Management - 400 level

This is a core subject for the Master of Arts in Information and Knowledge Management. Students are introduced to a range of the quantitative and qualitative research methods used in the study of people and information and develop skills in analysing and presenting data using standard software packages. Students apply their knowledge and skills to designing and executing a pilot research project. The ethics and politics of research are covered and the differing views of reality, the roles of the researcher and the establishment of knowledge claims are introduced.

Spring semester, City campus

57100 People, Information and Knowledge

8cn

Graduate subject - Information Management - 400 level

This subject begins with an examination of the fundamental philosophies of information and knowledge relevant to the areas of information management and knowledge management. It also serves as an introduction to frameworks for exploring and analysing people's information behaviour. Students develop a detailed understanding of the theoretical underpinnings that link people, information and knowledge. The subject introduces the concepts of information ecologies and communities of practice as part of the skill set for working with and understanding the implications of people needing, using and adding value to information. These concepts draw on multidisciplinary theories articulated within the social, cognitive, management and computing sciences.

Typical availability

Autumn semester, City campus Spring semester, City campus

57101 Advanced Screenwriting

8cp

Requisite(s): 50359c Screenwriting OR 50309 Advanced Screenwriting OR 57142 Writing for the Screen These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Graduate subject - Writing - 400 level

This subject explores the creative and complex storytelling potential of the cinematic image. It examines the relationship between the eye of the camera and the written text and offers students an opportunity to investigate both sound and image as metaphor while developing an existing piece of screenwriting. It explores adaptation from a literary source as well as storytelling possibilities opened up by digital technology and contemporary experiments in narrative structure. Students with an existing treatment or draft may develop a feature or short feature. Students with a short drama may develop a shooting script.

Typical availability

Spring semester, City campus

57103 Knowledge Management Strategies

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57087 Knowledge Management and the Organisation OR 32534 Knowledge Management Systems OR 21860 Managing Knowledge

Graduate subject - Information - 400 level

This subject builds on an understanding of organisational drivers for managing information and knowledge. Students investigate the characteristics of a broad range of strategies within the current rhetoric of knowledge management. This investigation considers the roles of enablers such as people, process, content and technology in planning and managing knowledge initiatives to reinforce, support and/or strengthen the knowledge environment. Topics covered are largely driven by current developments within knowledge management and include building knowledge cultures, creativity and innovation, organisational memory, facilitating communities of practice, managing content, value creation and knowledge transfer. At end of the subject students will be able to propose appropriate strategies for creating, sharing and using knowledge to achieve goals at both a group and organisational level.

Typical availability

Spring semester, City campus

57104 Information and Knowledge Management Project Part A

4cp; availability: not offered to exchange and study abroad students Requisite(s): 48 credit points of completed study in C04203 Master of Arts in Information and Knowledge Management AND 57089 Information Research and Data Analysis

Graduate subject - Information Management - 500 level

This is a core subject for the Master of Arts in Information and Knowledge Management. The subject involves planning a professional project that is aimed at integrating theoretical knowledge and practical skills. A combination of learning frameworks is used (e.g. learning contracts, information project management, information consolidation) to enable the student to plan and develop, with academic supervision, an individually tailored program or project.

Typical availability

Autumn semester, City campus Spring semester, City campus

57105 Information and Knowledge Management Project Part B

12cp; availability: not offered to exchange and study abroad students Requisite(s): 57104 Information and Knowledge Management Project Part A

Graduate subject - Information Management - 500 level

This is a core subject for the Master of Arts in Information and Knowledge Management. The subject involves the implementation of a professional project that is aimed at integrating theoretical knowledge and practical skills. A combination of learning frameworks is used (e.g. learning contracts, information project management, information consolidation) to enable the student to implement, with academic supervision, an individually tailored program or project.

Typical availability

Autumn semester, City campus Spring semester, City campus

57108 Film Animation

6ср

Graduate subject – Master of Animation (Faculty of Design, Architecture and Building)

This subject introduces students to all the major styles of traditional film animation and to the study of film animation techniques. Students are introduced to flip books, claymation, drawing on cells, pixillation and collage animation styles through hands-on exercises and detailed study of animation films. Equipment used includes 16 mm non-sync cameras and 16 mm and 35 mm Oxberry Animation Stands.

Typical availability

Autumn semester, City campus

57109 Film Animation

8ср

Graduate subject - Media Arts and Production - 400 level

This subject introduces students to all the major styles of traditional film animation and to the study of film animation techniques. Students are introduced to flip books, claymation, drawing on cells, pixillation and collage animation styles through hands-on exercises and detailed study of animation films. Equipment used includes 16 mm non-sync cameras and 16 mm and 35 mm Oxberry Animation Stands.

Typical availability

Autumn semester, City campus

57122 Short Fiction Workshop

8ср

Requisite(s): 57041 Advanced Narrative Writing OR 57031 Nonfiction Writing

Graduate subject - Writing - 400 level

This is an advanced workshop subject for students who are interested in short fiction, and keen commence work on a collection of short stories. The focus of this subject is on form: what makes a short story? How do I turn a simple narrative or even an anecdote into a short story? We also focus on redrafting and editing.

Autumn semester, City campus

57124 Novel Writing

8cp

Requisite(s): 57041 Advanced Narrative Writing OR 57031 Nonfiction Writing

Graduate subject - Writing - 400 level

This is an advanced workshop for students who have some background in fiction writing and who are either commencing work on a novel or have already commenced. The aim of this subject is to produce the opening section of a potential novella or novel, or a substantial portion of a work in progress, minimum 5000 words and maximum 10,000 words. Contemporary and experimental forms of the novel are studied and encouraged as well as more traditional narratives. Students study a range of short novels that enhance their understanding of the form and help develop their critical skills. Workshop participation and peer assessment are a vital part of this subject.

Typical availability

Autumn semester, City campus Spring semester, City campus

57130 Animation Concepts Seminar

6ср

Graduate subject – Master of Animation (Faculty of Design, Architecture and Building)

This subject covers some key concepts of animation. Students will be able to study and research these concepts in relation to major and experimental methods for generating animation (including optical toys, stop frame, pixillation, procedural, motion capture, genetic algorithms, cel, claymation, rotoscoping, interactive, real-time, 2D and 3D computer animation). Learning is by lectures, seminars and in-class presentation by students.

Typical availability

Autumn semester, City campus

57131 Inventive Media Advertising

8ср

Graduate subject - Public Communication - 400 level

This subject explores the importance of ideas in communication and building brands, the challenges posed by a diverse media landscape and the efficiency of advertising. Against a backdrop of technological change, students examine the consumer's interactions with the media, brands, ideas and advertising. As a component of finding insights and recognising ideas, students examine what changes occur in ideas as they migrate from one channel to another and the associated issues for practitioners. In pursuit of innovative approaches to idea generation, a critical research and practice-based approach is taken in which students explore experimental and industry techniques and critique their value in uncovering ideas with practical potential for advertising. Students develop creative solutions for a variety of channels representative of today's complex media environment.

Typical availability

Spring semester, City campus

57132 Media Relations

8ср

Graduate subject - Public Communication - 400 level

In this subject, students explore the role and uses of media relations for communication management. They explore the relationship between journalism and public relations and the structures, regulatory frameworks and processes relevant to developing media strategies. They review mass communication research traditions such as media effects theories and agenda setting, applying their understanding to issues for professional public relations practice. Public opinion and diffusion of ideas and innovations are examined, along with the concept of the public interest. Students investigate ways in which new media have changed the landscape for communicating with publics and for media relations. They practise developing media plans and products to broaden their awareness of the diversity of media channels. In their final project, they develop briefing notes and perform as interviewees in the UTS television studios.

Typical availability

Autumn semester, City campus Spring semester, City campus

57133 Writing Poetry

8cr

Graduate subject – Writing – 400 level

In this subject students write extensively and read widely in a variety of genres of contemporary and modern poetry. The subject is designed for students who, interested in writing, have a sustained interest in poetry or who, while not being poets themselves, wish to develop a working knowledge of recent and contemporary practices in poetry. The approach stresses the student's own creative practice and the exploration of genre and technique in the composition of poetry. The unit also introduces the work of a number of contemporary Australian and international poets as part of a field of creative and professional contexts in which poetry is written today. The unit is a workshop designed to encourage participants to enhance their skills as poets and also to develop a critical ability in editing and revising their own work and that of other writers in the class. At the same time, broad issues to do with the work of the contemporary poet, whether to do with specific aspects of creative practice, publishing, experimentation, or the presence of poetry in performance oriented or other non-literary formats, will feature in the workshop.

Typical availability

Spring semester, City campus

57134 Theory and Creative Writing

8cp

Graduate subject - Writing - 400 level

This is a core subject for two of the graduate writing programs and one which provides valuable theoretical and historical contexts for students' own writing. It introduces students to major developments in literary theory and examines in close detail a number of key texts from several genres that illuminate the use of theory for the practising writer. It also introduces students to some of the major developments in western literature, such as realism, modernism and postmodernism, as well as to the narrative theories that underlie these developments, particularly in relation to contemporary writing. Students critically explore ideas on writing directly arising from their theoretical and other reading, both in classroom discussion and in their written work. Students also workshop their creative writing, which is expected to reflect aspects of writing and literary theory that has been explored in the subject.

This subject:

- contextualises writing by examining literary movements, ideas and developments
- promotes essential critical and creative thought in relation to reading and writing
- enables a practical understanding of aesthetics and cultural debates
- enables exploration and experimentation of ideas in writing practice.

Typical availability

Autumn semester, City campus Spring semester, City campus

57138 International and Comparative Journalism

8cp

Graduate subject - Journalism - 400 level

This subject is concerned with the ways in which the philosophical basis, role and activities of journalism have developed in relation to social context. It takes a comparative approach to historical and contemporary forms of journalism in western liberal democracies, post-colonial multi-party states and single-party states, and relates professional and community practice injournalism to developments in the political, economic and coercive fields. Among other themes it will consider internationalisation of news flows, development journalism, policy initiatives such as NWICO (the New World Information and Communication Order), free speech and censorship, and public/private sector media. It emphasises the specificity of historical and geographic factors within larger structural developments, and takes a comparative and critical approach to the use and evaluation of social theory.

Autumn semester, City campus Spring semester, City campus

57142 Writing for the Screen

8ср

Graduate subject - Writing - 400 level

This subject offers postgraduate students the opportunity to develop advanced skills in writing for the screen. Students can develop short or long-form drama or animation. Students develop an idea through industry-accepted stages of development and formats and through workshops with professional actors. Students gain skills in research, visualisation, structuring, storytelling and character development. Students also improve their ability to read, develop and script-edit their own work and the work of their colleagues.

Typical availability

Autumn semester, City campus Spring semester, City campus

57144 Popular Fiction

8ср

Requisite(s): 57041 Narrative Writing OR 57031 Non-fiction Writing OR 57142 Writing for the Screen OR 50359 Screenwriting OR 50309 Advanced Screenwriting

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Graduate subject - Writing - 400 level

This subject provides a theoretical understanding of, and practice in, the writing of three popular genres: crime/adventure, romance, and science fiction/fantasy. It offers students the opportunity to work in a specific genre while simultaneously exploring the wider codes, conventions, structures and possibilities of writing popular fiction. It examines the historical and contemporary importance of popular fiction as a literary form and ways in which generic forms may be used or subverted. Several key popular fiction texts are examined with critical reflection on linear narrative and the concept and construction of plot.

Typical availability

Autumn semester, City campus

57145 Freelance Writing

8cp

Graduate subject - Writing - 400 level

This subject provides theoretical and practical understanding of writing in the key genres of the professional freelance world: literary journalism, essay writing, reviewing (particularly book reviewing) and cultural criticism. Students are introduced to examples of critical writing in magazines and journals as well as in the major newspapers, and are encouraged to engage in informed critical reading in relation to contemporary writing. The subject aims to increase understanding of how appropriate critical writing responds to significant literary and other cultural issues, and how it may usefully contribute to debate over these issues within institutional, publishing and media contexts.

Typical availability

Spring semester, City campus

57146 Organising Information

8ср

Graduate subject – Information and Knowledge Management – 400 level

This subject explores the interrelationship between processes and principles of information/knowledge organisation and information access. Students learn advanced skills of information organisation and apply them to the design and development of a database created in response to particular client requirements. The subject covers topics such as database structures, content analysis, indexing, abstracting, classifying, content management, architecture and metadata creation. The major project involves database creation and usability testing.

Typical availability

Spring semester, City campus

57147 Enterprise Content Management

8cp

Graduate subject – Information and Knowledge Management – 400 level

Enterprise content management (ECM) includes the strategies, processes and tools used to capture, manage, store, preserve, and deliver content to support organisational outcomes. This subject provides an overview and explanation of ECM and its key components. It explores how ECM contributes to the management and use of an organisation's structured and unstructured information, wherever that information exists.

Students explore frameworks of ECM and are introduced to the strategies and techniques for managing records, documents, email, web-based and collaboration content, business applications such as customer relationship management and enterprise resource planning, business processes and workflow. The subject explores key strategic drivers for ECM, such as governance and information sharing, and shows how organisations effectively deploy ECM to improve relationships between people, content, processes and technology and contribute to organisational outcomes.

Typical availability

Spring semester, City campus

57148 Discovering and Accessing Information

8cr

Graduate subject – Information and Knowledge Management – 400 level

This subject explores the nature, functions and characteristics of a range of resources and collections in diverse settings. It examines the interrelationship between processes and principles of information/knowledge organisation, selection and retrieval practices and information seeking behaviours. Students develop an understanding of the theory and practice of information retrieval and collection management in networked information environments. Students learn to apply client-centred approaches to information retrieval and develop specialised search strategies that enable them to improve client access to electronic and print resources. The subject covers topics such as: Boolean logic, thesauri tools, keyword searching, metadata and mediating relationships. Information retrieval interactions (including interpreting the needs of information seekers, negotiating, question analysis, searching and evaluating retrieval effectiveness) are also examined. These principles are put into practice in specific client contexts in the workshops and assessable tasks.

Typical availability

Autumn semester, City campus

57149 Information and Knowledge Management Major Paper

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57089 Information Research and Data Analysis AND 48 credit points of completed study in C04203 Master of Arts in Information and Knowledge Management

Graduate subject - Information and Knowledge Management - 500 level

In this subject, students explore in depth a topic relevant to a specific area of information or knowledge management theory or practice and prepare a major paper for publication in a refereed journal of the field. Students critically analyse and synthesise theoretical and professional literature on the topic; they also have the opportunity to theorise their own practice. Students demonstrate their understanding of the topic through the presentation and discussion of their major paper and extend this understanding to the topic areas chosen by others in the student group.

Typical availability

57150 Editing and Design

8cp

 $\stackrel{\cdot}{\text{Requisite(s)}}$: 57011 Research and Reporting for Journalism

Graduate subject - Journalism - 400 level

This subject introduces students to the basic principles, techniques and professional practice of editing, layout, design and production across print and online media. The subject covers print in all its forms as well as aspects of editing for online publications. The subject takes as its premise that whatever information is to be delivered, and by whatever sophisticated means, it remains imperative this is achieved by applying professional principles such as accuracy, clarity, fairness and balance and that the scrupulous eye and rigorous standards of a trained sub-editor are essential to that outcome. The subject covers the theory and practice of editing, the role of the sub-editor, and basic design and layout for print and online media.

Typical availability

Spring semester, City campus

57151 Storytelling with Sound and Image

8cr

This subject explores the production of news and current affairs in the audio visual domain within the context of a critical examination of current professional practice. Students develop skills in audio and video recording, interviewing, scripting, editing and presentation while devising and producing short news and current affairs reports. Students develop an understanding of the impact of online media developments on audio and visual journalism and the ethical implications that arise in the production of broadcast materials. A focus on issues relevant to cultural diversity is maintained throughout the course. Students log their stories in their e-portfolios, exploring the prospect of publishing more broadly.

Typical availability

Autumn semester, City campus Spring semester, City campus

57152 Investigative Research in the Digital Environment

8cp

This subject introduces advanced skills and methods for doing investigative research in the electronic environment, often referred to as computer-assisted research, not only for advanced information retrieval, but also for data mining and data and information analysis. Students develop their capacity to use contemporary computer-based methods of investigation in combination with other methods of inquiry and analysis to produce new knowledge and insights in relevant fields of practice that include information and knowledge management, journalism and other forms of social research. As well, students develop PIM (personal information management) techniques, including the creation of databases and digital repositories and explore how these can be used in the writing of research briefings for clients, reports for a range of publics, or investigative stories for audiences. This subject is designed for postgraduate students who already have basic information discovery and retrieval skills developed in information management, journalism, business, or other relevant field of practice.

Typical availability

Autumn semester, City campus Spring semester, City campus

57153 Digital Curation

8ср

Postgraduate

Increasingly vast amounts of digital data, content and objects are being created in a multitude of formats, in many organisational and cultural contexts, including museums, archives, film and media organisation, government, corporate and research institutions. As well, there has been huge investments in digitisation and purchase of digital content and information. In this subject students are introduced to both the theory and applied knowledge of storing and preserving this digital content so that future generations are able to access and understand it. Students are introduced to a range of techniques for

digitising analogue materials, for migrating these file formats to newly developed technologies, for preserving the original context of the content and to provide mechanisms for this content to be accessed. In a collaborative and interactive learning environment, students develop specifications for digital curation projects and prototype trusted digital curation models, taking into consideration the social-economic and legal aspects of digital curation, such as digital rights managements, archival evidence and specialised social and cultural contexts.

Typical availability

Spring semester, City campus

57154 Writing Television Drama

8cr

This subject offers postgraduate students a comprehensive overview of, and active participation in, the practical processes involved in developing and writing long form television character-based drama and comedy, from initial idea through to script production. The subject is project-based, taking students from the basic elements of screenwriting, through the particular collaborative process of television series and serial writing, and acquainting them with the idiosyncrasies of dealing with producers, story liners, editors and directors. Students view and critically analyse a wide range television drama and comedy, and hybrid forms, from Australia and overseas. Working in groups, each student generates an idea for a television series which is then developed into a formal, 'series outline', or 'production bible', This includes a complete draft of a sample episode. Students learn how to pitch an idea to producers/directors and from it produce the type of follow-up document that has currency within the industry. Students are assessed on both group and individual work.

Typical availability

Spring semester, City campus

57155 Online Journalism

8cp

Requisite(s): 57011 Research and Reporting for Journalism These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject introduces students to the application of internet technologies to journalism practice. It builds on the journalism skills of research, reporting, interviewing and analysis and applies them to the World Wide Web. The subject explores changes in professional journalism practice and the major issues related to sourcing and publishing journalism on the web. It teaches web publishing skills for journalism and explores content management systems for the publication of text, video, stills, audio and soundslides.

Typical availability

Autumn semester, City campus Spring semester, City campus

57156 Radio Journalism

8ср

Requisite(s): (57011 Research and Reporting for Journalism AND 57151 Storytelling with Sound and Image) OR (57168 Sound and Interaction AND 57167 Moving Image)

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject develops the editorial, technical and presenting skills involved in the production of radio current affairs journalism. Students study a range of current affairs formats as they produce short- and long-form current affairs packages for broadcast on radio station 2SER-FM. As the students learn practical radio journalism skills, they explore the editorial and ethical issues that exist in the professional broadcast environment.

Typical availability

Spring semester, City campus

57158 Television and Video Journalism

ao8

Requisite(s): (57011 Research and Reporting for Journalism AND 57151 Storytelling with Sound and Image) OR (57167 Moving Image AND 57168 Sound and Interaction)

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject develops the editorial, technical and presenting skills involved in the production of television and video news and current affairs journalism. Students study a range of news and current affairs formats as they produce short- and long-form news and current affairs packages suitable for broadcast on the internet and/or television. As the students learn practical television and video journalism skills, they explore the editorial and ethical issues that exist in the professional broadcast environment.

Typical availability

Autumn semester, City campus Spring semester, City campus

57161 Investigative Journalism

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57011 Research and Reporting for Journalism These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject introduces students to investigative reporting, a style of journalism which probes deeper than most daily news journalism. Students familiarise themselves with research techniques which have proved useful to journalists pursuing in-depth stories, analyse and learn from investigative reporting by others, and solve problems which arise in stories through group discussion. The subject emphasises problem solving in the context of hands-on experience in developing stories from conception to finished product. The subject is designed to: demonstrate a wide variety of practical research techniques, especially the use of public records; to show the distinctiveness of investigative reporting; and to use students' own problems and experience in researching their assignments as practical examples of the way to apply investigative techniques.

Typical availability

Autumn semester, City campus Spring semester, City campus

57162 Memory and Life Writing

8cp; availability: not offered to exchange and study abroad students

The study and writing of a life is now one of the most popular and dynamic fields in non-fiction scholarship. This subject introduces students to the interdisciplinary study of life writing in forms such as biography, autobiography, family history, oral history, memoir, TV, radio, drama and portraiture, and engages with the critical and methodological issues raised by these various approaches. In scoping the field, this subject engages with central issues of memory, agency, identity, self-representation, and so on. Life writing can encapsulate the relation between the individual and society, the local and the national, the past and present, and the public and private experience. Through its various activities, the subject aims to air such topics for both academic and 'general' audiences, especially through a consideration of how life writing contributes to our broader cultural heritage.

Typical availability

Spring semester, City campus

57163 Non-fiction Project Development

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57031 Non-fiction Writing AND ([57061 Issues in Documentary OR 57162 Memory and Life Writing]) AND 8 Credit Points in spk(s): SMJ10042 Media Arts and Production Sub-major There are also course requisites for this subject. See access conditions

This subject requires students to plan and structure their major project through research and development, and in consultation with their allocated academic advisor. The subject is conducted by individual guidance and group work, and students are required to regularly present the progress of their research and development throughout

the semester. Students critically explore the most appropriate and effective methods for realising their substantial work of non-fiction.

Typical availability

Autumn semester, City campus Spring semester, City campus

57164 Non-fiction Writing Project

16cp; availability: not offered to exchange and study abroad students Requisite(s): 57031 Non-fiction Writing AND 57061 Issues in Documentary AND 57162 Memory and Life Writing AND 57163 Non-fiction Project Development

There are also course requisites for this subject. See access conditions

This subject requires students to synthesise the knowledge and skills they have developed in the Master of Arts in Non-fiction Writing. The completion of a substantial work of non-fiction writing is the capstone of the course, and demonstrates the students' ability to work professionally and independently. On completion of this subject students are expected to be able to demonstrate high-level skills in researching, developing, structuring and completing a major written project in a selected non-fiction genre. Students respond to critical feedback throughout the supervision of the process, to re-write and edit their work.

Typical availability

Autumn semester, City campus Spring semester, City campus

57165 True Crime

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57041 Narrative Writing OR 57031 Non-fiction Writing

This subject focuses on true crime writing. Students are asked to engage with the history, contexts, conventions and contemporary debates around the notion of true crime. The subject aims to develop students' awareness of the wide possibilities and scope of writing creatively in the true crime genre, and to produce an extended piece of true crime writing in a workshop environment.

Typical availability

Spring semester, City campus

57166 Documentary Production

8cp; availability: not offered to exchange and study abroad students

This subject explores conceptual and production approaches to documentary media forms. Students are introduced to key documentary modes, and examine documentary strategies and forms from photo essay to video and sound documentary, to emerging online and interactive documentary. Students undertake a series of handson exercises to advance their skills in producing, directing, shooting and editing for documentary. They also take a short documentary from idea to treatment. Throughout the subject, students investigate the issues facing media producers seeking to work with the creative interpretation of reality.

Typical availability

Spring semester, City campus

57167 Moving Image

8cp; availability: not offered to exchange and study abroad students

This subject introduces students to the creative challenges and technical demands of making moving images using a range of digital imaging technologies. The subject explores essential concepts and craft skills needed for moving image production in fields such as camera, lighting, directing, sound recording and editing. Students are introduced to concepts of montage, rhythm, juxtaposition and structure, in addition to learning practical skills connected with editing audiovisual media. The subject is structured to encourage students to learn through hands-on learning, experimentation and collaboration. The delivery of the teaching and learning is through a series of seminars, in-class and out-of-class exercises, and practical workshops. While introductory in assumed knowledge, the subject is designed for postgraduate-level students who are interested in developing moving image production skills.

Typical availability

57168 Sound and Interaction

8cp; availability: not offered to exchange and study abroad students

In this subject, students explore the history, theory and production of new media and sound, involving key historical sound texts, contemporary audio practices, the rise of interactive new media forms and the emergence and impacts of social media, podcasting and other approaches. Students research and examine a range of creative works involving sound and interaction, and utilise social media tools to investigate aspects of sound and digital media culture and production. Students develop basic production skills in audio recording, mixing, and online media development. Students also develop critical, conceptual and technical skills, producing a series of short works with audio and online outcomes.

Typical availability

Autumn semester, City campus Spring semester, City campus

57169 Moving Image

6cp; availability: not offered to exchange and study abroad students

This subject introduces students to the creative challenges and technical demands of making moving images using a range of digital imaging technologies. The subject explores essential concepts and craft skills needed for moving image production in fields such as camera, lighting, directing, sound recording and editing. Students are introduced to concepts of montage, rhythm, juxtaposition and structure, in addition to learning practical skills connected with editing audiovisual media. The subject is structured to encourage students to learn through hands-on learning, experimentation and collaboration. The delivery of the teaching and learning is through a series of seminars, in-class and out-of-class exercises, and practical workshops. While introductory in assumed knowledge, the subject is designed for postgraduate-level students who are interested in developing moving image production skills.

Typical availability

Autumn semester, City campus Spring semester, City campus

57170 Sound and Interaction

6cp; availability: not offered to exchange and study abroad students

In this subject students explore the history, theory and production of new media and sound, involving key historical sound texts, contemporary audio practices, the rise of interactive new media forms and the emergence and impacts of social media, podcasting and other approaches. Students research and examine a range of creative works involving sound and interaction, and utilise social media tools to investigate aspects of sound and digital media culture and production. Students develop basic production skills in audio recording, mixing, and online media development. Students also develop critical, conceptual and technical skills, producing a series of short works with audio and online outcomes.

Typical availability

Autumn semester, City campus Spring semester, City campus

57171 Writing for the Screen

 $\ensuremath{\mathsf{6cp}};$ availability: not offered to exchange and study abroad students

This subject offers animation students the opportunity to develop screenwriting skills. Students develop a screenplay, 5–10 minutes in length, and suitable for any kind of animation. Students may produce a written screenplay and/or a storyboard-based screenplay. Students develop an original idea and gain skills in storytelling through exploring character development, structure, research and visualisation. Students also improve their ability to read, develop and edit their own work and the work of their peers.

Typical availability

Spring semester, City campus

57172 Advanced Moving Image

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57167 Moving Image OR 57094 Film and Video 1 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject extends and develops ideas, concepts and technical skills in the context of team-based media production workflows. Students further their understanding of the techniques and conceptual skills required for professional moving image production through a series of seminars, in-class and out-of-class exercises and practical workshops. These skills include film and digital cinematography, data wrangling, production design, directing, location sound recording and production management. Students are introduced to advanced moving image acquisition and hands-on exercises are designed to take students through the technical and conceptual issues involved in realising an idea through moving images. The subject stresses the importance of collaboration in professional media production and students learn skills that help them to be effective crew members and work as part of a creative team. The subject enables students to develop production skills as a basis for future media projects.

Typical availability

Autumn semester, City campus Spring semester, City campus

57173 Advanced Post Production

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57167 Moving Image OR 57094 Film and Video 1 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject extends and develops ideas, issues, concepts and techniques around post-production, and the concept of the editor as creator of the story. Students further their understanding of these skills in the context of team-based media production workflows through a series of introductory seminars, in-class and out-of-class exercises, and practical workshops. These techniques and theories include non-linear editing, special effects, title design, sound design, data management, collaborative workflow, and a broad range of delivery formats including digital. The subject introduces students to advanced pre-visualisation and post-production techniques involved in various production formats. The subject stresses the importance of collaboration in professional media production and students learn skills that help them to collaborate with directors and producers, working as part of a creative team. The subject enables students to develop post-production skills as a basis for future media projects.

Typical availability

Autumn semester, City campus Spring semester, City campus

57175 Creative Producing

8cp; availability: not offered to exchange and study abroad students

This subject introduces students to the role and strategies of the creative producer in fields spanning animation, games, film and television, installation art, and cross-media works. Students examine the key issues and concerns of producers working in the creative industries in varying local, national and international contexts. Students are also introduced to key concepts and approaches to funding and finance; marketing and distribution; intellectual property and copyright; budgeting; collaboration; creativity; and sustaining a fruitful and viable creative practice. The subject also covers the pitching of short project proposals. Following a series of introductory in-class seminars and guest lectures, students complete a learning contract outlining their proposal for the remainder of the semester. Typically, this involves a case study and an in-class presentation about a working creative producer. It also involves a self-directed research assignment based on a media, art or industry matter identified by the student. These research findings are presented to the whole class and, where feasible, are also published or presented to other students and media, art or industry bodies.

Typical availability

Spring semester, City campus

57176 Directing

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57167 Moving Image

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

The subject explores the role of the director, with an emphasis on narrative drama. The teaching and learning of the subject is delivered through a series of seminars, in-class and out-of-class exercises, and practical workshops that are designed to develop students' skills as directors. Through a focus on visual storytelling, mise-en-scène, performance and script analysis, the subject explores techniques to elicit performance and determine visual style and coverage relevant to a variety of filmed scenes.

Typical availability

Autumn semester, City campus

57177 Media Arts and Production Minor Project

8cp; availability: not offered to exchange and study abroad students

In this subject, students have the opportunity to develop their professional skills and creative expertise in media arts program making. Students may choose to develop their professional practice through undertaking specialised technical or production roles on other student projects and profiling this work through a resulting show reel or equivalent. For example, students may work as producer, cinematographer or sound designer on a film or video project. Students develop a learning contract that is approved by their allocated academic adviser.

Students may choose instead to complete a short original minor media project in film, video, television, online, sound, radio, performance and installation or multi-platform. The project must be feasible and be able to be completed within one semester. A drama project should not exceed 7 minutes in length. The proposed minor project must be approved by the academic adviser. Students are required to submit critical documentation (approximately 1500 words) of their research, production development and production process to accompany the final project. This documentation should show evidence of the student's critical relationship to their media production practice.

Typical availability

Autumn semester, City campus Spring semester, City campus

57178 Digital and Multiplatform Storytelling

8cp; 3hpw (seminar) plus relevant digital media technical/production workshops; availability: not offered to exchange and study abroad students

This subject allows students to develop their conceptual and production skills in digital storytelling and multiplatform production, such as for online, mobile, transmedia, social media, locative, e-book, electronic publishing and other emerging media formats. The subject explores a range of storytelling forms for digital media such as multiplatform and transmedia storytelling; narrative in networked and application (app) formats; episodic media; locative narrative; electronic literature; and other emerging media formats. Building on earlier knowledge, students explore a range of creative, technical and production issues concerning digital narrative, content and multiplatform development. They develop production skills in the new modes of storytelling, publishing and distribution that online, networked and app formats make possible.

Students engage conceptually with issues such as structure, design, user experience, multiplatform project scoping, and digital treatment development for digital and multiplatform storytelling. They expand their production skills through a series of technical workshops and by working in small teams to develop a digital creative work such as a multiplatform or transmedia narrative, episodic media, electronic literature, locative narrative or other relevant digital storytelling project. Where approved, students may choose to work on the multiplatform component of other relevant media projects produced in postgraduate subjects in the Faculty of Arts and Social Sciences.

Typical availability

Spring semester, City campus

57179 Project Development and Creative Practice

8cp; availability: not offered to exchange and study abroad students

This subject develops advanced skills for the research and development of creative media projects. Students learn to take an idea through research to a form ready for production. In this subject students workshop scripts and develop skills in production design and planning. They also develop advanced skills in research and development in media arts through one of the following: by developing specialised knowledge of a particular technical or production area of the media industries; through research and writing a detailed treatment or script for a creative project intended to be taken into 57177 Media Arts and Production Minor Project, 57180 Media Arts and Production Major Project, or intended for production after the subject or through undertaking creative led research into an area of innovation that experiments with the interplay between media forms. The subject is taught by a combination of seminar and learning contract. Students are required to complete seminar assignments and present the progress of their research or development during the seminar. Students are required to work in a crew role on at least one project in production during the semester.

Typical availability

Spring semester, City campus

57180 Media Arts and Production Major Project

16cp; availability: not offered to exchange and study abroad students

In this subject students complete an original short project in film, video, television, online, sound, radio, performance and installation or multi-platform. The completed project should demonstrate the student's advanced professional skills and creative expertise. The project must be successfully completed during the semester, although it may have been developed and commenced during the Research and Development subject or equivalent Scriptwriting subject. It must be feasible to be produced within the resources available both through UTS and those provided by the student from outside UTS. The proposed project must be approved by the academic adviser. Students are required to submit critical documentation (approximately 3000 words) of their research, production development and production process to accompany the final project. This documentation should demonstrate the student's critical relationship to their media production practice. This subject differs from Media Arts and Production Minor Project in that it is expected that the completed project work is conceptually and creatively challenging. The production and/or post-production process should be considerably more demanding and the resulting project should show evidence of the student as a media arts program maker. The subject is conducted by individual or small group supervision.

Typical availability

Autumn semester, City campus Spring semester, City campus

57181 Recordkeeping Fundamentals

8ср

This subject provides an overview of the key concepts and practices in recordkeeping and the role of records and recordkeeping systems in an organisational and societal context. Students are introduced to theoretical frameworks of the record life cycle and the record continuum as well as the key components of a best practice recordkeeping system within the current Australian legal and regulatory environment. Key recordkeeping practices and tools such as functional classification, metadata schema, records retention and disposal, implementation methodologies and records management policies and processes are explored with reference to current best practice.

Typical availability

57182 Rethinking Media

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57023c Communicating with Publics AND 57022c Foundations of Communication

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

In this subject, students explore the roles and functioning of media in society and engage in critical thinking about media models from 'mass media' to 'social media' and social networks. They review major frameworks for understanding media including the First Media Age and Second Media Age, and examine key concepts from the various traditions of media studies focused on media ownership and control, media texts, media technologies, media effects, media audiences, and media practices. They investigate dysfunctions as well as functions of media, and contemporary shifts such as interactivity, convergence, and hybridisation, as they explore ways in which media are used in the public sphere, for cultural production, and for public communication by organisations. Students read about media, consume media, analyse media, and produce media as part of their learning, including engaging in online research and contributing to an online forum and blog.

Typical availability

Spring semester, City campus

57183 Soundtrack

8cr

Requisite(s): 57168 Sound and Interaction AND 57167c Moving Image

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject focuses on the design and composition of sound for moving image, radio and digital media. Emphasis is placed on location sound recording, track laying and mixing dialogue, effects and atmospheres for both synchronous and non-synchronous media, and critical listening. As a project, students undertake a collaborative work to develop a soundtrack from design to final mix. To facilitate this students are encouraged to work on the soundtrack of projects produced in other subjects of media arts and production, either from the undergraduate and postgraduate project subjects or an assignment as set by their lecturer.

Typical availability

Spring semester, City campus

57184 Documentary: Expanded, Mobile and Networked

a28

Requisite(s): 57151 Storytelling with Sound and Image These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject allows students to develop their conceptual and production skills in expanded forms of documentary involving social media, online, mobile and app formats. The subject will explore new modes of conceptualising, producing and distributing documentaries; covering online documentary, social media, mobile and locative projects and other relevant emerging technologies and formats. Building on earlier knowledge, students will explore a range of creative, technical and production issues concerning expanded online documentary production. They will develop production skills in new modes of storytelling, publishing and distribution that online, networked and app formats make possible.

Typical availability

Spring semester, City campus

57185 Journalism Major Project 1

8ср

Requisite(s): (57011 Research and Reporting for Journalism AND (57151 Storytelling with Sound and Image OR 57014 Feature Writing) AND 57013c Journalism Studies)

There are also course requisites for this subject. See access conditions.

This subject is designed for students who have substantial experience in journalism and are ready to work independently. Working under the supervision of an appropriate member of staff, students devise,

research, and draft a plan for a journalism major project and/or exegesis, which is completed and polished to a high standard in Journalism Major Project 2. Students are encouraged in this subject to explore and extend, through reading and redrafting, the possibilities of their chosen form and genre.

Typical availability

57186 Journalism Major Project 2

8ср

Requisite(s): 57185 Journalism Major Project 1
There are also course requisites for this subject. See access

This subject is designed for students who have substantial experience in journalism and are ready to work independently. Students devise, research, and draft a substantial (10,000 words or equivalent) work of journalism. The writing may be in any platform, depending on the viability of the project and the availability of academic advice. Students are encouraged in this subject to explore and extend, through reading and redrafting, the possibilities of their chosen form and genre. They are also encouraged to work independently.

Typical availability

Autumn semester, City campus Spring semester, City campus

57187 Specialist Journalism

d28

Requisite(s): 57011 Research and Reporting for Journalism These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject aims to flexibly develop analysis and/or advanced practices in professional journalism. It allows journalism students to critically engage in issues relevant at particular and appropriate points of time; generated by national or international events, political, social or economic developments, debates, data or document releases. Students work to deadlines, creating scholarly works and/or researching and reporting stories for journalism publications.

Typical availability

Autumn semester, City campus

57188 Writing Project 1

8cp

Requisite(s): 57041 Narrative Writing AND 57134 Theory and Creative Writing

There are also course requisites for this subject. See access

This subject is designed for students who have substantial experience in writing and are ready to work independently. Working under the supervision of an appropriate member of staff, students devise, research, and draft a substantial (7,500 words or equivalent) work of creative writing, which will be completed to 15,000 words and polished to a high standard in Writing Project 2. The writing may be in any genre, depending on the viability of the project and the availability of academic advice. Students are encouraged in this subject to explore and extend, through reading and redrafting, the possibilities of their chosen form and genre. They are also encouraged to independently form their own writing groups in which to discuss their work.

Typical availability

Autumn semester, City campus Spring semester, City campus

57189 Writing Project 2

8cr

Requisite(s): 57188 Writing Project 1

There are also course requisites for this subject. See access conditions.

This subject is designed for students who, having completed Writing Project 1, have substantial experience in writing and are ready to work independently. Working under the supervision of an appropriate member of staff, students complete and polish their 15,000-word (or equivalent) creative project to a high standard (this

15,000-word project includes the 7,500-word, or equivalent, project undertaken in Writing Project 1, though these may be substantially rewritten, if desirable). The writing may be in any genre, depending on the viability of the project and the availability of an appropriate supervisor. Students are encouraged in this subject to explore and extend the possibilities of their chosen form and genre. They are also encouraged to independently form their own writing groups in which to discuss their work.

Typical availability

Autumn semester, City campus Spring semester, City campus

57190 Writing Seminar

8cn

Requisite(s): 57031 Non-fiction Writing AND 57041 Narrative Writing AND 57134 Theory and Creative Writing

There are also course requisites for this subject. See access conditions

This is an advanced subject for students in the Master of Arts in Creative Writing. It brings together graduate writing students from a number of areas to workshop their own and each others' creative work, provide and receive productive feedback on work-in-progress, and to explore aspects of contemporary writing practice and theory that are both directly related to and/or challenge their own practice. It also prepares students for independent professional practice as writers.

Typical availability

Autumn semester, City campus Spring semester, City campus

57989 Mise-en-Scene

8cn

Graduate subject - Media Arts and Production - 400 level

In this subject, students develop advanced skills in visual style. Students have the opportunity to examine mise-en-scène in a range of audio-visual screen works. They study in depth the interrelationship of elements which comprise a particular style and the way this contributes to genre. Through individual research, seminar presentations and production exercises, students develop skills in planning a visual and sound style for their film, video or new media work.

Typical availability

Autumn semester, City campus Spring semester, City campus

57994 Managing Organisational Communication

8cp; availability: not offered to exchange and study abroad students

In this subject students develop their understanding and capacities for working in an internal communication management role. They develop strategies for employee/member communication for an organisation and produce plans and budgets for their implementation. Students address the strategy by creating e-newsletters for internal organisational publics, demonstrating their writing and design skills and their understandings of internal issues identification and management.

Typical availability

Autumn semester, City campus

57995 Learning in Organisations

8cp; availability: not offered to exchange and study abroad students

This subject seeks to orientate students to current practices in organisational learning. It examines the various theories of organisational learning from the perspectives of the individual, organisational unit and whole organisation. The application of these theories to organisations in various sectors is critically examined and case studies of organisational learning are used to illustrate the impact of organisational learning on the long-term performance of the organisation. The future of organisational learning in the contexts of economic, social, demographic and technological change is also examined.

Typical availability

Autumn semester, City campus

57996 Marketing and Corporate Communication

8cp; availability: not offered to exchange and study abroad students

In this subject students focus on integrative communication strategies that link stakeholders to an organisation. They examine the intersection of public relations and marketing. They research, design, plan and budget integrated communication strategies for clients in the commercial and not-for-profit sectors. Campaigns may include product promotion, social marketing or corporate identity and reputation.

Typical availability

Autumn semester, City campus

57997 Professional Communication Project

8cp; availability: not offered to exchange and study abroad students Requisite(s): 57022 Foundations of Communication AND 57023 Communicating with Publics AND 57028 Research for Communication Professionals

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject allows students to pursue further studies in their area of professional and/or scholarly interest in the field of communication management. Students further develop their critical and analytical skills in communication management appropriate to working in consultancy and advanced management roles, extend and deepen their conceptual understandings of communication management, and develop competencies in research and theory building. The body of work undertaken may include an internship or critical production or a small independent research project and a reflective journal. The project enables students to link their professional work to the theories and skills covered in modules undertaken during the subject. The reflective journal provides a framework for developing the ability to reflect critically on practice through the application of different models of reflection.

Typical availability

Autumn semester, City campus Spring semester, City campus

57999 Digital and Multiplatform Storytelling

6cp; 3hpw (seminar) plus relevant digital media technical/production workshops, weekly, on campus; availability: not offered to exchange and study abroad students

This subject allows students to develop their conceptual and production skills in digital storytelling and multiplatform production, such as for online, mobile, transmedia, social media, locative, e-book, electronic publishing and other emerging media formats. The subject explores a range of storytelling forms for digital media, such as multiplatform and transmedia storytelling; narrative in networked and app formats, episodic media; locative narrative; electronic literature and other emerging media formats. Building on earlier knowledge, students explore a range of creative, technical and production issues concerning digital narrative, content and multiplatform development. They develop production skills in the new modes of storytelling, publishing and distribution that online, networked and app formats make possible.

Students engage conceptually with issues such as structure, design, user experience, multiplatform project scoping and digital treatment development for digital and multiplatform storytelling. They expand their production skills through a series of technical workshops and by working in small teams to develop a digital creative work such as a multiplatform or transmedia narrative, episodic media, electronic literature, locative narrative or other relevant digital storytelling project. Where approved, students may choose to work on the multiplatform component of other relevant media projects produced in postgraduate subjects in the Faculty of Arts and Social Sciences.

Typical availability

Spring semester, City campus

58101 Understanding Communication

8cb

In this foundation subject students investigate the role of communication in society and the different ways in which communication is understood and practised interpersonally, socially, culturally and professionally. Students examine communication from the perspectives of writers, producers, journalists, creative artists,

advertising and public relations practitioners, information managers, and from social, cultural and political perspectives. The interrelated roles of authors/producers, audiences, texts and contexts are explored through research, reading, projects and discussions. Students also gain practical experience through conducting interviews and presenting their findings in writing, photography and video, and in various online forms using digital media.

Typical availability

Autumn semester, City campus Spring semester, City campus

58102 Language and Discourse

8cr

This subject introduces three key communication concepts, develops a thematic study and teaches skills in the medium of sound. The concepts are Discourse, Genre and 'Multimodality'. Through multimodal analysis and practice, students understand communication as combinations of representations, cultural forms and specific communicative resources (verbal and non-verbal, visual and auditory, etc), assembling complex relations of thoughts and feelings. The thematic research explores the different ways in which important social and cultural issues are represented in a range of media. Students extend their learning by experimentation in multimodal writing in different genres, such as 'report', 'story', argument', 'appeal', etc, and they reach out for different audiences with sound practice. The subject equips students with the concepts and methods to reflect critically on their own experience of language phenomena through the issues systematically explored.

Typical availability

Autumn semester, City campus

58103 Ideas in History

8ср

This subject engages students in critical examination, discussion and reflection on some of the key ideas and intellectual movements in world history and how these inform current social, cultural, economic and political thought and practice. In particular, it explores how ideas and worldviews frame and influence communication socially, culturally and politically. Students explore non-Western as well as Western ideas and viewpoints and ways of understanding human history including those ideas and intellectual traditions attached to the categories of the 'modern' and modernity, the 'post-modern' and post-modernity and 'tradition' – culture, custom and community. These are examined through various themes from multiple cultural perspectives and activities which include those based in museums and other sites where ideas and their histories are represented.

58110 Introduction to Journalism

8ср

Students are introduced to principles of professional journalism and its theoretical and ethical dimensions. Students examine the practice of journalism in relation to its historical, economic, political and social contexts with a focus on the impact of the internet on contemporary news media practice. Students research and produce original news stories to deadline and build online ePortfolios. They are introduced to Newsday, the real-time UTS newsroom. Through a critical examination of the process of research and reporting, students develop the rigorous skills required for journalism in the public interest.

Typical availability

Autumn semester, City campus Spring semester, City campus

58111 Reporting with Sound and Image

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58110 Introduction to Journalism

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

The use of sound and image in journalism professional practice is explored. Students develop their sound and video recording, interviewing, writing and editing skills to produce short news and current affairs reports for broadcast media. Students build an understanding of how changes in online media are impacting on audio/visual journalism. They critically analyse professional and ethical issues that arise in the context of broadcast journalism, including their own. The relationship between publishing formats and storytelling is explored. Students develop ideas and produce current affairs reports, drawing on a range of sources and build on basic news reportage, both in form and content. Students edit, package and publish reports on NewsDay.

Typical availability

Spring semester, City campus

58112 Reporting and Editing for Print and Online Journalism

8ср

Requisite(s): 58110 Introduction to Journalism
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access

This subject develops skills in research and reporting and introduces editing for online and print media. Students extend their abilities as reporters by developing more advanced research skills and interviewing and writing techniques appropriate for the production of longer stories. Students are introduced to basic skills and strategies for the editing and publishing of stories for publication. They learn to shape stories for specific audiences by writing introductions, headlines, captions and adding links and other online elements. Students develop an appreciation of the importance of accuracy and clarity for publishing and consider ethical and legal implications that arise during the publishing process. Throughout the semester, students develop their ability to critically analyse contemporary news and current affairs practices in local and international contexts. They publish reflections on their own and others' journalism practice in their ePortfolios. Students research, write and edit stories to deadlines in a newsroom environment.

Typical availability

Autumn semester, City campus Spring semester, City campus

58113 Exploring Media Arts

8cp; availability: exchange and study abroad students with faculty approval

This subject explores creative media arts practices across moving image, audio and participatory forms. It introduces students to relevant media arts histories and contexts in addition to a range of technologies, media practices and production techniques. Each semester is based around a specific theme, such as time, speed, place or memory, which is explored through creative play. Working on creative exercises, students are introduced to core skills and understandings in media arts practice. They gain basic skills in synopsis writing, production planning, content gathering in image and sound, mixing and editing, safety issues, and collaborative work practices. Students publish and reflect on their creative practice online, a process which is continued in subjects throughout the major.

Typical availability

58114 Fictions: Storytelling, Narrative and Drama

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58113 Exploring Media Arts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject is an exploration of narrative storytelling and drama in media. Students are introduced to narrative forms in media including concepts of structure, suspense and drama along with scriptwriting for narrative works. Student learning in this subject focuses on ways of working with the interplay between visual and aural style, and performance and narrative form across a variety of media. Assessment tasks include writing concept documents for media projects, group narrative exercises and online reflection and self and peer feedback.

Typical availability

Autumn semester, City campus

58115 Composing the Real

8cr

Requisite(s): 58113 Exploring Media Arts

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions

This subject explores conceptual and production approaches to documentary media forms. Students are introduced to key documentary modes and examine and develop documentary projects involving a range of outcomes from photo essay to video and sound documentary to emerging online and interactive documentary projects. Activities include short documentary exercises across a range of media and the development of a short documentary treatment. Hybrid forms and boundary blurring such as reality TV, blogging and other cross-overs between fiction and non-fiction are also examined. Throughout the subject, students investigate the issues facing media producers seeking to work with the 'creative interpretation of reality'.

Typical availability

Spring semester, City campus

58116 The Ecology of Public Communication

8cp

Students explore the field of public communication and the major areas of practice. They gain an understanding of the role of communication in the public sphere, of audiences, environments and contexts of communication, including professional communication practices and issues around integration and convergence. Students learn how public communication, public relations and advertising are conceptualised and practised in various types of organisations and interest groups including organisational communication and marketing communication. They explore issues and controversies in the field such as social representations, agendas and advocacy. Students also begin to produce their own work in advertising, public relations and organisational communication including using new media.

Typical availability

Autumn semester, City campus Spring semester, City campus

58117 Principles of Public Relations

8cp

Requisite(s): 58116 The Ecology of Public Communication These requisites may not apply to students in certain courses. See access conditions.

In this subject, students learn about theories, models and principles of contemporary public relations, tracing the historical evolution from technical function to strategic management. Major areas of employment such as media, community and stakeholder relations, public sector and internal communication are reviewed. Case studies and professional issues are used to analyse current practice, developing understanding of ethics and socially responsible practice. Students are introduced to writing and research skills essential for practice.

Typical availability

Autumn semester, City campus Spring semester, City campus

58118 Principles of Advertising

8cc

Requisite(s): 58116 The Ecology of Public Communication These requisites may not apply to students in certain courses. See access conditions.

Students are introduced to the principles and practice of advertising and its unique role in business and society. Creativity in advertising is examined through an exploration of the art and science of advertising and how these apparent contradictions influence principles and industry practice. Students learn how to develop and present a range of creative ideas appropriate to the various stages of effectively promoting a product, service or idea in sectors as diverse as public, private and not-for-profit.

Typical availability

Spring semester, City campus

58120 Creativity and Culture

8cp

Requisite(s): 58119 Text and Context

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject prepares students with a reflective knowledge about contemporary directions and debates in current creative practice. Students research, design, write and publish a creative project in essay, non-fictional or fictional form. They analyse a range of different perspectives (philosophical, psychological, inspirational and practical) on the connection between creativity and invention and on generic forms of creative, essayistic, fictional and non-fictional writing. Theories of narrative and voice, relationships between identity, subject and the representation of the self in the creative text, as well as contemporary approaches to the essay and to experimental forms of critical discourse, are discussed throughout the subject. Students respond to these contexts in the creative work they complete during the semester.

Typical availability

Autumn semester, City campus

58121 Fictional Forms

8cp

Students are brought into close contact with creative practice in both mainstream and emergent forms of fiction and narrative as they investigate the question 'what is fiction?'. The subject introduces a wide range of recent and modern forms of fiction writing as technical examples and thematic models. Throughout the semester students produce and collectively workshop their own writing in fiction or script. At the same time, critical debate within the class explores the limits and the possibilities of the contemporary text together with the functional operation of categories such as 'author', 'genre', 'narrative', 'performance', 'subjectivity', 'meaning', 'reading', 'writing' and 'text', including in relation to innovative formats such as hypertext or other electronic formats. Students are encouraged to choose within a wide range of fictional forms for their creative writing.

Typical availability

Spring semester, City campus

58122 Introduction to Social Inquiry

8ср

How do we understand the structure and changing nature of the social world? This subject provides an introduction to key ideas in social and political thought which enable the critical interpretation of social life. It focuses on concepts such as gender, race and social class, and explores how they can be applied to understand society and the life-paths of individual social actors. As a core activity of the subject, students undertake their own empirical biographic or 'life-story' analysis as a vehicle through which to begin to develop their social research skills and to concretely explore the ways the social structures explored shape the possibilities of individual agency.

Typical availability

58123 Society, Economy and Globalisation

8cp

Requisite(s): 58122 Introduction to Social Inquiry

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions

To understand the problems of global society and develop possible solutions, we must try to understand the political dimensions of 'the economy', or in other words to consider how political power shapes and is shaped by changing distributions of wealth and poverty. This subject introduces students to key concepts and debates in political economy and the study of globalisation. In particular, it assesses the rise of the ideology of the 'free market' to global pre-eminence in recent decades, and the increased capacity of transnational corporations to influence political institutions and democratic governance. A snapshot of international trade is developed, with students focusing on a specific commodity, such as coffee, soy or uranium, to chart its passage through global society. These global networks are explored from sites of extraction to manufacture, retail, consumption and disposal. Social, political and ecological impacts are highlighted using quantitative and qualitative data drawn from internationally available data. Students use insights gained from these investigations to explore popular perceptions of globalisation and consumer culture, and of the globally traded commodities by which we are made interdependent. Throughout the subject, students consider: (a) the problem of measurement in the social sciences, and the way measurements and statistics are made and deployed as evidence in policy debates, and (b) alternative goals for social development, such as equity and sustainability.

Typical availability

Autumn semester, City campus

58124 Local Transformations

8cn

Requisite(s): 58122 Introduction to Social Inquiry

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

The way we think about relationships between the individual, local community life and the wider social order is addressed in this subject through investigation of the intersections between time, place and agency. Students investigate issues such as how the historical legacies of locality are connected to present possibilities and future hopes, how localities are produced in relation to each other in cross-national and trans-local interactions, and how local capacity or agency is linked to local, national and transnational power hierarchies, whether in terms of dominance or marginality. This subject introduces students to survey research methods. Students engage a range of theoretical approaches and integrate them with survey methods, developing communication skills to present resulting insights.

Typical availability

Spring semester, City campus

58125 User Experience Design

8cp

This subject introduces students to the principles of creative information design: audience analysis, contextual writing, colour, typography and layout. Students design, create the content and produce for selected clients useful information products in a range of digital and non-digital formats and media. The design process introduces students to creative problem-solving, collaborative work practices and the principles of usability and self-assessment. Students begin the development of their course-wide ePortfolio which contains examples of work such as specialised written texts, brochures, images and webpages.

Typical availability

Autumn semester, City campus

58126 Information Discovery and Analysis

8ср

Requisite(s): 58125 User Experience Design

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access

Students are introduced to a range of techniques that enable them to conduct sophisticated searches and analysis in digital environments. Using case-based approaches and a real-life scenario, they learn to apply these skills to a particular problem. By analysing and reflecting upon approaches to the execution of searches as well as the significance of the content of information located through these searches, students develop an understanding of information systems and an appreciation of their strengths and current limitations. To develop an understanding of potential strategic uses of information, they learn how to analyse information to create compact syntheses that suit the needs of different audiences in different contexts. In a collaborative learning environment, students also critically examine themes associated with information practices in a digital world. Students continue to contribute to their course-wide ePortfolio.

Typical availability

Spring semester, City campus

58127 Information Cultures

8cr

Requisite(s): 58125 User Experience Design

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access

Students are introduced to the conceptual and methodological tools they need to actively engage with the organisations and communities they will work with in the information, communication and creative industries. They develop a critical understanding of the complex interrelationship between people, information, knowledge and culture and of the central role of theory and research in effective professional practice. The subject introduces students to theories and empirical research from a range of disciplines including information behaviour, communication theory, philosophy and sociology, as well as to a range of research methodologies for exploring and analysing both individual and collective information/knowledge behaviour and practices. Students apply their theoretical and methodological learning to the development of a practice-based pilot research project. In doing so, students develop an appreciation of the importance of practice-based research as the basis for research-based professional practice. Students make further contributions to their ePortfolio.

58128 Strategic Public Relations

8cp; availability: exchange and study abroad students with faculty approval $% \left(1\right) =\left(1\right) \left(1\right$

Requisite(s): 58117c Principles of Public Relations

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject equips students with knowledge and practical skills in research, planning and budgeting for strategic communication campaigns. They learn to assess and develop strategy by identifying issues, publics and options for communication and relationship management. They develop their expertise in designing, writing and managing innovative, multimedia campaigns to address client and communication problems and opportunities. Students design and present a professional client pitch.

Typical availability

58129 Advertising Campaign Practice

8ср

Requisite(s): 58118c Principles of Advertising

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Students gain insight into the various agency disciplines and their contribution to campaign research and strategy, creation and production of ideas, media planning, and pitching as an agency team. Topics include the significance of strategic planning in campaign development, conceptual issues involved in the production of advertising ideas, and the development and selling of an integrated campaign to a client. Students engage in scriptwriting and the production of storyboards for broadcast media.

Typical availability

Autumn semester, City campus

58201 Communication and Cultural Industries and Practices

8cc

Requisite(s): 58101 Understanding Communication OR 58102 Language and Discourse OR 58103 Ideas in History These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Looking back and forth between theory and practice (individually and collectively), this subject examines ways that media, information and communication figure in our everyday practices. It examines the development of the communication and cultural industries and practices with a particular focus on current practices and technologies of convergence, and on ways of theorising and understanding the relationship between producers, texts and audiences. Students are introduced to practice and the roles of communication professionals in different contexts. The subject provides an overview of important historical and political developments within communication and cultural industries, critically interrogating how communication and information products are produced, in what organisational and economic contexts, and for what purposes. The Australian situation is placed in its international context and with reference to the changing roles of digital technologies, public and private sector production? distribution and the role of governments.

58202 Regulating Communication: Law, Ethics, Politics

8ср

Requisite(s): 58101 Understanding Communication OR 58102 Language and Discourse OR 58103 Ideas in History

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Public, organisational and everyday communication practices are shaped through laws, policies and ethical codes. Investigating and comparing different regulatory approaches tells us much about our own assumptions about communication and its role in shaping our lives. Contests over law and ethics reflect underlying social, economic and political conflicts that shape political agendas and define public policy. The subject explores communication regulation in a range of Australian and international contexts and from historical and crosscultural perspectives. Students investigate how codes and laws relate to communication practices by selecting from a range of topics such as defamation, censorship, intellectual property, privacy, data protection, surveillance, racial vilification, whistle-blowing, confidentiality, freedom of information, and the role of inter-state organisations, such as the United Nations, and non-government organisations. Students develop their practical understanding of these topics through a simulation role-playing game based on a hypothetical scenario designed to raise regulatory issues of contemporary relevance.

58210 Storytelling, Narrative and Features

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58110 Introduction to Journalism OR 58111 Reporting with Sound and Image OR 58112 Reporting and Editing for Print and Online Journalism

These requisites may not apply to students in certain courses. See access conditions.

This subject is designed to move students from news production to storytelling through longer form journalism, focusing on the production of features and other forms of non-fiction narrative in a range of media. Genres such as investigative and literary journalism are considered. The subject aims to give students an insight into a range of styles and their applications across the mediums and the implications for storytelling of convergence and interactivity including the 'packaging' of feature stories for online publication. An understanding of voice, story structure, interviewing technique, language and, where relevant, the use of visual images and sound are further developed in the context of students' own story production. Through a reflective approach, students develop a critical appreciation of the role played by narrative and language in media discourse and how this relates to the work of journalists.

Spring semester, City campus

58211 Specialist Reporting, Audiences and Interactivity

8cp; availability: exchange and study abroad students with faculty approval $% \left(1\right) =\left(1\right) \left(1\right$

Requisite(s): 58210 Storytelling, Narrative and Features These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject introduces specialist genres and 'rounds' in journalism. Students are introduced to investigative research techniques within specialist rounds such as environment, health, technology, arts, sports, law, media, business and politics. Students form reporting and editing teams around specific rounds. By developing their own chosen round and monitoring how the round is covered by professional journalists they develop a critical understanding and ability to develop relationships with sources, produce interactive journalism for specific audiences and work in collaborative teams. Students build their own eportfolios and specialist reporting teams contribute to the UTS media hub by producing work using a range of media forms.

58212 Aesthetics

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58114 Fictions: Storytelling, Narrative and Drama OR 58115 Composing the Real

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

This subject explores how media arts aesthetics work through engaging the senses and emotions. It provides students the opportunity to develop the potential impact of a work through experimenting with form, composition, and poetics. The subject examines how aesthetics are both culturally determined and dynamic.

During the subject, students explore these ideas using techniques such as remixing and experimental approaches to composition and form. The resulting works may be cross-platform and cross-media, including installation works, time-based and interactive media, and sound art.

Typical availability

58213 Research and Practice

8cp; availability: not offered to exchange and study abroad students Requisite(s): 58114 Fictions: Storytelling, Narrative and Drama OR 58115 Composing the Real

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Students have the opportunity to develop their creative practice and capacity for critical reflection through conceptualisation, research and writing. This subject allows students to develop their final projects and/or to undertake research and targeted skill development towards that project. Students undertake skill and conceptual development in modules from a number of choices offered each semester. These modules have a practical and conceptual development focus. Students work in an intensive mode within specialised areas of media arts production and undertake case study research within this framework.

Typical availability

Spring semester, City campus

58214 Media Writing and Production

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58117 Principles of Public Relations OR 58128 Strategic Public Relations

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Students develop knowledge and practice in writing and producing materials such as media releases, feature articles, newsletters, brochures, speeches, profiles, websites and print, and online production. The requirements of different genre and styles of public communication writing are explored together with issues rhetoric and persuasion in public relations. Students enhance their skills in writing, design production and the application of these skills to the internet. Student work integrates theories and principles of effective public communication with technical skills in their fields of focus.

58216 Imagining the Real

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58121 Fictional Forms

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject focuses on the concept of the real. Students are asked to engage with the history, contexts, conventions and current debates centred on the notion of 'the real'. Students choose different approaches to these issues in terms of creative and theoretical perspectives. The subject aims to develop students' awareness of the wide possibilities and scope of non-fiction writing and enables them to produce an extended piece of non-fiction writing in a workshop environment. The laboratory acts as a context for researching how the notions of the real are associated with questions to do with society, culture and globalisation no less than to do with issues of subjectivity, the senses and corporeal knowledge. Each class acts as a space in which students test out received and experimental approaches to writing and thinking about the real. Truth telling, the use of fictional mode in non-fictional forms of writing, concepts of simulacrum, verisimilitude, revelation and authenticity, and the ethical contexts of documentation are key features of each class's work. Students are asked to nominate the area in which they intend to write and are assisted in researching and contextualising that area.

Typical availability

Autumn semester, City campus Spring semester, City campus

58217 Experiments in Culture

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58119 Text and Context OR 58121 Fictional Forms OR 58120 Creativity and Culture

These requisites may not apply to students in certain courses. See access conditions.

Students have the opportunity to study and write within one of the following forms: non-linear and interactive writing, poetry, critical and theoretical writing, or screenwriting for innovative film and image. This subject challenges students to create situations or events in which forms of culture are composed in such a way as to propel them into new situations, for instance to find new audiences. During the subject examples are given of how, in various other times and places, artistic and intellectual movements have gathered impetus and evolved as historical cultural forms. Students work in different workshops within these forms over the semester, sharing key readings and references. An emphasis is placed throughout the semester on original and innovative subject matter, on the capacity of the student to become familiar with and expert in the technical range of the chosen form of writing and to research its recent and longer term history.

Typical availability

Spring semester, City campus

58218 Ideology, Beliefs and Visions

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58122 Introduction to Social Inquiry OR 58123 Society, Economy and Globalisation OR 58124 Local Transformations These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Social change produces ideas but ideas also produce or prevent social change. The ideologies we live under, the beliefs we may hold and the visions to which we aspire are rooted in our experiences but they also transcend them. The capacity to change society can hinge on this ability to inspire people to action. Students examine matters such as what produces beliefs and ideologies and how they are built into coherent worldviews through successive generations, the differences between religious cosmologies, political ideologies and visions and the ways they transform peoples' lives and the source of their potency and danger. They explore different types of ideas in the context of political ideologies, religious values and visions for a better society. Students develop and investigate a research question relevant to the role of ideas in social change, using participant observation and qualitative interviews to analyse ideational dynamics in real world contexts.

Typical availability

Autumn semester, City campus Spring semester, City campus

58219 Policy and Advocacy

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58122 Introduction to Social Inquiry OR 58123 Society, Economy and Globalisation OR 58124 Local Transformations These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Policy making takes place in the interaction between governments, communities, business and other interest groups at local, regional, national and international levels. Contending players deploy differing communication strategies to gain influence over the policy process and its outcomes. This subject engages with the processes of communication associated with the development, contestation, implementation and evaluation of social change strategies. It encompasses activities by movements, organisations and institutions such as international and local NGOs, national, state and local governments, political parties, action groups and various groups of mobilised citizens. Students develop critical and analytical perspectives drawing on relevant theory and learn to apply them through advocacy, policy development and communication practices. Students become practised in action research and communicative advocacy and through strategic application of digital resources and media.

Typical availability

Spring semester, City campus

58220 Designing for the Web

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58125 User Experience Design OR 58127 Information Cultures OR 58126 Information Discovery and Analysis These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject examines the conceptual and aesthetic aspects of designing for the web: creating content, writing for the web environment and designing website architecture including structuring and tagging content to enable browsing and searching, as well as developing basic skills in designing database-driven web sites and Web 2.0 technologies. Students, applying acquired web skills work both individually and in small groups to develop creative projects and exercises throughout the subject. Students also learn to critically evaluate website usability and accessibility and to reflect on issues of web-based communication. Students also make further contributions to their e-portfolio.

Typical availability

Autumn semester, City campus Spring semester, City campus

58221 Social Informatics

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58125 User Experience Design OR 58126 Information Discovery and Analysis OR 58127 Information Cultures These requisites may not apply to students in certain courses. See access conditions.

This subject critically examines the interplay between society and technologies. Students develop an advanced understanding of the key social issues associated with the design, uses and consequences of information and communication technologies that takes into account human interaction with technology in a range of institutional and cultural contexts of development and deployment. The subject builds on understandings of the interpretation and representation of knowledge; how particular knowledges are privileged and translated; and the relationship between issues of access and power. Students develop critical analysis skills required to understand the dynamic nature of relationships affecting the transfer and use of knowledge and information in emerging social and technological contexts.

Typical availability

Not offered in 2013.

58222 Global Politics from Above and Below

8ср

Requisite(s): 99201c Global Histories

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

World order hierarchies pattern world politics. From above, dominant Northern states, militaries and corporations reproduce the status quo. From below, social movements, non-government organisations and Southern states seek alternative models for world order. Conflicts between dominant and subordinate forces shape central issues of world politics including issues of world peace, global poverty, environmental change, international migration and women's status. These and other issues are addressed in this subject, which aims to convey the dynamics driving change and transformation in global politics. Ways of understanding world politics from traditional international relations approaches to post-colonial and southern perspectives are evaluated against key issues and problems.

Typical availability

Spring semester, City campus

58223 Social Bodies

8cp

This subject unravels the body as the key site through which the reproduction of social structures and norms are secured and contested. The socio-biological matter of the body is interrogated, including an examination of habitual body competencies and feeling-states. The subject questions the 'geography closest in', setting in train a progressively broadening consideration of how body-formation is intimately linked to the formation of culture and states.

Typical availability

Spring semester, City campus

58224 Australian Pasts and Places

8cr

In this subject, students investigate the idea of 'Australia' through an exploration of the idea of place and the embodied pasts that become known to us through place. They study the ways in which landscape, country and spatial poetics have given rise to a particular way of imagining Australia through various disciplinary approaches. In this subject they question not just how does Australia 'appear' but how can we write the affective force of a placed Australia over time? They research ways in which ideas of belonging to country or attempting an embodied history challenge ideas of both place and the past as well as a unitary notion of 'Australia'.

Typical availability

Spring semester, City campus

58225 Introduction to Film Studies

8c

This subject provides students with a comprehensive introduction to key movements and directors in the history of cinema, and key theories and debates that have defined film studies as a discipline. Through a detailed engagement with films from a diverse range of political, historical and national contexts, students develop the vocabulary and skills to think and write about film in an informed, critical and scholarly way.

Typical availability

Autumn semester, City campus Spring semester, City campus

58226 Media, Mediation, Power

8ср

This introduction to media studies examines significant debates about the social, political and psychological power and effects of modern (post-WWII) media: the press, radio, television, and the internet. The course investigates what constitutes a medium of communication and how this has changed through time. It considers how each medium uniquely mediates among key social agencies, the state, communities, and citizens. It investigates the questions: How do people use media? How do the media use people? How are the media involved in social and historical change? Through the study of individual and converging media (including television, the press and the internet), students engage with the principal theoretical approaches to understanding media and mediation, technological determinism, and the increasingly active use of digital, converging media in students' own lives.

Typical availability

Autumn semester, City campus Spring semester, City campus

58227 Balancing World Views: Introduction to Aboriginal Cultures

8ср

This subject explores Indigenous and non-Indigenous peoples worldviews and draws upon a range of intellectual disciplines, Indigenous studies, history, anthropology, and sociology.

The aim of the subject is to establish a critical learning framework for appreciating different ways of knowing, being and doing as explored through a backdrop of colonial and current experiences in Australia and internationally. Indigenous and non-Indigenous worldview encounters provide opportunities to examine and comprehend these experiences.

Typical availability

Autumn semester, City campus Spring semester, City campus

58228 Climate Change: Politics and Ecology

8cr

With climate change the ecological crisis is visible as a global crisis. Worldwide, it is already exhausting nourishing landscapes, causing extinction of species and displacements of peoples. The possibility of catastrophic climate change is now on the international policy agenda. Low-income societies are in the immediate firingline, while global elites, about a fifth of the world's population (including most Australians), continue to reap the benefits of carbonintensive development. Such asymmetries raise profound issues of environmental ethics and justice. These foreground relations between species, between nature and livelihood, between generations, and between young and old, pose a fundamental challenge to notions of sustainable development. To find new possibilities and transformations, this subject engages with climate politics, from global frameworks to local actions. Students analyse climate discourses from scientists, corporate executives, social activists and governments. They investigate key sites of climate politics, such as climate governance and emissions trading, adaptation to new climate conditions, climate action, and mobilisation for climate justice.

Typical availability

Spring semester, City campus

58229 Brand Advertising Strategies

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58118 Principles of Advertising OR 58129 Advertising Campaign Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Students explore consumer relationships with brands, the factors driving change and the use of brand equity models in their management and advertising strategy. A practice-based approach to consumer research develops students' skills in using creative and experimental techniques to uncover ideas for brand advertising. Students present their recommendations for communication as an integrated campaign with creative work in two media/channels.

Typical availability

Autumn semester, City campus Spring semester, City campus

58230 Professional Advertising Practice

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58118 Principles of Advertising OR 58129 Advertising Campaign Practice OR 58229 Brand Advertising Strategies These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Students examine the image of their chosen profession and the impact of social and industry perceptions on professional conduct within the advertising industry. Examining the relevant codes of conduct, legal, ethical and regulatory frameworks that govern and guide professional advertising practice, students identify the responsibilities affecting the professional pathway they plan to pursue, and assess their suitability for it. Topics include professional service firms, responsibilities to clients, career profiling, objectivity and independence, competence, public interest, integrity, confidentiality, reporting, and accountability.

Typical availability

Spring semester, City campus

58231 Organisational Communication

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58117 Principles of Public Relations OR 58128 Strategic Public Relations OR 58214 Media Writing and Production These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Students develop their understanding of interpersonal, group and organisational communication. They develop knowledge of organisational culture and use metaphor as an analytical tool for understanding organisations and communicating with internal publics. Students apply organisational communication theory to a change scenario and develop communication strategies, including special events, issues management and internal communication.

Typical availability

Spring semester, City campus

58301 Communication Practice Project

8cp; availability: not offered to exchange and study abroad students Requisite(s): 96 Credit Points in spk(s): C10246 Bachelor of Arts in Communication (Journalism) OR 96 Credit Points in spk(s): C10247 Bachelor of Arts in Communication (Media Arts and Production) OR 96 Credit Points in spk(s): C10248 Bachelor of Arts in Communication (Public Communication) OR 96 Credit Points in spk(s): C10249 Bachelor of Arts in Communication (Writing and Cultural Studies) OR 96 Credit Points in spk(s): C10250 Bachelor of Arts in Communication (Social Inquiry) OR 96 Credit Points in spk(s): C10251 Bachelor of Arts in Communication (Information and Media) OR 96 Credit Points in spk(s): C10252 Bachelor of Arts in Communication (Journalism) Bachelor of Arts in International Studies OR 96 Credit Points in spk(s): C10253 Bachelor of Arts in Communication (Media Arts and Production) Bachelor of Arts in International Studies OR 96 Credit Points in spk(s): C10254 Bachelor of Arts in Communication (Public Communication) Bachelor of Arts in International Studies OR 96 Credit Points in spk(s): C10255 Bachelor of Arts in Communication (Writing and Cultural Studies) and in International Studies OR 96 Credit Points in spk(s): C10256 Bachelor of Arts in Communication (Social Inquiry) Bachelor of Arts in International Studies OR 96 Credit Points in spk(s): C10257 Bachelor of Arts in Communication (Information and Media) Bachelor of Arts in International Studies OR 96 Credit Points in spk(s): C10258 Bachelor of Arts in Communication (Journalism) Bachelor of Laws OR 96 Credit Points in spk(s): C10259 Bachelor of Arts in Communication (Media Arts and Production) Bachelor of Laws OR 96 Credit Points in spk(s): C10260 Bachelor of Arts in Communication (Social Inquiry) Bachelor of Laws OR 96 Credit Points in spk(s): C10261 Bachelor of Arts in Communication (Public Communication) Bachelor of Laws OR 96 Credit Points in spk(s): C10262 Bachelor of Arts in Communication (Writing and Cultural Studies) Bachelor of Laws OR 96 Credit Points in spk(s): C10263 Bachelor of Arts in Communication (Information and Media) Bachelor of Laws OR 96 Credit Points in spk(s): C10311-C10319 OR 96 Credit Points in spk(s): C10332-C10337

This is the capstone subject in the BA in Communication, designed to bring together knowledge and skills gained by students throughout their entire course. Students have the opportunity to work on projects that develop creative and innovative responses to communication and/or media issues and problems. Students work collaboratively in cross-program teams which may also work with external 'clients' or partners in projects. At the beginning of the semester, a contract for the project is negotiated between the student group and their 'client'. Students need to assess their progress and write critical reflections and evaluations on the projects and project processes. There may be opportunities for students to organise symposia or conferences to present these reflections. Course professional portfolios—in electronic and other media—are finalised.

Typical availability

Autumn semester, City campus Spring semester, City campus

58310 Media Hub

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58210 Storytelling, Narrative and Features AND 58211 Specialist Reporting, Audiences and Interactivity

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject draws together the threads of all other subjects in the Journalism major in a final project that showcases students' skills in one or more mediums of their choice. This project includes both journalism production and critical reflection. It may include producing individual pieces of journalism, taking on individual editing and publishing roles in the UTS Media Hub or other UTS Journalism publications, or designing and producing a pilot issue of new publications. To commence the subject students produce a critical reflection of their achievements so far and develop a plan for a final project, either individual or collaborative. Each student finalises their ePortfolio for presentation at a final seminar.

Typical availability

Autumn semester, City campus Spring semester, City campus

58311 Media Arts Project

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58212 Aesthetics OR 58213 Research and Practice These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject flows from the development and research undertaken in the previous subject. Students develop and complete a small media arts project, e.g. sound, video, interactive media, installation or performance. They can consider a range of distribution modes for the project such as online, broadcast, theatrical or other hybrid models. Students may undertake this subject in a variety of ways: producing a short media work in either sound, video, interactive media, installation, performance or film with encouragement to explore the possibilities of convergent media; forming small collaborative associations and working as a team to produce a work of greater scope or complexity; or developing their skills in a specific production area or crew role and undertaking this role on several projects across the semester.

Typical availability

Autumn semester, City campus Spring semester, City campus

58312 Integrated Communication

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58214 Media Writing and Production OR 58229 Brand Advertising Strategies OR 58230 Professional Advertising Practice OR 58231 Organisational Communication

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Students respond to a client brief to develop a communication strategy and produce a major piece of work. Projects can be tailored to students' particular fields of interest in advertising or public relations or one of their specific sub-disciplines such as social marketing, internal communication, community relations or media relations, or integrated campaigns. The industry collaboration gives students experience in working with clients and producing a major piece of communication.

Typical availability

Autumn semester, City campus Spring semester, City campus

58313 Writing Laboratory

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58216 Imagining the Real OR 58217 Experiments in Culture

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject is a laboratory in thinking, writing, the senses and experiment. Students may compose in any medium they choose: fiction, non-fiction, screen-writing, graphic or multimedia, poetry, philosophical and ficto-critical writing or other innovative forms. The laboratory is an environment of experimental elements working towards the networking of concepts, senses and practices. The group's collaborative study offers a context in which students may choose to produce individual original works of an intellectual, creative or hybrid nature. A lecture series positions a series of core themes from cultural, critical and literary debate, stressing themes which address how we conceive contemporary experience in terms of the senses, media representations, the environment and in relation to key questions in critical, philosophical and art practice. Dissemination of student work is envisaged as a core part of the laboratory's creative study and students present their final work in a published, electronically published, screening, exhibition, seminar or performance context.

Typical availability

Autumn semester, City campus Spring semester, City campus

58314 Social Inquiry Placement

8cp; availability: not offered to exchange and study abroad students Requisite(s): 40 credit points in MAJ09395 Social Inquiry major BAComm

These requisites may not apply to students in certain courses. See access conditions.

Social Inquiry works for social change at the nexus between research, advocacy, policy and communication. Accordingly, the subject culminates with the 'real life' challenges of a specific workplace or community-based placement designed to develop written and verbal communication skills and interpersonal relationships in a non-university setting. In this final-year subject students bring to bear the thematic insights, research capacities and communicative skills they have gained through the subject. It allows them to integrate and synthesise these abilities and, in the process, to produce a distinct and practical contribution for an external partner organisation. A discrete and manageable placement project is negotiated between the student, partner organisation and academic supervisor. Partner organisations range from state parliamentarians, government departments, commercial organisations and non-government civil society organiaations including indigenous, community and campaign groups. Placements are usually undertaken as individual projects, although there is scope for collaboration.

Typical availability

Autumn semester, City campus Spring semester, City campus

58315 Managing Digital Information

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 58220 Designing for the Web OR 58221 Social Informatics

These requisites may not apply to students in certain courses. See access conditions.

This subject examines theories, models and techniques for storing a wide range of text and non-text digital objects in many institutional contexts, including corporate, cultural and heritage environments. Students use international and national standards and unique solutions for describing digital objects and design web-enabled interfaces for effective retrieval and display of the stored content. The subject explores a range of digital storage issues, including preservation, curatorial processes and digital rights management and Web 2.0 issues such as user-created content and social tagging. Students also make further contributions to their ePortfolio.

Typical availability

Autumn semester, City campus Spring semester, City campus

58316 Sex, Race and Empire

8cp

Requisite(s): 58222 Global Politics from Above and Below

These requisites may not apply to students in certain courses. See access conditions.

Making sense of today's globalised world means recognising the continuing impact of the flows of people, ideas and trades, as well as the conflicts, generated by colonial power relations. Decentring Europe, this subject focuses on the innovations of and challenges to colonialism in regions around the Indian and Pacific Oceans, linking Africa, the Middle East, South Asia, Australia, SE Asia, East Asia and the southern Pacific. In colonial politics, sexual relationships often demonstrated the entanglement of gender and race in the most $momentous\,conflicts\,over\,identity, labour,\,trade\,or\,borders.\,To\,explore$ these themes, students study in depth some of many perspectives: including those of colonised indigenous peoples; of invading 'settlers' moving to the countries of the colonised; of anti-colonial political and military struggles; and of diasporas, the populations dispersed by invasion, slavery, indentured labour and voluntary migration. Students deepen their knowledge of the political, economic, social and cultural processes of colonial expansion, imperialism and their links to contemporary global relations.

Typical availability

Spring semester, City campus

58317 Transnational Media

8cn

Requisite(s): 58222 Global Politics from Above and Below OR 58226 Media, Mediation, Power

These requisites may not apply to students in certain courses. See access conditions.

This subject discusses media practice in a globalising economy to question the effects of developments such as trade liberalisation, technological change and global war on the organisation and operation of media and the significance of such changes for understanding transnational communication. Students canvass the international communication and media history literature, critically engage with approaches to theorising international communication and global media practice, and explore the politics of both transnational media mega-corporations including advertising agencies and their counterpart, alternative, DIY and community-based media including the blogosphere. Students focus on the specific issues of electronic journalism and the possibility of a transnational public sphere of debate; internet advertising and the difficulties of creating viable business models in the online environment; and new forms of social networking and interaction found in virtual communities and the possibilities for new kinds of political and social engagements and media practices.

Typical availability

Autumn semester, City campus

58318 Gender, Culture, Power

8ср

Requisite(s): 58223 Social Bodies

These requisites may not apply to students in certain courses. See access conditions

In this subject students undertake a rigorous and detailed analysis of the notions of sex, gender and sexuality in a wide variety of cultural and social contexts. Students examine in depth how social and political institutions function to regulate sex, gender and sexuality, how gender analysis helps us understand contemporary social and political issues, and how gender and sexual identities are embodied and performed in everyday life.

Typical availability

Spring semester, City campus

58319 Rights and Territories

8cp

Requisite(s): 58223 Social Bodies

These requisites may not apply to students in certain courses. See access conditions.

'Rights' – human, cultural, social, economic and political - sit centre-stage in global and local debates about justice and power. 'Territories' – states and nations, sovereignty and authority – are the basis upon which 'rights' claims are generated and pursued. This subject interrogates the historical and contemporary development of 'rights' and examines, in particular, the ways in which 'territories' are organised and disorganised (institutionally and discursively) through the politics of these 'rights' claims. In doing this, students engage with ideas and fields of practice that traverse legal, political, economic and social theory and institutions.

Typical availability

Autumn semester, City campus

58320 Australian Fiction

8cr

Requisite(s): 58224 Australian Pasts and Places

These requisites may not apply to students in certain courses. See access conditions.

This subject combines the in-depth study of Australian literature with the practice of literature. It examines key tropes in Australian fiction over the past 100 years with particular emphasis on 'the city', 'the outback', and 'the road'. It also explores the ways in which indigenousness, diaspora, class and gender have influenced and continue to shape Australia's literary identity.

Typical availability

Spring semester, City campus

58321 Australian Film

8cn

Requisite(s): 58224 Australian Pasts and Places OR 58225

Introduction to Film Studies

These requisites may not apply to students in certain courses. See access conditions.

Students explore the imaginary in Australian film through the study of key moments in Australia's film history such as the revival of the Australian feature film industry in the 70s, the new wave of avant garde, documentary and feminist film practice in the 70s and 80s, and the latest wave of Indigenous and transnational filmmakers in the 90s through to the present. This subject follows on from Pasts and Places with its exploration of how we might know and therefore imagine Australia.

Typical availability

Autumn semester, City campus

58322 Screening the Past

8cr

Requisite(s): 58225 Introduction to Film Studies

These requisites may not apply to students in certain courses. See access conditions.

Through a detailed engagement with a broad range of different media (including film, video, television and new media) this subject explores the various channels through which we come to know, understand and engage with the past, memory and historical experience. Drawing on extensive scholarship in the field, students analyse how, and with what effects, certain texts from the historical blockbuster to experimental video confirm, challenge and/or complicate our understanding of the past and its relationship to the present.

Typical availability

Autumn semester, City campus

58323 Contemporary World Cinema

8ср

Requisite(s): 58225 Introduction to Film Studies

These requisites may not apply to students in certain courses. See access conditions.

This subject focuses on key developments in contemporary world cinema, with a particular emphasis on films that are innovative, challenging and/or experimental. Drawing closely on recent debates in film studies on the relationship between politics, aesthetics, affect and experience, students analyse and engage critically and creatively with an eclectic collection of contemporary films from a diverse range of national and cultural contexts.

Typical availability

Spring semester, City campus

58324 Investigating Media, Reflective Practices

8ср

Requisite(s): 58226 Media, Mediation, Power

These requisites may not apply to students in certain courses. See access conditions.

This subject explores key research traditions and methodologies through practical projects investigating diverse media and the people who use them. Students explore approaches including semiotic methods for analysing the meaning and significance of programs and formats (such as 'reality television'); objective and subjective approaches to audiences/consumers; how to study the ways people actively use various media in their daily lives ('ethnomethodology'); 'political economy' analyses of media industries; and self-reflective and critical approaches to understanding what it means to work as a media professional in contemporary Australian media industries. In this subject, students further develop their ability to report and present research findings using research communication techniques rather than conventional essays. It provides practical experience in formulating and investigating research questions, preparing students for successful Honours-level research, and building pathways to careers in the media and in media research.

Typical availability

Spring semester, City campus

58325 Audiences, Users, Publics, Communities

8ср

Requisite(s): 58226 Media, Mediation, Power

These requisites may not apply to students in certain courses. See access conditions.

This subject equips students to analyse changing concepts of the media audience and critically evaluate claims about the relationships between media and people individually and collectively. It explores magazines, newspapers, television and online and mobile media, their 'content' (such as programs, as information, as models for defining identity), the various ways they are used (such as memory supports, as agents of virtual travel, as archives, as networking tools), and considers how audiences as active 'readers' increasingly produce their own meanings from the resources the media provide. Students explore developments including 'virtual' communities, virtual publics and political online activism as examples of how audiences are evolving into dynamic meaning-makers and 'producers'. This subject provides an implicitly historical overview of changing theorisations of audiences. It gives students further experience in formulating and conducting their own research focused on people's actual relationships to diverse media.

Typical availability

Autumn semester, City campus

58326 Australian Aboriginal Politics and History

8cp

This subject focuses on the various ways Aboriginal people have sought to exercise power. This approach seeks to understand, through detailed case studies, the demands Aboriginal people have made since colonisation. In doing this students develop an understanding of the impact of colonisation/dispossession as it occurred at different times across NSW, the shifting and changing political rationalities and wider intellectual influences that shaped this process and how this in turn has shaped Aboriginal social, cultural, economic and political life. The subject is organised around studies of key moments in the NSW Aboriginal political rights movement/s and the changing government policy and administration of Aboriginal affairs.

Typical availability

Spring semester, City campus

58327 Indigenous Futures

8ср

Requisite(s): 58227 Balancing World Views: Introduction to Aboriginal Cultures

These requisites may not apply to students in certain courses. See access conditions.

In this subject students learn the normative and legal bases for the protection of Indigenous rights. The objective is not only to understand the legal and political language of Indigenous rights with a view to engaging in the advocacy and debates that promote those rights but also to think critically about these ideas and institutions. Areas investigated include comparative studies of Australian and international cases such as cultural rights, land rights and native title rights and legislation, rights and institutions of self-government, Indigenous land use agreements and joint management strategies, and economic enterprise and social development frameworks and practices.

Typical availability

Autumn semester, City campus

58328 The New Economy of Post-Nature

8cp

Requisite(s): 58228 Climate Change: Politics and Ecology These requisites may not apply to students in certain courses. See access conditions.

The Western academy is organised around a fundamental distinction between nature and society, with nature defined as that which is independent of human action. What can this idea of nature mean in our Anthropocene era, when chemical and thermal pollution are universal, when human cells are cultured and can achieve immortality outside the body, when 'wilderness' exists only in legally designated protected areas, when evolution itself is driven by human caused extinctions, and the recombination and design of species to order in commercial laboratories? Introducing key debates at the intersection of science and technology studies and environmental policy, this subject enables students to evaluate the vexed concept of 'sustainability' and the utopian prospect of a transformation from fossil-fuelled industrial modernity to a 'post-industrial' mode of production, sometimes called the 'knowledge-based bioeconomy'. Students undertake an informed critical analysis of the social, political, economic and ethical issues associated with the 'life industries' from the level of molecular biotechnology to global ecological management.

Typical availability

Spring semester, City campus

58329 Culture, Science and Nature

8cr

Requisite(s): 58228 Climate Change: Politics and Ecology These requisites may not apply to students in certain courses. See access conditions.

The subject introduces students to the relationships between cultures and environments including theory and debates about the relationship between culture, science and nature. Drawing on cultural expressions from graphic art and imagery, film and music through to oral and literary forms, students consider how understandings of nature have been shaped by a range of cultures, including Australian Indigenous place making and perceptions of nature in religious or philosophical traditions. Students investigate changing understandings of 'nature', 'the environment' and related terms, from the early modern emergence of sciences challenging theological ideas of nature, to present articulations of a crisis of 'the biosphere' by environmentalists, challenging neoliberal economics. These changing conceptions of nature are considered in the light of cross-cultural comparison across Indigenous and non-Indigenous contemporary societies, inflected by class and gender, in order to analyse the ecological consequences of dominant ideas about nature.

Typical availability

Autumn semester, City campus

58330 Narrative and Theory

8ср

Based on practice, and oriented towards the production of writing, this subject focuses on the large field of narrative and its essential elements. Students study and practice aspects of narrative theory including point of view, temporality, story and plot development. A range of narrative writing is studied and discussed, integrating practical work with critical reflection and enabling students to produce their own piece of narrative writing. Students write a narrative piece in a genre of their choice.

58331 Creative Writing Project

8cp

The capstone in the Creative Writing major, this subject enables students to complete a portfolio of work, in a chosen genre, to a professional standard. Working under supervision as well as in groups, and with input from industry professionals, students gain an understanding of the literary and other creative industries. They

develop skills in editing and revision and acquire the confidence to enable them to submit their work for publication. Students write in a genre and for a publication of their choice.

58332 Defining Cultures

8ср

This subject explores the debates about culture that underpins the development of the cultural and creative industries, beginning with a study of the meanings of the term 'culture'. It introduces students to the different ways that cultural analysis has been undertaken since the 19th century. It also considers the relationship between culture and power, the notion of the sub-culture, culture and the body, culture and the media, providing students with the cultural literacy with which to explore emergent cultural and creative industries.

58333 Introduction to Cultural Research

8cr

Requisite(s): 58332 Defining Cultures

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject introduces students to the key ways in which diverse cultural forms and practices can be explored and analysed. It does so through an introduction to key contemporary theories and methodologies, including discourse analysis, archival research and critical ethnography. Students are introduced to key terms used in contemporary research, including race and ethnicity, sex and gender, class, embodiment, subjectivity, and culture in order to build critical literacy. Students learn how to use those terms as part of cultural research through a series of exercises in cultural research.

58334 Research Studio

8cp

This studio focuses on the practical use of research theories and methodologies by using them to collaboratively explore major social and cultural issues, and in the process developing further the research skills introduced in Year 1. It includes study of traditional, multimedia and emerging media forms and products in order to examine political, cultural, social and ethical issues. The subject engages with issues of representation, cultural politics, sociality and social justice across and within various media communities and productions.

58335 Digital Communities

a28

This subject encourages students to examine localised cultural practices and to present their findings through the use of commonly used digital and mobile media and written text. The subject focuses on case studies of creative interventions in urban contexts and invites students to research and learn about the social, historical, cultural and economic aspects of the city as a physical and digital reality at the intersection of lived and mediated spaces.

58336 Cultural Research Practicum

8cp

In this subject, students spend time working in a cultural analysis placement or producing a major collaborative research project. The placement or project is complemented by training in appropriate workplace skills, documentation methods and classes in which students discuss and present their experiences and obtain feedback in preparation of a final report.

58337 Engagement, Participation, Gamification

8cn

Requisite(s): 58125 User Experience Design

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Game-like processes and 'gamification' are becoming more and more widespread as a mode of interaction, participation and communication design for engagement with diverse audiences or publics. In this subject students are introduced to theories of technological mediation of communicative ecologies and of interactions through social media. They undertake place-based research about global locations and events (both contemporary and historical) and then use this knowledge in a design process to create a hybrid online/offline game. The design of interactive tasks within the game develops research skills and introduces concepts and contextual knowledge, as

well as algorithmic thinking and scripting of rule-based interaction. Considerations of accessibility and inter-cultural communication are introduced, as well as methods of evaluating digital environments along lines of aesthetics, usability and resource efficiency.

58338 Representing Complexity

8ср

This subject extends on students' knowledge and understanding of how to engage with diverse communities and audiences through researching and communicating an innovative solution to a complex real-world problem in the form of a virtual exhibition. Students explore how software and technologies (as constellations of affordances) structure our experience and interactions and therefore our relationships with them and with each other. Critical analysis of case studies is used to explore processes, dynamics and interacting factors in digital production environments and demonstrate how creativity is deployed in response to complexity and underpins processes of innovation. Implementation of the virtual exhibition develops skills in requirements gathering, user experience design, project management, appropriate technology choice, and communicating with technical specialists.

58339 Digital Futures

8cp

This subject develops students' understanding of how new technologies interact with existing technologically and socially structured environments through exploring how a work-based context might respond to the transformative shifts brought about by the emergence of a new disruptive technology. Technological change is a given in workplaces of the future and this subject aims to equip students with theoretical and practical tools to remain agile in responding to these inevitable shifts. Students design and prototype solutions to a problem-based scenario, including gaining experience in presenting to clients and workplace management, advocating for design solutions, and building a business case.

58340 Creative Cities, Cultural Communities and Entrepreneurs

8ср

This subject builds on the student's skills in research and analysis and their studies of cultural and creative industries and communities in a major project that explores cultural experimentation at individual, cultural or social level. At individual level this includes a diverse range of artistic and intellectual practices that are deployed as part of the new creative economy; culturally it explores the ways that cultural communities deploy creative thinking and practice to challenge the status quo and create new identities; socially, it addresses strategies such as the 'Creative Cities' initiative that are used as part of contemporary urban renewal.

58723 Research Dissertation 1 (Communication)

24cp; availability: not offered to exchange and study abroad students For subject description, contact UTS: Communication.

58724 Research Dissertation 2 (Communication)

24cp

Requisite(s): 58723 Research Dissertation 1 (Communication) There are also course requisites for this subject. See access conditions

For subject description, contact UTS: Communication.

58900 Poetry

8cp; availability: not offered to exchange and study abroad students

This subject offers students the opportunity to develop skills in writing poetry. Students write extensively and read widely in a variety of genres of contemporary and modern poetry, with a special emphasis on the contemporary and the Australian context. As well as introducing aspects of traditional techniques in poetic composition, students will have an opportunity to explore their creative work across both literary and performance-based facets of writing. In the context of writing and workshopping, students enhance not only their creative skills as poets but also their critical ability to edit and revise their own work and that of other writers in the class.

Typical availability

Spring semester, City campus

58901 Screenwriting

8cp; availability: not offered to exchange and study abroad students

This subject is an introduction to both the theory and practice of writing for the screen. It focuses on storytelling for a visual medium with an emphasis on the creative process, imagination, character development and structure. The process of writing a short film, from initial concept to second draft, is explored through industry-accepted stages of development and formats and through workshopping. Students improve their ability to critically assess their own work and the work of their colleagues.

Typical availability

Autumn semester, City campus

58902 Writing Through Genre

8cp; availability: not offered to exchange and study abroad students

In this subject students engage with the conventions of genre, in both its broad and specific applications, building upon knowledge and skills gained in other subjects. Genre is the conceptual and structural heart of writing, either in traditional manifestations (romance, crime, fantasy) or as a blend of genres (verse narratives, literary mashups). Students study a range of genre writing forms, and produce and collectively workshop their own writing in a chosen genre, demonstrating both an understanding of the conventions of their genre as well as a willingness to challenge and extend it.

Typical availability

Spring semester, City campus

58999 Professional Internship

8cp; availability: not offered to exchange and study abroad students. Requisite(s): 40 credit points in MAJ10020 Journalism major BAComm OR 40 credit points in MAJ10021 Media Arts and Production major BAComm OR 40 credit points in MAJ10024 Public Communication major BAComm OR 40 credit points in MAJ10022 Writing and Cultural Studies major BAComm OR 40 credit points in MAJ10037 Creative Writing OR 40 credit points in MAJ10038 Digital and Social Media

These requisites may not apply to students in certain courses. See access conditions.

Students develop a structured industry experience project in the area of their major study. This involves the negotiation of a learning contract to identify the outcomes of such experience and to design a detailed program of activities to achieve these outcomes. Supervision is provided to assist students in identifying the capabilities they need to develop and to provide support and advice during their industry involvement. Students are assisted to reflect on their learning from experience in the workplace in the context of their chosen field of study.

Typical availability

Autumn semester, City campus Spring semester, City campus

59330 Advertising Practice

6cp; availability: not offered to exchange and study abroad students Elective

Students are introduced to the principles and practice of advertising and its unique role in business and society. Creativity in advertising is examined through an exploration of the art and science of advertising and how these apparent contradictions influence principles and industry practice. Students learn how to develop and present a range of creative ideas appropriate to the various stages of effectively promoting a product, service or idea in sectors as diverse as public, private and not-for-profit.

Typical availability

Spring semester, City campus

59333 Advertising Strategies

6cp; availability: not offered to exchange and study abroad students Elective

This subject advances students' knowledge and understanding of principles of strategic creativity in advertising practice. It develops students' ability to analyse creative approaches and address the debate on 'award' vs. 'strategic' creativity. Students gain an understanding of advertising agency disciplines and their contribution to campaign planning, production and pitching. Topics include the significance

of strategic planning in campaign development, conceptual and production issues involved in radio and TV advertising, the evaluation of advertising effectiveness, and the development and selling of an integrated advertising idea. Students engage in scriptwriting and the production of storyboards for broadcast media and develop their concepts through to finished form using current digital technologies taught within the subject.

Typical availability

Autumn semester, City campus

59343 Experiencing Australian Language and Culture

6cp; intensive: 3 week intensive (weekly on campus: 4hrs a day, 4 days per week; block: 2 x 2hr day blocks); availability: non-English-speaking background international, exchange or study abroad students who meet the requisite IELTS score Undergraduate

This is one of five subjects specifically for international students in the Australian Language and Culture program. This subject consists of two components: the in-class segment, and facilitated field trips to specific sites in order for students to develop a deeper understanding of Australian society and culture.

59709 Australian Conversations

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14) Undergraduate

This subject is designed for international students as part of an Australian Language and Culture Studies program. The subject aims to develop students' oral and written English and their sociolinguistic awareness of Australia through the study of a range of topics related to Australian society and culture. The subject also provides an overview of the Australian education system and introduces the key genres relevant to participation in an Australian tertiary education environment. Students who have successfully completed this one-semester subject are eligible to audit a mainstream FASS subject in their second semester.

59710 Performing Australia

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14) Undergraduate

This subject is designed for international students as part of an Australian Language and Culture Studies program. In this subject, students investigate the way key concepts in Australian cultural identity are expressed in writing, performing and visual arts. Students engage with key texts and images, with key figures in arts production, and with key places in arts presentation. These studies aim to develop students' cultural literacies.

59711 Natural Australia

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14) Undergraduate

This subject is designed for international students as part of an Australian Language and Culture Studies program. The subject focuses on the development of students' written and oral academic literacies, and introduces a range of texts that are appropriate for participation in an English language tertiary context. In this subject, academic literacies are approached through topics that relate to

Australia's natural environment. These may include meanings attached to land, landscape, beach and bush; concepts of native, introduced, companion and feral species; patterns of population, consumption and waste; and the ways in which Australians participate in green cultures and organisations.

59712 Australian Language Studies

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14) Undergraduate and Postgraduate

This subject is designed for international students as part of an Australian Language and Culture Studies program. The subject aims to develop students' oral and written English, and their sociolinguistic awareness of Australia, through the study of a range of topics related to Australian society and culture. The subject also provides an overview of the Australian education system and introduces the key genres relevant to participation in an Australian tertiary education environment. Students who have successfully completed this one-semester subject are eligible to audit a mainstream FASS subject in their second semester.

59713 Australian Media

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14) Undergraduate and Postgraduate

This subject is designed for international students as part of an Australian Language and Culture Studies program. In this subject, students investigate texts and genres in Australian film, television, and websites, and engage with recurring themes and issues that reflect Australian Indigenous and migrant identities. Through these investigations, students develop practices for interpreting and responding to cultural texts in written and spoken discussions.

59714 Australians at Work

8cp; availability: restricted to students who are admitted to either C22032 Exchange Australian Language and Culture or C50009 Study Abroad Australian Language and Culture

Requisite elaboration/waiver: Non-English-speaking background international, exchange or study abroad students who meet the requisite English proficiency score (IELTS: 5.0-6.0 overall with a writing score of 5.0; TOEFL: paper based: 510-550 overall with TWE of 3.0, internet based: 35-78 overall with a writing score of 14) Undergraduate and Postgraduate.

This subject is designed for international students as part of an Australian Language and Culture Studies program. The subject is designed to develop students' critical reading, writing and oral skills. These skills are developed through a range of studies that relate to Australian workplace and business cultures. These studies may include: patterns of labour, migration and employment in the Australian economy; workplace practices; sociocultural issues of gender, age, ethnicity and language in the Australian workplace; and Australia's place in the global economy.

59715 Australian Workplace Cultures

8cr

This subject is designed for students who are identified by their faculty as requiring additional English language consolidation. In this subject, students investigate issues in Australian workplace and business cultures. These studies may include: patterns of labour, migration and employment in the Australian economy; issues of gender, age, ethnicity and language in the Australian workplace; and Australia's place in the global economy. Through engagement with these topics, students develop critical reading, writing and oral skills.

59716 Australian Environment

8ср

 $Requisite \, elaboration/waiver: Students \, from \, a \, non-English \, speaking \, background. \, Referral \, by \, student's \, home \, faculty.$

Undergraduate and Postgraduate

This subject is designed for international students as part of an Australian Language and Culture Studies submajor, and aims to develop students' written and oral academic skills and literacies. These skills are developed through a range of studies that relate to Australia's natural environment and may include the meanings attached to: land, landscape, beach and bush; concepts of native, introduced, companion and feral species; patterns of population, consumption and waste; and the ways in which Australians participate in green cultures and organisations.

59717 Indigenous and Migrant Cultures

8cr

Undergraduate and Postgraduate

This subject is designed for students who are identified by their faculty as requiring additional English language consolidation. In this subject, students are introduced to Australian Indigenous cultures; the history of migration; and the development of multiculturalism. These aspects of Australian identity are explored through a variety of media texts as well as Australian films. Students use a range of research techniques to develop selected topics, and present their research in both seminar and written form.

59718 Academic English

6cp; availability: restricted to students who are admitted to C22028, C22029, C50006 or C50007.

Requisite elaboration/waiver: Non-English-speaking background international, exchange or study abroad students who almost meet the requisite UTS English proficiency score for entry into a mainstream course but are required to undertake English language consolidation. Undergraduate

This subject is designed to consolidate students' written and oral academic skills and literacies. These skills are developed through a range of studies that relate to Australia's natural environment, and may include: the meanings attached to land, landscape, beach and bush; to concepts of native, introduced, companion and feral species; to patterns of population, consumption and waste; and to the ways in which Australians participate in green cultures and organisations.

59719 English for University Study

6ср

For further details, contact UTS: International Studies.

60101 Chemistry and Materials Science

6ср

This subject develops a solid science foundation for further materials and engineering-related studies and facilitates the working relationship between engineers, materials scientists and other scientists; an ability to identify and solve chemical and materials problems; and an ability to relate properties of engineering materials to technical applications. Topics covered in this subject are: chemical bonding of materials and general chemistry, classification of materials, structure-property relationships, mechanical properties, heat treatment and strengthening mechanisms, ferrous and non-ferrous alloys, ceramics, polymers and composites, materials degradation, materials recycling and materials selection. Numerous applied examples are discussed. Laboratory work imparts practical skills and reinforces the underlying theories. This is an integral part of the subject along with tutorial workshops.

Typical availability

Autumn semester, City campus Spring semester, City campus

60700 Undergraduate Project (Scientific Practice)

6cp

This subject is designed to enhance development of students' ability to undertake a professionally based scientific project. This subject can only be undertaken following prior negotiation on the part of the student with a full-time member of academic staff regarding supervision. Students contribute, in collaboration with their academic and, where relevant, industry supervisor, to the formulation of the project, including planning the work within an appropriate time scale. Students are responsible for appropriate analysis and critical evaluation of the data or information obtained and presentation of their findings in a formal written report.

Students should approach potential supervisors in the first instance. Before enrolment can be approved, the student and supervisor must provide the head of department with a short written project proposal, including assessment criteria and, where the project involves laboratory or field work, a completed risk assessment form. In addition, approval by the subject coordinator is required.

Typical availability

Autumn semester, City campus Spring semester, City campus Summer session, City campus

60701 Undergraduate Project (Research Internship)

6ср

This subject is recommended for students wishing to undertake a career in research. It offers the opportunity to complete a short supervised research project either in a research laboratory at the University or with an industry partner.

This subject can only be undertaken following prior negotiation on the part of the student with a full-time member of academic staff regarding supervision, and, where relevant, with an industry co-supervisor. Students should approach potential supervisors about project availability in the first instance. Before enrolment can be approved, the student and supervisor must provide the head of department with a short written project proposal, including assessment criteria and, where the project involves laboratory or field work, a completed risk assessment form. Normally, a weighted average mark of 75 per cent or more is required for approval to enrol in this subject.

Students contribute, in collaboration with their UTS supervisor and, where appropriate, their industry co-supervisor, to formulation of the scope of the research project, including planning of the research work within an appropriate time scale and establishment of effective channels of communication. They are responsible for carrying out the work productively and cooperatively, for appropriate and critical analysis of the data or information obtained, and are required to present their findings in a formal written report. They may also be required to present a seminar to other students, staff and industry partners.

Typical availability

Autumn semester, City campus Spring semester, City campus Summer session, City campus

60901 Advanced Communication Skills in Science

6cp; 3hpw

The aim of this subject is to provide postgraduate science students with ongoing integrated academic language skills, in both written and oral communication, and text-based research skills. Students are encouraged to take a critical/analytical approach to understanding and producing written and spoken texts appropriate for different professional contexts.

In particular, the subject focuses on critical reading skills; effective paraphrasing and summarising; selecting, evaluating and using a variety of sources of information; citation and referencing of literature; developing written arguments; presenting seminars; text drafting and editing; workplace communication skills; and communication in the media. Students examine the various styles of professional documents (journal articles and reviews, short communications, technical reports, etc.) and their purposes, and are guided in the use of library and internet resources.

60902 The Scientific Method

6ср

The ability to apply experimental methods to a diverse range of scientific applications is an essential capability of all those pursuing a career in science. This subject provides students with a logical framework for conducting or assessing scientific research beginning with standard principles of designing a good experiment. Students gain an understanding of how hypotheses should be framed for testing, how to design appropriate data collection, how to determine if the sample size is adequate, and how to analyse the data collected. An introduction to the ideas of uncertainty and international guidelines relating to these, and consideration of ethical issues are also covered. This subject aims to impart a deep understanding of the concept of the scientific method which is invaluable for all students destined for a research, research management, research training or other science-oriented career.

60903 Project Management in Science

6cp

This is a foundation-level subject which provides: an overview of the terminology, tools, techniques and processes in project management; an understanding of project integrative process; the know-how to develop a project plan and implement and control a project; and an understanding of stakeholder management and organisational structures and their influences.

60904 Innovation, Entrepreneurship and Commercialisation

6cp

This subject covers topics that lead to an understanding of the basis for scientific innovation, commercialisation and entrepreneurship. It includes how to come up with new projects, develop a product and establish a start up company. In addition, the management of intellectual property is presented along with ways in which to pitch a new company or concept to investors, the media and the general public.

60905 Leadership and Teamwork in Science

6cp

This subject is an introduction to management in a science context. The particular areas focused on are the main ideas of leadership, issues of motivation, the influence of personality and the use of teamwork in the workplace. The management and motivation of staff, team work and team leadership, and strategic management are important competencies of managers in science-based enterprises. An important aspect of this subject is utilising case studies and student experience in leadership and teamwork to provide stimulus for discussion. This subject provides the essential knowledge and concepts in teamwork and leadership to facilitate skills development in these areas relevant to each student's career.

60906 Science in Practice

6ср

In this subject a major scientific breakthrough is studied in considerable detail in order to build an appreciation of the way in which science operates. The elucidation of the double-helical structure of DNA provides an ideal case study on which to base an in-depth investigation on scientific research. There is opportunity to consider the issues involved in collaborations: both the advantages and the pitfalls. It is also an outstanding case for considering how science progresses: there were some blind alleys that dominated thinking for some time and may have delayed progress but flexible minds were able to work around the roadblocks. Overall the 'DNA story' is an excellent example of a major scientific breakthrough that had far-reaching consequences and came about because of a concerted campaign by many researchers working in a spirit of competition and friendly rivalry.

60907 Managing Science-based Enterprises

6ср

Cross-cultural management, career management of staff, management of research and development programs and projects, intellectual property management, management of creativity, and risk management are critical competencies of managers in science-based enterprises. This subject provides the essential knowledge and concepts to facilitate skill development that is appropriate for managers in science-based enterprises. Case studies of different organisational structures and cultures is discussed.

60908 Science and Industrialisation

6ср

The impact of science on economic growth and society is the major focus of this subject. Science has been intimately involved in the development and implementation of new technologies that have transformed the economics and lifestyles of citizens. The early adoption of new technology has often had a major impact on national and global economies. In this subject, there is an examination of several case studies that estimate the cost of a new development in terms of the background science that has been funded in order to establish a new product or process. The importance of mergers and acquisitions in certain industries, e.g. pharmaceuticals, are shown to be necessary to ensure a sufficient capital base for the huge investment in bringing new product to market. There are also case studies that show that development of new processes gave nations a considerable economic advantage for a time. A further issue is the legacy of old large-scale manufacturing processes that were environmentally damaging and the continuing impact that has on society.

60909 Professional Science Project

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

65032 Forensic Science Research Project A

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project

proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

65033 Forensic Science Research Project

24cr

In this subject students undertake a semester-long research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. This project is equivalent in level to those undertaken by honours and research master's students. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (10,000–20,000 words approx.) which includes an introduction, which sets the project in the context of the literature, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

65034 Introduction to Forensic Science

6cp; 4hpw

This subject is designed to introduce forensic science as a coherent discipline to students with pre-existing scientific backgrounds. Crucial forensic science concepts, philosophies and principles are presented in their historic context, and their impact on modern forensic science is emphasised. The various forensic science sub-disciplines are presented in a descriptive and logical manner. The subject intends to familiarise students with forensic science and also enhance the learning experience of other specialised forensic science subjects.

The subject covers, in the forensic context, the following areas: history, general definitions and concepts, sub-disciplines, methodology and methods, introduction to interpretation and Bayesian statistics, crime scene, trace typology, function of the expert, legal system, judicial admissibility and ethical considerations. Lectures are complemented by tutorials/workshops involving guest speakers.

65072 Forensic Science Research Project B

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

65111 Chemistry 1

6cp; 6hpw

The study of chemistry is central to an understanding of the world around us and is relevant to all other science areas, such as physics, biology, geology and the environment at the fundamental level. This subject is designed to develop a student's understanding of the basic principles of chemistry. Topics covered are an introduction to matter, chemical reactions, atomic structure, stoichiometry, the periodic table, bonding, intermolecular forces and crystal structures, molecular geometry, introductory carbon chemistry, equilibrium, and acid-base equilibria. The subject provides the requisite knowledge and skills for 65212 Chemistry 2.

Typical availability

Autumn semester, City campus Spring semester, City campus

65202 Organic Chemistry 1

6cp; 6hpw

Requisite(s): 65201 Chemistry 2C OR 65022 Chemistry 2A OR 65212 Chemistry 2

This subject introduces students to the reactions characteristic of the common families of carbon compounds, and explores the details and implications of the reaction mechanisms involved. A primary objective is for students to gain an appreciation of the relationship of molecular structure to reactivity across a wide range of functional groups.

Students have the opportunity to perform many of these reactions in the laboratory, and to evaluate critically the success of their experiments by analysis of their reaction products using gas chromatography and infra-red spectroscopy as well as mp, bp and refractive index measurements.

Typical availability

Autumn semester, City campus

65212 Chemistry 2

6cp; 6hpw

Requisite(s): 65111 Chemistry 1 OR 65101 Chemistry 1C OR 65012 Chemistry 1A

This subject builds on and develops further the material introduced in 65111 Chemistry 1. Physical chemistry topics include acidic and basic salts, acid-base titrations, buffers, solubility equilibria, complex ion equilibria; introduction to chemical thermodynamics, enthalpy of reactions, Hess's Law, entropy and Gibbs free energy; chemical kinetics; coordination chemistry; redox chemistry, electrode potentials, electrolysis, corrosion, Galvanic cells. Carbon chemistry topics include: structures and reactions of the common families of carbon compounds, alkanes, alkenes, alkynes, arenes, halogen compounds, alcohols, ethers, alkanals, alkanones, carboxylic acids, amines, amides, esters; stereochemistry, chirality and optical isomerism; biological molecules and biopolymers, amino acids, peptides, proteins, carbohydrates, nucleic acids.

Typical availability

Spring semester, City campus Summer session, City campus

65213 Chemistry 2 (Advanced)

6cp

This subject develops the material introduced in 65111 Chemistry 1. Physical chemistry topics include: acidic and basic salts, acid-base titrations, buffers, solubility equilibria, complex ion equilibria; introduction to chemical thermodynamics, enthalpy of reactions, Hess's Law, entropy and Gibbs free energy; chemical kinetics; coordination chemistry; redox chemistry, electrode potentials, electrolysis, corrosion, Galvanic cells. Carbon chemistry topics include: structures and reactions of the common families of carbon compounds, alkanes, alkenes, alkynes, arenes, halogen compounds, alcohols, ethers, alkanals, alkanones, carboxylic acids, amines, amides, esters; stereochemistry, chirality and optical isomerism; biological molecules and biopolymers, amino acids, peptides, proteins, carbohydrates, nucleic acids.

This subject also covers extension topics in areas such as inorganic chemistry, analytical chemistry and forensic chemistry.

65242 Principles of Forensic Science

6cp; 4hpw

This subject is designed to introduce the different disciplines, principles and concepts peculiar to forensic science. It covers, in the forensic context, the following areas: history, general definitions and concepts, sub-disciplines, methodology and methods, introduction to crime scene, trace typology, function of the expert, legal system, judicial admissibility, ethical considerations, and interpretation of forensic evidence. Lectures are complemented by tutorials/workshops involving guest speakers. This is a core subject for the forensic science courses and an elective for students in other related courses.

Typical availability

Spring semester, City campus

65306 Analytical Chemistry 1

6cp; 6hpw

Requisite(s): 65202 Organic Chemistry 1

Lecture, laboratory and tutorial components of this subject cover spectroscopic methods of analysis including mass spectrometry (MS) and infra-red (IR), ultraviolet-visible (UV-Vis) and nuclear magnetic resonance (NMR) spectroscopy; general chromatographic methods for separation; volumetric techniques including acid-base and complexometric titrations; and errors, calibration and statistical interpretation of analytical data.

Typical availability

Spring semester, City campus

65307 Physical Chemistry 1

6cp; 4.5hpw

Requisite(s): ((65022 Chemistry 2A OR 65201 Chemistry 2C OR 65212 Chemistry 2) AND 33190 Mathematical Modelling for Science)

This subject is designed to provide students with a working knowledge of chemical thermodynamics, optical spectroscopy, and chemical kinetics, which can then be applied to other subjects within the course. Students are introduced to fundamental concepts in these areas and learn how to apply their principles in problem-solving situations.

Typical availability

Autumn semester, City campus

65342 Crime Scene Investigation

6cp; 6hpw

Requisite(s): (65242 Principles of Forensic Science OR 65241 Principles of Forensic Science) AND (65212 Chemistry 2 OR 65201 Chemistry 2C OR 65022 Chemistry 2A)

These requisites may not apply to students in certain courses. See access conditions.

This subject provides a sound teaching in crime scene investigation. It is designed to introduce the different principles and concepts peculiar to a crime scene. It covers the following areas: aims of the crime and related investigation; preservation, recording and processing of a crime scene; preservation, search and collection of evidence; on-site screening tests; scene reconstruction; examples of scenes (break-entry, homicide, sexual assault, traffic and other accidents, fire, explosion, disaster); common types of evidence; ad-hoc forms and software assisting crime science investigation. Lectures are complemented by tutorials/workshops involving guest speakers.

Typical availability

Autumn semester, City campus

65409 Analytical Chemistry 2

6cp; 6hpw

Requisite(s): 65306 Analytical Chemistry 1

This subject includes topics such as separation techniques, gas chromatography and instrumentation. The subject also covers sample preparation and derivatisation, columns-packed and bonded phase, GC detectors and their application, HPLC: basic theory and instrumentation, normal and reversed phase columns, ion-pair chromatography and gel permeation chromatography, ion exchange

resins and chromatography, method validation and quality assurance, electrophoresis: plate and capillary, laboratory automation: robotic techniques, auto samplers and post-column derivatisation methods.

Typical availability

Autumn semester, City campus

65410 Chemical Safety and Legislation

6cp; 3hpw

Requisite(s): 65201 Chemistry 2C OR 65022 Chemistry 2A OR 65212 Chemistry 2

This subject covers identification of laboratory hazards and prevention; roles of government organisations (Safe Work Australia, WorkCover, DECCW, NICNAS, and APVMA); toxic effects of chemicals (carcinogens, mutagens and teratogens, sensitisers); exposure to chemicals, local and systemic reactions, acute and chronic toxicity; classification of dangerous goods (ADG class code and class labels); flammability limits (flammable liquids and solids); fire safety and fire prevention; precautionary labels and material safety data sheets; conducting risk assessments; NSW Occupational Health and Safety Act and the Regulations; safe storage of chemicals; safe handling of corrosives, oxidisers and explosives; class 6 poisons (scheduling, NSW Poisons and Therapeutic Goods Act; compressed gases (classification, hazards, storage and safe handling); cryogens and safe handling; personal protective equipment (respiratory, eye, head and face, and hand protection); workplace atmospheric monitoring; waste (safe handling of chemical, biological, and microbiological waste).

Typical availability

Autumn semester, City campus

65411 Inorganic Chemistry 1

6cp; 4.5hpw

Requisite(s): 65201 Chemistry 2C OR 65022 Chemistry 2A OR 65212 Chemistry 2

This subject covers the following topics: transition metals - electron configurations and oxidation states; fundamentals of coordination chemistry; crystal field theory; spectral and magnetic properties of metal complexes; chelating agents and applications in analytical chemistry, industrial processes and medicine.

Typical availability

Spring semester, City campus

65412 Physical Evidence

6cp; 6hpw

Requisite(s): 65242 Principles of Forensic Science AND 65307 Physical Chemistry 1 AND 65306c Analytical Chemistry 1 AND 65342 Crime Scene Investigation

These requisites may not apply to students in certain courses. See access conditions.

This subject covers the nature, value and relevance of several types of physical evidence. It follows on from the prerequisite subject and covers the following topics: fingerprint detection and identification; miscellaneous individual traces, tooth marks, lip prints, nail marks, etc.; path marks, footwear impression, tyre impression, etc.; weapons including firearms, bullet/cartridge identification, gunshot residues, firing distance; motor vehicle globes and other light; and miscellaneous trace evidence, matches, cigarettes/tobacco, building and safe insulation materials cordage, buttons, wood, and other types of physical evidence. Lectures are complemented by a practical program involving mock cases.

Typical availability

Spring semester, City campus

65508 Organic Chemistry 2

6cp: 6hpw

Requisite(s): 65202 Organic Chemistry 1

The subject builds on previous studies of functional group reactions and spectroscopic techniques and illustrates applications of these concepts for organic synthesis. Topics covered include aromaticity and chemistry of benzene and heterocyclic compounds; carbanion chemistry and multi-step synthesis of new aromatic compounds; chemistry of phenols and aryl halides; palladium-catalysed coupling reactions and modern synthetic methods used in academia and industry; molecular orbital theory, pericyclic reactions and 1,3-dipolar [2+3] cycloadditions. The subject also emphasises the practical applications of organic chemistry in the synthesis of

many important compounds. Chemical research literacy in organic chemistry is implemented, using *SciFinder Scholar*, with an emphasis on differentiate and use of chemical literature.

In the laboratory, students have the opportunity to perform multi-step reactions to synthesise bioactive molecule and natural products as well as carrying out other useful synthetic transformations.

Typical availability

Spring semester, City campus

65509 Inorganic Chemistry 2

6cp; 5hpw

Requisite(s): 65411 Inorganic Chemistry 1

This subject covers structures of crystalline inorganic solids including relevance of crystal field theory to advanced structures; reaction mechanisms and redox processes of d-block metal complexes; some applications of metal phthalocyanine complexes; electrode materials for lithium ion batteries; bioinorganic chemistry including metalloproteins and biominerals; and crystallographic and spectroscopic properties of bone.

Typical availability

Autumn semester, City campus

65544 Chemical Criminalistics

6cp; 6hpw

Requisite(s): 65412 Physical Evidence AND 65409c Analytical Chemistry 2

These requisites may not apply to students in certain courses. See access conditions.

This subject complements the material covered in 65412 Physical Evidence by presenting evidence types that require a high level of analytical skills. It covers forensic analysis of glass, soil, paint, fibres, hairs and documents. Lectures are complemented by an extensive practical program involving mock cases. At the end of this subject, students should be able to select appropriate analytical procedures, analyse, interpret and write an expert witness report describing the forensic analysis of the material covered in this subject and its prerequisite subjects.

Typical availability

Autumn semester, City campus

65545 Forensic Toxicology

6cp; 6hpw

Requisite(s): 65508 Organic Chemistry 2 AND 65409c Analytical Chemistry 2

These requisites may not apply to students in certain courses. See

This subject examines the underpinning science of drugs and poisons relevant to matters that arise in judicial proceedings — that is forensic toxicology. The lecture component covers general pharmacology and toxicology. Topics covered include mechanisms of action, the absorption, distribution metabolism and elimination of drugs and poisons from the body as well as the signs and symptoms associated with the use of common drugs and poisons. The subject also provides an overview of state and federal laws relevant to licit and illicit drugs and poisons. The practical component is designed to reinforce topics covered in lectures and seeks to give student experience in solving problems associated with the analysis of a wide range of matrics including human tissues and various biological fluids. The subject also includes workshops and tutorials on the interpretation of the meaning of analytical results.

Typical availability

Autumn semester, City campus

65606 Analytical Chemistry 3

6cp; 6hpw

Requisite(s): 65409 Analytical Chemistry 2

This subject covers lecture topics such as: method validation, chemometrics (including principal component analysis and artificial neural networks), experimental design; advanced analytical techniques including Raman spectroscopy, X-ray diffraction, X-ray fluorescence and microfluidics; and guest lectures from industry including Agilent Technologies, Waters Chromatography, National Association of Testing Authorities (NATA) and the Royal Australian Chemical Institute (RACI).

The practical component requires students to develop, validate and apply an analytical method to a given sample using a variety of techniques including High Performance Liquid Chromatography (HPLC), Gas Chromatography (GC), Capillary Electrophoresis (CE), Nuclear Resonance Spectroscopy (NMR) and Inductively Coupled Plasma-Mass Spectrometry (ICP-MS).

Typical availability

Spring semester, City campus

65607 Physical Chemistry 2

6cp; 4.5hpw

Requisite(s): 65307 Physical Chemistry 1

The subject builds on 65307 Physical Chemistry 1, exploring more advanced topics in chemical kinetics, electrochemistry, and spectroscopy. The principles of infra red and Raman spectroscopic instrumentation are included, along with the application of these techniques to chemical imaging.

Typical availability

Spring semester, City campus

65621 Environmental Chemistry

6cp; 6hpw

Requisite(s): 65201 Chemistry 2C OR 65022 Chemistry 2A OR 65212 Chemistry 2

This subject focuses on the importance of chemical changes in the natural environment, and those resulting from human activity. Chemical changes are examined for both inorganic matter (soil clays) and organic matter (plant materials), having as their end products humic substances, petroleum, and coal. Particular emphasis is placed on changes in organic molecular structure. Important pollutants including halogenated hydrocarbons, and the oxides of nitrogen, sulphur and carbon are discussed, in the contexts of their origins and their effects on the geosphere, hydrosphere and biosphere.

Typical availability

Spring semester, City campus

65643 Chemistry and Pharmacology of Recreational Drugs

6cp; 6hpw

Requisite(s): 65545 Forensic Toxicology

These requisites may not apply to students in certain courses. See access conditions.

This subject provides greater detail on the chemistry, pharmacology and societal context of a number of substances covered in 65545 Forensic Toxicology. The focus of the subject is those substances used for recreational purposes, that is stimulants, depressants, hallucinogens and mixed effect drugs (e.g. opiates, solvents, amphetamines, alcohol and nicotine). Other topics covered include routes of synthesis; profiling of drugs to determine the method of manufacture and / or geographical origin; construction and operation of clandestine laboratories; sampling and analysis protocols; examination of relevant state and federal legislation regarding the possession, supply, manufacture and importation of certain drugs; the use of drugs in sport; the 'war on drugs'; case studies and social issues relating to the recreational use of drugs. The laboratory component includes experiments in natural product chemistry and two cognate syntheses based on procedures carried out in clandestine laboratories, as well as workshops and tutorials on the elucidation of the structure and purity of an unknown substance and those synthesised during practical sessions.

Typical availability

Spring semester, City campus

65644 Fire and Explosion Investigation

6ср

Requisite(s): 65544 Chemical Criminalistics AND 65606c Analytical Chemistry 3

These requisites may not apply to students in certain courses. See access conditions.

This subject seeks to show how a systematic scientific examination of a fire or explosion scene can lead to the establishment of its origin and cause. It covers the following topics: general definitions; fire insurance and crime statistics; combustion process, external and internal scene

examination, fire origin and cause determination; physical properties of materials, gases, aerosols; spontaneous combustion; kitchen fires, cigarettes, heaters, motor vehicle fires, electric appliances, analysis of accelerants and explosives; and sniffers and canines.

Typical availability

Spring semester, City campus

65743 Complex Forensic Cases (Chemistry)

6cp; 6hpw

Requisite(s): ((65412 Physical Evidence AND 65544 Chemical Criminalistics) OR 65864c Honours (Forensic Science) 1) These requisites may not apply to students in certain courses. See access conditions.

This subject is designed as an advanced practical course where the students apply techniques and principles gained in previous forensic subjects to the analysis of mock cases. It aims to familiarise the students with the management of a complex forensic case involving more than one type of evidence. It involves forensic analysis of material previously studied, preparation of expert witness reports and preparation for presenting evidence in a court environment.

Typical availability

Autumn semester, City campus

65861 Honours (Chemistry) 1

24cp

Study in this subject is designed to enhance the skills and knowledge necessary for research in chemistry. The principal activity is an individual research project in which the student, under supervision, plans and undertakes investigations in an area of interest. The data collected is then subjected to analysis and interpretation under the guidance of the supervisor. Students learn to define objectives and aims, work to available time and resources, use appropriate research methods, critically assess information and develop complex arguments in detail. The findings of the research project are presented in a structured and integrated thesis. which comprises the main assessment component.

Typical availability

Autumn semester, City campus

65862 Honours (Chemistry) 2

24cp

Requisite(s): 65861 Honours (Chemistry) 1

For subject description, refer to 65861 Honours (Chemistry) 1.

Typical availability

Spring semester, City campus

65863 Expert Evidence Presentation

6cp; 6hpw

Requisite(s): 65865c Honours (Forensic Science) 2

These requisites may not apply to students in certain courses. See access conditions.

This subject deals with the legal issues involving forensic science in the field and the impact of scientific evidence on the legal system. Students receive some training in the preparation of reports and in the presentation of evidence in court and participate in a mock trial at the end of the subject in order to consolidate these skills (the mock trial is not assessable). This subject is studied under the following broad topic areas: introduction to the Australian legal system, criminal law, tort law, Crimes (Forensic Procedures) Act 2000 (NSW), evidence, Uniform Civil Procedure Rules 2005 (NSW), the role of the expert, advocacy and coronial law. This subject aims to provide an understanding of:

- the legal and practical issues of forensic science
- the impact of forensic science on the legal system, and
- the traditional and emerging admissibility standards involving forensic science evidence.

In addition the subject consolidates crucial communication skills.

Typical availability

Spring semester, City campus

65864 Honours (Forensic Science) 1

18cp

A research project on specific aspects of forensic science is conducted under the supervision of a member of the academic staff of the University. Some projects are conducted externally in conjunction with an external co-supervisor. This subject is designed to enhance the skills and knowledge necessary for research in forensic science. The principal activity is an individual research project in which the student, under supervision, plans and undertakes investigations in an area of interest. The data collected is then subjected to analysis and interpretation under the guidance of the supervisor. Students learn to define objectives and aims, work to available time and resources, use appropriate research methods, critically assess information and develop complex arguments in detail. The findings of the research project are presented in a structured and integrated thesis which comprises the main assessment component.

Typical availability

Autumn semester, City campus

65865 Honours (Forensic Science) 2

18cr

This subject is the second component of a program designed to enhance the skills and knowledge necessary for research in forensic science. The principal activity is an individual research project in which the student, under supervision, plans and undertakes investigations in an area of interest. The data collected is then subjected to analysis and interpretation under the guidance of the supervisor. Students learn to define objectives and aims, work to available time and resources, use appropriate research methods, critically assess information and develop complex arguments in detail. The findings of the research project are presented in a structured and integrated thesis which comprises the main assessment component.

Typical availability

Spring semester, City campus

66513 Marine Geosciences

6cp

Requisite(s): 91107 The Biosphere

These requisites may not apply to students in certain courses. See access conditions.

This elective subject is suitable for any student undertaking study in the environmental sciences. It deals with the structure and morphology of ocean basins and their margins, including their origin and evolutionary history. Physical and chemical processes operating in the oceans and their interaction with the atmosphere and climate systems are examined. The nature and origin of seafloor sediments and the history of ocean and climate change are covered in detail, including the relationships between continental drift, ocean currents and climate variation. In particular the role of tertiary and quaternary ocean sediments in an understanding of climate and environmental change are assessed as part of an overall examination of the evidence for climate and climate change throughout geological history. The subject then examines in more detail quaternary allocyclic factors that influence earth systems and their consequences. The subject covers milankovitch cycles, ice ages, eustatic fluctuations and climate change: recordings of these in earth systems, and the consequences of these and other major influences on the geosphere-biosphere; and greenhouse concepts and their relationship and responses to natural and anthropogenic input. As part of the subject, an examination of relevant methods of determining age, collecting and analysing field data and the application of modelling techniques are dealt with.

Typical availability

Autumn semester, City campus

67305 Polymer Science

6cp; 6hpw

Requisite(s): 65212 Chemistry 2 OR 65201 Chemistry 2C OR 67101 Introduction to Materials OR 60101 Chemistry and Materials Science OR 65022 Chemistry 2A OR 68070 Introduction to Materials

This subject provides an introduction to the chemistry and physics of polymers and includes comprehensive coverage of the structures, polymerisation mechanisms and characterisation techniques of polymers. Practical classes provide experience with relevant techniques and complement the theory presented in lectures. The applications of polymers are also addressed. This subject gives students a solid grounding in the field of polymers and the practical foundation for work in the polymer industry.

Typical availability

Autumn semester, City campus

67509 Molecular Nanotechnology

6cp; 6hpw

Requisite(s): 65212 Chemistry 2 OR 65201 Chemistry 2C OR 65022 Chemistry 2A

These requisites may not apply to students in certain courses. See access conditions.

The subject focuses on the chemical basis of nanotechnology and the atomic and molecular interaction of small and large molecules, and how these forces can be used to assemble molecular devices. The preparation, characterisation and uses of molecular devices are discussed. Existing molecular devices, such as liquid crystals and biological and synthetic ion-channels are also discussed.

Typical availability

Autumn semester, City campus

67510 Surface Processes

6cp; 6hpw

Requisite(s): 65307 Physical Chemistry 1

This subject is based on the chemistry of surfaces and interfaces and covers such topics as surface thermodynamics yielding concepts of surface energy and tension, adsorption isotherms, surfactants and micelles, wetting spreading and surface energy of solids and liquids and colloidal (or nanoparticulate) systems. The subject uses concepts introduced in 65212 Chemistry 2 and 65307 Physical Chemistry 1 to aid the development of models for the understanding of the observed properties of interfaces. The emphasis on the chemistry of interfaces is important in providing an underpinning of the development of nanoscale systems.

Typical availability

Spring semester, City campus

68001 Advanced Physics

6cp; up to 4hpw

The aim of this coursework subject is to enhance students' understandings of physical principles and build the capacity to engage at an advanced level in several areas of contemporary significance in physics. The subject develops the theoretical background for experimental techniques such as x-ray and neutron diffraction and advanced electron microscopy and develops student skills in computational science applied to physical systems.

Typical availability

Autumn semester, City campus

68002 Advanced Nanomaterials

6cp; 3-4hpw

The aim of this coursework subject is to develop students' awareness and competency in the specific components of nanoscience and nanotechnology relevant to material-related research. It combines topics in nanostructures and nanomaterials with the necessary foundations that underlie the nanoscience and technology of materials. The subject covers topics selected from: nanomaterials synthesis and characterisation, advanced spectroscopic techniques, surface science, optical characterisation and modelling techniques, technology transfer from the laboratory to the industrial world.

Typical availability

Spring semester, City campus

68037 Physical Modelling

6cp; 6hpw

This is a foundation physics subject. It covers the fundamentals of mechanics, thermal physics, electricity, fluids, waves and optics. Students are introduced to the basic techniques of measurement and technical communication.

This subject aims to develop an appreciation of the physical principles governing natural processes is an essential foundation experience for all engineers. Through this subject, students appreciate that physics is not just a body of knowledge to be learned and understood. Together with mathematics, it provides a framework for understanding and modelling natural phenomena that is carried over into design and analysis in engineering.

Students see that physics both enables and restrains engineering. Designs that are inconsistent with the laws of physics cannot be realised while much engineering innovation demands new physical insight or innovative uses of existing physical and mathematical models.

The subject also seeks to give students insights into the processes and pleasures of physics itself as a professional discipline. This includes basic experiences with the analytical, problem solving, observational and technical as well as measurement skills needed to model natural processes. The strong link to mathematics is integral to this aspect of the subject, as is the laboratory program which also links to mathematical modelling. The technical communication and other generic skills developed in this subject are further developed in later subjects. Graduates and later stage students, whether using physics themselves, working with physicists in a research or design team, or using new products based on advanced physics concepts, need to function in a world of innovation in which physical understanding and new physics plays a key role. This subject initiates the insights and attitudes relevant to this goal.

68038 Advanced Mathematics and Physics

6cp; 5hpw

Requisite(s): 68037 Physical Modelling AND 33230 Mathematical Modelling 2 AND 48520 Electronics and Circuits

Advanced Mathematics and Physics represents a partnership between the Electrical Engineering Group in the Faculty of Engineering, the Department of Mathematical Sciences and the Department of Physics and Advanced Materials in the Faculty of Science. This subject provides knowledge of mathematical methods needed for analysis of electric and magnetic fields and for circuit analysis and signal processing. It also provides an introduction to quantum physics and its application to semiconductor electronic and opto-electronic devices. The mathematics and physics components complement each other so that students develop both their theoretical and experimental skills. Topics covered are: vector calculus; functions of a complex variable; partial differential equations and boundary value problems; the concepts of quantum mechanics and Schrödinger's equation; and applications of quantum mechanics to semiconductors and electronic devices.

Typical availability

Spring semester, City campus

68041 Physical Aspects of Nature

6cp; 6hpw

This subject provides a general introduction to movement, wave motion, optics, thermal effects, properties of solid and fluid matter, electrical and atomic concepts, with a view to developing an appreciation and understanding of how to model physical aspects of nature. The material is presented with a focus on application to all areas of science and life science and integrates as a key component hands-on laboratory work and analysis of experimental data.

68044 Characterisation of Energy Efficient Materials

6cp

The concept of energy efficient materials is introduced to define the range and application of materials to be studied in this subject. This includes semiconductor materials used in light emitting diodes and photovoltaic applications, and thin film materials relevant to window coatings. Techniques for characterising these materials are then discussed in detail with demonstration of the practical application of these techniques. These include techniques such as x-ray diffraction for structure characterisation, optical characterisation using spectroscopy and ellipsometry, and measurement of electrical resistivity.

This subject contains a mix of coursework, experimental exercises and projects.

The aim of the subject is to provide a thorough grounding in the physical basis and practical application of these techniques in the context of energy efficient materials at a level appropriate to conducting research in this field.

68046 Physics Research Project A

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

68047 Physics Research Project B

12cr

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

68048 Physics Research Project

24cp

In this subject students undertake a semester-long research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. This project is equivalent in level to those undertaken by honours and research master's students. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (10,000–20,000 words approx.) which includes an introduction, which sets the project in the context of the literature, a description of the methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

68070 Introduction to Materials

6cp; 6hpw

This subject develops a solid science foundation for further materials and engineering-related studies and facilitates the working relationship between engineers, materials scientists and other scientists; an ability to identify and solve materials problems; and an ability to relate properties of engineering materials to technical applications. Topics covered in this subject are: chemical bonding of materials, classification of materials, structure-property relationships, mechanical properties, heat treatment and strengthening mechanisms, ferrous and non-ferrous alloys, ceramics, polymers and composites, materials degradation, materials recycling and materials selection. Numerous applied examples are discussed. Laboratory work imparts practical skills and reinforces the underlying theories. This is an integral part of the subject along with tutorial workshops.

Typical availability

Spring semester, City campus

68075 Nanomaterials

6cp; 5hpw

Requisite(s): 68070 Introduction to Materials OR 60101 Chemistry and Materials Science OR 60103 Nanosciences 1

These requisites may not apply to students in certain courses. See access conditions

This subject contains two complementary strands. The first deals with methods for producing nanostructures, nanostructured materials and nanoscale devices, using deposition, growth and self-assembling processes. The second uses real-world examples to demonstrate how the unique properties of these materials can be tailored for a wide range of applications from novel building materials and medical prothestics to the next generation of electronic devices.

Typical availability

Autumn semester, City campus

68101 Foundations of Physics

6cp; 4-6hpw

This is a foundation physics subject primarily for students in the physical sciences. It covers the fundamentals of dynamics and statics, fluid mechanics, thermal physics, waves and electricity. A strong emphasis is placed on the investigative nature of physics research with an integrated laboratory program developing further the problem-solving skills of the lecture and tutorial material to an appreciation of good experimental design and significance in information obtained under real-life modelling situations.

Typical availability

Autumn semester, City campus

68201 Physics in Action

6cp; 6hpw

Requisite(s): 68101 Foundations of Physics OR 68041 Physical Aspects of Nature OR 68037 Physical Modelling

This subject is a foundation for later stage subjects. In this subject students learn about: electrostatics, dc circuits, magnetism, electromagnetism and induction, geometrical optics, physical optics, introductory atomic physics, and quantum theory. Research linked to each of the topic areas, and which is happening within the School of Physics and Advanced Materials at UTS, is integrated into this subject.

Typical availability

Spring semester, City campus

68315 Imaging Science

6cp; 5hpw

Requisite(s): (68201 Physics in Action OR 68037 Physical Modelling) AND (33290c Statistics and Mathematics for Science OR 33230 Mathematical Modelling 2)

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: knowledge of calculus and of complex numbers

This subject builds upon the study of waves, optics and electromagnetics undertaken in an introductory physics subject. It assumes knowledge of calculus and of complex numbers. The subject considers how light is used to observe the world from the molecular scale upwards. It

introduces the electromagnetic description of light as well as the description based on photons. Different sources and detectors are considered. The design of imaging systems and their resolution limits are analysed. The subject includes a significant experimental component, which emphasises the importance of careful analysis and clear presentation of observations.

Typical availability

Spring semester, City campus

68316 Applied Electronics and Interfacing

6cp: 5hpw

Requisite(s): 68201 Physics in Action OR 68037 Physical Modelling These requisites may not apply to students in certain courses. See access conditions.

This subject builds upon the foundation studies of electricity undertaken in an introductory physics subject. It assumes knowledge of calculus and of complex numbers. The subject develops practical and theoretical skills in the application of electronic circuits in the laboratory with particular emphasis on the development of computer interfacing applications. Op-amps and digital circuit components are treated as building blocks to functional interfacing systems. The Labview environment is used to build skills in programming a computer interface.

Typical availability

Autumn semester, City campus

68320 Scanning Probe and Electron Microscopy

6cp; 6hpw

Requisite(s): 68413 Quantum Physics AND 68606 Solid-state Science and Nanodevices

These requisites may not apply to students in certain courses. See access conditions.

Characterisation and production of materials, devices, biological systems with nanoscale features requires analysis and manipulation tools with extreme precision. This is a central issue in nanotechnology and many contemporary areas of materials science. The advent of techniques such as scanning tunnelling or atomic force microscopy allows us to view and manipulate objects at this level. Electron microscopy has a more established history, but in more recent times has turned out to be an invaluable tool to the nanotechnologist. This is a hands-on subject that introduces the concepts behind these techniques, their use and application in many areas of science and technology. Recent developments in the techniques are introduced, and students have the opportunity to gain hands-on experience using a variety of scanning probe and electron microscopes.

Typical availability

Spring semester, City campus

68412 Energy Science and Technology

6cp; 4hpw

Requisite(s): (68201 Physics in Action OR 68037 Physical Modelling) AND (33290c Statistics and Mathematics for Science OR 33230 Mathematical Modelling 2)

This subject explores the physics and thermodynamics of energy systems. It builds on the fluids and thermodynamics studied in introductory level subjects, and develops an understanding of the physics and thermodynamics underlying conventional and renewable energy systems. The subject builds problem-solving skills in practical applications of energy science. These systems and related issues are explored through lectures, tutorials and project-based work.

Typical availability

Autumn semester, City campus

68413 Quantum Physics

6cp: 6hpv

Requisite(s): (68201 Physics in Action OR 68037 Physical Modelling) AND (33360c Mathematics for Physical Science OR 68038 Advanced Mathematics and Physics)

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: some knowledge of complex numbers, matrices and differential equations

This subject builds on introductory material on waves and classical mechanics. The subject examines how the behaviour of our world at an atomic level differs from our everyday experience of the macroscopic world. It introduces concepts and quantum mechanical tools needed to describe the structure and interactions of atoms, molecules and solids. The unique properties of matter at this scale can be exploited in the creation of new materials and devices in nanotechnology. This subject explores emerging technologies such as quantum computing, scanning tunelling microscopy, and spectroscopic tools used to characterise and investigate the atomic world. It provides material which is fundamental to understanding many areas of physics and chemistry together with contemporary applications which are relevant to nanotechnologists.

Typical availability

Spring semester, City campus

68414 Advanced Mechanics

6cp: 4hpw

Requisite(s): (68201 Physics in Action OR 68037 Physical Modelling) AND (33360c Mathematics for Physical Science OR 68038 Advanced Mathematics and Physics)

This subject builds upon the foundation studies of mechanics and fields undertaken in an introductory physics subject. It takes advantage of the methods of vector analysis and differential equations to analyse the motion of particles and bodies under influence of forces and fields. Topics include coupled oscillators, the Lagrangian description of particle motion, rotational body dynamics, central force dynamics, and relativity.

Typical availability

Spring semester, City campus

68415 Measurement and Analysis of Physical Processes

бср; 5hpv

Requisite(s): (68201 Physics in Action OR 68037 Physical Modelling) AND (33290c Statistics and Mathematics for Science OR 33230 Mathematical Modelling 2)

These requisites may not apply to students in certain courses. See access conditions.

This is predominantly an experimentally based subject. It builds upon the approach to experimentation introduced in the first year and provides a firm foundation for later experimental work. In particular, a focus is brought to methods of measurement and principles of data analysis of relevance to laboratory-based experimentation. The subject reinforces basic principles with practical applications drawn from various areas of applied physics. An experimentally based project is a major feature of this subject, where experimental design, data analysis and faithful and accurate reporting are emphasised.

Typical availability

Spring semester, City campus

68416 Computational Physics

6cp; 5hpw

Requisite(s): 33360 Mathematics for Physical Science OR 68038 Advanced Mathematics and Physics

These requisites may not apply to students in certain courses. See access conditions.

This subject introduces the key elements of computational physics such as methods for solving physical problems numerically and the use of computers for simulating the dynamics of large or complex systems. Numerical techniques including matrix manipulation, iterative optimisation and differential equation solvers. These are developed and applied to practical problems such as quantum mechanical simulations, statistical mechanics, electrodynamcs and fields and molecular dynamics. Project work leads students to advanced simulation work including processing and visualisation of results.

Typical availability

Autumn semester, City campus

68513 Optics and Nanophotonics

6cp; 4hpw

Requisite(s): (68201 Physics in Action OR 68037 Physical Modelling) AND (33360c Mathematics for Physical Science OR 68038 Advanced Mathematics and Physics)

These requisites may not apply to students in certain courses. See access conditions.

Recommended studies: 68315 Imaging Science; 68606 Solid-State Science and Nanodevices

This subject builds upon the foundation studies of waves and optics undertaken in an introductory physics subjects. It takes advantage of the methods of vector calculus and differential equations to analyse how propagating fields interact with matter. The subject shows that field distributions at the nanoscale play an important role in many well-established and developing biological and chemical nanoscale analytic tools. Topics include: Maxwell's equations, interaction of electromagnetic waves and matter, diffraction and holographic gratings, near-field optics and bionanophotonics.

Typical availability

Spring semester, City campus

68606 Solid-state Science and Nanodevices

6cp; 5hpw

Requisite(s): 68413 Quantum Physics

These requisites may not apply to students in certain courses. See access conditions.

This subject provides an introduction to the quantum mechanics of electrons in solids and shows how the basic principles are used to guide the development of nanodevices which have technological applications. The subject has a substantial laboratory component which provides an opportunity to work with nanostructured materials.

Typical availability

Autumn semester, City campus

68723 Research Dissertation 1 (Science)

24cp

For subject description, contact UTS: Science.

68724 Research Dissertation 2 (Science)

24ср

Requisite(s): 68723 Research Dissertation 1 (Science) There are also course requisites for this subject. See access conditions.

For subject description, contact UTS: Science.

69337 Special Reading Subject

Зср

This subject can only be undertaken following prior negotiation on the part of the student with a full-time member of academic staff regarding individual supervision. In addition, special permission of the Associate Dean (Teaching and Learning) is required.

Typical availability

Autumn semester, City campus Spring semester, City campus Summer session, City campus

69500 Career Management for Scientists

6cp; 4hpw

The aim of this subject is to enable students to research and understand the requirements of employers of science graduates and to review and effectively promote both discipline specific skills and graduate attributes to employers in their fields of interest. It develops professional skills and behaviours sought by employers that enable graduates to transition effectively into science or other industries. It requires students to research relevant work opportunities in the local or global workplace, to analyse their capacities in relation to employer requirements in that field and review education and training needs for ongoing employment. It enables students to analyse and apply effective interpersonal skills in teamwork and develop confidence in

their business communication and presentation skills. Students clarify career goals, identify relevant professional capacities and graduate attributes and learn to successfully articulate these capacities and experiences to employers. The subject also supports the development of a skills based e-portfolio for ongoing career management.

Typical availability

Spring semester, City campus

70102 Foundations of Law

8cr

This subject aims to engage students with the concepts of law and legal systems, the Australian legal framework, and legal method and research in a legal context. Students are introduced to the Australian legal system – its origins, institutions, culture and theoretical foundations – and legal method and research. Students begin to develop skills in: case analysis, statutory interpretation, critical analysis and evaluation, legal reasoning, legal discourse and legal problem solving. Students are also introduced to a range of research skills necessary to locate and evaluate resources and develop an effective research strategy.

Typical availability

Autumn semester, City campus Spring semester, City campus

70103 Ethics Law and Justice

6cr

This subject aims to engage students with an awareness and understanding of the role of ethics in the legal system and in the legal profession.

Students are introduced to theories of values, morals and ethics within the context of professionalism. The ethical responsibilities of legal practitioners, established through the common law, legislation and conduct rules, including the obligations relating to a solicitor's trust account, are addressed. An understanding of the role of lawyers in society and in the promotion of access to justice enables students to reflect on their own ethical approach to being a law student and a member of the legal profession.

Students are provided with a grounding in skills, including identification of ethical challenges, critical analysis of the role of lawyers in the administration of justice, reflective practice and ethical decision-making.

The integration of practical and theoretical approaches to legal ethics provides a framework in which students can better integrate ethical priorities within their own moral framework. These approaches also include self-management strategies and skills to assist students to be resilient and reflective lifelong learners.

Ethics complements the learning undertaken in 70102 Foundation of Law through its focus on the ethical perspectives on the concepts of law and legal systems and the Australian legal framework. As well students are also introduced to international ethics together with emerging ethical issues.

70104 Civil Practice

6ср

This subject deals with the area of civil practice. The application of civil practice in New South Wales is addressed to enable students to have an understanding of the legal and ethical context in which lawyers operate within the civil jurisdiction.

Areas of study in this subject follow the interpretation and application of civil practice governed by the *Civil Procedure Act* 2005 and the *Civil Procedure Rules* 2005 (UCPR).

Civil practice follows the scope of the Act and Rules, such as the resolution and settlement of disputes, the commencement of proceedings, representation and advocacy, the drafting and filing of documents, service, interlocutory applications and resolution, including alternative processes for dispute resolution. Preparation of client and their matters are presented and discussed within a problem-solving framework.

The Act and Rules form the framework for caseload management in the Supreme, District and Local courts. The legislation gives power to judicial officers to firstly direct the business of the court and caseload manage all matters, and secondly to direct the parties as to the management of their individual case. Statute law is supported by relevant case law.

Case law is relevant when it is applicable to the issues before the NSW courts. Some of the cases looked at in the subject concern the uniform civil procedure legislation. The cases that do not come within the legislation have similar legislation or principles. The purpose of referring to these cases, outside the NSW civil procedure regime, is to determine and discuss the relevant link between the principles and the current civil procedure framework.

Three of the significant results of the uniform civil procedure regime are:

- the increased resolution of disputes through non-adversarial processes
- the more active role of the courts in the conduct of proceedings, and
- the additional roles and duties of legal practitioners acting for the parties in civil disputes.

Typical availability

Autumn semester, City campus Spring semester, City campus

70106 Principles of Public International Law

6cp

International Law is a well-established and important branch of law which has a wide scope of application and far-reaching implications for almost every aspect of human activity. This subject introduces students to the fundamental concepts and principles of public international law. It pays particular attention to the development of the law through the machinery of the United Nations in its relationship with states, other international organisations and individuals.

The topics covered in the subject include nature, sources and subjects of international law; the relationship between international and national law; personality and recognition; state jurisdiction and immunities; law of treaties; state responsibility; peace settlement of disputes; and use of force.

This subject would benefit students intending to take subjects in the areas of international humanitarian law, human rights law; international criminal law; international environmental law; international organisations law; law of the sea; WTO law, and the Jessup International Moot.

70107 Principles of Company Law

8cp

This subject examines the role and operation of companies in Australia and in modern commercial practice. The internal operation of companies is discussed, particularly the role of members; meetings, the corporate constitution, the board of directors and the duties of corporate directors and other officers. The topic of separate corporate personality is also discussed, together with the role of the limited liability principles.

The subject also considers the role of state regulation of corporate activity using a range of social, political and theoretical perspectives. Both for profit and not-for-profit companies are examined, but the primary focus is on companies registered under the *Corporations Act* 2001 (Cwlth).

70108 Public International Law

6ср

International Law is a well-established and important branch of law which has a wide scope of application and far-reaching implications for almost every aspect of human activity. This subject introduces students to the fundamental concepts and principles of public international law. It pays particular attention to the development of the law through the machinery of the United Nations in its relationship with states, other international organisations and individuals.

The topics covered in the subject include nature, sources and subjects of international law; the relationship between international and national law; personality and recognition; state jurisdiction and immunities; law of treaties; state responsibility; peace settlement of disputes; and use of force.

This subject would benefit students intending to take subjects in the areas of international humanitarian law, human rights law; international criminal law; international environmental law; international organisations law; law of the sea; WTO law, and the Jessup International Moot.

70109 Evidence

6cp

Undergraduate and Postgraduate

This subject is based around the provisions of the *Evidence Act* 1995. Students study aspects of criminal procedure, as well as the rules about the admissibility of evidence. Topics include arrest, bail, police interrogation, the right to silence, types of evidence and the thresholds to the admissibility of evidence including relevance, hearsay, opinion, credibility, character, tendency and coincidence, discretionary exclusions, directions and warnings. Students examine the law reform processes that underpin the rules in NSW and federal courts and study the interpretation of these rules in judicial decisions.

Typical availability

Autumn semester, City campus Spring semester, City campus

70110 Introduction to Law

6ср

Undergraduate

The subject is designed for non-lawyers and lawyers from legal traditions other than the common law tradition who need to acquire an understanding of the Australian legal system and fundamental principles within main areas of Australian law to assist them to undertake more specialised studies including those in a range of disciplines and fields other than law. It is designed to provide, in a module of nine out of a total of 12 topics, an introduction to the Australian legal system and an understanding of the western legal traditions and common law foundations for the legal system, followed by an introduction to principles of legal research and legal problemsolving, and to legal principles in the main areas of the law. This provides a foundation for students to undertake the research and learning in the last three topics of the subject which are specific to students' courses. It is intended that these nine topics are offered as an adjunct to a number of courses both internal and external, and it is designed to give an overview of those areas required to underpin the more specific and in-depth course materials which are taught in the remaining three topics. By combining the teaching of an understanding of the Australian legal system and major legal concepts with teaching the skills of research and legal problem-solving, the first nine topics of the subject equip students to move effectively into the specialised learning required not only in the last three topics but in their other subjects and their future studies.

Typical availability

Autumn semester, City campus Spring semester, City campus

70114 Criminal Law and Procedure

8cp

Undergraduate and Postgraduate

This subject deals with the substantive criminal law, the doctrines and rules that define the conditions of criminal liability and some aspects of procedural criminal law. Australian common law doctrine and the *Crimes Act 1900* (NSW) are considered. Topics include: the nature of crime; the doctrines of mens rea and actus reus; burden of proof; strict liability; offences against the person; property offences; complicity and criminal defences.

Typical availability

Autumn semester, City campus Spring semester, City campus

70115 Perspectives on Law

8cp

Undergraduate and Postgraduate

This subject aims to introduce students to the law and the Australian legal system through the lens of a variety of perspectives, including: ethical, philosophical, historical, indigenous, constitutional, international and cultural perspectives. In this way students not only develop an understanding of the fundamental concepts which underpin our legal system, as well as an appreciation of the interrelationships between its various institutions, but moreover acquire an insight into the workings of and tensions within our legal system and so be in a position to critically evaluate the strengths and weaknesses of the Australian legal system and the role of law in the Australian community. Students are given the opportunity to read and critically assess a range of materials from a variety of sources. Students are also introduced to a range of legal assessment skills relevant to their studies in law.

Typical availability

Autumn semester, City campus Spring semester, City campus

70116 Principles of Public International Law

8cp

International law is a well-established and important branch of law which has a wide scope of application and far-reaching implications for almost every aspect of human activity. This subject introduces students to the fundamental concepts and principles of public international law. It pays particular attention to the development of the law through the machinery of the United Nations in its relationship with states, other international organisations and individuals.

The topics covered include the nature, sources and subjects of international law; the relationship between international and national law; personality and recognition; state jurisdiction and immunities; the law of treaties; state responsibility; peace settlement of disputes; and use of force.

This subject would benefit students intending to study the following unit areas: international humanitarian law; human rights law; international criminal law; international environmental law; international organisations; law of the sea; world trade law; and the Jessup international mooting competition.

70120 Legal Method and Research

6ср

Requisite(s): 70110 Introduction to Law AND 76006 Public International Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The aim of this subject is to engage students with legal systems, legal reasoning, legal problem solving and legal research. Firstly, students are introduced to the Australian legal system, legal reasoning and the legal method skills of case analysis, statutory interpretation, legal problem solving and legal research. Legal method skills are fundamental to both the study and practice of law and students are able to develop these skills in a range of contexts. Students are also given opportunities to explore different approaches to legal reasoning and the contentious issue of judicial law-making.

Secondly, students are introduced to and develop a range of legal research skills. Students learn to distinguish between and locate primary and secondary sources of law using a number of library resources. Students also learn to develop research strategies and apply effective methodologies that suit the circumstances of the research tasks. Legal method and research are essential in the study of all subjects in the law program.

70311 Torts

8cp

Requisite(s): ((70113 Legal Process and History AND 70105c Legal Research) OR 79203 Business Law and Ethics OR 70120c Legal Method and Research)

Undergraduate and Postgraduate

This subject covers the functions and aims of the law of torts. The law of torts deals with claims for redress for civil wrongs. Students examine the nature of tortious liability in the light of a selection of specific torts, namely, trespass to the person, goods and land; detinue and conversion, the action on the case for wilful injuries; negligence; nuisance and statutory workers compensation and motor vehicle accident schemes. Negligence is the most significant tort and it is the primary focus of this subject. Students engage with and develop an understanding of the common law development of doctrine and rules through reading cases. In 2002 and 2003 there were significant legislative reforms to tort law and the impact of this legislation, in particular the *Civil Liability Act* 2002 (NSW), and its relationship to the common law is examined.

A law of torts subject is required for admission as a legal practitioner in all Australian jurisdictions. This subject is part of the core program for the Bachelor of Laws and provides students with foundational knowledge required for more advanced 'private law' subjects in the law degree. Subjects covering areas such as commercial law, and equity and corporate law also require a sound knowledge of tort law as a basis for the legal concepts learned in those subjects.

Typical availability

Autumn semester, City campus Spring semester, City campus

70317 Real Property

8cc

Requisite(s): ((70211 Contracts AND 70311c Torts) OR 79203

Business Law and Ethics)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject deals with the law relating to transactions and title in land. The topics covered in this subject include torrens title and priorities; old system, possessory, qualified and limited title; fixtures; trespass to land; co-ownership; easements; covenants; mortgages, tenures and estates; and native title and leases.

Typical availability

Autumn semester, City campus Spring semester, City campus

70327 Commercial Law

6cr

Requisite(s): 70211 Contracts AND 70311c Torts

Undergraduate and Postgraduate

In this subject students develop an understanding of aspects of commercial transactions. They also examine the law relating to chattel leases, cheques, negotiable instruments, guarantees, sale of goods, product liability and the application of key provisions of the *Australian Consumer Law*.

Typical availability

Autumn semester, City campus Spring semester, City campus

70417 Corporate Law

8cp

Requisite(s): 70317c Real Property AND 70517c Equity and Trusts Undergraduate and Postgraduate

Corporations are an all-pervading presence in contemporary society. An understanding of corporate law is essential for students intending to enter a commercial legal practice or aspiring to a senior appointment within a company. Awareness of the different rights and responsibilities of corporate stakeholders, such as directors, employees, creditors and shareholders, is also important for any prospective lawyer, since so many legal issues involve one or more corporations as parties to the action or transaction.

This subject is an introduction to the field of corporate law and corporations, and their role in commerce and society. It looks at that mode of business activity conducted in the form of a vehicle known as a company or a corporation and asks 'What/why/how/who is it?'. It looks at the various actors involved: shareholders, directors, creditors, regulators and the public, and the web of relationships between these parties. It also looks at the legal system and laws, corporate laws, and how they provide dispute resolution mechanisms. In addition, the increasing role of laws as regulatory and prescriptive is explored with a tilt towards understanding and utilising theoretical models of the body corporate and public policies.

This subject is taught from a student-centred perspective, with an emphasis on case and policy analysis, which may involve lectures, seminars and online exercises. It is Australian-laws focused and cases chosen for readings and discussion reflect this bias.

Autumn semester, City campus Spring semester, City campus

70517 Equity and Trusts

8cp

Requisite(s): 70317 Real Property Undergraduate and Postgraduate

This subject covers two related fields of study.

In 'equity' students examine the doctrines and remedies which were originally developed in the Courts of Chancery in England prior to 1873 to ameliorate the harshness of the common law and which are still applied today to the largely same effect, with some modification from time to time. Equitable doctrines and remedies do not replace the common law but supplement it in significant ways by recognising and enforcing obligations which are not known to the common law and by granting remedies in respect of those obligations which are not available at common law. These doctrines and remedies are

now administered in the same courts in which the common law is administered. Many areas of law are touched by equitable doctrines and remedies. In particular, the law of contract and property law are significantly affected by equity. Through the study of equity, students examine the range of discretionary remedies which are available for breach of particular obligations.

In 'trusts' students explore the concept of a trust which was developed in the Courts of Chancery, whereby an interest in property is legally owned by one party but held for the benefit of another person or purpose permitted by law. The obligations of the party owning the interest at law, and the rights of the beneficiary to that interest, continue to be recognised and enforced in equity. Trusts are now commonly used in both private arrangements and for commercial purposes, having particular consequences for taxation and insolvency. The relevant principles and modern applications of trusts are considered.

70616 Australian Constitutional Law

8cr

Requisite(s): ((70105 Legal Research AND 70113 Legal Process and History) OR (70115 Perspectives on Law AND 70120 Legal Method and Research)) AND 70211c Contracts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject aims to provide an understanding of:

- the philosophies and principles which shape Australian constitutional law
- the nature and content of the Commonwealth and state constitutions
- the role and methods of the High Court in interpreting the Constitution
- the distribution of legislative power under the Constitution
- the scope of particular grants of legislative power to the Commonwealth
- the role of international law, including treaties, in shaping Australian domestic law
- the relationship between the Commonwealth and the states under the Constitution
- the scope of the executive, parliamentary and judicial powers of the Commonwealth, the states and the territories
- the relationship between the three arms of government in Australia
- those rights and freedoms guaranteed by the Constitution, both express and implied, and
- the nature of 'representative government'.

70617 Administrative Law

8ср

Requisite(s): 70616c Australian Constitutional Law

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject deals with the control of government decisions. The primary focus is on the various mechanisms designed to achieve accountability on the part of officials who exercise broad discretionary powers, including decisions of the Governor-General, Ministers of the Crown, department heads, public servants and other public officers. (Judicial review ensures supervision by the executive arm of government of decisions made by the executive. Accountability of the executive is also achieved through other mechanisms such as the role of the ombudsman, freedom of information legislation, and privacy and anti-corruption legislation.) The subject deals principally with judicial review by the courts of decisions and actions of government. It also deals with some aspects of administrative law relating to non-governmental bodies. Administrative law is studied under the following broad topic areas: grounds of review of administrative decisions, in particular procedural fairness, ultra vires and jurisdictional error; and remedies available upon judicial review,

including prerogative writs and equitable remedies. The subject also deals with judicial review; administrative review, especially the jurisdiction of the *Administrative Appeals Tribunal Act* 1975 (Cwlth) and comparable state legislation. The role of the Ombudsman, freedom of information and anti-corruption legislation is also reviewed. This subject aims to provide an understanding of:

- the central principles and the rights of the individual in dealing
 with government through administrative law, including the
 ideals of preservation of order, the welfare of the citizen,
 natural justice and the rights of the individual in contrast to
 governmental power
- the processes of institutions, both administrative and judicial, which regulate administrative action, and
- the institutions, legal principles, reasoning, constructs and techniques of administrative law.

70717 Evidence and Criminal Procedure

6cc

Requisite(s): [70218 Criminal Law OR 70217 Criminal Law] AND 70417c Corporate Law AND [70517c Equity and Trusts OR 70516c Equity and Trusts]

Undergraduate and Postgraduate

This subject is based around the provisions of the *Evidence Act* 1995. Students study aspects of criminal procedure, as well as the rules about the admissibility of evidence. Topics include arrest, bail, police interrogation, the right to silence, types of evidence and the thresholds to the admissibility of evidence including relevance, hearsay, opinion, credibility, character, tendency and coincidence, discretionary exclusions, directions and warnings. Students examine the law reform processes that underpin the rules in NSW and federal courts and study the interpretation of these rules in judicial decisions.

Typical availability

Autumn semester, City campus Spring semester, City campus

71116 Remedies

6cn

Requisite(s): 70516c Equity and Trusts OR 70517c Equity and Trusts Undergraduate

This subject deals with the range of self-help and court-ordered private remedies available to a plaintiff in civil proceedings. It brings together what students have studied or are studying in subjects such as equity, contract and tort into one coherent subject. A plaintiff often has more than one cause of action, and more than one remedy, and complete advice requires a comparison and evaluation of the alternatives. This subject aims to provide an understanding of the remedies available at common law, in equity and under statute, their interrelationship and the practical and theoretical considerations that underpin them.

Following an introduction to the subject and discussion of self-help remedies and declarations, the principal forms of damages for civil wrongs are then considered: compensatory damages reflecting the plaintiff's loss; and restitutionary damages referenced by the defendant's gain. Damages which do not depend on the commission of a wrong are then covered, in particular restitution for unjust enrichment. Non-monetary remedies are then covered: the general equitable remedies of injunction and specific recovery; and the mostly contract-specific remedies of specific performance, rectification, rescission and their statutory extensions. Finally, discretionary damages (nominal, exemplary and equitable) for civil wrongs and the principal forms of interlocutory relief are considered.

Typical availability

Autumn semester, City campus Spring semester, City campus

72104 Insolvency, Restructuring and Turnaround Management

6cp

For further details, contact UTS: Law.

75402 Property Transactions

6cp; offered either on campus (lecture: 1hpw, workshop: 2hpw) or by distance requiring no on-campus attendance (lectures are taped for distance students)

Requisite(s): (75412c Legal Skills AND (75420c Ethics and Professional Conduct OR 75415c Professional Conduct 1) AND (132credit points in C04148 Master of Law and Legal Practicec 132 credit points in C04148 Master of Law and Legal Practice OR 108credit points in C04236 Juris Doctor 108 credit points in C04236 Juris Doctor OR 156credit points in C10124 Bachelor of Lawsc 156 credit points in C10124 Bachelor of Lawsc 156 credit points in C10125 Bachelor of Business Bachelor of Lawsc 156 credit points in C10125 Bachelor of Business Bachelor of Laws OR 156credit points in C10129 Bachelor of Laws Bachelor of Arts in International Studiesc 156 credit points in C10129 Bachelor of Laws Bachelor of Laws Bachelor of Arts in International Studies OR 156credit points in C10131 Bachelor of Medical Science Bachelor of Lawsc)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

The subject explores the legal practitioner's role in property transactions, including torrens title and strata title conveyancing transactions, commercial and residential leases, mortgages, finance, powers of attorney and options. Students learn and practise tasks in preparation for professional practice as an entry-level lawyer including a practice file for a residential conveyance and preparation of a commercial lease. Students develop their skills in applying their knowledge and understanding of the law in the context of property transactions. The subject encourages students to experience and reflect on some of the graduate attributes developed by the faculty.

Typical availability

Autumn semester, City campus Spring semester, City campus

75403 Commercial and Estate Practice

6cp: distance

Requisite(s): [(132credit points in C04148 c Master of Law and Legal Practice OR 108credit points in C04236 c Juris Doctor OR 156credit points in C10124 c Bachelor of Laws OR 156credit points in C10125 c Bachelor of Business Bachelor of Laws OR 156credit points in C10129 c Bachelor of Laws Bachelor of Arts in International Studies OR 156credit points in C10131 c Bachelor of Medical Science Bachelor of Laws) AND 75412c Legal Skills)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

The subject explores the legal practitioner's role in commercial and estate practice, including the sale and purchase of businesses, planning business structures, employer obligations, drafting and analysing wills, applying for probate or letters of administration and administering estates. Students learn and practise tasks in preparation for professional practice as an entry-level lawyer in the areas of commercial and estate practice. The subject encourages students to experience and reflect on some of the graduate attributes developed by the faculty.

75411 Practical Experience

Ocp

Requisite(s): (((132Credit Points in spk(s): C04148 c Master of Law and Legal Practice OR 108Credit Points in spk(s): C04236 c Juris Doctor OR 156Credit Points in spk(s): C10124 c Bachelor of Laws OR 156Credit Points in spk(s): C10125 c Bachelor of Business Bachelor of Laws OR 156Credit Points in spk(s): C10129 c Bachelor of Laws Bachelor of Arts in International Studies OR 156Credit Points in spk(s): C10131 c Bachelor of Medical Science Bachelor of Laws) AND 75424c Legal and Professional Skills) OR 75424c Legal and Professional Skills)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

Students in this subject undertake a minimum of 16 weeks of full-time or equivalent part-time work experience in a legal office environment. Practical experience placements must be approved in advance by the UTS Faculty of Law Practical Experience Committee and completed in accordance with the practical experience rules. Students must complete their practical experience work placement within five semesters of enrolling in this subject.

75412 Legal Skills

6cp; offered either on campus (1.5hpw lecture, 2hpw workshops as timetabled) or by distance requiring students to attend on Saturdays as timetabled for two days of workshops (all day) and two days for assessment in short blocks (1-2hrs); lectures are recorded and available on UTS online

Requisite(s): (70417 Corporate Law AND (70717 Evidence and Criminal Procedure OR 71216 Law of Evidence) AND (132credit points in C04148 c Master of Law and Legal Practice OR 108Credit Points in spk(s): C04236 c Juris Doctor OR 156Credit Points in spk(s): C10124 c Bachelor of Laws OR 156Credit Points in spk(s): C10125 c Bachelor of Business Bachelor of Laws OR 156Credit Points in spk(s): C10129 c Bachelor of Laws Bachelor of Arts in International Studies OR 156Credit Points in spk(s): C10131 c Bachelor of Medical Science Bachelor of Laws)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject introduces students to the skills and awareness that together form the professional persona of an effective legal practitioner. The skills of interviewing and advising, writing, drafting and negotiating are covered. The subject also examines the areas of human behaviour and practices that a lawyer needs to be sensitive to in order to be an effective practitioner. These include work management, legal aid, access to justice and disability and EEO issues.

The approach to problem solving is explored, discussed and developed as a law student is refined and redirected to become client centred. A lawyer's most valuable tool is the ability to communicate. Participation in workshops dealing with drafting, interviewing and negotiation tasks are designed to enable students to practise these key skills in a client-focused environment.

Typical availability

Autumn semester, City campus Spring semester, City campus

75413 Advocacy

6cp; off-campus students must participate in UTSOnline workshops during semester, and are also required to attend a two-day intensive during the UTS: Law non-teaching week and a three-day intensive during the final exam week

Requisite(s): {(132credit points in C04148 c Master of Law and Legal Practice OR 108Credit Points in spk{s}: C04236 c Juris Doctor OR 156Credit Points in spk{s}: C10124 c Bachelor of Laws OR 156Credit Points in spk{s}: C10125 c Bachelor of Business Bachelor of Laws OR 156Credit Points in spk{s}: C10129 c Bachelor of Laws Bachelor of Arts in International Studies OR 156Credit Points in spk{s}: C10131 c Bachelor of Medical Science Bachelor of Laws) AND 75412c Legal Skills AND (70717 Evidence and Criminal Procedure OR 71216 Law of Evidence) AND 75421c Civil Litigation)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject develops the skills necessary to prepare for and present evidence and argument in court. The primary focus of the subject is on the techniques involved in examination-in-chief, cross-examination, re-examination, making objections to evidence and the presentation of an opening and closing address. On-campus students practice skills through attending workshops, participating in exercises, presenting a local court mention, a bail application, a plea of guilty, a defended hearing and preparing an interlocutory application in the District Court. Off-campus students participate in these activities online and demonstrate the skills in an intensive week on campus during the faculty non-teaching week and at the end of the semester. This subject aims to provide the skills necessary to:

- present a mention, bail application and plea of guilty
- develop persuasive argument and submissions
- prepare a defended matter for court using the 'proof making model', and
- conduct a defended matter including the presentation of evidence.

Typical availability

Autumn semester, City campus Spring semester, City campus

75420 Ethics and Professional Conduct

6cp; on campus

Requisite(s): 70120c Legal Method and Research AND 70115c Perspectives on Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject provides a basis for the understanding of the ethical responsibilities of legal practitioners, including obligations relating to a solicitor's trust account. The lectures focus on the practical applications of admission to practice, including the basic requirement for the operation of a solicitor's trust account and alternative approaches to applying legal ethics. The practice of law requires an understanding of the *Legal Profession Act 2004* (NSW) and *Legal Profession Regulation 2005* (NSW), the Professional Conduct Rules and case law. The integration of practical and theoretical approaches to legal ethics provides a framework in which students can better integrate ethical priorities within their own moral framework. The tutorials provide scenarios in which students can better understand and discuss the application of the common law and rules as well as giving an opportunity to explore the various approaches to legal ethics.

Typical availability

Autumn semester, City campus Spring semester, City campus

75422 Transactional Practice

6cp

Requisite(s): ((75420c Ethics and Professional Conduct AND 75421c Civil Litigation AND 75424c Legal and Professional Skills AND (108 Credit Points in spk(s): C04236 Juris Doctor OR 156 Credit Points in spk(s): C10124 Bachelor of Laws OR 156 Credit Points in spk(s): C10125 Bachelor of Business Bachelor of Laws OR 156 Credit Points in spk(s): C10129 Bachelor of Laws Bachelor of Arts in International Studies OR 156 Credit Points in spk(s): C10131 Bachelor of Medical Science Bachelor of Laws)) OR 75424c Legal and Professional Skills)

These requisites may not apply to students in certain courses. See access conditions.

This subject covers the skills, practice areas and values required of a law student to be admitted to practise law as prescribed by the 'competency standards' set out in the Sixth Schedule to the Legal Profession Admission Rules 2005. The subject assumes an understanding of disciplinary knowledge taught in core law subjects in a relevant degree. Students learn and practise tasks in preparation for professional practice as an entry-level lawyer.

This subject focuses on law, practice, procedure and skills to enable students to:

- conduct and advise on property transactions such as conveying torrens title and strata title residential property; advise on, create and release securities; advise on, create and transfer leases; identify revenue issues of property transactions; advise on land use, powers of attorneys, residential tenancies and options
- conduct and advise on commercial transactions such as the sale and purchase of a business; set up and advise on business structures and the continuing obligations in relation to those structures; identify revenue implications of commercial transactions and refer clients to appropriate expert advisers; advise on loans, securities and financing arrangements for commercial transactions.

Students also draft relevant documentation and analyse issues in clients' problems as well as offering options and solutions.

The subject encourages students to experience and reflect on the targeted Graduate Attributes developed by the faculty.

Typical availability

Autumn semester, City campus Spring semester, City campus

75423 Litigation and Estate Practice

6ср

Requisite(s): [(75420c Ethics and Professional Conduct AND 75421c Civil Litigation AND 75424c Legal and Professional Skills AND (108 Credit Points in spk(s): C04236 Juris Doctor OR 156 Credit Points in spk(s): C10124 Bachelor of Laws OR 156 Credit Points in spk(s): C10125 Bachelor of Business Bachelor of Laws OR 156 Credit Points in spk(s): C10129 Bachelor of Laws Bachelor of Arts in International Studies OR 156 Credit Points in spk(s): C10131 Bachelor of Medical Science Bachelor of Laws)) OR 75424c Legal and Professional Skills)

These requisites may not apply to students in certain courses. See access conditions.

This subject covers the skills, practice areas and values required of a law student to be admitted to practise law as prescribed by the 'competency standards' set out in the Sixth Schedule to the Legal Profession Admission Rules 2005. The subject assumes an understanding of disciplinary knowledge taught in core law subjects in a relevant degree. In this subject, students learn and practise tasks in preparation for professional practice as an entry-level lawyer.

This subject has three components.

- Civil Litigation Practice: this subject component deals with the
 theory of civil practice and procedure in NSW governed by the
 Civil Procedure Act and Uniform Civil Procedure Rules. Areas
 of study include identification of case theory, the merits of a case,
 litigation and alternative dispute resolution options, drafting of
 court documents including pleadings and affidavits, gathering of
 evidence and preparation for and engagement in an alternative
 dispute resolution activity (interests-based negotiation).
- Wills and Estate Practice: this subject component covers drafting
 and advising on wills, obtaining grants, administering deceased
 estates, identifying issues and problems that arise in will drafting
 and estate administration and resolving and advising on these
 issues and problems.

- 3. A choice of either:
 - Option A (Family Law Practice component): this subject component covers advising clients about matters following the breakdown of a relationship, marriage or de facto. Students draft appropriate documents to be filed with the court and appear before the court, or
 - Option B (Criminal Law Practice component): this subject component covers preparing and presenting a bail application, a plea of guilty and a case theory analysis document based on allocated fact situations.

The subject encourages students to experience and reflect on the targeted graduate attributes developed by the faculty.

76001 Comparative Law

6cr

Requisite(s): ((70120 Legal Method and Research OR 70105 Legal Research)) OR (70110 Introduction to Law AND 76006c Public International Law)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject focuses on how different legal systems function in the world today. It examines current and past theories of comparative law in the context of globalisation and the internationalisation of law. It provides an introduction to each of the world's major legal systems in their various manifestations and the way in which they are adapting to modern challenges. As well as the traditional comparisons of common, civil and socialist law, the subject considers the theory and practice of legal pluralism and the place of indigenous and religious based laws within state legal systems.

76002 Sports Law

6ср

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice AND 70211 Contracts AND 70311 Torts These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The law of sport and recreation is a commercial law subject. This is to be expected in an industry that is a major economic driver. Moreover, sport-based disputes seem to have an urgency about them that sees them litigated within a few weeks of a cause of action arising. With the growth of professionalism, the internationalisation of sport, media influence, sporting sponsorship and high profile sporting cases, sport once quarantined from the impact of the law, is now at the forefront.

Any sporting event generates a number of legal concerns, for example: what rights of appeal exist for non-selected athletes; issues concerning doping; to whom does a team doctor owe their duty of care; are athletes illegally exploited by major sporting organisations; when can an athlete be criminally charged for violent acts; do sporting disciplinary tribunals function legally; how should the sporting organisation deal with claims of discrimination; are coaches and clubs legally liable for the actions of their athletes; is it legal to exclude an athlete or member of the public from a sporting venue; when is a referee legally liable in tort.

This subject considers the law as it relates to sport in Australia and several areas of international interest. It is hoped that, where appropriate, a number of guest speakers from the sporting world will present mini-lectures on matters of interest in sport and its relationship with law.

76003 Asian Law and Legal Systems

6cp; one semester

Requisite(s): ((70120 Legal Method and Research OR 70105 Legal Research)) OR (76006c Public International Law AND 70110 Introduction to Law)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

The subject exposes students to another legal system. It is designed to introduce students to the reception of legal systems in the countries of East and South-East Asia, with special reference to the reception of English law and Islamic law by these countries.

76005 Islamic Law

6ср

Requisite(s): (60 credit points of completed study in C04148 Master of Law and Legal Practice OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The aim of this subject is to provide an introduction to Islamic law in theory and its practice as implemented in the modern world. Topics covered include:

- jurisprudence reviews the origins and development of Islamic law, current issues such as codification and modernisation, and application of these principles in modern Muslim countries such as Malaysia and Pakistan
- family law and inheritance examines the rules regarding marriage and divorce, custody of children and maintenance, the importance of the extended family, and developments in family planning law
- commercial, property and banking law reviews new developments in these fields and looks at the model of an Islamic bank. Intellectual Property law is also considered.
- criminal law and evidence looks at the classification of crimes, prescribed and discretionary punishments and evidence required for conviction, and
- Islam in Australia gives an overview of the Muslim population in Australia today.

76007 International Human Rights Law

6cp

Requisite(s): [70616 Australian Constitutional Law OR [70110 Introduction to Law AND 76006c Public International Law]] These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

International human rights law seeks to address a range of contemporary issues in global politics, economics and society. While it draws on a long conceptual history of thinking through the rights of the human, this subject focuses more on the practical history and development of the current international human rights regime. Students become familiar with the substantive and procedural elements of international human rights law, and gain practical experience in debating the applicability of human rights instruments to specific situations. Students engage with a range of case studies which include consideration of the human rights issues raised by the Northern Territory Intervention, the Australian system of mandatory detention of those seeking to exercise their right to asylum, torture and ill-treatment, and corporations and human rights. The subject aims to provide students with a sophisticated appreciation of the wide range of issues that encompass human rights concerns; and to allow reflection upon the significance of international human rights law in order to develop an understanding of its usefulness, its limits and its future potential for emancipatory change.

Typical availability

Autumn semester, City campus Spring semester, City campus

76008 Jurisprudence

6cn

Requisite(s): (70311 Torts OR (76006c Public International Law AND 70110 Introduction to Law))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject deals with theoretical questions that are relevant to an understanding of the notion of law (e.g. What is the law of the state? Is there any other command, convention or the like that can also be called 'law'?). It also includes a discussion of different approaches to the study of law (e.g. philosophical, sociological, historical, analytic, international, comparative) to determine its derivation, nature and function, as well as a discussion of the doctrines and techniques of legal analysis and evaluation. The various approaches are compared and criticised in the context of sociopolitical problems, conflicts and other phenomena. Topics here include sovereignty and the law, legal rights and duties, and law and ideology. Their treatment in the common law is examined. A number of theorists are considered, e.g. Austin and Dworkin.

76009 Introduction to Chinese Business Law

6Cb

Requisite(s): (70211 Contracts OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

With China's emergence as a new economic superpower, and with ever-deepening business ties between Australia and China, it is crucial that students gain an up-to-date understanding of Chinese business law and an awareness of major differences between Australian and Chinese legal and business cultures.

This subject adopts a case-based, problem-solving approach to focus on the following areas:

- · current legal system and legal/business culture of China
- Chinese investment law environment and how it differs from Australia
- corporate structures and the status of business corporations in China since China's accession to the World Trade Organization (WTO)
- the legal environment for foreign entities doing business in and with China, potential risks and case studies

China's WTO compliance and Australia-China Free Trade Agreement — case studies. The subject is important for students wishing to understand the interactions between law, business, politics and culture in China today. Students are able to develop practical and research skills that assist them in understanding the business law environment in China in contrast to that of Australia.

Typical availability

Autumn semester, City campus Spring semester, City campus

76010 Disability and the Law

6ср

Requisite(s): (70120 Legal Method and Research OR (76006 Public International Law AND 70110 Introduction to Law))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject explores disability and impairment as a legal category. Students are introduced to the various competing models of disability including: the medical model, the social construction model, the human rights model and bioethical, feminist and postmodern approaches to disability. In so doing, the subject takes an interdisciplinary and international comparative approach to conceptions and theories of disability and impairment. Students examine the practical implications of these models for the construction of legal rights and responsibilities with respect to persons with disabilities in a number of key areas of law. These include health law, tort law, criminal law, international law and anti-discrimination law. Specific issues examined include: treatment-limiting decisions for newborns, constraints on reproductive decision making, abortion for disability, end of life decision making; the therapy / enhancement distinction and body modification, the UN Declaration of Human Rights, the UN Declaration of the Rights of Disabled Persons and various state and federal anti-discrimination legislation. Key issues that students need to examine are the concepts of normal and disabled, healthy and diseased and able-bodied and impaired. This subject examines and evaluates how law can best achieve the goals of social justice and equality for individuals with disabilities.

76012 Criminology

6ср

Requisite(s): 70217 Criminal Law OR 70218 Criminal Law These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

Criminology is a broad subject encompassing both theoretical and practical approaches. Theoretical aspects of criminology include analyses of why people commit crime, appropriate responses to the commission (or potential commission) of crime, and theoretical justifications for punishment. Research in criminology focuses on specific topics, providing a combination of quantitative and qualitative analysis of factors such as the impact of ethnicity, gender, sexuality, etc., on the commission of crime and the criminal justice system's responses to crime.

Students are invited to consider traditional and emerging analyses of criminology both in the abstract and applied to specific examples.

76013 World Trade Law

6ср

Requisite(s): ((70120 Legal Method and Research OR 70105 Legal Research)) OR (76006c Public International Law AND 70110 Introduction to Law)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Undergraduate and Postgraduate

The rules of the World Trade Organization (WTO) underpin the conduct of international trade in about 150 countries and have direct relevance for governments, businesses and individuals. The WTO rules cover not just customs and tariffs, but also agriculture, industry development, quarantine and health, and environmental protection. This is a specialist subject on the WTO.

The second half of the subject focuses on the Australian application of trade rules and domestic and international laws governing international transactions. On completion of this subject, students have a developed understanding of the basic legal principles underpinning the multilateral trading system; the key agreements; the dispute settlement mechanism of the WTO; and its institutional structure and the decision-making processes. Students also have an understanding of the application of the law to international transactions.

76015 Labour Law

6ср

Requisite(s): 70211 Contracts AND 70311 Torts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines 'individual' aspects of Australian labour law under both judge-made law and selected legislation. Labour law is an important component of studies in the legal regulation of commerce. Students are introduced to the key aspects of laws which determine the rights, entitlements and responsibilities governing the relationship between an employer and an individual worker. Both practical and theoretical perspectives on individual labour law are examined. Topics covered include: employment and other categories of work relationships; formation and content of the employment contract; post-employment restraints; implied duties of employers and employees; employment terms and conditions under legislation; termination of the employment contract; unfair dismissal legislation; and unfair work contracts legislation.

76016 Advanced Revenue Law

6cr

Requisite(s): [76212 Revenue Law AND (70516c Equity and Trusts OR 70517c Equity and Trusts)]

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject builds on the understanding obtained in previous study. It focuses on a deeper analysis in relation to a number of taxation issues including the taxation of companies, trusts and partnerships, further capital gains tax issues, aspects of international taxation, tax administration, and tax planning, with a consideration of antiavoidance and ethical issues in tax planning.

76019 Broadcasting and Telecommunications Regulation

6cr

Requisite(s): 70120 Legal Method and Research OR 70105 Legal Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject addresses the law regulating the structure of electronic communications in Australia. The subject covers the regulation of broadcasting, telecommunications and online content.

It provides students with an understanding of the policy and legal framework and addresses such questions as who can provide these services; what regulatory obligations are imposed on businesses providing these services; how are these sectors regulated to ensure that competition is promoted and no persons have undue influence over communications in Australia; what rules are in place to ensure that Australians, regardless of wealth, location, etc. have access to communications services; and how does the law respond to the impact of new technology.

This is a very topical course with a changing menu of current issues. Some current issues include provision of broadband services and access across Australia, the switch to digital technology and the regulatory response as traditional broadcasting and telecommunications frameworks give way to a global multi-platform delivery environment.

76020 Entertainment Law

6cp

Requisite(s): 70211 Contracts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject aims to provide students with a detailed and practical understanding of the legal environment of the entertainment industries in Australia. The focus of the subject is the transactions concerned with the production and distribution of content - film and television, recordings, music publishing and new media. The discussion of laws relating to the entertainment industries is placed within the broader commercial and artistic context of the entertainment business, including the impact of new media in creating new formats and a more global market, the roles of different parties, the structure and major players in the Australian industry and the processes of production and distribution. In particular, this subject aims to provide students with an understanding of the role of the entertainment lawyer and the practical knowledge and skills required to handle the transactional issues associated with the production and distribution of creative content.

76021 Advanced Remedies

6ср

Requisite(s): (70311 Torts AND 70211 Contracts AND (70516 Equity and Trusts OR 70517 Equity and Trusts))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject deals with the range of self-help and court-ordered private remedies available to a plaintiff in civil proceedings. It brings together what students have studied or are studying in subjects such as equity, contract and tort into one coherent subject. A plaintiff often has more than one cause of action, and more than one remedy, and complete advice requires a comparison and evaluation of the alternatives. This subject aims to provide an understanding of the remedies available at common law, in equity and under statute, their interrelationship and the practical and theoretical considerations that underpin them.

Following an introduction to the subject and discussion of self-help remedies and declarations, the principal forms of damages for civil wrongs are then considered: compensatory damages reflecting the plaintiff's loss; and restitutionary damages referenced by the defendant's gain. Damages which do not depend on the commission of a wrong are then covered, in particular restitution for unjust enrichment. Non-monetary remedies are then covered: the general equitable remedies of injunction and specific recovery; and the mostly contract-specific remedies of specific performance, rectification, rescission and their statutory extensions. Finally, discretionary damages (nominal, exemplary and equitable) for civil wrongs and the principal forms of interlocutory relief are considered.

76022 Insurance Law

6ср

Requisite(s): 70211 Contracts AND 70311 Torts There are also course requisites for this subject. See access conditions.

Undergraduate

This subject examines the principles and rules that make up Australian insurance law. Its central focus is on the rights and liabilities of the insurer and the insured, as determined by their contract of insurance, the general law and statute. Concepts such as indemnity, subrogation, utmost good faith, the duty of disclosure, insurable interest, conditions and warranties lie at the heart of most insurance arrangements. The role of insurance intermediaries is examined. Some forms of insurance are mandatory under statute (e.g. motor vehicle compulsory third party insurance, workers compensation insurance, home warranty insurance), but are not studied in detail. The impact of the *Insurance Contracts Act 1984* (Cwlth) on the rights and liabilities of insurer and insured is substantial, affects most insurance contracts commonly entered into today, and is closely studied. In the final lecture the subject also overviews some of the specialist areas of insurance law in Australia and internationally.

Note(s)

This subject was formerly called Law of Insurance.

76023 Deceptive Trade Practices and Product Liability

6ср

Requisite(s): 70211 Contracts AND 70311 Torts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

In this subject students consider the operation of the action for misleading and deceptive conduct under the Australian Consumer Law (ACL) including its nature, limitations, comparison and interoperation with other causes of action, remedies and enforcement.

76024 Environmental Law

6ср

Requisite(s): 70211 Contracts AND 70311 Torts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Undergraduate and Postgraduate

As a field of study, environmental law deals with the rules, relationships, systems and processes by which environmental protection is achieved. This subject grounds students in an introduction to the foundations of environmental law at the international, federal, state and local government levels. It introduces students to the nature and conceptual notions of environmental law with a view to enabling them to undertake more specialised courses in environmental law, either at the undergraduate or postgraduate level, such as water law and policy, international environmental law and international trade law and the environment. Topics covered in the subject include:

- the philosophy of environmental law
- international environmental law and domestic implementation of multinational environmental agreements
- constitutional support for environmental actions
- legislative framework at the federal, state and local government levels
- principles of ESD and courts interpretation of these principles
- the Environmental Protection and Biodiversity Conservation Act 2000 (Cwth)
- NSW pollution legislation, the Protection of the Environment Operations Act 1997
- system of regulation and management of natural resources in NSW
- case studies of current environmental issues
- environmental institutions and resolution of environmental disputes.

76025 International Organisations

6ср

Requisite(s): 70115 Perspectives on Law AND 70120 Legal Method and Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

The proliferation of intergovernmental and non-governmental organisations is one indicator of the internationalisation of social life and the interdependence of states in the early 21st century. This subject examines the principal legal issues concerning organisations composed of states. These include the legal status and powers of organisations, membership and participation, norm-creation, dispute settlement, enforcement of decisions, peace and security activities and finally the organisations' privileges and immunities as well as their legal status and powers under national law.

At the same time, the subject addresses real-world problems such as the creation of international criminal courts, the 'succession' of Russia to the USSR's seat on the UN Security Council, the response to the break-up of Yugoslavia, the jurisdictional issues in the Lockerbie-case, the possibility of judicial review of acts of the UN Security Council, the success of WTO dispute settlement, NATO action against Serbia in 1999, the military intervention in Afghanistan and Iraq in the aftermath of 9/11 and the UN administration of Kosovo and East Timor.

Primary consideration is given to the development of the United Nations. Other universal organisations such as ILO, the Bretton Woods institutions, WTO or ICAO, as well as regional ones such as the Council of Europe, the EU and others are also dealt with. This subject does not try to provide a comprehensive picture of all of these organisations, rather it aims at helping students understand the common legal problems faced by international institutions.

76027 Competition Law

6ср

Requisite(s): 70211 Contracts AND 70311 Torts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access

conditions.

Undergraduate and Postgraduate

This subject provides a comprehensive, in-depth and engaging examination of the economic and legal principles of competition law (also known as antitrust law or restrictive trade practices law) in Australia. It examines statute law, Part IV of the *Competition and Consumer Act 2010* (Cwlth) (CCA) (formerly Part IV of the *Trade Practices Act 1974* (Cwlth) (TPA)), the decisions of the common law Courts in interpreting the Act, as well as some international treaties on antitrust law enforcement, of which Australia is a party. Current issues and recent cases on competition laws and policies in Australia are also examined.

The subject covers the economic functioning of markets, market power and competition; the relationship between antitrust-related statute law, common law and economics; the evolution and objectives of Australian competition law and the administration and enforcement of competition law, both nationally and internationally.

The subject also covers:

- an overview of the evolution of competition law, including the reasons for the competition law, the economic functioning of markets, market power and competition, the relationship between economics and competition laws, and the legislative feature of the Australian competition law
- an in-depth examination of major anti-competitive statutory conduct in Part IV of the CCA, including mergers/acquisitions, misuse of market power, exclusionary conduct, monopolistic agreements/arrangements, exclusive dealing, and resale price maintenance
- examination of the administration and enforcement of completion law in Australia, including the roles of the Australian Competition and Consumer Commission, the Australian Competition Tribunal and the Courts. It includes also authorisation and notification regimes, remedies for private litigants and other related matters
- examination of major international treaties on antitrust law enforcement, of which Australia is a party, and major international antitrust cases in which Australia is involved.

Typical availability

Spring semester, City campus

76030 Genetics and the Law

6ср

Requisite(s): 70115 Perspectives on Law AND 70120 Legal Method and Research

There are also course requisites for this subject. See access conditions.

This subject examines the scope and limitations of existing regulation of genetic technologies with respect to humans. It also considers recent scientific and technological innovations in the area of human genetics and the role and effectiveness of law in managing these new developments. The role of law as a means to control both the development of new genetic technologies and the utilisation of existing technologies is also evaluated. This includes a specific focus on individual decision-making versus responsibility for genetic risk, individual versus group rights, genetic privacy, genetic discrimination, reproductive autonomy, and ownership and control of genetic information and research developments. Specific issues covered include regulatory limits on the use of genetic screening of adults, children and newborns; prenatal genetic testing and genetic testing of adults and children; the regulation of genetic registers, protecting genetic information privacy and the problem of familial information; measures to control genetic discrimination in employment and insurance; the regulation of genetic research through the NHMRC guidelines and other means; the regulation of genetics in medical research including gene therapy, inheritable genetic modification, stem cell research and human somatic cell nuclear transfer (cloning technologies); and the establishment of biobanks and the concept of genomic property.

76033 Animal Law and Policy in Australia

6ср

Requisite(s): 70115 Perspectives on Law AND 70120 Legal Method and Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject examines the effectiveness of existing regulation in Australia with respect to animal welfare. Topics covered include: consideration of animals in the context of morality, science and the law; the historical development of animal law as well as an overview of animal regulation in Australia; the prevention of cruelty; and the legal status of animals. The material is presented against the backdrop of the animal welfare and rights debate, encouraging students to consider and evaluate whether the current regime fosters accountability and ethical standards. In order to appraise Australia's regime more effectively, the subject also includes consideration of two topics at international and comparative levels. The first relates to advances in animal welfare introduced by the European Union, and the second relates to the impact on animal welfare by the rules of the international trade law regime, as typified by the World Trade Organization. The subject is designed to provide students with a sound understanding of the fundamentals of animal law including its application to companion animals, farm animals, wild animals and animals in laboratories.

76034 Law of Slavery and Human Trafficking

6cr

Requisite(s): 70616 Australian Constitutional Law AND 70120 Legal Method and Research AND 70115 Perspectives on Law These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Slavery and human trafficking are transnational crimes. This subject comprehensively explains and evaluates international and domestic responses to slavery and human trafficking within an international law and human rights framework. While the subject addresses international law, it does so with an appreciation of the practical application of the law. The subject draws students to a critical evaluation of the state's responsibility to protect and support, and develop effective criminal justice responses. Areas covered include: the legal definitions; the international legal framework; the intersection between migrant worker exploitation, slavery and trafficking; the gender implications of slavery; trafficking and refugee law; and trafficking as a crime against humanity. State responsibility at international law is reviewed to develop a sound knowledge of the state's obligations to protect and support as well as to promote the application of effective remedies. An effective domestic and international criminal justice response is critical in the development of a framework to prevent trafficking and ensure prosecution of transnational crimes. The dimension of slavery and trafficking — the link between such transnational crimes, economic opportunities, substandard working conditions and migration — is explored. Vulnerability to trafficking, the issues of demand and the supply chain, and corruption are addressed, as well as compliance standards, monitoring mechanisms and the role of civil society. Finally, the course concludes with consideration of a body of international literature which is critical to the implementation of anti-trafficking measures.

At the end of the course, students are expected to have a deep understanding of the principles of international law and their application within the Australian domestic context. Students also gain sophisticated insight and understanding of the application of international law through a comprehensive evaluation of selected areas of law.

76036 International Trade Law and the Environment

6cp; distance

Requisite(s): 70115 Perspectives on Law AND 70120 Legal Method and Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

The trade and environment debate conceals the problematic relationship between two legitimate interests of the international community. This subject introduces students to the significant interface between international trade liberalisation and the environmental imperative of ecologically sustainable development.

Initially the subject provides an overview of the frameworks of international trade law and environmental law and an insight into the philosophical underpinnings of both institutions. The subject considers the important role of developing countries in shaping the trade/environment debate.

The subject also considers the obligations imposed by the World Trade Organization (WTO) including the Agreements on Food Safety Standards, Technical Barriers to Trade and the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS). The scope and operation of environmental exceptions that have been the subject of recent trade environment disputes in the WTO provide valuable insights into the area. The position of multilateral environmental agreements and the WTO is considered along with the serious implications for developing countries.

Particular specialty areas of concern are covered including ecolabelling, invasive species and intellectual property issues.

Upon completion of this subject students should be able to understand and analyse the current relationship between trade and environment, reflect in an informed manner on the future of the protection of the environment in the multilateral trade and investment regime and be able to critically assess the prospects for future harmonisation of global free trade regimes and ESD principles.

76037 Advanced Criminal Law

6cp

Requisite(s): (60 credit points of completed study in C04148 Master of Law and Legal Practice AND (70217 Criminal Law OR 70218 Criminal Law)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject critically examines the major forms of crime which affect society today. In analysing such crime and society's response to it, the subject begins with an examination of the principles around which criminal laws are constructed and are said to operate. In this regard, the subject focuses not only on the law itself but also on its structures in institutions of control. Particular emphasis is placed on current law and order politics and the effect this has had on criminal law. To a certain extent the subject is also comparative, focusing in particular on crimes and social responses which are global in nature.

76038 Law and Mental Health

6ср

Requisite(s): 70311 Torts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject is designed to give students an introduction and overview of the interface between the disciplines of psychiatry and law. It examines how the empirical research and theories of psychiatry intersect with the application of legal principles and practices. As a result of successfully completing this subject, students should be able to translate personal and/or social issues concerning the study of mental illness into the practice of mental health law, and evaluate the efficacy of different perspectives in relation to contemporary debates about mental illness. Students should also demonstrate successful teamwork, involving the ability to participate in collaborative learning activities face-to-face as well as the development of independent learning skills.

76039 Jessup International Moot

6cp; availability: by invitation only

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Undergraduate and Postgraduate

This elective encourages participation in the Jessup International Moot. The moot is organised by the Association of Student International Law Societies, which operates under the auspices of the American Society of International Law in Washington. The workload involved is particularly demanding: the problems circulated are on complex and current issues of international law. Detailed research into both international and comparative law is essential to prepare complex pleadings for both sides with a maximum size prescribed. The work involved is certainly no less than that for a large research project.

The memorials are assessed by memorial judges, often including distinguished teachers of international law. In addition, there is the opportunity to present oral submissions in the four preliminary rounds. The top eight teams move on to the final rounds. Because of the rules of the Jessup Moot, no assessment is available until after the conclusion of the Australian finals of the Jessup Moot each year. Further information about the mooting competitions that UTS: Law is involved in is available at:

www.law.uts.edu.au/students/current.html

76040 Research Thesis

6cp; availability: all students in LLB and LLB combined programs, and who are in line to receive their law degree with Honours Requisite(s): 70120 Legal Method and Research OR 70102 Foundations of Law

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject comprises the research and writing of a supervised thesis on an approved topic in law. The thesis is in the range of 8000 to 12,000 words in length. Undertaking this subject provides an opportunity for undergraduate law students to further develop and refine their legal research and writing skills, as well as explore and analyse a topic of law of their own choosing.

It is a requirement under the UTS: Law honours rule (see page 100) that this subject must be undertaken before a student can be awarded an undergraduate law degree with honours. Undergraduate students who are not in line to receive their law degree with honours are not normally approved to enrol in this subject. Students should consult the honours rules in the UTS: Handbook for information about requirements for the award of honours at graduation (note: from 1 January 2010 marks received for law exchange subjects are not included in any determination of marks either for application to undertake a research thesis or for the final award of the LLB with honours)

Early submission of the proposal and form is encouraged. Forms are accepted and processed from Week 12 of the preceding semester. The last date to submit forms is the Friday, two weeks before the start of semester, to allow for processing.

Typical availability

Autumn semester, City campus Spring semester, City campus

Note(s)

This subject was formerly called Research Project 4.

76041 Climate Law and Carbon Markets

6ср

Requisite(s): 70115 Perspectives on Law AND 70120 Legal Method and Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject examines climate change, which is one of the most pressing environmental problems of our era. It is a major business issue that is affecting law, policy and corporate behaviour. The Intergovernmental Panel on Climate Change (IPCC) has said that to avoid irreversible harm to the planet, we must stabilise greenhouse gas emissions, and this will involve a significant and rapid reduction in 'business as usual'. It will involve unprecedented cooperation at the international level as well as innovative national responses. This subject examines the potential role of the international and policy communities as well as the legal and business communities in confronting climate law. It analyses the existing and emerging legal rules and frameworks, both internationally and in Australia, the impacts of these on business and the response from industry. It critically evaluates the incentives for firms to comply and over-comply with environmental laws and participate in voluntary programs, and examines the role of business in adaptation measures and climate justice issues.

76043 Building and Construction Law

6cp

Requisite(s): 70517 Equity and Trusts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access

This subject examines the legal and commercial relationships that typically are brought into existence during residential and commercial building and construction projects. It examines the roles of the various project participants such as clients, project managers, design and engineering professionals, cost consultants, contractors and subcontractors with particular reference to their contractual roles and responsibilities. The subject canvases the various ways in which projects are procured with reference to various forms of contract and the risks associated with each procurement method. Students are also made aware of the various ways in which the practical and legal risks can be managed through effective risk distribution and contract drafting. Some aspects of the legislative framework within which both the residential and commercial sector operates will be considered together with examples of various practical applications. Suitable dispute resolution processes are explained together with the use of expert evidence in the litigation of building and construction disputes.

Typical availability

Autumn semester, City campus Spring semester, City campus

76045 Medicine and Law

6ср

Requisite(s): 70311 Torts AND 70617c Administrative Law There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subjects deals with the aspects of law relevant to health care. There are many issues that can arise as health law is an ever evolving and diverse area. It is subject to both local and overseas influences and regulation is challenging. When studying health law, many areas must be considered, such as: human rights, ethical practice, the advancement of medical technology, social policy, governance and the many vested interests. The subject examines the issues that confront health-care professionals and their patients and peers, in particular in the context of continuing systemic and resource problems. This includes the handling of complaints against health-care practitioners, the regulation of the various health professions, the outcome of parliamentary inquiries and the history and findings of the various royal commissions. Other important areas such as medical negligence, consent to treatment, access to and ownership of medical records, privacy and confidentiality, euthanasia, wrongful birth, wrongful life and abortion, complementary and alternative medicine, organ donation, public health law issues such as tobacco, alcohol and obesity are examined and discussed.

76047 Advanced Contracts

6ср

Requisite(s): (60 credit points of completed study in C04148 Master of Law and Legal Practice AND 70211 Contracts AND (70516 Equity and Trusts OR 70517 Equity and Trusts))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject focuses on how contract law assists in the negotiation and enforcement of agreements, as well as the resolution of disputes arising out of agreements. It deals with selected areas of practical relevance and legal difficulty in the application of principles of contract law to various transactions (electronic transactions, uncertainty, the exercise of judicial discretion to fill gaps in agreements, implied terms, good faith, breach and termination of contracts); the intervention of equity (estoppel, penalties, restitution, unconscionability); legislative intervention (*Competition and Consumer Act 2010* (Cwlth) (including schedule 2, Australian Consumer Law), *Fair Trading Act 1987* (NSW), *Contracts Review Act 1980* (NSW)); and the relationship between tort law and contract law

76048 Citizenship and Immigration Law

6ср

Requisite(s): 70617 Administrative Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject promotes an analytic examination of major legal and policy issues in Australia. The subject deals with the development of a distinct Australian citizenship and Australian immigration law. A primary focus is on the analysis of constitutional law issues, the legislative framework, policy responses and examination of international law principles. Recent developments in Australian nationality and citizenship law are evaluated within the context of acquisition of Australian citizenship, passport control and the statutory concept of entry to Australia. Australian migration law is about the control of those who are not Australian citizens. This subject examines the legal and policy framework controlling Australian immigration including the development of the universal visa system, the operation of the Migration Act 1958 and Migration Regulations 1994, the distinction between lawful and unlawful non-citizens, visa acquisition and cancellation, the controversial character and deportation provisions and administrative and judicial review of adverse citizenship and immigration decisions. Specific themes include an analysis of the migration program, immigration detention, skilled and temporary visa entry, the national skill shortage, comparative guest worker schemes, humanitarian considerations, ministerial discretion, refugee visas, irregular migration, global trends, the status of migrant workers, people smuggling and human trafficking. The statutory scheme established to regulate migration agents is also reviewed. This subject aims to provide an understanding of:

- the historical development of citizenship and immigration law in Australia
- the effectiveness and fairness of Australian migration legislation and policy
- the legislative schemes: primarily the Migration Act and Migration Regulations, the Australian Citizenship Act 1973, relevant policy and case law
- the major permanent visa programs and temporary entry visas
- visa refusal, cancellation and review
- acquisition, grant, loss and deprivation of Australian citizenship
- the operation of the Migration Agents Registration Authority.

76050 Commercial Trade and Transport Law

6cp

Requisite(s): 70211 Contracts AND 70317 Real Property There are also course requisites for this subject. See access conditions.

This subject examines the various sources of law that govern and impact upon the trade and transport of goods to and from Australia. The first part covers commercial maritime law. Topics examined include an overview of international trade processes; Australia's trade and transport industry; the international and Australian sources of law that regulate commercial shipping activities; maritime law concepts on the ownership, financing and arrest of ships; maritime transport documentation including bills of lading and charter parties; sources of liability; liability limitation; and marine insurance. The second part covers commercial aviation law. Topics examined include the international and Australian sources of law regulating the carriage of goods by air and aviation insurance. The subject concludes by examining recent international developments relating to the multimodal transport of goods.

Typical availability

Autumn semester, City campus Spring semester, City campus

76052 Dispute Resolution Advocacy

6ср

Requisite(s): 70516c Equity and Trusts OR 70517 Equity and Trusts These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject deals with the jurisprudence of dispute resolution, and the theory, dynamics and essential characteristics of the major dispute resolution processes, so that effective strategies for resolving a wide range of disputes can be formulated. There is a two-day intensive weekend component in the course for negotiation and mediation exercises and simulations. The subject's emphasis is on the role of lawyers in dispute resolution processes; advising clients on, and preparing clients for, suitable dispute resolution processes; the institutionalising of dispute resolution processes; the nature of disputes and the theoretical, ethical and practical issues.

Typical availability

Autumn semester, City campus

76053 Industrial Law

6cr

Requisite(s): 70616 Australian Constitutional Law AND 70311 Torts These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines collective aspects of Australian work law with a principal focus on the federal legislative collective work relations system. Industrial law is an important component of studies in the legal regulation of commerce. Students are introduced to the key aspects of law which determine the rights, entitlements and responsibilities governing the relationship between employers, on the one hand, and groups of workers and their trade unions on the other. Both practical and theoretical perspectives on industrial law are examined, and where appropriate, comparison of Australian industrial law with relevant international standards and law in overseas jurisdictions is made. Topics include: the history and constitutional basis of Australian industrial law; international standards and Australian industrial law; the safety net of minimum terms and conditions; agreement-making; collective bargaining; industrial action; freedom of association; transfer of business; and information, consultation and decision-making rights.

76055 Mining Law and Regulation

6cn

Requisite(s): 70417 Corporate Law AND 70317 Real Property There are also course requisites for this subject. See access conditions.

This subject examines the various Australian laws and regulations that govern and impact upon investment in the mining industry. Topics examined include: the history, development and current status of mining regulation in Australia; key mining law concepts - such as the ownership of minerals, mining tenements, mining claims, and the regimes for the payment of royalties; the State and Territory licensing regimes governing mineral exploration and extraction; and the laws governing investment across the life cycle of mining operations (exploration, set up of mining operations, extraction of minerals, the sale and export of minerals, and the sale of mining assets). This includes the relevant provisions of the Corporations Act 2001 (Cwlth) relating to corporate fundraising (Ch 6D) and mergers and acquisitions (Ch 6); the Foreign Acquisitions and Takeovers Act 1975 (Cwlth); the ASX Listing Rules, and the JORC Code for the Reporting of Mineral Resources and Ore Reserves. The subject also examines the use of joint venture structures in the mining industry.

Other issues examined include native title, environmental law considerations, infrastructure access, the regimes for the onshore and offshore extraction of petroleum and gas, and the legal framework for dispute resolution. The subject concludes by briefly examining some of the current issues impacting on the Australian mining industry such as carbon taxing and trading, and the proposed Mining Resources Rent Tax.

The subject involves a comparative consideration of the laws across the Australian states and territories and is not limited to New South Wales.

Typical availability

Autumn semester, City campus Spring semester, City campus

76056 Intellectual Property Commercialisation Overview

6ср

Requisite(s): 78025 Intellectual Property: Law and Policy These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject aims to provide a comprehensive survey of much of the law and some of the business and economics of commercialising and licensing intellectual property (IP) rights. The scope is interdisciplinary, exploring the business and economic aspects of IP licensing and investment in IP development in the context of a detailed legal framework for IP licensing and investment. It includes consideration of relevant IP laws, competition law, compulsory and voluntary licensing, contract and consumer laws, and selected issues in international practice. Moreover, the subject involves practicel skills training in drafting and negotiating licenses as well as practice-focused exercises that give students a better sense of the deal-making process in licensing transactions both in Australia and abroad.

The subject is in three parts. Part I explores the connection of IP and economic development, and provides a comprehensive survey of major IP laws, such as copyright, patent, confidential information, trademark, and domain name. Part II discusses possible business structures for commercialising IP and other special laws related to IP commercialisation, such as the enforcement of completion law, contract law and consumer law in the IP area. Part III involves practice or skills training in negotiating and drafting licenses and getting a 'sense of the deal' in licensing transactions.

76057 Judgement and the Rule of Law

6ср

A central tenet of legal systems, founded in common law traditions, is the rule of law. Concepts which are foundational to the rule of law include consistency, neutrality and objectivity. The rule of law is founded on two essential principles. The first being that law making powers are not exercised arbitrarily and the second that laws sustain a normative order and thereby stability, security and order in a community. To maintain normative order, laws must be more than predictable, well administered and understood by the community. They also need to be meaningful and generally accepted by the community. These principles raise fundamental questions about the relationship between the rule of law and values which underpin legal judgments.

Drawing on Kantian and Arendtian scholars, this subject critically explores the faculty of judgment and if there is something particular about legal judgments which differentiates them from judgments in other spheres such as politics, art or more routine decision-making. A second core theme explored is the philosophical foundations which underpin objectivity and how these relate to legal judgments. This theme is explored through the ideas of Martin Heidegger, Michel Foucault and critical legal theorists.

These ideas are applied to investigate relationships between precedent, tradition/history and change, judging against one's community and dissent, and how different communities of values and opinion, in particular minority communities, can be considered within legal judgments. The themes are explored through case analysis and case studies drawing on international, national and comparative laws.

76063 Media Law

6ср

Requisite(s): 70311 Torts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject looks at legal regulation of media content. Throughout the subject, students analyse laws that restrict what the media can publish or distribute. Topics include freedom of speech, defamation, contempt, hate speech and vilification, obscenity and pornography, sedition and the regulation of the internet. Through close examination of cases and literature, students are required to critically consider the nature of power, democracy and liberalism, as they relate to law and the mass media.

76066 Children and the Law

6cp

Requisite(s): ((70217 Criminal Law OR 70218 Criminal Law) AND 70311 Torts AND 70616 Australian Constitutional Law) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This elective subject is designed to enhance undergraduate studies in core law subjects as they relate to children; in particular constitutional law, criminal law, contracts, torts and the law of evidence. It also complements elective studies in family law and succession. The subject has been designed to combine both a theoretical and a vocational approach to the study of these issues and not only benefits students interested in these issues, but also those students considering a career in legal practice and/or the delivery of children's legal services.

The emphasis is on issues such as child development theory, children's rights, juvenile justice, care and protection, education rights and responsibilities, and the legal representation of children. Issues such as adoption, employment, property ownership and succession issues, civil liability, and medical procedures and treatment may be covered in assessment options. This is not a strictly 'black letter' subject; the present law in New South Wales is considered as well as the historical development of laws relating to children, proposed reforms, and comparative material from other jurisdictions. Material from other disciplines, such as criminology, sociology, and developing brain research is also incorporated, as appropriate.

76068 Indigenous Peoples and the Law

6cn

Requisite(s): ((70120 Legal Method and Research OR 70105 Legal Research)) OR (70110 Introduction to Law AND 76006c Public International Law)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The relationship between Indigenous peoples and the law goes to the foundation of Australia's legal and political identity. This subject considers a range of historical and current issues between Indigenous peoples and the law. Competition for land ownership has defined and driven race relations in Australia. This subject examines the historical dispossession of Indigenous people with reference to how this has impacted on current legal relations and debates. Aboriginal and Torres Strait Islander peoples' dispossession by law and war, together with the Mabo decision, is evaluated. Land rights legislation, native title legislation and subsequent common law developments are also considered. Indigenous Australians are also the most incarcerated people in the world.

Considering this, their relations with the criminal justice system with particular reference to community police relations is discussed. Also, the policies of dispersal of communities and the forced removal of children from their families are considered, with particular reference to current impacts in areas such as welfare law, juvenile justice and family law. The issue of self determination is also considered in depth. Between 1972 and 1995 all federal governments had a policy of self determination with regard to Indigenous peoples. The meanings and implications of this policy are examined in the context of self determination policies in comparable countries such as Canada and the United States. Consideration is given to the formation and role of Indigenous corporations, Australian and Canadian models of self government, the Aboriginal and Torres Strait Islander Commission (ATSIC) and international standards and developing norms with respect to self determination. In light of the Australian Government's decision in 2004 to abolish ATSIC, the shift from policies of self determination to 'practical reconciliation' is also evaluated.

76069 Community Justice Studies

6ср

Requisite(s): 70617 Administrative Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

Community Justice Studies fosters vital legal skills. The subject is taught in two parts. First, students review contemporary literature about the practice of public law within a social justice and community context. Key areas include the ethics of practice, identification of areas

of legal need in the community and access to justice. Second, students choose to engage in a public law or community activity from a broad range of options. For example, students are encouraged to engage in practice-based learning and may elect to further their experience through a relevant work placement. Students may also prepare community legal education for community groups. Students in this elective research, develop and deliver plain language presentations or short courses about legal issues for communities. Community legal education focuses on practical law, affecting members of communities in their daily lives, including consumer protection law, tenancy law, health law, domestic violence, dispute resolution, apprehended violence orders, succession, immigration law and other areas. Research is a critical skill and this subject allows students to develop policy, analytical and legal skills by completing a research publication such as a law reform submission or submission to a parliamentary committee. The subject introduces students to the dynamics of law reform and community engagement and fosters an understanding of the practice of public or community-based law by giving students an experience and direct knowledge of the law in practice.

Autumn semester, City campus Summer session, City campus

76070 Biomedical Law and Bioethics

6ср

Requisite(s): 70120 Legal Method and Research OR 70105 Legal Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject analyses the effectiveness of law in regulating new medical developments. The subject examines the impact that emerging biomedical technologies have on society and explores legal solutions that deal with the challenges presented by such technologies. A diverse and wide range of biomedical issues are considered, such as genes, cloning, euthanasia, medical experimentation and research, reproductive technology and surrogacy.

76074 Australian Civil Liberties Law

6cp

Requisite(s): ((70217 Criminal Law OR 70218 Criminal Law) AND 70616 Australian Constitutional Law)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Undergraduate and Postgraduate

This subject aims to provide an advanced understanding of:

- case and statute law relevant to the protection of civil liberties in Australia
- the relationship and dynamic between the individual and the state in a legal and political framework
- the institutions (both Commonwealth and state) and organisations established to protect civil liberties and legal issues associated with their operation
- current legal issues in the protection of civil liberties in Australia.

76075 Contemporary Legal Studies 1

6ср

For subject description, contact UTS: Law.

76076 Contemporary Legal Studies 2

6cn

For subject description, contact UTS: Law.

76080 Finance Law

6ср

Requisite(s): 70417 Corporate Law AND 70517 Equity and Trusts AND 70327 Commercial Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject considers the legal framework within which commercial enterprises raise debt finance. Various forms of secured and unsecured finance are considered, including project and asset financing arrangements and securitisation. Methods for protecting unsecured

loans are also covered including negative pledge lending, guarantees and debt subordination agreements. The subject provides a detailed examination of the new *Personal Property Securities Act* 2009 (Cwlth). Key aspects of tax and insolvency law as well as cross border issues are also discussed.

76081 Gender, Law and Sexuality

6ср

Requisite(s): ((70120 Legal Method and Research OR 70105 Legal Research)) OR (70110 Introduction to Law AND 76006c Public International Law)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject explores legal issues regarding sexuality and gender in a cross-doctrinal and interdisciplinary context. The subject introduces students to legal scholarship that takes a feminist perspective and considers the multitude of ways in which law constructs and regulates individuals and families by reference to their gender and sexuality. In doing so, the subject traverses and re-traverses various legal doctrinal areas, such as criminal law, international law, family law, anti-discrimination law and so on. However, the focus is not on the legal rules as such, rather the purpose of the subject is to provide a solid theoretical foundation that enables students to understand links between various legal doctrines and practices that have contributed to inequality.

76083 Ngiya - Talk the Law: Editorial Role

6ci

Ngiya means 'talk the law' in Kamillaroi. The idea for Ngiya came from a group of Indigenous lawyers who were frustrated that there was no unique voice for critique of the dominant legal system and its impact on Indigenous peoples. Ngiya allows for these voices to be heard.

Ngiya is published twice a year and its articles are subject to rigorous peer review. It provides a mix of general and thematic editions. There are generally eight articles per edition, which are approximately 5000 words each.

The subject is offered in Autumn and Spring semesters under joint supervision of:

- a staff member from Jumbunna Research Unit responsible for Ngiya, and
- a staff member from the Faculty of Law.

The student works closely with the Jumbunna staff responsible for Ngiya in relation to the editing and proofreading tasks of one article accepted for publication in Ngiya.

The student is supervised by a member of the Law Faculty to undertake research for an article written with the intention of publication in Ngiya. Staff at Jumbunna may also provide input into the nature and scope of the article.

The unit is limited to eight students per semester (although this may be lower, depending on the needs of the journal). They are selected on the basis of academic merit and interest in Indigenous issues. Preference may be given to Indigenous students and students in their final year of a law program.

Students selected for this unit must be prepared to serve for approximately six months (1 December - 30 May or 1 June - 30 November).

76084 Copyright and Designs

6ср

The subject provides an introduction and overview of the legal principles of copyright law, industrial design rights and confidential information law in Australia. It also provides an overview of the policy issues which inform the development of this law. It is designed as an introductory subject for students completing their undergraduate law degrees. Classes consider the historical development of these areas of law, as well as their justifications and objectives, the international framework setting standards, including WIPO, WTO and AUSFTA, and the main legal principles and doctrines which determine the scope and operation of the law in Australia.

76085 Trademarks and Patents

dob

The subject provides an introduction and overview of the legal principles of patent law, trade mark law and passing off in Australia, as well as covering certain related areas of law such as consumer law, geographical indications of origin and plant varieties. It provides an overview of the policy issues which inform the development of this law. It is designed as an introductory subject for students completing their undergraduate law degrees. Classes consider the historical development of these areas of law, as well as their justifications and objectives, the international framework setting standards, including WIPO, WTO and AUSFTA, and the main legal principles and doctrines which determine the scope and operation of the law in Australia.

76112 Conflict of Laws

6cp

Requisite(s): 70311 Torts AND 70616 Australian Constitutional Law There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines the interaction of two or more legal systems, specifically focusing on the international jurisdiction of the Australian courts, the recognition and enforcement of foreign judgments and decrees, and the problem of choice of law as it arises with respect to areas such as marriage, matrimonial causes, contract, torts, inter vivos property transactions and succession.

The subject also deals with choice-of-law issues as they arise between the Australian states.

76115 Insolvency

6cp

Requisite(s): 70417 Corporate Law OR 70120 Legal Method and Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject provides an introduction into the protection and regulation of insolvent individuals and corporations. The subject aims to discuss insolvency within the social context and impact of insolvency law. Students examine the legal procedure involved in insolvency law (such as bankruptcy petitions, lodging proofs of debt and distribution of insolvent estates) as well as the impact of insolvency upon stakeholders such as employees, unsecured creditors, and individual and corporate debtors.

Both individual and corporate insolvency are examined. All aspects of personal and corporate insolvency will be discussed but the subject places particular emphasis on discussing powers of insolvency administrators, voluntary administration, liquidation and the rights of creditors.

76212 Revenue Law

6ср

Requisite(s): ((70417 Corporate Law AND 70617 Administrative Law) OR 70327 Commercial Law)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

In this subject students examine the legal principles that relate to revenue law in Australia. Topics covered include the structure and sources of tax law in Australia; tax policy and tax reform; income - concepts of income, income from labour, property and business, statutory extensions to the income base; deductions - general and specific deductions, substantiation; capital gains tax; fringe benefits tax; tax accounting; tax administration; tax avoidance and ethics.

76516 Family Law

6cp

Requisite(s): 70616 Australian Constitutional Law AND 70317c Real Property

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This elective subject introduces undergraduate students to the principles that govern the laws, rights and obligations of parties in parenting and/or interpersonal relationship disputes. The legal recognition and regulation of different types of domestic relationships and families, including married, de facto (same-sex and opposite-sex) and other domestic relationships is considered. The subject covers four main areas:

- the historical and current development of family law, including constitutional and jurisdictional issues; and principal relief (divorce and nullity)
- children and parental responsibility (parenting disputes)
- spousal maintenance and child support (family support)
- claims and agreements in relation to property (property settlement).

The subject combines both a theoretical and a vocational approach to the study of these issues, which not only benefits students interested in these issues, but also those students considering a career in legal practice and/or the delivery of family law-related services. Emphasis is also given to the practical and social policy issues in each of these areas, including the impact of family violence and the growing awareness of children's rights.

76517 Succession

6ср

Requisite(s): 70516 Equity and Trusts OR 70517 Equity and Trusts These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject takes both a theoretical and practical approach to the study of the law of wills. The formal requirements for a valid will are considered, as well as the circumstances where those requirements may be dispensed with by the Court, such as death bed or suicide notes which purport to pass property upon death.

The legislative framework for the law of succession in NSW is considered in detail, including the consequences of the failure to have made a will or where a Court determines that a will was invalid, for example where the will-maker (testator) was suffering from a dementing-type illness at the time the will was made.

There is particular focus on the tension between the concept of freedom of testamentary disposition and the provisions of Chapter 3 of the *Succession Act*, which permit certain classes of eligible person to make a claim to part of an estate even if cut out of a will by a displeased testator. This focus on the themes of testamentary freedom, forced succession and familiar responsibility invites students to consider what is meant by 'family', including blended families and the status of adopted, IVF and surrogate children in the scheme of succession to property in NSW.

76521 Intellectual Property and Traditional Knowledge

6ср

Requisite(s): 70516 Equity and Trusts OR 70517 Equity and Trusts These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject considers the nature of traditional knowledge, how intellectual property in this area is protected under the Australian legal framework, and the development of strategies for its protection. The subject includes an overview of the international treaty framework, relevant Australian legislation and concerns for Australian Indigenous peoples such as appropriation of Indigenous arts and culture, language, spirituality, biodiversity, biotechnology, medicinal knowledge, film and music.

76703 Indigenous Peoples, the Environment and Property

6cp

Requisite(s): (70317 Real Property OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines the relationship of Aboriginal and Torres Strait Islander customary rights and the development of Indigenous land rights. The subject examines developments in land rights legislation, the recognition of native title and legislative and common law developments in land rights and native title. Topics include the evidence of Aboriginal and Torres Strait Islander customs and traditional law; statutory recognition of aspects of customary law including traditional interests in land or items of cultural heritage, traditional hunting, fishing and gathering rights; issues as to the admissibility of evidence pertinent to the veracity of Aboriginal and Torres Strait Islander customs and traditional law; legal proceedings relating to Aboriginal land claims; assertion of common law title to land; legal proceedings relating to Aboriginal land claims, the effect of the decision of the High Court in Mabo v Queensland (No 2) 1992, the *Native Title Act* 1993 (Cwlth), amendments to the *Native Title Act* 1993 (Cwlth) and recent developments.

76801 Exchange Subject 1

6ср

Requisite(s): 70516 Equity and Trusts OR 70517 Equity and Trusts These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

International exchange offers students the option to complete part of their study in another country and receive credit towards their degree at UTS. UTS: Law participates in the UTS international exchange program that is administered by UTS: International Studies. Under the program, law students have the opportunity to undertake three or four law options at an exchange partner university. Applicants for exchange must have their study at the exchange partner university approved by UTS: Law's exchange director. The subject studied at the exchange partner university should have relevance to a student's course of study, and be taught and assessed in an acceptable format. Subjects of an international or comparative nature are preferred. Further information is available at:

www.uts.edu.au/international/exchange

Typical availability

Autumn semester, City campus

76900 Moot

6cp; availability: by invitation only Undergraduate and Postgraduate

UTS: Law offers students the opportunity to participate in a variety of mooting competitions, both within Australia and overseas. Students enrol in this subject in cases where participation in a mooting team is counted as credit towards their degree. UTS: Law calls for expressions of interest from students to participate in a variety of moot competitions.

76901 Vis Arbitral Moot

6cp; availability: by invitation only Undergraduate and Postgraduate

The Willem C Vis International Commercial Arbitration Moot is an international moot that takes place every April in Vienna. Named in honour of Professor Willem Vis, a world-recognised expert in international commercial transactions and dispute settlement procedures, this moot is an acknowledgment of the business community's marked preference for resolving international commercial disputes by arbitration. This method of dispute resolution is offered as the clinical tool to train law students through two crucial phases: the writing of memorandums for claimant and respondent, and the hearing of oral argument based upon the memorandums. The forensic and written exercises require determining questions of contract - flowing from a transaction relating to the sale or purchase of goods under the United Nations Convention on Contracts for the International Sale of Goods and other uniform international commercial law - in the context of an arbitration of a dispute under specific arbitration rules. There are currently 79 law schools from 30 countries that send teams to Vienna. It is an excellent opportunity for students to learn an extremely valuable commercial skill, and a rare chance to meet and to form valuable professional friendships with a range of law students from around the world. Further information is available at:

www.cisg.law.pace.edu/vis.html

76902 Law and Literature

6cp

Requisite(s): 70120 Legal Method and Research AND 70115 Perspectives on Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject approaches important questions from jurisprudence, philosophy and legal theory through a consideration of law's relationship to literature. Lectures relate key cases of the last hundred years to key works of literature, indicating ways in which we might think of the relationship between law and literature. Students engage in a rigorous process of reading and discussion that includes some of the most fascinating and thought provoking literary works of the last century, including works by Franz Kafka, Toni Morrison, Truman Capote and Harper Lee. Using these texts students will think about questions of justice related to central problems and traumas of recent times: the Holocaust, the death penalty, slavery and the Stolen Generations.

Students develop important skills in critical thinking and writing as part of these investigations, and their own deep responses to the following questions. What is justice, and how do law and literature provide different answers to justice? What is the law's relationship to violence? How does the law regulate the individual's relationship to their community? How are moral questions addressed by the law? In what ways can it be said that literature judges the law, and what might we do with these judgments?

76903 International Commercial Transactions

6ср

Requisite(s): 70327 Commercial Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject provides an overview of international business transactions and the framework for international regulation of commercial transactions. Furthermore, the subject provides an overview of international trade organisations (e.g. WTO, EU) and the uniform law applicable to international sale of goods (CISG).

Other key themes in the subject include aspects of the international regulation of trade in goods: WTO; an overview of licensing transactions and licensing into the EU; an overview of foreign direct investment and issues of investing in Europe.

The subject also provides an introduction to dispute resolution issues; and an overview of trans-boundary dispute resolution.

76904 Price International Media Law Moot

6cp; availability: by invitation only

The Monroe E. Price International Media Law Moot aims to expand knowledge in international media law and policy.

Students will develop expertise in arguing a case before an international bench of judges from different legal systems and backgrounds.

Participants in the international rounds operate in a world where a Universal Court of Human Rights has been established to ensure the citizens of the United Nations are enjoying the rights enshrined in the Universal Declaration of Human Rights. In this world, the Universal Court of Human Rights substitutes all jurisdictions of all other regional courts and becomes the final adjudicator when all national remedies have been exhausted.

Students participating in the moot gain an understanding of issues of international human rights, US constitutional law and the law of various nations as they impact on freedom of speech, privacy and regulation of media content.

The international rounds are held at Oxford University and involve teams from law schools in Europe, Asia, the Middle East and the US.

UTS: Law calls for expressions of interest from students in July each year.

Typical availability

Autumn semester, City campus Spring semester, City campus

77688 Doctoral Dissertation (SJD)

Оср

Postgraduate

This subject develops theoretical understandings and practical applications of research across the discipline of law and related fields. Emphasis is placed on currency in legal research and the application of appropriate research methodologies. Further information is available from:

77701 International Economic Law (PG)

6cn

Requisite(s): ((70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77885c Legal Process and Legal Research OR 60 credit points of completed study in C04148 Master of Law and Legal Practice)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

Increasing globalisation of commercial and social engagements is creating a greater need for lawyers to understand the nature and extent of global legal regulation and, in the commercial context, the operation of various domestic and transnational laws in relation to international trade. This subject is designed to help students develop an understanding of the law governing the international economy and relations between participants in that economy. The concept of international economic law is examined. Topics include specific resource issues such as the common heritage; international legal regulation of investment, finance and trade; relevant institutions such as the International Monetary Fund, the World Trade Organization; and the relationship between national and international economic law involving such concepts as extraterritoriality and sovereign immunity.

77704 European Union Law

6ср

Requisite(s): (70616c Australian Constitutional Law OR 77885c Legal Process and Legal Research OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject deals with the laws and institutions of this supra-rational organisation. Topics discussed include the activities of the European institutions; the political and economic origins of the EU and its institutional structures (with emphasis on the European Court of Justice); the interrelationship between community law and the law of the member states; and the free movement of goods, workers, capital and services.

The subject concentrates on the emerging transnational protection of social and economic rights and the jurisprudence of the European Court of Justice.

77715 Banking Law

6ср

Requisite(s): ((70327c Commercial Law OR 70318c Personal Property)) OR 77885c Legal Process and Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject concentrates on relations between banking institutions and their customers. Additional topics examined are drawn from the following: the regulatory framework within which banking institutions operate and the activities of banking institutions including cheques, bills of exchange, foreign currency transactions and secured and unsecured lending.

77716 International Trade Law

6cr

Requisite(s): 70616c Australian Constitutional Law OR 77885c Legal Process and Legal Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The rules of the World Trade Organization (WTO) underpin the conduct of international trade in about 150 countries and have direct relevance for governments, businesses and individuals. This subject covers a brief introduction of the WTO followed by a more detailed analysis of private international trade transactions.

The subject primarily focuses on the Australian application of trade rules and domestic and international laws governing international transactions

On completion of this subject, students have developed an understanding of the basic legal principles underpinning the multilateral trading system and an understanding of the application of the law to international transactions.

Typical availability

Autumn semester, City campus Spring semester, City campus

77724 International Banking and Finance Law

6cp

Requisite(s): ((70120 Legal Method and Research AND 70115 Perspectives on Law) OR 77885c Legal Process and Legal Research OR 60 credit points in C04148 Master of Law and Legal Practice) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is important for students wishing to understand the transnational nature of corporate finance and regulation, and the central place of banks and other financial intermediaries in the globalisation of commerce. The subject is an advanced study of types of cross-border finance, regulation of banking between countries and regions, foreign exchange and derivative markets, and international financial and banking policy. Case studies cover the US, European Union, East Asia and emerging markets, with a focus on whether globalisation of banking and finance has beneficial or detrimental social consequences and whether convergence to a single international financial system is desirable or even possible. Topics covered in the subject include:

- international banking/finance systems
- US securities/banking markets: international aspects
- the Bank for International Settlements, Basel Accord and capital adequacy
- East Asia: Japanese and Chinese banking/capital markets
- risk control: foreign exchange, hedging, derivatives, operational risk
- · emerging markets and the debt crisis
- privatisation and the IMF/World Bank
- Europe: Monetary Union and securities/banking markets
- convergence and the globalisation of banking and finance.

777251 Research Project 1 (PG)

6cp; availability: must be completed by Master of Legal Studies, Master of International Law, Master of Dispute Resolution, Master of Law and Legal Practice; candidates should have completed at least 24 credit points (60 credit points for Master of Law and Legal Practice) and maintained an average grade of 75 per cent or greater, and Master of Laws (only for LLM students enrolled in 2007 and prior)

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

Candidates must research and write a paper of approximately 12,000-15,000 words at a standard suitable for publication on a topic approved by UTS: Law. In most cases, the research project extends

and develops research done in one or more of the elective subjects already undertaken, but in appropriate circumstances a candidate may undertake a new topic. Students are not permitted to enrol in the research project until written approval has been obtained from the subject coordinator.

The research project is completed over two consecutive semesters. Candidates enrol in this subject in the first semester of enrolment and 777252 Research Project 2 in the following semester. A final grade is not recorded against this subject until completion of 777252 Research Project 2.

Early submission of proposal and form is encouraged. Forms are accepted and processed from Week 12 of the preceding semester. The last date to submit forms is the Friday, two weeks before the start of semester, to allow for processing.

777252 Research Project 2

6cp; availability: must be completed by Master of Legal Studies, Master of International Law, Master of Dispute Resolution, Master of Law and Legal Practice; candidates should have completed at least 24 credit points (60 credit points for Master of Law and Legal Practice) and maintained an average grade of 75 per cent or greater, and Master of Laws (only for LLM students enrolled in 2007 and prior)

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: 777251 Research Project 1 (PG)

Candidates must research and write a paper of approximately 12,000-15,000 words at a standard suitable for publication on a topic approved by UTS: Law. In most cases, the research project extends and develops research done in one or more of the elective subjects already undertaken, but in appropriate circumstances a candidate may undertake a new topic.

The research project is completed over two consecutive semesters. Candidates enrol in 777251 Research Project 1 (PG) in the first semester of enrolment and this subject in the following semester. A final grade is not recorded against 777251 Research Project 1 (PG) until completion of this subject.

Only students enrolled in 777251 Research Project 1 (PG) are eligible to enrol into this subject by lodging an eRequest

77734 Law and Medicine

6ср

Requisite(s): 70311 Torts AND 70617c Administrative Law These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject deals with the aspects of law relevant to health care. There are many issues that can arise as health law is an ever evolving and diverse area. It is subject to both local and overseas influences and regulation is challenging. When studying health law, many areas must be considered, such as: human rights, ethical practice, the advancement of medical technology, social policy, governance and the many vested interests. The subject examines the issues that confront health-care professionals and their patients and peers, in particular in the context of continuing systemic and resource problems. This includes the handling of complaints against health-care practitioners, the regulation of the various health professions, the outcome of parliamentary inquiries and the history and findings of the various royal commissions. Other important areas such as medical negligence, consent to treatment, access to and ownership of medical records, privacy and confidentiality, euthanasia, wrongful birth, wrongful life and abortion, complementary and alternative medicine, organ donation, public health law issues such as tobacco, alcohol and obesity are examined and discussed.

77740 Research Paper

6cp; availability: Master of Laws, Master of Law and Legal Practice, Master of International Law, Master of Industrial Property, Master of Dispute Resolution, Master of Legal Studies, Graduate Diploma in Legal Studies, Graduate Certificate in International Law, Graduate Certificate in Dispute Resolution; candidates should have completed at least 24 credit points (60 credit points for Master of Law and Legal Practice) and maintained an average grade of at least 65 per cent Requisite(s): (([78101c Postgraduate Legal Research OR 78100c Postgraduate Legal Research)) OR 77896 Legal Process and Intellectual Property Overview OR 77905 Preparing for Intellectual Property Practice OR 70717 Evidence and Criminal Procedure) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject comprises the research and writing of a supervised thesis on an approved topic in law. The thesis length must be within the range 8000 to 12,000 words. Undertaking this subject provides an opportunity for undergraduate law students to further develop and refine their legal research and writing skills, as well as explore and analyse a topic of law of their own choosing.

Early submission of the proposal and form is encouraged. Forms are accepted and processed from Week 12 of the preceding semester. The last date to submit forms is the Friday, two weeks before the start of semester, to allow for processing.

More information regarding the honours degree is available at Juris Doctor with honours (see page 101).

Note(s)

This research paper may be used toward partial fulfilment of the award of honours for Juris Doctor (C04236) (see page 405) students only.

77745 Negotiation

6ср

Requisite(s): 60 credit points in C04148 Master of Law and Legal Practice AND 79771c Dispute Resolution

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access

conditions. Postgraduate

This subject is taught in a four-day intensive block which is designed to provide an understanding of the theory and skills of negotiation. It covers the diverse approaches to negotiation, with a focus on principled negotiation as taught by the Harvard Law Faculty's Negotiation Project. This subject brings together the current theories and practice in negotiation skills and analysis with an emphasis on identifying effective negotiation strategies.

This subject covers topic areas that include:

- distributive and integrative bargaining
- principled negotiation theory and practice
- pre-negotiation analysis, preparation and participation
- the challenges of complex negotiations including agency and team issues, negotiating behaviour and communication issues
- coalition dynamics
- risk assessment
- trust and good faith issues.

The assessment is centred on the opportunity to workshop and evaluate a chosen scenario developed in conjunction with a supporting critique of selected negotiation theories.

77746 Advanced Mediation

6ср

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice AND 79771 Dispute Resolution (PG) AND 78029 Mediation Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject builds on the introductory theory and practice presented in the prerequisite subjects and draws on the expertise of experienced mediators. It concentrates on the micro-skills of mediation at an

advanced level. And is designed to provide an in-depth understanding of skills, strategies and techniques used by experienced mediators and to explore a range of major mediation models. Topics included for study are:

- micro-skills of mediation at an advanced level
- the skills and techniques used by experienced mediators
- a range of mediation models including co-mediation and the 'Understanding' model developed by Harvard Law School and the New York Centre for Mediation in Law
- the practice of narrative mediation and the concepts of externalising, deconstructing and careful listening
- the practice of forgiveness as a strategy in a mediation context.

The subject is taught in a three-day intensive mode with opportunities in selected exercises to develop reflective practice and understand the application of theory to mediation practice. Assessment includes a paper based on critiquing the theories and concepts explored in the course, a case study and a reflective journal.

77751 International Commercial Arbitration

6cp

Requisite(s): 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice AND 79771 Dispute Resolution

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject covers commercial arbitration in the international arena in-depth and includes the following topics:

- ad hoc arbitrations
- relevant legislation and international conventions
- international institutional arbitration associations
- scope, formal requirements and validity of agreements to arbitrate
- drafting in relation to ICSID arbitrations
- curial intervention
- compulsory reference of an international commercial dispute to arbitration in Australia
- award of damages in international arbitration
- sovereign immunity
- international standard construction contracts
- power of the international arbitral tribunal to deal with defaults, delaying tactics or refusal of a member to participate in the making of an award
- provisions for correcting an international commercial arbitration award
- recourse against award under the UNCITRAL model law
- recognition and enforcement of foreign arbitral award under the UNCITRAL model law and the New York Convention
- liability of the arbitrator for negligence and/or wilful neglect of duty.

77752 Commercial Arbitration (Domestic)

6ср

Requisite(s): 60 credit points in C04148 Master of Law and Legal Practice AND 79771 Dispute Resolution

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

Topics covered in this subject include the arbitration agreement and its scope; the arbitrator's jurisdiction; reference by the court to a referee or arbitrator; the inherent jurisdiction of the court to interfere in arbitral proceedings; agreement binding on the Crown; the appointment of arbitrators and other related matters; the umpire entering upon the reference; the distinction between an arbitration certificate, valuation, assessment, an exception clause, reference to arbitrator, or quasi-arbitrator; powers and duties of the Arbitration Tribunal; subpoenas; evidence; legal representation; amiable compositeur or ex aequo et bono; interim awards; specific performance; extension of ambit of arbitration proceedings; duties of parties; right of appeal; exclusion agreements; misconduct; remission of award; removal of umpire or arbitrator; sundry provisions; Scott v Avery clause; and foreign awards.

77760 Family Dispute Resolution

6cp

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice AND 79771c Dispute Resolution (PG) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides instruction in the theoretical and practical aspects of the use of non-adversarial techniques for resolving family disputes. Different approaches and skills are presented together with a critical evaluation of the use of such techniques. Less adversarial approaches to trials relating to disputes over children and the impact of new legislation is considered in the context of the new family law framework. The subject covers such topics as:

- the nature of family disputes
- the legal system and the new family law framework for the resolution of family disputes
- the less adversarial approach to trials in the Family Court of Australia
- dispute resolution processes in relation to financial aspects of family disputes
- children's issues in family disputes
- the effects of domestic violence and the power dynamic in family disputes
- ethical issues in conducting family dispute resolution processes
- developments in dispute resolution practice including collaborative law practice and compulsory community-based services

Students are introduced to the legal, psychological and social aspects of family disputes through formal information giving and also through experiential teaching techniques. They are expected to research in the area to further their understanding of this complex and challenging area of law and social policy. Students may choose their area of research for a written paper and seminar presentation.

Note(s)

This subject was formerly called Interpersonal Conflict Resolution.

77761 Dispute Resolution in Commerce

6ср

Requisite(s): 79771c Dispute Resolution (PG) AND 60 credit points of completed study in C04148 Master of Law and Legal Practice These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an overview of dispute management and complaints handling systems, together with further consideration of the developing body of dispute resolution and negotiation theory and practice in the commercial context.

There is an increasing demand for the development of dispute resolution systems that avoid an adversarial approach in commercial environments where delay, high legal costs and limited possible outcomes are being perceived as counterproductive in the highly competitive commercial environment. Increasingly there have been legislative responses for providing both processes and process providers for resolving and settling commercial disputes. These developments are also studied in the context of changing corporate structures and cultures and the demands for effective, accessible, cost efficient and ethical methods for dealing with commercial disputes.

77767 Taxation Administration

6ср

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

Access to timely and relevant tax-related information is crucial to the Australian Taxation Office's attempts to correctly assess taxpayers and to taxpayers' attempts to resist assessments. In this subject students critically analyse the rationale for, and structure of, the current tax

administration system, and then proceed to a detailed analysis of the key strategic elements of that system including tax audits, selfassessment, objections and appeals, and collection and recovery of unpaid tax. Alternatives for reform are also examined.

77783 International Commercial Dispute Resolution

6cr

Requisite(s): 70616 Australian Constitutional Law AND 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject covers negotiation in international commercial disputes, cross-cultural commercial negotiations, negotiating with Japan and a Middle-Eastern country, the role of dispute resolution centres, international commercial mediation, arbitration as contract, drafting and analysing arbitration agreements, transnational aspects of arbitration, international arbitration law, UNCITRAL initiatives on international commercial arbitration, statutory regulation of international commercial arbitration in Australia, enforcement of arbitral wards, international commercial litigation, enforcement of international commercial judgments and institutions for international commercial dispute resolution.

77792 Crisis Negotiation

6cn

Requisite(s): 79771c Dispute Resolution (PG) AND 60 credit points of completed study in C04148 Master of Law and Legal Practice These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject provides a theoretical overview of, and instruction in, the process of crisis negotiation. The aim of the subject is to develop the students' skills in negotiating crisis situations and in dealing with hard-bargainers and 'dirty tricks'. It also addresses the use of negotiation in critical incidents such as crisis management in the corporate sector and the use of the process in counter-terrorism.

The topics included in this subject are:

- overview and understanding of crisis negotiation skills and techniques
- psychiatric and psychological considerations
- risk and crisis management as part of the preparation
- · key factors in crisis negotiation
- face-to-face crisis negotiations
- the stages of crisis negotiations, the preparation and the planning
- team approach and use of communication techniques
- dealing with an aggressive person
- choosing the right negotiator
- briefing and debriefing a critical incident
- · third person in a critical incident
- strategic planning.

77794 International Environmental Law

6ср

Requisite(s): ((70110 Introduction to Law AND 76006c Public International Law) OR (60 Credit Points in spk(s): C04148 Master of Law and Legal Practice AND 70616 Australian Constitutional Law) OR 77885 Legal Process and Legal Research)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject introduces students to international law relating to conservation and management of the environment. Particular areas that may be considered include the precautionary principle, sustainable development, marine pollution, climate change, conservation of biological diversity, marine pollution, trade in hazardous substances, climate change, conservation and biological diversity, protection of world heritage. The impact of international environmental law on domestic legal systems is also considered, including questions of domestic incorporation of principles of international and civil law.

77796 Taxation of Business Entities

6ср

Requisite(s): 60 credit points in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides a theoretical and practical overview of the taxation of partnerships and trusts and the taxation of partners and beneficiaries in respect of their interests in those entities. The topics include the calculation of net income or losses of partnerships and trusts and the allocation of net income/losses to partners and net income to beneficiaries. The impact of variations in partnership and trust interests and the application of the capital gains tax provisions to dealings with these entities are also considered.

77800 International Commercial Dispute Resolution

8cp

Requisite(s): (78100c Postgraduate Legal Research AND 78136 Dispute Resolution) OR ((46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject covers negotiation in international commercial disputes, cross-cultural commercial negotiations, negotiating with Japan and a Middle-Eastern country, the role of dispute resolution centres, international commercial mediation, arbitration as contract, drafting and analysing arbitration agreements, transnational aspects of arbitration, international arbitration law, UNCITRAL initiatives on international commercial arbitration, statutory regulation of international commercial arbitration in Australia, enforcement of arbitral wards, international commercial litigation, enforcement of international commercial judgments and institutions for international commercial dispute resolution.

77850 Psychology and Dispute Resolution

6ср

Requisite(s): 79771c Dispute Resolution (PG) AND 60 credit points of completed study in C04148 Master of Law and Legal Practice These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is an introduction to key concepts in psychology that have relevance for dispute resolution practise. A main focus of this subject is the application of psychological concepts to disputes and conflict situations in order to understand what is going on and to start to learn to harness new skills and paradigms to work more effectively with ongoing conflict and within the dispute resolution process.

It is presented in an intensive program of three full-day sessions on campus plus a day of seminar presentations. These four day sessions are supplemented by readings and research in an area of the subject that interests the student.

- theory: past and current
- research: evidence for and against the theory
- application of the concept to dispute resolution
- practice: exercises, homework, role-play
- discussion: as a student/practitioner how can I apply this?; what is its value?; what have I learnt?
- future directions: how is the concept evolving?; what are the implications for the practice of dispute resolution?
- as a student/practitioner: where do I go from here?; what action can I take?

77867 Workplace Dispute Resolution

6ср

Requisite(s): 79771c Dispute Resolution AND 60 credit points of completed study in C04148 Master of Law and Legal Practice These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject explores the applications of dispute resolution theory and practical skills in the workplace. It explores the causes of conflict within the workplace setting and some legislative requirements for dealing with workplace disputes. The relevance of a range of dispute resolution processes and the possible challenges to their implementation are explored. Impediments to changing the dispute resolution culture in the workplace are identified and dispute resolution models and the design of systems for implementation in both the private and public sectors are studied. The subject covers the following topics:

- analysis of workplace conflict and its sources
- the legal, political and historical contexts within which workplace conflict has been managed and how it is changing
- the existing dispute resolution cultures in Australian workplaces
- the types of disputes within the workplace, including grievances and management disputes, and the dispute resolution processes that are applicable
- the theory of the role of dispute resolution processes in effecting behavioural change in the workplace
- the theory shaping mediation techniques for resolving workplace disputes
- designing, implementing and evaluating a dispute resolution system for a workplace
- the relationship between organisational change and dispute resolution processes
- the difference in managing disputes in the public and private sectors
- the negotiation dynamic of enterprise and employment contract bargaining.

77885 Legal Process and Legal Research

6cp; online and on-campus components Postgraduate

In this subject students are introduced to the common law and its place in the Australian legal environment. The skills of legal research, case analysis, statutory interpretation, legal problem solving and critical analysis—which are essential to the study and practice of the law—are also developed in the course of students' learning.

Students begin their inquiry by considering primary and secondary sources of the common law, the development of common law, courts and lawyers, and the spread and reception of common law. They then examine contract law in the common law, public law and the common law, and business transactions in the common law.

77889 Trade Marks Law

6cp; offered either by distance, requiring no attendance, or oncampus

Requisite(s): (77896c Legal Process and Intellectual Property Overview OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR 77905c Preparing for Intellectual Property Practicel

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an understanding of the principles of trade marks and the trade mark system in Australia. Topics covered include passing off and unfair competition, registrability issues, comparison of trade marks and assessment of deceptive similarity, ownership and authorship of trade marks, requirements of use in relation to trade marks, grounds of opposition, and infringement and post-registration maintenance of trade marks.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney or Trade Mark Attorney in Australia.

77890 Trade Marks Practice

6cp; offered by distance requiring no on-campus attendance Requisite(s): 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice AND 77889c Trade Marks Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject concentrates on the ability to advise and to handle the interests of a client in prosecution and maintenance of trademark applications, including advice on the desirability of seeking trademark protection and provision of alternative protection in Australia and other countries. Topics covered include classification systems, searching, types of application and registration, Trade Marks Office practice and procedure, removal for non-use, rectification, registration of security interests, border controls, exploitation, misuse and criminal sanctions, and international issues.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney or Trade Mark Attorney in Australia.

77891 Patent Systems

6cp; offered by distance requiring no on-campus attendance Requisite(s): 77898 Patent Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject concentrates on the ability to handle the interests of a client in prosecution and maintenance of a patent application, including advice on the desirability of seeking patent protection and provision of alternative protection in Australia and other countries. Topics covered include: types of application; Patent Office practice; amendment; opposition; re-examination; maintenance; extension of term; extension of time; revocation; treaties and conventions; searching; assignment; licensing; compulsory licenses; Crown use; restrictions on exploitation; circuit layout legislation and practice; plant protection legislation and practice; patentability in other countries (particularly with reference to New Zealand, the United States, the European Union, the People's Republic of China and Japan); and innovation patents.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney in Australia.

77892 Professional Conduct (Intellectual Property)

6cp; offered wholly online, requiring no on-campus attendance Requisite(s): 77896c Legal Process and Intellectual Property Overview

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an understanding of the rights, privileges and responsibilities of a patent or trade marks attorney. Topics covered include: conflict of interest; privilege; confidentiality; professional liability and negligence; code of conduct; maintenance of rights and monitoring systems; and fiduciary obligations to clients.

Typical availability

Spring semester, City campus

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney or Trade Mark Attorney in Australia.

77893 Designs Law and Practice

6cp; offered wholly online requiring no on-campus attendance Requisite(s): [77885c Legal Process and Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77896 Legal Process and Intellectual Property Overview OR 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR 77905c Preparing for Intellectual Property Practice) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject concentrates on the ability to advise and to handle the interests of a client in prosecution and maintenance of a design application, including advice on the desirability of seeking design protection and provision of alternative protection in Australia and overseas. Topics covered include registrability, newness, registration procedure, maintenance, office practice, third-party objection, infringement, expunction, copyright, and international aspects of design practice.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney in Australia.

77894 Drafting of Patent Specifications

6cp; offered wholly online requiring no on-campus attendance Requisite(s): 77898 Patent Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

On completion of this subject, candidates should have acquired ability to obtain relevant information about an invention and from that, given the prior art, draft a patent specification to accompany a provisional application, a standard complete application, an international application or an innovation patent application. In particular, candidates should be able to draft claims that define an invention that is novel over the given prior art and, arguably, includes an inventive step. The support for the claims are also considered in light of the given description of the invention. Various common practice-based aspects of drafting of patent specifications are also considered.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney in Australia.

77895 Interpretation and Validity of Patent Specifications

 $\ensuremath{\mathsf{6cp}};$ offered either wholly online requiring no on-campus attendance, or on-campus

Requisite(s): 77898 Patent Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postaraduate

On completion of this subject, students have acquired an ability to express an understanding of a patent specification and what it covers for the purpose of advising on infringement validity over given prior art, s 40 of the *Patents Act* 1990 and other grounds of revocation and amendment.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney in Australia.

77896 Legal Process and Intellectual Property Overview

6cp; offered wholly online and requires no on-campus attendance Postgraduate

This introductory subject provides non-law graduates with an understanding of the Australian legal system and how intellectual property rights may be protected.

Topics covered include parliament and the courts, appeal and review systems under the Australian legal system, the doctrine of precedent and principles of statutory interpretation.

The subject also provides students with an introduction to patents, trademarks, designs copyright, circuit layouts, plant breeders' rights, confidential information and trade secrets, trade practices and anticompetitive practices, and international intellectual property treaties.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney or Trade Mark Attorney in Australia.

77898 Patent Law

6cp; offered wholly online and requires no on-campus attendance Requisite(s): (77885c Legal Process and Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77896c Legal Process and Intellectual Property Overview OR 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR 77905c Preparing for Intellectual Property Practice) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an understanding of the principles of patents and the patent system in Australia. Topics covered include subject matter, s 40 of the *Patents Act 1990* (specifications), infringement, inventorship, ownership and breach of confidence.

Note(s)

This subject is accredited by the Professional Standards Board as fulfilling part of the qualifications for registration as a Patent Attorney in Australia.

77900 Goods and Services Tax

6ср

Requisite(s): (60 credit points of completed study in C04148 Master of Law and Legal Practice AND (70516 Equity and Trusts OR 70517 Equity and Trusts))

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

The course canvasses some basic principles and associated legal issues and issues relating to matters such as administration, liability, supply, taxable supply, GST-free supplies, input tax credits, bad debts, anti-avoidance and comparable jurisdictions.

77901 Securities Markets Law

6ср

Requisite(s): 70417 Corporate Law OR 77885 Legal Process and Legal Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject builds on the compulsory company law subject by examining key issues in the Australian scheme for the regulation of markets for corporate securities. Topics include an introduction to corporate finance, regulation of major equity and debt capital transactions such as reductions, buy-backs and the raising of new capital through equity and debt issues. The subject has a particular focus on the role of disclosure in securities market regulation, including the regulation of continuous disclosure, misleading statements to the market and insider trading. The subject also provides an introduction to takeover regulation with an emphasis on the role of disclosure in takeovers and the regulation of takeover disputes.

77903 Copyright Law

6ср

Requisite(s): (77885c Legal Process and Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR 77896c Legal Process and Intellectual Property Overview OR 77905c Preparing for Intellectual Property Practice) These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject covers the principles of copyright, the development of case law and the structure and ambit of the legislation. Students are required to develop a good working knowledge of the *Copyright Act* 1968 (as amended), and associated regulations, and to have a sound knowledge of relevant case law.

77905 Preparing for Intellectual Property Practice

6ср

This subject provides students with an understanding of the:

- Australian legal system, courts and legislative processes
- protection of intellectual property rights by Australian and international legal systems
- principles involved in efficient and effective management, commercialisation and exploitation of intellectual property assets
- legal entities and processes used in licensing, franchising, assignment and securing intellectual property rights, and
- the rights, privileges and responsibilities of practising patent or trade marks attorneys towards their clients, the profession and the community.

When completed, this subject ensures that students satisfy the knowledge requirements prescribed by Regulation 20.8 and Parts 2 and 3 of Schedule 5 of the *Patent Regulations* 1991 (Cwlth).

77924 Superannuation and Retirement Planning

6cp

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject concentrates on the taxation aspects of superannuation at the contribution stage, while superannuation money is held in a fund, and when benefits are paid. The subject deals with related topics such as the regulatory requirements of the *Superannuation Industry (Supervision) Act* 1993, the superannuation guarantee scheme and the interaction of GST and superannuation.

Note(s)

Students who have completed 77979 Retirement Planning (PG) are not permitted to enrol in this subject. This subject was formerly named Superannuation Law.

77930 Insurance Law

6ср

Postgraduate

This subject looks at insurance from the perspective of a business buying insurance. It begins with risk management and, in the context of the function of insurance in risk management, considers the design of an insurance program and how business buys and sells insurance. The subject looks at the public regulatory regime governing the insurance industry, including products and markets. The approach examines in some detail the private law principles governing the relationship between insurer and insured in particular, the pre-contract matters of disclosure, terms on the risk and claims, and the structure and documentation of a typical policy. There is a focus on the main insurance principles: duty of utmost good faith, insurable interest, indemnity, subrogation, risk, non-disclosure, misrepresentation and cancellation of cover. There also is material on the resolution of insurance disputes. The role of intermediaries, such as agents and brokers, is also examined. The subject concludes with case studies on the insurance market in crisis.

77938 Introduction to Taxation Law

6ср

Postgraduate

This subject acquaints students with Australian taxation law in a practical business environment. The focus of the syllabus is on the application of tax law concepts in a professional accounting setting. It aims to develop students' conceptual and analytical skills and an appreciation of the Australian tax system. It provides a general analysis of the current tax system and consideration of the many changes it is presently undergoing with an emphasis on the implications for the commercial world. The subject looks at the *Income Tax Assessment Act*, the Tax Law Reform Project and the New Tax System. Particular concepts to be considered include: taxable income, income, deductions, capital gains tax, trusts, partnerships, companies and shareholders, tax accounting, tax planning and anti-avoidance provisions, fringe benefits tax and goods and services tax.

77942 Legal Aspects of Contracts Administration

6cp

Postgraduate

This subject aims to provide students with an understanding of legal issues that arise when negotiating complex contracts, as well as the difficulties that can occur once such contracts are entered.

77945 Current Issues in Taxation

6cp

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is concerned with taxation practice. It is not intended to be prescriptive, and variations will be made by the lecturer to cater for the interests of students and to take account of current developments in revenue law. Topics covered include: recent amendments and case law; fundamentals of tax planning; advanced problems; partnerships; trusts; taxation and stamp duty problems in estate management; company distributions, losses, superannuation and employee benefits; foreign source income and tax havens; alienation of income; legislative and judicial techniques to minimise tax avoidance; objections and appeals; and other revenue laws.

77947 Companies and Securities Law

6ср

Postgraduate

This subject explores company law in its applied context, addressing the needs of business practitioners and professionals such as accountants. The subject comprises four main sections. The first examines the principal provisions affecting the formation and operation of companies. The second concerns the main roles, responsibilities and duties of corporate directors, officers and other employees. The third section considers the protection of shareholders including in the process of corporate fundraising through the issue of new share capital; the section also looks at measures to protect creditors through provisions concerning the maintenance of share capital. The final section contains an introduction to securities regulation and deals with other major events in the corporate lifecycle such as external administration and takeovers.

Specific topics covered in the subject include:

- the framework of Australian corporations legislation and the role of the Australian Securities and Investments Commission
- the process of company registration and its consequences; the range of legal forms of association available for the conduct of business enterprise
- the corporate constitution
- the company's liability in contract and under criminal law
- the allocation of responsibility between shareholders, directors and company officers
- directors' and officers' duties and liabilities
- minority shareholder protection and remedies
- the regulation of major equity capital transactions such as capital reductions, share buy-backs and dividend payments
- an introduction to the legal structure of securities market regulation
- corporate fundraising prospectus disclosure obligations and liabilities

- external administration of failing companies voluntary administration, receivership, liquidation and winding up
- an introduction to takeovers law.

The subject seeks to:

- provide an overview of corporate law in Australia
- highlight the roles, responsibilities and duties of key personnel involved in corporations
- develop skills in identifying, analysing and understanding corporate legal problems, and
- build an appreciation of the commercial implications of the legal framework in which corporations operate.

77953 International Taxation Law

6cp

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

A comprehensive explanation of the important issues within the international environment of business is provided. The subject places emphasis on the more important taxation issues, and responds to new issues as they arise.

77976 World Trade Organisation Law and Practice

6cp

Requisite(s): (77885c Legal Process and Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR (70616 Australian Constitutional Law AND 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This is a specialist subject on the World Trade Organization (WTO). Students develop an understanding of the basic legal principles underpinning the multilateral trading system; the three pillars of the multilateral trading system, namely the General Agreement on Tariffs and Trade, General Agreement on Trade in Services and the Agreement on Trade-related Aspects of Intellectual Property Rights; the dispute settlement mechanism of the WTO; and the institutional structure and the decision-making process of the WTO.

Note(s)

LLB students require a minimum weighted average mark (WAM) of 65 per cent to undertake this subject (this requirement may be reviewed in future). If a student enrols with a WAM of less than 65 per cent they will be withdrawn from the subject after the last date to add subjects and consequently will not be able to enrol in an alternative subject in that semester.

77980 Estate Planning and Trusts

6ср

Postgraduate

This subject gives an introduction to the law of wills and estates and explores the efficient utilisation of same to achieve beneficial estate planning. Presently, succession law in Australia varies on a state by state basis – this poses additional challenges for those working with all but the simplest testamentary dispositions.

78008 Law of the Sea

6ср

Requisite(s): (77885c Legal Process and Legal Research OR (70616 Australian Constitutional Law AND 60 credit points of completed study in C04148 Master of Law and Legal Practice) OR (70110 Introduction to Law AND 76006c Public International Law)) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Undergraduate and Postgraduate

The Law of the Sea (LOS) is one of the most diverse and interesting areas of international law. This subjects examines in detail not only the status of the LOS today, but also its history and development which can be traced back to around 1650 and which has traditionally reflected shipping and navigation interests. The LOS has today been

codified and is contained in the 1982 United Nations Convention on the Law of the Sea (UNCLOS), a treaty that clearly represents one of the greatest achievements of international law making. The UNCLOS now contains many additional and dynamic areas of international law such as delineation of various maritime boundaries, including those for archipelagic states; pollution from various sources of marine pollution including land-based sources; exploitation of valuable resources such as high seas fisheries, the minerals of the continental shelf beyond national jurisdiction and of the deep seabed; marine scientific research; as well as dispute resolution.

78010 International Criminal Law

6ср

Requisite(s): (70120 Legal Method and Research AND 70115
Perspectives on Law) OR 77885c Legal Process and Legal Research
OR (70616 Australian Constitutional Law AND 60 credit points of
completed study in C04148 Master of Law and Legal Practice)
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access
conditions.

Postgraduate

The subject provides an overview of international criminal law, with particular focus on conceptual and historical issues arising from the prosecution of war criminals, the establishment of international criminal authority, and the legalisation of 'justice'.

The subject charts the origins of international criminal law from the postwar settlements of Versailles, and the Nuremberg and Tokyo trials, to national-level prosecutions of war crimes and the establishment of international tribunals. It examines international criminal law by assessing its purported objectives – its claims to provide redress, historical narrative (or memory) and deterrence – in light of its substantive achievements and failures, and its continued progress in the contemporary world.

The subject examines the core crimes set out in the Rome Statute (war crimes, crimes against humanity, genocide and aggression). It also examines the functioning of the principal international institutions – the ad hoc tribunals, the International Criminal Court and the 'hybrid' tribunals. Several currently topical questions are also covered including universal jurisdiction and immunities. Finally, students have the opportunity to explore in depth a number of areas of interest in the field, including piracy, torture, terrorism and corporate complicity.

Typical availability

Autumn semester, City campus Spring semester, City campus

78011 International Sale of Goods

6ср

Requisite(s): (70120 Legal Method and Research AND 70115 Perspectives on Law) OR 77885 Legal Process and Legal Research OR (60 credit points of completed study in C04148 Master of Law and Legal Practice AND (70318 Personal Property OR 70327 Commercial Law))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject examines certain practical, theoretical and methodological issues concerning the proper interpretation of the provisions of the UN Convention on Contracts for the International Sale of Goods 1980 (CISG). The CISG is the uniform sales law of countries that account for two-thirds of total world trade. However, the enactment of a uniform law text carries no guarantee of its subsequent uniform application in practice. This subject provides a comparative analysis of the main provisions of the CISG and the UNIDROIT Principles of International Commercial Contracts 1994 and the Principles of European Contract Law 1998, in order to determine whether consideration of such general principles of international commercial law could aid in the proper interpretation and application of the CISG as uniform international sales law - a positive step towards substantive legal uniformity.

78013 Refugee Law and Practice

6cr

Requisite(s): 70616c Australian Constitutional Law AND 70617c Administrative Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject surveys contemporary legal issues in refugee protection both within Australia and internationally. Focusing initially on the 1951 Convention Relating to the Status of Refugees and the 1967 Protocol, this subject explores the key controversies in interpreting the refugee definition and extent of international protection afforded to refugees. In reviewing exclusion mechanisms in the international context, we consider the impact of terrorism on asylum procedures and eligibility, as well as issues involved in processing child soldiers.

This international law background provides a framework for considering the implementation of the Refugee Convention in Australian domestic law. We proceed to examine Australian constitutional power with respect to 'aliens' and the relevant provisions of the Commonwealth *Migration Act 1958*, focusing particularly on the procedures for decision-making in Australian refugee law, including merits review before the RRT and judicial review of administrative decisions. In this context, time is spent considering special issues which arise in working with refugee clients. Specific case studies in the domestic context include the detention and offshore interception of asylum seekers, as well as the overlap between refugee law and Australian responses to trafficking in persons. The subject concludes by considering proposals to reformulate the international refugee protection regime.

78015 Global Aspects of Intellectual Property Law

6cr

Requisite(s): (60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR 77896 Legal Process and Intellectual Property Overview OR (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77885 Legal Process and Legal Research OR 77905 Preparing for Intellectual Property Practice)

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject considers the international framework of intellectual property law. Topics covered include the international institutions dealing with intellectual property (the World Trade Organization, World Intellectual Property Organization, International Union for the Protection of New Varieties of Plants and the United Nations), particularly considering their treaties and dispute mechanisms; bilateralism and the future of multilateralism in international intellectual property including the Australia-US Free Trade Agreement; and emerging issues likely to affect international intellectual property over the coming years - health and access to pharmaceuticals, access to and protection of genetic resources and biodiversity, protection of traditional knowledge, the possibility of harmonisation and the digital agenda.

78016 International Humanitarian Law

6cp

Requisite(s): (70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77885 Legal Process and Legal Research OR 60 Credit Points in spk(s): C04148 Master of Law and Legal Practice OR (70110 Introduction to Law AND 76006 Public International Law) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Undergraduate and Postgraduate

This subject examines all the major areas of international humanitarian law. It covers the traditional topics of the laws of armed conflict and the laws in war, in addition to considering more recently emerged fields such as refugee law, peacekeeping operations and international crimes. The subject aims to situate each of these areas within the historical, philosophical and political contexts in which they have, and continue to be, developed. Moreover, there is an emphasis on the analysis of international humanitarian law through issues that have arisen by virtue of recent events, such as the proliferation of internal conflicts and the reaction to international terrorism.

78021 Contemporary Issues in Constitutional Law

6cp; mixed mode, including field trips to the High Court, guest lectures from practitioners and judicial officers and opportunities for students to negotiate assessment tasks with the lecturer Requisite(s): 60 credit points in C04148 Master of Law and Legal Practice AND 70616 Australian Constitutional Law

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate and Postgraduate

This subject aims to provide an advanced understanding of:

- the philosophies and principles which shape Australian constitutional law
- the role and methods of the High Court in interpreting the Constitution
- the scope of particular grants of legislative power to the Commonwealth
- the scope of the executive, parliamentary and judicial powers of the Commonwealth
- the relationship between the three arms of government in Australia
- those rights and freedoms guaranteed by the Constitution, both express and implied.

Note(s)

LLB students require a minimum weighted average mark (WAM) of 65 per cent to undertake this subject (this requirement may be reviewed in future). If a student enrols with a WAM of less than 65 per cent they will be withdrawn from the subject after the last date to add subjects and consequently will not be able to enrol in an alternative subject in that semester.

78023 International Trade Law and the Environment

6cp: distance

Requisite(s): ((70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77885 Legal Process and Legal Research OR 60 credit points of completed study in C04148 Master of Law and Legal Practice)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The trade and environment debate conceals the problematic relationship between two legitimate interests of the international community. This subject introduces students to the significant interface between international trade liberalisation and the environmental imperative of ecologically sustainable development.

Initially the subject provides an overview of the frameworks of international trade law and environmental law and an insight into the philosophical underpinnings of both institutions. The subject considers the important role of developing countries in shaping the trade/environment debate.

The subject considers the obligations imposed by the World Trade Organization (WTO) including the Agreements on Food Safety Standards, Technical Barriers to Trade and the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS). The scope and operation of environmental exceptions that have been the subject of recent trade environment disputes in the WTO provide valuable insights into the area. The position of multilateral environmental agreements and the WTO is considered along with the serious implications for developing countries.

Particular specialty areas of concern are covered including ecolabelling, invasive species and intellectual property issues.

Upon completion of this subject students should be able to understand and analyse the current relationship between trade and environment, reflect in an informed manner on the future of the protection of the environment in the multilateral trade and investment regime and be able to critically assess the prospects for future harmonisation of global free trade regimes and ESD principles.

78025 Intellectual Property: Law and Policy

6ср

Requisite(s): 70120 Legal Method and Research OR 70105 Legal Research

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject provides an introduction to and overview of the legal principles of intellectual property law and the policy issues which inform the development of this law in Australia. It is designed as an introductory survey subject for graduates, practicing lawyers and students completing their first law degrees. Classes consider the historical development of intellectual property subject matters, the international framework setting standards including WIPO, WTO and AUSTFA, and the different forms of intellectual property including copyright, designs, patent, plant breeders protection, trade marks law, passing-off and related actions, moral rights, and performers' protection.

78026 Business and Law in China

6cr

Requisite(s): (77885 Legal Process and Legal Research OR (60 credit points in C04148 Master of Law and Legal Practice AND 70211 Contracts))

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

With China's emergence as a new economic superpower, and with ever-deepening business ties between Australia and China, it is crucial that students gain an up-to-date understanding of Chinese business law and an awareness of major differences between Australian and Chinese legal and business cultures. This subject focuses on areas of Chinese law that are most relevant for foreign businesses and for law firms with a China practice. Topic areas covered include:

- Chinese legal culture/business culture
- challenges of doing business in China politics, bureaucracy, corruption, personal connections
- Chinese business enterprise law state-owned enterprises, companies limited by shares, township and village enterprises, private entrepreneurs, foreign-invested enterprises
- pitfalls surrounding contracts and business transactions with Chinese enterprises
- · foreign investment regime in China
- Chinese banking/finance system and capital markets
- business dispute resolution and litigation.

Note(s)

- This subject was formerly called Chinese Corporate Commercial Law.
- Students who have completed an introductory subject in Chinese law need not attend the first class but are welcome to attend if they wish.

78029 Mediation Practice

6ср

Requisite(s): 79771c Dispute Resolution AND 60 credit points of completed study in C04148 Master of Law and Legal Practice These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject studies the philosophy, theory and practice of mediation as a dominant generic dispute resolution process. It considers the roles of all parties in the mediation process and the legal, ethical and normative framework in which the process is provided. The subject looks at the selection criteria for mediation, both by private parties and by curial reference, and the institutionalisation of mediation by

courts and public bodies. Also covered are the stages in the mediation process and the skills required for competent mediation practice. Mediation practice is the frame for the following topics:

- the development of mediation practice and philosophies in the Australian context
- the mediation process and the roles of the participants
- critical appreciation of the trend to institutionalise mediation
- the legal, ethical and normative issues that relate to mediation practice
- critical appraisal of the current debates surrounding training, accreditation and accountability of mediators.

This subject is taught in intensive mode with an emphasis on the use of simulations to explore theory. The prime assessment is a research paper selected from a list of current issues and the secondary is a case study presented in a seminar format.

Note(s)

Students who completed 79771 Dispute Resolution before Autumn 2006 should not enrol in this subject. This subject was previously taught as part of 79771 Dispute Resolution.

78030 Criminal Sentencing Law

6ср

Requisite(s): 70218 Criminal Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The law of sentencing is without doubt one of the most interesting aspects of criminal law. It is also a critical element of the criminal justice system in New South Wales. This subject begins with a brief revision of how the criminal justice system works. It then plunges into the purpose and science of sentencing, and factors that the court may take into account when exercising its discretion in the sentencing exercise. The subject covers sentencing in the local, district and supreme courts. Students are given a practical idea of what actually happens, how the law is actually applied and what is expected of lawyers, prosecutors and judges during the sentencing exercise.

78039 Wickedness and Vice

6ср

Requisite(s): (70311 Torts OR (70110 Introduction to Law AND 76006c Public International Law))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The legal system organises and expresses multiple meanings. This subject considers the structure of wickedness and vice it communicates. The approach taken is consistent with traditional jurisprudential concerns such as natural law theory and positivism, and theorising about the criminal legal system as a system of blaming. The subject introduces students to various jurisprudential and general philosophical accounts of the legal system's approach to wickedness and vice. These theories are applied to specific issues, including questions about our duty to obey, the regulation of morality, the malice of the law and the characterisation of terrorism. This subject is particularly timely, given increasing international reliance on a 'discourse of evil'. Theory is essential to the law. Theory gives us a way of thinking about issues differently. This is particularly important when a legal problem appears to be insurmountable. Theory offers the possibility of imagining the world differently.

78040 The Law and Education

6ср

Requisite(s): [70113 Legal Process and History AND 70105 Legal Research) OR (70115 Perspectives on Law AND 70120 Legal Method and Research)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

The object of this subject is to examine the law as it applies to compulsory and higher education today. It is designed to encourage thought and excite debate in the many areas where the law currently impacts upon both education sectors. The subject begins by outlining the legal framework for the provision of education and the governance and management of schools and universities. It then considers many

of the legal issues which arise in education today in a wide range of areas such as tort, contract and consumer law, administrative law and human rights law. Current issues are examined comparatively with jurisdictions such as the United States, the United Kingdom, Canada and New Zealand.

78041 New Families, New Technologies

6cp

Postgraduate

This subject explores the multiple legal dimensions regulating families formed with the assistance of reproductive technologies. These dimensions include health and legal regulations governing the provision of reproductive technologies, ethical practice and contractual rights of individuals during treatment, direct legal regulation of practices such as surrogacy and the parental status of children.

While this subject complements subjects such as the biomedical law subjects and 77734 Law and Medicine, its focus is firmly on the recipients rather than the providers of new reproductive technologies. The subject's approach centers family formation and recognition of family relationships formed through non-traditional means. Adoption and international adoption are also considered for this reason.

The main focus is on current Australian law, but international comparative material and future Australian reform options are also discussed.

78042 Environmental Planning and Development Law

6cr

Requisite(s): 70617 Administrative Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate and Postgraduate

This subject introduces students to the basic rules of environmental planning and development law in New South Wales. The primary focus is on the 'development control and assessment process' in NSW, which is part of the system of statutory environmental planning contained in the *Environmental Planning and Assessment Act* 1979.

In addition to the Environmental Planning and Assessment Act 1979, other legislation is covered as well including, but not limited to, the Local Government Act 1993, the Land and Environment Court Act 1979, the Environment Protection and Biodiversity Conservation Act 1999, the Protection of the Environment Operations Act 1997, the Rivers and Foreshores Improvement Act 1948, the National Parks and Wildlife Act 1974, the Heritage Act 1977, the Threatened Species Conservation Act 1995 and the Water Management Act 2000.

The subject covers the following topic areas: the making of environmental planning instruments, the meaning of development, the different categories of development, the development control process, development applications and development consents, existing use rights, part 3A major development, part 4A certificates, part 5 environmental assessment, enforcement of environmental planning laws, the powers of NSW local councils and decision-making by councils.

In order to properly understand and appreciate the law in relation to environmental planning and the development control and assessment process, it is essential that students gain an understanding of the institutions, legal principles, thought-forms, constructs and techniques of local government in NSW. Accordingly, the subject also includes such fundamental topic areas as the legal nature and role of NSW councils, their organisational structure, the roles and functions of the various 'players', decision-making mechanisms (including the conduct of meetings), delegations, sub-delegations and authorisations.

78100 Postgraduate Legal Research

8cp

Requisite(s): 75420c Ethics and Professional Conduct These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject develops theoretical understandings and practical applications of research across the discipline of law and related fields. It explores the traditional boundaries of legal research within the development and application of empirical methodologies. Emphasis is placed upon currency in legal research; the application of quantitative and qualitative methodologies to legal research and refining research skills in interdisciplinary areas with application to legal research.

Typical availability

Autumn semester, City campus Spring semester, City campus

78101 Postgraduate Legal Research

6ср

Postgraduate

This subject develops theoretical understandings and practical applications of research across the discipline of law and related fields. It explores the traditional boundaries of legal research within the development and application of empirical methodologies. Emphasis is placed upon currency in legal research; the application of quantitative and qualitative methodologies to legal research and refining research skills in interdisciplinary areas with application to legal research.

Autumn semester, City campus Spring semester, City campus

78102 LLM Project by Research

8cr

Requisite(s): [78100c Postgraduate Legal Research OR (70717 Evidence and Criminal Procedure AND (46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration]]]

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject comprises the research and writing of a supervised thesis on an approved topic in law. The thesis is between 8000-12,000 words providing an opportunity for postgraduate law students to further develop and refine their legal research and writing skills as well as explore and analyse a topic of law of their own choosing at a high level to produce a superior quality piece of academic work. In most cases, the thesis extends and develops research done in one or more of the electives already undertaken, but in appropriate circumstances a candidate may undertake a new topic.

While LLM students may undertake this subject as a law option subject, it is not necessary under the honours rules that LLM students complete the LLM Project by Research for the award of honours to be conferred. LLM students may qualify for the award of honours if they have received a percentage mark of at least 80 per cent in all subjects.

Enrolment in this subject for Master of Laws students is generally appropriate for students in their final semester of study.

Juris Doctor and Juris Doctor/MBA students who commenced studies in 2012 or after, are required to have provisional WAM of 73 across all subjects attempted in order to undertake this subject. The application form can be found online at www.law.uts.edu.au/honours/forms.

Early submission of proposal and form is encouraged. Forms are accepted and processed from Week 12 of the preceding semester. The last date to submit forms is the Friday, two weeks before the start of semester, to allow for processing.

Typical availability

Autumn semester, City campus Spring semester, City campus

78103 Common Law Legal Traditions

8ср

Requisite(s): 78100c Postgraduate Legal Research These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This intensive subject provides the bridge between the civil law and the common law. It is a comprehensive subject aimed at lawyers from countries with civil or dual civil and common law legal systems. It opens with expert tuition and practical exercises in the research skills and methodology of the common law. The topics covered include primary and secondary sources of the common law; the development of the common law; courts and lawyers; the spread and reception of the common law; law finding in the common law; contract law in the common law; public law and the common law; and business transactions in the common law.

Typical availability

Autumn semester, City campus Spring semester, City campus

Note(s)

- 1. Requires Faculty of Law approval.
- 2. Eligible students must enrol in their first semester of study.

78104 Genetics and the Law

8cp

Requisite(s): [78100c Postgraduate Legal Research OR ([46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)])
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines the scope and limitations of existing regulation of genetic technologies with respect to humans. It also considers recent scientific and technological innovations in the area of human genetics and the role and effectiveness of law in managing these new developments. The role of law as a means to control both the development of new genetic technologies and the utilisation of existing technologies is also evaluated. This includes a specific focus on individual decision-making versus responsibility for genetic risk; individual versus group rights; genetic privacy; genetic discrimination; reproductive autonomy; and ownership and control of genetic information and research developments. Specific issues covered include regulatory limits on the use of genetic screening of adults, children and newborns; prenatal genetic testing and genetic testing of adults and children; the regulation of genetic registers, protecting genetic information privacy and the problem of familial information; measures to control genetic discrimination in employment and insurance; the regulation of genetic research through the NHMRC guidelines and other means; the regulation of genetics in medical research including gene therapy, inheritable genetic modification, stem cell research and human somatic cell nuclear transfer (cloning technologies); and the establishment of biobanks and the concept of genomic property.

78105 Genetics and the Law

6ср

Postgraduate

This subject examines the scope and limitations of existing regulation of genetic technologies with respect to humans. It also considers recent scientific and technological innovations in the area of human genetics and the role and effectiveness of law in managing these new developments. The role of law as a means to control both the development of new genetic technologies and the utilisation of existing technologies is also evaluated. This includes a specific focus on individual decision-making versus responsibility for genetic risk, individual versus group rights, genetic privacy, genetic discrimination, reproductive autonomy, and ownership and control of genetic information and research developments. Specific issues covered include regulatory limits on the use of genetic screening of adults, children and newborns; prenatal genetic testing and genetic testing of adults and children; the regulation of genetic registers, protecting genetic information privacy and the problem of familial information; measures to control genetic discrimination in employment and insurance; the regulation of genetic research through the NHMRC guidelines and other means; the regulation of genetics in medical research including gene therapy, inheritable genetic modification, stem cell research and human somatic cell nuclear transfer (cloning technologies); and the establishment of biobanks and the concept of genomic property.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject examines climate change, which is one of the most pressing environmental problems of our generation. It is a major business issue that is affecting law, policy and corporate behaviour. The Intergovernmental Panel on Climate Change has said that to avoid irreversible harm to the planet, greenhouse gas emissions must be stabilised, and this will involve a significant and rapid reduction in 'business as usual' reductions. This will involve unprecedented cooperation at the international level as well as innovative national responses.

This subject examines the potential role of the international and policy communities as well as the legal and business communities in confronting climate law. It analyses the existing and emerging legal rules and frameworks, both internationally and in Australia, the impacts of these on business and the response from industry. It critically evaluates the incentives for firms to comply and over-comply with environmental laws and participate in voluntary programs and examines the role of business in adaptation measures and climate justice issues.

This subject examines key issues in the law and regulation relating to securities within Australia. It begins by developing an understanding of the nature of securities as a form of corporate fundraising, and then briefly examines how their issuance and trading is regulated within Australia. The regulatory roles of ASIC and ASX in relation to the issuance and trading of securities are then examined. From the basis of this foundational knowledge, the course is structured into three parts.

- Part 1 examines the regulation of securities offerings, including
 the objectives and focus of Australia's investor protection laws,
 the documentation and procedural requirements for securities
 offerings, and the liability issues that might arise from deficient
 disclosure. Part 1 concludes with an examination of the
 continuous disclosure requirements applying to entities that
 are listed on Australia's financial markets.
- Part 2 undertakes an overview of the regulation of significant transactions involving securities, including share reductions, share buy-backs, self-acquisitions and payments of dividends. It then undertakes an overview of the regulation of merger and acquisition activity within Australia.
- Part 3 focuses on the regulation of financial markets within Australia upon which securities are traded, and the various forms of prohibited conduct involving dealings in securities, including insider trading, market manipulation and short selling.

The subject draws upon recent and current case studies relating to the issuance of, and dealing in, securities both within Australia and overseas to further develop students' knowledge of the various topics examined. Throughout the subject, the significance of several key themes are reinforced, including the importance of timely and accurate disclosure, responsible handling of confidential information, and the potential consequences that might follow from illegal conduct. The subject also develops an appreciation of the commercial considerations that drive and influence significant transactions involving securities, and the various factors which impact upon the operation of financial markets.

Postgraduate

With China's emergence as a new economic superpower, and with ever-deepening business ties between Australia and China, it is crucial that students gain an up-to-date understanding of Chinese business law and an awareness of the major differences between Australian and Chinese legal and business cultures. This subject adopts a case-based, problem-solving approach to focus on the areas of:

- current legal system and legal/business culture of China
- Chinese investment law environment and how it differs from Australia
- corporate structures and the status of business corporations in China since China's accession to the World Trade Organization
- the legal environment for foreign entities doing business in and with China, potential risks and case studies
- China's WTO compliance and Australia-China Free Trade Agreement – case studies.

The subject is important for students wishing to understand the interactions between law, business, politics and culture in China today. Students develop practical and research skills that assist them in understanding the business environment in China in contrast to that of Australia.

This subject provides an overview of dispute management and complaints handling systems, together with further consideration of the developing body of dispute resolution and negotiation theory and practice in the commercial context.

There is an increasing demand for the development of dispute resolution systems that avoid an adversarial approach in commercial environments where delay, high legal costs and limited possible outcomes are being perceived as counterproductive in the highly competitive commercial environment. Increasingly there have been legislative responses for providing both processes and process providers for resolving and settling commercial disputes. These developments are also studied in the context of changing corporate structures and cultures and the demands for effective, accessible, cost efficient and ethical methods for dealing with commercial disputes.

This subject enhances and builds upon law studies as they relate to children; in particular, constitutional law, criminal law, contracts, torts and the law of evidence. The subject includes issues ranging from children's rights, child development theory, care and protection (including fostering), preschool and school education, civil liability, juvenile justice, legal representation, access to medical treatment and procedures. The present law in New South Wales is considered as well as the historical development of laws relating to children, proposed reforms and comparative material from other jurisdictions. The subject combines both a theoretical and a vocational approach to the study of these issues and is not only of benefit to students interested in these issues, but also to those students considering a career, or enhancing their career, in legal practice and/or the delivery of children's legal services.

Postgraduate

This subject is an introduction to the philosophy, theory and practice of dispute resolution, an area of increasing importance in all professions, business, and government. The new legal advocacy is based on the principles and processes studied in this subject.

The subject content reflects the changes in the many state and federal jurisdictions necessary to integrate a range of voluntary and compulsory dispute resolution processes with adversarial proceedings. The subject also covers the development and application of an ever-widening range of private and public situations dispute resolution processes required under legislation or government and professional requirements.

This emerging practice of professional dispute resolution is examined both within and outside the legal profession. Overall, the subject encourages students to think critically and reflexively about this emerging area of practice, the legal, professional and policy issues, and to learn the core practical skills.

Postgraduate

This subject covers the range of facilitative processes and techniques applied to the resolution of disputes in both the public and private arenas. Students are introduced to the extensive scholarship, strategies and skills that are required for the resolution of disputes using consultative, consensus-seeking and restorative processes with the assistance of a facilitator. The subject focuses on the use of these processes in the resolution of a broad range of multi-party disputes where mediation and conciliation processes are not indicated. The subject examines the design and use of these processes in:

- the public arena, such as environmental and other multi-party disputes involving governmental and quasi-governmental, social and community concerns
- the juvenile and adult criminal justice system
- family and civil law systems, such as in the resolution of family welfare disputes and multi-party family or community-based disputes
- schools and other educational organisations and other institutions where the needs of community behaviour require disciplinary systems that are both restorative and educational.

In addition, the subject examines, generally, where a process, required to address concerns of parties to a dispute, is able to provide a satisfying and effective outcome that also has the possibility of being transformative for the participants and for the community. In particular, the subject involves students in the critical study of the scholarship, the philosophy and values, the skills and the issues arising out of the application of these facilitative processes.

There are also course requisites for this subject. See access

conditions. Postgraduate

This subject is an introduction to the theory and practice of the emerging family law framework that is supported by new legislation and developing practice in family dispute resolution.

This subject studies the evolving alternatives to adjudication of family law matters and the demand for new dispute resolution systems and processes to avoid an adversarial approach to family disputes. The influence of the social sciences in this field and the growing body of research that examines the negative impact of protracted litigation on families, and in particular, children, is examined.

As well as the legislative and theoretical aspects of family dispute resolution, this subject comprehensively explores the combination of voluntary and compulsory dispute resolution processes, supported by government policy and legislation, in this new family law framework. The quality and complementary aspects voluntary and compulsory approaches are also examined in terms of the accessibility and effectiveness of the new family law framework.

This subject also examines the emerging practice of collaborative law and the impact this will have on modern legal advocacy and professional practice.

Postgraduate

This subject explores issues in family law from an international and comparative perspective. It examines the legal relationship among children, families and the state, with special emphasis on the United Nations Convention of the Rights of the Child 1989 and other human rights documents that govern the role of government and the law in family life. The course compares and contrasts Australian family law with one or more international jurisdictions (e.g. the United States, the United Kingdom, New Zealand and Canada) on a number of issues including relationships (formation and recognition), parenting and parenting disputes, and financial disputes following relationship breakdown. The subject specifically examines how international treaties (such as the Hague Conventions) have shaped the development of family law.

Requisite(s): (78100c Postgraduate Legal Research AND 78136 Dispute Resolution) OR (78136 Dispute Resolution AND (46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)) These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject explores laws that regulate and impact upon 'new families'; those formed through non-normative means. It primarily focuses on legal issues for families formed with the assistance of reproductive technologies, but also examines surrogacy and adoption, using a family law perspective. The issues include:

- health policy and legal regulations governing the provision of reproductive technologies
- the rights of prospective parents and gamete donors during treatment
- direct legal regulation of practices such as surrogacy
- the parental status of children born through assisted reproductive technologies, and
- domestic and international law, government policy and practice around adoption (in particular, inter-country adoption).

While this subject complements subjects such as BioMedical Law and Law and Medicine, its focus is firmly on the recipients rather than the providers of new reproductive technologies. The approach centres family formation and examines avenues for legal recognition of family

relationships formed through non-traditional means. Adoption and international adoption is also considered for this reason. The main focus is on current Australian law, but international comparative material and future Australian reform options is also discussed.

78143 Psychology and Dispute Resolution

8cr

Requisite(s): [78100c Postgraduate Legal Research AND 78136 Dispute Resolution) OR (78136 Dispute Resolution AND (46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)] These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is an introduction to key concepts in psychology that have relevance for dispute resolution practise. A main focus of this subject is the application of psychological concepts to disputes and conflict situations in order to understand what is going on and to start to learn to harness new skills and paradigms to work more effectively with ongoing conflict and within the dispute resolution process.

It is presented in an intensive program of three full-day sessions on campus plus a day of seminar presentations. These four day sessions are supplemented by readings and research in an area of the subject that interests the student.

During the full-day sessions each psychological concept is explored using the following format:

- theory: past and current
- research: evidence for and against the theory
- application of the concept to dispute resolution
- practice: exercises, homework, role-play
- discussion: as a student/practitioner how can I apply this?; what is its value?; what have I learnt?
- future directions:
 - how is the concept evolving?; what are the implications for the practice of dispute resolution?
 - as a student/practitioner: where do I go from here?; what action can I take?

Postgraduate

This subject deals with current issues in health law. The area of health is dynamic and ever evolving and the law must recognise the rapid developments and impact of new technologies, treatments and consider the future impact of current policies. Class discussion focuses on the need for regulation; the current systems in place; the responses to the ethical and legal dilemmas that may arise and the contribution that the law makes. Topics include the rapid advancement and future direction of medical technology; neuroscience and law; public health issues such as obesity, alcohol, pandemics; aged care and tobacco; responses to emergencies; drug policy and the effects on the health system; the pharmaceutical industry; International perspectives; discrimination and access to treatment; e-health and the cosmetic surgery industry.

Postgraduate

This subject provides an in-depth exploration of select current issues in the way in which the legal system responds to new biomedical developments. It is often assumed that law reform solves many of the dilemmas which society faces through technological advances in areas such as genetic testing and cloning. This subject examines such traditional assumptions as to the efficacy of legal regulation through an analysis of the strengths and limitations of differing regulatory choices. From hard law through to soft law, this subject uses the issues that arise in biomedical law and the principles of bioethics to examine policy choices and practical outcomes. In particular, the subject seeks to examine the impact which emerging medical developments may have on society, and to explore possible legal solutions to deal with the challenges presented by such innovations.

Postgraduate

This subject is designed to give students an introduction and overview of the interface between the disciplines of psychiatry and law. It examines how the empirical research and theories of psychology intersect with the application of legal principles and practices. As a result of successfully completing this subject, students should be able to translate personal and/or social issues concerning the study of mental illness into the practice of mental health law. Furthermore, students should be able to evaluate the efficacy of different perspectives in relation to contemporary debates about mental illness. Students should also demonstrate successful teamwork, involving the ability to participate in collaborative learning activities, both face-to-face and also demonstrate the development of independent learning skills.

These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Postgraduate

International human rights law seeks to address a range of contemporary issues in global politics, economics and society. While it draws on a long conceptual history of thinking through the rights of the human, this subject focuses more on the practical history and development of the current international human rights regime.

Students become familiar with the substantive and procedural elements of international human rights law, and gain practical experience in debating the applicability of human rights instruments to specific situations. Students engage with a range of case studies which include consideration of the human rights issues raised by the Northern Territory Intervention, the Australian system of mandatory detention of those seeking to exercise their right to asylum, torture and ill-treatment, and corporations and human rights.

The subject aims to provide students with a sophisticated appreciation of the wide range of issues that encompass human rights concerns; and to allow reflection upon the significance of international human rights law in order to develop an understanding of its usefulness, its limits and its future potential for emancipatory change.

Postgraduate

This subject provides an overview of international business transactions and the framework for international regulation of commercial transactions. Furthermore, the subject provides an overview of international trade organisations (e.g. WTO, EU) and the uniform law applicable to international sale of goods (CISG).

Other key themes in the subject include aspects of the international regulation of trade in goods: WTO; an overview of licensing transactions and licensing into the EU; an overview of foreign direct investment and issues of investing in Europe.

The subject also provides an introduction to dispute resolution issues; and an overview of trans-boundary dispute resolution.

Postgraduate

The subject provides an overview of international criminal law, with particular focus on conceptual and historical issues arising from the prosecution of war criminals, the establishment of international criminal authority, and the legalisation of 'justice'.

The subject charts the origins of international criminal law from the postwar settlements of Versailles, and the Nuremberg and Tokyo trials, to national-level prosecutions of war crimes and the establishment of international tribunals. The course examines international criminal law by assessing its purported objectives—its claims to provide redress, historical narrative (or memory) and deterrence—in light of its substantive achievements and failures, and its continued progress in the contemporary world.

The subject examines the core crimes set out in the Rome Statute (war crimes, crimes against humanity, genocide and aggression). The course also examines the functioning of the principal international institutions—the ad hoc tribunals, the International Criminal Court, and the 'hybrid' tribunals. The course also covers a number of currently topical questions including universal jurisdiction and immunities. Finally, students have the opportunity to explore in depth a number of areas of interest in the field, including piracy, torture, terrorism and corporate complicity.

Postgraduate

This subject addresses the nature, scope, structure and implementation of international environmental law. It introduces students to treaty law, soft law and customary international law relating to the protection, conservation and management of the world's environment. Concepts and principles that have been employed for environmental protection are examined. This subject gives special attention to contemporary environmental problems. These include global warming, ozone depletion, marine pollution, trans-boundary movements of hazardous wastes, biodiversity and trade and the environment. The role of the UN and and other multilateral organisations and the role of the international court of justice in formulating and developing international environmental law is highlighted. Selected domestic implementation is also explored.

Postgraduate

This subject provides a theoretical overview of, and instruction in, the process of crisis negotiation. This subject aims to develop the student's skills in negotiating crisis situations and in dealing with a hard-bargainer and 'dirty tricks'. It also addresses the use of negotiation in critical incidents, such as crisis management in the corporate sector, up to the use of the process in counter terrorism. This subject builds on the subject content of 77745 Negotiation, in particular, knowledge of the negotiation process and communication techniques. The subject aims to give the student knowledge and practical skills in negotiation to deal peacefully with potentially volatile situations. The subject is designed for students that may be working in a profession that has exposure to these types of situations (e.g. front line counter staff, psychiatric nurses, community mediators, crisis team workers, social workers, ambulance officers, police officers) and those students interested in the specific application of the negotiation process in critical situations.

Postgraduate

This subject is an introduction to the philosophy, theory and practice of dispute resolution, an area of increasing importance in all professions, business, and government. The new legal advocacy is based on the principles and processes studied in this subject. The subject content reflects the changes in the many state and federal jurisdictions necessary to integrate a range of voluntary and compulsory dispute resolution processes with adversarial proceedings. The subject also covers the development and application of an ever-widening range of private and public situations dispute resolution processes required under legislation or government and professional requirements. This emerging practice of professional dispute resolution is examined both within and outside the legal profession. Overall, the subject encourages students to think critically and reflexively about this emerging area of practice, the legal, professional and policy issues, and to learn the core practical skills.

78177 Converging Media Industries: Regulatory Challenges

8cp

Requisite(s): (78100c Postgraduate Legal Research OR 78203c Communications and Intellectual Property Law Overview OR ([46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)]) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

Changes in technology and the growth of digital delivery have meant that established means of regulating the media are under strain because of innovation and changes in audience expectations and behaviour. Media regulation has traditionally been siloed and platform-based. Broadcast media are presently regulated by statute, the press by self-regulation, and online and digital media by little specific regulation at all.

Several recent inquiries have attempted to address this asymmetrical approach to media regulation in an increasingly converged environment. Media convergence changes the regulatory paradigm. The focus shifts from platforms to ubiquitous content and from regulating technology to serving the interests of audiences wherever they read, watch or listen. Audiences are no longer passive but interactive with their contributions forming part of the media's value proposition.

This subject explores the legal and regulatory consequences of a converged media space. If the existing media regulatory framework is now inadequate, what are the principles and practices whereby appropriate cross-platform regulation can be put in place? In this new converged world does the purpose and reach of regulatory intervention need review? Where appropriate, this subject makes use of comparative analysis with particular reference to the United Kingdom, Canada and New Zealand. By completing this subject a student is equipped to think and work in a converged media environment.

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject considers the international framework of intellectual property law. Topics covered include the international institutions dealing with intellectual property (the World Trade Organization, World Intellectual Property Organization, International Union for the Protection of New Varieties of Plants and the United Nations), particularly considering their treaties and dispute mechanisms, bilateralism and the future of multilateralism in international intellectual property including the Australia-US Free Trade Agreement and emerging issues likely to affect international intellectual property over the coming years - health and access to pharmaceuticals, access to and protection of genetic resources and biodiversity, protection of traditional knowledge, the possibility of harmonisation and the digital agenda.

78184 Intellectual Property: Law and Policy

6cp

Postgraduate

This subject provides a comprehensive, in-depth and engaging examination of the legal principles of intellectual property (IP) law and the policy issues which inform the development of this law in Australia. It is designed as an introductory survey subject for graduates, practicing lawyers and students completing their first law degrees.

Each class considers a different form of intellectual property including copyright; designs; patent and trade marks law; passing-off and related actions; moral rights and performer's protection; as well as a consideration of the proposed protection indigenous cultural property. In addition, this subject touches on how to deal in IP, globalisation of IP and emerging issues in IP.

78185 Intellectual Property: Law and Policy

8cp

Requisite(s): (78100c Postgraduate Legal Research OR 78203c Communications and Intellectual Property Law Overview OR [(46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)]) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject provides an introduction and overview of the legal principles of intellectual property law and the policy issues which inform the development of this law in Australia. It is designed as an introductory survey subject for graduates, practicing lawyers and students completing their first law degrees. Classes consider the historical development of intellectual property subject matters, the international framework setting standards including the WIPO, WTO, and AUSTFA and the different forms of intellectual property including copyright, designs, patent, plant breeders protection, trade marks law, passing-off and related actions, moral rights and performers protection.

78186 Intellectual Property and Traditional Knowledge

6ср

Requisite(s): 77905c Preparing for Intellectual Property Practice These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject considers the nature of traditional knowledge, how intellectual property in this area is protected under the Australian legal framework, and the development of strategies for its protection. The subject includes an overview of the international treaty framework, relevant Australian legislation and concerns for Australian Indigenous peoples such as appropriation of Indigenous arts and culture, language, spirituality, biodiversity, biotechnology, medicinal knowledge, film and music.

78187 Intellectual Property and Traditional Knowledge

8ср

Requisite(s): (78100c Postgraduate Legal Research OR ((46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)))
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

Recommended studies: students who have previously not completed a basic intellectual property subject are recommended to enrol in 78185 Intellectual Property: Law and Policy before this subject Postgraduate

The subject includes an overview of the international treaty framework, relevant Australian legislation and concerns for Australian Indigenous peoples such as appropriation of Indigenous arts and culture, language, spirituality, biodiversity, biotechnology, medicinal knowledge, film and music.

78188 Intellectual Property Commercialisation

6cr

Requisite(s): 78184 Intellectual Property: Law and Policy OR 77896 Legal Process and Intellectual Property Overview OR 77905 Preparing for Intellectual Property Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject covers much of the law and some of the business and economics of buying, selling and licensing intellectual property (IP). IP is a broad field, including patents, trade secrets, copyrights, semiconductor chip protection, trademarks, trade dress, Internet domain names, and rights of publicity.

Licensing of intellectual property takes many different forms in different types of businesses. Research and manufacturing businesses typically buy, sell and license technology, such as patents and trade secrets. They also may trade in copyrights (for example, in computer programs) and protected semiconductor chip designs. Multimedia licenses, such as those for films, video games, and multimedia websites, often involve a number of copyrighted properties, and virtually every business has a trademark or trade name that might or must be licensed and sometimes is sold (for example, in a merger or acquisition).

The subject discusses most, if not all, major types of businesses and their practices in buying, selling and licensing IP. It also touches on some of the basic principles of using IP as collateral or security for other transactions, for example, bank loans. No single subject, however, can cover all the nuances of law and practice affecting all of the industries that involve IP. This subject focuses primarily on technology licensing (of patentable inventions and trade secrets), but also discusses 'soft' IP, including such things as copyrights in literary and entertainment properties, websites and computer software and multimedia properties like video games.

The subject is interdisciplinary. About one-third of its substance explores the business and economic aspects of licensing, including the scope of a license, how licensors make money, and how business people estimate the economic value of IP and licensing rights. Another third discusses legal considerations in licensing, including relevant IP law, antitrust or competition law, involuntary licensing by operation of law, standing to sue and the problems of co-ownership, the problem of 'clearing' legal rights in IP, and selected issues in international practice, such as jurisdiction and enforcement. The final third involves practice or 'skills' training in drafting and negotiating licenses and getting a 'sense of the deal' in licensing transactions.

Much of the readings involve US law, with some European Union law included. Class discussion uses the readings as a spring board for discussing licensing in more general and international contexts, and students' using their own business and/or personal experience is encouraged.

78189 Intellectual Property Commercialisation

8cp

Requisite(s): (78185 Intellectual Property: Law and Policy AND 78100c Postgraduate Legal Research) OR (78203c Communications and Intellectual Property Law Overview AND 78185 Intellectual Property: Law and Policy) OR ((46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration))

78190 Patent Law

8cp

Requisite(s): [78100c Postgraduate Legal Research OR ([46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)]]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Recommended studies: students who have previously not completed a basic intellectual property subject are recommended to enrol in 78185 Intellectual Property: Law and Policy before this subject Postgraduate

This subject provides an understanding of the principles of patents and the patent system in Australia. Topics covered include subject matter, section 40 of the *Patents Act* 1990 (specifications), infringement, inventorship, ownership and breach of confidence. Patents have been the subject of much controversy in recent times. Biotechnology challenges our traditional distinction between nature and invention; the health demands of developing countries come into conflict with the private interest of patent owners; the use of traditional knowledge of indigenous communities in biodiscovery processes can complicate the availability of patent protection; US pharmaceutical companies demand a greater role in determining what drugs should be available under Australia's Pharmaceutical Benefits Scheme; the computer

software industry demands patent protection to supplement their rights in copyright; and in a growing number of cases patents can be granted for 'business methods'. In this subject, students are introduced to the law of patents - what is patentable subject matter, what are the threshold requirements of patentability, what level of disclosure is required to justify the grant of the patentee's monopoly rights, the rights of the patent holder, exploitation of patent rights, and actions for infringement. In addition, special issues relating to biotechnology patents and the international context in which Australia's patent law operates are considered. There is some attention to plant varieties rights and the use of the action for breach of confidence to protect trade secrets.

78191 Patent Systems

8cp

Requisite(s): [78100c Postgraduate Legal Research AND 78190 Patent Law) OR [78190 Patent Law AND [46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)]

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: students who have previously not completed a basic intellectual property subject are recommended to enrol in 78185 Intellectual Property: Law and Policy before this subject Postgraduate

The subject is designed to equip students with knowledge and skills appropriate to representing the interests of a client in the prosecution and maintenance of patent applications - including advising on the desirability of seeking patent protection and provision of alternative protection in Australia and other countries. Topics covered include types of patent applications; claiming priority; Patent Office practice; amendment practice; opposition; re-examination; the maintenance of patents and patent applications; extension of term; extension of time; revocation; treaties and conventions including the Patent Cooperation Treaty (PCT), the Paris Convention and the Budapest Treaty; searching; assignment; licensing; compulsory licenses; Crown use; restrictions on exploitation; circuit layout legislation and practice; plant protection legislation and practice; patentability in other countries (particularly with reference to New Zealand, the United States, European Union, People's Republic of China, Japan); and petty patents.

78192 Trade Marks Law

8cp; offered either by distance, requiring no attendance, or oncampus

Requisite(s): [78100c Postgraduate Legal Research OR ((46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)])]
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access

conditions. Postgraduate

This subject provides an understanding of the principles of trade marks and the trade mark system in Australia. Topics covered include passing off and unfair competition, registrability issues, comparison of trade marks and assessment of deceptive similarity, ownership and authorship of trade marks, requirements of use in relation to trade marks, grounds of opposition, and infringement and post-registration maintenance of trade marks.

78193 Trade Marks Practice

8cp

Requisite(s): [78100c Postgraduate Legal Research AND 78192 Trade Marks Law) OR [78192c Trade Marks Law AND [46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)] These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Recommended studies: students who have previously not completed a basic intellectual property subject are recommended to enrol in 78185 Intellectual Property: Law and Policy before this subject Postgraduate

This subject gives students an understanding of the practice and procedure in respect of trademarks in Australia and abroad, covering the filing of trademark applications and the examination, opposition and registration of them, as well as removal and cancellation. The

subject also provides an overview of international treaties and conventions and of the trademark practice and procedure in foreign jurisdictions such as New Zealand, Canada, the United States, various South Pacific countries, selected countries of Asia and the European Union.

78194 Designs Law and Practice

8ср

Requisite(s): (78100c Postgraduate Legal Research OR ([46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)])

There are also course requisites for this subject. See access

Recommended studies: students who have previously not completed a basic intellectual property subject are recommended to enrol in 78185 Intellectual Property: Law and Policy before this subject Postgraduate

This subject covers the principles of copyright, the development of case law and the structure and ambit of the legislation. Students are required to develop a good working knowledge of the *Copyright Act 1968* (as amended), and associated regulations, and to have a sound knowledge of relevant case law.

78196 Insurance Law

8ср

Requisite(s): [78100c Postgraduate Legal Research OR ([46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)])
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions

Postgraduate

This subject looks at insurance from the perspective of a business buying insurance. It begins with risk management and, in the context of the function of insurance in risk management, considers the design of an insurance program and how business buys and sells insurance. The subject looks at the public regulatory regime governing the insurance industry, including products and markets. The approach examines in some detail the private law principles governing the relationship between insurer and insured, in particular the pre-contract matters of disclosure, terms on the risk and claims, and the structure and documentation of a typical policy. There is a focus on the main insurance principles: duty of utmost good faith, insurable interest, indemnity, subrogation, risk, non-disclosure, misrepresentation and cancellation of cover. There is material on the resolution of insurance disputes. The role of intermediaries, such as agents and brokers, is also examined. The subject concludes with case studies on the insurance market in crisis.

78201 International Development Law

6ср

Postgraduate

This subject aims at training international aid workers, NGO and international aid agency personnel and specialist legal practitioners for development. The subject focuses on a systematic study and analysis of the principles of development in developing, emerging, post-conflict and transitional economies. It examines the right to development and the role of international development assistance, legal aspects of international aid management, good governance and public accountability, principles of capacity development, human rights and community justice issues in the development process.

The subject explores the normative goals of economic development and the role of international law in facilitating development. The foundation of the subject is that international law as reflected in human rights and a strong commitment to international standards for the rule of law is an essential pre-condition for economic and social development and for achieving human security.

The subject is practical in orientation. However, it also involves studies and critical appreciation of social, gender and moral theories that underpin concepts in international law and impact on development.

78202 International Development Law

8cp

Requisite(s): (78100c Postgraduate Legal Research OR (146 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)))

78203 Communications and Intellectual Property Law Overview

8cp

This foundational subject provides non-law graduates with an overview of the key legal areas relevant to the communications law program. It introduces the key current legal principles and topics generally covered by the areas of media law, broadcasting and telecommunications law, and intellectual property law, providing students with a foundational knowledge to enable them to pursue the more specialised subjects offered in the program.

The subject is compulsory for non-law graduates and recommended for law graduates who do not have a background in media, communications, or IP law. Law graduates considering enrolling in this subject who are not enrolled in the Master of Communications Law (C04242) (see page 416) or Graduate Certificate in Communications Law (C11217) (see page 513) are advised that this subject is not suitable if they already have a background in media, communications, and / or IP law. The subject also includes a component on the Australian legal system and legal method designed for non-law graduates.

78204 Legal Perspectives on the Internet

8ср

Requisite(s): (78100c Postgraduate Legal Research OR 78203c Communications and Intellectual Property Law Overview OR ((46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration))) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject covers a range of legal issues which face challenges because of the internet's ubiquity and global reach. It enables students to see the interplay of media law, communications law, and intellectual property as legal and regulatory solutions are sought for online situations and the impact on freedom of expression.

78205 Regulatory Issues in the Broadband Environment

8ср

Requisite(s): 78100c Postgraduate Legal Research OR 78203c Communications and Intellectual Property Law Overview These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject provides students with an awareness of the legal and regulatory problems which may arise as broadband, and in Australia, the National Broadband Network, become more firmly established as a viable alternative platform for traditional media-type content. The subject is dynamic so that topics are built around current case-studies or contemporary issues. Each case study or issue provides an opportunity for students to assess the legal implications posed and to reflect on potential solutions. At each issue, the subject examines the impact it would have on established media and communications, and/or intellectual property, policy and legal principles.

78206 International Organisations

6ср

Requisite(s): ((70115 Perspectives on Law AND 70120 Legal Method and Research) OR 77885c Legal Process and Legal Research OR 60 credit points in C04148 Master of Law and Legal Practice) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access

The proliferation of intergovernmental and non-governmental organisations is one indicator of the internationalisation of social life and the interdependence of states in the early 21st century. This subject examines the principal legal issues concerning organisations composed of states. These include the legal status and powers of organisations, membership and participation, norm-creation, dispute settlement, enforcement of decisions, peace and security activities and finally the organisations' privileges and immunities as well as their legal status and powers under national law.

At the same time, the subject addresses real-world problems such as the creation of international criminal courts, the 'succession' of Russia to the USSR's seat on the UN Security Council, the response to the break-up of Yugoslavia, the jurisdictional issues in the Lockerbie-case, the possibility of judicial review of acts of the UN Security Council, the success of WTO dispute settlement, NATO action against Serbia in 1999, the military intervention in Afghanistan and Iraq in the aftermath of 9/11 and the UN administration of Kosovo and East Timor.

Primary consideration is given to the development of the United Nations. Other universal organisations such as ILO, the Bretton Woods institutions, WTO or ICAO, as well as regional ones such as the Council of Europe, the EU and others are also dealt with. This subject does not try to provide a comprehensive picture of all of these organisations, rather it aims at helping students understand the common legal problems faced by international institutions.

78207 International Organisations

8ср

78208 Taxation of Commercial Enterprises

8ср

Requisite(s): [78100c Postgraduate Legal Research OR ((46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)])
These requisites may not apply to students in certain courses.
There are also course requisites for this subject. See access conditions.

The Australian legal framework allows for commercial enterprises to be structured in a number of ways. Correspondingly, the Australian taxation system provides for different taxation treatment for different commercial enterprise structures. This subject assumes that students have undertaken at least an undergraduate taxation subject, with the content in this subject building upon that knowledge. The subject examines the taxation provisions applying to the most common of the commercial enterprise structures, being sole traders, companies, partnerships and trusts. The subject additionally examines the restrictions and limitations that operate to prevent taxpayers exploiting these different tax treatments to avoid a taxation liability.

78209 Taxation of Commercial Enterprises

6ср

Requisite(s): 76212 Revenue Law OR 60 credit points in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

78210 Law and Literature

6cr

Requisite(s): 60 credit points in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. See access conditions.

This subject approaches important questions from jurisprudence, philosophy and legal theory through a consideration of law's relationship to literature. Lectures relate key cases of the last hundred years to key works of literature, indicating ways in which we might think of the relationship between law and literature. Students engage in a rigorous process of reading and discussion that includes some of the most fascinating and thought provoking literary works of the last century, including works by Franz Kafka, Toni Morrison, Truman Capote and Harper Lee. Using these texts students think about questions of justice related to central problems and traumas of recent times: the Holocaust, the death penalty, slavery and the Stolen Generations.

Students develop important skills in critical thinking and writing as part of these investigations, and their own deep responses to the following questions. What is justice, and how do law and literature provide different answers to justice? What is the law's relationship to violence? How does the law regulate the individual's relationship to their community? How are moral questions addressed by the law? In what ways can it be said that literature judges the law, and what might we do with these judgments?

Postgraduate students focus on a number of modules within the overall subject structure, but may attend and participate in all modules.

Requisite(s): ((78101 Postgraduate Legal Research OR 77885 Legal Process and Legal Research)) OR (70115 Perspectives on Law AND 70120 Legal Method and Research)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject provides a comprehensive and in-depth examination of the economic and legal principles of international competition law and policy, as well as the current enforcement regime of competition laws internationally. A comparative overview of the principles underlying competition regulation and policy in the United States, Europe, Australia, Japan and China is provided. Current issues and recent cases on global competition lawmaking and enforcement are also examined. The instructor does not assume students have had previous exposure to competition law in any of these jurisdictions, or to the study of economics.

The subject covers:

- an overview of international competition law and policy, including the reasons for examining competition law in a global context, and major theories and strategies for harmonising and enforcing competition laws internationally. Both convergence and divergence approaches are introduced.
- the major international bodies and treaties which deal with international competition rule-making and law enforcement, including existing and ongoing international efforts to cooperate in competition law and policy. Both advantages and limits of these authorities and international regulations are examined.
- a comparative overview of the principles underlying competition regulation and policy in the United States, Europe, Australia, Japan and China, including the economic and political backgrounds of different jurisdictions and the substantive laws and policies of each country. The main fields of competition law raising international concern are examined, such as: concentration; cartel and other horizontal restraints; vertical restraints; and other anti-competitive practices.
- some current issues on international competition law, including:
 the nexus of intellectual property and competition; external
 enforcement (cartel); the interface between competition and
 trade policy, including national security/interest review regimes;
 and strategies for establishing a more balanced multi-level
 competition law system (moves to uniformity of competition
 laws internationally).

78217 Competition Law in a Global Context

8cn

78218 Animal Law and Policy in Australia

6cr

Requisite(s): ((78101c Postgraduate Legal Research OR 77885 Legal Process and Legal Research)) OR (70115 Perspectives on Law AND 70120 Legal Method and Research)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject examines the effectiveness of existing regulation in Australia with respect to animal welfare. Topics covered include: consideration of animals in the context of morality, science and the law; the historical development of animal law as well as an overview of animal regulation in Australia; the prevention of cruelty; and the legal status of animals. The material is presented against the backdrop of the animal welfare and rights debate, encouraging students to consider and evaluate whether the current regime fosters accountability and ethical standards. In order to appraise Australia's regime more effectively, the subject also includes consideration of two topics at international and comparative levels. The first relates to advances in animal welfare introduced by the European Union, and the second relates to the impact on animal welfare by the rules of the international trade law regime, as typified by the World Trade Organization. The subject is designed to provide students with a sound understanding of the fundamentals of animal law including its application to companion animals, farm animals, wild animals and animals in laboratories.

78220 Commercial Equity

6cn

Requisite(s): (78101 Postgraduate Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research)) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject considers the interplay between legal issues that commonly arise during complex commercial disputes. The subject examines the role that equitable doctrines, particularly fiduciary obligations, play in common commercial situations. The reach of equitable doctrines and their relationship with contractual, tortious and statutory duties are considered within a series of commercial scenarios involving company executives, professional agents and advisers, commercial trusts, joint ventures and partnerships. The subject discusses the role of commercial law in a practical and realistic commercial context.

78222 Law of Slavery and Human Trafficking

6cp

Requisite(s): ((78101 Postgraduate Legal Research OR 77885 Legal Process and Legal Research)) OR (70115 Perspectives on Law AND 70120 Legal Method and Research)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Slavery and human trafficking are transnational crimes. This subject comprehensively explains and evaluates international and domestic responses to slavery and human trafficking within an international law and human rights framework. While the subject addresses international law, it does so with an appreciation of the practical application of the law. The subject draws students to a critical evaluation of the state's responsibility to protect and support, and develop effective criminal justice responses. Areas covered include: the legal definitions; the international legal framework; the intersection between migrant worker exploitation, slavery and trafficking; the gender implications of slavery; trafficking and refugee law; and trafficking as a crime against humanity. State responsibility at international law is reviewed to develop a sound knowledge of the state's obligations to protect and support as well as to promote the application of effective remedies. An effective domestic and international criminal justice response is critical in the development of a framework to prevent trafficking and ensure prosecution of transnational crimes. The dimension of slavery and trafficking — the link between such transnational crimes, economic opportunities, substandard working conditions and migration — is explored. Vulnerability to trafficking, the issues of demand and the supply chain, and corruption are addressed, as well as compliance standards, monitoring mechanisms and the role of civil society. Finally, the course concludes with consideration of a body of international literature which is critical to the implementation of anti-trafficking measures.

At the end of the course, students are expected to have a deep understanding of the principles of international law and their application within the Australian domestic context. Students also gain sophisticated insight and understanding of the application of international law through a comprehensive evaluation of selected areas of law.

78224 International Trade Law and the Environment

8cp; distance

Requisite(s): [78100c Postgraduate Legal Research OR ([46 Credit Points in spk(s): C04236 Juris Doctor OR 46 Credit Points in spk(s): C04250 Juris Doctor Master of Business Administration)]]

These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access

The trade and environment debate conceals the problematic relationship between two legitimate interests of the international community. This subject introduces students to the significant interface between international trade liberalisation and the environmental imperative of ecologically sustainable development.

Initially the subject provides an overview of the frameworks of international trade law and environmental law and an insight into the philosophical underpinnings of both institutions. The subject considers the important role of developing countries in shaping the trade/environment debate.

The subject considers the obligations imposed by the World Trade Organization (WTO) including the Agreements on Food Safety Standards, Technical Barriers to Trade and the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS). The scope and operation of environmental exceptions that have been the subject of recent trade environment disputes in the WTO provide valuable insights into the area. The position of multilateral environmental agreements and the WTO is considered along with the serious implications for developing countries.

Particular specialty areas of concern are covered including ecolabelling, invasive species and intellectual property issues.

Upon completion of this subject students should be able to understand and analyse the current relationship between trade and environment, reflect in an informed manner on the future of the protection of the environment in the multilateral trade and investment regime and be able to critically assess the prospects for future harmonisation of global free trade regimes and ESD principles.

78227 Financial Services Law and Compliance in Australia

6cn

Requisite(s): (78101 Postgraduate Legal Research OR (70115 Perspectives on Law AND 70120 Legal Method and Research)) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

Financial services is one of the fastest growing sectors of the Australian economy. Following an extensive review, Australia has put in place an overarching system for regulating all financial services, replacing a system that was based on separate regulation of products in individual industries. This is an essential subject to understand this new regime, focusing on the implications of the new system for retail clients as financial citizens, and addressing the regulatory structure and legislative framework, including the new regulatory bodies. Licensing requirements for entering the financial services market and the new obligations for marketing or offering financial services to the public are also examined.

On completion of this subject, students should have developed an understanding of the law governing the regulation of financial services transactions; the effect of financial services law and other related legislation on particular financial services issues; and particular aspects of financial services law in depth.

78228 Financial Services Law and Compliance in Australia

8ср

78229 Disability and the Law

6ср

Requisite(s): 78101 Postgraduate Legal Research These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject explores disability and impairment as a legal category. Students are introduced to the various competing models of disability including: the medical model, the social construction model, the human rights model and bioethical, feminist and postmodern approaches to disability. In so doing, the subject takes an interdisciplinary and international comparative approach to conceptions and theories of disability and impairment. Students examine the practical implications of these models for the construction of legal rights and responsibilities with respect to persons with disabilities in a number of key areas of law. These include health law, tort law, criminal law, international law and anti-discrimination law. Specific issues examined include: treatment-limiting decisions for newborns, constraints on reproductive decision making, abortion for disability, end of life decision making; the therapy / enhancement distinction and body modification, the UN Declaration of Human Rights, the UN Declaration of the Rights of Disabled Persons and various state and federal anti-discrimination legislation. Key issues that students need to examine are the concepts of normal and disabled, healthy and diseased and able-bodied and impaired. This subject examines and evaluates how law can best achieve the goals of social justice and equality for individuals with disabilities.

78231 Commercial Trade and Transport Law

8ct

Requisite(s): 78100c Postgraduate Legal Research OR 77697c Higher Degree Research Seminar

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject examines the various sources of law that govern and impact upon the trade and transport of goods to and from Australia. The first part covers commercial maritime law. Topics examined include an overview of international trade processes; Australia's trade and transport industry; the international and Australian sources of law that regulate commercial shipping activities; maritime law concepts on the ownership, financing and arrest of ships; maritime transport documentation including bills of lading and charter parties; sources of liability; liability limitation; and marine insurance. The second part covers commercial aviation law. Topics examined include the international and Australian sources of law regulating the carriage of goods by air and aviation insurance. The subject concludes by examining recent international developments relating to the multimodal transport of goods.

Typical availability

Autumn semester, City campus Spring semester, City campus

78232 Mining Law and Regulation

8cp

Requisite(s): 78100c Postgraduate Legal Research OR 77697c Higher Degree Research Seminar

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

This subject examines the various Australian laws and regulations that govern and impact upon investment in the mining industry. Topics examined include: the history, development and current status of mining regulation in Australia; key mining law concepts - such as the ownership of minerals, mining tenements, mining claims, and the regimes for the payment of royalties; the State and Territory licensing regimes governing mineral exploration and extraction; and the laws governing investment across the life cycle of mining operations (exploration, set up of mining operations, extraction of minerals, the sale and export of minerals, and the sale of mining assets). This includes the relevant provisions of the Corporations Act 2001 (Cwlth) relating to corporate fundraising (Ch 6D) and mergers and acquisitions (Ch 6); the Foreign Acquisitions and Takeovers Act 1975 (Cwlth); the ASX Listing Rules, and the JORC Code for the Reporting of Mineral Resources and Ore Reserves. The subject also examines the use of joint venture structures in the mining industry.

Other issues examined include native title, environmental law considerations, infrastructure access, the regimes for the onshore and offshore extraction of petroleum and gas, and the legal framework for dispute resolution. The subject concludes by briefly examining some of the current issues impacting on the Australian mining industry such as carbon taxing and trading, and the proposed Mining Resources Rent Tax.

The subject involves a comparative consideration of the laws across the Australian states and territories and is not limited to New South Wales.

Typical availability

Autumn semester, City campus Spring semester, City campus

78233 International Commercial Arbitration

8cn

Requisite(s): 78136 Dispute Resolution

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject aims to present a thorough and transnational approach to understanding the key principles and practice of International Commercial Arbitration. The subject examines the importance of arbitration as a process for resolving international commercial disputes; the legislative and institutional context for international commercial arbitration; the conduct of arbitration and the relevant legal and practical issues at each stage of the process, including challenges to and enforcement of arbitral awards. The subject also aims to develop an in-depth knowledge of conducting research in this topic area and development of skills related to legal writing in this field.

Typical availability

Autumn semester, City campus Spring semester, City campus

78234 Common Law Legal Traditions

6cp

This subject provides the bridge between the civil law and the common law. It is a comprehensive subject aimed at lawyers from countries with civil or dual civil and common law legal systems. It opens with expert tuition and practical exercises in the research skills and methodology of the common law. The topics covered include primary and secondary sources of the common law; the development of the common law; courts and lawyers; the spread and reception of the common law; law finding in the common law; contract law in the common law; public law and the common law; and business transactions in the common law.

78235 Justice

6ср

This subject asks the questions: 'what is justice?', 'what is the just decision?' and 'what does law have to do with justice?'.

The concept of 'justice' is integral to the operation of our legal system, the practice of law and, as legal professionals, our contribution to the different communities in which we live and work. This subject aims to explore the question 'what is just?' through the lens of traditional and contemporary theoretical approaches to justice including: divine command, natural law, utilitarianism, libertarianism, positivism, egalitarianism, desert and the Rawlsian idea of fairness, critical race, feminist, environment, global and poststructural perspectives.

Together with this grounding in the conceptualisation of justice in a legal framework, students also engage with the question 'what is just?' in the context of particular cases and case studies. These opportunities to apply the frameworks and theoretical approaches vary between semesters and are drawn from a wide range of possibilities such as: tax, patenting human genes, exporting live animals for slaughter, compensation or access to justice.

78236 Environmental Ethics

6ср

The subject explores those systems and processes that concern environmental and ecological justice. What types of justice issues, for example, stem from government decisions to orchestrate the operation of high risk or pollutant industries in areas inhabited by disadvantaged communities? How do populations in a developing country obtain justice when a multi-national corporation poisons the drinking water? Environmental justice originally focused on distributive justice, or in the context of environmental law, the

distribution of environmental risks and benefits among humans. The notion, however, quickly extended to include matters concerning capacity, recognition and procedural justice. Linked to, but separate from, environmental justice is ecological justice, that focuses on the claims of non-humans to their place in nature and their portion of the world's resources. This part of the subject links ecological justice theory to environmental criminology and examines issues such as over-fishing and laws relating to wildlife smuggling.

Overlaying these concepts is the notion of environmental ethics that considers the nature and extent of normative restraints that should inform human interactions with the living and non-living components of the environment. The subject examines these issues, against the backdrop of the role of law in enforcing and protecting environmental rights and responsibilities. Examples and readings are widely drawn, including from international law, and comparative case studies.

78237 Law and Place

6cr

Questions of place and placement rest in the background of almost all the important questions of law. The concern with place touches on the location or site of law (where?, from where?), as well the ways of living with law (who?, whose?), and by what means (how?). The common law tradition – taught in this law school – offers both an account of place (the territory of Australia) and the means of living with law (authority to act lawfully, arrangement of public and private obligations and rights, relations of property, etc.). Concentrating on questions of place through an engagement with critical and jurisprudential languages of law, this subject provides students with the means of navigating different ways of thinking about the place of law in the world.

An essential part of the study of law is jurisprudence. This subject introduces students to questions of place by engaging with an emerging field of jurisprudence known as 'law and geography'. Through close readings of pivotal texts in legal theory, students are introduced to key concepts in law and geography, which are then explored through case studies addressing current debates about the place of law, both nationally and internationally. In exploring this important issue of place, topics such as jurisdiction and the problem of authority are examined in case studies such as Guantanamo Bay, Antarctica, Christmas Island, Aboriginal sovereignty or the death of Osama bin Laden. By critically reflecting on the place of law in the world, and learning to notice the role of law in the making of the world, the aim of this subject is for students to master a conceptual language of jurisprudence.

78238 History and Theory of Intellectual Property

6ср

This subject covers selected topics in the history and theory of intellectual property. It gives students a background in the historical development of the areas of copyright, patents, trademarks and trade secrets law, as well as approaching important questions from jurisprudence, philosophy and legal theory in light of their application to intellectual property law.

Students engage in reading and discussion of key texts in the fields of property theory, law and economics and natural rights theory. Through selected case studies, students consider how the law has developed, the effects of social, cultural and political factors, as well as the application of legal theory to aspects of legal doctrine. Students develop important skills in critical thinking and writing as part of these investigations and in formulating their own responses to questions such as: Is intellectual property really 'property'? How long should intellectual property rights last? What is the relationship between intellectual property law and creativity or innovation? Is intellectual property infringement the same as 'theft' or 'piracy'?

The aim is for students to develop their theoretical and historical understanding of law by reference to the dynamic and contested field of intellectual property.

78239 International Feminist Perspectives

6ср

Feminist critiques of the theory and practice of law have revealed that legal doctrine and procedures are not gender neutral and that law actually creates and perpetuates inequality. This subject explores feminist insights into how law is gendered through an examination of key concepts, including the public/private divide, sameness and difference, and the category 'woman'. Drawing on international feminist theoretical frameworks, including Western (North America/European) and South Asian perspectives, this subject explores the application of feminist critique to key areas of legal regulation, including family and reproduction, employment and discrimination,

violence against women, colonialism and immigration. The subject investigates feminist contributions to law reform as well as critical theoretical perspectives which fundamentally question the transformative power of law. The subject aims to assist students to develop skills in critical thinking and to question assumptions that underlie legal education and practice.

78240 Western Legal Theory

6cp

This subject provides students with a holistic appreciation of the Western legal environment by studying a collection of ideas concerning the nature of the law. This subject deals with theoretical questions that are relevant to an understanding of the notion of law (e.g. what is the law of the state?, is there any other command, convention or the like that can also be called 'law'?). It also includes a discussion of different approaches to the study of law (e.g. philosophical, sociological, historical, analytic, international, comparative) to determine its derivation, nature and function, as well as a discussion of the doctrines and techniques of legal analysis and evaluation. The various approaches are compared and criticised in the context of sociopolitical problems, conflicts and other phenomena. Topics include sovereignty and the law, legal rights and duties, and law and ideology. Their treatment in the common law is examined.

78241 Reading the Law: Language, Power and Ideology

6cn

Language is of central importance to the law; indeed, there would be no law without language. Court judgments, legislation and legal proceedings employ specific linguistic forms. In many legal cases, there are issues of interpretation and ambiguity, such as in relation to the words in a conversation, a term in a contract or a provision in a statute. The legal profession recognises the importance of language, particularly oratory skills, legal argument and reasoning, as well as the use of plain language. As an institution, the law is even regarded as having its own register that students must master, referred to as 'legalese'.

This subject aims to assist students to reflect on the relationship between language and the law. Students are equipped with a number of linguistic theories including sociolinguistics, critical discourse analysis, narrative theory and semiotics. Using these theories, students critique a range of texts, such as police interviews, contracts, legislation, court trial transcripts and judgments.

Students are introduced to theories about the relationships between language, power and ideology in the law. How lawyers, judges and other legal players construct important concepts, such as consent, provocation, intention and the 'reasonable person', are examined. Students analyse how language affects issues of justice, fairness and equality, as well as how the law is structured by class, gender, race and culture, and explore how poor English language skills may lead to disadvantage in the legal system.

78242 Property Rights and the Environment

6cp

This subject explores the intersections between property rights and the environment in three ways. First, property rights in natural resources, such as coal seam gas, water and genetic material, are explored. Second, the relationship between property rights and environmental change, such as the protection of private property from coastal erosion, and from major flooding and fire events, is considered. Third, the intersection of property rights and environmental law is examined, for example prohibitions on clearing vegetation on private land, conservation covenants and compensation for acquisition of property rights through the operation of environmental law. From ground-breaking case law of Australian Courts to legal, political and scientific scholarship; from policy development to media coverage, this subject provides students with the breadth of perspective encompassing the political, economic, scientific and social aspects of the topic of property and the environment. From this broad perspective, students are invited to select one issue identified in the subject material (or their own topic) through which they can develop their research skills culminating in a major in-depth report. Teaching in the subject explicitly focuses on the development of professional research skills. Students are encouraged to write up their research to a level suitable for submission to peer-reviewed journals for consideration for publication.

78243 Advanced Trusts Law

6ср

This subject builds on the fundamental aspects of trusts law covered in compulsory equity and trusts core subjects by engaging in a detailed examination of the use of trusts across a range of commercial enterprises, including property trusts, managed investment schemes and superannuation trusts. The rights, duties and liabilities of trustees are considered together with the rights and liabilities of beneficiaries of different types of trusts. Variations of trust documents and the indemnification of trustees are examined. The liability of third parties dealing with trustees is considered. An overview of taxation and superannuation regulations relevant to the commercial use of trusts is also provided.

78244 Mergers and Acquisitions Law

6cr

This subject examines the law relating to takeovers of public companies and publicly listed trusts. The subject also covers mergers involving schemes of arrangement under the Corporations Act 2001 (Cth). Key issues relating to regulated acquisitions, acquiring a relevant interest prior to a takeover, disclosure of substantial shareholdings and defensive tactics are considered. The role and powers of the Takeovers Panel during contested acquisitions is examined. Particular issues relating to a range of regulated industries such as telecommunications, broadcasting and financial services as well as foreign investment rules relating to mergers and acquisitions are also discussed. Consequential actions involving compulsory acquisitions and capital restructuring are considered. The role and duties of bidding and target directors is a particular focus of the subject.

78245 Public Health Law

6ср

Public health law is an active and expanding area of legal practice in areas such as environmental health, food law, and the control and prevention of communicable disease.

Students learn: the history of public health law in Australia; the role of international treaties in public health; the different theories and philosophies that have strengthened public health; the tensions between the promotion and protection of the public good and the infringement on human rights; the use of law as a mechanism to protect public health; and the current trends and future directions in public health lawmaking both internationally and in Australia.

Key topics taught include:

- diseases of lifestyle (tobacco control, obesity, alcohol abuse)
- emergency preparedness (pandemics and acute threats)
- HIV and sexual health
- screening programs
- environment protection and public health
- Indigenous Australians and public health.

Students study and participate in discussions on recent case studies in public health law. Students are also encouraged and expected to critically evaluate the effectiveness of public health laws and their underlying aims of protecting and promoting health.

78246 Work Law

6cr

In this subject students survey Australian work law by examining relevant law, policy and theory. Work law is an important component of studies in the legal regulation of commerce. Students examine the key aspects of Australian work law pertaining to the rights, entitlements, liabilities and obligations of employers and workers in the workplace, especially those determining the pay and conditions of workers. Practical and theoretical perspectives on the relevant common and statute laws regulating work are examined. As far as possible, these laws are examined with reference to underlying policy. In relation to statute law, given the extensive coverage of Commonwealth workplace relations legislation, there is a focus on analysing amendments to that legislation. The extent to which Australian work law meets the aspirations of work law theories and policy perspectives is discussed.

78247 Collaborative Law

6ср

Collaborative law is a clear indication that the dispute resolution field has now entered a second generation of processes which require appropriate education for law students, social scientists and financial professionals to competently participate in an evolving form of advocacy.

This subject examines and contextualises the emerging practice of collaborative law and the associated interdisciplinary and multidisciplinary process models in the Australian family law system. Students gain an appreciation of the trans-disciplinary development of the lawyer's role to participate in these processes and the refocusing of legal practice from lawyer-focused to client-centred. Students study the collaborative law process framework to gain a clear understanding of the requisite roles, functions and skills for all participants.

Both Australian and international developments are studied, as well as the complexities arising when teams of professionals are brought together to provide an holistic service for clients.

The subject is offered in two two-day blocks to accommodate both theoretical and experiential learning experiences.

78248 Privacy and Surveillance: Law and Policy

6cr

Privacy and surveillance regulation features prominently in contemporary public debate in Australia. It is controversial, dynamic and challenging. This subject explores key legal and policy issues arising in this space. Specifically, it investigates various dimensions of privacy including invasion of personal privacy, data protection and retention, and surveillance of personal conversations, activities and locations. It also tackles emerging issues and challenges prompted by the advent of new technologies, including online privacy protection, anonymity / pseudonymity and the right to be forgotten. This necessitates travelling through disrupted legal terrain, formed by a complex mix of common law and statute as well as federal and state/territory laws. It also calls for students to engage with a range of relevant perspectives, views and interests. Understanding of key issues is further deepened by interrogating the wider contexts in which privacy and surveillance law and policy operate and are informed, including theoretical, constitutional, ethical and international contexts. The subject also exposes students to a myriad of ethical dilemmas associated with privacy and surveillance, and enhances their capacity to develop strategies to address such issues.

78249 Privacy and Surveillance: Law and Policy

8cc

78296 Postgraduate Exchange Subject 1

6cp

International exchange offers students the option to complete part of their study in another country and receive credit towards their degree at UTS. UTS: Law participates in the UTS international exchange program that is administered by UTS: International Studies. Under the program, law students have the opportunity to undertake three or four law postgraduate options at an exchange partner university. Applicants for exchange must have their study at the exchange partner university approved by UTS: Law. The subject studied at the exchange partner university should have relevance to a student's course of study, and be taught and assessed in an acceptable format. Subjects of an international or comparative nature are preferred. Further information is available at:

www.uts.edu.au/international/exchange

78297 Postgraduate Exchange Subject 2

6ср

International exchange offers students the option to complete part of their study in another country and receive credit towards their degree at UTS. UTS: Law participates in the UTS international exchange program that is administered by UTS: International Studies. Under the program, law students have the opportunity to undertake three or four law postgraduate options at an exchange partner university. Applicants for exchange must have their study at the exchange partner university approved by UTS: Law. 78723 Research Dissertation 1 (Law)

24cp

For subject description, contact UTS: Law.

78724 Research Dissertation 2 (Law)

24cp

Requisite(s): 78723 Research Dissertation 1 (Law) There are also course requisites for this subject. See access conditions.

For subject description, contact UTS: Law.

79004 Environmental Law and Science

6cn

Requisite(s): 91102 Animal Function and Diversity OR 91123 Biocomplexity

Undergraduate

This subject introduces the science student to concepts of environmental law and the interface between environmental law and science. It establishes a foundation for the subject 79023 Environmental Forensic Law, and it complements subjects in environmental management by setting out the legal framework which supports the management of natural resources at both a federal and state level. This subject also introduces students to legal research.

Typical availability

This subject is offered in odd years only.

79006 Intellectual Property Commercialisation

6cp

Requisite(s): 79203 Business Law and Ethics $\,$ OR 70110 Introduction to Law

Undergraduate and Postgraduate

This subject aims to provide a comprehensive survey of much of the law and some of the business and economics of commercialising and licensing intellectual property (IP) rights. The scope is interdisciplinary, exploring the business and economic aspects of IP licensing and investment in IP development in the context of a detailed legal framework for IP licensing and investment. It includes consideration of relevant IP laws, competition law, compulsory and voluntary licensing, contract and consumer laws, and selected issues in international practice. Moreover, the subject involves practical skills training in drafting and negotiating licenses as well as practice-focused exercises that give students a better sense of the deal-making process in licensing transactions both in Australia and abroad.

The subject is in three parts. Part I explores the connection of IP and economic development, and provides a comprehensive survey of major IP laws, such as copyright, patent, confidential information, trademark, and domain name. Part II discusses possible business structures for commercialising IP and other special laws related to IP commercialisation, such as the enforcement of completion law, contract law and consumer law in the IP area. Part III involves practice or skills training in negotiating and drafting licenses and getting a 'sense of the deal' in licensing transactions.

79011 Marketing Law

6cn

Requisite(s): 79203 Business Law and Ethics $\,$ OR 70110 Introduction to Law

Undergraduate

The aim of this subject is to provide students with a sound knowledge of the relevant federal and state laws that affect business decisions in the field of marketing and to provide them with an understanding of the complex laws regulating marketing activities. Topics covered include consumer protection, product liability, product safety and standards, intellectual property, the regulation of competition, and risk assessment and compliance strategies.

79013 Industrial and Labour Law

6ср

Requisite(s): 79203 Business Law and Ethics OR 70110 Introduction to Law

Undergraduate

Industrial and labour law is an important component of studies in the legal regulation of business. This subject is designed to introduce undergraduate non-law students to Australian industrial and labour law by examining relevant law, policy and theory. In light of the now extensive coverage of the federal labour law system, this subject focuses on that federal system and the underlying common law principles of employer and employee rights and obligations. Students are introduced to the key aspects of industrial and labour laws which govern employers and workers in the workplace. Both practical and theoretical perspectives are offered on the industrial and labour law system as it operates, and is changing, within Australia. The extent to which Australian industrial and labour law meets the aspirations of various labour law policy perspectives is discussed.

79014 Applied Company Law

6ср

Undergraduate

This subject is designed to provide students with a sound understanding of fundamental aspects of company law and regulations as they apply to the modern company. Emphasis is given to the way company law has developed to reflect the realities of carrying on a business relationship in a changing society.

Topics covered include an introduction to partnership law, registration, corporate constitution, promotion and pre-incorporation, company membership, duties of controlling shareholders, the raising of equity and debt, companies in difficulty, officers' duties, accounts and audit.

79015 Banking Law

6cp

Requisite(s): 79203 Business Law and Ethics OR 70110 Introduction to Law

Undergraduate

This subject aims to provide students with an understanding of the manner in which banking institutions are regulated, dealing with the changes following the deregulation of banking. Topics covered include: a historical introduction to the law relating to banking and to relevant principles; the statutory regulation of banking; the banker-customer relationship; negotiable instruments; and the provision of loans and other banking facilities.

Attention is drawn to the wide range of services currently offered by trading banks and to the wide range of institutions currently offering services of the same kind. There is ongoing discussion of current developments in the area.

Students are expected to develop sufficient working understanding of the areas of law to which they are introduced to be able relevantly to advise in the resolution of problems and the planning of strategies.

The law of contracts and the law of torts is of particular relevance to the subject, but no expertise is required in any other discipline: all necessary concepts and terms are explored in the classroom. Students are encouraged to ask questions whenever the territory seems unfamiliar: discussion in class greatly facilitates individual learning, not only by students but also by the lecturer.

79017 Taxation Law

6ср

Undergraduate

This subject aims to develop students' conceptual and analytical skills and an appreciation of the Australian tax system. It provides a general analysis of the current tax system and consideration of the many changes it is presently undergoing. The course looks at the *Income Tax Assessment Act* 1936 and the *Income Tax Assessment Act* 1997, the Tax Law Reform Project and the New Tax System. Particular concepts to be considered include income and capital, assessable income, allowable deductions, capital gains tax, fringe benefits tax, goods and services tax, trusts, partnerships, tax accounting, tax planning and anti-avoidance provisions.

79018 Advanced Commercial Law

6ср

Requisite(s): 79203 Business Law and Ethics OR 70110 Introduction to Law

Undergraduate

This is a valuable elective for any business student, especially those working in or wishing to work in a business environment involving interaction with legal advisers and with managers mindful of their legal obligations.

An initial practical focus in this subject is to refresh and enhance students knowledge of contracts and some other areas impacting upon business which were relatively briefly covered in the requisite subject.

The rest of the subject is intended to develop knowledge and understanding of areas of law relevant to the modern business environment, such as sale of goods, consumer protection, agency and negotiable instruments.

Students are expected to develop sufficient working understanding of the areas of law to which they are introduced to be able relevantly to advise in the resolution of problems and the planning of strategies.

Aside from the requisite, no other expertise is required; all necessary concepts and terms are explored in the classroom. Students are therefore encouraged to ask questions whenever the territory seems unfamiliar: discussion in class greatly facilitates individual learning, not only by students but also by the lecturer.

79019 Corporate Environmental Responsibility

6ср

Requisite(s): 79203 Business Law and Ethics OR 70110 Introduction to Law OR 70120 Legal Method and Research OR 70105 Legal Research

Undergraduate

As a field of study, environmental law deals with the rules, relationships, systems and processes by which environmental protection is achieved. The process of environmental protection or sustainability involves multiple stakeholders of which corporations

are but one. Corporate environmental responsibility focuses on the role that corporations can play in environmental protection and the responsibilities that are now attaching to corporations to encourage sound environmental practice.

This subject examines environmental law issues as they relate to corporations focusing at the national and state levels but looking at comparative examples where appropriate. It analyses climate change as a driver for corporate environmental change.

Topics covered in the subject include:

- international environmental law as it relates to multinational corporations
- the concept of ecologically sustainable development and the application of the precautionary principle and the principle of intergenerational equity
- criminal and civil liability of directors and corporate officers
- managing risk
- drivers of corporate social responsibility, examining issues of corporate disclosure and reporting and socially responsible investment
- corporate case studies in areas chosen from natural resources management, water or waste management, or pollution
- regulatory and non-regulatory methods of enforcement and responsibility such as environmental audits, due diligence, taxes and tradeable permits
- the role of corporations in climate change and greenhouse gas emission reduction.

79021 International Aspects of Australian Taxation Law

6ср

Requisite(s): 79203 Business Law and Ethics OR 70110 Introduction to Law

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject focuses on aspects of international tax planning. Although topics vary from time to time, they could include an analysis of the concept of residence and source of income, taxation of multinational staff, the taxation of offshore royalties, the operation of double tax arrangements, transfer pricing and anti-avoidance provisions and international tax planning.

79022 GST and other Indirect Taxes

6cp

Requisite(s): 79203 Business Law and Ethics OR 70110 Introduction to Law

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject examines the goods and services tax (GST) and its effect on the Australian tax system. It analyses overseas experience with other indirect tax systems and examines the basic principles of current indirect taxes in Australia and their practical implications. Besides looking at the implementation of the GST, the subject also looks at the flow-on effect for existing taxes such as payroll tax, sales tax, land tax and stamp duty.

79023 Environmental Forensic Law

6ср

Requisite(s): 79004 Environmental Law and Science OR 79203 Business Law and Ethics

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

Environmental forensic scientists use a range of tools including chemical characterisation to biological markers to determine where environmental pollution has occurred, how it has occurred and who is responsible. This subject examines how this evidence can be used in court and students will learn how to develop the scientific case for identifying the responsible parties.

Typical availability

This subject is offered in odd years only.

79026 Estate Planning (UG)

6ср

Undergraduate

This subject introduces students to the Australian estate planning regime, providing an understanding of the requirements of the regime and the impact of those requirements and opportunities on the financial planning process. The subject takes both a theoretical and practical approach to the area of estate planning.

79027 Retirement Planning (UG)

6cn

Undergraduate

This subject introduces students to the Australian retirement planning process, providing an understanding of the requirements of the process and the impact of those requirements and opportunities on financial planning strategies.

79028 Complex Forensic Cases (Law for Biology)

6cr

Requisite(s): 91139c Complex Forensic Cases (Biology)

This subject deals with the legal issues involving forensic science in the field, and the impact of scientific evidence on the legal system. Students receive training in the preparation of reports and in the presentation of evidence in court. Significant cases involving the application, interpretation and admissibility of forensic science in the Australian justice system is examined in detail. The subject is studied under the following broad topic areas: introduction to the legal system; the role of the expert; the rules of evidence; the *Crimes (Forensic Procedures) Act 2000 (NSW)*; the importance of expert evidence in legal cases; and the role of advocacy.

The subject aims to provide an understanding of:

- the legal and practical issues relating to forensic science
- the impact of forensic science on the legal system, and
- the admissibility requirements in relation to forensic science evidence.

79031 Employment and Industrial Law

6ср

Postgraduate

This subject is designed to introduce non-law students to the law regulating work in Australia. Employment and industrial law is an important component of studies in the legal regulation of commerce. Students are introduced to the key aspects of employment and industrial laws which determine the rights, entitlements and responsibilities of employers and workers in the workplace. Both practical and theoretical perspectives on the law regulating work are examined. Given extensive legislative activity by the Commonwealth Parliament in the area of work law, the Fair Work Act 2009 (Cwlth) as amended is analysed.

79032 Competition and Consumer Law

6ср

Requisite(s): 79203 Business Law and Ethics OR 70110 Introduction to Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject provides a comprehensive and engaging examination of the economic and legal principles of competition law (also known as antitrust law or restrictive trade practices law) and consumer law (also known as deceptive trade practices law) in Australia. It examines statute law, Part IV and Schedule 2 of the *Competition and Consumer Act* 2010 (Cwlth) (CCA) (formerly the *Trade Practices Act* 1974 (Cwlth) (TPA)), the decisions of the common law courts in interpreting the Act, as well as some international treaties on antitrust and consumer law enforcement, of which Australia is a party. Current issues and recent cases on competition and consumer laws and policies in Australia are also examined.

The subject covers the economic functioning of markets; the relationship between the competition and consumer laws (including both statute law and common law) and economics; the evolution and objectives of Australian competition law and consumer law; and the administration and enforcement of competition law and consumer law, both nationally and internationally.

This subject includes three parts. Part I focuses on competition law. It covers the evolution of competition law; the legislative feature of the Australian competition law; major anti-competitive conduct in Part

IV of the CCA, such as monopolistic agreements, misuse of market power, mergers/acquisitions; and enforcement issues in Australia, including authorisation and notification regimes, remedies and other related matters. Part II focuses on consumer law. It covers the policy objective of consumer law; general prohibitions in Schedule 2 of the CCA, such as misleading or deceptive conduct, unconscionable conduct, and unfair contract terms; as well as enforcement issues. Part III examines major international treaties on consumer protection and competition enforcement, and some major international cases in which Australia is involved.

79033 Insolvency Administration

6cp

This subject provides students with legal knowledge needed to assist business, concerning the protection and regulation of insolvent individuals and corporations. Students examine the legal procedures involved in insolvency law (such as bankruptcy petitions, lodging proofs of debt and distribution of insolvent estates) as well as the impact of insolvency upon stakeholders such as employees, unsecured creditors, and individual and corporate players. Particular emphasis is placed on the various methods of administering insolvent estates including discussing powers of insolvency administrators, voluntary administration, liquidation and the rights of creditors.

79603 International Business Transactions and the Law

6cp

Requisite(s): [79203 Business Law and Ethics OR (76006c Public International Law AND 70110 Introduction to Law)]

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject introduces students to those legal rules which affect traders doing business where there is an international element involved. It focuses on matters relating to the formulation of contracts in international business transactions; the law relating to the international carriage of goods; payment in relation to such transactions; currency matters; the resolution of disputes and the enforcement of judgments where litigation occurs with an international element.

79606 Advanced Taxation Law

6cn

Requisite(s): 79017 Taxation Law

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject builds on the understanding obtained in previous study. It focuses on a deeper analysis in relation to a number of taxation issues including the taxation of companies, trusts and partnerships, further capital gains tax issues, aspects of international taxation, tax administration, and tax planning, with a consideration of antiavoidance and ethical issues in tax planning.

79708 Contemporary Business Law

6ср

Postgraduate

This subject provides students with an understanding of the legal system and a knowledge of a range of legal topics that are of practical relevance to business law. It provides timely information on recent developments in areas including commercial contracts and trade practices legislation, consumer protection, business structures and intellectual property.

79771 Dispute Resolution

6ср

Requisite(s): 60 credit points of completed study in C04148 Master of Law and Legal Practice

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

This subject is an introduction to the philosophy, theory and practice of an area of increasing importance in all professions, business and government. Dispute resolution processes are now integrated into the adversarial framework as well as being applied to an ever-widening

range of private and public situations. This emerging practice of professional dispute resolution both within and outside the legal profession is the framework for the central topics in this subject. The topic areas covered in this subject include:

- an introduction to the theories and philosophy of dispute resolution
- an overview of the development of the range of dispute resolution practice in both the legal system and generally
- an introduction to negotiation and mediation theory
- conflict theory
- the relevance of personal style in dispute resolution processes
- communication theory and skills requisite for dispute resolution processes
- issues of power, culture and participation in dispute resolution processes
- ethics and standards.

The subject is taught in intensive mode with an emphasis on experiential learning. Student assessment focuses on a written research paper on a topic of their choice with a presentation to the class of the essential concepts explored in the research. The focus of this subject is interdisciplinary and draws upon the professional expertise and experience of the class.

Typical availability

Autumn semester, City campus

80027 Photographic History and Theory

6ср

Core

Undergraduate

The subject provides a contextual framing for understanding photography as a technology and visual medium for the production of images in culture. Students are introduced to models of vision since the Renaissance that have shaped, and also rendered problematic, the understanding of perception and image making. Photography as a technology and medium is introduced within this context, and also differentiated from techniques and technologies that preceded it historically. In this subject major theorists of photography are introduced, and their differing perspectives canvassed. Through an introduction to the relationships between still and moving photography, digital and analogue technologies are introduced and different camera technologies and image production are also explained within their historical context.

Typical availability

Autumn semester, City campus

80028 Independent Project: Designed Outcome

12cp

Core

Undergraduate

The two honours year Independent Projects can be thought of jointly as a major project, commencing with conceptual development and culminating with a designed outcome. The project can be theoretical, historical, cultural, critical or practical in nature, either by written, photographic, interactive, multi-modal, situated or other specialisation, developed in conjunction with the supervisor. A researched approach and critical thinking are vital ingredients for any medium. Thus this subject involves the materialisation, practice or fabrication of the designed outcome, focusing largely around the project, its reflective and critical documentation. This culminates in an exhibition, installation, or written submission as befitting the specialisation.

Typical availability

Spring semester, City campus

80029 Independent Project: Conceptual Development

12cp

Core

Undergraduate

The two honours-year Independent Projects, can be thought of jointly as a major project, commencing with conceptual development and culminating with a designed outcome. The project can be theoretical, historical, cultural, critical or practical in nature, either by written, photographic, interactive, multi-modal, situated or other specialisation, developed in conjunction with the supervisor. The conceptual development subject establishes the goals, methods,

materials, context and critical literature review relevant to the project and the student develops appropriate metrics for evaluation and critical review, according to specialisation.

80030 Research Methods

12cp Core

Undergraduate

This subject introduces methodologies for research and evaluation, usability, appraisal, critical comparison and reflective writing, as relevant to a diversity of disciplines and interdisciplinary areas. The subject equips the student with a wide range of methods suitable for structuring and thinking critically from a researched context about design, that may range from a theoretical, historical and conceptual research approach to applied, practice-based and project-centred projects. Its content may be oriented towards the student's successful written and project components of the honours degree.

80031 Graduation Exhibition

12cp Core

Undergraduate

Occurring in the student's final semester, the graduation exhibition forms the culmination of the student's program of study. This provides the opportunity for students to undertake the production of a major work, or series of related works in a collection/series, in addition to documentation of the context, creation and motivation for the work. The production of photographic/designed outcomes enables students to focus upon a medium or media of preference/specialisation from conception through to public presentation. Such works may take the form of photographic, situated media, mixed modality, collaborative interdisciplinary, sound or music works displayed as performance, installation, exhibition, physical artefacts or spatial environments.

Typical availability

Spring semester, City campus

80032 Pervasive and Convergent Media Research Project

6cp Core

Undergraduate

Grounding one's own creative practice in critical and constructive review of other's work, the context, philosophies, literature, culture and of ones own and others work, lends gravity and depth to practical artistic and design outcomes. This subject investigates pervasive and convergent media as the vehicle for developing research through documentation and written outcomes. Students who plan to progress in their chosen field or continue their studies have explicit requirements for research skills, critical thinking, review and written expression. This subject is designed to work with existing as well as explore innovative forms of research. While the development of research skills is essential to this subject, assessment outcomes are negotiable, to facilitate both traditional research outcomes as well as practical research projects, underpinned by structured writing/documentation.

Typical availability

Spring semester, City campus

80033 Professional Practice: Photography

6cp Option

Undergraduate

This subject introduces students to a variety of views and critiques of professionalism in the field of photography including: the roles and responsibilities of the creative professional; case studies of practice/studios; business management and planning; preparation for and modes of employment; legalities and liabilities; the ethical professional; the client/creative professional relationship; existing and emerging work practices in the industry; the role of professional bodies; exhibiting and licensing. Topics are covered through site visits, guest lectures, workshops and where possible and/or appropriate short-term work experience placements.

80034 Physical and Tangible Media Interfaces for Design Expression

6cp Option

Undergraduate

Physical computing and tangible interfaces are comparatively modern genres of pervasive computing. Both are motivated by the desire to move computing and digital activities away from the desktop and desk-bound experience, and to instead explore their seamless integration into our daily lives. This subject explores existing and emergent conduits for interacting with sound and image. Students examine the implications for them as artist/designers and their design activities, in new emerging technologies. Of particular import to this subject is an examination of the point of interface or intersection with the consumer/audience/user. Hence this subject addresses the recent history, theory and context of physical and tangible computing as it impacts on design and expression through sound, image, tactility and transformation.

Typical availability

Autumn semester, City campus

80035 Photographic Artifice

6cp

Requisite(s): 80067 Photographic Context 1

Option

Undergraduate

This subject explores the role of photography in representing entirely fictitious and artificial scenarios. This involves building shots up from scratch in the blank space of the studio where total control of light, composition and arrangement can be managed. Emphasis is placed on pre-shoot conception and art direction and the use of studio facilities to achieve a desired outcome. This subject further explores studio lighting techniques, specifically multi-light set ups using studio flashes. Students are encouraged to use the photographic format/medium of their choice but in consideration of their pre-nominated output media.

Typical availability

Spring semester, City campus

80036 Situated Media Real Time Technology

6ср

Core

Undergraduate

This subject provides the technical and experimental learning context for students to develop fluency with object-oriented visual programming environments and interfacing, through basic operational, sound and video/image software and the exploration of real-time environments through new technology.

The objective of this subject is to ground students in the capabilities of specific software, encouraging an inventive, exploratory approach to constructivist learning and to help students cultivate fluency and confidence with the basic paradigms of operation and processing. This is done through project-based learning, through students' exploration of techniques and their integration into actual and alternate physical environments for real-time responsiveness and the situating of media.

Typical availability

Autumn semester, City campus

80037 Situated Media Culture and Context

6ср

Requisite(s): 80027 Photographic History and Theory

Core

Undergraduate

This subject forms an introduction to the study of the history, theory and interpretations of situated media. With particular reference to situated media's responsiveness to location, cultural, social and physical context, the subject encourages students to reflect upon and communicate its situation and medium. Through lectures and tutorials, students investigate the emerging discourses of sensory anthropology and urbanism, challenging the historic hegemony of vision as well as the cultural influences and impacts of media integration through an examination of the historical approaches taken in works of art, media and design that explore, interpret or challenge their situation and whose impact is governed by the situating of the medium in a particular spatial experience.

Typical availability

Spring semester, City campus

80038 Photographic Intervention

6ср

Core

Undergraduate

This subject involves an exploration of photography as a means of consciously intervening in and interpreting the social world as a narrative source. This is done through the exploration and photographic interpretation of the spaces and places people create and inhabit and their relationship to them, through the guise of environmental portraiture. Emphasis is placed on the conscious construction of meaning across still image sequences through subtle techniques of art direction and the manipulation of available light sources. This subject introduces the basic principles of digital photography including file formats, image resolution, colour temperature, contrast control, digital workflow practices, and shooting for various digital output media.

Typical availability

Autumn semester, City campus

80041 Dissertation

12cp

Core

Undergraduate

The dissertation is a substantive body of written work, designed to complement the independent project component of the honours degree. While its content is determined individually, its fundamental aim is to situate the research area within historical, comparative literature and related works. This is done through the investigation of appropriate methodologies for criticising, comparing and evaluating the medium such as usability evaluation for interaction, aesthetics in photography, etc. Based on the individual students negotiation of the structure of their honours year, student's proposed aim, philosophy or theoretical context and method for developing the designed outcome of their independent project may interact with or inform the subject of their dissertation.

Typical availability

Autumn semester, City campus

80042 Photography and Seeing Light

6ср

Undergraduate

This subject explores light as fundamentally plastic, or manipulable, through a combination of studio practice, technical theory and photographic history. The manner in which light can be controlled to create different moods and atmospheres and the impact this has on the communicative aspects of the photograph is a central feature of study. Students further develop their understanding of lighting contrast ratios through the use of a range of ambient and studio flash light sources as well as explore a variety of lighting techniques.

Typical availability

Autumn semester, City campus

80046 Smart Object Studio

12cp

Requisite(s): ((80065 Design Studio: Photographic Intervention AND 80066 Design Studio: The Digital Image) OR 50846 Situated Media Installation Studio)

Core

Undergraduate

This studio subject is designed to enable cross-disciplinary collaboration through the examination and development of 'smart objects'. This could involve for example, the development of playful and intelligent applications, smart objects with practical and marketable applications, objects with energy awareness, sensing systems or devices designed to adapt to/suit users and their behaviour. Students collaborate to examine the potential for imbuing objects with new audio, visual and mechanical capabilities by transforming the experience of using objects and devices. For the photographer or sound and music designer, this studio enables a useful fusion of modalities and re-situates passive (unresponsive), static media or time-based (fixed) media in a paradigm of user-centred, dynamic and responsive interaction, by challenging students to re-think and re-invent ways of communicating through physical experience.

Typical availability

Spring semester, City campus

80048 Photographic Manipulation

6ср

Core

Undergraduate

This subject explores the way photographic techniques and lighting can be used and manipulated to transform the photographic representation of the world 'as it is found' to one that is pre-conceived. This involves the exploration and manipulation of actual locations and settings as well as an introduction to studio scenario building. Emphasis is placed on pre-shoot conception and art direction as well as the use and manipulation of mixed available and studio light sources. It introduces the principles of lighting contrast ratios, studio flash photography, and medium format film and digital cameras.

Typical availability

Spring semester, City campus

80063 Professional Practice: Situated/Interactive Media

6ср

Option

Undergraduate

This subject introduces students to a variety of views and critiques of professionalism in the field of situated media including: the roles and responsibilities of the creative professional; case studies of practice/studios; business management and planning; preparation for and modes of employment; legalities and liabilities; the ethical professional; the client/creative professional relationship; existing and emerging work practices in the industry; the role of professional bodies; documenting situated media; exhibiting and seeking funding. Topics are covered through site visits, guest lectures, workshops and where possible and/or appropriate short-term work experience placements.

Typical availability

Autumn semester, City campus

80064 Interaction-based Designing

6ср

Core

Undergraduate

This subject addresses the history and practice of interactive design. The historical component of the subject focuses on the period from the invention of the cathode ray tube to the dawn of personal computing. This period contains the origins of many technologies that are now ubiquitous. The practical component of the subject is centred around a series of assessable exercises intended to introduce students to fundamental design skills.

Typical availability

Autumn semester, City campus

80065 Design Studio: Photographic Intervention

12cp

Undergraduate

The subject involves an exploration of photography as a means of intervention and interpretation of society as a reflective process. Students' photographic interpretation, both of urban space/place and its creation/inhabitation, is understood through the guise of environmental portraiture. Through techniques of art direction and the manipulation of available light sources, students learn how to construct meaning across still image sequences. This subject introduces the principles of camera and darkroom work in black and white photography. Students are introduced to the basic principles of composition, 35mm manual SLR camera functions, film exposure, development and print enlargement.

Typical availability

Autum semester, City campus

80066 Design Studio: The Digital Image

12cp

Requisite(s): 80065 Design Studio: Photographic Intervention AND 50846 Situated Media Installation Studio

Undergraduate

This subject explores contemporary digital imagery with particular emphasis on professional and experimental photography. Through a range of creative digital practices, photography is examined and its cultural context articulated. Central to the studio are the conceptual and practical implications of the digital medium and the associated implications of an image-focused contemporary culture.

Students are expected to utilise skills and conceptual processes they have gained in previous subjects to support the theoretical and practical aims of the subject. This subject introduces digital image manipulations, publication design, post-production, and distribution through print, web and other forms of electronic and analogue media.

Typical availability

Autumn semester, City campus

80067 Photographic Context 1

6ср

Undergraduate

This subject investigates and examines photography's cultural positioning, both in a contemporary and historical context through a series of lectures by contemporary photographers, artists, writers, curators, and theorists who address 'the image' and its production. Framed through social, political, gender and aesthetic approaches, it aims to extend the student's critical thinking and ability to engage in a focused dialogue, round-table discussion and critique through interaction with invited guests and tutors. Students are supported in developing a theoretical and/or aesthetic foundation for the production of their own work and an ability to critically engage in the contemporary photographic discourse, and to situate their own work accordingly.

Typical availability

Autumn semester, City campus

80068 Photographic Context 2

6ср

Requisite(s): 80067 Photographic Context 1 AND 80035

Photographic Artifice

Further information is available from UTS: Design, Architecture and Building.

80214 Locative and Sensor Design Technologies

6ср

Requisite(s): 80064 Interaction-based Designing AND 50846

Situated Media Installation Studio

Option

Undergraduate

This subject allows students to specialise in the application of locative and sensor technologies. Locative and related technologies include GPS and other positioning systems, and location awareness through networks and locative devices. Designing with locative technologies requires an understanding of technical protocols, infrastructure and the social, contextual and cultural features that make this technology interesting and relevant in design. Sensor technologies include motion, proximity, climatic condition, bio-data and numerous other sensor types. Like locative technologies, sensors provide information that is sensitive (potentially public or private), real time and contextual. Students examine technical mechanisms for using these technologies, strategies for mapping sensor output to display or interaction, interaction for affecting information and modifying experience, as well as evaluative methodologies for appraising human interaction with designs, including the social causes and motivations for applying locative and sensor enabled design.

Typical availability

Spring semester, City campus

81000 PhD Thesis: Design

Оср

Further information on this subject is available from UTS: Design, Architecture and Building.

81511 Problems to Possibilities

8cp

In this first subject of the combined degree, students engage in a creative series of practical activities that bring them to a broad understanding of creative intelligence and innovation as a field of practice. This subject enables students to gain firsthand experience of the nature of today's open, complex, dynamic and networked problems. They are challenged to analyse problem situations from multiple perspectives and to integrate these findings in ways that lead to new possibilities. In the process, students develop and hone their skills in team collaboration, visualisation, modelling, representation and presentation.

81512 Creative Practice and Methods

8cp

This subject focuses students on understanding how design practices, processes and methods lead to innovation. Students create propositions in a collaborative environment, shape processes of discovery and exploration, generate solutions, develop visual literacy in dealing with complexity, and create frameworks for criticising and judging propositions. Built on values such as risk-taking and inquisitiveness, students' research, analytical and creative practices are supported by their development of skills for effective communication of concepts and ideas. Students challenge their own ideas for building and running a creative practice through undertaking a central project for an external partner.

81513 Past, Present, Future of Innovation

8cr

In this subject, students explore the nature of invention and innovation in the various fields of their core degrees. Through special projects (such as What would Buckminster Fuller do now?) students are provoked to examine the conceptual, methodological and empirical patterns of innovation leaders, and apply them to major contemporary issues. In this way, students develop insights into the cultural and social contexts of innovation in the past and present, and in the speculative future. Through the use of techniques such as scenario building, forecasting, backcasting and technology roadmapping, a diverse history of ideas is spanned to explore possible futures.

81514 Creativity and Complexity

8cp

In this subject students probe the nature of a range of complex dynamic systems. In the process they explore ways to understand these systems including the use of natural language, mathematics, and multiple techniques for visual and temporal mapping. Through undertaking a series of projects, students are challenged to creatively and rigorously test key qualities they have identified in various complex dynamic systems.

81515 Leading Innovation

8cp

This third year subject situates innovation leadership/creative intelligence as a practice within the fields of students' core degrees. The nature of innovation and the ways it is attained in professional fields are made explicit. This in-depth knowledge enables students to strategically address a variety of major challenges in a competitive format. Their project outcomes are exhibited and judged by a panel.

81516 Initiatives and Entrepreneurship

8ср

In this subject, students' abilities to shape initiatives are situated in real-world contexts. Students consider and select the contexts in which to shape their innovation proposals. For example, a student may want to innovate by conceiving of and building a new context (entrepreneurship, e.g. in a start-up company) or by recognising an opportunity within existing organisational structures (intrapreneurship, e.g. in a non-government organisation). In the process, students develop a keen understanding of the transformation required to create and implement innovation, with a sensitivity to the creative processes required, e.g. shedding old ideas for new ones. They are also required to build networks, negotiate, operate with diplomacy and act ethically. Through interviews, site visits and a hands-on project, students gain insights into shaping environments in which trans-disciplinary practices can thrive and develop.

81521 Envisioning Futures

6ср

In this subject, students are challenged as a group to organise a public forum or symposium on innovation leadership/creative intelligence, selecting and inviting distinguished guests to discuss critical developments in different fields and engage in trans-disciplinary discussions. This large public event results in an edited book and various other media (website, blogs, etc.) relating to students' professional fields.

81522 Innovation Internship A

6cp

Active engagement in the context of practice takes shape in this subject through an internship (exploring the possibilities and challenges of intrapreneurship) or through the development of a speculative start-up (exploring entrepreneurship). Both of these options result in (business) plans outlining how to achieve innovation.

81523 Speculative Start-Up

6cr

For further details, contact UTS: Creative Intelligence and Innovation.

81524 Professional Practice at the Cutting Edge

6ср

In this subject students are challenged to reflect on their abilities and position themselves relative to challenges and/or trans-disciplinary challenges related to the field of their core degree. As a result, students produce a clear and coherent digital portfolio of their work and a mapping of their anticipated development path into the future. Students' current individual expertise and missions can be expressed in different ways, for example, through a TED talk format where students pitch their achievements and proposals.

81525 Innovation Internship B

6ср

Further active engagement in a practice context takes shape through an internship, preferably with an international partner organisation. Of particular note is the rich network of adjunct professors at UTS who can play a crucial role in forging such internship possibilities. Students map their own individual development path and, in consultation, align it with learning outcomes they set for the internship.

81531 Innovation Capstone: Research and Development

12cc

In this first of two capstone subjects, students are challenged to prepare their final project, positioning it relative to challenges and/or transdisciplinary challenges related to the field of their core degree. Once the project set-up is accepted, students transition into initial research and concept development. Towards the end of the semester students present their initial ideas and proposed path to proof-of-concept to a panel of specialists in the field.

81532 Innovation Capstone: Realisation and Transformation

12cp

In the second of the two capstone subjects, students work towards a proof-of-concept of their proposed innovation and map out the path towards realisation. This includes a critical understanding of both the transformation required to make this happen, as well as a vision of the new possibilities attendant implementation of the innovation.

81821 Thesis (Design)

Оср

Further information on this subject is available from UTS: Design, Architecture and Building.

Typical availability

Autumn semester, City campus Spring semester, City campus

82120 Animation Studio: Foundations in Animation Language

12cp

Research and re-imagining

Primary research through observational drawing, photography, film, and sound recording are key elements in the creative process in this subject. Students are taken through a varied program of observational drawing classes, visual research, story telling and problem-solving projects designed to introduce them to a wide range of possibilities within animation. These short projects introduce them to a diverse range of research methods, which feed directly into their creative outcomes. Students learn to record and collect information and imagery, and then to apply this to their work in imaginative ways. Secondary research, through the exploration of existing art, design, media and culture—not just animation—is also an essential component. Inspiration and information should be found in the most varied and unlikely places. Emphasis is placed on the development of a clear, original and thorough approach to research, ideas generation and character design.

82121 Context: 2D Animation Introduction

6cr

The objective of this area of study is the development of core animation skills, the fundamental principles that underpin performance based animation. The focus is on 2D character animation, human mechanics, movement physics and timing. Students acquire these animation skills through a number of exercises using hand drawing, Flash and After Effects

82220 Animation Studio: Foundations in Animation Design

12ci

This subject advances students' knowledge and skill in the development of both narrative and non-narrative forms of animation. Students build upon their experience during first semester with a continuing emphasis on primary research through direct observation, photography, film and sound. Studio based projects focus more on the production of animation sequences as final outcomes, and there is a strong emphasis on experimentation and risk-taking throughout. It also expands on themes around building narratives for animation through the making and analysis of analogue and digital sequences.

Further emphasis is placed on developing sophisticated visualisation skills in a wide range of hand made and digital media. Issues such as composition, colour theory, camera framing and movement, visual space and hierarchy are also explored in greater depth.

Students begin to work closely with text in relation to character and story, both generating original written material and analysing existing texts. The research methods explored in this subject further equip students to observe and invent compelling characters and archetypes for moving image.

This subject also explores further the construction and function of team-working models, including appropriate roles, time management and action plans, negotiation, and communication. Projects include a range of team based and individual tasks to identify capabilities and extend creative possibilities within the group.

The aim is the development of a design and movement language that incorporates a clear understanding of animation both as traditional narrative form and as an open-ended experimental and abstracted language. Students learn how to conceptualise intention, atmosphere, mood and genre in order to develop a critical understanding of the language of visual communication and animation media.

In addition, this subject increases students' knowledge of the history and theory of animation, with a particular emphasis on the study of genre. This includes animation production techniques, animation styles and formats, experimental animation, text and image sequences, as well as a study of centres of production such as European, North American and Asian animation.

82221 Context: 3D Animation Introduction

6cn

This subject introduces students to theories and practices of 3D CGI for animation. It is primarily a skill-based subject, focused on understanding the basic technical fundamentals of animation as expressed through industry standard 3D software. Students in this subject learn the fundamentals of 3D animation in Maya, and gain an understanding of complex interface of the 3D environment. Although underpinned by the same fundamental principles as 2D animation, this subject brings a new set of challenges. The technical complexity of the CGI interface demands a patient and thorough

approach, and students are required to keep a subject specific notebook. There is also a far greater challenge to be taken on here; how to invest performance in 3D digital animation with the human feel that is crucial to generating empathy. Students should be mindful that digitally generated animation can often appear sterile and cold, and an over reliance on software-led movement must be avoided. Although it is possible to generate movement very quickly in 3D, it takes a surprising amount of time to refine this movement into a believable and sympathetic form.

It is important to note that there are aspects of this subject that reiterate principles and conventions from 2D animation fundamentals. The technical demands and the major differences in work creation between 2D and 3D make this process absolutely necessary.

82320 Animation Studio: Narrative Investigations

12cc

This studio enables students to engage with animation processes that advance their knowledge and understanding of narrative and performance. Projects explore the conceptualisation of complex design ideas and narrative drive through storyboarding to full animation, with a strong emphasis on experimentation. Building on the fundamental animation skills acquired in first year, students incorporate these principles directly into studio projects.

Continued emphasis is placed on the use of primary research processes grounded in first-hand experience, case studies, collection and observation. Students should be prepared to explore ideas through numerous iterations, and avoid formula and cliché. The subject explores psychology and emotional drive within character, performance and film language, camera and composition, story arcs, and production design. An increased emphasis is placed on the use of sound design, music and spoken dialogue.

An important aspect of this subject is the development of collaborations with key creative partners. Working with people from disciplines closely associated with animation such as musicians, actors, interactive and sound designers, students learn ways to exchange ideas, negotiate and communicate effectively with co-creators.

82321 Context: 3D Modelling and Rigging Introduction

6ср

This studio introduces students to the core technical complexities and creative possibilities of 3D computer modeling and rigging. Students are exposed to a series of in-depth, practical lab-based assignments, designed to help them build fully functioning characters for 3D animation.

As much importance is attached to the use of imaginative creative approaches as to demonstrating technical competence. The subject approaches the learning of technical disciplines with the same exploratory, open-ended attitude as conceptual projects.

The outcomes for this subject feed directly into Spring semester studio projects, and therefore a character design brief is introduced during the semester. Outcomes for this subject do not include animation.

82420 3D Modelling and Rigging Advanced

6ср

This project-based subject builds on the skills and techniques introduced in 82321 Context: 3D Modelling and Rigging Introduction and each student develops an advanced animation response to a suite of project briefs currently explored in tandem with 88211 Animation Studio: Narrative Experimentations. When taken in sequence after students have completed 82321 Context: 3D Modelling and Rigging Introduction, this advanced subject provides students with a detailed understanding of the design and production of 3D digital animation using industry standard Maya software. Students are expected to understand design processes in the production of 3D animation, gain knowledge of relevant software, demonstrate design and production skills, and demonstrate appropriate design solutions for a project of their choice

82520 Context: Design for Three-dimensional Computer Animation

6ср

For subject description, contact UTS: Design, Architecture and Building.

82620 Animation Studio: Animation Industry Project

12cp

The Industry Project Studio introduces students to the negotiation of animation outcomes through collaborative animation design projects (undertaken and marked as group and individual assignments) set by creative industry/community partners. Students work in groups learning professional practice skills in documentation, communication, negotiation and design outcomes. Projects have objectives set out by the industry/community project leader who works with the academic supervisor.

82621 Context: Experimentations for Animation and VFX

6cp

This subject complements the industry projects under development in Studio: Industry Project. Students work in groups (and submit work for individual and group assessment) to experiment and propose animation design solutions to the industry project. This subject requires students to apply their 3D animation skills acquired in 82221 Context: 3D Animation Introduction, 82321 Context: 3D Animation Advanced and 89205 Design for Three-dimensional Computer Animation in support of the projects undertaken in 82620 Animation Studio: Animation Industry Project. The aim of this subject is to further extend design practices in 82620 Animation Studio: Animation Industry Project. Areas include advanced rigging and character set-up using animation software such as Vicon iQ, Motion Builder and Maya to capture, process and apply motion capture and/or key frame data to a character and/or VFX. Students work in collaborative groups undertaking specific roles from pre-visualisation, production and postproduction/compositing to achieve an animation sequence outcome.

82710 Animation Studio: Advanced Animation Practice

12cr

This studio operates in tandem with 82711 Animation Studio: Animation Project Pre-Production, to advance students' individual design approach to animation practice. It focuses on self-directed research, where students develop strategies and practices that inform the basis of the honours project undertaken in Semester 2. Experimentation in thinking and practice is encouraged as a means towards developing an individual design approach with an emphasis on innovation. The aim of this studio is the fostering of conceptual thinking and design research into a key area of animation visualisation such as performance, VFX or narrative as it relates to their final studio, 82800 Animation Studio: Animation Project / Production.

82711 Animation Studio: Animation Project Preproduction

12cp

In this studio, students undertake to develop an idea/script / concept brief for an original short piece of animation work done in tandem with 82710 Animation Studio: Advanced Animation Practice. Their project can be in any form and style of animation production. Students work with leading animation professionals and academic supervisors to negotiate the feasibility and length of their proposed project and production schedule. In the first semester, students are expected to take their project through research and appropriate pre-production processes (such as script development, pre-visualisation of key animation concepts, storyboard stages and/or visual scripts). They are expected to continue to develop their technical skills through a series of dedicated workshops and master classes.

82800 Animation Studio: Animation Project/Production

24cp

This is the capstone project within the Honours year, building upon conceptualisation undertaken in Semester 1. Students realise an innovative animation design solution to their animation problem. These projects are self-directed and supported by leading animation professionals and academic supervisors and students may be able to engage industry practitioners in specialist fields of animation production and postproduction/ post-visualisation processes. Students are expected to complete a piece of animation of broadcast or public exhibition standard, which must show evidence that they have engaged in a lively dialogue between theoretical ideas and production practices. Their completed project should demonstrate their professional skills, creative expertise and evidence of their capacities as an animator or digital VFX designer.

83001 Fashion and Textile Design Special Project

6cp; intensive

Fashion and textile design is a diverse and complex creative field, encompassing broad ranging issues dealing with human interaction and the environment in which the discipline sits. This subject offers students the opportunity to gain a highly developed and detailed understanding of a specialised or specific area of fashion design practice. It enables students to explore fashion practice within a more holistic and expanded manner both in terms of its creation, representation and presentation.

83002 Fashion Event

6cp; block (from August 1 to Nov 6), August: 1hpw x 4wks, September: 4hpw x 3wks, 8hrs x 1wk, 25hrs x 1wk intensive, October: 3hpw x 1wk; introductory briefing July 29 (essential)

The subject revolves around the UTS Fashion and Textiles graduate fashion show held annually in the UTS Great Hall. The subject is for students interested in exploring the interface between fashion, public relations, marketing and events. It embraces design, communication and marketing in relation to public projects and fashion industry engagement. Encompassing aspects of event management, design and communications participating, students engage with a live brief and have the opportunity to work alongside professionals from fashion media, fashion marketing, PR, event staging and production, visual, interior and spatial design. This is a multi-venue, multi-faceted project revolving around a live fashion show extending to include a fashion exhibition, fashion publication and fashion industry events. Students work on a project basis utilising design thinking, interpersonal and communication skills in creative teams to realise the project.

83119 Thinking Fashion

6cp; 4hpw Undergraduate

This subject provides a foundation to fashion design practice. Through a series of lectures and design studio tutorials, students gain knowledge and design skills to enable them to undertake practical and theoretical investigation into the area of fashion practice. The lecture series introduces students to key theories of fashion, set around on the cultural, political and social significance of the dressed body. Topics include the fashion system, semiotics of fashion, fashion as art, and conceptual approaches to fashion. Design studios provide a practical context to examine the relationships between a range of 2D and 3D media, creative exploration and conceptual development. The subject culminates in the creation of an original fashion design project utilising conceptual approaches and practical investigation.

Typical availability

Autumn semester, City campus

83121 Fashion Communication: An Introduction

6ср

Undergraduate

This subject introduces the visual language of fashion through digital and freehand modes of communication. Students study the human body through life drawing and the basic rendering techniques required. Students are also introduced to digital means of representing mark-making and an understanding of the computer environment.

Typical availability

Autumn semester, City campus

83231 Fashion Cultures

6ср

Undergraduate

This subject encourages students to further investigate fashion practice through design investigation while integrating individual research into studio activities. A lecture series provides an overview of the relationship between cultural innovation and the fashioned body in relation to a number of historical and contemporary subcultures. Design studios provides a practical context for the exploration of fashion practice in relation to alternate garment making methodologies, creative process, process documentation, reflective practice and image making. The subject culminates in the creation of an original fashion design project enabling the student to position fashion design practice as a form cultural research.

Typical availability

Spring semester, City campus

First-year experience videos

View commentary from students and academics about this first-year subject at:

Student video: www.youtu.be/F6f-nKLJfIY

83233 Fashion Illustration Fundamentals 2

6Cp

This subject builds on students' proficiencies gained in earlier subjects as a means to further develop an understanding of the visual modes of fashion and textile design.

Within the illustration module students are introduced to key contemporary fashion illustrators and explore a diversity of mediums and rendering techniques as a way to generate detailed range drawings. Drawing is a critical communication tool in Global Fashion practice consequently students are encouraged to refine skills in order to accurately communicate design ideas and detail. The digital component of the subject enables students to translate hand rendered fashion illustrations and technical drawings using industry standard software such as Adobe Illustrator. Students continue to explore and learn a diversity of presentation modes as a means to extend their fashion and textile practice.

Typical availability

Spring semester, City campus

83341 Fashion, Gender and Identity

6cp; lecture and studio practice

Requisite(s): 83119 Thinking Fashion AND 83231 Fashion Cultures AND 85502 Researching Design History AND 85503 Design Thinking Undergraduate

This subject explores the social and political representations of gender and identity in fashion by studying the conditioning of the body and body image in western society. It challenges students to question fashion imagery and to analyse its message surrounding gender and cultural identity. It engages with fashion theory regarding the construction, performance and representation of gendered and sexual identities. The representation of appearance and its projection through media and cultural production is a key theme of this subject and provides the opportunity for students to engage in different modes of representation such as film, advertising, fashion photography, texts, and magazines.

Typical availability

Autumn semester, City campus

83343 Fashion Design: Past to Present

6cp

Requisite(s): (83231 Fashion Cultures AND 83341 Fashion, Gender and Identity AND (83342 Couture Techniques OR 83883 Couture Techniques) AND 85502 Researching Design History AND 85503 Design Thinking)

Undergraduate

This subject encourages students to explore traditional techniques as a means to create and engage with an inquiry into complex fashion design outcomes. The emphasis of the subject focuses on generating individual and original fashion design solutions specifically in relation to the human form. Students advance their design and technical knowledge as they are challenged to design three-dimensionally for the body. The subject is supported by specialised lectures, case studies and studio practice. It investigates the historical and contemporary context of fashion, and is supported by approaches to fashion draping as an essential patternmaking methodology. This subject combines both design and technical practices. It enables students to engage with advanced fashion construction skills as appropriate to the high fashion and couture markets including hand-sewing techniques.

Typical availability

Spring semester, City campus

83344 Fashion Communication: Drawing and Digital Media

6ср

Requisite(s): 83233 Fashion Illustration Fundamentals 2 Undergraduate

This subject consolidates the knowledge and understanding of drawing and digital media studied in previous communication subjects. Students develop projects specifically related to major studies in fashion. Students are encouraged to use both digital and freehand modes to explore the creative process, which may include client presentation and layout of fashion concepts. Mode of delivery is studio practice.

Typical availability

Autumn semester, City campus Spring semester, City campus

83563 Dress, Body and Couture

6ср

Requisite(s): (83341 Fashion, Gender and Identity AND (83342 Couture Techniques OR 83883 Couture Techniques) AND 83343 Fashion Design: Past to Present AND 83345 New Textiles and Technologies)

Undergraduate

This subject provides students with the opportunity to further explore design in relation to art, the body and form. A lecture series addresses notions of fashion's connection to art, conceptual design practices, alternative perceptions of couture practices and different forms of fashion presentation. Students pursue individual interests in terms of design and its application into a fashion context.

Typical availability

Autumn semester, City campus

83564 Digital Fashion Multimedia

6ср

Requisite(s): 83121 Fashion Communication: An Introduction AND 83233 Fashion Illustration Fundamentals 2 AND 83344 Fashion Communication: Drawing and Digital Media

Communication: Drawing and Digital Media

For further details, contact UTS: Design, Architecture and Building.

83565 Marketing Promotions for Fashion

6ср

Requisite(s): 83121 Fashion Communication: An Introduction AND 83233 Fashion Illustration Fundamentals 2 AND 83344 Fashion

Communication: Drawing and Digital Media

For further details, contact UTS: Design, Architecture and Building.

83566 Contemporary Fashion Styling

6ср

Requisite(s): (83341 Fashion, Gender and Identity AND (83342 Couture Techniques OR 83883 Couture Techniques) AND 83343 Fashion Design: Past to Present AND 83344 Fashion Communication: Drawing and Digital Media AND (83345 New Textiles and Technologies OR 83888 New Textiles and Technologies)) Undergraduate

This subject explores fashion styling and art direction in relation to the associated industries. Through a series of lectures, tutorials and project work, students research, analyse and consider the messages conveyed through fashion visual imagery, and use this as a basis for concept development and application towards, for example, a catwalk show, magazine or an advertising campaign.

Typical availability

Spring semester, City campus

83568 Advanced Fashion and Textile Techniques

6cp

Requisite(s): ((83342 Couture Techniques OR 83883 Couture Techniques) AND 83344 Fashion Communication: Drawing and Digital Media AND (83345 New Textiles and Technologies OR 83888 New Textiles and Technologies) AND 83343 Fashion Design: Past to Precent

This practice-led subject is designed to encourage students to build advanced skills and knowledge in technical areas of fashion and textile design. The subject includes issues relating to designing for 'product

life extension'. Each of the projects offers a series of lectures and studio tutorials, which introduce students to contemporary and historical aspects and theory. These also include professional and ethical design practice. A selection of textile project options are offered.

83621 Studio: Foundations in Patternmaking and Construction 1

6ср

Undergraduate

This subject introduces students to the principles of pattern making and garment construction, as a means to begin interpreting fashion design ideas into realisable garment outcomes. Students learn how to translate fashion drawings into flat pattern form, and to translate flat pattern pieces into three-dimensional form. In this subject students investigate material qualities essential to begin creating accurate and professional fashion garments, and learn industry techniques used for creating and interpreting production garment patterns. Students are introduced to garment block patterns, and investigate essential garment forms, and details applicable to these forms. Students undertake accreditation and OH&S training relevant to working in the specialised industrial sewing workshop.

Typical availability

Autumn semester, City campus

83622 Studio: Fashion Illustration Fundamentals 1

60

This subject introduces students to the fundamentals of fashion illustration as means to develop an essential understanding of modes of visual communication within a fashion context. In the illustration module of the subject, students examine freehand modes of drawing, and the importance of technical drawing and its relationship to the human body. The digital module familiarises students with computer software such as Adobe Illustrator and Photoshop, and instils in students visual techniques suitable for creating professional fashion layouts and range boards to present their design work.

83721 Studio: Fashion Illustration Exploration

6cc

This subject enables students to advance their knowledge and technical skills in fashion communication. It extends the techniques gained in 83622 Studio: Fashion Illustration Fundamentals 1 and 83233 Fashion Illustration Fundamentals 2 through exploring complementary mediums and modes of fashion illustration. Subject content includes life drawing and initiating students to digital media software such as Adobe and InDesign as a means to create professional layouts and formats. Essential proficiencies in communicating fashion are crucial within the fashion and textile industry. This subjects aims to further develop these professional attributes through assisting students to understand and create the importance of developing fashion collateral, portfolio and client presentations.

83722 Studio: Body Mapping

6ср

In this subject the primary emphasis is to introduce students to the fundamentals of working with stretch and knitted fabrications, and generating contoured fashion design 'on-the-body'. The subject combines design and technical components, and teaches students how to develop design concepts suitable for predetermined markets, patternmaking and construction of 'bodywear', such as swimwear or sportswear. The subject is supported by a series of lectures with industry specialists as a means for students to advance their knowledge and provide research pathways for third-year subjects. Students are challenged to produce a portfolio of illustrated design work as a means to translate a series of their designs into realised outcomes. Students investigate advanced notions of patternmaking, constructing garment toiles, body fitting techniques, and critiquing final garment design.

83723 Textile Lab: New Technologies

6ср

This subject introduces students to the fundamentals of textile print design and emerging digital technologies for fashion. Through a series of workshops, students explore creative methods to generate imagery, with the emphasis on individuality, originality and innovation for textile application. Students learn traditional textile production techniques including screenprinting, and contemporary digital textile techniques including sublimation and digital printing. In this subject students challenge print conventions and explore

creative photographic and graphic styles. Students are introduced to techniques used to create repeat patterns and how to prepare artwork for print production in industry. A series of lectures and workshops introduce students to developments in techno textiles, including extreme, medical and sports applications, with the aim to generate an awareness of creative potentials for fashion design innovation. An emphasis throughout this subject is placed on a professional and sustainable print room practice. The subject is linked to industry sponsorship opportunities.

83724 Studio: Bespoke Fashion

6ср

For further details, contact UTS: Design, Architecture and Building.

83772 International Design

6ср

Requisite(s): (83561 Men's Collection OR 83884 Men's Collection)
AND (83562 Tailoring: New and Traditional Techniques OR 83885
Tailoring: New and Traditional Techniques) AND 83563 Dress, Body
and Couture AND 83564 Digital Fashion Multimedia AND 83565
Marketing Promotions for Fashion AND 83566 Contemporary
Fashion Styling AND (83567 Women's Collection OR 83886
Women's Collection)

There are also course requisites for this subject. See access conditions.

For further details, contact UTS: Design, Architecture and Building.

83773 Fashion and Textiles Research Dissertation

6ср

Undergraduate

In this subject students are required to research a project oriented to support their personal design philosophy or interest in a design-related topic. Research must be presented in a written form and may include visual components.

Typical availability

Autumn semester, City campus

83774 Fashion and Textile Research and Conceptualisation

12cp

This subject requires students to research a project that supports their personal design philosophy or interest within a fashion and/or textile design-related field. The in-depth design project provides a structured experience for students by offering a self-directed design project that combines research and practice. The subject is supported by a series of lectures, tutorials and workshops that address current fashion and textile design issues. It concludes with a final body of experimental design work that documents the research and design process.

83777 Professional Practice for Fashion and Textile Designers

6ср

Undergraduate

This subject prepares students for entry into professional practice. There are lectures on business procedures related to fashion and textile design and the subject includes copyright and ethical issues specific to the discipline. Students follow a self-initiated project designed to enhance their professional knowledge and skills with regard to the fashion and textile design industry. Examples of possible project areas include industry initiated design competitions, industry linked grant application, business plans and community collaboration. While the subject is self-directed, learning is supported by group tutorials and workshops.

Typical availability

Autumn semester, City campus Summer session, City campus

83821 Studio: Men's Collection

12cp

This subject gives students the opportunity to explore fashion within an international context and focuses on design, making and presentation of original menswear. A lecture series explores contemporary and historical contexts of male culture, in relation to men's style and the performance and presentation of masculine identity. A brief enables students to challenge their own aesthetic bias by working with an existing design signature, utilising research,

technical and conceptual skills to produce a significant body of creative work. This subject brings together a strong industry focus set around range development and the presentation of contemporary menswear. Students are provided an opportunity to consider alternate modes of presenting menswear proposals. These revolve around 2D image making and publication or the presentation of the menswear within spatial and performative contexts.

83822 Studio: Women's Collection

12cr

In this subject students explore experimental fashion practice as it relates to contemporary womenswear. The subject is supported by a series of guest industry lectures and specialised studio workshops where students explore contemporary ideas and design methodologies. The lecture series introduces students to conceptual fashion practice and the relationship of fashion to art and the body. Through a series of workshops in explorative drape techniques, students investigate a sculptural approach to garment formation, and generate ideas for womenswear range outcomes. This subject encourages students to challenge and extend contemporary fashion practice, expressed in the production of garment outcomes and design of a women's collection.

83823 Fashion and Textiles Professional Practice

6ср

This subject develops students' understanding of professional practice in the fashion and textile design industries. The focus for the subject is on contemporary industry practice within both local and global markets. Students develop their understanding of different roles within fashion and textile business structures, and projects are developed through both individual and group work to simulate design team environments. The role of the designer within the fashion system is explored, together with practices of making, manufacturing, marketing, and business planning. Students are introduced to industry practices such as costing garment ranges, and explore retail environments and e-commerce. Students are also introduced to career development options, job applications and portfolios. The subject includes contemporary issues which challenge industry practices including ethical and environmental concerns.

83881 An Introduction to Patternmaking and Construction

6ср

Undergraduate

This subject aims to provide students with the basic technical skills and abilities essential to begin interpreting design into a 3D form. Students participate in workshops that incorporate flat pattern making and garment construction where they learn the various techniques, finishes and specifications required to generate design ideas and concepts into realised outcomes.

Typical availability

Autumn semester, City campus

83882 Foundations in Patternmaking and Construction 2

6ср

This subject enables students to advance techniques learnt in 83621 Foundations in Patternmaking and Construction 1. Students continue to learn how to use the principles of patternmaking and garment construction to further interpret complex fashion design ideas into realisable garment outcomes. Students are introduced to advanced garment forms, and continue to investigate material qualities essential to understand in order to create accurate and professional fashion garments. Students learn to create complex garment components in both flat pattern and three-dimensional garment forms. In this subject, students learn how to apply and translate these principles into their own individual garment design outcome, based on a complex garment type.

Typical availability

Spring semester, City campus

83883 Couture Techniques

6cp

Requisite(s): (83120 An Introduction to Patternmaking and Construction OR 83881 An Introduction to Patternmaking and Construction) AND (83232 Intermediate Patternmaking and Construction OR 83882 Foundations in Patternmaking and Construction 2) Undergraduate

This subject promotes traditional specialist techniques through a variety of complex and inquiring design outcomes. Through case studies and studio practice students investigate the historical and contemporary context, as well as the use of, haute couture techniques. This subject is supported by drape methodology and introduces students to the fundamental techniques of creating design on a mannequin and the human form.

Typical availability

Autumn semester, City campus

83884 Men's Collection

6cr

Requisite(s): (83341 Fashion, Gender and Identity AND (83345 New Textiles and Technologies OR 83888 New Textiles and Technologies) AND 83343 Fashion Design: Past to Present AND 83344 Fashion Communication: Drawing and Digital Media AND (83342 Couture Techniques OR 83883 Couture Techniques)) Undergraduate

This subject focuses on designing for men, covering issues regarding the evolution of men's attire and the context of the male in society. Through research work and a project brief, students explore the historical and contemporary context of menswear, eventuating in a body of work.

Typical availability

Autumn semester, City campus

83885 Tailoring: New and Traditional Techniques

6ср

Requisite(s): (83120 An Introduction to Patternmaking and Construction OR 83881 An Introduction to Patternmaking and Construction) AND (83232 Intermediate Patternmaking and Construction OR 83882 Foundations in Patternmaking and Construction 2) AND (83342 Couture Techniques OR 83883 Couture Techniques)

For subject description contact UTS: Design, Architecture and Building.

83886 Women's Collection

6ср

Requisite(s): ((83561 Men's Collection OR 83884 Men's Collection) AND 83563 Dress, Body and Couture AND 83568 Advanced Fashion and Textile Techniques)

Undergraduate

In this subject students explore experimental fashion practice as it relates to contemporary womenswear. The subject is supported by a series of guest industry lectures and specialised studio workshops where students explore contemporary ideas and design methodologies. The lecture series introduces students to conceptual fashion practice and the relationship of fashion to art and the body. Through a series of workshops in explorative drape techniques, students investigate a sculptural approach to garment formation and generate ideas for womenswear range outcomes. This subject encourages students to challenge and extend contemporary fashion practice, expressed in the production of garment outcomes and design of a womens collection.

Typical availability

Spring semester, City campus

83887 Fashion and Textile Design Major Project

24cp

Undergraduate

The major project allows students to fully demonstrate their professional ability and accumulated knowledge from previous years' study, through the execution of a personally prepared design brief completed earlier in the year. The project is self-directed and study is independent of the program but is supported by lecturers in supervisory roles. Assessment is based on the process and presentation of an agreed and completed body of work.

Typical availability

Spring semester, City campus

83888 New Textiles and Technologies

6cp

Requisite(s): ((83232 Intermediate Patternmaking and Construction OR 83882 Foundations in Patternmaking and Construction 2) AND 83233 Fashion Illustration Fundamentals 2)

The aim of this subject is to introduce current and emerging technologies and processes developed by industry and applied to textiles in the field of art, design, engineering and science. Students explore current and future concepts of textiles and consider their specific application into fashion design. Students are introduced to the design potential of these materials and develop an awareness of the creative possibilities of new textile processes. Through a series of lectures and workshops, students are also introduced to the contemporary work of textile artists and designers who use new textile technologies in their work.

Typical availability

Spring semester, City campus

83900 Research Realisation: Major Project

24cr

Further information on this subject is available from UTS: Design, Architecture and Building.

83921 Research: Fashion and Textiles Dissertation

6ср

Further information on this subject is available from UTS: Design, Architecture and Building.

83922 Research: Professional Practice Identity

6cp

Further information on this subject is available from UTS: Design, Architecture and Building.

83923 Research: Fashion Concept Lab

12cp

Further information on this subject is available from UTS: Design, Architecture and Building.

84000 Industrial Design Special Project

6cp

Industrial design covers a diverse and complex range of issues dealing with the human condition and the built environment. Due to this diversity and complexity, practitioners generally specialise within a sector of the industry. This subject offers students the opportunity to gain a highly developed and detailed understanding of a specialised or specific area of industrial design practice. Entry into this subject is based on the capabilities of the individual student and the appropriateness of the proposed study. Students engage with a specific project through a supervised self-directed learning contract that offers a flexible learning approach. Projects may respond to community and faculty needs or to the individual student's preferred direction in their academic and career development. This subject may only be undertaken following consultation with and approval by the course director.

84110 Aesthetics in Industrial Design

6ср

Undergraduate

Aesthetics play a very important role in industrial design—how people perceive a product can mean the difference between its success, or failure in the market place. However aesthetics are more than simply a means of selling products, the pleasure derived from using products that look, feel and work beautifully is very important to humans from all backgrounds. This subject explores what it is that determines whether aesthetics succeed or fail, and gives the student first-hand experience in analysing and discussing aesthetic as well as practical experience in designing with aesthetic development as the main focus. The subject covers the creative process and methodologies for identifying and developing both aesthetic judgment and confidence.

Typical availability

Autumn semester, City campus

84111 Understanding Three-dimensional Form

6ср

Undergraduate

Throughout the program, students are expected to construct simple models, make test components and possibly working prototypes. This practical, hands-on subject sets the foundation for this work. It covers the appropriate use of materials and tools and the related OH&S issues. The subject includes workshop accreditation required for the use of power tools and equipment. Exercises involving the construction of three-dimensional objects form part of the subject.

Typical availability

Autumn semester, City campus

84112 Industrial Design Communications

6ср

Undergraduate

The development of a visual language for the communication of design ideas and solutions to others is integral to the design process. The subject introduces students to a number of techniques and conventions that reflect the changing nature of communication in design. The ability to quickly hand sketch allows the designer to investigate, develop and reflect on their ideas in a concrete way. The understanding of the conventional language of two-dimensional engineering drawing provides the essential information for products to be produced by others. The digital environment forms the third stream of this subject where the communication of shape and form are further developed.

Typical availability

Autumn semester, City campus

84113 Problem Solving in Industrial Design

6ср

Undergraduate

A core activity within the profession of industrial design revolves around creative problem solving. Consequently, students need to be introduced to and develop a deep understanding of this core activity. This subject therefore introduces basic problem solving structures and strategies within an industrial design context. This is accomplished using various teaching strategies including a series of formal lectures, industrial design problems and projects (long term and short term) to be completed as individuals and in groups.

Typical availability

Spring semester, City campus

84114 Industrial Design Digital Communication

6ср

Undergraduate

Integrated Product Design operates in a global context and successful communication of design ideas at any stage of the development relies on systems that can transfer digital information accurately and immediately to reduce lead-times, communicate intent and to engage resources available anywhere in the world. This subject centres on communication and the relevant digital programs used by the designer in the expression of their ideas. This includes two-dimensional raster and vector-based programs as well as an introduction to the construction of three-dimensional geometry in a virtual context.

Typical availability

Autumn semester, City campus Spring semester, City campus

84115 Informing Industrial Design

6cn

This subject examines the philosophical and theoretical achievements that have shaped contemporary Integrated Product Design. Students are introduced to academic research methods and use these skills to inform practice based projects. Through a series of lectures and design studio tutorials, students will cover the period from the Industrial Revolution through to the present day.

84116 Integrated Product Design Communications

6cr

Undergraduate

The development of a visual language for the communication of design ideas and solutions to others is integral to the design process. This subject introduces students to a number of techniques and conventions that reflect the changing nature of communication in design. The ability to quickly hand sketch allows the designer to investigate, develop and reflect on their ideas in a concrete way. The understanding of the conventional language of two-dimensional engineering drawing provides the essential information for products to be produced by others. The digital environment forms the third stream of this subject where the communication of shape and form are further developed.

Typical availability

Autumn semester, City campus

84117 Integrated Product Design Digital Communication

6cp

This subject centres around communication and the relevant digital programs used by the integrated product designer in the expression of his or her ideas. This includes two-dimensional raster and vector-based programs as well as an understanding of the construction of three-dimensional geometry in a virtual context.

84118 Informing Integrated Product Design

6ср

This subject examines the philosophical and theoretical achievements that have shaped contemporary integrated product design. Students are introduced to academic research methods and use these skills to inform practice-based projects. Through a series of lectures and design studio tutorials, students cover the period from the Industrial Revolution through to the present day.

84120 Structure, Form and Material in Industrial Design

6cp

Requisite(s): 84110 Aesthetics in Industrial Design AND 84111 Understanding Three-dimensional Form AND 84115 Informing Industrial Design

Undergraduate

All products need a certain degree of structure if they are to function. Understanding how products respond to the environmental loads placed upon them is therefore an important part of design. This subject aims to help students identify the way in which products react to various types of load, and how to design in a suitable level of structure. Starting with an introduction to materials' properties, and simple engineering principles, the subject develops an understanding of how form and material choice can be manipulated to achieve the desired design outcome.

Typical availability

Autumn semester, City campus

84121 Computer-aided Industrial Design

6cr

Requisite(s): 84114 Industrial Design Digital Communication Undergraduate

Computer-aided design is a substantial part of an industrial designer's repertoire. This subject continues with the mechanics of three-dimensional computer modelling and how it can be used to explore form and create virtual products. It also covers how the model can be used to communicate that form to others and how to

support downstream manufacturing processes. This subject gives students exposure to the whole process from form creation to product realisation.

Typical availability

Autumn semester, City campus Spring semester, City campus

84122 Ergonomics and Industrial Design

6ср

Requisite(s): 84110 Aesthetics in Industrial Design AND 84111 Understanding Three-dimensional Form AND 84115 Informing Industrial Design Undergraduate

Ergonomics is the application of scientific information about human capabilities and limitations to design. Anthropometry is a component of ergonomics that is about the measure of human scale and strength. Ergonomics and anthropometry play a fundamental role in industrial design. The scale and capabilities of humans provides critical guidelines for the successful development of product and interface designs. By appropriate application of data, designers can make designs that are efficient and effective to use. This subject introduces the various measures of both efficiency and scale, and informs students of where to find and how to set about interpreting scientific data relating to the topic.

Typical availability

Autumn semester, City campus

84123 Material Manipulation

6cr

Requisite(s): 84120 Structure, Form and Material in Industrial Design

Undergraduate

Manufacturing is intrinsic to design - without an understanding of basic manufacturing principles such as how materials are processed, which materials provide what properties, etc., it is impossible to produce a considered design response to a problem. This subject aims to introduce students to major processes and materials, to involve them in design projects that demand material and process considerations, and to initiate a lifelong learning process aimed at validating the conceptual design process.

Typical availability

Spring semester, City campus

84124 Sustainability and Design

6ср

Requisite(s): 85503 Design Thinking AND 84110 Aesthetics in Industrial Design AND 84111 Understanding Three-dimensional Form AND 84115 Informing Industrial Design AND 85502 Researching Design History

Undergraduate

Among the more urgent needs of human societies today is to realise sustainable relationships with our planet's biosphere. The last decade has seen the emergence of increasingly comprehensive strategies by which designers can contribute to this wider societal goal. This subject provides frameworks for these strategies, options for their implementation in industrial design, as well as project opportunities to gain practical experience in their application.

Typical availability

Spring semester, City campus

84130 Product Technology

6ср

Requisite(s): 84120 Structure, Form and Material in Industrial Design AND 84123 Material Manipulation Undergraduate

This subject makes an in-depth examination of how things work. It is intended to give students an understanding of the technology that makes products work and enables humans to interact and control product functions. The completion of a major project requires students to demonstrate an understanding of the creative application of technology to a product design of their own.

Typical availability

Autumn semester, City campus

84131 Industrial Design Directions

6ср

Requisite(s): 84110 Aesthetics in Industrial Design AND 84111 Understanding Three-dimensional Form AND 84115 Informing Industrial Design AND 85502 Researching Design History AND 85503 Design Thinking

Undergraduate

This subject is about exploring different careers that are available on completion of the Industrial Design course. Students have the opportunity to research one or more design career options in some detail and either undertake work experience in the design field of their choice or carry out an externally based project related to their design interest. Past graduates and practising designers are invited to talk about their experiences and the realities of working as professionals.

Typical availability

Autumn semester, City campus Spring semester, City campus

84133 Industrial Design Theory

6cr

Requisite(s): 85502 Researching Design History AND 85503 Design Thinking

Undergraduate

Design is experiencing profound change, instigated in part by remarkable and rapid developments in technology and changing perceptions of the role of design in society. This subject considers diverse theoretical and practical developments core to contemporary and future industrial design practice. It fosters divergent, emergent and sometimes controversial viewpoints. It is offered primarily by way of lectures and seminars. Students are mentored in researching and presenting material relevant to the subject themes.

Typical availability

Spring semester, City campus

84134 Industrial Design Professional Communication

6ср

Requisite(s): 84114 Industrial Design Digital Communication AND 84121 Computer-aided Industrial Design

Undergraduate

Professional communication of design intent at various stages of the design process is critical in ensuring that clients, design team members and various stakeholders are able to understand, participate and respond to the inherit complexities addressed in industrial design projects. This subject brings together techniques and methods of communication specific to the integrated product design profession. It develops students' ability to evaluate and employ appropriate communication strategies for whatever situation is presented to them. Students develop a deeper understanding of the different methods of communication available to integrated product designers.

Typical availability

Spring semester, City campus

84135 Ecodesign Practice

6cn

Requisite(s): 84124 Sustainability and Design AND 84904c Industrial Design Major Project: Realisation

It is during the design process that the potential for environmental improvement becomes a reality. This subject describes the practical steps and strategies available to industrial designers wanting to optimise their product's environmental performance. Designers must make complex trade-offs over the whole product life cycle during the ecodesign process.

Typical availability

Autumn semester, City campus

84610 Inside Design

6ср

Integrated Product Design is a complex discipline that can have a major impact on society and influence on people's lives. It requires an understanding of the many stages of the design process. In the development of a design solution a designer is concerned with details, proportions, combining materials and subtle finishes. To take it to production a designer must understand materials and manufacturing processes alongside where it fits within the market. This subject allows students to explore and develop an understanding of design practice and opportunities of the discipline in a broad context. The subject is about gaining an understanding of what Integrated Product Design is now and where it will be in the future. Insights into areas of contemporary design practice are supported through the reflection and analysis of various design reports, documentaries and commentaries available in video, film and print materials. Understandings and interpretations are demonstrated through reports, presentations and form studies of research conducted, including interviews with practicing designers.

84611 Design Thinking in Integrated Product Design

6cp

Current design research relating to design thinking and associated design thinking strategies establishes a strong link to many creative design processes and practices. Consequently, students need to be introduced to and develop a deep understanding of these contemporary topics as they relate to the processes and practices of integrated product design (IPD) specifically. This subject therefore introduces basic design thinking structures and strategies as they relate explicitly to the industrial design profession and the integrated product design context. This is accomplished using various teaching strategies including a series of formal lectures, IPD problems and projects.

84710 Research Methods in Integrated Product Design

6cp

Various research methodologies, strategies and techniques are of core importance in obtaining, analysing and understanding research data and its implications for integrated product design. This subject considers diverse theoretical and practical research methodologies which serve to support and build on previous learning. Students are mentored in researching and using a variety of research methodologies, strategies and analysis techniques.

84711 User-Centred Design

12cp

User-centred design involves the selective application of research and design methods focused on understanding the needs and limitations of the end-user in the development of new products, interfaces and systems solutions. The development of designs of optimum useability and performance involves the analysis of users, their environment and circumstance through the methodological application of interventions, testing methods and experimentation supported by literature and empirical research. The subject aims to support students in creative exploration, analysis and reflection of the problem space and solution concepts through design thinking reliant on the use of prototyping skills in the pursuit of innovative solutions that meet both ergonomic (the application of scientific information about human capabilities and limitations) and commercial goals.

84712 Product Engineering

12cp

An understanding of basic mechanical and electrical materials and manufacturing knowledge must be applied in the design and development of new products and systems. This subject introduces students to a range of engineering and electrical principles as they relate to industrial design process, through a series of projects where Design Thinking is supported to explore technical approaches to the functional aspects of future orientated products, systems and interfaces both conceptually and in the establishment of efficient physical forms. Aptitude in the ability to innovate, experiment and rationalise solution concepts that appropriately consider these technical aspects, with consideration to ecological sustainability, is developed through the practice of design skills, including sketching, prototyping and collaboration to produce designs that are socially responsible, technically feasible and operationally intuitive for the end-user.

84771 Industrial Design Project 700A

6cr

Requisite(s): 84120 Structure, Form and Material in Industrial Design AND 84123 Material Manipulation AND 84130 Product Technology

Undergraduate

Market focus: A manufacturer or company representative briefs the students on a real-world design problem as seen from a marketing perspective. Students are required to draft a formal brief, prepare a task/time sheet and develop a resolution to the problem. On completion they present the solution to the 'client' for feedback.

Typical availability

Autumn semester, City campus

84772 Industrial Design Professional Practice

6cr

Requisite(s): 84122 Ergonomics and Industrial Design AND 84130 Product Technology AND 84133 Industrial Design Theory AND 84134 Industrial Design Professional Communication Undergraduate

This subject focuses on understanding the different models of design management structures and methods used in industry and recognising their impact on the design process.

The practice of industrial design, particularly Australian design, is investigated through a series of case-study presentations. Particular emphasis is placed on issues relating to ethics, intellectual property and contractual administration in new product development. This subject enables the student to deepen their understanding of industrial design through application of knowledge gained in the course to the area of professional practice.

Typical availability

Autumn semester, City campus

84780 Research Dissertation ID

6ср

Requisite(s): 84131 Industrial Design Directions AND 84133 Industrial Design Theory

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject ties together many of the strands of the program to date. Students examine an activity field from a design systems perspective: the tasks required to perform the activity, the current products involved, the size of the field and its complexity. In short, all the systems which interact with the field of study. The aim is to find where improvements might be made and how they might be implemented, either by changes to the system or by the introduction of new or improved products. The results are compiled in a report.

Typical availability

Autumn semester, City campus

84811 Smart Design

12cp

As the world is experiencing many profound and rapid technological and social changes, students must be properly prepared to operate in this new environment. Students need to develop next generation products, systems, and environments which are a result of 'smart' thinking and are in themselves 'smart/innovative'. Drawing upon and developing the practical skill sets and design thinking experiences established in the first two years of the curriculum, this subject makes an in-depth examination of how things work and should work to benefit larger sociocultural contexts. It provides students with an understanding of the technology that makes products work and enables humans to interact and control products, systems and environments.

84812 Innovation and Commercialisation in Integrated Product Design

12cp

This subject focuses on understanding the different models of integrated product design practice, management structures and methods used in industry and understanding the impact these variables have on the design process. The connection between

design and business of varying scale and capability is explored. The practice of integrated product design, particularly Australian design, is investigated through a series of case-studies including small (designer-maker or solo practitioner), medium (SME manufacturing companies) and large (multinational) businesses. Particular emphasis is placed on issues relating to ethics, intellectual property, innovation, design thinking, design expertise and contractual administration in new product development. This subject enables the student to deepen their understanding of industrial design through application of knowledge gained in the course to the area of professional practice.

84813 Integrated Product Design Professional Communication

6cp

For further details, contact UTS: Design, Architecture and Building.

84880 Major Project ID

24cp

Requisite(s): 84771 Industrial Design Project 700A AND 84780 Research Dissertation ID AND 84140 Industrial Design Professional Practice AND 84134 Industrial Design Professional Communication There are also course requisites for this subject. See access conditions.

Undergraduate

The major project is determined by the student in consultation with staff, and the topic is normally derived from research carried out in 84780 Research Dissertation ID. The field of study largely determines the content, however it is expected the project will include an analysis, solution proposal, documentation and presentation. The aim of this project is to demonstrate the skills and knowledge gained during the course.

Typical availability

Spring semester, City campus

84900 Superstudio

24cp

In this subject students simultaneously undertake a series of design projects. Each project is used to evaluate various design approaches to the development of form and solution for an identified problem space established through formally conducted research. Throughout the subject Design Thinking is supported in the exploration of methodology and process as a driver for establishing innovative outcomes that address a human need and are mindful of the social, ecological and global impact of design intervention. Students are expected to negotiate the establishment of their own assessment criteria to enable extension and coordination of learning attributes that match self-directed and identified project goals. The subject requires students to draw upon knowledge and skills gained throughout the course and involves concept evaluation and selection, design development and detailing, rationale for situated context and communication presented in the form of reports, visual presentations and prototypes. Working on multiple projects is a reflection of professional practice and requires careful time management.

84902 Industrial Design Major Project: Research and Conceptualisation

12cp

Requisite(s): 84122 Ergonomics and Industrial Design AND 84130 Product Technology AND 84133 Industrial Design Theory AND 84134 Industrial Design Professional Communication

This is a project driven subject focused on researched-based designing. Throughout it students produce a design project brief and a number of conceptual designs. The brief is developed through engagement of appropriate research methodologies. These include but are not limited to background contextual research; theoretical conceptual investigation; situation analysis; problem-statement; and statement of aims, methods and outcomes and technological mapping. The brief development should be further informed by contextual exploration through in-depth observation, interviewing or probing of the social context. The conceptual designs should evidence explorations of form, function, ritual-of-use, ergonomics, product life cycle, materials and technologies.

84903 Industrial Design Professional Project

12cr

Requisite(s): 84122 Ergonomics and Industrial Design AND 84130 Product Technology AND 84133 Industrial Design Theory AND 84134 Industrial Design Professional Communication

This subject allows students to demonstrate and build on their comprehension of the knowledge gained so far in the course. Projects emphasise all aspects of the industrial design process and students are required to engage with social, technological, environmental and commercial issues. Projects reflect real-world design briefs, where possible, supported by a manufacturer or company.

84904 Industrial Design Major Project: Realisation

12cp

Requisite(s): ((84471 Industrial Design Major Project: Research and Conceptualisation OR 84902 Industrial Design Major Project: Research and Conceptualisation) AND 84135c Ecodesign Practice)

The subject simulates a professionally conducted project that is informed by research conducted in 84902 Industrial Design Major Project: Research and Conceptualisation to address an identified problem associated with the human condition. Students are required to resolve the connections between user need, social context, commercial feasibility and ecological responsibility associated with their stated design brief in the development of products, systems or service solutions. The subject requires students to draw upon knowledge and skills gained throughout the course and involves concept evaluation and selection, design development and detailing, costing documentation, communication and project management presented in the form of reports, visual presentations and prototypes.

84905 Design in the Wild

12cc

Increasingly professional Integrated Product Design practice operates across international borders and the prevalence of working collaboratively is addressed in the teaching of this subject. Design in the Wild offers practice based projects linked to partners and stakeholders external to UTS, exposing students to managing and participating in projects that operate both in person and via digital connections. This context facilitates students to work in multidisciplinary teams, where teams can be defined as groups formed within their own cohort at UTS or as part of a group which include members from outside UTS. This subject heightens the importance of communication and students are required to draw on all their previous learning in this area.

84906 Professional Studio

85500 Design Futures: Creative Technologies

6cn

Requisite(s): 85502 Researching Design History AND 85503 Design Thinking

Undergraduate

In this subject, students enhance the creativity of their designing in the context of increasingly technology-dependent futures. Students experiment with a range of creative problem-solving techniques and learn to take more risks with lateral ways of generating design options. Through various philosophies of technology and case studies of the development, take-up and consequences of a number of technological innovations, students also gain an understanding of how technology creates, and is created by, changing cultural habits, perceptions and values. By bringing together information on creativity strategies and human-technology relations, students are able to develop alternative futures through experiments with design-orienting scenarios.

Typical availability

Autumn semester, City campus

85502 Researching Design History

6ср

In this subject students are introduced to academic culture and the research and argumentation conventions involved in higher learning. Students use these skills to investigate key issues throughout the history of modern design. With this understanding, students begin to be able to make judgments about what design can and needs to do in the coming decades.

Typical availability

Autumn semester, City campus

85503 Design Thinking

6ср

Undergraduate

The aim of this subject is to help students develop their attitude, behaviour and thinking as designers. It aims to show them what the field of design looks like from the inside and to challenge preconceptions. Students develop their knowledge of design processes and design research techniques that are common to all design disciplines. Students learn a range of strategies for working in teams, defining design problems, researching design contexts, generating creative responses, evaluating proposals from different perspectives, and visualising the arguments for proposals. The subject also introduces students to the rigorous and self-directed learning environment of the School of Design.

Typical availability

Autumn semester, City campus

85504 Design Futures: Sustainable Lifestyles

6cp

Requisite(s): 85502 Researching Design History AND 85503 Design Thinking

This subject examines how design can influence people to live and work more sustainably. Students investigate the many varied historical and international forces that have led modern consumer societies to evolve unsustainably and utilise resources inequitably. By engaging with theory and practice students gain an understanding of the forces that continue to prevent societies from becoming more sustainable. Through this subject students develop proposals for design-led attitudinal and behaviour change toward more sustainable ways of living and working.

Typical availability

Spring semester, City campus

85505 Design Interventions: Making Theories

6cn

Every design embodies a theory about people, the world and the way people interact with products, environments and communications. This subject teaches how to develop well-constructed theories that can give new insights into situations and thereby develop more creative and more effective designs. Students are introduced to a range of current cultural theories including: visual culture – which focuses on the way the 'society of spectacle sees things'; and material culture – which focuses on the material things we depend upon and value by owning.

Typical availability

Spring semester, City campus

85506 Design Differences: Intercultural Asia

6ср

Requisite(s): 85502 Researching Design History AND 85503 Design Thinking

In this subject, students explore issues of intercultural communication and cross-cultural designing. The subject examines the differences in design cultures not only between the East and West, but between different east Asian countries, and within those countries as they negotiate post-colonialism or globalisation. Students learn about some of the design traditions and philosophies of particular North-East and South-East Asian countries. Through applied research toward interdisciplinary design projects, students also explore current design issues and trends, including the nature of professional practice in those countries.

85509 Design Differences: Community Identities

6cp

Designers fulfil the needs and desires of others through empathy. This subject explores notions of identity so that you can have more insight into your own background and more flexibility when trying to understand the backgrounds of others. You will examine changing senses of self and community in an age of globalised media and commerce using contemporary cultural studies perspectives. The subject also explores the politics of marginal and mainstream identities through a range of experiences and experiments. As a result, you will become more adept at working with a range of competing and often incompatible stakeholder expectations.

Typical availability

Autumn semester, City campus Spring semester, City campus

85601 Design Futures: Business Innovation

6ср

Requisite(s): 85502 Researching Design History AND 85503 Design Thinking

This subject examines how design can drive business innovation, enabling businesses to be on the forefront of creating change. It looks at case studies that have employed design-led approaches to create new markets, reshape habits, perceptions and social values. In this context students investigate current practices and trends in design, participatory design and human centred design approaches. By engaging with design management and design thinking theory students gain an understanding of the role design can play in shaping

business models and in developing innovative and entrepreneurial design ideas. This subject centres on interdisciplinary collaborations through which students identify new market potential whilst experimenting with future-orienting scenarios, and then design/propose something for that new market.

85602 Interdisciplinary Design Lab: Undergraduate

6ср

Requisite(s): 85701 Research Based Designing

This subject is an opportunity for students to work intensively on experimental briefs that range across design disciplines. The design lab allows them to extend their abilities by engaging with challenging briefs in innovative contexts, such as emerging technologies or pressing social issues. The labs enhance critical analysis skills and the creativity of design work. They also teach students better team and project management skills in time-pressured situations and create opportunities to reflect on their own design processes when compared to those of other disciplines.

Typical availability

Spring semester, City campus

85603 Interdisciplinary Design Experience: Undergraduate

6ср

Requisite(s): 85701c Research Based Designing

Undergraduate

This subject is an opportunity for students to work in inter-disciplinary teams on live briefs that range across design disciplines. The process enhances research and communication skills, as well as the ability to think critically about the consequences of what is designed. In particular, it allows students to learn in-depth about collaborative design and the potential of design to effect change in complex situations. Working with live briefs and real clients teaches better team and project management skills in situations where people depend upon professionalism. Working with colleagues from different design disciplines provides students with the opportunity to reflect on their own design processes.

Typical availability

Autumn semester, City campus

85604 Reflective Practice

6cp

Professional designers are reflective practitioners, reflecting on their designs and their designing, while designing and after completing a job. Expert designers share their reflections with their peers and actively challenge the habits and prejudices revealed by their reflections. Through a series of readings, design exercises and writing exercises, students learn how to notice aspects of their designing worth reflecting on, how to interrogate what they notice, develop and test theories about their designing, and how to implement changes to the way they design.

85605 Design Differences: Community Identities

6cp

Requisite(s): 85502 Researching Design History AND 85503 Design Thinking

Undergraduate

Designers fulfil the needs and desires of others through empathy. This subject explores notions of identity so that students can have more insight into their own background and more flexibility when trying to understand the backgrounds of others. Students examine changing senses of self and community in an age of globalised media and commerce, using contemporary cultural studies perspectives. This subject also explores the different ways designers can help build the capacities of communities to sustain themselves in the future. The subject centres around interdisciplinary collaborations through which students identify an area of need, and then, in consultation with representatives of that context, design empowering responses.

85701 Research Based Designing

6ср

Requisite(s): (85502 Researching Design History AND 85503 Design Thinking AND (85506 Design Differences: Intercultural Asia OR 85601 Design Futures: Business Innovation OR 85504 Design Futures: Sustainable Lifestyles OR 85500 Design Futures: Creative Technologies) AND 85603c Interdisciplinary Design Experience: Undergraduate)

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

The quality and innovativeness of professional designing depends upon careful and creative research. This subject introduces students to a range of methods and strategies appropriate to design processes through which designers can acquire valid and insightful understandings of the contexts in which they are designing. Students also learn through project work how to select research strategies most appropriate to the focus of each design project. In addition, the subject enhances the evaluative and argumentation skills of the students, both in terms of analysing collected data and presenting research findings to design teams, clients and stakeholders.

Typical availability

Spring semester, City campus

85702 Interdisciplinary Design Lab

12cp

Requisite(s): 85502 Researching Design History AND 85503 Design Thinking

Undergraduate

In this subject, design is conceived of in its widest and most exciting sense; as an agent for change in a complex world. The aim of the interdisciplinary design labs (DLabs) is to connect students with live research projects led by staff across the design school. The DLabs offer students from all disciplines a diverse range of exciting projects, often with partners from industry or the community, which engage with real-life problems and opportunities. The DLabs focus on problems that require an interdisciplinary design approach, and develop students' skills in collaboration and teamwork. The emphasis of this subject is on experimentation and innovation. The DLabs aim to prepare students for future developments in the design professions.

86001 Strategies for Interior Design

6ср

This subject introduces the student to a number of strategies for designing interior places. Strategies discussed include methods of rational analysis and synthesis, formal design paradigms drawn from history, strategies for developing concepts and for making space meaningful to user groups. These strategies provide a diverse set of tools that can be employed within different design contexts or at different stages in the design process. Various techniques for exploring and representing design ideas are also introduced. The subject aims to provide a foundation for future expertise in designing.

86002 The Human Environment

6ср

Using a cross disciplinary approach, ideas and methods from the fields of behavioural psychology, anthropology, anthropometry, ergomics, demography, and interior design are used to develop students' awareness and understanding of the interaction between people and interior environments. This overview is essential to students' understanding of the way human beings and their behaviour are influenced by and influence the design of interior places and environments.

86003 Interior Design Conceptualisation

6ср

This subject provides a foundation for understanding the design of permanent and impermanent spaces. Through the means of studio projects students explore and apply various design strategies with a focus on concept generation and design synthesis. This enhances their ability to develop and apply original conceptual approaches to design projects. Students in this subject gain experience in team and individual work, conceptual thinking, interpretation, and the realisation of design ideas across four dimensions.

86004 Design Studio: Foundations in Spatial Language

12cp

This design studio introduces students to the thinking and practice of spatial design. It exposes students to key designers and projects in order to build the student's language of the discipline and define the context in which they will work. Students are challenged to explore and develop their creativity and curiosity through a variety of speculative design projects. First-year presentations focus on key practitioners, theorists and histories across the field of spatial design, including spatial designers, designers, architects, artists and filmmakers.

The design studio constitutes the primary vehicle for student learning and development throughout the Interior and Spatial Design program. Studios combine design tutorials, lectures, workshops, symposia, presentations and critical feedback.

86005 Design Studio: Foundations in Spatial Design

12cn

This design studio engages students with the thinking and practice of interior and spatial design. It develops students' language of the discipline through a study of key designers and projects in order to build and define the contexts in which the students work. Students are challenged to engage and develop their creativity and curiosity through a variety of speculative design projects.

The design studios constitute the core vehicle for student learning and development throughout the Interior and Spatial Design program. Students in this studio develop formal and informal experimental methods and through rigorous, iterative practices engage in the realisation and presentation of design concepts. The design process is evolved through the introduction of ideas of event, program and spatial organisation. Augmented by related readings and theory, students are asked to develop and present a designed response to a site, a community, a series of processes and intertwined issues.

First-year students focus on key practitioners, theorists and histories across the field of interior and spatial design, including interior designers, architects, artists and filmmakers.

86008 Context: Image and Making (Representation)

6ср

This subject aims to introduce students to the principal techniques of spatial visualisation and communication. The emphasis is on exploring multiple representational techniques in a thoughtful way. Subject content includes drawing, sketching, drafting and basic analogue model making.

The subject develops students' ability to understand three-dimensional space, visualise spatial environments, and represent these clearly and effectively through a range of media. Students' understanding of space as a medium evolves during the design process through an ability to translate spatial ideas across multiple communication modes. In this subject a variety of drawing and modelling techniques, often in tandem or in quick succession, build a flexible, multi-modal way of representing spaces.

86009 Context: Image and Making (Generative Methods)

6ср

This subject aims to establish and evolve techniques of spatial visualisation and communication. The emphasis is on exploring multiple representational techniques in a rigorous and thoughtful way. Subject content includes sketching, hand drafting, 2D and 3D CAD, graphic image production and analogue model making. Essential in visualising spatial environments is the designer's ability to understand three-dimensional space and translate that understanding clearly and effectively. This understanding evolves during the design process through an ability to translate spatial ideas across multiple communication modes. Students in this subject learn a variety of drawing and modelling techniques, often in tandem or quick succession, building a flexible, multi-modal way of working. There is an emphasis on developing the student's ability to generate forms and images through an iterative process.

86021 Interior Design History

6cp

Requisite(s): 86001 Strategies for Interior Design AND 86002 The Human Environment AND 86003 Interior Design Conceptualisation AND 85502 Researching Design History

This subject outlines the key people, spaces and activities from 1750 to the present, that come together to make up our contemporary understanding of the profession of interior design. The subject describes the economic, social and cultural context within which the discipline of interior design took shape. It also introduces key themes of this period that have been influential within the development of interior design, such as mobility, style, transience and progress.

Skills in drawing, critical thinking and design analysis are cultivated.

86022 Sustainable Human Futures: Residential Environments

6ср

Requisite(s): 86320 Interior Materiality and Design Detail AND 86110 Interior Design Communication: Digital Media AND 86001 Strategies for Interior Design AND 86002 The Human Environment AND 86003 Interior Design Conceptualisation AND 86420 Interior Design Communication

The subject explores the principles of sustainable life and human wellbeing using residential design as the focus. A broad approach is taken, which covers both global concerns and local apporaches to the design of sustainable dwellings by exploring sustainable design principles. In particular, human wellbeing is examined to provide a philosophical, practical and spiritual understanding of both house and home, so that residential design can usefully contribute to the health and wellbeing of the users of residential interiors.

86023 Light, New Materials and Form

6ср

Requisite(s): 86110 Interior Design Communication: Digital Media AND 86001 Strategies for Interior Design AND 86002 The Human Environment AND 86420 Interior Design Communication AND 86003 Interior Design Conceptualisation AND 86320 Interior Materiality and Design Detail

Light, materials, form and space are the primary elements that create and define human environments. Through the manipulation and enhancement of these elements the human experience can be shifted, elevated, orientated and guided. Students explore the effects that various spatial and elemental forms, lighting, colour and materials can have on the experience and interpretation of an interior space. The subject encourages students to undertake creative investigation of the way emerging materials and systems, form-making, and lighting, can question the standard approaches to design outcomes.

86024 Hospitality Environments

6ср

Requisite(s): 86110 Interior Design Communication: Digital Media AND 86320 Interior Materiality and Design Detail AND 86420 Interior Design Communication AND 86001 Strategies for Interior Design AND 86002 The Human Environment AND 86003 Interior Design Conceptualisation

Hospitality environments address varied user needs including leisure, convenience, respite, recuperation, indulgence and experience. They include hotels, motels, retreats, serviced apartments, bars, cafes, restaurants and other food services.

This subject includes the theory, application and testing of the information required to analyse design and document interiors for this use, including cultural and market considerations and influences. An understanding of the requirements of the hospitality industry is gained through site surveys and precedent studies, environmental systems, planning, and the appropriate selection of furniture, fixtures and equipment. Within this subject students are introduced collectively to the broad sector of hospitality design and then focus on a particular aspect or subgroup of this sector.

86025 Interior Elements and Design Detail

6cp

Requisite(s): 86110 Interior Design Communication: Digital Media AND 86320 Interior Materiality and Design Detail AND 86420 Interior Design Communication

The practice of interior design focuses on the design of elements that define the spatial qualities of an interior. These elements sit within the larger systems and structure of the building and range in size, function and complexity.

This subject extends students' knowledge of materials and their incorporation into structural systems. Specific study is made of the construction of interior elements such as spatial subdivision, cabinetry and built-in furniture, and introduces students to specification writing and scheduling. This subject develops a broader and more complex understanding of detailing as an expression of design.

86031 Directions in Spatial Experience

6cp

Requisite(s): 85503 Design Thinking AND 86110 Interior Design Communication: Digital Media AND 86320 Interior Materiality and Design Detail AND 86420 Interior Design Communication AND 86002 The Human Environment AND 86023 Light, New Materials and Form AND 86001 Strategies for Interior Design AND 85502 Researching Design History AND 86003 Interior Design Conceptualisation

Interior design deals with the tangible and intangible realms of spatial experience. New technologies can further shape, stretch and manipulate the boundaries of this spatial experience and the ways in which people interact with material and digital space. Through the investigation of different technologies, such as advanced lighting, advanced digital representation, and interactive space, students explore and realise how these technologies can morph, shape and model interior spaces, contribute to the activities within such spaces and how these vary between interior environments.

Students undertake a generic project that introduces the new technologies and their inter-relationships, followed by a focused exploration into the directions of one of the selected technologies: interior lighting design, advanced digital representation or interactive space.

86041 Interior Design Major Project: Research and Conceptualisation

12cp

Requisite(s): 85502 Researching Design History AND 85503 Design Thinking AND 85701 Research Based Designing

Good designing necessarily involves research. Design research ranges from that which addresses issues of general concern within the field of design, to that which is particular to a proposed design project. Much design research belongs somewhere between these two objectives, serving both to further the general understanding of the designer and to inform a particular design.

Through the design studies subjects completed in years one, two and three of their degree program, all students have been introduced to a range of design research methods. These include strategies for research about design, research for design, and research through design. In this final year subject they draw upon these methods to construct a

research program that informs and inspires the conceptualisation process for their major design project. In this subject it is intended that research and conceptualisation go hand in hand. This research and conceptualisation process is undertaken independently, mentored by a supervising member of academic staff. Students are expected to display initiative in developing and pursuing their project, and to demonstrate their capacity to arrive at understandings that can significantly enhance the sophistication with which they approach their major design project.

86042 Interior Design Professional Project

12cc

Requisite(s): 86160 Corporate Environments AND 86213 Interpreting Cultural Space AND 86031 Directions in Spatial Experience AND 86150 Consumer Environments

This subject provides a framework within which students further develop and refine their understanding of practice and their capabilities to enter practice. Through work experience or observation students investigate advanced communication strategies and approaches to folio presentation and marketing used within interior design practice, including web, digital and multimedia. The students use the insights gained from their experience or observation of practice to inform the development of an advanced strategy for communicating their design response to a competition or industry brief. This response is developed to the level of a professional project presentation and is then translated into a digital folio piece.

86043 Interior Design Major Project: Realisation

12cp

Requisite(s): 86160 Corporate Environments AND 86213 Interpreting Cultural Space AND 86031 Directions in Spatial Experience AND 86150 Consumer Environments

In response to a detailed design brief, supported by previous research, students explore an established design concept, and through this exploration develop and realise an innovative, holistic and professional design solution to a complex design problem within the diverse discipline of interior design. The solution includes aspects of feasibility and developed rationales for design approaches and strategies. This subject requires students to undertake self-directed study, guided by a supervisor, and informed by their professional capabilities and knowledge. Students are required to undertake critical analysis, synthesis and reflective evaluation as the intellectual basis of their working methodology.

86044 Independent Study

6ср

Undergraduate

Interior design covers a diverse and complex range of issues dealing with the human condition and the built environment. Due to this diversity and complexity, practitioners generally specialise within a sector of the industry. This subject offers students the opportunity to gain a highly developed and detailed understanding of a specialised or specific area of interior design practice.

Entry into this subject is based on the capabilities of the individual student and the appropriateness of the proposed study. Students engage with a specific project through a supervised self-directed learning contract that offers a flexible learning approach. Projects may respond to community and UTS: Design, Architecture and Building needs or to the individual student's preferred direction in his or her academic and career development. This subject may only be undertaken following consultation with and approval by the course director.

Typical availability

Autumn semester, City campus Spring semester, City campus

86110 Interior Design Communication: Digital Media

6ср

Undergraduate

Computer generated drawing is an intrinsic method of communication within design practice, for the exploration, testing, communication, visualisation and documentation of design ideas and intentions. Within a computer lab environment, students develop skills and understanding of the principles and applications of CAD programs, together with an introduction to other graphic software packages that are directly related to the communication of interior design concepts and projects.

A foundation in the principles and applications of CAD and graphic programs allows students to apply this understanding to the use of other digital platforms.

Typical availability

Spring semester, City campus

86112 Design Studio: Experimentations

12cp

Experimentation in thinking and practice is central to the development of an individual spatial design language and theoretical position that should be reflected in the student's processes and outcomes. In applying previous knowledge of techniques and strategies in the forming and transformation of space as a process for experimentation, this subject investigates the creative possibilities of experimentation as a powerful tool in generating both form and the re/shaping of space to address formal constraints in both propositional and pragmatic student projects.

The design studio constitutes the primary vehicle for student learning and development throughout the Interior and Spatial Design program. At the beginning of semester, students choose a studio that has been presented by a studio leader who outlines the brief, program, theoretical and historical framework. While the scope of subject can differ, all projects are framed by the common theme of experimentation. Studios combine design tutorials, lectures, workshops, symposia, presentations and critical feedback.

86113 Context: Experimentations

6cr

This subject allows students to develop practical experience in explorative, analytical and representational techniques integral to the spatial design processes used in the forming and transformation of space. It includes sketching, photography, lighting and physical and virtual modelling, which feed into the framework of 86112 Design Studio: Experimentations. The learning processes throughout the semester include intensives, workshops, seminars, symposia and exhibitions.

86114 Context: Inhabitations

6cr

This subject examines and explores the possibilities that new material and fabrication techniques give to interior and spatial design. Students develop an understanding of and practical experience in advanced digital fabrication methods as well as material techniques (such as lighting and acoustics) in the formation and transformation of spaces.

The 'Context' subjects are divided in two parts, Techniques and Knowledge, which feed back into the framework of 86529 Design Studio: Inhabitations. The subject employs a diversity of learning processes throughout the semester that include intensives and workshops, seminars, panel sessions and events.

86133 Interior Systems and Design Detail

6ср

Requisite(s): 86023 Light, New Materials and Form AND 86025 Interior Elements and Design Detail AND 86001 Strategies for Interior Design AND 86002 The Human Environment AND 85502 Researching Design History AND 86003 Interior Design Conceptualisation AND 85503 Design Thinking AND 86110 Interior Design Communication: Digital Media AND 86320 Interior Materiality and Design Detail AND 86420 Interior Design Communication

Undergraduate

This subject enhances the student's understanding of building systems and details used in interior spaces. Within an adaptive re-use context, students look at the ways materials, interior elements, construction systems, service systems and technology systems are related to each other and integrated to satisfy project and site-specific design requirements. By understanding the particular application of building systems and details, students gain the knowledge to appropriately design and detail interior projects. Specific studies are made on building enclosures, structural elements, HVAC systems, FF&E (furniture, fittings and equipment), and the Building Code of Australia and Australian Standards with a focus on contract documentation.

Typical availability

Autumn semester, City campus Spring semester, City campus

86150 Consumer Environments

6cp

Requisite(s): 86025 Interior Elements and Design Detail AND 86024 Hospitality Environments AND 86001 Strategies for Interior Design AND 86002 The Human Environment AND 85502 Researching Design History AND 86003 Interior Design Conceptualisation AND 85503 Design Thinking AND 86110 Interior Design Communication: Digital Media AND 86320 Interior Materiality and Design Detail AND 86420 Interior Design Communication AND 186025 Interior Elements and Design Detail Undergraduate

This subject explores the design of tangible and intangible communication environments. This includes tangible channel environments represented by stores, shopping centres and service venues, and intangible channels such as new media and the internet. The application of marketing theory and the notion of brand and its realisation within these environments is explored through a series of design projects. Conceptual strategy, concept design, client presentation techniques and contract documents including working drawings are included within the assessment.

Typical availability

Autumn semester, City campus Spring semester, City campus

86160 Corporate Environments

6cp

Requisite(s): 86021 Interior Design History AND 86022 Sustainable Human Futures: Residential Environments AND 86023 Light, New Materials and Form AND 86024 Hospitality Environments AND 86025 Interior Elements and Design Detail AND 85503 Design Thinking

Undergraduate

The concept of what is a work environment is constantly changing in response to the development of new technologies, global markets and work practices. The predominant focus of this subject is on corporate environments and the considerations and strategies involved in the design of interior work environments that satisfy the interests of corporations and individual workers.

These considerations include three dimensional branding, corporate culture, operational planning, growth, facilities management, facilitation of work processes, flexibility and adaptability and sustainable approaches.

Typical availability

86190 Special Industry Project

6ср

Requisite(s): 86000 Interior Methodology and Space AND 86420 Interior Design Communication AND 86320 Interior Materiality and Design Detail AND 86120 Interior Identity and Space AND 86110 Interior Design Communication: Digital Media AND 86111 Interior Technology

Undergraduate

This subject requires students to explore beyond their basic understanding of the selected subject matter within Industry subjects. It is offered only to third-year students who have completed all prerequisites in the list of Interior Industry subjects and who are capable of being involved in independent study. Students explore a particular area of interest related to Industry subjects through a self-directed learning contract. This flexible learning approach allows for the student to further examine this area of study in greater detail, or to explore another issue relevant to the interior design industry that has an application to his or her academic and career development. Projects that may be offered may respond to special conditions within the community and/or faculty. The Interior Design Director of Program will appoint an academic supervisor for the Special Industry Projects. The range of projects is limited to the capacity of the program and the academic supervisor to facilitate adequate study conditions and to offer support to the students.

Typical availability

Autumn semester, City campus Summer session, City campus

86213 Interpreting Cultural Space

6cp

Requisite(s): 86002 The Human Environment AND 85502 Researching Design History AND 86003 Interior Design Conceptualisation AND 85503 Design Thinking AND 86021 Interior Design History AND 86110 Interior Design Communication: Digital Media AND 86320 Interior Materiality and Design Detail AND 86420 Interior Design Communication AND 86001 Strategies for Interior Design

Undergraduate

This subject approaches the understanding of diverse cultural spaces through contemporary theories of interpretation. Current and influential interpretations of various cultural spaces, especially those shaped by the world's major religions and by non-European peoples, are presented. Through a series of lectures, seminars and interpretive projects, students are introduced to the diversity of spatial understandings that inform different cultures, both across the world and within a multicultural society. The challenges and possibilities for design within a multicultural world are discussed and engaged with.

86221 Context: Explorations

6cp

The subject provides students with a deeper understanding and ability to integrate and interrelate traditional analogue techniques with multiple software solutions including parametric modelling, remote sensing, motion capture and data visualisation, output through digital hardware that could include advanced digital fabrication, rapid prototyping, and laser cutting.

This subject is divided into two parts, technique and discourse. Both feed directly into the framework of the 86531 Design Studio: Explorations. The learning processes throughout the semester include intensives, workshops, seminars, symposia and exhibitions.

86222 Context: Interdisciplinary

6cp

This subject provides students with a deeper understanding of the influences and benefits of other design practices through an interdisciplinary teaching structure. Through the integration of discipline specific lectures and associated learning methods, students gain a broad knowledge of how design thinking and design practices converge to create new potentials for communicating design. This subject explores interdisciplinary practice through analogue and digital methods.

86223 Design Studio: Industry

12cp

This studio introduces students to the negotiation of spatial outcomes through community-based and collaborative design approaches. Students take part in a design project, learning professional practice skills in documentation, communication, negotiation with stakeholders and construction. The studio focuses on the student's ability to generate design propositions across a diverse range of design scenarios and negotiate final propositions with multiple stakeholders.

The design studios constitute the core of teaching and learning throughout the Interior and Spatial Design program. Design projects are framed within a theoretical discourse and positioning within the studio environment. At the beginning of semester students choose from a selection of projects presented by staff. Projects aim to build spatial intelligence and innovate environments through thoughtful and rigorous individual design processes. Over the three projects students develop their own theoretical positions.

Projects have common objectives and framing in the studios, with students working alongside studio leaders on specific approaches and design thinking. Each studio incorporates a specified history and theory component. Studios involve a combination of design tutorials and lectures, workshops and intensive studios, and presentations and panel feedback sessions.

For many students this subject is their last studio before gaining an undergraduate degree in Interior and Spatial Design. This final semester aims to be a mirror to the practice of design and students need to demonstrate a level of professionalism, initiative and commitment throughout the semester.

The project relies on students' own efforts and commitment. Students are asked to work professionally both individually and in groups, reflecting the reality of practice.

86320 Interior Materiality and Design Detail

6ср

Undergraduate

Materials are the physical interface that informs us about our surroundings and influences how we experience a particular environment. Through the study of materials and sustainable principles, students develop an understanding of how the behaviour, performance and aesthetic qualities of materials inform material selection in interior design. Students develop a generic vocabulary of materials and structures by exploring these key criteria and how they interrelate. Through lectures, seminars, workshops and tutorials, students develop the ability to communicate design ideas and construction through materials boards, orthographic drawing, model making, detailing and CAD.

Typical availability

Autumn semester, City campus

86321 Design Studio: Investigation

12cp

This studio focuses on developing strategies and practices that form the basis of students' culminating honours project. Students are encouraged to build on the breadth of knowledge gained in their undergraduate study and to develop new systems of design process. The outcome from this studio is to develop conceptual thinking and design processes to further enable the students towards their final design studio (86400 Design Studio: Realisation).

Students are expected to display initiative in developing and pursuing their project, and to demonstrate their capacity to arrive at understandings that can significantly enhance the sophistication with which they approach their major design project.

86322 Design Studio: Directions

12cp

Recommended studies: investigations into the structure and nature of design through the context of analysing precedents and forwarding new strategies; developing and furthering interior design and to its associated discipline of spatial design programming

This studio operates in tandem with 86321 Design Studio: Investigation, allowing students to test and interrogate their ideas through a series of design projects. Students are exposed to professionals in the field to develop their ideas and realisation. This allows for the integration of professional practices in areas such as modelling, high-level conceptualisation and creative thinking, and experimental spatial construction to be part of a student's frame of reference. Students are challenged to engage with these new processes in a rigorous and professional manner.

Projects are particular to each year, carefully curated and coordinated to ensure their relationship and value to students' final projects in semester 2.

86400 Design Studio: Realisation

24cp

In response to a design brief supported by the research accumulated and examined in the first semester, students explore, develop and realise an innovative, holistic and professional design solution to a complex design problem within the diverse field of interior and spatial design. This subject requires students to undertake self-directed study supported by class tutorials and presentations. Students are required to undertake critical analysis, synthesis and reflective evaluation as the intellectual basis of their working methodology. The final design outcome is visually and verbally presented to and examined by a panel of experts, comprised of academics and practitioners.

86420 Interior Design Communication

6ср

Undergraduate

For interior designers the issue of communication is vitally important and requires a clear understanding of the representation of ideas. These ideas, in order to be understood, need to be visualized by the designer and in turn expressed through various levels of communication to other designers, clients, consultants, project managers, developers, contractors and users. This subject focuses on the development of skills in free drawing/illustration, measured drawing, three dimensional representation and model making. Multiple approaches to communication skills and techniques are introduced to enhance the basic skills of the student.

Typical availability

Autumn semester, City campus

86529 Design Studio: Inhabitations

12cr

This studio provides complex and challenging interior and spatial design briefs. Students incorporate research techniques and design methods derived from previous studios into cohesive design projects. Experimentation in thinking and practice is encouraged as a means toward developing an individual design approach. There is an emphasis on well-considered and crafted, finished outcomes.

The design studios constitute the core of teaching and learning throughout the Interior and Spatial Design program. Design projects are framed within a theoretical discourse and positioning within the studio environment. At the beginning of semester students choose from a selection of studios presented by staff. Projects aim to build spatial intelligence and innovate environments through thoughtful and rigorous individual design processes.

Projects have common objectives and framing in the studios, with students working alongside studio leaders on specific approaches and design thinking. Each studio incorporates a specified history and theory component. Studios involve a combination of design tutorials and lectures, workshops and intensive studios, and presentation and panel feedback sessions.

86530 Design Studio: Performative Spaces 1

12c₁

This studio builds spatial understanding and creativity in the design of performative spaces. Engaging techniques and methods from scenography, theatre design, installation design, cinematography and media design, this studio allows students to develop design skills in working across the spectrum of performance. Analysis and experimentation focuses on relationships between narrative, space and form.

The design studios constitute the core of teaching and learning throughout the Interior and Spatial Design program. Design projects are framed within a theoretical discourse and positioning within the studio environment. Projects aim to build spatial intelligence and to innovate environments through thoughtful and rigorous individual design processes.

86531 Design Studio: Explorations

12cp

The subject combines prior learning with additional design tools that include strategic analysis, and system/network frameworks that support an exploration of individual themes and language applied to the proposed studio projects. Incorporating these and other design tools into the formal process of redefining the design brief, students are encouraged to negotiate spatial design outcomes that clearly articulate an individual design sensibility and a clear position within a cohesive final design project.

This subject encourages students to engage with contemporary explorative design processes focusing on formal and theoretical methods of spatial articulation. Design projects have an emphasis on the exploration of production strategies leading to new kinds of spaces and environments.

The design studio constitutes the primary vehicle for student learning and development throughout the Interior and Spatial Design program. At the beginning of semester, students choose a studio that has been presented by a studio leader who outlines the brief, program, theoretical and historical framework. While the scope of subject can differ, all projects are framed by a common theme. Studios combine design tutorials, lectures, workshops, symposia, presentations and critical feedback.

86533 Design Studio: Performative Spaces 2

12cı

Recommended studies: 86530 Design Studio: Performative Spaces 1

This studio focuses on performative space with emphasis placed on its narrative, transformative and media aspects. Students undertake research and design projects. Skills, including prototyping and fabrication, are acquired in order to realise projects at scales of up to 1:1.

Design projects are framed within an interdisciplinary discourse on the performative aspects of space. They are positioned within the studio environment. Projects aim to build spatial intelligence and to innovate environments through thoughtful and rigorous individual design processes.

The design studio constitutes the primary vehicle for student learning and development throughout the Interior and Spatial Design program. At the beginning of semester, the studio leader outlines the brief, program, theoretical and historical framework. This studio involves design tutorials, lectures, workshops, presentations, site visits and critical feedback. It also forms the second part of the Performative Spaces sub-major.

86780 Interior Design Research Dissertation

6cp

Requisite(s): 86000 Interior Methodology and Space AND 86420 Interior Design Communication AND 86320 Interior Materiality and Design Detail AND 86120 Interior Identity and Space AND 86110 Interior Design Communication: Digital Media AND 86111 Interior Technology

This subject requires students to develop a research project in conjunction with a supervising lecturer on a topic or an area of study that supports the student's personal direction and career orientation within design practice. Topics must relate to issues of interior design (e.g. its practice, theory, philosophy, history) or to related issues such as environmental systems or design phenomena. These topics may form the basis of the student's major project topic in the second semester. Every student investigates a chosen topic and prepares a written paper of 8000-10,000 words. It is expected that the paper demonstrates a high standard of research and appropriate standard of referencing and expression. The text may be supported by visual material.

Typical availability

Autumn semester, City campus

86871 Professional Practice for Interior Designers

6ср

Requisite(s): 86041 Interior Design Major Project: Research and Conceptualisation AND 86042 Interior Design Professional Project Undergraduate

This subject requires the student to develop a clear understanding of professional practice as applied to the practice of interior design. Through a series of lectures, tutorials, research tasks and projects, the student explores the issues of environmental planning laws and regulations, the role of local government and other authorities, understanding the application and approval systems applicable to interior design projects in NSW, and the general requirements needed to successfully practice interior design in NSW. Specific study is made of the following: planning law, development application procedures, extent of approvals required for interior design projects, insurance requirements, commercial, legal and ethical responsibilities of an interior designer, and general management of an interior design practice.

Typical availability

Autumn semester, City campus

86872 Interior Design Seminar

6cp

Requisite(s): 86000 Interior Methodology and Space AND 86420 Interior Design Communication AND 86320 Interior Materiality and Design Detail AND 86120 Interior Identity and Space AND 86110 Interior Design Communication: Digital Media AND 86111 Interior Technology

Undergraduate

This subject requires students to reflect upon the current issues of interior design and their course of studies in the program. A series of seminars by experts in the field addresses issues of design management, technologies, theories, and/or industry practice. Students are also guided through research, analysis and development of these ideas towards the completion of a clear design brief for their major project. Information and insight gained from the seminars aids this process.

Typical availability

Autumn semester, City campus

86880 Interior Design Major Project

24cp

Requisite(s): 86872 Interior Design Seminar AND 86871 Professional Practice for Interior Designers AND 86780 Interior Design Research Dissertation

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject requires the student to demonstrate self-directed learning on a selected project of his or her choice. Advice from academic supervisors in studio sessions helps the student select and complete his or her program of studies. Students are required to undertake the design of a complex interior design project that tests issues raised and knowledge gained throughout the course. The project allows students to develop an holistic solution demonstrative of their abilities as final-year design students, and also requires them to demonstrate a professional attitude to their work as a prelude to the practice of Interior Design after graduation. The project's assessment is based on the supervisor's assessment of the student's work methods, and a panel assessment that takes into account the stated aims of the project and the level that they have been achieved. Preparation for this subject is carried out at the end of 86871 Professional Practice for Interior Designers through the completion of the major project research.

Typical availability

Spring semester, City campus

87007 VC Technology: Pre-press and Print Production

6cp

Requisite(s): 87333 VC Technology: Typography, Text and Form AND 87443 VC Project: Typography in Context

Undergraduate

Designers are expected to handle a wide range of technical issues when preparing their designs for print. Before the development of Macintosh computers and PCs, prepress tasks such as scanning, trapping, imposition and colour correction were performed exclusively by skilled specialists working manually or on very expensive proprietary systems. Although some of these tasks are now done with inexpensive software programs, the designer is often now responsible for these specialist techniques. It is important to understand these processes in order to avoid costly errors and to get the best results on any particular design job. This subject aims to give practical experience in the problems involved, and the solutions available, in preparing files for print, and to develop proficiency in the relevant software packages.

Typical availability

Summer session, City campus

87100 VC Project: Ways of Seeing

6ср

Undergraduate

In this subject, students gain an understanding of the fundamental formal and communication aspects of visual communication. They also begin to develop the working processes of a designer and learn how to articulate their ideas to others.

In the first half of the subject students investigate the fundamentals of human perception – how our minds determine shape and form from visual data and draw meaning from them. Theories of gestalt perception: figure and ground, closure, proximity, area, symmetry; are taught through lectures and practical exercises. Students also come to understand how our physical experiences of the world, for example weight and speed, influence the way we interpret graphic form.

In the second half of the subject students undertake photography and illustration to investigate how images can communicate ideas, both directly and through visual metaphor, simile, and juxtaposition. Experiments from this process are developed into image/text compositions in the form of posters.

Typical availability

Autumn semester, City campus

87117 VC Technology: Visible Language

6ср

Undergraduate

The subject introduces the historical and contemporary design, production and application of typographic forms as the visual extension and expression of the spoken word and written text. The design and production of letterforms and typefaces is examined in the context of typography, a keystone language of visual communication.

Typical availability

Autumn semester, City campus

87118 VC Studies: Image Experimentation

6cr

The subject introduces students to the making and analysis of hand and media-generated images with the aim of developing their visual acuity. The lectures explore the technological development and contemporary uses of the image in print, photography, cinematography, animation, interactive multimedia, and the World Wide Web. Theories of semiotics and visual rhetoric are introduced as tools for analysis.

Typical availability

Autumn semester, City campus

87221 VC Studies: Histories of Visual Communication

6ср

Undergraduate

The subject examines the philosophical or other theories that have shaped contemporary visual communication design. Students gain an understanding of visual culture and the impact of contemporary thought on the design of visual communication. Discussion covers topics raised by modernism, deconstruction and post-modernism.

Typical availability

Spring semester, City campus

87222 VC Project: Symbols and Systems

6ср

Undergraduate

This subject explores the historical development and contemporary applications of pictographic, iconographic and ideographic symbols; the use and value of symbolic and metaphoric imagery; grouping, framing, hierarchy and narrative sequence as visual systems; and the role of user studies in visual communication.

Typical availability

Spring semester, City campus

87333 VC Technology: Typography, Text and Form

6ср

Undergraduate

This subject advances students' knowledge and skill in the design and production of words and texts as well as the design of individual letterforms and typefaces. Following on from VC Technology: Visible Language, this subject overviews the historical development of written languages in the context of technological change, and critically examines contemporary applications of typographic forms. Through lectures and studio-practice, students achieve a progressive level of literacy in visual technologies and issues such as figure/ground relationships, hierarchical structures, spatial organisation, text setting for legibility and readability, typographic detailing of headline copy as well as individual letterforms.

Students are encouraged to integrate theory and practice, with theoretical issues presented and critically analysed in lectures, then personally researched through practical investigation. Knowledge and skills gained in this subject support the processing and presentation of design project work. The use of technologies for word/text processing and production are demonstrated and practical experience is gained in design studios and computing laboratories, which introduces and demonstrates the use of advanced applications of software programs that directly support the examination and processing of typographic forms and applications.

Typical availability

Spring semester, City campus

87335 VC Project: Sequence and Narrative

6ср

Requisite(s): 87100 VC Project: Ways of Seeing AND 87222 VC

Project: Symbols and Systems

Undergraduate

In this subject, students gain experience in researching and generating ideas. The lectures focus on the historical evolution and contemporary state of design and production technologies in the media. Project work asks students to explore the pictorial representation of movement and narrative in its still and moving-image forms: in cartoons, animation, film, and video. Students are able to develop their skill in storyboarding ideas for these various forms.

Typical availability

Autumn semester, City campus

87441 VC Studies: Contexts of Visual Communication

6ср

Requisite(s): 87118 VC Studies: Image Experimentation AND 87221

VC Studies: Histories of Visual Communication

Undergraduate

This subject takes students through several research approaches including a generative process of visual mapping with text and image, an experimental interview process and an introduction to secondary research - online and in the library. Through these research approaches students identify processes, practices and issues impacting on contemporary visual communication designers. These may include the implications of technological change, social responsibility and sustainability.

Typical availability

Spring semester, City campus

87443 VC Project: Typography in Context

6cn

Requisite(s): 87118 VC Studies: Image Experimentation AND 87333 VC Technology: Typography, Text and Form

Undergraduate

This subject introduces topics in contemporary typographic practice. Students are required to undertake or develop: empirical research on reading habits; intelligent analysis of written texts; a highly refined awareness of typographic detailing leading to the processing and execution of sophisticated typography and print design. The topics of legibility, readability, communication-interface and navigation systems in print design are covered. Computer lab practice in relevant software develops the essential skills in synthesis of typography and images required for later subjects.

Typical availability

Autumn semester, City campus

87445 VC Project: Visualising Experience

6ср

Requisite(s): 87100 VC Project: Ways of Seeing AND 87222 VC

Project: Symbols and Systems

Undergraduate

This subject explores visual communication design in the context of complex informational and technological systems. Students design interactions within these systems that are a response to what they observe in the world through basic design research methods. Through these research methods students identity and frame relationships among people, information, technology and their contexts and seek to use their findings to generate novel (new) design concepts that are thoughtful, empathic, human-centred, speculative, or useful. Students are introduced to ways of communicating and visually representing their concepts that could include exhibition design, environmental graphics, urban interventions, interactive or responsive objects or environments.

Typical availability

Spring semester, City campus

87447 VC Technology: Motion Graphics

6ср

This subject introduces students to the design and production of motion graphics. The expressive potential of relationships between graphic elements, time and motion is explored. Fundamental concepts of image development, typographic design, visual composition and editing are addressed. Students engage in experimental production using relevant computing technologies.

Typical availability

Spring semester, City campus

87500 VC Special Project

6cp

Requisite(s): 87335 VC Project: Sequence and Narrative AND 87445 VC Project: Visualising Experience

Undergraduate

This subject may be taken in lieu of 87555 VC Project: Design Practice or 87665 VC Project: The Community. Students require approval from the visual communication course director to enrol in this subject. The subject is designed to enable students to participate in independent learning opportunities relevant to visual communication research and/or practice. Such opportunities may include but are not limited to:

- visual-communication competitions
- industry placement internships
- master-class projects run by leading industry professionals
- live external visual communication projects
- · self-initiated projects
- University-initiated projects.

The range of projects is limited by internal and external availability, the capacity of the program to facilitate appropriate study conditions, and the capacity of the program and/or external body to provide appropriate support to students. Learning is largely independent and self-directed and, in most instances, is framed by a detailed and pertinent learning contract.

87539 VC Technology: Introduction to Web Media

6ср

Requisite(s): 87333 VC Technology: Typography, Text and Form AND 87443 VC Project: Typography in Context

Undergraduate

The web (or world wide web) is how we all commonly experience and use the internet. Today the web has a pervasive presence in our lives extending beyond the desktop computer to mobile phones, tablets and further to other connected devices, objects and spaces. Through the web we access information, communicate, connect, experience.

In this field there are many facets of design involved in generating content for the web. Interface design, information design, information architecture, user experience design, interaction design, etc. Through this subject students gain a basic understanding of some of these facets of design and the production of content for websites. The design environment of the screen - the constraints and considerations - is explored. Students learn to apply their existing design skills and understanding of design principles and elements to design for the web. Using design as a conduit, students communicate information on the web through the integrated use of text, image and other media elements

Publishing content on the web is an integral step in the introduction to web media. Technically this course introduces the basic technologies of client-side web development working with HTML, CSS and Javascript. These are the basic underlying mechanisms for realising creative online content.

Typical availability

Summer session, City campus

87549 VC Technology: Introduction to Interactive Media

6ср

Requisite(s): 87333 VC Technology: Typography, Text and Form AND 87443 VC Project: Typography in Context

Undergraduate

We are constantly interacting with the world around us and are increasingly engaging with interactive devices, interfaces and systems. Understanding interaction as well as the expressive abilities and

processes of the digital and code is an integral part of a contemporary design practice. In this subject students focus on the nature of the digital and interactivity itself, with a view to the core theories and skills covered being cross-disciplinary and relevant in many current fields of design and creativity.

In this subject, through observing, making and playing with interactive devices, interfaces and systems, students explore and gain an understanding of the concepts and methods of interaction; to develop a sensitivity to our designed world (Rheingold, 1990) and the way people interact with the world and designs. Students use Processing (www.processing.org) to explore concepts covered in class and communicate their ideas, making on-screen interactive works that create relationships between people and computer-controlled environments.

Processing is an open source programming language and development environment that can create expressive interactive structures that combine text, image, video and sound.

Typical availability

Autumn semester, City campus

May be run in intensive mode in Summer or Winter session.

87551 VC Studies: Concepts of Professionalism

doa

Requisite(s): 87441 VC Studies: Contexts of Visual Communication Undergraduate

This subject introduces students to a variety of views and critiques of professionalism in visual communication. Lectures may cover analytical and critical approaches to design and production in professional visual communication practice; the role and responsibilities of the professional designer; professional case studies; business management and accounting; preparing for employment; legalities and liabilities; the client/designer relationship; the structure of work practices in design; and the role of professional bodies. Students research the areas of the visual communication profession that they intend to move into using research methods such as interviewing, focus groups, and quantitative data collection and analysis.

Typical availability

Autumn semester, City campus

87555 VC Project: Design Practice

6ср

Requisite(s): 87335 VC Project: Sequence and Narrative AND 87445 VC Project: Visualising Experience

Undergraduate

This subject focuses on the professional demands of visual communication practice. Students present project briefs integrating client consultation, teamwork, user studies, case studies, production sourcing, professional specification writing, pre- and post-production detailing and business. Students are called upon to research, analyse, process and present visualised concepts for complex projects real or equivalent to those undertaken in practice. This may occur in both individual and group-based projects.

Typical availability

Autumn semester, City campus

87559 VC Technology: Introduction to Video Media

6cp

Requisite(s): 87447 VC Technology: Motion Graphics AND 87443 VC Project: Typography in Context Undergraduate

In this subject, students engage in the production (recording and capture) and post-production (compositing, colour-grading, soundtrack design) of digital video. Students are introduced to current work practices in digital video planning and production, and gain hands-on experience with the technology involved in digital video production, utilising relevant software.

Typical availability

Autumn semester, City campus

May be run in intensive mode in Summer or Winter session.

87569 VC Technology: Historical Photo Media

6cp

Requisite(s): 87447 VC Technology: Motion Graphics AND 87443 VC

Project: Typography in Context

Undergraduate

Digital compositing and motion graphics involve the combination of various source elements, such as live action video, stills, text, animations and sound, to create an integrated result. Combining all of these media into a seamless whole can be a challenging technical and creative exercise. This subject enables students to further their understanding of the professional design practices and techniques developed in the prerequisite subjects.

Typical availability

Autumn semester, City campus

87600 VC Special Project 2

6ср

For further details, contact UTS: Jumbunna Indigenous House of Learning.

87631 Design Studio: Text and Image 1

12cc

This intensive subject introduces the core formal and theoretical foundations of visual communication. A series of fast-turnaround studio-based exercises explore the fundamentals of image, text and their interrelationship. Through these exercises students develop practical understandings of form, colour, composition, typography, hierarchy, juxtaposition and sequencing. These formal skills are developed alongside an understanding of the communicative role that image and text play. A parallel lecture series introduces key theoretical understandings of visual communication, embedding the exercises within the larger conceptual framework of practice and visual culture.

87632 Design Studio: Text and Image 2

12cp

In this subject students advance their understanding of the formal, material and technology based practices relevant to visual communication design. Students integrate practical investigations in typography and image-making with the theoretical and conceptual frameworks presented in lectures and studio. Students critically assess the significance of developments in their work, building a portfolio that reflects their emerging commitments and concerns. A lecture series grounds student practice within a historical overview of design developments through the 20th Century. The cultural, social and economic context of design is explored.

87639 VC Technology: Advanced Web Media

6ср

Requisite(s): 87333 VC Technology: Typography, Text and Form AND 87443 VC Project: Typography in Context

Undergraduate

This subject provides students with the opportunity to further explore and develop their understanding of visual communication on the web to produce more complex and sophisticated outcomes that are responsive, data driven or interactive. Students are introduced to the fundamentals of responsive web design to create flexible design systems that adapt to the viewing environment in anticipation of the array of devices and screens through which their designs are to be viewed. The JavaScript programming language is covered in depth to provide students the skills to create dynamic or interactive projects. Basic concepts of usability and theories of interaction are also surveyed. Much of the learning experience occurs through working on projects and students are encouraged to experiment, to undertake self-directed learning and to integrate research, theory and practice.

Typical availability

Spring semester, City campus

May be run in intensive mode in Summer or Winter session.

87649 VC Technology: Advanced Interactive Media

6ср

Requisite(s): 87333 VC Technology: Typography, Text and Form AND 87443 VC Project: Typography in Context

Undergraduate

This subject enables students to further their understanding of the professional framework and techniques associated with interactive design production. Students extend their knowledge of Flash and Fireworks but focus on advanced Lingo programming for MacroMedia Director. Students are encouraged to integrate theory and practice and to experiment. Whenever possible, projects are introduced that require students to integrate language and image in multimedia or other presentations, and to collaborate in research.

Typical availability

Spring semester, City campus

May be run in intensive mode in Summer or Winter session.

87659 VC Technology: Advanced Video Media

dcb

Requisite(s): 87447 VC Technology: Motion Graphics AND 87443 VC Project: Typography in Context

Undergraduate

Digital compositing and motion graphics involve the combination of various source elements, such as live action video, stills, text, animations and sound, to create an integrated result. Combining all of these media into a seamless whole can be a challenging technical and creative exercise. This subject enables students to further their understanding of the professional design practices and techniques developed in the prerequisite subjects.

Typical availability

Spring semester, City campus

May be run in intensive mode in Summer or Winter session.

87665 VC Project: The Community

6ср

Requisite(s): 87335 VC Project: Sequence and Narrative AND 87445 VC Project: Visualising Experience

Undergraduate

Teamwork, professionalism and community service form the basis of this subject. As members of design teams, students take part in projects with real clients from community-based organisations. They learn to work at a professional level, executing designs of a professional standard. Typical project work includes client briefings and interim presentations, team and project management, user testing where feasible, product sourcing and specification, and the formal oral presentation of a visual design to the client or peer group.

Typical availability

Spring semester, City campus

87669 VC Technology: Digital Photo Media

6ct

Requisite(s): 87333 VC Technology: Typography, Text and Form AND 87443 VC Project: Typography in Context

Undergraduate

This subject explores the short history and practice of photo-based digital montage with particular reference to beliefs about what is real. The relationship between 'photographic' and constructed imagery is investigated. Advanced Photoshop manipulation techniques, as well as topics relating to input and output devices and resolution, are covered. Students are encouraged to reflect analytically on their practice and to experiment. Whenever possible, projects are introduced that require students to integrate language and image in multimedia or other presentations, and to collaborate in research.

Typical availability

Spring semester, City campus

May be run in intensive mode in Summer or Winter session.

87731 Design Studio: Visual Experimentations

12cp

This subject further develops students' capacity to make and analyse hand and media-generated images and expand their possibilities beyond the static. The semester is divided into three parts with each student having the opportunity to explore photography, imagemaking and graphics in motion in small groups. The lectures explore the technological development and contemporary uses of the image in print, photography, cinema, animation, interactive multimedia and the World Wide Web. While the primary focus of this subject is visual investigations and experimentation with images, an emphasis on the relationship between images and text will remain. Students continue to develop their analytic skills, critically reflecting on the development of their work and its context.

87772 VC Project: Self-direction

6ср

Requisite(s): 87555 VC Project: Design Practice AND 87665 VC

Project: The Community

For further details, contact UTS: Design, Architecture and Building.

87773 Visualising Research

12cr

Requisite(s): 85701 Research Based Designing AND 87555 VC Project: Design Practice AND 87665 VC Project: The Community AND 87551 VC Studies: Concepts of Professionalism

Undergraduate

This studio encourages students to challenge the conventional positioning of visual communication and to re-imagine it as a site for provocation, speculation and experimentation. Central to this is an engagement with practice-led research, enabling students to investigate complex issues through visual communication design processes.

Students develop their visual and conceptual abilities through self-directed projects. Students work in small supervisory groups, developing a culture of critique and experimentation necessary to facilitate meaningful design artefacts, experiences and environments.

Students are expected to produce a substantial project that evidences advanced practical and theoretical design expertise. Studio participants also have the opportunity to challenge the material boundaries associated with visual communication practice by working with emerging digital technologies and new materials alongside more established methods of production. Outcomes can be static or interactive, print or digital, objects or installations, and could incorporate sound or moving image.

Typical availability

Autumn semester, City campus

87780 VC Studies: Research Dissertation

6ср

Requisite(s): 87551 VC Studies: Concepts of Professionalism There are also course requisites for this subject. See access conditions.

For further details, contact UTS: Design, Architecture and Building.

87831 Design Studio: Visual Communication and Strategic Design

12cp

This subject introduces students to emerging areas of innovation and change within local and international contexts. By examining the role of visual communication in strategic design, students familiarise themselves with current theories and practices, in business, social and cultural environments, that are relevant to design. Through primary and secondary research, in groups and individually, students are asked to engage with research and design approaches that include: humancentred design; participatory practices and collaborative design; systems and service design; social action and design for change; action research and critical practice. Project outcomes communicate the results of investigations and experiments using appropriate visual communication design.

87832 Design Studio: Design Practice

12cp

Further information on this subject is available from UTS: Design, Architecture and Building.

87880 Major Project VC

24cm

Requisite(s): 87773 Visualising Research

There are also course requisites for this subject. See access conditions

Undergraduate

This final project subject combines all study fields and completes study in the visual communication course. Students receive individual supervision and move through the final stage from dependence to self-directed, lifelong learner. Students develop a project that showcases their expertise and best reflects their creative and professional aspirations. Final projects can take many forms and can include books, magazines, posters, packaging, films, videos, CDs and websites. All projects require students to undertake critical analysis, synthesis and reflective evaluation as the intellectual basis of their working methodology. Students are required to independently define and address issues relating to appropriate use of technology and production processes, user testing, production scheduling and project management, and the appropriateness of design form to communicative intent. Assessment is undertaken by a panel of academics advised by external professional designers.

88000 Object and Accessory Design 1: Foundations

6ср

Undergraduate

The design of small, low function, high aesthetic products and accessories underlies the start up of many small design-oriented businesses whose main focus is the design of this type of consumer product. Companies such as Fink Design, Mambo, Dinosaur Designs, etc., have successfully built on their understanding of market and manufacture to the point where they have international reputations and market share. Understanding what makes a design attractive, feasible, and economic to manufacture on a low threshold basis is fundamental to success or failure in this endeavour. This subject can be seen as a 'foundation course' in understanding the complexities of design proportion, form and visualisation. The subject aims at building the design and design communication skills of participating students through a range of 2D graphic and 3D physical modelling exercises.

Typical availability

Autumn semester, City campus

88001 Object and Accessory Design 3: Soft Tooling and Rapid Prototyping

6cp

Requisite(s): 88300 Object and Accessory Design 2: The Cast Object OR 88002 Object and Accessory Design 2: The Cast Object Undergraduate

The design of small, low function, high aesthetic products and accessories underlies the start up of many small design-oriented businesses whose main focus is the design of small high aesthetic-low function objects and accessories. Companies such as Fink Design, Mambo, Dinosaur Designs, etc., have successfully built on their understanding of market and manufacture to the point where they have international reputations and market share. Understanding what makes a design attractive, feasible, and economic to manufacture on a low threshold basis is fundamental to success or failure in this endeavour.

Typical availability

Spring semester, City campus

88002 Object and Accessory Design 2: The Cast Object

6ср

Requisite(s): 88100 Object and Accessory Design 1: Foundations OR 88000 Object and Accessory Design 1: Foundations

The design of small, low function, high aesthetic products and accessories underlies the start up of many small design-oriented businesses whose main focus is the design of this type of consumer product. Companies such as Fink Design, Mambo, Dinosaur Designs, etc., have successfully built on their understanding of market and manufacture to the point where they have international reputations and market share. Understanding what makes a design attractive, feasible, and economic to manufacture on a low threshold basis is fundamental to success or failure in this endeavour.

Typical availability

Autumn semester, City campus

88003 Object and Accessory Design 4: Capstone Project

6ср

Requisite(s): 88200 Object and Accessory Design 3: Soft Tooling and Rapid Prototyping OR 88001 Object and Accessory Design 3: Soft Tooling and Rapid Prototyping

This subject is the capstone for the Object and Accessory Design sub-major.

As a major project, the subject aims to bring together the skills developed over the preceding three semesters while at the same time giving students the freedom to create, develop and have manufactured (or manufacture themselves, if appropriate) an object or accessory using either the manufacturing processes studied in earlier semesters or using a process(es) which they have researched themselves. Guest lectures by designers involved in the production, marketing and sale of small objects back up the student's own research into areas of interest.

Typical availability

Spring semester, City campus

88004 Textiles: Print

6ср

Undergraduate

This subject introduces students to the principles of textile print and pattern. A series of drawing workshops introduce students to creative approaches to print design through experimentation in mark and image making. The emphasis is on creative exploration and development of textile ideas in original and thoughtful ways; students develop original artwork and explore inventive scale and imagery in relation to textiles. Students are introduced to methods and techniques used in the fashion and textile industries to generate print designs, including textile repeat systems, placement prints, digital and screen-printing methods. This subject introduces students to the fundamental techniques of creating print repeats and students learn how to prepare artwork for patterned repeat and large-scale textile production. Students also learn how to design and engineer placement prints for the body. An emphasis throughout the subject is placed on a professional and sustainable print room practice.

Typical availability

Autumn semester, City campus

88005 Textiles: Installation

6ср

Undergraduate

In this subject students challenge the traditional practices of textile design in order to explore future textile possibilities in the context of contemporary art practice. The work of key designers and artists is introduced and students engage with a theoretical and experimental approach to textiles. The subject is linked to exhibition site visits and research develops around the study of international exhibitions and practices. Research informs the student engagement with the practice of textile installation and environments. A series of lectures and workshops contextualises textiles as an interdisciplinary practice and enables students to apply knowledge into a self-directed conceptual project for site-specific application. An emphasis throughout the subject is placed on a professional and sustainable print room practice.

Typical availability

Spring semester, City campus

88006 Textiles: Dye Methods

6cp

Undergraduate

This subject introduces students to the principles of dye, colour and resist patterning as they relate to fashion textiles. Through a series of dye workshops, students are introduced to both traditional and contemporary dye techniques and are encouraged to investigate innovative approaches to colouring and patterning cloth. In studios, students experiment with natural dyes, mordants and commercial dyes including acid and reactive dyes. Students explore rich cultural textile histories including the ancient arts of Japanese Shibori and Indigo dyeing. This subject introduces students to methods of generating resist textile patterning through techniques such as binding, stitching, tying and pleating. The studio explores natural fibers and fabrics and their relationship to dye techniques. Through material experimentation, students develop textile concepts and colour sensibilities in a sophisticated and individual way. An emphasis throughout the subject is placed on a professional and sustainable print room practice.

Typical availability

Spring semester, City campus

88007 Textiles: Surface Form

6ср

Undergraduate

This subject introduces students to three-dimensional textiles through an in-depth exploration of thermoplastic and other surface form techniques. Thermoplastic techniques are widely used in innovative textiles and inventive applications. Through applications of heat shaping, synthetics can be manipulated to permanently memorise shape or surface texture. In studio, students experiment with a variety of thermoplastic techniques as a means to discover new pleat geometries and the inherent design potential in sculpted surfaces. Other surface form techniques that are explored in this subject include bonded fabric applications such as felt making, and experimental knitting techniques, with the emphasis on technical textile innovation. In studio, students are introduced to the work of key contemporary textile designers. An emphasis throughout the subject is placed on a professional and sustainable studio practice.

Typical availability

Autumn semester, City campus

88009 Modern Places

6ср

Undergraduate

Contemporary photographic practitioners utilise their medium to explore notions of contested territory, the everyday, liminal space, and the contemporary sublime. Photography's historical relationship to anthropology continues to inform documentary practices that deal with how people interact with space and place, albeit with the most interesting work in more self-reflexive ways. This subject challenges the student to create a series of images that represents ideas about a sense of place in modern society. Approaches might include the architecture of commercial spaces like shopping centres; places that are connected with travel such as airports, motorways, car parks, etc.; suburbia; 'natural' landscapes and modern farming; wastelands and ruins; or familiar or uncanny spaces. Ultimately, the images should communicate something about the nature of modern environments and the ways in which they affect us.

Typical availability

Spring semester, City campus

88201 Animation Studio: VFX Design Introduction

12cn

This subject introduces students to the design of VFX events, previsualisation and the manipulation in 2D live action and 3D CGI environments. On a practical level, VFX is explored through 2D compositing – a system of building up layers of shot and digital elements to create a final image and 3D CGI, where 3D dynamic objects and figural models are modelled, rigged and animated, using computers before being rendered and composited into each shot. On a theoretical level, VFX is explored and discovered through a design lens with an understanding of the structure and composition of a narrative event and the associated aesthetic and design issues involved in object design and the creation of performative cinematic spaces.

88202 Animation Studio: VFX Design Advanced

12cn

This subject advances the student's competency and conceptual understanding of VFX design with an emphasis on the simulation of animate and inanimate figural and non-figural events. It builds upon 88201 Animation Studio: VFX Design Introduction in both 2D and 3D environments through advanced understanding of the camera and cinematic space including mapping and application of particle systems, data visualisation, movement capture and advanced CGI and High Dynamic Range (HDR) photographic compositing. In fostering their conceptual development, students are encouraged to explore and discover emerging and new solutions that result from technological developments through industry standard software (i.e. Nuke and Shake) with an emphasis on performative content such as theatre, event dramaturgy, dance and the performing arts.

88211 Animation Studio: Narrative Experimentations

12cp

In the context of this studio, students build on 82320 Animation Studio: Narrative Investigations, gaining greater understanding of the performative aspects of animation through the closer study of behaviour, intention and gesture. Students explore ways of constructing narratives, extending story ideas from real-world experience into imagined territory, and challenging conventions of mainstream animation. Facial acting, physical gesture and timing are analysed in greater depth in this subject, encouraging students to develop distinct and compelling movement languages. An emphasis is also placed on the use of allegory and visual metaphor as key components in animation storytelling, focusing on aspects such as anthropomorphism, story rules, credibility and the impossible. This subject builds upon previous connections with sound design and music, working with both the voice and atmospheric soundscapes, allowing students to investigate the role of sound as a key consideration in their animation practice. Students are encouraged to experiment with form in the visualisation of story and script ideas to enhance their creative animation problem-solving skills.

88212 Animation Studio: Animation Practice

12cp

In this subject students develop an individual design approach to animation practice, which fosters and encourages complex and challenging animation design projects that enable students to incorporate research and design techniques learned from previous design studios. Fostering experimentation in thinking and practice as a means for developing an individual design approach with an emphasis on well-considered and crafted outcomes, students explore the role that animation designers play in the development of complex design projects. They are encouraged to examine a range of ideas that inform traditional and contemporary animation practices.

88304 Illustration 1: Media and Techniques

6ср

Undergraduate

In this subject, students gain an understanding of of illustration as a tool for communication. They are introduced to a wide range of media techniques in illustration and acquire experience of the variety of its applications. Students from different design majors find that this subject has wide-ranging relevance. Workshops, demonstrations and practical tasks are given in a range of techniques and applications.

Typical availability

Summer session, City campus

88305 Photography 1: Documentation

6ср

Undergraduate

This subject introduces the basic principles of camera and darkroom work in black and white photography. It involves an exploration of photography as a medium of observation and documentation. This is done through an examination of the genres of photo reportage and social documentary photography. Students are introduced to the basic principles of composition, 35 mm manual SLR camera functions, film exposure and development, and print enlargement.

Typical availability

Summer session, City campus

88308 Introduction to Design for 2D Animation

6ср

Undergraduate

This subject introduces students to the history, fundamental principles and theory of design for 2D film and video animation. It also introduces students to design for interactive animation, covering areas such as conceptualising, layout and composition, and the immersive user experience. The topics cover the history of 2D animation, genre, character and background design, timing, framing, camera techniques, animation roles and responsibilities, storyboard formats and production processes. Priority is placed on quality of ideas over the production of finished animations.

Typical availability

Summer session, City campus Autumn semester, City campus

88316 Furniture Context and Language

6ср

Undergraduate

This subject focuses on the broader more contextual issues of furniture design through an analysis of space and the environment, and related human behavioural issues. Through a review of key designers and their designs throughout history, an appreciation is gained towards the precedents of design and their significance in developing new directions. Cultural analysis is undertaken to understand the impact of the dynamic change in society and its impact on furniture design. The relationship of form, function, structure and aesthetics are explored in a series of exercises and projects. An understanding of ergonomics is imparted through lectures and the design of full-scale mock-ups of projects.

Typical availability

Autumn semester, City campus

88323 Exhibition Design: Practice

6ср

Undergraduate

This subject introduces students to the specialised area of exhibition design. This is a multidisciplinary subject that brings together students to solve specific design problems through group projects and individual tasks. A series of lectures, workshops, site visits, and assignments explores the breadth of issues, skills and concerns that are involved in the practice of exhibition design. The areas of study discussed include: user studies; the role of the curator; conservation, exhibition design management, and the collaborative exhibition design process. Small-scale projects test the understanding of the key factors of the practice of exhibition design. A high level of competency in the communication areas of orthographic drawing, and 3D representation is required of students prior to entering the subject.

Typical availability

Autumn semester, City campus Spring semester, City campus

88330 Cinema and Design to 1960

6ср

Undergraduate

The subject studies those films up to 1960 which have had significant commercial and/or creative impact in terms of mise en scène and genre. Mise en scène includes production design, set design, costume design, special effects, sound design, graphic design, editing and story structure. The roles and intentions of key creative personnel are a part

of this. Genres include musical, thriller, sci-fi, comedy, western and film noir. The overall approach is to address the relationship of mise en scène and genre to the narrative of the selected films.

Typical availability

Autumn semester, City campus

88333 Design for Stage and Theatre: Contemporary

6cn

Undergraduate

This subject introduces students to the specialised area of design for performances in theatre spaces. Using a contemporary script as a starting point, the student learns how to design for a stage production that expresses the script through set and costume design. A series of lectures, workshops, and assignments on: the design process, the history of appropriate stage and costume design, set design, costume design, script analysis, and associated technologies is delivered to support the design project. The project tests, through the use of a contemporary script, the understanding that the student has attained in reference to the key areas of theatre design. This is a multidisciplinary subject that brings together students to solve specific design problems through group and individual tasks.

Typical availability

Autumn semester, City campus

88404 Illustration 2: Professional Applications

6cn

Requisite(s): 88304 Illustration 1: Media and Techniques

Undergraduate

Continuing the prerequisite subject, students having gained an understanding of illustration techniques as a tool for communication now harness this knowledge to acquire experience designing for professional use. Workshops and practical tasks inform approaches to designing and illustrating a series of applications.

Typical availability

Winter session, City campus

88405 Photography 2: Communication

6ср

Requisite(s): 88305 Photography 1: Documentation Undergraduate

This subject extends understanding of composition, exposure and development to an intermediate level. Building on the prerequisite subject, this subject goes beyond observation and documentation into the realm of photographic narratives. Students are introduced to different film types and speeds, different film developers, push and pull development of film for contrast control, and working in different lighting conditions.

Typical availability

Summer session, City campus

88408 Advanced Design for 2D Animation

6ср

Requisite(s): 88308 Introduction to Design for 2D Animation Undergraduate

In this advanced subject, students learn to solve 2D animation design problems for film and television. Topics covered at an advanced level include: genre, character and background design, aesthetics, mattes and effects for film and video design, motion and timing, web applications, camera and lighting techniques, studio terminology, formats, storyboard techniques, crew roles and responsibilities, and project management. It is suitable for those students who are interested in film and video, architecture or interior design. Students produce short animation sequences in this subject.

Typical availability

Autumn semester, City campus Spring semester, City campus

88414 Transportation Explorations

6ср

The design of vehicles for the movement of people and goods is increasingly complex. Designers have to respond to societal changes and environmental concerns while addressing issues of style, safety and functionality. This subject explores and develops a realistic vehicle package. This is achieved through the research and analysis of the history and development of an identifiable brand, from which students are expected to visualise design work to a high quality using a range of techniques from hand sketching to computer rendering and clay modelling.

88415 Transportation Futures

6cp

The design of vehicles for the movement of people and goods is increasingly complex. Designers have to respond to societal changes and environmental concerns while addressing issues of style, safety and functionalilty. In this subject students explore and develop a realistic vehicle package. This is achieved through the research and analysis of the history and development of an identifiable brand. Students are expected to visualise design work to a high quality using a range of techniques from hand sketching to computer rendering and clay modelling.

88416 Furniture Production and Materials

6cr

Undergraduate

This subject focuses on the development of the student's understanding of production methods and materials used in the furniture design industry. This knowledge gives the student a greater confidence in designing furniture. The subject covers processes adodpted by furniture designers in selecting materials based on their inevitable relationship to production systems as both a method of manipulation and an initiative directed by economic objectives. Ergonomics, as it relates to furniture design is discussed as projects are developed. Lectures on production, distribution, and assembly systems give the student a clear appreciation of manufacturing in relation to details and design. Students learn to produce appropriate documentation for production and the related connection to costing of the designs.

Typical availability

Spring semester, City campus

88424 Exhibition Design: Concepts and Strategies

6ср

Undergraduate

This subject introduces students to the specialised area of exhibition design, in particular the theoretical frameworks that underpin the design. The multi-disciplinary activity of exhibition design is reflected in the variety of students that could take this subject. A series of lectures, workshops, site visits, guest speakers, case studies and assignments explore the breadth of issues and concerns that are involved in the strategies, conceptual structures and understanding of exhibition design. The areas of study that are discussed include: historical case studies; the role of the institution in which the exhibition will be housed; conservation in relationship to context, didactic design strategies, and interpretive design strategies. Small-scale projects test the understanding of the key factors expressed in the lectures on exhibition design theory. A high level of competency in the communication areas of orthographic drawing, and 3D representation is required by the student prior to entering the subject.

Typical availability

Autumn semester, City campus Spring semester, City campus

88430 Cinema and Design from 1960

6ср

Undergraduate

This subject studies those films since 1960 which have had significant commercial and/or creative impact in terms of mise en scène and genre. Mise en scène includes production design, set design, costume design, special effects, sound design, graphic design, editing and story structure. The roles and intentions of key creative personnel are a part of this. Genres include musical, thriller, sci-fi, comedy, western and film noir. The overall approach is to address the relationship of mise en scène and genre to the narrative of the selected films. During the semester, there is a guest lecture by a practising film designer.

Typical availability

Spring semester, City campus

88444 Design for Stage and Theatre: Classics

6ср

Undergraduate

This subject introduces students to the specialised area of design for performances in theatre spaces. Using a classic script as a starting point, students learn how to design for a stage production which expresses the script through set and costume design. Delivered to support the design project, a series of lectures, workshops and assignments cover: the design process; the history of appropriate stage and costume design; set design; costume design; script analysis; and associated technologies. The project tests, through the use of a classic script, the understanding that the student has attained in reference to the key areas of theatre design. This is a multi-disciplinary subject that brings together students to solve specific design problems through group and individual tasks.

Typical availability

Spring semester, City campus

88503 Introduction to Production Design

6ср

Undergraduate

This subject introduces film and television production design at the conceptual level. Topics covered include film genre and mise en scène, character development, set design, on-location set dressing, approaches to model construction, camera coverage, lighting techniques and terminology, crew roles and responsibilities, storyboard formats, and concept presentation techniques. It is suitable for those students who are interested in film and video, architecture or interior design.

Typical availability

Summer session, City campus

88504 Illustration 3

6ср

Requisite(s): 88404 Illustration 2: Professional Applications Undergraduate

Continuation of 88404.

Typical availability

Autumn semester, City campus Spring semester, City campus

88505 Photography 3: Fabrication

6ср

Requisite(s): 88405 Photography 2: Communication Undergraduate

This subject deals with the notions of the 'fabricated' image under the guise of editorial portraiture, fashion and advertising photography. The conscious manipulation of spaces, places and subjects to achieve a preplanned outcome is explored. Students are introduced to colour photography, medium format camera use, portable artificial lighting, advanced available lighting techniques and the conversion of images from the analogue realm to the digital.

Typical availability

Summer session, City campus

88516 Furniture Industry and Development

6ср

Undergraduate

This studio-based subject is focused on the furniture industry and in developing the student's ability to clearly understand the business aspects of furniture design. The feasibility of production is discussed through project development at various scales of manufacturing. Efforts are made to provide multiple perspectives of the industry from the point-of-view of the designer, the retailer, and the manufacturer. Students are encouraged to examine the factors affecting the process of getting a product into the community. Legal constraints and information on IP protection are discussed. Concerns about marketing is discussed through case studies and site visits to manufacturers and retailers. Students gain a pragmatic and business-oriented approach to the design process.

Typical availability

Autumn semester, City campus

88525 Exhibition Design: Process-based Project

6ср

Requisite(s): 88323 Exhibition Design: Practice AND 88424 Exhibition Design: Concepts and Strategies Undergraduate

This subject extends the student's understanding of exhibition design beyond the introductory subjects. Lectures, tutorials, site visits, and a design project allows the student to gain a deeper understanding of the complete design process faced by an exhibition designer. Students develop a clear design brief, design presentations, details, and models that express their design proposals. A high level of competency in the communication areas of orthographic drawing and 3D representation is required by students prior to entering the subject.

Typical availability

Autumn semester, City campus Spring semester, City campus

88555 Design for Theatre: Special Performances

6cp

Undergraduate

This subject introduces students to the specialised area of design for performances in theatre spaces. Using either a classic or contemporary script and / or choreography as a starting point, students learn how to design for a stage production that expresses the performance through set and costume design. Areas of dance, opera, and performance art may form the basis for the project. A series of lectures, workshops, and assignments on: the design process, the history of appropriate stage and costume design, set design, costume design, script/score analysis, and associated technologies is delivered to support the design project. The relationship to the particular musical score is discussed as appropriate. The project tests the understanding that the student has attained in reference to the key areas of theatre design, through the synthesis of a design for a special performance. This is a multidisciplinary subject that brings together students to solve specific design problems through group and individual tasks.

Typical availability

Autumn semester, City campus

88603 Advanced Production Design

6ср

Requisite(s): 88503 Introduction to Production Design

Undergraduate

This advanced subject gives experience in the kinds of conceptual problems encountered in designing for film and television. Topics covered at an advanced level include film genre and mise en scène, character development, set design, on-location set dressing, approaches to model construction, camera coverage, lighting techniques and terminology, crew roles and responsibilities, storyboard formats, and concept presentation techniques. It is suitable for those students who are interested in film and video, architecture or interior design.

Typical availability

Autumn semester, City campus Spring semester, City campus

88604 Illustration 4

6ср

Requisite(s): 88504 Illustration 3

Undergraduate

Continuation of 88504.

88605 Photography 4: Construction

6ср

Requisite(s): 88505 Photography 3: Fabrication

Undergraduate

This subject goes deeper into the topic of the constructed image by exploring the possibilities of the studio environment. It also explores the way in which people and things and sites can be represented and manipulated through studio photo-imaging. Students explore the use of advanced studio lighting techniques.

Typical availability

Spring semester, City campus

88616 Furniture Prototype

6ср

Requisite(s): ((88416 Furniture Production and Materials AND 88311 Furniture Design 1) OR (88516 Furniture Industry and Development AND 88411 Furniture Design 2) OR 88316 Furniture Context and Language OR 88511 Furniture Design 3)

Undergraduate

This subject provides the capstone project for the specialisation in furniture design. It reinforces the design process particular to the discipline and takes the student from sketches through to mockup and then final prototype. Through lectures, discussions and demonstrations, students learn about the materials and manufacturing technologies suited to their project needs. Workshop skills and knowledge are enhanced in the key areas of furniture prototype production. Critical evaluation of the design process is assessed through critiques and process journals. The final outcomes are exhibited at the end of semester.

Typical availability

Autumn semester, City campus Spring semester, City campus

88617 Design Study Tour

6ср

. Undergraduate

This subject offers students an opportunity to learn about the design culture of another society. Students visit another country or place within Australia and experience it through site visits, discussion, travel, dialogue, debate, observation, critique and a series of related tasks to reach a high level of understanding of the key issues driving design in the chosen environment.

Typical availability

Autumn semester, City campus Spring semester, City campus

88619 Advanced Analogue Model Making Intensive

6ср

Undergraduate

This subject extends students' model making skills and offers a variety of intermediate/advanced techniques using diverse materials with the emphasis on the production of a physical model(s). Over two weeks of intensive workshops and discussions, students explore the various stages of the object design process through conceptual to detailed resolution, using appropriate materials and tecchniquies. Some of the techniques covered during the subject include plywood, metal and plastic facbrication using basic hand and electric tools.

Typical availability

July session, City campus

88620 Advanced CAD Intensive

6ср

Undergraduate

This subject extends students' skills in architectural computing communications. The use of the computer is studied in this component as a tool to aid communication of design thinking in 2D documentation and 3D computer modelling. Student's technical illustration skills are extended via an introduction to a variety of architectural projections and rendering techniques. Over two weeks of intensive workshops and discussions students explore the various stages of the design documentation process through conceptual to detailed resolution, using appropriate communication techniques.

Typical availability

July session, City campus

88622 Global Studio: Interior and Spatial Design B

6ср

Further information on this subject is available from UTS:Design, Architecture and Building

88626 Exhibition Design: Methods of Interpretation Project

6ср

Requisite(s): 88323 Exhibition Design: Practice AND 88424 Exhibition Design: Concepts and Strategies

Undergraduate

This subject extends the student's understanding of exhibition design beyond the introductory subjects. Lectures, tutorials, site visits, guest speakers, and a design project allows the student to gain a deeper understanding of the range of methods and approaches that can be taken towards the relationship between the interpretation of an object and exhibition design brief. The creative and imaginative response to a brief is encouraged and students are required to produce a design presentation of their ideas.

Typical availability

Autumn semester, City campus

88666 Design for Theatre: Self-Devised Project

6cr

Requisite(s): 2 Subjects from: 88333 Design for Stage and Theatre: Contemporary, 88444 Design for Stage and Theatre: Classics, 88555 Design for Theatre: Special Performances Undergraduate

This subject requires the student to explore beyond their basic understanding of the earlier Design for Stage electives completed. The student is expected, through self-directed study, to develop their stage design and costume, based on their extensive research into selected text. Storyboard development, music selection, prop, set and costume design are integrated into the project. Other issues related to the overall design can be explored and are encouraged within the subject This is a multidisciplinary subject that brings together students to discuss specific design problems through group tutorials and lectures, but with the project being an individual effort.

Typical availability

Spring semester, City campus

88805 Introduction to Photography

6ср

Elective

Undergraduate

This subject covers the basic principles of camera functions and digital photography. Students explore the design elements of images, creative and innovative approaches to conceiving photographs, and ways of developing visual awareness. Digital cameras are used to document the world, build a visual archive and communicate observations and ideas.

Typical availability

Autumn semester, City campus
Spring semester, City campus
Subject will be available from Spring 2013

88831 Global Studio: Fashion and Textiles A

6ср

The Fashion and Textile program emphasises international networking and visits/excursions/study tours in building a global perspective to an individual's practice. This subject provides students with the opportunity to immerse themselves in another design and educational culture, developing creative as well as personal maturity. A selection of global studios are offered, allowing students to undertake intensive fashion and textiles studios with students from overseas institutions. Through established relationships with international design schools, projects are undertaken with local students and practitioners.

88832 Global Studio: Fashion and Textiles B

6ср

The Fashion and Textile program emphasises international networking and visits/excursions/study tours in building a global perspective to an individual's practice. This subject provides students with the opportunity to immerse themselves in another design and educational culture, developing creative as well as personal maturity. A selection of global studios are offered, allowing students to undertake intensive fashion and textiles studios with students from overseas institutions. Through established relationships with international design schools, projects are undertaken with local students and practitioners.

88833 Fashion Media

6cp

This subject focuses on the understanding and interplay of fashion theory and media while exploring the culture of fashion from a contemporary viewpoint. Students explore developments within print and digital media, such as fashion film and magazine editorial relevant to the consumption of the fashion process. This subject aims to stimulate and cultivate fashion communicators of the 21st century. Reflecting a shift in the fashion industries demands for multi-skilled creatives, this subject encompasses digital and new media practices to encourage reflective practice and innovative solutions within fashion media production. This subject enables students to develop a solid grounding in the theoretical and practical issues relevant to the communication and cultural understanding of the fashion debate.

88834 Experimental Fashion Making

6cr

In this subject, students are introduced to garment (pattern) making techniques that challenge traditional approaches. The subject introduces students to conceptual fashion, and the creation of garments based on innovative methods of practice. Students are encouraged to experiment with methods of making, to create garments that are the result of investigational and innovative approaches. In this subject students are introduced to experimental pattern making techniques including non-Western approaches, generative pattern creation, subtraction cutting and zero-waste pattern making techniques. The subject is focused on emergent and non-traditional practices, as a means to design innovative garment outcomes, which are the result of off-the-body techniques.

88835 Global Studio: Fashion and Textiles A

6cr

For further details, contact UTS: Design, Architecture and Building.

88836 Global Studio: Fashion and Textiles B

6ср

For further details, contact UTS: Design, Architecture and Building.

88841 Global Studio: Integrated Product Design A

6ср

The Integrated Product Design program emphasises international networking and visits/excursions/study tours in building a global perspective to an individual's practice. The Global Studio provides students with the opportunity to immerse themselves in another design and educational culture, developing creative as well as personal maturity. A selection of global Studios is offered, allowing students to undertake intensive Integrated Product Design Studios with students from overseas institutions. Through established relationships with international design schools, projects are undertaken with local students and practitioners.

88842 Global Studio: Integrated Product Design B

6ср

The Integrated Product Design program emphasises international networking and visits/excursions/study tours in building a global perspective to an individual's practice. The Global Studio provides students with the opportunity to immerse themselves in another design and educational culture, developing creative as well as personal maturity. A selection of Global Studios is offered, allowing students to undertake intensive Integrated Product Design Studios with students from overseas institutions. Through established relationships with international design schools, projects will be undertaken with local students and practitioners.

88843 Design Enterprise: Small Batch Production

6ср

For further details, contact UTS: Design, Architecture and Building.

88871 Global Studio: Visual Communication A

6ср

The Visual Communication program emphasises international networking and visits/excursions/study tours in building a global perspective to an individual's practice. The Global Studio provides students with the opportunity to immerse themselves in another design and educational culture, developing creative as well as personal maturity. A selection of global Studios is offered, allowing

students to undertake intensive Visual Communication Studios with students from overseas institutions. Through established relationships with international design schools, projects will be undertaken with local students and practitioners.

88872 Global Studio: Visual Communication B

do2

The Visual Communication program emphasises international networking and visits/excursions/study tours in building a global perspective to an individual's practice. The Global Studio provides students with the opportunity to immerse themselves in another design and educational culture, developing creative as well as personal maturity. A selection of global Studios is offered, allowing students to undertake intensive Visual Communication Studios with students from overseas institutions. Through established relationships with international design schools, projects are undertaken with local students and practitioners.

88901 Observational Photography

6cr

This subject introduces students to some of the theories, practices and histories of photo-based observational research. Unlike conventional photo-observation for sociological purposes, this subject explores the potential of these techniques for creative purposes. Students are introduced to both the analytical and communicative potential of this media.

88902 Digital Photography

6ср

This subject introduces students to some of the theories and practices of digital photography, and provides a short history of the medium. Particular emphasis is placed on issues of image veracity, manipulation and transformation. Students are introduced to a variety of digital image capture, processing and output techniques.

88903 Photographic Fabrication

6cr

This subject deals with the notions of the 'fabricated' image under the guise of editorial portraiture, fashion and advertising photography. The conscious manipulation of existing spaces, places and subjects to achieve a pre-planned outcome is explored. Students are introduced to colour photography, medium-format camera use, portable artificial lighting, advanced available lighting techniques and the conversion of images from the analogue realm to the digital.

88904 Photographic Construction

6ср

Requisite(s): 88903 Photographic Fabrication

This subject explores the notion of the constructed image by exploring the possibilities of the studio environment in relation to people and objects. It also explores the way in which spaces and places can be represented and manipulated through studio photo-imaging. Students are introduced to advanced studio lighting, large-format camera use, still life and tableaux photography.

88911 Design for Visual Information Systems

6cp

In this subject students explore the principles involved in designing visual information systems with determined outcomes. Primary to this subject is the development of visual languages that enable complex information tasks to be translated into efficient and effective sites of communication. This is enabled by research into the cultural contexts of the outcomes and visual literacies of user communities.

88912 Histories of Visual Information Design

6ср

This subject introduces students to the histories of visual information design through a series of lectures, workshops and tutorials. The material covered provides the students with an opportunity to investigate the key moments that have defined information design, and shaped past and current practice. In this subject, information design is located predominantly within the narrative history formed by visual communication. Subsequently it is understood as a cultural practice that informs, and is informed by, the environment in which it is produced.

88913 Visual Information Project

6ср

This subject requires students to initiate and develop a visual information design project. Students are required to independently define, research and address issues relating to the communication and context of visual information systems and appropriate technologies. These systems may conform to existing modes of information design or be experimental and speculative. Research and project rationale activities should be evidenced as an information design proposal through appropriate visualisation design models, mapping and schematic presentations.

88931 Furniture Concepts

6cp

Postgraduate

This subject offers students in the furniture design major (in the Master of Design) insights into conceptual design processes for furniture designers. The subject focuses on generative design processes used in the development of original furniture designs. It equips students with advanced skills in idea generation and critical and iterative design methods through a series of studio activities, design projects and research seminars.

88941 Experience Economy

6cp

This subject introduces students to post-industrial capitalism, variously called the service economy, the information economy, the knowledge economy, the experience economy, and the support economy. Through a series of readings, seminars, observations and self-interrogations, students explore the contexts that are making branding significant, such as globalisation, quality assurance, customer relations management, human resources management, post-materialist societal values, and dematerialisation. The subject involves fieldwork investigating how businesses are packaging experiences for target audiences and the critical reflection by each student of their own consumption habits and values.

88942 Experience Branding

6ср

Requisite(s): 88941 Experience Economy

An important and rapidly growing challenge for design is to develop stimulating and strong representations of brands for commercial and not-for-profit organisations and their different products and services. This subject introduces students to the basics of experience branding and explores how design can be used to communicate organisational core values, products and services. In an integrated manner, the subject covers all areas of branding design including graphic design (2D), interior design (3D) and web design (4D). The objective is to understand how different disciplines work together and create an integrated brand experience. Special emphasis is put on the design process including research, brand strategy development and concept development. Finally, the role of branding in the wider context of society is critically discussed.

88943 Brand Strategy

6cp

Requisite(s): 88942 Experience Branding

Building on the subjects Experience Economy and Experience Branding, this subject explores the relationship between branding, strategising and the implementation of a brand design. Key themes analysed in this subject include developing an understanding how strategy drives the creation of a brand experience, how strategic planning becomes a valuable tool in the design process, how research fuels the strategy making process, and the relation between human resources management and brand expression. Ultimately, the subject seeks to explore how design can be used to implement a brand experience that helps clients accomplish business objectives (including those of not-for-profit organisations).

88944 Branding Project

6ср

Requisite(s): 88943 Brand Strategy

There are also course requisites for this subject. See access conditions.

This is the final subject in the Branding Design major and is held as a practical project that integrates the three previous subjects. The subject involves rebranding projects with 'live' clients. Students are provided with skills to assist their rebranding jobs in the areas of project

management, client relations, strategy validity testing, brand user testing, quality assurance mechanisms, and presentation techniques.

88951 Future Design Strategies

6ср

Elective

Postgraduate

By its very nature, design is an activity concerned with the future. In this time of rapid transformation, with all its accompanying complexity, threats and opportunities, being aware of how change might impact on design becomes critical. This subject addresses those areas identified as likely to impact most on the design professions over the next decade. They include cultural change, globalisation, sustainability and technology advances. Students are supported in researching developments in these and other change making themes. Leading designers, design academics and futurologists join UTS staff in mapping possible future strategies for designers.

Typical availability

Autumn semester

Spring semester

88952 Design Project Specialisation

6ср

Elective

Postgraduate

Within the context of an undergraduate design project students reflect on the major issues implicit in the design task, be it commercial, social, environmental or technical. The subject is aimed at providing students with an understanding of how a design solution might impact beyond the initial intention. Regular seminars, in addition to the project tutorials, reflect on the project work in this wider context.

Typical availability

Autumn semester

Spring semester

89015 Textile and Fashion Innovation

12cp

Postgraduate

This subject enables students to investigate innovative textile and fashion concepts that explore the integration of the handmade with emerging technologies. This studio provides an ideal space for interdisciplinary collaboration through the study of current global textile, fashion and design practice. In this millennium a material revolution is taking place whereby textiles and fashion are providing designers from various disciplines the solutions for a very different society and consumer. Market demand reflects changing cultural and social concerns and in response textiles and fashion are leading with cutting edge innovation. Underpinning these developments is a critical social consciousness towards ethical design practice and issues and questions around sustainability.

In this studio students are introduced to Electronic Fashion, Interactive Interfaces, Photo Voltaic Textiles, Biomimicry, Architectonic Structures, Smart fabrics, Nano fabrics, High Performance Textiles, Zero Waste. Students examine what meaning these emerging technologies have for future design and how they provide designers with a language and solution for a future world. Through a self-initiated project, students have the opportunity to explore their practice through an identified project brief.

Typical availability

Autumn semester, City campus

89016 Reframing Fashion and Textile Practice

12cp

Postgraduate

This subject addresses the role of the fashion designer within contemporary fashion and textile practices and explores emerging trends that point to challenges, future roles and opportunities for fashion creative practitioners. Over recent years fashion and textile design have emerged as interdisciplinary practices aligned with new modes of presentation and approaches to design activity. In this subject students undertake critical investigation of both their own practice and the broader context of contemporary fashion and/or textile practice. The investigation enables students to critically reflect on their own practice and through a series of structured research and studio activities be able to re-position fashion and textiles practices at

the nexus of innovation, meaning-making and critical engagement. The aim of the subject is for students to reposition their practice for re-entry to industry or subsequent postgraduate research pathways through the identification of foci for further investigation.

Typical availability

Spring semester, City campus

89017 Fashion and Textiles Entrepreneur

12cp

Postgraduate

The primary focus of this studio lies on the student's engagement with industry. In this context, students look to their particular area of interest and build on the knowledge and skills developed during the first two studios. In working with manufacturers, students gain valuable experience in relationship building and communication in order to realise their design. The outcome here is a realised design highly focused on their area of special interest. Within the studio, students prepare digital and physical presentation of design that demonstrates the full impact of information within the environment or application; and verbally present a completed visual presentation, together with appropriate made elements that outline the key aspects of the concept and outcome.

Typical availability

Autumn or Spring semester, City campus

89105 Design Activism

6ср

Postgraduate

This subject looks at the increasingly active role that design is playing within contemporary contexts of social critique and change. Students are introduced to the history of social activism in design, and to the particular contexts within which design activism is currently being pursued. Philosophical critiques of a human-centred conception of authorship and agency have important repercussions for the thinking of designers on their role as activists. This subject positions contemporary activism within post-humanist understandings of agency. Discussions and theoretical engagement foster critical understanding of the complex interaction of human and non-human, material and immaterial, memory, expectation, hope and experience within the unfolding social and political histories of designed things.

Typical availability

Spring semester, City campus

89106 Researching Contexts

6ср

Postgraduate

This subject introduces students to experimental design-research practices using different technologies to elicit aspects of the contexts for which designers design. The technologies used enable these contexts to be explored through audio, visual and textual dimensions. Students gain skills in the analysis of ethnographic research data using grounded theory and phenomenography, in addition to visual research methods. Such design research practices foster understanding of, and connection with, the contexts that designed things participate in, enrich, and often transform. The emphasis of this subject is on understanding through making, as the process of data analysis enables the researched context to 'talk back' to the designer. Outcomes include designed communications that convey the particular understanding of context that each student has arrived at through their research process.

Typical availability

Spring semester, City campus

89107 Innovation and Entrepreneurship: A

6ср

Postgraduate

This subject explores the potential of design thinking as a generator of innovative and entrepreneurial strategies, practices and designed things through interdisciplinary innovation challenges, and developing entrepreneurial outcomes of varying scale and context.

Students are required to radically cross-boundaries of their known discipline to contribute to diverse projects through the application of corporate and academic research and development methods. Students inherently cooperate within complex systems, responding to client requirements and considering the effect of their choices on outcomes throughout the process.

Typical availability

Autumn semester, City campus

89108 Technology Workshop: Creative Play

6ср

Postgraduate

The Technology Workshops offer students opportunities to engage with diverse tools, processes and materialities of production. Oriented to experimental practices, and to iterative exploration of the aesthetic and material effects enabled by each technology, the workshops encourage openness to new possibilities for making. Creative Play provides for student experimentation and research into the possibilities for design enabled by selected technologies.

Typical availability

Spring semester, City campus

89109 Technology Workshop: Experimental Media

6ср

Postgraduate

The Technology Workshops offer students opportunities to engage with diverse tools, processes and materialities of production. Oriented to experimental practices, and to iterative exploration of the aesthetic and material effects enabled by each technology, the workshops encourage openness to new possibilities for making. Experimental Media focuses upon student experimentation and media investigation through selected technologies.

Typical availability

Autumn semester, City campus

89110 Engaging Texts: Interpreting Contexts

6ср

Postgraduate

This subject introduces students to philosophical and theoretical lenses for interpreting the various contexts of reception within which their designs will be encountered, engaged with, experienced or consumed. 'Engaging Texts: Interpreting Contexts' is one of a pair of subjects that focus specifically on 'engaging texts' as a stimulus to design understanding. In these subjects students engage with texts that are or have been influential in shaping ways in which designers think about the worlds that designed things enter into and redefine. Different kinds of text, including theoretical, literary and designed texts, and texts utilising different media, are introduced.

Typical availability

Autumn semester, City campus

89111 Interactivation Studio: Autumn

12cp

Postgraduate

This studio is dedicated to the relationship between people and technology, in particular the design of interfaces connecting technological environments with their inhabitants. Interactivation is a design approach to creating distributed interfaces which enable better designed interactions in electronic ecosystems. This involves interactions in ecologies, from the intimate (on and around the body) to the spatial (rooms and buildings), to the urban/landscape scale and beyond. Examples of such intimate interfaces are phones and other objects, wearable interfaces and interactive jewellery. The spatial scale is concerned with interactive spaces (indoor parameters such as light, temperature and data flow) and buildings (interactive architectures), while the urban scale can be, for instance, interactive facades and long-range spatial information radiation including the natural landscape.

This subject covers a broad field of design and study involving a variety of disciplines. Students gain and develop knowledge and insights in human factors, engineering, art and design. The subject guides individual and group development of a new type of designer who is equally confident in understanding and applying technology, human factors and artistic—conceptual thinking. The outcomes of this process involving research and design are presented in the studio in the forms of working demonstrators, interactive presentations and reflective writing.

Students are given a tailored project (1, 2 or 3 based on individual level of development, determined through prior learning) that is expanded on through their remaining Interactivation Studio subjects.

Typical availability

Autumn semester, City campus

89112 Interactivation Studio: Spring

12cp

This studio is dedicated to the relationship between people and technology, in particular the design of interfaces connecting technological environments with their inhabitants. Interactivation is a design approach to creating distributed interfaces which enable better designed interactions in electronic ecosystems. This involves interactions in ecologies, from the intimate (on and around the body) to the spatial (rooms and buildings), to the urban/landscape scale and beyond. Examples of such intimate interfaces are phones and other objects, wearable interfaces and interactive jewellery. The spatial scale is concerned with interactive spaces (indoor parameters such as light, temperature and data flow) and buildings (interactive architectures), while the urban scale can be, for instance, interactive facades and long-range spatial information radiation including the natural landscape.

This subject covers a broad field of design and study involving a variety of disciplines. Students gain and develop knowledge and insights in human factors, engineering, art and design. The subject guides individual and group development of a new type of designer who is equally confident in understanding and applying technology, human factors and artistic—conceptual thinking. The outcomes of this process involving research and design are presented in the studio in the forms of working demonstrators, interactive presentations and reflective writing.

Students complete a tailored project (1, 2, or 3 based on individual level of development, determined through prior learning) that is expanded on through their remaining Interactivation Studio subjects.

Typical availability

Spring semester, City campus

89113 Interactivation Studio: Final Project

12cp

Postgraduate

The Interactivation major is dedicated to the relationship between people and technology, in particular the design of interfaces connecting technological environments with their inhabitants. Interactivation is a design approach to creating distributed interfaces which enable better designed interactions in electronic ecosystems. This involves interactions in ecologies, from the intimate (on and around the body) to the spatial (rooms and buildings), to the urban/landscape scale and beyond. Examples of intimate interfaces are phones and other objects, wearable interfaces, and interactive jewellery. The spatial scale is concerned with interactive spaces (indoor parameters such as light, temperature and data flow) and buildings (interactive architectures), while the urban scale can encompass interactive facades and longrange spatial information radiation including the natural landscape.

This studio covers a broad field of design and study involving a variety of disciplines. Students gain and develop knowledge and insights in human factors, engineering, art and design. The subject guides individual and group development of a new type of designer who is equally confident in understanding and applying technology, human factors and artistic—conceptual thinking. The outcomes of this process involving research and design are presented in the studio in the form of working demonstrators, interactive presentations and reflective writing.

Typical availability

Autumn semester, City campus

89114 Lighting Studio: Light, Time and Change

12cp

This studio combines a thorough study of the change of light in nature with an exploration of lighting and its time-dependent dynamics and control. The studio activity is built on the observation and analysis of the interdependencies between lighting patterns and behavioural patterns in the way people occupy and utilise the built environment.

89115 Lighting Studio: Light, Materials and Space

12cp

People's conscious and subconscious mind can be manipulated and conditioned by what they see. Seeing is the response of the human perceptual system to light's interaction with surfaces and spaces. Therefore at its very basis, the lighting designer has the tools and

the opportunity to recondition the mind, by determining how light interacts with the surrounds and influences the state of the perceptual system.

This studio explores ideas on designing visual environments that influence human moods and emotions, through a deep study of perceptual psychology, visual attributes and modes of appearance. The studio has a strong focus on hands-on experimentation with light, materials and volumes. The participants produce solutions that challenge the traditional use of lighting in the built environment with the objective to open up new possibilities.

89116 Lighting Studio: Final Project

12cp

Postgraduate

The Lighting major aims to equip graduates with the intuition, ability and aspiration to become leading practising professionals or researchers in the field of lighting, with well-rounded and high-level expertise, social consciousness and global perspective. The main focus of the major is an open and progressive approach to advance the analytical thinking skills and creativity of its participants. The major provides a solid understanding of the physics and human factors of lighting, extensive hands-on experience, and wider context considerations relating to lighting design. It is structured to give its participants the opportunity to cultivate and share knowledge through research, experimentation, collaboration and communication; to shape and continually improve the future of the lighting design profession.

This studio is based on the model of a fictive/actual architectural lighting design project. The participants are responsible for developing and communicating their lighting design solutions for this project from initiation to final documentation. The studio advances the skills of the participants to manage multi-faceted aspects relating to lighting design through providing them with a broad appreciation of real-life project considerations.

Typical availability

Autumn semester, City campus

89120 Sustainability, Design and Creative Futures: Being Human

12cp

Postgraduate

The quest to find more sustainable ways to inhabit the planet is complicated by human entanglement in practices, systems and sub-cultures that are, in themselves, unsustainable. Designed things constantly reconfigure these entanglements; seemingly modest design interventions can have profound and ongoing effects, both intended and unintended. Designing for more sustainable human worlds, therefore, requires reflective awareness of the ways in which design can reconfigure the ways of being human.

This studio investigates the ways that different kinds of designed things shape what it is to be human, whether they be garments, equipment, interfaces or environments. Drawing upon contemporary philosophies of technology and theories of practice, the studio provides critical tools to support designing that engages richly with the complexity of human experience and culture. The emphasis of the studio is upon understanding what should be valued, and what can be let go, in the quest to be both more sustainable and most fully human.

Typical availability

Autumn semester, City campus

89121 Sustainability, Design and Creative Futures: Spatio-Temporal Shifts

12cp

Different cultures inhabit space and time in very different ways. The inherited spatio-temporal dispositions that shape our world dispose us to particular pleasures; attune us to particular kinds of beauty; make possible particular modes of knowing and particular kinds of production. The spatio-temporal not only configures everyday practices, cares and striving, but significantly impacts the wider ecologies in which we participate. Unsustainable modes of inhabiting our world are currently held in place by the spatio-temporal dispositions that dominate contemporary globalised cultures.

This studio looks at the role played by different design disciplines in the production and reproduction of particular modes of spatiotemporal experience, whether the disciplinary focus is the body, equipment, communication, interaction, environment, systems or services. The power of design to shift the ways we inhabit time

and space, and the implications of such shifts for sustainability, are explored through studio projects.

Typical availability

Spring semester, City campus

89122 Sustainability, Design and Creative Futures: Critical Economies

12cp

Postgraduate

The practice of design has always been profoundly shaped by the particular economies in which it has been embedded. The demands placed on both human and non-human ecologies by 20th century growth-based economies, are evidently unsustainable. Increasing acknowledgment of ecological stress upon the planet, in tandem with the economic instability of the first decades of the 21st century, have given impetus to a rethinking of our assumptions about the economy. Over the past decades a number of critical thinkers have proposed new approaches to the economy. What are the implications of these potential economies for design? How might more sustainable approaches to the economy open up new possibilities for design? What might be the role of design in the transition to a different economy?

89123 Experimental Visual Communications: Research Through Design

12cp

Postgraduate

This studio encourages students to challenge the conventional positioning of visual communication and to re-imagine it as a site for provocation, speculation and experimentation. Central to this is an engagement with practice-led research, enabling students to investigate complex issues through visual communication design processes.

Students develop their visual and conceptual abilities through self-directed projects. Students work in small supervisory groups, developing a culture of critique and experimentation necessary to facilitate meaningful design artefacts, experiences and environments.

Students are expected to produce a substantial project that evidences advanced practical and theoretical design expertise. Studio participants also have the opportunity to challenge the material boundaries associated with visual communication practice by working with emerging digital technologies and new materials alongside more established methods of production. Outcomes can be static or interactive, print or digital, objects or installations, and could incorporate sound or moving image.

Typical availability

Autumn semester, City campus

89124 Experimental Visual Communications: Visualising the Invisible

12cp

Postgraduate

In this subject students create projects that give visual form to the social, cultural, scientific or economic narratives embedded in contemporary society. Students have the opportunity to reveal stories that have yet to be realised, or create new experiences from existing stories. This can range from the pragmatic/factual to the poetic/metaphorical, and take various forms such as information design, experimental publication design, exhibition design, motion graphics, etc. The aim is to extract and communicate previously inaccessible meanings, insights and experiences through work that is speculative, provocative, and experimental. In this subject there is an emphasis on the designer as cultural agent/critic. Students are challenged to develop a critical position around an issue, and use their design skills to communicate this position in innovative, playful and challenging ways. Outcomes could be static or interactive, print or digital, objects or installations, and could incorporate sound or moving image.

Typical availability

Spring semester, City campus

89125 Experimental Visual Communications: Final Project

12cp

Postgraduate

The final studio requires students to create a self-initiated project that exhibits a sophisticated understanding of the potential of contemporary visual communication practice. Central to this project

will be evidence of critical analysis, social engagement, reflective practice, as well as a refined visual language. Students must draw on the practical, methodological, theoretical and the technical tools they have gathered over the duration of the degree to complete a successful project. Students are individually mentored through this project by a supervisor with complementary practice-based research expertise. Projects can be static or interactive, print or digital, objects or installations, and could incorporate sound or moving image.

Typical availability

Autumn or Spring semester, City campus

89126 Design Studio 1: Human-centred Design

12cr

This studio explores the voice of intent in relationship to the voice of experience as negotiated by the various voices of design practice. A human-centred approach to design is investigated with various scenarios and personas techniques used to shift the role of the user from a recipient to one of an author of design outcomes. Various methods of analysis, including ethnography, together with approaches to design synthesis are presented to allow the students an advanced understanding of real-world projects.

89127 Design Studio 2: Social Design Practice/Critical Reflection

12cp

This studio builds on 89126 Design Studio 1: Human-centered Design, or experiences gained in other studio majors, in order to draw a fine focus on the relationship of how design can affect social frameworks. This subject critically explores the creative challenges involved in socially responsible design. Participants learn a range of ways of negotiating cultural difference to access deeper understandings of social conditions. It focuses on a number of participatory design techniques, where designers act as facilitators of communities, helping them to identify their needs and then realise ways of satisfying their needs in socially, ecologically and economically sustainable manner. Professional designers and expert designers use reflection in different ways. This subject examines the reflection of design during the professional design process, and also the sharing of ideas, as practiced by expert designers who challenge existing habits and prejudices. Through a series of readings and projects, students learn how to implement changes to the way they design through critically reflecting on social design practice.

89128 Design Studio 3: Resilience and Creative Practice

12cp

This subject offers the student the opportunity to fully comprehend the value of design and gain a potential sense of meaning to what they do. Thought and the translation of an idea are both investigated in a text and design outcome. Group and individual projects help to advance the need for clarity of communications and for negotiated settlement. The project explores how design thinking allows for a resiliency of outcomes in the design world and ultimately considers the importance of sustainability. The aesthetic act allows for a space of value in society, a value that has to be recognised. The recognition of how creative practice can constantly re-invent itself in reference to how it engages with the problem allows for a resiliency of design.

89131 Objects and Accessories Studio: Fold

12cp

Postgraduate

This studio focuses on creativity and innovation in the context of object design under the umbrella theme of fold. Students build on the conceptual, formal, analytical and critical skills developed in previous studies or professional experiences. The studio enables students to experiment, exposing them to the endless ways objects can be made. Innovation is driven by the creative application of new and unique combinations of material and process. Students in the studio need to be highly motivated and self-directed, and appreciate that the central focus of this studio is actual making.

Objects developed within a contained scale enable the student to investigate multiple situations and proposals, realising designs that enable a deeper understanding of form and material.

Parallel studies into the historical, social and cultural aspects linked to the concept of fold in object design enable further understanding and clearly articulated positioning of work in a contemporary context.

Typical availability

Autumn semester, City campus

89132 Objects and Accessories Studio: Layer

12cp

89133 Objects and Accessories Studio: Final Project

12cp

Postgraduate

The Objects and Accessories major has been developed to enable designer–makers the opportunity to experiment. Innovation is driven by the creative application of emerging and/or traditional methods to develop new approaches to form-making within the context of small batch production.

This studio is an opportunity for students to develop a self-directed project in consultation with the studio leader/subject coordinator. The project is articulated in a written learning contract negotiated between the student and studio leader/subject coordinator in the first quarter of the semester.

Typical availability

Autumn semester, City campus

89141 Perception Space Materials: Research and Conceptualisation

12cp

Postgraduate

This is the first subject in the Perception Space Materials major. This subject is based on a series of cognitive week-by-week research and conceptual projects to develop material thinking towards an innovative spatial practice. Through the studio environment, projects will be aimed at forwarding individual perceptions to the analysis of site in developing site-responsive programs. Design will be investigated through spatial experiencing and programing, function and occupation, surface and texture. Over the course of the three semesters, participants in this major will explore the conceptualisation of design and practice and associated visual techniques including: 2D & 3D spatial constructions, filmic, diagrammatic and schematic mappings: creating a matrix of design potentials feeding into the major project and final dissertation.

Typical availability

Autumn semester, City campus

89142 Perception Space Materials: Design Philosophy -Spatial Design Program

12ср

Postgraduate

This is the second subject in the Perception Space Materials major. It focuses on devising achievable programs from the research and conceptualisation work undertaken in the previous subject. The scope of the project is aimed at generating fully documented prototype spaces that succinctly illustrate students design strategy. Material thinking and spatial practice combine as a single entity to evolve the program schematic, users and environmental conditions in transforming the site. The project explores the expanded field of spatial design filtered through the manifold appearances of the interior and exterior. Project documentation includes: plan, section, elevation, detailing, 2D and 3D renderings, materiality, study of Marquette's, a final site model and a visual/text document.

Typical availability

Spring semester, City campus

89143 Perception Space Materials: Constructing Materials - Expanded Field of Practice

12cp

Postgraduate

This is the final subject in the Perception Space Materials major. It is based on applying an expanded field of practice to the projects realised in the previous two subjects. The expanded field of inquiry can incorporate an interdisciplinary application towards creating alternative and innovative ways of furthering students design communication. Projects may involve advanced prototyping of design intention in expanded scales as test probes for other sites and collaborations with other disciplines and/or with industry partners. A definitive document of the design journey and a written dissertation will accompany this subject as the major documentation of the course.

Typical availability

Autumn semester, City campus

89151 Design for Change: Specific Retail Environments

12cp

In this studio students are required to apply various methods of problem exploration and design research to develop solutions to a current crime problem for real retail business clients. Students work on real projects, often in teams and always supported by experts in the fields of socially responsive design, environment design, crime prevention, and retail planning.

The studio process requires students to develop a comprehensive understanding of the range of commercial, organisational and community drivers in the retail context, including loss prevention. The challenge is to develop a design approach that addresses the various drivers, while also providing an environment less prone to crime. Working with real clients in a commercial setting requires students to develop their team and project management skills in a situation dependent on the professional delivery of design outcomes.

Through an applied project with a large retail store client (supermarket, department store or hardware store), the subject builds students' skills and knowledge about how to research and understand crime problems. DOC methods of problem exploration and reframing are reviewed and applied to the client's problem. Through this studio students start to develop key skills and understanding of how design processes can be employed to develop innovative solutions to crime problems.

Typical availability

Autumn semester, City campus

89152 Design for Change: Reinvigorating Retail Precincts

12cr

In this studio students are required to apply various methods of problem exploration and design research to develop solutions to a current crime problem for real retail business clients. Students work on real projects, often in teams and always supported by experts in the fields of socially responsive design, environment design, crime prevention, and retail planning.

The process requires students to develop a comprehensive understanding of the range of commercial, organisational and community drivers in the retail context including loss prevention. The challenge is to develop a design approach that addresses the various drivers, while also providing an environment less prone to crime. Working with real clients in a commercial setting requires students to develop their team and project management skills in a situation dependent on the professional delivery of design outcomes.

In this subject students undertake an applied project with a local shopping area authority (council, shopping centre) in which they draw on their design research and problem exploration skills to develop a frame and design concepts that address a crime problem and reinvigorate the precinct. Students work with a broader stakeholder group in this project that includes diverse community groups, council, police, community workers, retailers and licensees among others. It requires students to develop their skills in engaging clients and stakeholders to think about crime problems and the possibilities for declining retail precincts.

89153 Design for Change: Retail Futures

12cr

Led by the UTS interdisciplinary Designing Out Crime research centre, the focus of the subjects in this three semester studio is on creating vibrant, safe, sustainable and profitable retail environments. Students work on real projects, often in teams and always supported by experts in the fields of socially responsive design, environmental design, crime prevention, and retail planning.

Throughout the studios students work with industry partners such as retailers, supermarkets, shopping centres, industry bodies and law enforcement agencies.

In this final subject of the studio, students utilise the expertise that they have developed in the previous two subjects of the studio. This expertise informs an exploration into future retail concepts and their capacity to embody the virtual and/or physical requirements that ensure positive retail experiences.

Additional information about the Designing Out Crime research centre can be found at:

www.designingoutcrime.com/research-centre/projects

Typical availability

Autumn semester, City campus.

89171 Innovation and Entrepreneurship: B

6ср

Postgraduate

This subject explores the potential of design thinking as a generator of innovative and entrepreneurial strategies, practices and designed things through interdisciplinary innovation challenges, and developing entrepreneurial outcomes of varying scale and context.

Students are required to radically cross-boundaries of their known discipline to contribute to diverse projects through the application of corporate and academic research and development methods. Students inherently cooperate within complex systems, responding to client requirements and considering the effect of their choices on the project outcomes throughout the process.

In addition to Design, expertise within this subject Is drawn from a variety of disciplinary fields such as Business, IT Engineering and Architecture.

Through this subject students gain advanced skills in the management of interdisciplinary entrepreneurial projects, as well as exposure to client contacts in the wider community for a semester specific project.

Typical availability

Spring semester, City campus

89172 Engaging Texts: Cross-Disciplinary Conversations

6cp

Postgraduate

This subject introduces students to texts, conversations and viewpoints drawn from diverse disciplinary contexts that are of relevance to design, including philosophy, sociology, anthropology, science and technology studies, history, literature and film. It highlights the richness of understanding that can arise when texts move across disciplinary boundaries and populate other disciplinary spaces. This in one of a pair of subjects that focus specifically on 'engaging texts' as a stimulus to design understanding. In these subjects students engage with texts that are or have been influential in shaping ways in which designers think about the worlds that designed things enter into and redefine. Different kinds of text, including theoretical, literary and designed texts, and texts utilising different media, are introduced.

Typical availability

Autumn semester, City campus Spring semester, City campus

89173 Technology Workshop: New Poetics

6ср

Postgraduate

The Technology Workshops offer students opportunities to engage with diverse tools, processes and materialities of production. Oriented to experimental practices, and to iterative exploration of the aesthetic and material effects enabled by each technology, the workshops encourage openness to new possibilities for making. In particular, this subject focuses on the potential for production of new and different formal effects through experimentation with various technologies.

Typical availability

Autumn semester, City campus Spring semester, City campus

89200 Graphic Visualisation

6ср

Postgraduate

This subject expands the awareness and ability of students from various disciplinary backgrounds to generate ideas and develop visual narratives and to communicate these by means of the visual communication media. There is special emphasis on drawing and image-making and the development of competencies in a range of basic techniques suitable for the representation and effective visual communication of animation and design ideas and solutions, including character design, layout and storyboarding. Students are encouraged to experiment with form in the visualisation of story and script ideas and to enhance their creative visual problem-solving skills. The subject provides students with the opportunity to acquire a critical understanding of the language of visual communication using simple linear form to construct graphic narratives and sequences for the comics and animation media.

Typical availability

Autumn semester, City campus

89201 Animation Genres Seminar

6ср

Postgraduate

This subject consists of a series of weekly lectures, screenings and seminars and the occasional master class and aims to increase the student's knowledge of the history and theory of animation with a particular emphasis on the study of genre. A range of animation genres is examined. These include, but are not restricted to, animation production techniques such as trick films, puppet animation, claymation, cut-outs, pixillation, rotoscoping, model and toy animation, scratched and drawn animation, digital animation and cartoon animation. In addition to the study of techniques of production, this subject also analyses various animation styles and formats, including cartoon animation, Anime, television animation, animated title graphics and motion graphics, art animation, abstract and experimental animation, animated music video and animated film musicals, animation special effects in live-action films, animation in advertising and on the Internet, animation for mobile phone displays and computer games including hand-held game sets, Web animation, applications in architecture and design such as virtual space and buildings, children's animation and kids TV animation. Other aspects of genre studies include issues such as self-reflective animation, cute and hyper realistic styles, animation as visual communication in instructional, informational and propaganda environments, aspects of artifice, art and ideology, entertainment, fantasy, fairy tale and myth, as well as a study of centres of production such as European, North American and Asian animation.

Typical availability

Spring semester, City campus

89202 3D Digital Animation 1

6cn

Postgraduate

This subject introduces students to 3D digital animation techniques based on standard practice within the animation industries. Topics covered include traditional principles of animation, 3D animation techniques with a focus on performance and character animation. In this subject, students participate in exercises that build a demonstrable knowledge of the design and production of 3D digital character animation.

Typical availability

Spring semester, City campus

89203 3D Digital Animation 2

6ср

Postgraduate

This is a modelling project-based subject that requires students to apply their 3D modelling skills in the design and production of an animation ready environment and character model. The subject requires the creation and manipulation of 3D models and their appropriate application in animation production. Topics covered include advanced computer modelling and topology theory, lighting for production and character rigging basics. Students are also expected to further develop animation production skills, refine their understanding of the different areas of computer graphics in a production pipeline and how they work together.

Typical availability

Spring semester, City campus

89204 2D Digital Animation

6ср

Postgraduate

This subject provides coverage of the design and production of 2D digital animation, advanced using appropriate software. The subject also covers the theory and conceptualisation of design in computer animations for the Internet. In this subject, students are expected to understand design processes in the production of 2D animation, comprehend knowledge of relevant software, demonstrate design and production skills, acquire basic 2D animation skills, become aware of a range of possibilities and limitations of dynamic media and animation for the Internet and demonstrate appropriate design solutions for the advanced Web applications of animation.

Typical availability

Spring semester, City campus

89205 Design for Three-Dimensional Computer Animation

6ср

In this animation project-based subject, students apply their 3D animation skills acquired in 82221 Context: 3D Animation Introduction and 82321 Context: 3D Animation Advanced in the design and production of a short animated sequence, while developing and expanding their knowledge of both the theory and operation of industry standard computer animation, with an emphasis on rigging through Maya (or other industry equivalent) using prerigged characters. The subject demands the student's creation and manipulation of 3D images and their appropriate application in animation pre-visualisations, production and post-visualisation.

Typical availability

Winter session, City campus

89303 Client and User-centred Designing

6ср

Postgraduate

Expert designing involves understanding the situation into which the design will intervene. To reach these understandings, designers must be as creative in their research as in their idea generation and realisation. This subject introduces designers to the methods and strategies being used by the leading design innovation companies around the world to access the activities, values, needs and feelings of those they design for. The subject covers obtrusive and unobtrusive research, and direct and technologically-mediated interviewing. Each technique students learn about is immediately tested in live fieldwork and then translated into clear design briefs.

Typical availability

Autumn semester, City campus Spring semester, City campus

89304 Social Change Design

6ср

Postgraduate

Designs enable people to live different sorts of lives, if they are developed out of deep understanding of those people or preferably with those people. This power can be used to develop new markets and to develop disadvantaged communities. This subject explores both commercial and social entrepreneurship by design. Participants learn a range of ways to negotiate cultural difference to access deeper understanding of marginal social practices. The subject focuses on a number of participatory design techniques, where designers act as facilitators of communities, helping them to identify and respond to their changing situations.

89400 Design Capstone Project

12cp

Requisite(s): 12 credit points of completed study in MAJ10014 Information Design Major M Design OR 12 credit points of completed study in MAJ04004 Interior Lighting Major OR 12 credit points of completed study in MAJ04005 Furniture Design Major M Design OR 12 credit points of completed study in MAJ10015 Photomedia Major M Design OR 12 credit points of completed study in MAJ10016 Branding Design Major Postgraduate

This is the final subject of each of the design expertise majors in the Master of Design (C04243) (see page 417). Students utilise the knowledge and insights they have gained from their master's studies to develop an original body of design work in an area of practice as defined by their previous elective study. Each student develops an individual project that includes four elements: design research, design conceptualisation, design development and design evaluation. Assessment is based on the submission of a project that clearly demonstrates these four elements of the design process. This is a demanding subject that requires self-motivation and self-management of a high order. Students need to plan their time effectively as there is a substantial amount of work in translating a project notion into a well-researched and documented design proposal and then finally into a responsive detailed design.

Typical availability

Autumn semester, City campus Spring semester, City campus

89921 Design Project Preliminary

12cp

Postgraduate

This subject is a program of individual supervised research or design. Assessment is made on submission of an original body of work which usually includes four elements: research, development, evaluation and report. Topics include research, new product development, packaging, pricing, promotion, advertising, product image, test marketing, strategies and tactics for existing products, services and societal marketing, legislation, and consumerism.

89990 Animation Project

24cp

Requisite(s): 89200 Graphic Visualisation

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

In project work students undertake an original short piece of animation work informed by theoretical study, based on independent research and showing evidence of their professional skills and creative expertise. The project can be in any appropriate form and style of animation production. Students are also required to produce a critical rationale (of approximately 5,000 words) to accompany the project. The animation project is required to demonstrate work of a high standard with the possibility of being publicly exhibited. It must be of a length that can be reasonably completed within the time frame. In Animation Project, students work with their supervisor to negotiate the feasibility and length of their proposed project and their production schedule. In this first part of the semester, students are expected to take their project through research and script revisions to storyboard stage and into pre-production. Students are also expected to make significant progress on their rationale by mid-semester then take both this and their project through to completion. The project should be a significant piece of quality animation, informed by theory and suitable for international exhibition, with an accompanying rationale and research document. It must show evidence that students have engaged in a lively dialogue between theoretical ideas and production practices. Students take the project from shooting, through editing, sound design and post-production. They are expected to screen work-in-progress to their supervisor and regularly report on their post-production. The completed project should demonstrate the student's professional skills and creative expertise and the evidence of the student's capacities as an animator. The subject is conducted by individual supervision and attendance at weekly seminars that offer students the opportunity to present their program ideas, project development and work-in-progress for critical examination. There is also screening and discussion of short media work and the presentation of production case studies relevant to student's own production work.

89991 Animation Project A

12cp

Requisite(s): 89200 Graphic Visualisation

There are also course requisites for this subject. See access conditions.

89992 Animation Project B

12cp

Requisite(s): 89991 Animation Project A AND 89200 Graphic

Visualisation

Postgraduate

This subject continues the individual and/or group production processes developed in the prerequisite subject through to completion of a significant piece of quality animation, informed by theory and suitable for international exhibition, including an accompanying rationale and research document. It must show evidence that students have engaged in a lively dialogue between theoretical ideas and industry standard animation production practices (i.e. group work

that demonstrates individual roles and responsibilities). Students take the project from shooting, through editing, sound design and postproduction. They are expected to demonstrate their individual roles and associated processes and screen work in progress to their supervisor and regularly report on their postproduction. The completed project should demonstrate the student's professional skills and creative expertise and the evidence of the student's capacities as an animator or skills in a specialised area of animation. The subject is conducted by individual/group supervision and attendance at weekly seminars. In this subject students are also required to submit written critical rationale in support of their project.

90001 Exchange Elective 1 (Information Technology)

6cp; availability: outbound international exchange students only Undergraduate

Enrolment in this subject indicates that a student has completed an elective subject in information technology as part of the UTS international exchange program. Before outbound exchange students can enrol in this subject, the equivalent subject at the exchange partner university must be approved. For students enrolled in UTS: Information Technology courses, this approval must be sought from their program leader. For non-IT students wishing to study IT electives overseas, this approval must be sought from the UTS: Information Technology international exchange contact person.

91103 Honours FT (Medical and Molecular Bioscience) 1

24cp

Study in this subject is designed to enhance the skills and knowledge necessary for research in the biological and biomedical sciences. The principal activity is an individual research project in which the student, under supervision, plans and undertakes investigation in an area of interest. The data collected are then subjected to analysis and interpretation under the guidance of the supervisor. Students learn to define objectives and aims, work to available time and resources, use appropriate research methods, critically assess information and develop complex arguments in detail. The findings of the research project are presented in a structured and integrated thesis, which comprises the main assessment component.

91107 The Biosphere

6cp; 5hpw

This subject provides an introduction to the science of the biosphere; a collective term encapsulating all life on earth. The subject explores the environment and how it relates to life; interactions among the various living and non-living components within the biosphere, and

with external factors such as climate; the fundamental construct of the Earth's crust; and issues associated with land and water. Throughout the subject there is an integrated focus on the science of the biosphere and the effects of humans and their activities on the biosphere, including current issues such as climate change, sustainability and the water crisis. Some of the skills that students acquire in this subject include presentation and interpretation of scientific data, and communicating science.

Typical availability

Autumn semester, City campus

91110 Experimental Design and Sampling

6cp; 5hpw

Requisite(s): 33116 Statistical Design and Analysis OR 33109c Statistics for Environmental Biologists

This subject demonstrates the keystone role of experimental design and data analysis in environmental science. It also provides a logical framework for conducting scientific research, as well as builds on the analytical skills acquired in past subjects at UTS. By the end of this subject, students are able to design and analyse unconfounded experiments in the field and laboratory. They also have an improved knowledge of multifactor ANOVA, correlation and regression analyses and non-parametric multivariate techniques. The skills learnt in this subject are crucial for future work at UTS and for a successful career in environmental science.

Typical availability

Autumn semester, City campus

91116 Wildlife Ecology

6cp; students are expected to attend lectures, student talks, and a four-day field excursion

Requisite(s): 91363 Animal Behaviour and Physiology OR 91309 Biodiversity Conservation

These requisites may not apply to students in certain courses. See access conditions.

This subject explores the conservation, management and study of wildlife in Australia. It focuses on current issues in wildlife ecology and applied solutions to conservation and wildlife management problems. The subject gives students hands-on experience in wildlife ecology and involves a field trip where students learn a broad range of skills and techniques used to survey, identify and study wildlife. Students learn many of the necessary skills and knowledge to contribute in a professional capacity to the conservation and management of Australian wildlife. Topics include conservation biology, the ecology of threatened and endangered species, anthropogenic impacts on Australian wildlife, captive breeding programs, the role of zoos and national parks in conservation, the ecology of native and introduced pest animals, and the sustainable use of wildlife. Guest lecturers, researchers, and resource managers give presentations covering a range of contemporary issues and advances in the vibrant interdisciplinary field of wildlife ecology.

Typical availability

Autumn semester, City campus

Note(s)

Students wishing to take this subject without the abovementioned prerequisites need to discuss it with the course director or subject coordinator before putting in an e-request.

91118 Fisheries Resources

6ср

Requisite(s): 91123 Biocomplexity OR 91153 Catchment Ecosystems These requisites may not apply to students in certain courses. See access conditions.

In this subject students learn about the biology of freshwater, estuarine and marine biological resources in relation to their exploitation by humans. Problems of productivity against a background of regulations, fishing methods and climate change are explored, and the major management requirements for ecologically sustainable development of coastal and freshwater fisheries resources are addressed. NSW and Australian practices are examined in relation to best practices elsewhere. Some classes are taught in excursion mode, as well as workshops with fisheries professionals.

Typical availability

Autumn semester, City campus

91120 GIS and Remote Sensing

6cp

Requisite(s): 72 credit points of completed study in Completion of 72 credit points in a Bachelor's degree

These requisites may not apply to students in certain courses. See access conditions.

This subject provides students with an understanding of some of the complex aspects related to the use, development and management of geographical information systems (GIS) as well as exposure to elements of remote sensing as applied to the study of natural phenomena. In the GIS stream students gain exposure to one of the most widely used GIS softwares in industry and science. In the remote sensing stream students are presented with elements of the physical principles underpinning collection of earth systems data from orbiters and the payloads on board. Experience on how to input data obtained by remote sensing (as well as other sources) into a GIS is also gained. The subject includes lectures, computer practicals and discussion boards. Selected case studies on the application of GIS and remote sensing are presented by guest speakers as appropriate, depending on speakers' availability.

Typical availability

Autumn semester, City campus

91121 Aquatic Ecology

6cp; includes a compulsory field trip to Manly Dam, usually held in March

Requisite(s): 91110 Experimental Design and Sampling AND 91154 Ecology

This subject gives students a comprehensive understanding of the ecology of aquatic ecosystems (freshwater and marine). It provides students with knowledge of the physical, chemical and biological processes and their interactions that occur in freshwater, marine and estuarine systems. It also introduces them to the effects of anthropogenic impacts of in-stream and catchment activities on the integrity of these ecosystems, and approaches to managing these water resources. Students develop an appreciation of the importance of understanding the ecology of these systems as it underpins the ability to manage these resources for the benefit of the biota and humanity. These include an appreciation of the rich and varied patterns of biodiversity and physical features among these habitats, and the importance of maintaining their integrity in the face of anthropogenic impacts. Understanding ecosystem integrity requires and understanding of the structure and function of these ecosystems. The subject develops the student's ability to research issues related to the project component of the subject to discuss the implications of their results in the broader context of the ecology of aquatic ecosystems.

The subject applies the knowledge gained in 91110 Experimental Design and Sampling in the practical activities which are project based. It also provides the knowledge and skills required for the elective subject 91155 Stream and Lake Assessment.

Typical availability

Autumn semester, City campus

91123 Biocomplexity

6cp; 6hpw

The existence of humans on earth has arguably been made possible through the evolution of a vast diversity of biota – to which we are inextricably linked, both directly and indirectly. Earth's biodiversity is not only extraordinary and fascinating but also fundamental to our ongoing survival. An understanding of the biological complexity of life is an important component underpinning a career in science, irrespective of the chosen scientific profession.

This subject investigates the question: what does it take for life to exist in the range of habitats across the globe? There is considerable variation among living organisms, including humans, in their biology and how they interact with their environment. This subject explores the problems faced by organisms living in different habitats and demonstrates the strategies of plants, animals, fungi, protists, bacteria and archaea that have evolved to cope with the vast array of habitats on earth. The order in which these biota are treated is reflected in the order of the evolution of life, i.e. movement from water to land (and in some cases back again). All major taxa are discussed comparatively to better demonstrate the diversity of evolutionary strategies that have evolved in response to environmental conditions. The subject concludes with considerations of the sustainable use of animals, plants, fungi and bacteria as resources for humans.

Typical availability

Spring semester, City campus

91126 Coral Reef Ecosystems

6cp; includes a six-day field excursion to One Tree Island, normally held in July; availability: enrolment is restricted due to the availability of space at the One Tree Island Research Station and preference is given to final-year students in the Bachelor of Science in Marine Biology

Requisite(s): 91123 Biocomplexity AND 91121 Aquatic Ecology

Coral reefs are biodiverse and spectacular global ecosystems that are currently at risk from human exploitation and climate change. In this senior-level field subject, students examine in detail the ecology and geology of a coral reef environment, and its relevance to sustainable management. As part of the study, students carry out a group research project on an area of special interest within the reef environment. The subject requires a literature survey and a workshop prior to attendance and preparation of a field report following completion of the field work. The subject covers a range of aspects of the marine environment, including chemical, biological, social, physical and geological oceanography, with a special emphasis on the biology of fishes, benthic fauna, plants and sediments. The subject includes a six-day excursion to Queensland's Heron Island.

Typical availability

July session, City campus

91129 Transfusion Science

6cp; 6hpw

Requisite(s): 91401 Introductory Haematology and Immunology

This subject covers human blood groups, principles of donor blood compatibility and antigen/antibody reactions, detection and identification of serum antibodies, blood products, the safety of the blood supply and minimisation of transmission of infectious diseases, investigation of transfusion reactions, haemolytic disease of the newborn, platelet and leucocyte immunohaematology, transfusion in critical care situations, legal aspects of transfusion of blood products, stem cell transplantation, and cytokine stimulation of haemopoiesis.

Typical availability

Spring semester, City campus

91132 Molecular Biology 1

6cp; 6hpw

Requisite(s): 91161 Cell Biology and Genetics AND 91314 General Microbiology

These requisites may not apply to students in certain courses. See access conditions.

This subject provides an introduction to the basics of molecular biology and an understanding of the key concepts underlying the experimental techniques of DNA manipulations of a molecular biology laboratory. Topics covered include: DNA and RNA isolation, restriction enzymes, DNA ligation, cloning strategies; southern, northern and western blotting; and an introduction to DNA sequencing and PCR. Emphasis is also placed on the use of databases to retrieve and analyse nucleic acid and protein sequences. This subject encourages students to become adept at the techniques required for molecular analysis in a modern scientific laboratory, and provides a foundation for more advanced molecular biology study.

Typical availability

Spring semester, City campus

91137 DNA Profiling

6cp; 5hpw

Requisite(s): (35255 Forensic Statistics AND (65242 Principles of Forensic Science OR 65241 Principles of Forensic Science) AND (65342c Crime Scene Investigation OR 65543c Crime Scene Investigation) AND 91132 Molecular Biology 1)

These requisites may not apply to students in certain courses. See access conditions.

This subject examines advanced molecular biological techniques, and the performance of DNA laboratory extraction procedures from a variety of samples. DNA extract amplification and examination using the standards is highlighted as required for court admissible evidence. Population genetics and population structure is addressed in relation to relevance of results. Basic population statistics and likelihood ratios is discussed in relation to considerations, quality control, proficiency testing and accreditation. Students study the applications of these techniques in quarantine, customs and wildlife management.

Typical availability

Autumn semester, City campus

91138 Investigation of Human Remains

6cp; 5hpw; availability: limited places are available with priority given to Bachelor of Forensic Biology in Biomedical Science (C10174) students; it also may not be available as an elective to other science students, contact the subject coordinator

Requisite(s): ((91402 Anatomical Pathology OR 91354 Anatomical Pathology) AND (65342c Crime Scene Investigation OR 65543c Crime Scene Investigation) AND 91314 General Microbiology) These requisites may not apply to students in certain courses. See access conditions.

This subject covers the coronial system, the function of the coroner, ethical and religious issues, sensitivity to Koori (and other indigenous Australian people) rights and heritage, and procedures required for disaster victim identification. Theoretical and practical aspects also include recovery of remains, decomposition, methods to estimate time of death, ways forensic scientists and pathologists distinguish race, age and gender of the deceased and whether death was caused by ageing, disease or accidental or intentional means. Students are also introduced to odontological (dental), osteological (bone) and anthropological techniques, which also assist in such identifications.

Typical availability

Autumn semester, City campus

91139 Complex Forensic Cases (Biology)

6cp; 4hpw

Requisite(s): 91137 DNA Profiling AND 91138 Investigation of Human Remains

These requisites may not apply to students in certain courses. See access conditions.

This subject examines some cornerstone cases in biological evidence, which lead to changes in testing and court procedures. The subject also includes working through mock cases, making decisions on what samples to take and analyses to perform, along with relevant controls and reference samples. A court report is written (submitted for marking) and evidence relating to the case presented in a mock rial. The report details the case strategy, relevant quality assurance, control, reference samples and significance of the findings.

Typical availability

Spring semester, City campus

91140 BioNanotechnology

6cp; 5hpw

Requisite(s): [[(65201 Chemistry 2C OR 65212 Chemistry 2]) OR 65022 Chemistry 2A]

These requisites may not apply to students in certain courses. See access conditions

Biological systems are extremely important in nanotechnology and many new applications are being developed by mimicking natural systems. Biology is extremely good at self-assembling complex, multifunctional systems at the nanoscale, e.g. cell membranes or DNA. By understanding how these systems work, nanotechnologists are

developing new biosensing, biomedical and materials applications, e.g. the ion-channel biosensor. This subject investigates the science that underlies these biological processes and how it is applied in contemporary nanotechnologies.

Typical availability

Spring semester, City campus

91142 Biotechnology

6cp; 6hpw

Requisite(s): ((91320c Metabolic Biochemistry AND 91314c General Microbiology) OR 91313 Biomolecules: Structure and Function)

This subject provides a detailed overview of the biotechnology industry from the traditional industries to the recent high-technology industries. The major streams of food biotechnology, agricultural biotechnology, industrial biotechnology and medical biotechnology are explored with an emphasis on recent advances and modern procedures.

Typical availability

Autumn semester, City campus

91144 Plant Biotechnology

6cp; 5hpw

Requisite(s): 91132 Molecular Biology 1

In this subject, students are introduced to plant cell and tissue culture and the application of these techniques to cloning, somatic embryogenesis and somaclonal variation, and totipotent cells as a means of multiplication and determining phenotypic and genetic stability of tissue cultured plants. The subject also includes media preparation and nutrient requirements and the use of robotics and biofermentors in micropropagation. Pathogen detection and elimination, virus-free plants, pathogen indexing, certification of horticultural crops, plant quarantine, germplasm preservation, cryopreservation, long-term storage, and biosecondary metabolites are covered. Physiological status of micropropagated plants, transplanting and hardening-off stages are demonstrated and practices and problems in micropropagation such as vitrification, phenolic exudates, vessel environment and large-scale production are covered. Techniques used in plant biotechnology such as transgenic plant production, molecular biology and proteomics are covered and environmental concerns and biosafety regulations are included. Emphasis is given to Australian indigenous and rare flora and agriculturally important crops.

Typical availability

Spring semester, City campus

91145 Environmental Protection and Management

6cp; 5hpw

Requisite(s): 91154 Ecology

These requisites may not apply to students in certain courses. See access conditions.

There has never been a greater need for environmental protection and management, and for the science needed to guide decisions on ways to protect the environment and manage human activities. Degradation of the Earth's natural environment by unsustainable human activities endangers ecosystems and biodiversity, and impacts human society through its effects on incomes and livelihood, human health, global climate, and recreation and culture.

This subject reviews current issues for the environment, approaches to environmental protection and management, the contribution of science to understanding the impacts of human uses of the natural environment, and the pivotal role of science in the development of solutions to environmental issues. The subject is taught by lectures, workshops that focus on critical analysis of current environmental topics, and a group project. Topics covered include: environmental ethics, environmental impact assessment, environmental risk assessment and management, environmental management systems, rehabilitation, ecosystem-scale management, conservation value, protected areas, and community participation in environmental protection and management.

Typical availability

Spring semester, City campus

91146 Topics in Australian Marine Science

6ср

This subject introduces students to current research undertaken in the various disciplines of marine science in Australia. It is a multi-institutional subject taught at the Sydney Institute of Marine Science (SIMS) with contributions from four partner universities (UTS, UNSW, USyd, and Macquarie). Students are able to take advantage of the newly built (as of 2011) facilities at SIMS, and its more than 80 associate scientists. Lectures and tutorials are taught by leading marine science researchers. The SIMS partnership provides a breadth of expertise that would not be achieved by any institution in isolation. Topics cover physical and biological oceanography, climate change, molecular ecology, aquaculture, marine biology and marine geosciences. In practical classes, students analyse and interpret remotely-sensed data from the Integrated Marine Observing System (IMOS), which provides comprehensive information on the biological and physical processes of Australia's coastal and oceanic waters.

91149 Geological Processes

6cp; 6hpw

Requisite(s): 35101 Introduction to Linear Dynamical Systems OR 68041 Physical Aspects of Nature OR 68101 Foundations of Physics

This subject introduces basic concepts of environment building processes. The focus is on the processes of rock and landscape formation, and their evolution due to the action of atmosphere and hydrosphere, and the interaction with the biosphere. Geomorphologic processes and their relationship to the underlying geological sequences are presented, as well as principles of weathering and sedimentology; soils and sediments, their formation, structure and function in supporting soil-based ecosystems. Unravelling the history of the Earth through the study of layering in rocks and examination of the fossil record are included, together with an introduction to the development of stratigraphic principles and their significance in understanding the nature of surface materials through aspects of superposition, correlation, structure, erosion and land stability. Practical classes are aimed at equipping students with the following essential skills: map reading and environmental interpretation; and practical identification of sediment, soil, minerals, rocks and fossils.

Typical availability

Autumn semester, City campus

91154 Ecology

6ср

Requisite(s): 91107 The Biosphere OR 91123 Biocomplexity

Management and remediation of the vast array of environmental problems facing the globe require a rigorous, scientific understanding of how ecosystems work. In this subject, students are introduced to fundamental ecological principles underpinning the structure and function of ecosystems. Theoretical and empirical examples are provided using a broad cross-section of organisms (e.g. invertebrates and vertebrates) and ecosystems (e.g. aquatic and terrestrial) with a focus on the application of ecological knowledge to the conservation and management of biodiversity. Field work in several different systems (e.g. woodland vegetation, rocky shore habitat) during practical classes is compulsory. This subject is an important link to a range of third-year subjects that require a deep understanding of ecological concepts.

Typical availability

Autumn semester, City campus

91155 Stream and Lake Assessment

6ср

Requisite(s): 91121 Aquatic Ecology

These requisites may not apply to students in certain courses. See access conditions.

Australia is the driest inhabited continent on earth and our limited surface water is critical for biodiversity as well as freshwater for direct human consumption for irrigation, potable water, industry and a range of other ecosystems services that derive from healthy freshwater systems. In order to ensure biodiversity protection and that the impacts of human disturbances are understood, it is necessary to be able to assess the health of streams and lakes. This subject covers the biological characteristics of Australian streams and lakes, methods of measuring their health via biomonitoring and water quality measurements, and the ecological management of streams and lakes. An appreciation of these factors allows students to

contribute to the ongoing debates about direct human consumption of freshwater versus 'environmental flows', the regulation of water by dams and other engineering works, and the impact of environmental contaminants on freshwater systems. This subject is targeted at those seeking a career as professional freshwater ecologists in government, environmental consultancy, companies and universities. A two-day field excursion is a core component of this subject.

Typical availability

Spring semester, City campus

91156 Marine Productivity and Climate Change

6cp; block, plus 7-day excursion

Requisite(s): 96 Credit Points in spk(s): C10227 Bachelor of Environmental Forensics OR 96 Credit Points in spk(s): C10228 Bachelor of Marine Biology OR 96 Credit Points in spk(s): C10115 Bachelor of Biomedical Science OR 96 Credit Points in spk(s): C10172 Bachelor of Biotechnology OR 96 Credit Points in spk(s): C10184 Bachelor of Medical Science

These requisites may not apply to students in certain courses. See access conditions.

Marine ecosystems are supported by the energy derived from its primary producers. With the continuing increase in anthropogenic CO2 emissions, the need for understanding the processes that underpin primary production are necessary to better understand how climate change will impact marine ecosystems. Over 50% of the oxygen we breathe is generated by our marine ecosystems; this oxygen is a direct result of the photosynthesis performed by marine microalgae, macroalgae, seagrass and corals. Marine ecosystems present a range of unique problems in assessing their health and therefore primary productivity. This subject investigates drivers of primary production in essential marine ecosystems (oceanic phytoplankton; coastal and intertidal; seagrass, mangrove and coral communities; sea-ice and benthic microalgae), and explores how rising atmospheric CO2 and climate change are threatening the ecosystem functioning and services of our marine environment. How primary producers support their ecosystems and practice a range of techniques used to monitor their production and health is explored, with a special focus on their capacity for adaptation to a greenhouse world.

This subject is predominantly taught on Heron Island, with some laboratory practicals and lectures presented in Sydney during the early part of Spring semester.

Typical availability

July session, City campus

Note(s)

91156 runs every day (3rd year).

91157 Marine Communities

6cp; block, plus one-day and three-day excursions Requisite(s): 91154 Ecology AND 91110 Experimental Design and Sampling

These requisites may not apply to students in certain courses. See access conditions.

Australia is directly responsible for more the 16 million square kilometres (km2) of ocean, which contributes in excess of \$50 billion to our economy each year. Sustainable management of our coastal and oceanic resources can only come through understanding of the ecology of these systems. In this subject students develop an understanding of the processes that structure marine communities and support marine mammal populations. Problem-based learning techniques are used to elucidate interactions between the animals and plants in marine communities. Special attention is paid to local rocky reef, soft-sediment and pelagic (open water) communities. This subject integrates lecture and fieldwork, complementing other subjects which focus on fish, coral reef ecosystems, marine primary producers and marine geosciences. Experimental work is conducted in the field during a three-day excursion to Pearl Beach, held during tutorial week. Due to the Pearl Beach excursion, numbers are limited and preference is given to second-year marine biology students.

Typical availability

Spring semester, City campus

Note(s)

91157 runs every year (2nd year).

91159 Environmental Forensics

6cp; 5hpw

Requisite(s): ([91152 Contemporary Environmental Issues OR 65012 Chemistry 1A OR 65101 Chemistry 1C)) OR (91107 The Biosphere AND 91123 Biocomplexity)

Recommended studies: 65111 Chemistry 1; 91107 The Biosphere; 91123 Biocomplexity

This subject is a combination of analytical and biological disciplines that aid scientific investigations and address the nature and implications of contaminants in the environment. Environmental forensics investigates the sources, fate and transport of toxicants in soils, water and air, and effects on biological and ecological processes that have legal, financial and social environmental implications. In this subject student are introduced and exposed to the study of impacts of major pollutants and toxicants in aquatic and terrestrial ecosystems on biota, their fates in the environment and the methodologies that are used to measure impacts to yield results that are acceptable under regulatory constraints. The contributions of field and laboratory methods of assessment are evaluated in the context of monitoring and assessment, quality assurance and quality control (QA/QC), and forensic investigation methods relevant to the environmental protection area. Relevant examples from Australia are explored throughout the subject, along with international case studies. Several one-day excursions to testing laboratories and prospective employment organisations are included. The subject integrates techniques used in plant physiology and biotechnology to investigate environmental pollution, such as plant and invertebrate bioassays and phytoremediation. Issues of concerns and biosafety related to these environmental technologies are discussed. Special emphasis is given to evaluating Australian indigenous flora and fauna, and their application to urban and rural environments.

Typical availability

Spring semester, City campus

91161 Cell Biology and Genetics

6cp; 6hpw

This subject is concerned with the cellular nature of biological material and students engage in processes of scientific inquiry in cell biology and genetics. The subject introduces the student to the basic concepts of cell biology, cell structure and function and the underlying genetic code. The different structure, composition and function of prokaryotes, eukaryotes and archaea are covered. The subject covers the structure and properties of cell membranes and transport across them, as well as the chemical changes (both synthetic and degradative) that occur in cells and the ways in which cells obtain, store and manipulate energy. Processes of cell communication, including cell recognition and adhesion, and the ways in which cells respond to external signals are also covered.

Students are introduced to the methods used to investigate cellular structure and the functional significance of their sub-cellular organisation. Cell growth and division along with stages of the cell cycle and key molecules and mechanisms involved in its regulation, along with mitosis and meiosis are discussed. The topics of cell proliferation, cell differentiation and apoptosis (programmed cell death) are covered. In this subject students learn to undertake independent research and participate in the scientific peer review process.

Typical availability

Autumn semester, City campus

91163 Alpine and Lowland Ecology

6cp

Requisite(s): 91110 Experimental Design and Sampling AND 91154 Ecology

This is a field-based subject run every third summer. The 'Great Southern' is an 11-day field trip from the southeast coastal to alpine regions of New South Wales. This field trip alternates on a three-year rotation with 91371 Forest and Mountain Ecology (the 'Great Northern') and 91370 Semi-arid Ecology (the 'Great Western'), i.e. each subject is offered once every three years. The next offering of this subject is in December 2016.

The discipline of environmental science requires a comprehensive understanding of the environment, which is best achieved by experiencing it first-hand. Worldwide, ecological processes and biota vary dramatically with altitude. Such an altitudinal gradient

can be seen in Australia not far from Sydney. The field trip goes from the lowest to the highest locations in Australia: sea level on the southeast coast to Mt Kosciuszko at 2,228 metres. Along this gradient, students experience changes in flora, fauna, and ecology, driven by the climatic forces and other process that vary from the ocean to the mountains. The curriculum framework is therefore altitudinal change, with core content focusing on vegetation changes in height, form, species composition, ecology and human use. Students compare heathlands at the top and the bottom of the range, the tall forests in between, and their associated fauna and aquatic systems. Students experience first-hand the major climatic driver of environmental change along this altitudinal gradient: temperature. They also learn how the interacting forces of rainfall, soil, slope, and aspect shape the ecological complexity as they gradually ascend Australia's tallest peak.

Typical availability

Summer session

The next offering of this subject is in December 2016.

91164 Communication for Science

6cp; lecture: 1hpw; workshop: 3hpw

This is an integrated subject aimed at developing and enhancing oral and written communication skills of students entering science. The content of lectures and practical workshops deals with the development of a range of academic and professional communication skills such as effective reading of scientific texts, writing for a range of readers and purposes in various science disciplines, effective speaking and listening. The subject also addresses ethical considerations relevant to science communication, such as plagiarism, truth in reporting of scientific data and ethical dilemmas in science.

91170 Microbial Ecology

6ср

Requisite(s): (91107 The Biosphere AND 91123 Biocomplexity AND (91161 Cell Biology and Genetics OR 65111 Chemistry 1))

Microorganisms dominate all natural ecosystems and are fundamentally important for the maintenance of conditions that permit life on earth. Microbes are also important infectious agents or symbionts of animals and plants, and thus play a critical role in influencing the physiology and ecology of these larger organisms. Understanding these relationships and the ecology of microbes is often overlooked, but fundamental to environmental science. This subject goes beyond traditional laboratory and clinical-based microbiology to examine the ecological role of microorganisms in natural environments. Within this context the subject investigates how microorganisms fit into aquatic and terrestrial food webs, and the roles that they play in controlling global chemical cycling processes. The ways that microbes interact with higher organisms (animals and plants) and their influence on human society are also examined. The primary objective is to provide a comprehensive introduction to the multifaceted influences of microorganisms in our natural world.

91239 Human Pathophysiology

6cp; 5hpw

Requisite(s): (91400 Human Anatomy and Physiology OR (91701 Medical Science 1 AND 91702 Medical Science 2))

These requisites may not apply to students in certain courses. See access conditions.

This subject aims to provide an overview of the essential elements of the disease process as occurring in some common disorders of each of the major body systems. This information is provided in the context of how the disorder affects healthy structure and function, and so reinforces basic anatomy and physiology previously studied. Topics include immunology, cancer, endocrine, gastrointestinal, respiratory, cardiovascular, renal and body fluid, nervous, musculoskeletal and reproductive disorders.

Typical availability

Spring semester, City campus

91270 Plant Physiology and Ecophysiology

6cp

Requisite(s): (91123 Biocomplexity OR (91101 Cells, Genetics and Evolution AND 91151 Plants, People and the Environment AND 65212 Chemistry 2))

Plants are the cornerstone of energy capture and transformation of all ecosystems. The productivity of plants and their influence on water, carbon, nutrient and energy cycles is central to the functioning of landscapes. Developing knowledge of the physiology and ecophysiology of plants allows students to contribute to ongoing debates about overcoming the impacts of climate change, global food insecurity and the rise of water scarcity as a socio-political issue.

This subject introduces the key concepts, processes and techniques required to understand the basics of the physiology of plants and the interaction of the abiotic environment with plants in the field (ecophysiology). It is taught using a combination of lectures, practical lab work and group project work. Topics covered include a selection from the following: how plants fix carbon; long-distance transport in the phloem; uptake, movement and control of water fluxes in the soil-plant-atmosphere continuum; landscape carbon and water budgets; behaviour and physiology of stomata; nitrogen fixation of vascular plants; ion uptake by plant roots; comparative ecophysiology of plants in contrasting environments; the ecophysiology of global plant mortality in response to drought; and the physiology of plants exposed to stress.

Typical availability

Spring semester, City campus

Note(s)

This subject was formerly called Plant Ecophysiology.

91309 Biodiversity Conservation

6cp; 5hpw

Requisite(s): 91154 Ecology

These requisites may not apply to students in certain courses. See access conditions.

Biodiversity is threatened globally and species are becoming extinct at unprecedented rates as a result of human activities. In this subject students learn the conceptual framework of conservation biogeography to investigate both the theoretical principles (e.g. island biogeography) and applied challenges (e.g. limited time, resources and conflicting stakeholder interests) of conserving biodiversity in the face of expanding human populations and increasing demands on natural resources. Students learn about modern approaches to assessing biodiversity across a range of spatial scales - from local plant and animal communities to floral and faunal diversity at continental and global scales - and monitoring biodiversity change through time. There is a focus on Australian terrestrial vertebrates, invertebrates and plants and the pressing environmental issues of invasive species, urbanisation and climate change. This subject is a logical advanced extension of the prerequisite subject and it provides essential skills for a range of environmental career paths.

Typical availability

Autumn semester, City campus

91314 General Microbiology

6cp: 5hpw

Requisite(s): 91161 Cell Biology and Genetics OR 91701 Medical Science 1 OR 91101 Cells, Genetics and Evolution

This subject provides an introduction to the structure, function and taxonomy of the bacteria, fungi, protozoa, and viruses. Several key topics in the study of microbiology are discussed including microscopy, sterilisation, disinfection, microbial nutrition, microbial growth, bacterial identification schemes, as well as antibiotic and anti-microbial agents, and contemporary techniques in molecular microbiology. Basic mycology, parasitology, and virology are covered, with an emphasis on transmission control of these organisms. The practical exercises give students experience in the principal laboratory procedures for the isolation, manipulation, growth and identification of micro-organisms.

Typical availability

Autumn semester, City campus

Note(s)

This subject was formerly called Microbiology 1.

91320 Metabolic Biochemistry

6cp; 6hpw

Requisite(s): (91161 Cell Biology and Genetics OR 91313 Biomolecules: Structure and Function) AND (65212 Chemistry 2 OR 65022 Chemistry 2A OR 65201 Chemistry 2C)

This subject introduces students to cellular metabolism and energy transfer mechanisms. It provides an overview of the main carbohydrate catabolic and anabolic pathways including glycolysis, Krebs cycle and oxidative phosphorylation, gluconeogenesis and glycogen metabolism. It provides an understanding of nitrogen and fatty acid metabolism, and the metabolic specialisation of tissues and the relationships between tissues. Cell signalling and the role signals / hormones in maintaining homeostasis is explored.

This understanding of cell function provides a foundation for many subjects in biological and biomedical sciences. Emphasis is placed on mastering and understanding the principles of cellular reactions and their application to diverse cell types. The subject also introduces the basic tools and methods of biochemical experimentation, the application of biochemical reasoning, and the presentation of results in written format.

Typical availability

Autumn semester, City campus

Note(s)

This subject was formerly called Biochemistry 2.

91326 Analytical Biochemistry

6cp; 6hpw

Requisite(s): 91320 Metabolic Biochemistry OR 91313 Biomolecules: Structure and Function

This subject examines modern methods in biochemical analysis emphasising instrumentation, underlying principles, aims and strategies. It covers spectroscopic methods, spectrophotometry, spectrofluorometry flame emission and absorption photometry, magnetic resonance, mass spectrometry; chromatography principles and practice; GLC, HPLC; electrophoresis, centrifugation; applications to nucleic aids and proteins; cryoscopic osmometry; electrochemical methods; potentiometry and ion electrodes, polarography; introduction to radiochemistry; and immunoassay methods.

Typical availability

Spring semester, City campus

91330 Epidemiology and Public Health Microbiology

6cp; 6hpw

Requisite(s): 91314 General Microbiology

This subject covers the following topics: history of understanding of disease causation and of public health microbiology; basic epidemiological principles; mathematical formulation of epidemics; measures of disease frequency (rates and risk factors); sociological aspects; the public health laboratory environment; food, water and airborne diseases; exotic and notifiable diseases; zoonoses; application of bacterial enumeration and identification techniques to the examination of water and food; epidemiological tracing methods; biotyping; serotyping; bacteriophage typing; molecular

typing; control measures and interventions; hygiene; sanitation; disinfection; sterilisation; vaccines, vaccination procedures and vaccination programs.

Typical availability

Spring semester, City campus

91335 Molecular Biology 2

6cp; 6hpw

Requisite(s): 91132 Molecular Biology 1

These requisites may not apply to students in certain courses. See access conditions.

This subject covers the following topics: structure and organisation of the eukaryotic genome; fundamental introduction to the 'omics' technologies: genomics, transcriptomics and proteomics; control of gene expression by regulation of RNA synthesis, processing and translation; examples of gene therapy and transgenic technology including the use and design of expression vectors; and introduction to bioinformatics and the practical use of computer algorithms for the analysis of molecular data, DNA extraction and digestion for the identification of repetitive sequences, polymerase chain reaction and proteomics technology.

Typical availability

Autumn semester, City campus

91338 Clinical Bacteriology

6cp: 6hpw

Requisite(s): 91330 Epidemiology and Public Health Microbiology

This subject covers the following topics: quantitative methods, reliability studies, automation, data processing and numerical analysis in clinical microbiology; pathogenic microorganisms (their handling (including safety requirements), cultivation, isolation and relationship to the indigenous flora of humans and animals) a detailed study of staphylococci, streptococci, corynebacteria, mycobacteria, neisseria, enteric bacteria, pasteurellae, pseudomonads and spirochaetes; and antibiotics and antibiotic sensitivity testing.

Typical availability

Autumn semester, City campus

91344 Medical and Diagnostic Biochemistry

6cp; 6hpw

Requisite(s): 91320 Metabolic Biochemistry

These requisites may not apply to students in certain courses. See access conditions.

This subject is designed to introduce the basic concepts of medical biochemistry relevant to biotechnology, medical research and clinical analysis. It is structured in such a way that it analyses the basic biochemical abnormalities that lead to various disease states, their diagnosis, clinical analysis and final treatment. The major areas covered are abnormal kidney and liver function, biochemistry of haemoglobin pigments and their relation to disease. Abnormalities of carbohydrate metabolism such as diabetes, clinical enzymology and serum proteins in health and disease, the principles of laboratory management, with special emphasis on safety, quality control and automation are also covered.

Typical availability

Autumn semester, City campus

91345 Biochemistry, Genes and Disease

6cp; 6hpw

Requisite(s): 91320 Metabolic Biochemistry

These requisites may not apply to students in certain courses. See access conditions.

This subject covers biochemical and genetic aspects of human diseases for students planning careers in medical science, diagnostic biochemistry, molecular biology and biotechnology. In this subject, students learn about some of the more common heritable genetic defects and their medical and biochemical consequences. In addition, students further develop knowledge and practical skills in the biomedical applications of biochemical and molecular analysis. The lecture series covers three main areas: heritable metabolic defects, e.g. hypothyroidism, cystic fibrosis, familial hyperlipidemia, Down's syndrome; biochemical physiology and pathology, e.g. human biochemistry as expressed by lipid metabolism, detection of disease states resulting from altered biochemical systems; and current trends

in biochemical/molecular research including cancer and gene therapy for diabetes. The practical component enables students to gain experience in test procedures used to detect and monitor disease, including techniques of radioimmunoassay, electrophoresis and PCR screening.

Typical availability

Spring semester, City campus

Note(s)

This subject was formerly called Clinical Biochemistry 2.

91352 Parasitology

6cp; 6hpw

Requisite(s): 91314 General Microbiology

These requisites may not apply to students in certain courses. See access conditions.

This subject covers the following topics: parasitism; biology of parasitic worms including nematodes, trematodes and cestodes; biology of parasitic protozoa including the sporozoans, flagellates, amoeba and ciliates; arthropods as vectors of disease; clinical parasitology; molecular biology of parasites; immunity and vaccine development; and antiparasitic therapy.

Typical availability

Spring semester, City campus

91358 Advanced Haematology

6cp; 4hpw

Requisite(s): 91401 Introductory Haematology and Immunology

This subject covers disease processes related to hereditary, acquired, benign and malignant disorders of haematological systems; correlation of physiological processes, pathological states and diagnostic tools in haematology; light microscopic morphological examination of peripheral blood and bone marrow in disease and correlation of these findings with indices and cell counts obtained by automated laboratory equipment; procedures for detection and precise diagnosis of anaemias, haemostatic disorders, haemoglobin disorders and haematological malignancies; the World Health Organization classification of haematological malignancies; introduction to cytogenetics; prenatal diagnosis of genetic disease, genetic counselling and cancer cytogenetics.

Typical availability

Autumn semester, City campus

91359 Advanced Immunology

6cp; 5hpw

Requisite(s): 91401 Introductory Haematology and Immunology These requisites may not apply to students in certain courses. See access conditions.

This subject provides current concepts of modern immunology to students who have some basic understanding of the subject, and aims to develop an appreciation of the wide spectrum of applied immunology in medicine, research and industry. Specialised areas of immunology covered include: genetics of antibody diversity; structure of antibodies; genetics and structure of the T cell receptor and MHC molecules; cytokines; mechanisms of immune cell regulation in health and disease; clinical immunology and techniques applicable in both diagnostic and research laboratories, including enzyme-linked immunoassays; protein purification and analysis; cell separations and flow cytometry.

Typical availability

Autumn semester, City campus

91363 Animal Behaviour and Physiology

6ср

Requisite(s): 91123 Biocomplexity

Animal behaviour and physiology is the objective study of how animals interact with the natural environment. Understanding how animals behave and adapt to external environments, and why, is vital to many realms of science, but particularly the environmental sciences of biology, ecology, conservation, animal welfare and biogeography. Key to this understanding is the process by which adaptive responses arise through evolutionary selection. The focus of this subject is therefore to gain an understanding of the different repertoires of behaviour, their interaction with physiology and the environment,

and the processes that drive their evolution. Emphasis is placed on how adaptive responses enable species to survive and reproduce, and how environmental change favours or disfavours behaviours and physiologies (and, by inference, species).

Typical availability

Spring semester, City campus

91368 Bioreactors and Bioprocessing

6cp; 6hpw

Requisite(s): 91314 General Microbiology

These requisites may not apply to students in certain courses. See access conditions.

This subject covers the practical aspects of modern biotechnology including bioreactor operation, microbial kinetics, extraction techniques and downstream processing. It includes the microbiological physiological and biochemical basis of industrially useful fermentations in food, beverage, pharmaceutical and other relevant industries. Economic and other factors impinging on the operation of fermentation industries are also undertaken in this subject. The theory and laboratory practice is further developed by visits to local biotechnology businesses.

Autumn semester, City campus

91370 Semi-arid Ecology

6cp; block mode; 10-14 day field excursion to far western NSW in July every third year; availability: enrolment is restricted by the availability of space in vehicles, with preference given to third-year environmental science students

Requisite(s): 91110 Experimental Design and Sampling AND 91154 Ecology

Recommended studies: a thorough knowledge of basic ecology is a prerequisite for this subject

Many of the ecological processes and environmental issues associated with arid and semi-arid regions in Australia (indeed, around the world) can be found in New South Wales. This excursion-based subject takes us as far west as the border with South Australia and as far north as Queensland. We experience semi-arid woodland and mulga scrub, arid shrublands and grasslands, ephemeral floodplains, salt pans and dune country. A core theme of this subject is the fragility of a system typified by low and/or unpredictable rainfall, extreme temperatures, nutrient-poor and skeletal soils, and the adaptations of the associated flora and fauna.

This subject (the 'Great Western') is run every third year (in July session) by the UTS School of the Environment. It is a 14-day excursion in the semi-arid and arid regions of western New South Wales. This block subject is normally taken in the senior stages of the course. It is assumed that students have a thorough knowledge of basic ecology.

Typical availability

July session, City campus

This subject is offered once every three years, alternating with 91371 Forest and Mountain Ecology and 91163 Alpine and Lowland Ecology. It is next offered in July 2015.

Note(s)

Students wishing to enrol in this subject must email a request containing the following information to the School of the Environment administrative assistant:

- their year/level of study
- · course enrolled in
- whether they have undertaken subjects 91371 or 91163.

91371 Forest and Mountain Ecology

6cp; block mode, 13-day field excursion to northern NSW; availability: enrolment is restricted by the availability of space in vehicles; preference is given to third-year environmental science students

Requisite(s): 91110 Experimental Design and Sampling AND 91154 Ecology

Recommended studies: a thorough knowledge of basic ecology

This is an excursion-based subject run by the School of the Environment at UTS. It comprises a 13-day field trip (the 'Great Northern') to the northern New South Wales forests and northwestern woodlands following a chain of hotspot volcanoes along the Great Dividing Range. This field trip alternates on a three-year rotation with 91163 Alpine and Lowland Ecology (the 'Great Southern') and 91370 Semi-arid Ecology (the 'Great Western').

The Great Dividing Range is Australia's most distinctive topological feature, running from the northernmost to southernmost points of the eastern edge of the continent. The range is the source of major ecological gradients longitudinally (along the range) and latitudinally (across the range). The field trip goes along the range from Sydney to the Queensland border, before crossing west over the range. The curriculum framework is the ecological change associated with these two gradients along and across the range. The core content focuses on the climatic and geological drivers of ecological processes characteristic of different regions along the chain of mountains formed by hotspot volcanoes. When following this mountain chain, students learn about the many different forest types, along with their associated fauna and aquatic systems, and observe how these change as they progress from cooler temperate to sub-tropical rainforests to open woodland systems. Students experience firsthand the environmental processes along these two gradients, where rainfall, or lack thereof, and soil properties are key to shaping species diversity and distribution.

Typical availability

December session, City campus

The mode of this subject is excursion-based.

91400 Human Anatomy and Physiology

6cp; 6hpw

This subject describes the anatomy (structure) and physiology (function) of the healthy human body. Lectures are complemented by a supportive practical/tutorial program. The content includes: homeostasis; the anatomical organisation of the body and anatomical terms; the structure and function of the blood, cardiovascular system, musculoskeletal system, endocrine system, nervous system, respiratory system, gastrointestinal system and urinary system; and human reproduction. Development of practical skills is a major part of the subject.

Typical availability

Spring semester, City campus

91401 Introductory Haematology and Immunology

6cp; 5hpw

Requisite(s): 91400 Human Anatomy and Physiology

This subject is designed to introduce the basic concepts of haematology and immunology. The cells of the blood, bone marrow and immune tissues are studied in detail with regard to their identification, morphology and function. The development of these cells (haematopoesis) and their role in haemostasis and immune function is investigated. Students are also introduced to haematological diseases and the significance of haematological changes in disease. The study of immune function is structured in such a way that it follows the course of an immune response, from initial non-specific reactions to the development of adaptive responses and immunological memory. Emphasis is given to the basic concepts that underlie the recognition of foreignness and the response to infection.

The practical sessions introduce students to the variety of haematological and immunological techniques used in pathology and research laboratories.

Typical availability

Spring semester, City campus

91402 Anatomical Pathology

6cp; 5hpw

Requisite(s): 91400 Human Anatomy and Physiology AND 91500 Histology

These requisites may not apply to students in certain courses. See access conditions.

This subject builds on 91500 Histology and provides a basic knowledge of disease processes, the body's responses to them, and the light microscopic appearance of diseased tissues; and general pathology. Students then move on to special pathology and examine the major organ systems, learning about organ specific diseases which affect these systems. Various histochemical methods already learned are used to demonstrate pathological tissue changes that occur during disease development. This is all integrated to present an understanding of disease, its histological appearance and the laboratory staining techniques used to investigate structural tissue changes that occur in disease states and aid histopathological diagnosis.

Typical availability

Spring semester, City campus

91403 Medical Imaging

6cp; 4hpw

Requisite(s): 68041 Physical Aspects of Nature OR 68101 Foundations of Physics OR 68037 Physical Modelling These requisites may not apply to students in certain courses. See access conditions.

This subject provides advanced understanding of medical imaging technology and practice. It covers an examination of the role and effectiveness of clinical imaging, an overview of generic characteristics, and a detailed examination of specific imaging modalities: conventional x-rays, ultrasound, computed tomography, nuclear medicine, and magnetic resonance imaging. The subject includes lectures, seminars, practicals, workshops, and a visit to an imaging facility or guest lecture by an imaging specialist.

Typical availability

Autumn semester, City campus

91429 Physiological Bases of Human Movement

6ср

This subject examines the structure and function of the major systems of the body. It serves as an introduction to life processes in the healthy state and the physiological bases underpinning human movement. Areas of study include: anatomical organisation of the body, anatomical terms, organisation of the cell, osmosis, tissues, nervous system, cardiovascular system, respiratory system, digestive system and metabolism, renal system, and endocrine system.

Typical availability

Autumn semester, City campus

91500 Histology

6cp; 5hpw

Requisite(s): [91400 Human Anatomy and Physiology AND (65212 Chemistry 2 OR 65022 Chemistry 2A OR 65201 Chemistry 2C]]

This subject teaches the micro-architecture of the human organs and tissues adding to the knowledge base established in the subject Anatomy and Physiology by both showing and describing mammalian tissue structure of all major systems of the human body at the light and electron microscopic levels. Students also learn about tissue fixation and processing for embedding into paraffin blocks for sectioning. They study the theory and practice of basic routine histological staining techniques, which assist and enhance different cellular components on cut tissue sections. These techniques along with microscopy skills and recognition of normal tissue histology comprise the practical component of this subject.

Typical availability

Autumn semester, City campus

91527 Pathophysiology and Pharmacology 3

6cp

Requisite(s): 91528 Health and Homeostasis

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Together with 91529 and 91530, this subject shares the aim of providing an overview of the pathophysiology and treatment of some commonly occurring disorders of the major body systems. This information is provided in the context of how the disorder affects normal/healthy structure and function and so reinforces prior study of basic anatomy and physiology in healthy individuals. The subject provides students with the capacity to apply pathophysiological knowledge and concepts to acute and chronic care patients in clinical settings. It also extends this framework to areas that are consequences of disease processes, such as fever, impaired wound healing, and inflammation. It also provides the underpinning clinical science of nursing practice in areas including infection control, medication and health promotion

91528 Health and Homeostasis

6cp

This subject provides the underpinning anatomy and physiology for the subsequent pathophysiology and pharmacology subjects in the Bachelor of Nursing program. Through the guiding principle of homeostasis, this subject describes the contribution the different organ systems make to maintain a state of wellness. It provides points of reference with regard to the activity and structure of individual organs in the person judged to be well (e.g. heart rate, lung volumes and capacity, organ architecture).

First-year experience videos

91529 Pathophysiology and Pharmacology 1

6ср

Requisite(s): (91528 Health and Homeostasis OR ((48 Credit Points in a coursework Master's degree or Graduate Diploma OR 48 Credit Points in a Bachelor's degree or Graduate Certificate)))

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions

This subject provides an introduction to the science and medicine of cardiovascular, respiratory, nervous and endocrine systems (a convenient grouping for major diseases that confront an ageing population). The subject explores fundamental pathophysiology of these body systems and the pharmacology of drugs used in the treatment and management of disease. Throughout the subject, there is an integrated focus on body systems contrasting normal and abnormal and how disease states may be managed therapeutically. The subject concentrates on common major diseases of these body systems which facilitates a comprehensive study of the pathophysiology encountered in these disease states, as well as cementing an understanding of the normal physiology in these body systems including the process of ageing. This is complemented by the study of the treatment and management of these diseases.

- Neuro-endocrine pathophysiology and pharmacology: the pathophysiology of the alterations which occur within the nervous and endocrine systems (including cerebrovascular disorders, altered states of cognition, neurodegenerative disorders, demylenating diseases, motor disorders, spinal injuries, head trauma, the neurochemical imbalances in disorders of mental health, pain, diabetes mellitus, and disorders of hypo-, hyper- and ectopic hormone secretion); the underlying actions of pharmaceuticals used for these disorders.
- Cardiovascular pathophysiology and pharmacology: the pathophysiology of the alterations which occur with the cardiovascular system (including hypertension, atherosclerosis, heart failure) as well as the underlying actions of pharmaceuticals used for these disorders.
- Respiratory pathophysiology and pharmacology: the pathophysiology of the alterations which occur with the respiratory system (including asthma, infections of the upper and lower respiratory tract, COPD) as well as the underlying actions of pharmaceuticals used for these disorders.

91530 Pathophysiology and Pharmacology 2

6ср

Requisite(s): 91528 Health and Homeostasis

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access

This subject explores fundamental pathophysiology of the gastrointestinal, renal, musculoskeletal and haematological systems and the accompanying management and treatment. This information is provided in the context of how the pathophysiology affects healthy structure and function, and so reinforces basic anatomy and physiology previously studied. Throughout the subject, there is an integrated focus on body systems contrasting normal and abnormal and how disease state may be managed by pharmaceutical, surgical, medical and other strategies. The subject focuses on some major diseases which facilitate a comprehensive study of the pathophysiology encountered in these diseases.

91535 Microscopy and Cytometry

6cp

This subject provides an in-depth understanding of the theoretical principles of modern microscopy and flow cytometry and offers students the opportunity for hands-on use of state-of-the-art research microscopes and flow cytometers at UTS. The subject covers theoretical principles of light microscopy (bright-field and dark-field), fluorescence and epifluorescence, as well as deconvolution and confocal microscopy, and reviews issues in data handling techniques for achieving high resolution and live cell (real-time) imaging. Similarly, the cytometry component focuses on theoretical principles of contemporary multi-laser flow cytometry, including cytometer instrument design and set-up for multicolour flow cytometry. The subject reviews all aspects of sample preparation, safety, and staining techniques, as well as data handing and storage, and extensive data analysis for microscopy and flow cytometry. Practical sessions provide the opportunity to perform both a fixed and a live cell fluorescent microscopy experiment and allows for students to work with their own results data for complex computer analysis and presentation. Results data are then compiled for data analysis, presentation and discussion and finally for a written report presented in such a fashion that is deemed acceptable in a peer reviewed scientific journal.

Typical availability

Summer session, City campus

91536 Proteomics

6cp

Proteomics describes the study of the complete set of proteins (proteome) that is expressed at a given time in a cell, tissue, organ or organism. Modern proteomics involves the integration of a wide range of protein–analytical tools and information technologies to quickly and reliably identify qualitative and quantitative changes in proteins; for example, in the detection of altered protein expression associated with disease. This subject covers leading technologies for sample preparation, protein fractionations, separations and mass spectrometry for protein identification and characterisation.

In the theory component, students are taken through experimental design and data analysis, and the best practice sample preparation technologies for different sample types: micro-organisms, plants, mammalian tissue and fluids. The practical component covers sample preparation, complex mixture fractionation, protein separations and mass spectrometry. Students complete a small lab-based project which requires a publication-style report encompassing data analysis skills.

Typical availability

March session, City campus August session, City campus

91537 Biotechnology Research Project A

12cp

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and, where appropriate, an industry or external co-supervisor, to formulating the scope of the research project, including planning the research work. The student is responsible for carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up their findings in a formal written report (7000–15,000 words approx.) which includes an introduction to the project, a description of the

methods used, a presentation of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature. They may also be required to present a seminar to other students, staff and industry or external partners.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with faculty approval. Students should approach their Program Adviser and potential supervisors about project availability in the first instance. A project proposal, written in consultation with, and signed by the proposed supervisor and countersigned by the Program Adviser must be sent to the Master of Science Course Director for formal approval. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

91538 Biotechnology Research Project B

12cr

In this subject students undertake a short research investigation under the supervision of a member of academic staff. 91540 Climate Change and Ecological Modelling

6cp

Climate change and climate variability have significant impacts on natural and social systems of vegetation, water and industry. Modelling of environmental systems, including climate, provides means for prediction of climate regimes, evaluation of possible impacts of climatic change, and for optimisation of natural resources management in climate change adaptation and mitigation strategies.

The objectives of this subject are to develop students' knowledge of climate change science, techniques of data analysis and process simulation, which enhance students' ability to evaluate and use a range of models and model frameworks to understand and research specific environmental issues. The aim of the section on climate change is to introduce students to terminology and details of the climate system, and to provide an introduction to the details of climate science and climate modelling. The aim of the ecological modelling section is to introduce knowledge of ecological responses to climate change, the system approach of ecological modelling and basic mathematical modelling techniques suited to environmental processes. Students learn techniques to apply software of ecological models to simulate plant production and water use.

This subject introduces students to modelling of environmental systems and, in particular, the principles associated with developing and using climate and ecological models. The physical basis of the climate system is introduced and factors affecting climatic change are addressed. Students build their knowledge of the physical aspects of the climate system as well as associated biogeochemical cycles (carbon and nitrogen cycling) and ecohydrology. This subject links with other subjects, such as 91541 Monitoring Ecological Variability, which introduce methodologies of data acquisition.

Typical availability

March session, City campus August session, City campus

91541 Monitoring Ecological Variability

6cp

With increasing threats and pressure being exerted on the environment and its land and freshwater resources, societal demands for more quantitative, timely and accurate information on the functioning and sustainability of ecosystems have become prominent. There is a recognised need for long-term monitoring studies and protocols for evaluating environmental change and for improved understanding and management of complex environmental systems. Monitoring is fundamental for detecting and evaluating changes in ecosystem structure and function, and for evaluating landscape response to disturbances such as climate change, natural disasters or certain land management practices.

This subject aims to introduce students to ecological monitoring for characterisation of landscape dynamics including: vegetation-climate studies with long-term time series data sets; radiation, carbon and water studies; the seasonality and phenology of ecosystems; environmental health; and biodiversity, fire and disturbance. This subject emphasises multi-scale monitoring programs from plot-level and tower-based measurements to remote sensing, and assesses existing national and international ecological monitoring programs. Topics and practicals cover global climate change, time series analysis (anomalies and trends), and mapping and monitoring of the temporal dynamics of landscapes and freshwater environments on local, regional and global scales.

91551 Ecohydrology and Climate Change

6cn

Ecohydrology is the study of the relationships between weather, climate, vegetation structure and vegetation function and water in terrestrial landscapes. In particular the study of ecohydrology requires an understanding of the physiology and ecophysiology of plants, micro-meteorology and hydrology. This subject expands students' understanding of plant physiology and ecophysiology and applies an ecohydrological perspective to understanding landscape behavior and function. It also explores how climate change may affect landscape ecohydrology across Australia. The subject examines groundwater dependent ecosystems, dryland salinity, the measurement and analyses of water and carbon fluxes above woodlands and forests and the impact of climate change on C and water fluxes of terrestrial biomes.

91604 Introductory Pharmacology and Microbiology

6cp; 4hpw; availability: Faculty of Health students only

This subject is divided into two components and provides the introductory principles governing drug action and microbial infections. Lectures are complemented by a tutorial/practical program that emphasises the clinical nature of the subject and develops lecture material using a variety of experimental and case study approaches.

Microbiology: This section of the subject covers the biology of the main groups of micro-organisms, concepts of normal flora, opportunistic pathogens, and microbial infections acquired via gastrointestinal, urinary, respiratory, and the genital tracts. Several key topics in the study of microbiology are also discussed including sources and modes of transmission of micro-organisms, factors determining microbial virulence, and prevention of hospital acquired infections. Additional topics include the epidemiology of infectious diseases, susceptible population groups, isolation procedures, and the collection and transport of microbiological specimens.

Pharmacology: This section of the subject introduces the concepts of potency, drug/receptor interactions, agonists and antagonists and provides some introductory concepts of pharmacokinetics. Other key topics include the site and mechanism of action of drugs affecting the cardiovascular system, anti-inflammatory drugs, analgesics, antimicrobials and drugs used in the treatment of asthma.

Spring semester, City campus

91610 Medical Classics and the History of Chinese Medicine

6ср

This subject studies the development of traditional Chinese medicine (TCM) in the west as well as its theoretical structure and influence on the holistic approach to healing and preventative therapy. The focus is on some of the more complex theories arising from the classical literature and the ethics, both ancient and modern, that are embedded in the practice of TCM. Traditional Chinese medicine is firmly based on a 2000-year-old body of classical medical writing, and some of the landmark texts are still relevant to today's practitioners. The interpretation of such ancient writings is the study of a lifetime. This subject introduces students to a detailed study of the major original writings on many aspects of Chinese herbal medicine and acupuncture theory, which they have studied in previous theory and practice subjects and may implement in clinical practice.

Typical availability

Spring semester, City campus

91611 Clinical Practicum (Therapy and Diagnosis)

6cp

Requisite(s): 99646c Clinic Level 5 and Acupuncture Microsystems

This is a pre-clinical subject designed to prepare the student to undertake the responsibilities of a practitioner while under clinical supervision in the UTS TCM (traditional Chinese medicine) clinic. All previous subject material related to herbal, organ and acupuncture channel diagnostics; tongue and pulse diagnostics; establishment of treatment principles; selection of acupuncture or herbal scripts with rationale; and examination of treatment outcomes is reviewed and assessed by means of tutorials, practical workshops and exams, as well as a final pre-clinical examination.

Typical availability

Spring semester, City campus

91613 Professional Issues in Traditional Chinese Medicine

6ср

This subject acquaints the student with the current requirements for the private practice of traditional Chinese medicine (TCM). The subject is split into two modules and features guest speakers in addition to the standard lectures. Module A focuses on current research, integration with Western medicine, legal and safety professional issues and examines the development of TCM within a worldwide framework. Module B delves into the principles and practice of running a business, its finances, recordkeeping, reporting, taxation obligations, etc. The subject also encourages students to individually pursue areas of personal interest and research, and to see themselves as part of the wider health care community.

Typical availability

Spring semester, City campus

91614 Evaluating TCM: Theory, Practice and Research 1

6cp

Requisite(s): 99647 Clinic Level 6

This subject provides the essential grounding of material necessary for progressing into Evaluating TCM: Theory, Practice and Research 2 (91615). Both subjects are designed to enable the student to develop a solid grasp of the research process in acupuncture, Chinese medicine and the health sciences. The subject also further develops learners' critical thinking skills and their ability to apply this to clinical practice environments and the relevant research literature. Student interest is engaged and encouraged towards an appreciation of the relevancy of and need for research into the health professions, clinical practice and acupuncture and Chinese medicine. Together, both subjects provide an important foundation for students considering further development of their critical thinking skills through formalised learning pathways in honours, masters (by research) or doctorate research programs. Equally, the subjects provide students with the knowledge, skills and capabilities to engage in evidence-based approaches and evaluations of their own clinical practice and inquiry-oriented approach to clinical assessment and evaluation.

Typical availability

Autumn semester, City campus

91615 Evaluating TCM: Theory, Practice and Research 2

cp; 8hpw

Requisite(s): 91607 Research Methods 1 (Acupuncture) OR 91614 Evaluating TCM: Theory, Practice and Research 1

This subject builds on material provided in the requisite subject. It enables the student to have a solid grasp of the research process in acupuncture and the health sciences, thereby encouraging the ability to be a lifelong learner. As such, it is an important foundation for students undertaking postgraduate studies. The subject also further develops learners' critical thinking skills and their ability to apply this to clinical practice environments and the relevant research literature. Student interest is engaged and encouraged towards an appreciation of the relevancy of and need for research into the health professions, clinical practice and acupuncture and Chinese medicine. Together, this subject and its requisite subject provide an important foundation for students considering further development of their critical thinking skills through formalised learning pathways in honours, masters (by research) or doctorate research programs. Equally, the subjects provide students with the knowledge, skills and capabilities to engage in evidence-based approaches and evaluations of their own clinical practice and inquiry-oriented approach to clinical assessment and evaluation.

Typical availability

Spring semester, City campus

91703 Physiological Systems

6cp; 4hpw

Requisite(s): 91400 Human Anatomy and Physiology OR 91702 Medical Science 2

This subject extends the knowledge and understanding of cellular elements of the body and of certain body organ systems that were introduced in 91400 Human Anatomy and Physiology. It provides an understanding of cell membrane transport processes and how these principles apply to the body; the importance of ion channels generally in cell physiology and the application of ion channels to nanotechnology; the role of ion channels in the physiology of the cardiovascular system, in fluid regulation by the kidney and as sensory

receptors in the transduction of different forms of energy in sense organs. The subject also covers ion channel opathies, e.g. cystic fibrosis and the use of therapeutic drugs by altering ion channel function. The subject encourages students to be active learners.

Typical availability

Autumn semester, City campus

91705 Medical Devices and Diagnostics

cp: 4hpw

Requisite(s): (91400 Human Anatomy and Physiology OR 91702 Medical Science 2) AND (68041 Physical Aspects of Nature OR 68101 Foundations of Physics OR 68037 Physical Modelling) These requisites may not apply to students in certain courses. See access conditions.

This subject provides an introduction to the principles of operation and use of typical devices encountered in medical practice. Specific emphasis is given to fundamental principles underpinning implantable devices including biomaterials, biocompatibility and device design. Transduction techniques (such as pressure, internal voltage signals, temperature, sound, fluid volumes) and light as applied in the measurement of blood pressure, cardiac output, ECG, body temperature, respiratory volumes and capacities, and blood oxygen saturation are discussed. Principles of active stimulation of various organs such as the heart, nervous tissue and muscle are also taught. An overview of the medical device regulatory framework, including clinical trials, is explored.

Typical availability

Spring semester, City campus

91706 Neuroscience

6cp: 5hpv

Requisite(s): [(27111 Mechanics of Human Motion AND 27180 Functional Kinesiology AND 91429 Physiological Bases of Human Movement) OR 91703 Physiological Systems)

This subject provides an advanced understanding of the physiological basis of the nervous system. It advances physiological subjects by providing an in-depth study of neuroscience. It covers physiology of excitable tissue and introductory neurochemistry; synaptic transmission and neurotransmitter systems; and anatomy and functions of the nervous system. The subject also provides an understanding of the sensory system (smell, taste and the brain); chemical control of the brain and behaviour; sleep, emotion, and memory systems and learning; and disease states such as schizophrenia and mental illness. Emphasis is placed on student participation as active learners, for example in presentation of seminars and tutorial group participation.

Typical availability

Autumn semester, City campus

91707 Pharmacology 1

6cp; 6hpw (average)

Requisite(s): (91703 Physiological Systems AND (91161 Cell Biology and Genetics OR 91313 Biomolecules: Structure and Function)) These requisites may not apply to students in certain courses. See access conditions.

This subject provides the introductory principles governing drug and xenobiotic action to be developed further in the subject Pharmacology 2. It is designed to foster a problem-solving approach to pharmacology with particular emphasis on applying molecular pharmacology concepts to pathophysiological problems. Major objectives are to develop the concepts of dose response relationships and the specificity of drug action. Topics covered include: therapeutic index and the concept of selective toxicity; chemical neurotransmitters, ion channels and receptors as determinants of drug action in the central and peripheral nervous systems; and clinical efficacy of the major pharmacology drug classes used in the treatment of pathophysiological processes involving the nervous system. Lectures are complemented by a tutorial/practical program which emphasises the clinical nature of the subject and develops lecture material using a variety of experimental, tutorial, and computer-simulation approaches.

Pharmacology is the biomedical discipline that is involved with studying the effects of drugs on living systems. Effects of drugs can be measured at the molecular level through to intact living organisms. It is a relatively new discipline that is closely related to physiology and biochemistry although other biological sciences, such as zoology,

pathology, microbiology, psychology, immunology, etc., are relevant to it. Conversely, pharmacology can often contribute significantly to these subjects. Chemical considerations are also involved in such aspects of pharmacology as the relationship between structure and activity and the physicochemical properties of drugs which affect their distribution in the body and their mode of action.

Until recently, the more therapeutic aspects of pharmacology have been the principal concern of pharmacologists, that is, drugs were primarily studied in the hope of obtaining knowledge that might lead to the better treatment of disease and to the better understanding of physiological processes. However, in recent years considerations of public health have become increasingly involved with pharmacological matters. This is in part due to the great increase in the use and abuse of drugs, both by self-medication and by prescriptions. Among other consequences, this has brought about a rise in the incidence of unwanted side-effects, especially when mixtures of drugs are used. It has also become increasingly apparent in recent times that the whole earth is becoming contaminated by chemicals such as pesticides, which are deliberately distributed, and also by waste products from numerous industrial processes. Some of these substances have lasting deleterious effects on biological processes, thus their study properly involves a branch of pharmacology known as toxicology. As well as the contaminations directly due to human activity, there are also toxic substances originating from other living organisms and these too are $% \left\{ 1\right\} =\left\{ 1\right$ important aspects of toxicology. Toxicology is involved in studying these adverse effects of drugs and toxins on living systems. Within pharmacology there are also numerous subdisciplines (e.g. molecular pharmacology, chemotherapy, neuropharmacology, etc.).

It is important that there should be as many informed people as possible throughout the community, not just health and medical workers, if these problems are to be assessed accurately and dealt with efficiently. A study of pharmacology therefore is a desirable part of any general education and is especially relevant to those intending to pursue careers in teaching, law, local government and many scientific occupations. For this reason, this subject is directed not only towards training specialist pharmacologists but also aims at providing a broad education about drugs / chemicals that may affect living organisms. In order to do this, the fundamental principles of pharmacology must be fully understood before the applied aspects of drug action can be discussed.

Typical availability

Autumn semester, City campus

91708 Medical and Applied Physiology

6cp; 5hpw

Requisite(s): 91703 Physiological Systems

This subject builds on material provided in the prerequisite subject. It provides the student with an understanding of aspects of medical and applied physiology with emphasis on the underlying physiological mechanisms and their implications for medicine. The subject encourages students to evaluate the connections between human physiology and health outcome. The teaching material covers applied and medical physiology of areas such as brain function and disorders, medical imaging, cardiac and muscle activity, biofeedback, drugs and alcohol, temperature regulation, exercise physiology, hereditary disease, fatigue and eye and other related areas. A labbased experiment conducted by students provides a practical view of physiological mechanisms and measurements.

Typical availability

Spring semester, City campus

91709 Pharmacology 2

6cp: 6hpw

Requisite(s): 91707 Pharmacology 1

These requisites may not apply to students in certain courses. See access conditions.

This subject develops and extends the principles governing drug and xenobiotic action covered in 91707 Pharmacology 1. It is designed to foster a problem-solving approach to pharmacology with particular emphasis on applying molecular pharmacology concepts to pathophysiological problems. The objectives are to further develop the concept of receptors as cellular determinants of drug and xenobiotic action and to develop the concepts of modulated receptors and ion channels in determining drug action. We examine selective toxicity in the treatment of microbial, viral and protozoal infections as well as

toxicokinetic factors, defense mechanisms, cellular reactivity, receptors and binding sites as determinants of target organ toxicity. The clinical efficacy of the major pharmacology drug classes used in the treatment of cancer, affective and psychotic illnesses, cardiovascular disease, lipid disorders, blood disorders, diabetes, peptic ulcers, nausea and vomiting, and disorders of the respiratory and musculoskeletal systems are examined. In addition, the abuse of drugs is examined including tobacco, alcohol, CNS stimulants, psychotomimetics and the mechanisms underlying drug dependence, including treatment of drug overdose and antidotal therapy in the context of clinical toxicology. Lectures are complemented by a tutorial program which emphasises the clinical nature of the subject and develops lecture material using a variety of tutorial and case-study approaches.

92014 Role Transition and Professional Identity

6cp; lectures: 2hpw laboratories: 2hpw Undergraduate

In this subject, students examine the registered nurse (RN) role and compare and contrast this role with other categories of health worker in varying contexts of practice. The subject places particular emphasis on addressing the developmental needs of enrolled nurses (EN) as they begin their educational transition to becoming a RN. Aspects explored include frameworks for clinical judgment and decision-making, intra and interprofessional health care and learning, political awareness and self-development and lifelong learning. Necessary components such as: developing a professional attitude in the RN role, knowledge about professional nursing standards, role definition; and quality and safety provide sound scaffolding to enable clinical leadership. The concept of reflection is explored and forms part of the assessment. This subject outlines the transition of nursing as a profession and explores the forces that have shaped, and continue to shape nursing practice as a collaborative professional endeavour. At the core of the subject is the view that a 'professional disposition' articulates with all subjects and that successful transition to a professional practitioner is optimised by this characteristic. Career planning and personal record keeping is introduced to facilitate this process.

Typical availability

Autumn semester, Kuring-gai campus

92015 Fundamentals of Mental Health Nursing (Graduate Entry)

6cp; lectures and laboratories (blended): 4hpw, 160 clinical hours Requisite(s): 92017 Health Assessment and Nursing Therapeutics There are also course requisites for this subject. See access conditions.

Undergraduate

Students explore a range of issues related to the promotion of health and the nursing care of people in need of mental health care, the impact for their families and carers, and the importance of mental health nursing in all health care settings including inpatient and community-based services. The knowledge, attitudes and skills required for contemporary mental health nursing practice - such as interpersonal skills to build and maintain therapeutic relationships, assessment processes, therapeutic interventions, development of partnerships with consumers in their recovery, inter-professional collaboration and reflective practice - are explored. Mental health nursing practice that places the consumer at the centre of all mental health services is a key feature of this subject.

Typical availability

Spring semester, Kuring-gai campus

92016 Workshops for Practice Readiness (Graduate Entry)

6cp; workshops: 6 weeks x 5hpw Undergraduate

This subject focuses on a number of discrete, interdependent and foundational nursing issues that have been identified as particularly challenging and important to beginning practice and learning as a student nurse. These issues are explored through workshops which allows students to gain knowledge in each topic area and actively use this knowledge in the workshop situation to build meaning, understanding and connection through guided experiential immersion in inquiry-based activities. This subject is aimed at strengthening core literacies related to practice readiness which include: interpersonal skills, intrapersonal knowledge, quality and safety awareness, behavioural management skills; dealing with challenging behaviours such as anxiety, anger and grief, leadership, self awareness and self concept, and the assessment and management of withdrawal from alcohol and other drugs.

Typical availability

Spring semester, Kuring-gai campus

92017 Health Assessment and Nursing Therapeutics

6cp; 4hpw (blended), laboratories: 9hpw Undergraduate

This subject focuses on assisting students to understand the role of the registered nurse and the way in which nursing care is planned and delivered in Australia. Students are introduced to nursing as a patient-centred therapeutic process and a skilled activity that aims to promote and maintain health in primary and acute care. Nursing is considered within a trans-disciplinary framework and emphasis is placed on comprehensive patient health assessments, promoting and maintaining health by encouraging and reinforcing positive health practices and preventing health breakdown through early detection and intervention. After the completion of this subject students have developed the knowledge and skills to identify patient needs, provide essential nursing care safely, and begun to understand actual and potential problems that can be experienced by patients. Students explore elective and emergency clinical presentations and propose and implement appropriate evidence-based interventions. Skills in prioritisation, effective verbal and written communication, clinical decision-making and an introduction to nursing leadership is incorporated. This subject facilitates a smooth transition into the program of study that follows.

Typical availability

Autumn semester, Kuring-gai campus

92018 Building Resilience in Mothers and Midwives

6ср

Postgraduate

This subject focuses on the concept of resilience and provides midwives with the knowledge and skills needed to promote emotional well-being in childbearing women as well as themselves and their colleagues. Resilience is the capacity to bounce back or respond to adversity. In this subject the student develops a greater appreciation of emotional/mental health issues affecting midwives, childbearing women and families, the impact of personal communication, and the impact of programs such as Mindfulness Based Stress Reduction and Mindfulness Based Cognitive Therapy. Students are provided with opportunities to personally experience a range of evidencebased strategies such as Mindfulness that have been demonstrated to positively affect well-being and contribute to personal resilience. Evidence demonstrating that the skills of meditation and compassion effectively enhance the care we can offer will be explored as powerful antidotes to compassion fatigue and burnout. The underlying neural basis of the effects of mindfulness will also be explored. Through an emerging and/or increasing awareness of mindful midwifery practice, students will develop a greater appreciation of how to create and nurture resilience in themselves and their colleagues and in families that have not yet been able to acquire it.

Typical availability

Autumn semester, City campus

92019 Contemporary Clinical Midwifery Practice

6cp; mixed mode and half-day workshops, supported by online learning

Postgraduate

This is a self-directed subject that provides students with an opportunity to undertake an in-depth exploration of a specific clinical practice topic. The subject requires students to expand their clinical and professional knowledge and extend and refine their practice. Learning experiences are directed to the provision of care, the clinical environment and services, professional responsibility, leadership, and collaboration and problem solving. Students work with the coordinator of the subject to choose a relevant practice issue, develop learning objectives and design a program of work that meets their individual learning needs.

Typical availability

Autumn semester, City campus

92020 Midwifery in Context

6cp; mixed mode and four workshop days, supported by online learning

Postgraduate

This subject seeks to engage students in a critical analysis of the historical and current maternity health care issues, in particular those that impact on midwifery globally. The subject introduces the student to the social, political, cultural and economic imperatives that drive maternity services. It critically examines these factors, exploring their impact on the role of the midwife within both the international and national context. In so doing the subject aims to shift students' awareness from the details of day-to-day work to the larger issues of professionalism, leadership, advocacy and the development of midwifery practice.

Typical availability

Autumn semester, City campus

92021 Perinatal Mental Health

6ср

Postgraduate

Perinatal mental health practice is based on a population health approach to enable mental health promotion activities and the early recognition of protective and risk factors that impact on women and their family's mental health during pregnancy and the first year after birth. Skills in perinatal mental health assessment are developed and refined. Students explore best practice approaches for the management of perinatal mental health and illness. Importantly students gain the skills to critically discuss community perceptions about perinatal mental health. Perinatal mental health is explored using understandings of cultural constructs.

Typical availability

Spring semester, City campus

92022 Improving Quality and Safety in Health Care

6cp; 4 days block

This subject covers the essential knowledge that health service practitioners and managers need concerning error management, and safety and quality improvement. It enables students to apply continuing practice improvement strategies to workplace and health service settings. Topics covered include the origins of error and risk; the management of error and risk from human factors and health systems perspectives; the elements of clinical governance; the relationship between clinical cultures, quality and adverse events; the monitoring, analysis and investigation of incidents from national, state and local perspectives; incident reporting systems and the processes used in Australian health care settings; and the legal, ethical, regulatory and professional requirements of safety and quality. Team-based, personal and interpersonal skills in open disclosure are addressed, as well as complaint management and the importance of patient and family engagement, and appropriate organisational communication following errors. International approaches to safety and quality in health care delivery are also discussed. An emphasis is placed on error reduction and meeting national standards within health services settings. The subject is delivered in a four-day block mode using a variety of teaching methods.

92024 Medical Surgical Nursing (Graduate Entry)

6cp; lecture: 2hpw (blended), laboratory: 2hpw (blended), 160 clinical hours

Requisite(s): 92017c Health Assessment and Nursing Therapeutics There are also course requisites for this subject. See access conditions.

Undergraduate

In this subject, students develop their understanding and application of nursing processes with increasing emphasis on effective critical reasoning and sound judgment. The focus of learning is on the nursing management of adults admitted to tertiary-care facilities with acute episodic medical-surgical conditions. Students analyse and apply their knowledge and problem-solving skills to clinical case scenarios based on commonly encountered medical-surgical problems, which includes further development of the scenarios introduced in 92017 Health Assessment and Nursing Therapeutics. Nursing competencies are reinforced and relevant nursing skills strengthened and extended including: vital signs and neurological observations, infection control, administration of parenteral medications, generic surgical nursing practice, complex wound care, pain assessment and management, fluid and electrolyte replacement, enteral nutrition and urinary catheterisation. Students are exposed to simulated and scenario-based emergency situations and are guided to develop appropriate evidencebased, patient-focused responses. Quality and safety in health care is introduced as a preparation for practice and all learning experiences focus on providing safe and effective care to individuals and families.

Typical availability

Autumn semester, Kuring-gai campus

92025 Fundamentals of Mental Health Nursing (Enrolled Nurse Entry 1)

6cp; lectures and workshops (blended): 4hpw, 80 clinical hours Undergraduate

This subject begins by examining theories of psychology, health psychology, sociology and life transition as they relate to mental health and wellbeing. Concepts of stress, coping and adaptation are introduced and the influence of values, beliefs, attitudes and attributions on perceptions of health, illness and methods of bringing about changes in health behaviour are presented. Students explore the epidemiology of mental illness in NSW. Anumber of issues related to mental health nursing are considered from an registered nurse (RN) perspective including the nursing care of people in need of mental health care, the impact for their families and carers, the importance of mental health nursing in all health care settings including inpatient and community-based services, and the knowledge, attitudes and skills required for contemporary mental health practice. Mental health nursing practice that places the consumer at the centre of all mental health services is a key feature of this subject.

Typical availability

Spring semester, Kuring-gai campus

92050 Policy, Power and Politics in Health Care

6cp; intensive Postgraduate

This subject covers the essential knowledge of the policy and political environment in which health services operate. Health services managers need to understand the political environment in which decisions are made, how health policies are formulated and enacted and how they are received. The subject covers the theoretical framework for studying policy and politics particularly in relation to government policy, the ways policies are formulated, the balance of power between different stakeholders in the development of health services policies and decisions, how the health and political systems manage issues and the influence of the stakeholders and the media in the management of health services issues.

Typical availability

Autumn semester, City campus

Note(s)

This subject was formerly called Power and Politics in Health Care.

92054 Research and Statistics for Sport and Exercise

6ср

Postgraduate

This subject assumes a basic knowledge of the range of research methods used in sport and exercise and the ability to use statistical analysis packages. It covers two areas: conceptual and theoretical approaches to research and quantitative research methods. The first of these addresses the nature of research and its relationship to the development of knowledge and conceptualisation and design of research projects. The quantitative area involves the application of statistical methods and exploration of the more advanced capabilities of the PASW package.

92271 Foundations of Midwifery Practice

6cp; 14 weeks, 3hpw theoretical Undergraduate

This subject introduces students to childbearing as a normal, but significant life event for a woman and her family. Students apply their developing understanding of anatomy and physiology to childbearing. Through the use of simulated environments, students develop communication skills to enable them to work effectively with women through the childbearing period. The subject focuses on the physical and emotional changes during pregnancy, labour and birth and the postnatal period and their potential effects on women's experience of childbearing.

Typical availability

Autumn semester, City campus

92272 Anatomy and Physiology: Pregnancy and Childbirth

6cp; 14 weeks, 5hpw theoretical Undergraduate

Students study anatomy and physiology with particular emphasis on pregnancy, labour and birth, the puerperium, and the foetus and neonate. The human biological structure and function are studied and students begin to demonstrate links with how midwives use this knowledge in practice. A human-systems-based approach is used.

Typical availability

Autumn semester, City campus

92280 Complex Newborn Care

6cp; 10 weeks, 3hpw theoretical, 30 clinical hours, 25 hours follow through experience

Requisite(s): 92630 Midwifery Practice 2: Supporting Women These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

The care of the neonate who experiences deviations from normal health is the focus of this subject. Health problems associated with variations in gestational age and intrauterine growth, difficulties with feeding, adaptation to extrauterine life and a range of body system anomalies form part of the content covered. Students are introduced to the concept of family-centred care in the neonatal nursery and are required to formulate an in-depth understanding of the impact on the woman and her family of having a baby with complex needs. The importance of the midwives' role in supporting the woman through this experience is explored. The subject also has a clinical component.

92282 Australian Health Care System

6cp; 4 weeks, 3hpw theoretical Undergraduate

This subject provides an opportunity for students to study the structure of the Australian health care system with particular focus on the provision of services in rural and remote settings. The role of both federal and state governments in the provision of health services is examined along with the opportunity to critique financing and legislation in both the public and private sectors. The place of government, policy development and legislation in defining practice and policy is also studied as well as the mechanisms and results of legislative change. Challenges in providing health care in metropolitan, regional and remote settings are explored with particular emphasis on maternity services.

Typical availability

Autumn semester, City campus

92283 Challenges in Midwifery Practice

6cp; 3hpw (workshop) Undergraduate

This subject examines the role of the midwife when working with women and families who have social or emotional complexities. Challenging issues, such as the role of the midwife in complying with child protection and other relevant legislation, are included. Students also explore the complexities for women who have utilised artificial reproductive technologies. The subject builds on students' understanding of the community resources available to women who require additional support. Legal, ethical and professional issues regarding the challenges in midwifery care are covered.

92284 Rural Midwifery Practice

6cp; 10 weeks, 2hpw theoretical, 80 clinical hours, 50 hours follow through experience

Requisite(s): 92281 Complex Midwifery Practice AND 92280 Complex Newborn Care

Undergraduate

This subject builds on learning from the students' experience in the previous practice subjects. Students have learning experiences in each of the major areas of midwifery care and continue to form 'follow through' relationships with childbearing women. The subject provides a platform for the students to consider possibilities for working in rural and remote Australia with regard to their role and scope of practice and the potential further education they might need to work outside these parameters.

92285 Collaborative Midwifery Practice

6cp; 4 weeks, 3hpw theoretical Undergraduate

This subject examines the place of the midwife in the community of practitioners. In particular, it examines the relationships of midwives with medical practitioners as collaborative partners in the care of childbearing women. It addresses issues of midwifery practice within institutions and within the community as a primary health care initiative. It challenges the rhetoric of the place of women as partners in care and the realities of women experiencing midwifery care.

92286 International Perspectives in Midwifery

6cp; 10 weeks, 2hpw theoretical Undergraduate

As students near the end of their course, this subject enables them to identify their role in Australia and in the wider community of midwifery. The implications and responsibilities that they are about to face as licensed practitioners is explored in relation to contemporary issues in the regulation of midwives. An exploration and critique of the ideologies associated with Western constructs of childbirth and maternity care allow for a new dimension in the students' learning. It examines the role of international bodies such as the World Health Organization in the maintenance of women's health and health care and the International Confederation of Midwives in the practice and regulation of midwifery.

92287 Midwifery Caseload Practice

6cp; 4wks, 3hpw workshops/theoretical, 125 clinical hrs, 50hrs follow-through experience

Requisite(s): 120 credit points of completed study in C10225 Bachelor of Midwifery

Undergraduate

This subject enables students to build on their learning in previous practice subjects so that they have the skills, knowledge and confidence to provide midwifery continuity of care. The subject enables opportunities to attain competence in all areas of midwifery practice including: keeping birth normal, electronic fetal monitoring, obstetric emergencies, neonatal resuscitation, perineal suturing and supporting women experiencing breastfeeding difficulties. Students continue to undertake their 'follow-through' continuity experiences. In particular, they work in a midwifery group practice model alongside midwives who work in caseload practice.

92288 Focused Midwifery Practice

6cp; 5 theoretical hours, 125 clinical hours, 50 hours follow through experience $\,$

Requisite(s): 120 credit points of completed study in C10225 Bachelor of Midwifery

Undergraduate

In this subject it is expected that the students complete the practice requirements for registration set down by the Nurses and Midwives Board NSW. Students develop their ability to make midwifery judgments, to carry out the midwifery care that results logically from the judgments made and to evaluate the care given. Students gain competence in applying the principles of evidence-based midwifery to their practice and are able to critique their work.

Further information is available from: Research administration officer telephone +61 2 9514 4834 email NMHResearch.StudentsAdmin@uts.edu.au

92295 Advanced Health Services Planning

6ср

This subject develops advanced skills and competencies of health service planners and managers through case studies and workshops, including input from experienced health service planners. This subject requires students to explore in depth complex health services planning issues. The subject is based around real-life planning assignments developed by senior health service planners. The case studies incorporate the issues faced in practice with examples of planning assignments involving divided communities, pressure from health professional advocacy groups, competing forces within the political process, and lack of complete data, as well as other examples.

Typical availability

Spring semester, City campus

92296 Epidemiology and Population Health

6ср

This subject covers the essential knowledge that health service managers and planners need concerning epidemiology and population health. It enables students to apply analytical strategies of epidemiology to the health service environment, and to assess, interpret and critically appraise the quality of evidence of health service studies. Topics covered include the social determinants of disease, the health of the Australian population, epidemiological methods and concepts, understanding epidemiological evidence and its limitations, using population health data and how findings are used to support health services planning, and management decisions. An emphasis is placed on linking epidemiological theory population health with application in health services settings and decision-making. The subject is delivered in a four-day block mode using a variety of teaching methods.

92297 Health Systems and Change

6ср

Health services in the modern world involve larges systems constantly changing. Health service managers and planners require competencies in understanding systems in the health services, implementing change and project management. This subject develops students' knowledge and skills in understanding and managing health systems around information technology, health service processes and capital development. It also develops students' skills in project management, service implementation and improvement, systems redesign and implementing change.

The method of teaching includes case studies and practical workshops. Students are expected to bring workplace examples of systems redesign projects for analysis. The subject is taught online and with a limited number of face-to-face workshops.

Typical availability

Autumn semester, City campus

92312 Integrated Nursing Practice

6cp; workshop: 4hpw (blended), 160 clinical hours Requisite(s): (92330 Complex Nursing Care: Medical Surgical AND 92316 Complex Nursing Care: Mental Health) AND 92331c Integrated Nursing Concepts

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

The subject consolidates and develops clinical practice undertaken over the course to prepare students for entry to the nursing workforce as a member of the health care team. The central focus of the subject is delivery and coordination of care for chronic and complex conditions, in order to practise as a beginning registered nurse. Students undertake an extended and continuous clinical placement experience that reinforces clinical learning integral to nursing practice and provides an environment for consolidating nursing practice highlighting leadership, management and workplace culture. The clinical placement experience is complemented by experiential workshops focusing on multidimensional simulated cases involving common chronic and complex conditions, and multiple morbidities. The workshops are conducted to develop students' abilities, knowledge, techniques and skills for integrated care across a diverse range of different patient care situations. Students undertake inquiry-based reflection and clinical judgment to plan, initiate, and evaluate care.

Typical availability

Spring semester, City campus

92313 Assessment and Therapeutics in Health Care 1

6cp; lectures: 2hpw (blended), laboratories: 3hpw, 40 clinical hours Undergraduate $\,$

Students are introduced to nursing as a therapeutic process and skilled activity that aims to promote and maintain health through collaborative partnerships with patients at a primary care level. Health is viewed as a dynamic phenomenon which varies as the individual transitions through a cyclical continuum of health and wellness, disease and illness. Determinants of health encompass a range of factors including lifestyle, disability and chronic health conditions. Within a trans-disciplinary team, the nurse undertakes comprehensive patient health assessments, promoting and maintaining health by encouraging and reinforcing positive health practices and preventing health breakdown through early detection and intervention. The nurse supports clients to be active participants in managing their health, facilitating health literacy through the provision of health information and health education. The nurse provides person-centred care that empowers patients to achieve their optimum health outcomes by facilitating improvement and adaptation within the context of their individual social cultural environment, needs, abilities and resources.

92314 Assessment and Therapeutics in Health Care 2

6cp; lectures: 2hpw (blended), laboratories: 3hpw, 80 clinical hours Undergraduate

In this subject students explore an individual's response to disease and illness. Integral to this is recognition of each individual's unique response to episodes of disease and illness, based upon multifactorial determinants including the disease process, pre-existing comorbidities, therapeutic interventions and patient factors. Students are encouraged to provide a holistic approach to facilitating the patient's transition to recovery, rehabilitation or adaptation including recognition of the psychosocial dimensions of the patient and their relationship to the wider society. This incorporates comprehensive assessment and nursing interventions that support and assist the

whole person in the context of acute care nursing. Elective and emergency clinical presentations and appropriate intervention based on the urgency of the situation are investigated. Skills in prioritisation, effective verbal and written communication and clinical decision-making are incorporated.

92315 Nursing Care of the Older Person

6cp; Standard: lectures: 2hpw (1hr face-to-face, 1hr blended learning); laboratory: 2hpw, 80 clinical hours; Summer (GE and EN only): lectures: 4hpw (2hr face-to-face, 2hr blended learning); laboratory: 6hpw, 80 clinical hours

Requisite(s): (91529 Pathophysiology and Pharmacology 1 OR 92024 Medical Surgical Nursing (Graduate Entry))) OR ((92313 Assessment and Therapeutics in Health Care 1 OR 92314 Assessment and Therapeutics in Health Care 2)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

In this subject students explore the foundational principles and practice of person-centred nursing care of the older person in a variety of health care contexts. Students have the opportunity to explore the normal ageing process and the diseases and dysfunctions that can occur in older age. The provision of quality care to the older person with multiple physical, social and psychological co-morbidities is emphasised. Students gain skills in undertaking comprehensive social histories and health assessments of older persons and gain an understanding of interdisciplinary approaches to older person care.

92316 Complex Nursing Care: Mental Health

6cp; lecture: 2hpw (blended), laboratory/workshops: 2hpw (blended), 80 clinical hours

Requisite(s): 92323 Fundamentals of Mental Health Nursing OR 92015 Fundamentals of Mental Health Nursing (Graduate Entry) OR 92025 Fundamentals of Mental Health Nursing (Enrolled Nurse Entry 1) OR 92322 Medical Surgical Nursing

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

In this subject students continue the exploration of approaches to nursing people with mental health challenges into different mental health care contexts, focusing more on diverse and complex care situations. The subject takes as its organiser two axes: an intervention focus and a focus on special populations for consumers and families on their recovery journey. The interventions that provide a focus in the subject are: a solid grounding in counselling skills cognitive behavioural interventions; group processes and group skills; therapeutic interactions with voice hearers; working with people with a range of problems and disorders: sound techniques in aggression management; and an understanding of the place of mental health promotion strategies. The special populations of interest in this subject include: those with high prevalence disorders such as anxiety, depression, and stress; people experiencing alcohol and other drug use disorders; dual diagnosis; conditions co-morbidity with mental illnesses and treatments; those with eating disorders; ethnically, culturally and linguistically diverse populations; age-specific populations; and Aboriginal and Torres Strait Islander populations.

92317 Contemporary Indigenous Health and Wellbeing

6cp; Standard: lectures: 2hpw (blended) x 10 weeks, tutorials: 2hpw x 10 weeks; Summer (GE and EN only): lectures: 4hpw; laboratory: 6hpw (blended) Undergraduate

This subject contributes to the overall aims of the course by familiarising students with the current health status of Aboriginal and Torres Strait Islander people in Australia and also increasing their understanding of the concept of cultural safety which can then be applied to practice. Nurses have a major role to play in improving the health of Aboriginal and Torres Strait Islander people through the contribution they can make in primary health and acute care. This is achieved by exploring the relationship between Australia's history of colonisation, relevant social and healthcare policy, and Aboriginal and Torres Strait Islander peoples' health care issues. It includes an exploration of the role of the nurse and the social and cultural implications of engagement with the healthcare system for the Aboriginal and Torres Strait Islander community. The subject aims to support the student to develop a greater understanding of the need to provide care that is culturally safe, competent and consistent with the codes of professional conduct in Australia.

Typical availability

Autumn semester, City campus Autumn semester, Kuring-gai campus

92318 Evidence for Nursing

6cp; lecture: 2hpw (blended), tutorial: 2hpw (blended) Undergraduate

This subject develops skills in accessing and appraising the evidence upon which to base nursing practice. This subject builds on student's understandings of the utility of published practice guidelines. Focus is on selection and appraisal of published primary research studies and applying the evidence to selected clinical situations. The subject focuses mainly on the appraisal of research using quantitative data analysis and the determination of indicators of clinical effectiveness. The appraisal of systematic reviews is also introduced. Popular health claims are evaluated as a method of understanding how the indicators of clinical effectiveness are used.

Typical availability

Spring semester, City campus Spring semester, Kuring-gai campus

92319 Family and Children's Nursing

6cp; lecture: 2hpw (blended), laboratory/workshop: 2hpw, 80 clinical hours

Requisite(s): [92322 Medical Surgical Nursing OR 92024 Medical Surgical Nursing (Graduate Entry) OR ((92313 Assessment and Therapeutics in Health Care 1 OR 92314 Assessment and Therapeutics in Health Care 2))]

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject contributes to the student's understanding of families and aspects of family life in contemporary Australian society. Health promotion and primary health care within a family context, family formation and structure, as well as cross-cultural understandings of the family are highlighted. This subject explores nursing issues related to the child bearing family, which include an examination of the family in crisis, parenting styles and the impact of development disability. Key acute and chronic health issues in children and adolescents are a major focus of this subject and child protection, child abuse and neglect, and guardianship issues are covered in the context of children at risk. This subject enables students to develop the personal, professional and intellectual attributes, along with the technical knowledge, required to work with children and families.

92320 Health and Society

6cp; lecture: 2hpw (blended), tutorial: 2hpw (blended) Undergraduate

The philosophy and expression of primary health care, health promotion and community development is the basis for therapeutic nursing practice in the community. Health promotion and primary health care as defined by the World Health Organization form the framework for exploring the principles and practice of community health nursing and the dynamic and diverse nature of the community. The influence of power and politics on health care are explored within this framework as are the implications of a culturally diverse society.

Typical availability

Autumn semester, City campus Autumn semester, Kuring-gai campus

92322 Medical Surgical Nursing

6cp; lecture: 2hpw (blended), laboratory: 2hpw (blended), 80 clinical hours

Requisite(s): 92313 Assessment and Therapeutics in Health Care 1 OR 92314 Assessment and Therapeutics in Health Care 2 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

Students develop their understanding and application of nursing processes with increasing emphasis on effective critical reasoning and sound judgment. The focus of learning is on the nursing management of adults admitted to tertiary-care facilities with acute episodic medical-surgical conditions. Students analyse and apply their knowledge and problem solving skills to clinical case scenarios based on commonly encountered medical-surgical problems. Nursing competencies achieved in Year 1 of the course are reinforced and relevant nursing skills strengthened and extended including: vital signs and neurological observations, infection control, administration of parenteral medications, generic surgical nursing practice, complex wound care, pain assessment and management, and fluid and electrolyte replacement. Students are exposed to simulated and scenario-based emergency situations and are guided to develop appropriate evidence-based, patient-focused responses. All learning experiences focus on providing safe and effective care to individuals and families.

92323 Fundamentals of Mental Health Nursing

6cp; lectures/workshops: 4hpw (blended), 80 clinical hours Requisite(s): 92313 Assessment and Therapeutics in Health Care 1 OR 92314 Assessment and Therapeutics in Health Care 2 Undergraduate

Students explore a range of issues related to the promotion of health and the nursing care of people in need of mental health care, the impact for their families and carers, and the importance of mental health nursing in all health care settings including inpatient and community-based services. The knowledge, attitudes and skills required for contemporary mental health nursing practice, such as interpersonal skills to build and maintain therapeutic relationships, assessment processes, therapeutic interventions, development of partnerships with consumers in their recovery, inter-professional collaboration and reflective practice are explored. Mental health nursing practice that places the consumer at the centre of all mental health services is a key feature of this subject.

92324 Professional Identity

6cp; lecture: 2hpw (blended), tutorials: 2hpw (blended) Undergraduate

Students are introduced to what it means to be a professional in contemporary health care practice. This subject focuses attention on learning about the essential components of professional conduct. Necessary components such as: the right professional attitude, knowledge about professional nursing standards and the ability to establish a work ethic that provides sound scaffolding to enable clinical leadership. Students are encouraged to appreciate their strengths as individuals helping others and how to work towards confidence in using these and learned skills in their everyday nursing experiences. It is important that students become knowledgeable in the standards required for legal and ethical practice and that each student is equipped to begin to use these standards when working with colleagues and patients. The concept of reflection is explored during the semester and forms part of the assessment. Students build on their understanding of social equity in order to make sound and clear judgments. This subject outlines the transition of nursing as a profession and explores the forces that have shaped, and continue to shape nursing practice as a collaborative professional endeavour. At the core of the subject is the view that a professional disposition articulates with all subjects and that successful transition to a professional practitioner is optimised by starting the process early. Career planning and personal record keeping is introduced to facilitate this process.

92325 Professionalism in Context

6cp; 1hpw (lecture), 1hpw (independent learning), 2hpw (tutorial; blended)

Requisite(s): 92014 Role Transition and Professional Identity OR 92017 Health Assessment and Nursing Therapeutics OR 92324 Professional Identity

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject assists students to prepare for their professional role and explore the attributes required to take on clinical leadership and team work responsibilities in health care. Students explore critical issues that impact on nursing practice, with an emphasis on the effects that power, policy and professional relationships have on health care quality and future directions for nursing in local and international health care contexts. Topics are introduced that reflect current health care challenges and opportunities for nursing to make a positive difference to health service delivery. Policy reports are explored enabling students to incorporate them into existing ethical and legal frameworks thereby increasing their ability to make considered clinical judgments. Professional resources that facilitate successful transition to the registered nurse role are introduced.

Typical availability

92326 Understanding the Person: Life Transitions

6cp; lecture: 2hpw (blended), tutorial: 2hpw (blended) Undergraduate

Students focus on the development of the person and their experiences throughout the lifespan. Health experiences and related behaviours are examined using theories and models from health psychology and sociology. Concepts of stress, coping and adaptation are introduced and the influences of values, beliefs, attitudes and attributions on perceptions of health, illness and health care are examined. The impact of lifestyle behaviours and choices on health and methods of bringing about changes in health behaviours are explored. The sequence of ages and stages as well as the milestones of human growth and development in children and adolescents is introduced. An understanding of these sequences and milestones provides the nurse with the ability to compare the developing child/adolescent to normal parameters, which is foundational to appropriate care. Relevant psychosocial assessments and nursing interventions are introduced and applied.

Typical availability

92327 Workshops for Practice Readiness 1

6cp; workshops: 5 weeks x 5hpw Undergraduate

This subject focuses on a number of discrete, interdependent and foundational nursing issues that have been identified as particularly challenging and important to beginning practice and learning as a student nurse. These issues are explored through workshops which allow students to gain knowledge in each topic area and actively use this knowledge in the workshop situation to build meaning, understanding and connection through guided immersion in experiential inquiry-based activities. This subject is aimed at strengthening core literacies related to practice readiness which include: interpersonal skills, intrapersonal knowledge, cognitive frameworks, and quality and safety in the workplace.

Typical availability

92329 Accountability in Nursing Practice

6cp; lecture: 2hpw (blended), tutorial: 2hpw (blended) Requisite(s): 92014 Role Transition and Professional Identity OR 92017 Health Assessment and Nursing Therapeutics OR 92324 Professional Identity

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject builds on the discussion of professional identity by focusing on how the ethical and legal texture of the practice settings of registered nurses engages and challenges their professional status. This focus is mediated by provision of educational opportunities which enable students to reflectively incorporate an informed understanding of accountability in nursing practice into their modes of perception, thought, feeling and response, and thus actively further their growth into the role of a registered nurse. Students are encouraged to appreciate that clinical capability and leadership cannot be accomplished without an understanding of the full range of accountability in practice. This subject requires student involvement to be of a kind that further develops their critical and analytical abilities, their competence with the variety of literacies required of professional practitioners, and their skill in the appropriate expression and communication of ideas.

92330 Complex Nursing Care: Medical Surgical

6cp; lecture: 2hpw (blended), laboratory: 2hpw (blended), 80 clinical hours

Requisite(s): 92322 Medical Surgical Nursing OR 92024 Medical Surgical Nursing (Graduate Entry)

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject extends the student's abilities and skills to practice in more complex medicalsurgical contexts. It provides students with an opportunity to extend their ability to undertake increasingly complex nursing activities in a range of care settings. The importance of comprehensive health assessment is particularly emphasised in this subject. Well targeted nursing interventions, appropriately planned nursing care and the application of best evidence to practice is also considered. Particular attention is given to advanced complex wound assessment and care and the assessment and management of the deteriorating patient. At all times during this subject nursing practice is considered within a multidisciplinary framework. Students have the opportunity to reflect on their practice and determine self-identified learning needs appropriate to subject focus.

Typical availability

92331 Integrated Nursing Concepts

6cp; laboratories/workshops: 4hpw (blended) Requisite(s): 92330 Complex Nursing Care: Medical Surgical AND 92316 Complex Nursing Care: Mental Health

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject contributes to the theoretical exploration of chronic and complex nursing practice. Considering the patient illness experience, students are encouraged to interrogate the range of therapeutic interventions, the impact of clinical guidelines and policies, and professional team member's contribution to the delivery of chronic and complex care. This exploration extends across the trajectory of care and contexts of care delivery. Evaluation of care including aspects of quality, safety and risk, and patient satisfaction are explored. Students are required to demonstrate synthesis of multiple levels of evidence when formulating nursing practice. Case scenarios congruent with clinical placement experience and coronial evidence are utilised.

Typical availability

92332 Introduction to Specialty Practice: Community Health Nursing

6cp; lectures/tutorials: 4hpw (blended), 80 clinical hours Requisite(s): (92014 Role Transition and Professional Identity OR 92014 Role Transition and Professional Identity OR ((92313 Assessment and Therapeutics in Health Care 1 OR 92314 Assessment and Therapeutics in Health Care 2))) These requisites may not apply to students in certain courses.

There are also course requisites for this subject. See access conditions.

Undergraduate

Community health nursing is a synthesis of nursing practice, within the context of public health and primary health care. Community nursing is founded on a social view of health, and upholds the values of access, equity and self-determination. The nature of community health nursing is comprehensive and directed towards the individual, families and the community at large. Community health nurses empower people to understand and respond effectively to those areas having a negative impact on their health and wellbeing by assisting people with accessing information, resources and services appropriate to their needs. Community health nurses assist people in the local community to maximise their health potential and wellbeing through; health assessment, counselling, screening, health promotion/education and community development.

Typical availability

Spring semester, Kuring-gai campus

6cp; lectures/laboratories: 4hpw (blended), 80 clinical hours Requisite(s): (92014 Role Transition and Professional Identity OR 92014 Role Transition and Professional Identity OR (192313 Assessment and Therapeutics in Health Care 1 OR 92314 Assessment and Therapeutics in Health Care 2)))
These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access

Undergraduate

This clinical elective is designed to enable students to gain theoretical knowledge to support clinical nursing practice in the critical care setting, i.e. intensive care, emergency and high dependency units. Through this experience, students have the opportunity to further develop their expertise in patient assessment, complex nursing skills and clinical decision-making, which offers invaluable support for future practice in any area of nursing.

Typical availability

Spring semester, Kuring-gai campus

92334 Introduction to Specialty Practice: Family and Child Health Nursing

6cp; workshops/seminars: 4hpw (blended), 80 clinical hours Requisite(s): (92014 Role Transition and Professional Identity OR 92014 Role Transition and Professional Identity OR (192313 Assessment and Therapeutics in Health Care 1 OR 92314 Assessment and Therapeutics in Health Care 2))) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

In this subject students build on foundational knowledge of child-rearing families in contemporary Australian society gained from 92326 Understanding the Person: Life Transitions and 92319 Family and Children's Nursing. Students considering a nursing career caring for well children and families can explore in greater depth psychosocial and health issues in family life, parenting and child rearing, nursing care of the infant/child and social and emotional wellbeing in infancy and early childhood. A primary health care and health promotion perspective is used throughout.

Typical availability

Spring semester, Kuring-gai campus

92335 Introduction to Specialty Practice: Mental Health Nursing

6cp; workshops/seminars: 4hpw (blended), 80 clinical hours Requisite(s): (92014 Role Transition and Professional Identity OR 92014 Role Transition and Professional Identity OR ((92313 Assessment and Therapeutics in Health Care 1 OR 92314 Assessment and Therapeutics in Health Care 2))) These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

Mental health has traditionally developed from a strong custodial model of care, dominated by a biomedical approach to treatment and management. Contemporary mental health nursing practice embraces a more holistic approach to care. This requires the nurse to examine and focus on a range of approaches and inter-professional models of care to ensure that consumers have the best chance in their recovery journeys. Contemporary mental health care must acknowledge the many forces that exist in society that impact on and shape the delivery of care. In this subject students have the opportunity to explore and examine a diverse variety of issues related to mental health with the opportunity to test the theoretical claims of this subject in a range of clinical settings.

Typical availability

conditions. Undergraduate

This subject looks at the history and development of palliative care as well as the structure and organisation of palliative care nursing services in Australia. Special attention is given to the psychosocial-spiritual care and symptom management of individuals living with a terminal condition. Through exploring the goals and principles that underpin the palliative care philosophy, students are able to strengthen and refine their nursing knowledge and skills in the provision of care to this group of individuals and families.

92337 Introduction to Specialty Practice: Women's Health

6cp; workshops/seminars: 4hpw (blended), 80 clinical hours Requisite(s): [92014 Role Transition and Professional Identity OR 92014 Role Transition and Professional Identity OR ([92313 Assessment and Therapeutics in Health Care 1 OR 92314 Assessment and Therapeutics in Health Care 2]]] These requisites may not apply to students in certain courses.

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

Women's health has traditionally been examined from a gynocentric or medical perspective as women have been acknowledged primarily for and only in terms of their reproductive function. However, issues surrounding women's health are broader than this and should be studied in the context of women's place in a patriarchal society at local, national and global levels. In this subject students have the opportunity to explore issues related to women's health from the model of social health and have the opportunity to test the theoretical claims of this subject in various clinical settings.

Undergraduate

Caring for an older person is a complex and yet fulfilling area of clinical expertise. The imminent rapidly ageing population brings a plethora of challenges and demands which this subject aims to further explore. Aged care nursing is designed to promote specialty practice for students in caring for the complex needs of older persons in the community and acute care settings. The framework of the subject is to develop complex skill profiles for supporting the needs of a

deteriorating older person. Based on strong theoretical foundations, students have the opportunity to participate in a variety of simulation activities.

Undergraduate

This subject has been designed to enable students to gain knowledge and clinical nursing practice in an area of interest to them. Through this experience, students have the opportunity to develop their expertise in paediatric nursing and to understand the experience of illness and hospitalisation from the perspective of the child. This clinical experience extends the paediatric knowledge and experience of children's nursing covered previously, and gives students the opportunity to determine their preference for the specialty of paediatric nursing. It also has the potential to assist them in their quest for future employment.

Undergraduate

This clinical elective subject is designed to introduce and further student's knowledge and understanding of the nursing management of adults and/or children undergoing surgery, including those from culturally and linguistically diverse backgrounds. This subject facilitates integration between theory and practice in this specialty area of nursing. It enables students to work within a highly structured and developed area of complex health management as members of high functioning interdisciplinary perioperative teams. It also provides students with the opportunity to demonstrate technical competence at a beginning level in the application of safe, effective and efficient use of technology and resources in perioperative nursing practice.

92603 Managing Quality, Risk and Cost in Health Care

6cp; intensive

Postgraduate

This subject is essential grounding for clinicians, managers and planners of health services who seek to implement systems to manage clinical work processes and to monitor health service performance. The subject material is designed for clinicians and managers experienced in health care delivery to acquire the knowledge and skills to comprehensively manage the processes of clinical work. The subject prepares students to improve the quality, risk and cost outcomes of care within the context of expectations of clinical and corporate governance, organisational performance and workplace change. The subject initially examines each of the three components of quality, risk and cost individually, and then focuses on how they can all be integrated in the current environment of national safety and quality service standards and activity-based funding. The transparent integration of these three components with a health service demonstrates organisational accountability for patient, clinical and resource outcomes.

Typical availability

Spring semester, City campus

92604 Mental Health Assessment

6cp; on campus, intensive Postgraduate

This subject enables students to gain competence and confidence with appropriate assessment, monitoring, intervention and referral processes. The teaching and learning activities focus on the day-today realities of working with children, adolescents, adults and their families and assists students to integrate appropriate, age-specific interventions. It also provides students with the opportunity to explore and utilise specific activities and techniques in order to critically evaluate their practice, including structured methods to examine interpersonal communication and the opportunity to further enhance their ability to therapeutically engage with individuals and their families. A variety of consumer perspectives is reviewed in order to inform and assist students to examine their practice, and to implement any necessary modifications to the ways in which they relate to consumers, their families and the community in which they live. Contemporary models of professional development, such as mentorship and clinical supervision, are also explored, and, in conjunction with the above reflective practices, provide students with a set of strategies to critically examine their practice.

92605 Therapeutic Interventions in Mental Health Care 2

6cp; on campus, intensive

Postgraduate

This subject provides students with the opportunity to expand their knowledge and ability to utilise a specified range of psychosocial therapeutic interventions in mental health care. These interventions include a comprehensive exploration of family therapy, group therapy, psychotherapy and psycho-education. This subject also provides students with the opportunity to examine and analyse the theoretical bases for interdisciplinary mental health care, and the opportunity to explore their own theoretical bases of practice. An holistic examination and analysis of care necessarily embraces the biological, psychological, sociological, cultural and spiritual domains, including consumer participation approaches and collaborations with the family and community. Philosophical and ethical considerations are examined.

92606 Issues in Australian Health Services

6cp; on campus, intensive Postgraduate

This subject is designed as an introduction to the Australian health system. It provides an essential grounding for clinicians, managers and planners working in the health system today about current issues that face them. The subject covers a range of topics that touch on the health status and care needs of the Australian population, inter-governmental relations, stakeholders and their interests and changing patterns of care. On completion of the subject, students have knowledge of the main components of the Australian system, its size, structure and organisation, the major issues facing health service policymakers, planners, managers and clinicians, and options for managing health and health systems for the future.

92607 Education for Practice Development

6cp; on campus, intensive Postgraduate

This subject focuses on the development of educational leadership in specialist nurses and midwives who seek to influence health care practice in their area of expertise and advance clinical excellence in others through the process of education. Through action learning, students are prepared to undertake the roles of change agent, mentor, critical companion and facilitator of learning. Students develop an understanding of education as a strategic building block in the creation of a rich clinical learning environment.

92608 Advanced Assessment and Diagnosis

6cp; on campus, intensive

Requisite(s): 24 credit points in any course

Postgraduate

This subject builds on students' developed skills in health and physical assessment aiming to develop diagnostic skills as they relate to advanced assessment. Advanced assessment skills are studied in relation to inductive or inferential reasoning, clinical thinking processes and clinical judgment. Students learn how to prescribe and analyse common diagnostic and laboratory tests, related to their area of practice, as well as the results of health and physical assessment. A focus is on the development of the skills required to critically

analyse patient/client health data in order to diagnose health need and appropriately make referrals to other health practitioners. The subject assumes that students are in concurrent clinical practice.

92609 Pharmacological Therapies in Advanced Practice

6cp; on campus, intensive

Requisite(s): 92713 Health Breakdown AND 18 credit points of completed study in Completion of 18 credit points
Postgraduate

Advanced practice nurses commonly administer complex drug protocols within a multidisciplinary team approach, which requires a highly developed knowledge of pharmacology to ensure patient safety. This subject provides students with the knowledge and skills required to manage patients requiring drug and non-drug treatment interventions within the student's specialist practice area, including administering medicines safely to clients. The subject allows students to focus on clinical pharmacological therapies relevant to the student's specialist area of practice and the assessment of patient's/client's responses to these therapies. Students study the actions of drugs including pharmacodynamics and pharmacokinetics as well as developing an advanced understanding of their application to patients/clients within their chosen specialty.

92611 Complex Case Management

6cp; on campus, intensive

Requisite(s): 24 credit points of completed study in Completion of 24 credit points

Postgraduate

This subject aims to bring together the various threads of complex case management. Students use their knowledge of pathophysiological events to frame appropriate clinical practice responses. From their understanding of normal trajectories of common health conditions, students are able to identify deviations from standard patterns and critically analyse practitioners' management responsibilities. Students develop advanced techniques of health promotion in relation to complex case management and have well developed risk management skills relating to specified clinical situations.

92612 Research in Health

6cp; on campus, intensive

Requisite(s): 24 credit points of completed study in Completion of 24 credit points AND 92790 Evidence-based Practice Postgraduate

This subject provides an understanding and appreciation of the multiple ways through which knowledge is generated, specifically in relation to the disciplines of nursing and midwifery, and to health care in general. Students are exposed to the breadth of research methodologies that can be employed for such knowledge generation. Emphasis is placed on relationships between research question/problem, methodology and method. Basic descriptive research methods are used as exemplars of knowledge generation. Completion of the subject enables students to critically appraise an appropriate methodology and method for a chosen area of research inquiry. In addition, the subject explores how to situate an area of inquiry within existing knowledge, proposal writing, as well as ethical and practical issues of conducting research in nursing, midwifery and health care.

92613 Principles of Child and Family Health Nursing

6cp; on campus, intensive Postgraduate

This subject introduces students to the clinical specialty of child and family health nursing. It describes the scope of practice and displays the level of competent practice to be exhibited in the professional knowledge, skills and behaviours of beginning practitioners. Students' understanding of evidence-based practice is reviewed and applied in child and family health nursing practice. The subject situates primary health care as the philosophical basis of health services for well children and their families, and defines the prominent position of health promotion within the practice of child and family health nursing.

92614 Child and Family Health Nursing 1

6cp; on campus, intensive, 40hrs clinical placement Postgraduate

The clinical focus of this subject is intended to give students essential skills for practice in working with families with young children from birth to age five. It includes the practical application of the parameters of normal development in early childhood, with particular

focus on attachment theory in infancy and normal variations in child behaviours. It supports the health role of the child and family health nurse in undertaking comprehensive assessments of infants and young children 0–5 years of age and in providing anticipatory guidance to alleviate distress and worry in parents. The subject increases students' abilities to support and instil confidence in parents caring for a young baby, and to provide opportunities for social support and education. The subject requires the successful completion of a clinical experience program of 40 hours, undertaken as five single 8-hour days in an early childhood health centre.

92615 Child and Family Health Nursing 2

6cp; on campus, intensive

Recommended studies: 92614 Child and Family Health Nursing 1 Postgraduate

This second clinically focused subject extends the essential skills for working with families with young children 0–5 years of age. It includes the identification of common or potential problems amendable to early intervention, and the nursing management to support parents to care for the health and safety of their children. It enables the role of the child and family health nurse in providing home visiting services for families with new babies and particularly families who would benefit from sustained home visiting. The subject assists the nurse to provide social support and education to parents and to foster the integration of the family in the community. It includes a parenting workshop. The subject requires the successful completion of a clinical experience program of 80 hours, taken as a two-week block in child and family health nursing facilities.

92616 Core Concepts in Acute Care Nursing

6cp; on campus, intensive Postgraduate

This subject focuses on phenomena that are fundamental to acute care (medical/surgical) nursing practice. Concepts, such as pain and wound management, and nutrition that impact on the patient's illness experience are explored. Students also explore models of nursing and their impact on the management of patient care. Teaching approaches draw upon students' clinical experience, with assessment items applied to their specific specialty area.

92617 Early Interventions in Acute Care Nursing

6cp; on campus, intensive Postgraduate

This subject provides students with an understanding of the principles of managing patients who become acutely ill and unstable in the acute care setting. It builds on the registered nurse's general nursing knowledge and experience, as well as knowledge of pathophysiology, to increase understanding, learning and application of the nursing care required for patients who suddenly become acutely ill and unstable. The subject focuses on the initial assessment of an unstable patient and the early interventions (including principles of resuscitation) required in managing an acutely ill patient.

92620 Family and Community Health Practice

6cr

This subject investigates the broader perspective of community health and wellness in child and family health nursing. The shared community responsibility of family support is explored together with processes that promote family and community health and wellness. An increased understanding of family function, assessment, and stress factors, especially related to transitional periods, facilitates the student's ability to interact appropriately with families. The signs of distress and dysfunction in the family that may have an adverse effect on infant mental health are addressed. Students gain an increased appreciation of the significant role the family plays in relation to the mental and physical health and wellbeing of its members and to the health of the whole community.

92621 Aboriginal and Torres Strait Islander: Women and Babies

6cp; 2hpw (lecture) Undergraduate

This subject enhances students' understanding and awareness of the issues related to the health of Indigenous people, particularly Australian Aboriginal and Torres Strait Islander people. Students are given the opportunity to explore their own personal and professional beliefs and attitudes in relation to working alongside Aboriginal and Torres Strait Islander women and babies. Students examine the ways that colonialism has impacted, and continues to impact, on

the health of Aboriginal and Torres Strait Islander people through cultural, political and socio-economic circumstances. Primary health care initiatives and community development approaches that have been implemented to address the health of Aboriginal and Torres Strait Islander women and babies in Australia as well as Indigenous people in other countries are also examined.

Typical availability

Spring semester, City campus

92622 Becoming a Midwife

6cp; 11 weeks, 2hpw (lectures)

Undergraduate

This subject introduces students to the Bachelor of Midwifery program by providing an overview of the program and the requirements for registration as a midwife in Australia. As the intention of the Bachelor of Midwifery is to prepare students for practice as a midwife, this subject explores the forces that have shaped, and continue to shape, the practice and image of midwifery. This subject briefly traces the rich history of midwifery to the present day. The fundamental literacy and cognitive skills that underpin practice judgment and professionalism are developed concurrently with other subject content. In addition, students are introduced to the information technology applications available in the University.

Typical availability

Autumn semester, City campus

92623 Complex Labour, Birth and Puerperium

6cp; 2hpw (lecture)

Requisite(s): 92626 Midwifery Practice 3: Complex Pregnancy AND 92624 Complex Pregnancy

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject examines the physiological and psychosocial processes that the childbearing woman and her family experience when complexities occur during the labour, birth and/or early postnatal period. The subject explores the role of the midwife in the care of the childbearing family to detect deviations from normal and implement timely and appropriate interventions in collaboration with the maternity care team. This subject also explores how the midwife can support the woman and her family during a complex labour, birth and/or postnatal period. In combination with Midwifery Practice 4, this subject assists students develop the knowledge, skills and attitudes needed to provide safe midwifery care in a variety of clinical scenarios and situations where complexities occur.

92624 Complex Pregnancy

6cp; 2hpw (lecture) Undergraduate

This subject examines the physiological and psychosocial processes that the childbearing woman and her family experience when complexities occur during pregnancy. The subject explores the role of the midwife in the care of the childbearing family to detect deviations from normal circumstances and implement timely and appropriate interventions. How the midwife can support the woman and her family during a complex pregnancy in collaboration with the maternity care team is also explored. In combination with Midwifery Practice 3, this subject assists students to develop the knowledge, skills and attitudes needed to provide safe midwifery care in a variety of clinical scenarios and situations where acute and surgical skills may be required.

Typical availability

Autumn semester, City campus

92625 Emergencies in Maternity Care

6cp; 1hpw (lecture), 2hpw (laboratory), 4 weeks

Requisite(s): 92627 Midwifery Practice 4: Complex Labour, Birth and

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This final year subject consolidates the student's knowledge, skills and attitudes in maternity emergency situations in the transition to becoming a midwife. Students apply their knowledge of

pathophysiology in maternity and neonatal emergencies in practice using simulated drills. The subject builds student's capacity to work as part of a team and has an emphasis on effective communications, reflection on practice, handover and documentation in urgent and emergency situations. The overriding framework of clinical risk management is used throughout the subject.

Typical availability

Autumn semester, City campus

92626 Midwifery Practice 3: Complex Pregnancy

6cp; 3hpw (laboratory), 1hpw (tutorial), 96 clinical hrs Requisite(s): 92630 Midwifery Practice 2: Supporting Women These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

Students in this subject work in simulated learning environments to learn and develop the requisite midwifery practice skills. Students engage in midwifery practice and are provided with opportunity to reflect on their practice. In the midwifery practice setting, students work with midwives and implement care based on clinical decisions developed in collaboration with others. Students are expected to continue with their continuity of midwifery care experiences. The skills acquired in this subject relate to, and are supported by, the concurrent theoretical subject Complex Pregnancy.

92627 Midwifery Practice 4: Complex Labour, Birth and Puerperium

6cp; 3hpw (laboratory), 1hpw (tutorial), 160 clinical hrs Requisite(s): 92626 Midwifery Practice 3: Complex Pregnancy These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

Students in this subject work in simulated learning environments to learn and develop the requisite midwifery practice skills. Students engage in midwifery practice and this subject provides opportunity for them to reflect on their practice. In the midwifery practice setting, students work with midwives and implement care based on clinical decisions developed in collaboration with others. Students are expected to continue with their continuity of midwifery care experiences. The skills acquired in this subject relate to, and are supported by, the concurrent theoretical subject Complex Labour, Birth and Puerperium.

Typical availability

Spring semester, City campus

92628 Midwifery Practice 5: Working with Women

6cp; 2hpw (tutorial)

Requisite(s): 92627 Midwifery Practice 4: Complex Labour, Birth and Puerperium

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

In this subject students revise the midwifery knowledge, skills and attitudes required to gain competence when working with childbearing women. This subject provides an opportunity for students to reflect on their practice, identifying their own individual learning needs as well as revising and practising frequently used midwifery skills. In the midwifery practice setting, students work with midwives and implement care based on clinical decisions developed in collaboration. Students are expected to continue with their continuity of midwifery care experiences.

Students are able to have an optional rural or international placement as part of this subject.

Typical availability

Autumn semester, City campus

92629 Midwifery Practice 6: Transitions to Being a Midwife

6cp; 2hpw (laboratory), 1hpw (tutorial), 232 clinical hrs Requisite(s): 92628 Midwifery Practice 5: Working with Women Undergraduate

Students in this subject work in simulated learning environments to learn and further develop the requisite midwifery practice skills prior to midwifery registration. Students also engage in midwifery practice and are provided with opportunity to reflect on their practice, formulating plans for continuous professional development. In the midwifery practice setting, students implement care based on clinical decisions developed in collaboration. In this subject, students are expected to finalise their continuity of midwifery care experiences and all midwifery practice assessments in preparation for registration.

Typical availability

Spring semester, City campus

92630 Midwifery Practice 2: Supporting Women

6cp; 2hpw (lecture), 2hpw (laboratory), 1hpw (tutorial), 80 clinical hrs Requisite(s): 92271 Foundations of Midwifery Practice AND 92632 Midwifery Practice 1: Preparation for Practice

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject contributes to the achievement of the knowledge, skills and competency required for midwifery practice. Students work with women and their babies in a supportive role while further developing their skills in assessment and screening. Communication and documentation skills are also developed.

Students are provided with practice opportunities in clinical facilities for predetermined periods of time throughout the semester. The clinical practice introduces students to the care of women and their babies in a supportive role in the antenatal period, during labour and birth, and in the postnatal and neonatal periods. Students commence their continuity of midwifery care experiences and have the opportunity to recruit women during their midwifery practice experience placements.

Typical availability

Autumn semester, City campus

92631 Midwifery as Primary Health Care

6cp; intensive (6hrs, four workshops) Undergraduate and Postgraduate

This subject contributes to the student's understanding of midwifery within a woman-centred, primary health care framework. Students explore midwifery as a public heath strategy within a broad social context influenced by particular sociocultural, spiritual and politicoeconomic environments. Students learn about the application of cultural safety within midwifery practice. Processes and mechanisms to enable effective collaboration with health care providers and other professionals are covered.

Typical availability

Autumn semester, City campus

92632 Midwifery Practice 1: Preparation for Practice

6cp; 1hpw (lecture), 3hpw (laboratory), 1hpw (tutorial), 48 clinical hrs Undergraduate

This subject contributes to the overall course by preparing students for initial midwifery practice. Students focus on learning clinical skills related to midwifery practice including observations, palpation, percussion, auscultation, urinalysis and psychosocial assessments. Students are prepared for entry to the practice environment including professional responsibilities and conduct, occupational health and safety, the requirements for clinical practice, and completion of professional portfolios. Students are expected to provide midwifery care (under the direct supervision of a midwife) based on the clinical decision-making of others.

Typical availability

Autumn semester, City campus

92633 Professional Practice

6cp; 2hrs x 4 workshops

Requisite(s): 120 Credit Points in spk(s): C10225 Bachelor of Midwifery OR 120 Credit Points in spk(s): C10329 Bachelor of Midwifery Bachelor of Creative Intelligence and Innovation Undergraduate

Situated in the final semester of the course, this subject is the capstone subject of the Bachelor of Midwifery. Students consolidate their understanding of the professional role of the midwife, and recognise and display the professional attributes of a midwife. In preparation for their registration as midwives, students review the ANMC competency standards and reflect on their practice in relation to these and other regulatory frameworks. They identify their role as a member of the maternity health care team and explore the issues related to working in this environment.

92634 Transitions to Parenthood

6cp; 1hpw (lecture), 2hpw (tutorial) Undergraduate

The transition from pregnancy to parenthood is a significant life event and the midwife plays an important role in the early days of parenting. Supporting and promoting breastfeeding is an important focus of this subject. The subject explores theories of maternal–infant attachment and bonding, and public health issues such as safe sleeping. Students also develop the knowledge, skills and attitudes required to work with women whose transition is complicated by perinatal mental health issues.

Typical availability

Autumn semester, City campus

92636 Preparation for Midwifery Practice

6cp; lecture, 18 hours (3 days); simulated workshops, 18 hours (3 days)

Postgraduate

This subject introduces students to the Graduate Diploma in Midwifery by providing an overview of the course and registering authority's requirements. Students develop an understanding and appreciation of the role of the midwife as a health care professional in the provision of contemporary maternity care. Students are introduced to a philosophy for midwifery practice, and apply this as they begin to develop their knowledge, skills and attitudes required to provide midwifery care. Students are prepared for midwifery practice in a simulated learning environment. The fundamental literacy, information technology and cognitive skills that underpin practice judgment and professionalism are developed concurrently with other subject content.

Typical availability

Autumn semester, City campus

92637 Supporting Families

6cp; 3hpw (workshops) Postgraduate

The transition from pregnancy to parenthood is a significant life event and the midwife plays an important role in the early days of parenting. Supporting and promoting breastfeeding is an important focus of this subject. The subject explores theories of maternal–infant attachment and bonding, and public health issues such as safe sleeping. Students also develop the knowledge, skills and attitudes required to work with women whose transition is complicated by perinatal mental health issues and child protection concerns.

Typical availability

Spring semester, City campus

92638 Foundations of the Australian Healthcare System

6ср

This subject introduces students to the major structural and functional components of the Australian healthcare system. The major inputs, processes, outputs, and outcomes are examined and discussed, as well as the concepts underpinning the current health system reform agenda. Students are able to critically assess the evolution of the Australian healthcare system, its future direction, and major challenges. Trends in health system performance are also explored, and the impact on the healthcare system of new service provision models. This subject provides a foundation for students to enable

them to improve the efficiency and efficacy of healthcare delivery, manage health systems effectively, influence and change health policy, or lead the future direction of health services.

92713 Health Breakdown

6cp; intensive mode; clinical studies subject Clinical studies subject

Postgraduate

This subject focuses on the development of an in-depth understanding of selected pathophysiological concepts and processes, such as: stress response; altered consciousness; impaired immunocompetence and nutrition; disruption of fluid, electrolytes and acid-base balance; altered gas exchange; and disruption of cardiac, renal and respiratory functions. The application of these processes and concepts provides a knowledge base for registered nurses to improve clinical judgments and decision-making in the management of patients with complex changes in health status.

Typical availability

Autumn semester, Kuring-gai campus Spring semester, Kuring-gai campus

92721 Health Promotion and Health Education

6cp; intensive mode; 500-level subject; professional studies subject Requisite(s): 24 credit points of completed study in Completion of 24 credit points

Professional studies subject

Postgraduate

The aim of this subject is for students to establish an expanded knowledge base in the theory and processes of health promotion, which can be applied in a range of settings both within the health sector and in the wider community. The subject provides students with useful frameworks to plan and evaluate health promotion programs.

Typical availability

Autumn semester, Kuring-gai campus Spring semester, Kuring-gai campus

92760 Fundamentals of Postanaesthesia Recovery Nursing

6ср

This subject aims to expand students' awareness and understanding of the postanaesthesia recovery unit nursing role. It also develops their knowledge of the physiological and psychosocial needs of the surgical patient in the immediate postoperative period, and the legal obligations of the nurse in the postanaesthesia recovery unit.

92785 Midwifery in Complex Situations

6cp; intensive mode; clinical studies subject Clinical studies subject Postgraduate

This subject prepares students to assess, plan, implement and evaluate midwifery care for women and babies who have complex needs. The legal, ethical and professional responsibilities of the midwife are examined in relation to the provision of care for this group.

Typical availability

Spring semester, City campus

Note(s

This subject was formerly named Midwifery in Complexity.

92790 Evidence-based Practice

6cp; weekly or intensive mode; research subject Research subject Postgraduate

This subject aims to expand students' understanding of, and commitment to, the development of evidence-based nursing and midwifery practice. Students are given the opportunity to develop a broad understanding of quantitative approaches to nursing research without becoming preoccupied with statistical analysis. Having completed the subject, students are able to evaluate research findings and extract their clinical relevance.

Typical availability

Autumn semester, Kuring-gai campus Spring semester, Kuring-gai campus

92812 Project

12cp; one-semester subject; equivalent to 2 x 500-level subjects; work with project supervisor Equivalent to 2 x 500-level subjects Postgraduate

This project aims at the completion of a supervised but independent development of a topic in an extended piece of written work of 8000-10,000 words (excluding references, appendices and tables). This extended piece of work may take a variety of forms, for example, a long essay, clinical practice guidelines, or development and evaluation of an education program.

Typical availability

Autumn semester, Kuring-gai campus Spring semester, Kuring-gai campus

92845 Primary Health Care

6cp; intensive mode Postgraduate

This subject examines the systems in place to prevent and manage a chronic disease such as diabetes. These include the Chronic Care Model, the Enhanced Primary Care Program, the National Integrated Diabetes Program and Clinical Information Strategies. Throughout this subject primary health care concepts are used as a theoretical backdrop for understanding these programs as well as appreciating the therapeutic relationship between diabetes educators and those for whom they provide care. The common psychological experiences in diabetes and their management are examined from an individual and family perspective. This subject broadens students' orientation to helping people manage and cope with diabetes by emphasising a self-management model of care. Self management is recognised as a way of preventing disease progression, reducing hospital admissions and the costs both direct and indirect of the disease. The barriers to optimal self management are explored and strategies to support self management addressed.

Typical availability

Spring semester, City campus

92847 Planning and Evaluating Health Services

6cp; intensive mode; 500-level subject; professional studies subject Professional studies subject

Postgraduate

This subject aims to provide students with the necessary knowledge and skills to understand and apply the major concepts involved in health services planning and evaluation. Topics covered include the relationship between evaluation and planning; the importance of assessing need, and understanding data and data sources; and the perils of healthcare forecasting. Workforce planning and service capability frameworks are addressed, as well as planning capital infrastructure for health services. How to evaluate and implement a health services plan is also described. In order to highlight the complexities of health services planning, a range of case studies are utilised such as an existing health service, a new purpose-built facility, primary and community health service, disease type, age type, and service model type. An emphasis is placed on the importance of stakeholder consultation and engagement within the health services planning environment.

Typical availability

Autumn semester, City campus

92848 Facilitation of Clinical Learning

6cp; intensive Postgraduate

This subject has been designed for nurse clinicians who have, or will have, responsibility for the successful transition of nursing students and new graduates into the clinical environment. Through the application of adult learning principles, participants become aware of the conditions that encourage and promote effective and efficient clinical learning. In addition, they have the opportunity to design a program of clinical teaching, and are encouraged to evaluate their own development as preceptors and facilitators of clinical learning.

Typical availability

Autumn semester, Kuring-gai campus

92869 Specialty Clinical Practice

Clinical practice subject Postgraduate

In this subject students achieve an advanced level of clinical and professional competency in their chosen clinical specialty through a program of integrated and clinically based learning strategies. The subject requires students to expand their clinical and professional knowledge and extend and refine their practice. Learning experiences are directed to the management of patient care, the clinical environment and services, professional responsibilities, leadership and collaboration, problem solving and evaluation, education strategies, inquiry and investigation.

Typical availability

Autumn semester, Kuring-gai campus Spring semester, Kuring-gai campus

92871 Perinatal Development

6cp; intensive mode; clinical studies subject Clinical studies subject Postgraduate

This subject aims to assist students in understanding the influence of prematurity and adverse perinatal factors on the adaptation of the neonate to the extrauterine environment. Consideration is given to the initial assessment and management of the compromised neonate and the neonate at risk. While this subject critically explores the health team's response to premature and adverse birth outcomes, the nurse's role is highlighted. Throughout this subject the neonate is recognised as an individual and as a family member.

92873 Midwifery Practice 1

6cp; intensive mode; clinical practice subject Clinical practice subject Postgraduate

This subject provides the theoretical underpinnings to enable students to acquire the requisite knowledge, skills and attitudes for midwifery practice. The primary focus of this subject is on women experiencing a normal childbearing period. Professional practice placements are a compulsory requirement and are assessed within this subject.

Typical availability

Autumn semester, City campus

Note(s)

This subject was formerly named Midwifery Clinical Practice.

92876 Therapeutic Interventions in Mental Health Care

6cp; intensive mode; clinical studies subject Clinical studies subject

Postgraduate

This subject has two primary purposes. The first is to expand knowledge and understanding of somatic therapies in mental health care, primarily psychotropic medications. To achieve this, students review findings regarding the biological understandings of mental distress and associated treatments. These approaches are integrated into other social, cultural and psychological understandings about mental distress. The second purpose is to give participants a hands-on experience of various interpersonal therapeutic modalities currently practised in mental health settings and of relevance to mental health nurses. This involves individual, group and family approaches. Where possible, participants are encouraged to link with groups engaged in therapies of interest in their clinical settings to enrich their understanding of and competence in these approaches.

92878 Care of the Child in Illness and Disability

6cp; intensive mode; clinical studies subject Postgraduate

This subject extends the student's theoretical knowledge for practice in paediatric nursing. The relationship between scientific and nursing knowledge and informed practice is emphasised. Health breakdown in infants, children and adolescents, related pathophysiology and epidemiology, assessment and diagnostics, and disability are examined. Therapeutic interventions and nursing management for infants, children and adolescents with health breakdown states and disability are also evaluated. Issues related to growth and development, the care of families and the development of paediatric nursing as a specialty are explored.

92881 Foundations of Perioperative Nursing

6cp; intensive mode; clinical studies subject Clinical studies subject Postgraduate

This subject aims to expand the students' awareness and understanding of the perioperative nursing role. It also aims to develop the students' foundational knowledge of the impact of the surgical experience on the individual and his or her significant others (e.g. partner, family, friend) and the legal obligations of the nurse in the operating suite environment.

Typical availability

Autumn semester, Kuring-gai campus

92882 Techniques in Perioperative Nursing

6cp; intensive mode; clinical studies subject Clinical studies subject Postgraduate

This subject aims to further develop students' knowledge of the physiological, psychosocial and surgical needs of the patient (adult and child) undergoing common surgical procedures. Pre-, intra- and postoperative nursing assessment and care are explored in depth, as well as the broader aspects of technological issues associated with the surgical environment. An in-depth knowledge of anatomy is also developed.

Typical availability

Spring semester, Kuring-gai campus

92887 Organisational Management in Health Care

6cp; intensive mode; professional studies subject Professional studies subject Postgraduate

Organisations are a part of everyone's life and world, dominating much of what people are and what they do. Organisational theory focuses on the goals of organisations, and the structures, strategies, processes and cultures within. In this subject, the concepts of organisation and organisational behaviour are considered. Knowledge of organisational behaviour provides a framework for the management of people and processes in an organisation, in this case, health care organisations. One of the increasingly important functions of managers is to understand how to meet objectives, enhance performance and govern the organisation's outcomes. Doing so requires an understanding of how humans behave and how organisations and the managers within them positively or negatively impact upon employees' capacity to accomplish organisational goals, and how performance, knowledge and change are managed in complex organisations.

Typical availability

Spring semester, City campus

92893 Midwifery Practice 2

6cp; tutorial and laboratory sessions/clinical placement; clinical practice subject

Clinical practice subject

Postgraduate

This subject provides the theoretical underpinnings to enable students to acquire the requisite knowledge, skills and attitudes for midwifery practice. The primary focus of this subject is on women experiencing maternity emergencies that require the midwife to recognise, react and respond appropriately. Professional practice placements are a compulsory requirement and are assessed within this subject.

Typical availability

Spring semester, City campus

This subject was formerly named Midwifery Practice.

92894 Advanced Clinical Practice

6cp; 500-level subject; clinical practice subject Requisite(s): 24 Credit Points in spk(s): 00000-999999 Clinical practice subject Postgraduate

In this subject, students who are experienced nurse clinicians undertake learning experiences in advanced practice which enables them to function as advanced practitioners. The subject requires

students to extend their knowledge, skills and performance to the practice levels of an advanced practitioner. Learning experiences are based in the practice setting and require students to demonstrate clinical, management and professional expertise.

Typical availability

Spring semester, Kuring-gai campus

92895 Issues in Neonatal Care

6cp; intensive mode; clinical studies subject Clinical studies subject

Postgraduate

This subject enables students to advance their knowledge of neonatal health dysfunction and its management through critical evaluation of practice. The pathophysiology of disease processes common to the neonatal period is utilised in conjunction with behavioural assessment as rationales for nursing intervention. Consideration is given to the long-term health consequences associated with health dysfunction during the neonatal period. The impact of neonatal health dysfunction on the family and society is explored and the nurse specialist's role in neonatal nursing emphasises leadership and innovative practice.

92902 Care of the Acutely Ill Child

6cp; intensive mode; clinical studies subject Clinical studies subject Postgraduate

This subject advances students' theoretical knowledge to that required for specialist paediatric nursing practice when children with complex health breakdown states require nursing care. Nursing knowledge is applied to the management of infants, children and adolescents in complex health breakdown states. Children's pain and its management are examined and the place of technology in paediatric nursing practice is explored. The development of policy and standards of practice for acutely ill children are considered and nursing approaches to death and dying, loss and grief issues are evaluated.

92905 Dimensions of Anaesthesia Nursing

6cp; intensive mode; clinical studies subject Clinical studies subject Postgraduate

This subject aims to expand students' understanding of the anaesthetic nursing role. It develops their knowledge and awareness of the physiological and psychosocial needs of the patient experiencing anaesthesia, being ventilated or requiring pain management.

Typical availability

Autumn semester, Kuring-gai campus

92917 Using Health Care Data for Decision Making

6cp; intensive mode; professional studies subject Professional studies subject

Postgraduate

This subject provides a supervised experiential opportunity for the graduate student with an interest in clinical or managerial decision-making in the health services sector to explore and manipulate 'real' patient data to both generate and answer questions. The focus may be managerial or clinical, or an integration of these. Theoretical input is limited to allow for more in-depth use of the database. The subject helps students to develop the ability to generate and answer research questions, and make decisions based on available health sector data.

Typical availability

Autumn semester, Kuring-gai campus

Note(s)

This subject was formerly named Using Data in Health Care Analysis.

92918 Fundamentals of Critical Care Nursing

6cp; intensive mode; clinical studies subject Clinical studies subject

Postgraduate

This subject develops the knowledge and understanding of critical care nursing practice in relation to the management of critically ill patients with acute cardiovascular, respiratory, neurological, renal and metabolic instability and who require emergency and critical care interventions. The impact of acute illness and the critical care environment on seriously ill patients and their families is explored.

Typical availability

Autumn semester, Kuring-gai campus

92919 Complex Critical Care

6cp; intensive mode; clinical studies subject Clinical studies subject Postgraduate

This subject develops the knowledge and understanding of critical care nursing practice in relation to the management of critically ill patients with complex, interdependent disorders requiring emergency and critical care interventions. The issues of loss and grief for patients, their families and critical care staff are explored.

Typical availability

Spring semester, Kuring-gai campus

92920 Neuroscience: Trauma and Cerebrovascular

6cp; block; clinical studies subject Clinical studies subject

Postgraduate

This subject focuses on the principles of neuroscience nursing practice. The focus of study is persons who have had an injury to the nervous system and alterations to cerebrovascular flow. The subject content is explored using clinical case studies and a framework that reflects a holistic model of care.

Typical availability

Autumn semester, Kuring-gai campus

92921 Neuroscience: Degenerative and Oncological

6cp; intensive; clinical studies subject Clinical studies subject Postgraduate

This subject is designed to enhance the clinical knowledge base and clinical decision-making skills of nurses working with persons with neurological and neurosurgical conditions. The subject focuses on the effects of malignant and non-malignant tumours, degenerative disorders, and disturbances to electrical conduction, infections and acute and chronic pain states.

Typical availability

Spring semester, Kuring-gai campus

92922 The Meaning of Birth

6cp; block, 3 days x 8 hours (face-to-face) + 6 hours (online) Undergraduate and Postgraduate

This subject exposes students to sociopolitical discourses that inform the experience of childbirth for women and their families, and the role of the midwife in that experience. Examining popular culture helps to stimulate students to consider and debate relevant psychosocial and political issues. Students engage in an ongoing process of questioning their own attitudes, values and feelings. Elements of research, self-reflection (as a student and as a future midwife) and woman-centred approaches assist students to prepare for what it means to be a midwife. In order to have a fuller understanding of the meaning of birth, theories of grief and loss are also explored.

Typical availability

Autumn semester, City campus (GradDipMid students) Spring semester, City campus (BMid students)

92923 Continuity of Midwifery Care

6cp; intensive; clinical studies subject Clinical studies subject Postgraduate

This subject enables students to explore ways in which midwives can respond to the identified needs of women as the primary focus of the midwives' relationship, and through them identify the needs of their families and significant others. Collaboration and interdisciplinary issues are explored within the context of the woman's life and the socio-political dimensions of families.

Typical availability

Summer session, City campus

92925 Models of Midwifery Care

6cp; mixed (lectures, seminars, group work, class presentations, inquiry-based learning, assignments); 500-level subject 500 level

Postgraduate

This subject enables midwives to critically evaluate the benefits, obstacles and developmental strategies associated with innovative maternity service provision in Australia and internationally, in both public and private health systems. A particular focus of inquiry is the multiple ways midwives work in partnership with women. This includes accessing and critiquing contemporary research findings that inform practice development, ethical decision-making, interprofessional collaboration and the implementation of cost-effective changes in maternity service provision. Students identify the personal and professional support and the practice development necessary to engender confidence in all those working to provide new models of maternity care. A framework that addresses the philosophical foundation of midwifery and the construction of midwifery knowledge underpins this subject.

Typical availability

Autumn semester, Kuring-gai campus

92926 Information Management Application

6cp; intensive; 500-level subject; professional studies subject Requisite(s): 92917 Using Health Care Data for Decision Making Professional studies subject

Postgraduate

Building on the prerequisite subject 92917 Using Health Care Data for Decision Making, this subject offers health professionals a unique opportunity to use their developing data analysis skill on a 'real life' problem of interest. Students complete a project in association with a health care delivery setting, using administrative data, supervised by faculty, staff and other health professionals. The process of completing the project offers an invaluable experience of interdisciplinary collaboration.

92927 Evidence-based Practice (Midwifery)

6cp; intensive mode; research subject Research subject

Postgraduate

This subject provides students with the knowledge, skills and attitudes to be able to effectively use evidence to inform midwifery practice as well as be research aware within the clinical practice environment. Students gain a broad understanding of quantitative and qualitative approaches to research. The ability to critique the evidence assists students formulate evidence-based guidelines. A focus on using woman-centred language helps students develop the skills needed to be able to discuss research findings with women in practice.

Typical availability

Autumn semester, City campus (postgraduate students) Spring semester, City campus (undergraduate students)

92932 Management for Clinicians

6cp; intensive; professional studies subject Professional studies subject

Postgraduate

This subject covers the essential knowledge that clinicians need to manage a ward or unit and introduces the concept of management theory and practice in healthcare settings. It addresses the basic competencies to fulfill a managerial role and the broader context in which a clinical manager operates. It enables students to develop effective skills in managing self, people, teams and finances. Topics covered include the difference between leading and managing, management and leadership styles, team communication, leading and developing teams, managing diversity and dysfunctional people, understating the main financial statements, and how to construct and analyse a budget. An emphasis is placed on describing strategies to deal with a range of common performance issues. The subject is delivered in a four-day block mode using a variety of teaching methods.

Typical availability

Autumn semester, City campus

92934 Clinical Management of Diabetes

6cp; intensive Postgraduate

This subject expands on foundation clinical knowledge and develops in-depth knowledge specific to the aetiology and pathophysiology of diabetes including prevention, risk factor screening and management strategies. The impact of diabetes on specific population subgroups and their particular interdisciplinary management needs are also examined along with acute and chronic diabetes complications. This subject also provides an overview of the impact of diabetes and jurisdictional, national and international responses to the diabetes epidemic.

Typical availability

Autumn semester, City campus

92938 Midwifery Practice Development

6cp; distance plus two days workshop attendance; 500-level subject; midwifery subject

Midwifery subject

Postgraduate

Development of midwifery practice at both national and international levels is being challenged through changes in health care policies, research findings related to childbearing and caring, and the economic imperatives that drive health care services. This subject examines these factors and a range of midwives' possible responses. The use of evidence in the development of best practice forms a significant component of this subject.

Typical availability

Spring semester, Kuring-gai campus

92946 Project Part A

6cp; one-semester subject; availability: enrolment is subject to faculty approval

500-level subject

Postgraduate

In this subject students are supervised but independently develop a topic in an extended piece of written work.

This extended piece of work is generally:

- a critical review of literature in relation to a defined topic, or
- a data analysis/project, or
- an extension of a work-based project.

The project may be taken as a 6-credit-point subject (i.e. this subject only) or as a 12-credit-point subject in association with 92947 Project Part B, with varying expectations in terms of the grounding in the literature, complexity of topic choice and the word length of the paper.

Typical availability

Autumn semester, Kuring-gai campus Spring semester, Kuring-gai campus

92947 Project Part B

6cp; one-semester subject; 500-level subject Postgraduate

The project is a supervised but independent development of a topic in an extended piece of written work. This extended piece of work is generally:

- a critical review of literature in relation to a defined topic
- a data analysis/project, or
- an extension of a work-based project.

The project may be taken as a 6-credit-point subject (i.e. this subject only) or as a 12-credit-point subject in association with 92946 Project Part A, with varying expectations in terms of grounding in the literature, complexity of topic choice and word length of the paper.

Typical availability

Autumn semester, Kuring-gai campus Spring semester, Kuring-gai campus

92972 Health Care Research Methodology

6cp; intensive, mixed; 500-level subject; research subject Research subject

Postgraduate

This subject provides an understanding and appreciation of the multiple ways through which knowledge is generated in specific relationship to the disciplines of nursing and midwifery, and health care in general. Students are exposed to the breadth of research methodologies that can be employed for such knowledge generation. Emphasis is placed on relationships between research question/problem, methodology and method. Basic descriptive research methods are used as exemplars of knowledge generation. Completion of the subject enables students to critically appraise an appropriate methodology and method for their chosen area of research inquiry. In addition, the subject explores how to situate an area of inquiry within existing knowledge, proposal writing, as well as ethical and practical issues of conducting research in nursing, midwifery and health care.

Typical availability

Autumn semester, City campus

92973 Developing Health Care Theory

6cp; intensive, mixed; 500-level subject; research subject Research subject Postgraduate

This subject focuses on understanding nursing, midwifery and health care phenomena through methodological approaches such as grounded theory and phenomenology. Descriptive and comparative studies examining relationships among variables and predictive modelling are used as exemplars of research approvals for theory development. Design issues, such as identifying and recruiting participants, theoretical sampling, and data collection including survey design, data analysis and interpretation are addressed. Concepts such as validity, reflexivity, trustworthiness of data and applicability are examined in relation to the methodological approaches explored throughout the subject.

Typical availability

Spring semester, City campus

92974 Investigating Health Care Change

6cp; intensive, mixed; 500-level subject; research subject Research subject Postgraduate

This subject situates research within the processes of examining practice change in nursing, midwifery and health care. Methodological processes, such as descriptive and experimental design, and action research are used as exemplars of investigating practice change. Practical issues of production of evidence, use of clinically meaningful outcomes, and development of strategies to overcome barriers to practice change are explored. Research challenges, including appropriate selection of design, research participants, sample size, data collection, including selection of appropriate measures, data analysis and interpretation of results are studied. Concepts such as validity, reliability, and rigour are examined in relation to the methodological approaches explored throughout the subject.

92983 Specialty Practice

6ср

Clinical practice subject

Postgraduate

In this subject students achieve an advanced level of clinical and professional competency in their chosen clinical specialty through a program of integrated and clinically based learning strategies. The subject requires students to expand their clinical and professional knowledge and extend and refine their practice. Learning experiences are directed to the management of patient care, the clinical environment and services, professional responsibilities, leadership and collaboration, problem solving and evaluation, education strategies, inquiry and investigation.

Typical availability

Autumn semester, Kuring-gai campus Spring semester, Kuring-gai campus

93002 Knowledge Utilisation and Policy in Health Services and Practice

6ср

This subject focuses on the concept of knowledge utilisation and the relationship between evidence-based decision-making and the health service context from the individual-clinical to a population-policy level. This includes exploring a range of knowledge utilisation/practice development models; guideline development, policy development, and practice development.

Typical availability

Autumn semester, City campus

93003 Research Inquiry: Processes and Practices

6cp

This subject builds on existing knowledge by further developing research awareness, knowledge and skills. The subject examines the philosophical foundations of research inquiry; assists students to further develop a range of abilities required to emerge as a beginning independent researcher and lifelong learner.

Typical availability

Autumn semester, City campus Autumn semester, Kuring-gai campus

93004 Research Design and Analysis in Health Services and Practice

6ср

This subject deepens and extends students' knowledge of a range of research designs/methods and methodological or theoretical frameworks to explore a range of health services issues. This enables the development of appropriate strategies for researching/analysing their own practice and practice context. Several experts in the field present seminars on innovative and collaborative research in health services and practice.

Typical availability

Spring semester, City campus

93005 Leading Change in Health Services and Practice

6cp

This subject examines the development of health services through an exploration of innovative and collaborative research into leadership, policy and international practice. A series of presentations by (or interviews with) visiting fellows from a range of disciplines, health settings and locations throughout Australia and internationally are established to showcase research excellence in leading change in health services and practices.

Typical availability

Spring semester, City campus

93006 Clinical Practice (Diabetes)

6cp; intensive

Requisite(s): 92934 Clinical Management of Diabetes AND 015356 Learning in Diabetes Education

These requisites may not apply to students in certain courses. See access conditions.

Postgraduate

This subject allows students to complete 40 hours of clinical observation in an approved centre to meet specific objectives which focus on ADEA core competencies.

Typical availability

Autumn semester, City campus

93007 PhD Thesis: Sport and Exercise

Оср

95563 Digital Media Development Process

6cp; 2hpw, face-to-face (students should spend an average of 9–12hpw, including class time); availability: postgraduate degree students

Postgraduate

This subject examines the nature of the interactive multimedia development process. It explores multimedia development teams, roles and methods in a group work setting. Students work with a real-world client to redesign their web presence and develop detailed proposals and specifications. This is an 'action learning' subject where students learn by doing. It has an intensive workload.

Typical availability

Autumn semester, City campus Spring semester, City campus

95564 Digital Media Technologies

6cp; availability: postgraduate degree students Postgraduate

This subject provides an overview of some of the software and hardware technologies utilised in the development and maintenance of moderately complex websites exhibiting sophisticated interactivity and requiring a systematic approach to management.

It provides an opportunity for students to demonstrate an understanding of the skills and issues relevant to the creation and management of websites of moderate complexity. These skills may include HTML authoring, CSS design, browser scripting with JavaScript, interaction with back-end database environments using scripting engines such as PHP, database management systems such as MySQL, and other skills as appropriate.

Typical availability

Autumn semester, City campus Spring semester, City campus

95565 Digital Graphics and the Still Image

6cp; availability: postgraduate degree students Postgraduate

This subject introduces students to the production of screen-based graphics in the context of the online environment. It also focuses on developing analytic skills in visual literacy and visual grammar. Students are expected to produce projects for assessment demonstrating a high level of critical visual awareness. The subject aims to develop an appreciation of basic graphic design, typographic principles and audience awareness, especially in relation to social, cultural and ethical issues.

Typical availability

Autumn semester, City campus Spring semester, City campus

95566 Digital Information and Interaction Design

6cp; availability: postgraduate degree students Postgraduate

This subject introduces students to the information and interaction design element of the multimedia production process. It encourages students to critically engage with interdisciplinary approaches to information and interaction design in a context of peer support and feedback, in order to forge their own unique personal theory. This theory is then applied to a real-world design project in which students work with a client, with advice and input from industry professionals.

Typical availability

Autumn semester, City campus Spring semester, City campus

95567 Digital Media in Social Context

6cp; availability: postgraduate degree students Postgraduate

This subject uses the interdisciplinary approach of media studies to explore the debates around the role of the media in society, and the changes that digital media are reflecting and contributing to that role. It takes some of the common terms associated with the new media, such as information revolution, global village, collapse of time and space, globalisation, constant change and new forms of democracy, and analyses their usage in an historical context to facilitate an informed and critical view of the issues.

Typical availability

Autumn semester, City campus Spring semester, City campus

95568 Digital Sound and the Moving Image

6cp; availability: postgraduate degree students Postgraduate

This subject introduces students to the uses of sound, moving image and interactivity in multimedia. Using practical and theoretical approaches, students are expected to examine the role of sound and the moving image in interactive media and refine the ability to make informed choices about using animation, audio and visual techniques in interactive contexts. The program used and supported in this class is Adobe Flash. Students gain basic skills in creating and applying sound and moving image for online products, together with programming skills in Flash's programming language Actionscript to increase interactivity.

Typical availability

Autumn semester, City campus Spring semester, City campus

95569 Digital Media Project

12cp; availability: postgraduate degree students Requisite(s): 48 credit points of completed study in C04158 Master of Interactive Multimedia Postgraduate

This is a capstone project subject where students consolidate their knowledge, skills and experience acquired in their studies. This is realised in the planning, development and production of a digital media product in a collaborative learning environment of a multimedia production team. Students are encouraged to critically innovate and experiment in their development process in the context of addressing a particular need as well as making an original contribution to the field of multimedia. The subject also provides students with the opportunity to explore possibilities for future development of their digital media product and careers in the multimedia industry.

Typical availability

Autumn semester, City campus Spring semester, City campus

95570 Knowledge Transfer and Research Commercialisation

6cp; availability: not offered to exchange and study abroad students Postgraduate

The commercialisation of research take place in a complex legal, commercial and scientific/cultural environment. In this subject students learn to understand their role, capacity and potential as an agent for such commercialisation. The subject provides students with practical information and builds skills and capacities in the identification of commercialisation opportunities and the implementation of commercialisation processes appropriate to the students research.

95571 Research Project Management

6cp; availability: not offered to exchange and study abroad students Postgraduate

This subject allows students to assess, plan and manage a chosen research project as a basis for learning about project management lifecycles and generic project management processes including initiating, planning, executing, controlling and evaluating the project. The subject introduces techniques for managing the project's stakeholders as well as those regarding its scope, time cost, quality, communication, procurement and risk.

95572 Entrepreneurial Foundations

6cp; availability: not offered to exchange and study abroad students Postgraduate

This subject assists students to develop and systematically apply an entrepreneurial way of thinking that allows them to create and/or identify opportunities that may be commercialised successfully. Entrepreneurship is the process of seizing or creating opportunity without regard to the resources you own. It is the process of building something from nothing; risk is involved.

95573 Leadership and Workplace Communication

6cp; availability: not offered to exchange and study abroad students Postgraduate

Workplace communication, team and leadership skills are essential to the multi-dimensional methods of research management and research commercialisation. This subject introduces students to various schools of thought surrounding leadership by examining the practical implications of these within a research environment. It also develops students own leadership and related communication skills through interactive and collaborative practical learning experiences.

95575 Public Policy in Research

6cp; availability: not offered to exchange and study abroad students Postgraduate

This subject offers an introduction to the world of public policy designed to specifically raise awareness about the relationship between research and public policy. A number of themes and issues on the relationship between research and public policy are introduced enabling a better understanding of public policy. The subject enables students to develop and deepen their understanding of the processes of policy analysis, development and implementation, and contributes towards them becoming more effective policy actors.

95582 PhD Thesis: Sustainable Futures

Оср

Students enrol in this subject as the thesis component of the Doctor of Philosophy in Sustainable Futures (C02037) (see page 529). Further information is available from the Institute for Sustainable Futures.

Typical availability

Autumn semester, City campus Spring semester, City campus

95583 Master of Sustainable Futures Thesis

Ucp

Students enrol in this subject as the thesis component of the Master of Sustainable Futures (C03032) (see page 542). For further details contact the Institute for Sustainable Futures.

95584 Contexts for Research Management

6cp; availability: not offered to exchange and study abroad students Postgraduate

The practice of research management is shaped, to a large extent, by the policy and structural contexts within which institutions, and researchers function. Thus, research managers operating at the higher levels of the profession require advanced understandings of discourses of globalisation, such as 'the knowledge economy'; those of national interest such as 'the national innovation system'; and conceptual debates in connection with quality, impact, scientific merit, 'public good' and triple bottom line thinking as determinants of the value proposition for research activity in both the public and the private sectors.

The subject aims to introduce the student to a number of concepts and analytical approaches necessary for the development and critical appraisal of your understanding of the environments within which research management practices take place, and for the development of practical responses to maximise the efficiency and effectiveness of research management in those environments.

Typical availability

Autumn semester, City campus Spring semester, City campus

95585 Managing Research Careers

6cp; availability: not offered to exchange and study abroad students Postgraduate

This subject aims to provide the students with an understanding of the patterns of research career development, and of the principles and mechanisms of career self-management. It aims to assist the student to develop the analytical approaches to professional development needs of researchers, and the personal skills of effective presentation to employers at various levels in the research and research management fields.

Typical availability

Autumn semester, City campus Spring semester, City campus

95586 Strategic Issues in Research Management

6ср

Postgraduate

Research management is an increasingly specialised and complex professional field involving both values-based strategic decision-making and a plethora of interrelated compliance, governance and administrative functions. Research management takes place in both public and private sector contexts, and facilitates delivery of the economic, social and cultural benefits expected of research.

This subject, the second of two focused on research management issues, deals with a number of the key strategic concerns which are part of a senior research manager's activity.

The subject aims to provide a foundation of understandings and skills for the exercise of senior research management roles including a focus throughout on quality assurance and risk management.

Typical availability

Autumn semester, City campus Spring semester, City campus

95587 Principles and Practice of Research Management

6cp; availability: not offered to exchange and study abroad students Postgraduate

Research management is an increasingly specialised and complex professional field involving both values-based strategic decision-making and a plethora of interrelated compliance, governance and administrative functions. Research management takes place in both public and private sector contexts, and facilitates delivery of the economic, social and cultural benefits expected of research.

This subject, the first of two, deals with a number of the key foundational principles and practices which are part of a research manager's activity.

The subject aims to improve an understanding of the range of frameworks and issues involved in the field of research management. In exploring these frameworks and issues, the subject acknowledges the human factors in research organisations and examines the data management systems and other technologies which underpin the operation of a typical research services unit.

Typical availability

Autumn semester, City campus Spring semester, City campus

95588 Research and Global Sustainability

6cp; availability: not offered to exchange and study abroad students Postgraduate

Global sustainability will be the driving force changing the way we work and live in the 21st century; a primary focus in our intellectual and material work, as well as in our collective and individual lives. Demands for greater accountability and transparency are increasing for government, corporations and civil society, particularly in the context of the knowledge economy, with significant ramifications for the accepted norms of R&D, including scientific merit, technological advancement and research integrity. Globalisation, revolutions in communication and information, increased environmental and social awareness are pressing leaders, citizens and communities alike to view the future in very different ways.

This subject deals with a number of key principles and practices relating to global sustainability, which are part of an R&D manager's activity and operating context. Global sustainability will be viewed as a case study of an emergent field in R&D, against the background of R&D's historical and ongoing responsibility for many of the phenomena requiring amelioration under the global sustainability agenda.

95589 PhD Thesis: Pharmacy

Ocn

96001 Introduction to Pharmacy

6cc

In this subject students are introduced to the profession of pharmacy and the role of the pharmacist in health care. The regulatory environment in which pharmacists work is addressed, as well as ethical and professional standards. An overview of the Australian health care system is provided, including the laws and policies governing the supply and use of medicines, in particular the National Strategy for Quality Use of Medicines. A number of core themes are introduced in this subject that are reinforced and expanded in subsequent subjects: health and illness, health literacy, and health promotion.

Typical availability

Autumn semester, City campus

96002 Concepts in Pharmaceutical Sciences

6cp

This subject covers the fundamental principles in pharmaceutical science and is an essential prerequisite of applied therapeutics and clinical practice. The first half of the unit provides an overview of drug discovery and development. The sources of medicinal products from plants and other galenicals, drug action at target macromolecules (including receptors, enzymes and nucleic acids) and approaches in the evaluation of drug response and drug stability are covered. The significance of functional groups to pharmacological activity,

disposition and delivery are also discussed. The second half focuses on approaches used in drug discovery and development. Topics include rational drug design and functional biology. Analytical methods used in the analysis of parent molecules, metabolites and degradation products are also studied.

96003 Pharmaceutics

6cp

This subject establishes the principle concepts of pharmaceutics required for drug formulation, therapeutics and practice. The relationships between physiological, physiochemical and biopharmaceutical properties of drugs; dosage form design and drug delivery; drug disposition and therapeutic response are established. Topics covered include: pharmaceutical formulation; biopharmaceutical and pharmacokinetic considerations in dosage form design; the physiochemical basis governing drug solubility; solid dosage forms; liquid dosage forms; topical dosage forms and semisolids; pharmaceutical inserts; and sterile dosage forms including parenterals, biologics and inhalation pharmaceuticals. Innovative approaches to drug delivery are addressed, such as the use of pharmaceutical nanotechnologies. Current Good Manufacturing Practice (GMP) and Good Compounding Practice, packaging and labelling, and the influence of manufacture and distribution on product quality are also covered. Other topics covered include microbiological contamination and sterilisation procedures.

96004 Professional Services 1

6ср

The pharmacist's role is evolving from a predominantly product orientation to a service and product model of health care, directed to patients and consumers of medicines. This subject addresses the service of dispensing prescription medicines, and the delivery of patient information using consumer medicine information (CMI) leaflets. Using an integrated approach, in this subject students develop their knowledge and skills in prescription processing, dispensing technologies, legal and ethical responsibilities, and communication with consumers.

96005 Professional Services 2

6cp; 6hpw, on campus; availability: students enrolled in the Master of Pharmacy course only

Requisite(s): 96004c Professional Services 1 AND 96006c Integrated Therapeutics 1 AND 96007c Drug Disposition AND 96008c Evidence Based Practice

There are also course requisites for this subject. See access conditions.

Postgraduate

Professional Services 2 covers three types of pharmacy service that address the objective of improving quality use of medicines (QUM).

First, it is evident that patients need to be adherent with their medications to ensure optimal use and clinical outcomes. At the same time, poly-pharmacy may result in drug-related problems which could lead to negative clinical outcomes. Students review the major causes of non-adherence and strategies to assist adherence. They follow the process of defining, planning, implementing and evaluating an adherence service. The communication and behavioural aspects of patient-pharmacist interactions are covered.

Second, the aims of a clinical intervention service are to identify, document and resolve drug-related problems. The various processes that lead to a drug-related problem are covered, including the communication and behavioural aspects of doctor-pharmacist interactions.

Finally, MedsCheck and Diabetes MedsCheck services are addressed. This subject covers matters such as the technology used, legislation, compliance, ethics, pharmaceutical science, patient safety, clinical aspects and competency standards.

Typical availability

Spring semester, City campus

96006 Integrated Therapeutics 1

6cp; 6hpw, on campus

Requisite(s): 96005c Professional Services 2 AND 96007c Drug Disposition AND 96008c Evidence Based Practice AND 96001c Introduction to Pharmacy AND 96002 Concepts in Pharmaceutical Sciences AND 96003 Pharmaceutics AND 96004 Professional Services 1 AND 96015 Clinical Practice 1

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject focuses on the optimal use of pharmacotherapy in the management of cardiovascular, respiratory, gastrointestinal and infectious diseases. The epidemiology, pathophysiology, diagnosis and clinical presentation of illness and disease are reviewed. Using an integrated approach, treatment and management options are considered with reference to relevant pharmacology, medicinal chemistry, formulation, pharmacokinetics and clinical properties of targeted therapies.

Typical availability

Spring semester, City campus

96007 Drug Disposition

6cp; 6hpw, on campus; availability: students enrolled in the Master of Pharmacy course only

Requisite(s): 96002c Concepts in Pharmaceutical Sciences AND 96003 Pharmaceutics AND 96005c Professional Services 2 AND 96006c Integrated Therapeutics 1 AND 96008c Evidence Based Practice

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject covers the principle topics in the pharmacokinetics, pharmacogenetics and pharmacodynamics required for applied therapeutics and practice. Core topics include: monoexponential kinetics; multiexponential kinetics; intravenous infusions; multiple dosing and dosage regimen design; non-linear kinetics; drug absorption; bioequivalence; drug distribution; drug metabolism; drug elimination; metabolite kinetics; pharmacodynamics; and toxicology. Advanced topics cover factors affecting drug efficacy including drug interactions and sources of variability (including the role of pharmacogenetics) in therapeutic outcomes. Applied topics include therapeutic drug monitoring and drug individualisation, and adverse drug reactions.

Typical availability

Spring semester, City campus

96008 Evidence Based Practice

6cp; 6hpw, on campus

Requisite(s): 96001c Introduction to Pharmacy AND 96005c Professional Services 2 AND 96006c Integrated Therapeutics 1 AND 96007c Drug Disposition

There are also course requisites for this subject. See access conditions.

Postgraduate

This subject focuses on the development of information retrieval, critical thinking and problem-solving skills. Students are introduced to the areas of evidence-based practice, pharmacoepidemiology and drug information, and their relevance to current pharmacy practice. Using current pharmacy practice examples, students develop skills in finding drug information, performing literature searches, critically evaluating the literature and applying evidence-based practice principles to ensure quality use of medicines.

Typical availability

City campus, Spring semester

96009 Professional Services 3

6cp

Requisite(s): 96005 Professional Services 2

There are also course requisites for this subject. See access conditions.

An increasing role for pharmacists in optimising clinical outcomes is to help patients and prescribers in the selection and use of medications and devices. Medication management reviews, particularly for patients who have multiple chronic pathologies, are an expanding part of pharmacy practice. This subject deals with management services such as the Medicines Utilisation Review, Home Medication Reviews, and Residential Medication Management Reviews carried out in Australian and international contexts. This subject also explores the role of pharmacists in hospital, residential care and community settings. It builds on earlier work dealing with communication and behavioural models, and analysing and applying strategies for in-depth communication with patients, carers and prescribers. Aspects such as the technology used, legislation, adherence, ethics, pharmaceutical science, patient safety, pathology, clinical aspects and competency standards are addressed in the context of pharmacy service delivery.

96010 Integrated Therapeutics 2

601

Requisite(s): 96006 Integrated Therapeutics 1

There are also course requisites for this subject. See access conditions.

Building on Integrated Therapeutics 1, this subject focuses on the optimal use of pharmacotherapy in the management of neurologic, endocrine, rheumatologic, dermatologic and mental health disorders. The epidemiology, pathophysiology, diagnosis and clinical presentation of illness and disease are reviewed. Using an integrated approach, treatment and management options are considered with reference to relevant pharmacology, medicinal chemistry, formulation, pharmacokinetics and clinical properties of targeted therapies.

96011 Primary Health Care

6cp

Requisite(s): 96006 Integrated Therapeutics 1

There are also course requisites for this subject. See access

Pharmacists are said to be the first point of contact with consumers for their health care and wellness needs. The results of these pharmacy consultations could be referral to medical practitioners and other care providers, the supply of non-prescription medication, or over-the-counter advice. This subject provides students with the knowledge and skills to make appropriate clinical decisions to help consumers self-manage, or seek further health advice. Diseases, symptoms, non-prescription medication, screening and treatments are covered. The role of pharmacy in disease prevention, health promotion and wellness theory and practice is explored, using anti-smoking measures, weight management and lifestyle changes as examples.

96012 Professional Services 4

6ср

Requisite(s): 96009c Professional Services 3

There are also course requisites for this subject. See access conditions.

The burden of chronic disease, the ageing of the population, new therapies, earlier diagnosis and increasing health care costs are subjecting the health care system to increasing pressure. Disease state management services for chronic diseases such as asthma, diabetes, mental health, cancer and cardiovascular issues are evolving to reduce morbidity and mortality. Different models and processes of disease state management are reviewed and applied including optimising the role of patients in self-management of the disease. Pharmacists, along with other health care providers, are involved in various forms of dependent and independent prescribing. These different methods of prescribing are covered. Models for in-depth inter-professional communication and behaviour within health care teams are analysed and applied. Service delivery takes into account matters such as the technology used, legislation, compliance, ethics, pharmaceutical science, pathology, patient safety, clinical aspects, inter-professional relationships, and roles and competency standards for the delivery of the service.

96013 Integrated Therapeutics 3

6cp

Requisite(s): 96010c Integrated Therapeutics 2

There are also course requisites for this subject. See access conditions.

Building on Integrated Therapeutics 1 and 2, this subject focuses on the optimal use of pharmacotherapy in the management of renal, gynaecological, obstetric and malignant disorders. The epidemiology, pathophysiology, diagnosis and clinical presentation of illness and disease are reviewed. Using an integrated approach, treatment and management options are considered with reference to relevant pharmacology, medicinal chemistry, formulation, pharmacokinetics and clinical properties of targeted therapies. The use of pharmacotherapy in special populations (paediatrics, geriatrics, palliative care) is highlighted.

96014 Molecule to Market

6cp

Requisite(s): 96002c Concepts in Pharmaceutical Sciences There are also course requisites for this subject. See access conditions

This subject covers the drug development process from laboratory to patient - a high risk, high cost but high reward process. One in 10,000 screened compounds make it to market. The subject outlines the stages of the pharmaceutical research and development of a drug. The process begins with drug discovery that can take five years in assessing 10,000 compounds. Of these 10,000 compounds, 250 have pre-clinical studies conducted that can take upwards of two years. Of these 250 compounds, only five make it to clinical trials, which can take six years. This includes phase 1 to phase 3 efficacy and safety clinical studies. Of these five compounds, only one will have the necessary chemistry, pre-clinical and clinical data for a regulatory dossier to be compiled and submitted to the Therapeutic Goods Administration (TGA) in Australia. The TGA is responsible for evaluating the efficacy, safety and quality of new drugs. Access to medicines for patients involves product registration via the TGA and pricing reimbursement via the Pharmaceutical Benefits Division (PBD). This subject also outlines what is involved in successfully registering a medicine and listing it with the Pharmaceutical Benefits Scheme (PBS).

96015 Clinical Practice 1

6ср

This subject practically applies the theory learned and the skills developed through coursework to the real-life practice environment. Students spend dedicated periods of time in a supervised practice setting, utilising their knowledge and skills to optimise the use of pharmacotherapy in the: management and care of patients; delivery of health services and interventions (e.g. health promotion activities); and/or quality use of medicines projects. Students maintain a clinical portfolio to demonstrate their professional development according to PSA National Competency Standards Framework for Pharmacists in Australia and SHPA Standards of Practice. This subject focuses on experiential learning in the community practice environment through weekly half-day placements as well as block placements.

96016 Clinical Practice 2

12cp; 4hpw, off-campus, (weekly placement); 35hpw, online, (virtual placement: two weeks); 35hpw, off-campus, (block placement: four weeks)

Requisite(s): 96015c Clinical Practice 1

There are also course requisites for this subject. See access conditions.

Postgraduate

Clinical placements help students to practically apply the theory learned and the skills developed through coursework to the real-life practice environment. Students spend dedicated periods of time in a supervised practice setting, observing the role of the pharmacist within the health care system, and utilising their knowledge and skills to optimise the use of pharmacotherapy in the management and care of patients, delivery of professional services and interventions (e.g. health promotion activities), and/or quality use of medicines projects. Students maintain an e-portfolio to demonstrate their learning and professional development.

The subject focuses on experiential learning in the clinical practice (community, hospital, clinic) environment.

Typical availability

City campus, Spring semester City campus, Summer session

96017 Clinical Practice 3

6cp

Requisite(s): 96016 Clinical Practice 2

There are also course requisites for this subject. See access conditions.

Building on the previous Clinical Practice subjects, this subject applies the theory learnt and the skills developed through coursework in elective, focused placements. Students choose from a range of pharmacy settings: community pharmacy, hospital pharmacy, pharmaceutical industry, rural settings, compounding sites, specialist clinics, and professional organisations. Supervised clinical practice enables students to apply their knowledge and skills to optimise the use of pharmacotherapy in: management and care of patients; delivery of health services and interventions (e.g. health promotion activities); and/or quality use of medicines projects. In their clinical portfolio, students relate their professional development to the PSA National Competency Standards Framework for Pharmacists in Australia and the SHPA Standards of Practice. Students may undertake specific projects to explore and/or facilitate the use of medicines, including health promotion activities, clinical audits, evaluation of interventions, development of resources, and activities to support special populations (e.g. Indigenous health and aged care).

96020 Pharmacy Research Project A

6cp; availability: Master of Pharmacy students only

In this subject students undertake a short research investigation under the supervision of a member of academic staff. Students contribute, in collaboration with their UTS supervisor and where appropriate an industry or external co-supervisor, to formulate the scope of the research project, including planning the research work. Students are responsible for writing the proposal, carrying out the work, including appropriate and critical analysis of the data or information obtained, and writing up the findings as a draft manuscript which may be eligible for publication. The draft manuscript typically includes an introduction to the project, a description of the methods used, a description of the results obtained plus any analysis undertaken and a discussion of the results in the context of the relevant literature.

Due to supervisory and infrastructure constraints, places in this subject are limited and it can only be undertaken with school approval. Students should approach potential supervisors about project availability in the first instance and then complete and submit a Research Project Application form for consideration. A project proposal and the final draft manuscript is assessed by school members external to the project. Where the project involves laboratory or fieldwork, a completed risk assessment form must also be provided with the approval request. Ethics approval is required for certain projects.

Typical availability

Autumn semester, City campus

97101 Chinese Language and Culture 1

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

This subject is designed for students with no previous knowledge of Chinese. It enables students to meet their communication needs in everyday social interaction in China and other Chinese-speaking communities, not only by developing basic skills in listening, speaking, reading and writing, but also by developing an understanding of Chinese culture. By the end of this subject students are able to interact with native speakers in a simple and culturally appropriate way by making statements and asking and answering questions on very familiar topics. They understand common words and basic phrases concerning themselves, their families and their immediate surroundings, when people speak slowly and clearly. Pinyin, the official transcription system, is used as a guide to the pronunciation of the Chinese language, and students learn to recognise approximately 300 characters and read familiar names, words and very simple sentences. Students are able to write short, simple notes, messages or postcards, fill in forms with personal details and understand and appreciate aspects of Chinese culture.

Typical availability

Autumn semester, City campus

97102 Chinese Language and Culture 2

8cp; 4hpw; availability: exchange and study abroad students with faculty approval $% \left(1\right) =\left(1\right) \left(1\right)$

Requisite(s): 97101 Chinese Language and Culture 1

This subject is designed for students who have successfully completed Chinese 1 or its equivalent. It continues to develop students' communicative competence in basic social interactions and their knowledge of Chinese culture. Students learn to communicate in simple and routine tasks on familiar topics and activities and handle very short social exchanges. They learn to understand phrases and vocabulary related to areas of immediate personal relevance and to catch the main point in short, clear, simple messages. They learn to use Pinyin to acquire a sound basis of Chinese pronunciation and intonation, recognise approximately 600 characters, and read short, simple texts written in characters. Students learn to write brief notes, messages, diary entries and very simple personal letters, and understand aspects of Chinese culture and society.

Typical availability

Spring semester, City campus

97103 Chinese Language and Culture 3

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97102 Chinese Language and Culture 2

This subject is designed for students who have successfully completed Chinese 2 or its equivalent. It develops students' oral communicative proficiency to satisfy their basic survival needs and to enhance their ability to use Chinese characters by gradually introducing more written texts. Students learn to deal with most situations in areas where the language is spoken and to understand the main points of clear standard speech when the delivery is relatively slow and clear. They also learn to enter unprepared into conversation on topics that are of personal interest or pertinent to everyday life. They acquire approximately 1200 characters and understand texts that consist of everyday language. Students are also taught to write simple connected texts and to describe personal experiences and impressions, and acquire a knowledge and appreciation of Chinese culture and society.

Typical availability

Autumn semester, City campus

97104 Chinese Language and Culture 4

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97103 Chinese Language and Culture 3

This subject is designed for students who have successfully completed Chinese 3 or its equivalent. It further develops students' communicative competence to enable them to interact with native speakers of Chinese in a range of basic social situations. Great emphasis is placed on the introduction of more written texts which allow students to use Chinese characters more confidently. Students learn to understand extended speech and follow the lines of argument on reasonably familiar topics, and interact with Chinese speakers with a degree of fluency and spontaneity, participate in discussion and express personal viewpoints in familiar contexts. Students acquire approximately 1600 characters, and read and understand literary prose and articles concerned with contemporary problems. Students learn to write clear and detailed texts related to personal interests, and understand Chinese culture and Chinese ways of thinking.

Typical availability

Spring semester, City campus

97105 Chinese Language and Culture 5

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97104 Chinese Language and Culture 4

This subject is designed for students who have successfully completed Chinese 4 or its equivalent. It aims to further develop students' communicative competence in general social interactions with a focus on developing their practical writing skills. By the end of this subject, students are able to use the language and express themselves flexibly and effectively for social purposes. They are able to understand extended and more complex speech, and understand the main points of common radio, TV programs and films. Students are able to acquire approximately 2000 characters, and read and comprehend long and complex texts with a range of written styles. They are able to write clear, well-structured texts, discussing social and cultural issues with personal points of view and understand Chinese culture and contemporary Chinese society.

Typical availability

Autumn semester, City campus

97106 Chinese Language and Culture 6

8cp; 2hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97105 Chinese Language and Culture 5

This subject is designed for students who have successfully completed Chinese 5 or its equivalent. It further develops students' reading and writing skills while reinforcing their communicative competence in general social interactions. Students learn to take part effortlessly in any conversation or discussion, and have a good familiarity with idiomatic expressions and colloquialisms. They learn to understand the majority of TV and radio programs and films, acquire about 2500 characters, and learn to read with ease virtually all forms of written texts such as reports, essays and literary works. They also learn to write clear, smoothly-flowing text in an appropriate style and have a deep understanding of Chinese culture and contemporary Chinese society.

Typical availability

Spring semester, City campus

97109 Chinese Mass Media

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97107 Chinese Language and Culture 7 OR 97108 Chinese Language and Culture 8 OR 97110 Twentieth Century Chinese Fiction OR 97111 Chinese Festivals and Ceremonies OR 97112 Chinese Film

This subject is designed for students who have a good knowledge of Chinese. It aims to develop a high level of communicative competence using various formats and current knowledge about contemporary China. The teaching focuses on understanding varieties of media sources, including daily news, newspaper/magazine articles and current affairs reports. Students are exposed to a range of Chinese

texts to develop their knowledge of listening and speaking capabilities through watching CCTV daily news, class discussions and other activities. By the end of this subject, students are able to read newspaper/magazine articles and understand daily news on TV with ease. They also acquire good skills for selecting and summarising the contents of various media sources and writing essays on a topic about China.

Typical availability

Autumn semester, City campus Spring semester, City campus

97110 Twentieth Century Chinese Fiction

8cp; 2hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97107 Chinese Language and Culture 7 OR 97108 Chinese Language and Culture 8 OR 97109 Chinese Mass Media OR 97111 Chinese Festivals and Ceremonies OR 97112 Chinese Film

This subject is designed for students who have successfully completed Chinese 9, Chinese Ceremonies and Festivals, Chinese Film, Chinese Mass Media, or who are native speakers of Modern Standard Chinese. It develops students towards a high level of communicative competence in reading and writing, and an understanding of modern and contemporary Chinese society. It does this by exposing them to a range of texts of twentieth-century Chinese literature and history, language and culture, as well as documentaries and films. Students gain a general understanding of modern Chinese literature and are able to acquire language varieties in Modern Standard Chinese with the ability to use them appropriately. Students also develop a critical way of thinking and write reviews and essays of about 3000 characters.

Typical availability

Autumn semester, City campus

97111 Chinese Festivals and Ceremonies

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 97106 Chinese Language and Culture 6 OR 97112 Chinese Film OR 97107 Chinese Language and Culture 7 OR 97108 Chinese Language and Culture 8 OR 97109 Chinese Mass Media OR 97110 Twentieth Century Chinese Fiction

This subject is designed for students with functional competence in oral and written Chinese. It aims to develop a high level of communicative capacity and cultural awareness using various formats and current knowledge about Chinese language and culture. The teaching focuses on major Chinese festivals and ceremonies. Students are exposed to a range of Chinese texts to develop their knowledge of Chinese culture as lived experience and understanding of Chinese ideas, beliefs and values embedded in daily practices and cultural conventions. They are also provided with opportunities to improve their oral and written communicative skills through class discussions, debates, oral presentations, reading, and writing. By the end of this subject, students have gained a good understanding of Chinese cultural traditions and conventions as well as a sound knowledge of Chinese festivals and ceremonies; at the same time, they have enhanced their speaking, reading and writing proficiency in Chinese. The subject is taught in Chinese.

Typical availability

Autumn semester, City campus Spring semester, City campus

97112 Chinese Film

8cp; availability: exchange and study abroad students with faculty approval $% \left(1\right) =\left(1\right) \left(1\right$

Requisite(s): 97106 Chinese Language and Culture 6 OR 97111 Chinese Festivals and Ceremonies OR 97107 Chinese Language and Culture 7 OR 97108 Chinese Language and Culture 8 OR 97109 Chinese Mass Media OR 97110 Twentieth Century Chinese Fiction

This subject is designed for students with functional competence in oral and written Chinese. It aims to develop a high level of communicative capacity and cultural awareness using feature films of the Post-Mao era. Students are exposed to some of the best films of the last three decades to develop their knowledge of Chinese culture as lived experience and their understanding of social change in China. They are also provided with opportunities to improve their listening, speaking, reading and writing skills through class discussions, debates, oral presentations, reading, and writing. By the end of this

subject, students have gained a good understanding of a broad range of cultural practices and social change over the last three decades; at the same time, they have enhanced their proficiency in Chinese. The subject is taught in Chinese.

Typical availability

Autumn semester, City campus Spring semester, City campus

97201 Japanese Language and Culture 1

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

This is the first unit in the Japanese Language and Culture program. It is designed as a first step in providing students with the basic survival language skills and sociocultural awareness to enable them to undertake in-country study in Japan.

While focusing primarily on the development of speaking and listening skills, the subject also provides a working knowledge of the hiragana and katakana scripts and approximately 50 kanji. Discussions of sociolinguistic and cross-cultural issues are an integral part of the language lessons.

The subject focuses on the development of skills required for the most basic predictable situations in which the speaker might initially be required to communicate.

This subject forms the basis for further study (Japanese 2).

Typical availability

Autumn semester, City campus

97202 Japanese Language and Culture 2

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97201 Japanese Language and Culture 1

This subject is designed for students who have completed Japanese 1 or its equivalent. It aims to further develop students' communicative competence on a range of topics, including discussions on families, making appointments and visiting people.

By the end of this subject, students should be able to demonstrate the language and sociocultural skills required to establish and develop relationships, and to fulfil basic survival needs in a Japanese-speaking environment.

By the completion of this subject, students are expected to be able to read and write 150 kanji. This subject lays the basis for further studies in Japanese language and culture (Japanese 3).

Typical availability

Spring semester, City campus

97203 Japanese Language and Culture 3

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97202 Japanese Language and Culture 2

This subject is designed for students who have completed Japanese 2 at UTS or its equivalent. It is also the entry point for students who have completed HSC Japanese (Continuers). Informal spoken Japanese is introduced in this subject. The aim of the subject is to develop students' spoken skills and their sociocultural awareness of when to use the different language registers according to social relationships in Japanese. By the end of this subject, students are expected to have developed their listening and spoken skills to the level where they can communicate effectively in a range of everyday situations. Students are expected to be able to read and write approximately 250 kanji by the end of this subject.

This subject lays the basis for further studies in Japanese language and culture (Japanese 4).

Typical availability

Autumn semester, City campus

97204 Japanese Language and Culture 4

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97203 Japanese Language and Culture 3

This subject is designed for students who have completed Japanese 3 or its equivalent. In this subject students consolidate their skills in listening, reading, writing and speaking. It is designed to broaden students' knowledge of Japanese language and culture. Upon

completion of this subject students should be able to interact in limited social, academic and work contexts with Japanese speakers and are expected to be able to read and write approximately 350 kanji. The learning of the sociocultural use of the language is an integral part of this subject. Students are also required to use a range of resources that facilitate independent language learning.

This subject lays the basis for further studies in Japanese language and culture (Japanese 5).

Typical availability

Spring semester, City campus

97205 Japanese Language and Culture 5

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97204 Japanese Language and Culture 4

This subject is the third in a series of four subjects in the post-HSC series, and is for those who have successfully completed either Japanese 4 or its equivalent. It aims to further develop listening, speaking, reading, writing and cultural skills.

The subject focuses on the development of language skills and cultural sensitivity required in formal and informal situations which occur in both routine social, and limited vocational areas. It forms the basis for further study (Japanese 6, usually only run in Autumn semester).

Typical availability

Autumn semester, City campus

97206 Japanese Language and Culture 6

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97205 Japanese Language and Culture 5

This subject subject aims to consolidate and further improve students' oral performance and report-writing skills and their cultural sensitivity in both formal and informal situations. By the end of this subject, students are expected to have achieved minimal vocational proficiency and be able to speak the language with sufficient structural accuracy and vocabulary to participate effectively in limited conversations on social and vocational topics. By the end of the subject, students are expected to be able to read and write approximately 600 kanji. The learning of the sociocultural use of the language is an integral part of this subject. Students are also required to use a range of resources that facilitate independent language learning.

This subject lays the basis for further studies in Japanese language and culture (Japanese 7).

Typical availability

Spring semester, City campus

97207 Japanese Films and Popular Culture

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97206 Japanese Language and Culture 6 OR 97208 Japanese Language and Identity OR 97209 Japanese Media and Current Issues OR 97210 Transcultural Communication in Japanese

This subject is designed to provide students who have successfully completed Japanese 6 or its equivalent with the ability to consolidate and extend their knowledge of Japanese in preparation for a period of in-country study in Japan.

Throughout this subject, students are expected to continue to develop the communication skills required to function effectively in academic contexts in Japan. In the first half of the subject, the focus is on the development of academic reading and writing skills and the acquisition of vocabulary based on reading, understanding and discussing various topics and viewpoints on the interrelationships between Japanese language and culture. In the second half of the subject, the focus is on the comprehension of university lectures in Japan, with an emphasis on the development of listening and note-taking skills. In terms of literacy development, students are expected to be able to recognise and pronounce the kanji introduced in the subject materials, to increase their pace of reading as a result of regular and habitual reading and improved dictionary skills, and to be able to write an increasing number of kanji as required for specific academic tasks.

Typical availability

Autumn semester, City campus

97208 Japanese Language and Identity

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97206 Japanese Language and Culture 6 OR 97207 Japanese Films and Popular Culture OR 97209 Japanese Media and Current Issues OR 97210 Transcultural Communication in Japanese

This subject is designed to provide students who have successfully completed Japanese 7 or its equivalent with the ability to consolidate and extend their knowledge of Japanese. The main focus of this subject is on the further development of presentation skills and the skills required to undertake research in Japanese.

Throughout the subject, students are expected to actively engage in academic reading and writing and participate in classroom discussions. In terms of literacy development, students are expected to increase their pace of reading as a result of regular and habitual reading, and to be able to write and recognise an increasing number of kanji as required for specific academic tasks.

97209 Japanese Media and Current Issues

8cr

Requisite(s): 97206 Japanese Language and Culture 6 OR 97207 Japanese Films and Popular Culture OR 97208 Japanese Language and Identity OR 97210 Transcultural Communication in Japanese

This subject is designed for students who have successfully completed Japanese 6 or its equivalent (600-800 hours of formal study of Japanese), and have sufficient language competence in understanding authentic spoken and written Japanese with some aid of a dictionary. Students examine current issues in Japanese media through: reading articles, essays and commentaries from a variety of sources; watching documentary films and news programs; class discussions; and researching a current issue to write a report and give a presentation. The subject aims to provide students with considerable opportunities to explore the contexts of current issues in order to gain deeper understandings of cultural aspects which underlie them. Throughout this subject, students are expected to consolidate and extend their knowledge of the Japanese language in preparation for a period of in-country study in Japan, as well as adopt a critical approach to cultural phenomena in both Japan and their own country. The subject is taught in Japanese.

97210 Transcultural Communication in Japanese

8ср

Requisite(s): 97206 Japanese Language and Culture 6 OR 97207 Japanese Films and Popular Culture OR 97208 Japanese Language and Identity OR 97209 Japanese Media and Current Issues

This subject is designed to provide students considerable opportunities to engage with Japanese culture, language and people. Students will examine the socio-cultural context in which the language is used under globalisation. It questions what constitutes Japanese language and culture and what it means to speak in Japanese with people of different cultural background in a transcultural environment where cultural and linguistic diversity and mobility are prominent across borders. Students are required to read or otherwise prepare extensively in preparation for classroom presentations, discussions and debates.

97401 French Language and Culture 1

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

This subject is designed to provide students, who have no prior knowledge of the French language, with basic reading, listening, speaking and writing skills in French. The subject allows for an understanding of the sociocultural context in which the language is used. By the end of the semester, students are able to understand and use familiar words and basic sentence structures. They learn to answer and ask simple questions about themselves and others, describe people and surroundings, give directions and interact in a simple way on a familiar topic such as an invitation to go out or a restaurant situation.

Typical availability

Autumn semester, City campus

97402 French Language and Culture 2

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97401 French Language and Culture 1

This subject is designed to provide students who have little prior knowledge of the French language with basic reading, listening, speaking and writing skills in French. The subject allows for an understanding of the sociocultural context in which the language is used. By semester's end students are expected to communicate simple and routine tasks requiring a simple and direct exchange of information on familiar topics and activities, and use a wide range of grammatical concepts and familiar vocabulary in spoken and written French.

Typical availability

Spring semester, City campus

97403 French Language and Culture 3

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97402 French Language and Culture 2

This subject is designed to provide students who have some knowledge of French, with further skills in reading, listening, speaking and writing. The subject allows for an understanding of the sociocultural context in which the language is used. In addition to basic grammatical concepts, this subject encourages students to explore more complex structures such as hypotheses, causes, consequences, probabilities and improbabilities. Students take active part in discussions on subjects related to topical issues, including debating their pros and cons.

Typical availability

Autumn semester, City campus

97404 French Language and Culture 4

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97403 French Language and Culture 3

This subject is designed to provide students who have some knowledge of French with further skills in reading, listening, speaking and writing. The subject allows for an understanding of the sociocultural context in which the language is used. In addition to basic grammatical concepts, students are encouraged to explore more complex constructions such as writing formal letters and recognising literary French. They take active part in discussions on topical issues and are introduced to situations likely to arise while travelling in an area where the language is spoken.

Typical availability

Spring semester, City campus

97405 French Language and Culture 5

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97404 French Language and Culture 4

This subject is designed to provide students with a good understanding of French, with further skills in reading, listening, speaking and writing. The subject allows for an understanding of the sociocultural context in which the language is used. Students learn to use spoken and written language flexibly and effectively, presenting clear, detailed descriptions of complex subjects and expressing points of view on social and contemporary issues.

Typical availability

Autumn semester, City campus

97406 French Language and Culture 6

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97405 French Language and Culture 5

This subject is designed to provide students with a good understanding of French with further skills in reading, listening, speaking and writing. The subject allows for an understanding of the sociocultural context in which the language is used. By the end of the semester, students are expected to be able to express themselves fluently and spontaneously on a variety of topics explored in class, particularly issues related to society, culture and politics as well as situations likely to arise while travelling in an area where the language is spoken.

97408 Show and Tell: Francophone Cultures on Display

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97406 French Language and Culture 6 OR 97407 Francophone Identities in Conflict OR 97409 Francophone Cultures of Consumption OR 97410 Places and Spaces of the Francophone World

This subject is designed to provide students who have little to no difficulty in understanding and writing French with proficiency in reading, listening, speaking and writing in the language as well as considerable opportunities to engage with Francophone culture. Students examine the socio-cultural context in which the language is used, specifically with regard to its interactions with visual media and/or performance in the Francophone world. Via written and oral assessments that demonstrate continuing mastery of the French language, students engage with these visual-linguistic sources in a manner which considers their cultural provenance and role. Students are required to read or otherwise prepare extensively in preparation for class.

Students are called on to analyse major linguistic aspects of texts and engage with their visual elements (films, television shows, advertisements, graphic novels, bandes dessinées, plays, etc.). They develop a sound understanding of Francophone culture and the relationship between language and visual culture through group discussions, individual and group presentations, writing, independent research, and the production of an original work that emphasises the French language and the visual and/or performative.

97409 Francophone Cultures of Consumption

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 97406 French Language and Culture 6 OR 97407 Francophone Identities in Conflict OR 97408 Show and Tell: Francophone Cultures on Display OR 97410 Places and Spaces of the Francophone World

This subject is designed to provide students, who have little or no difficulty in understanding and writing French, with both proficiency in reading, listening, speaking and writing in the language and considerable opportunities to engage with Francophone culture. Students examine the socio-cultural context in which the language is used, specifically with regard to its interactions with consumer culture (broadly defined) in the Francophone world. Via written and oral assessments that demonstrate continuing mastery of the French language, students engage with source texts and objects in a manner that considers their cultural provenance and role. Students are required to read or otherwise prepare extensively in preparation for classroom presentations, discussions and debates.

97410 Places and Spaces of the Francophone World

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 97406 French Language and Culture 6 OR 97407 Francophone Identities in Conflict OR 97408 Show and Tell: Francophone Cultures on Display OR 97409 Francophone Cultures of Consumption

This subject is designed to provide students, who have little or no difficulty in understanding and writing French, with both proficiency in reading, listening, speaking and writing in the language, and considerable opportunities to engage with Francophone culture. Students examine the socio-cultural context in which the language is used, specifically with regard to its interactions with place and the environment in the Francophone world. Via written and oral assessments that demonstrate continuing mastery of the French language, students engage with a variety of authentic sources in a manner that considers their cultural provenance and role. Students are required to read or otherwise prepare extensively in preparation for classroom presentations, discussions and debates.

97501 Spanish Language and Culture 1

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

This subject aims to provide students who have no prior knowledge of the Spanish language with a range of basic survival skills in order to express their immediate needs in Castilian and Latin American Spanish. Students learn how to give basic information and respond in a culturally and socially appropriate manner in oral and written forms. The four language skills of listening, speaking, reading and writing, both individually and in combination, are developed using authentic materials covering a variety of everyday situations. Signs, menus, narratives and other cultural texts are used for learning and students are taught to write messages or letters using familiar register. Students develop skills for planning, organising and presenting their ideas in Spanish and develop a basic understanding and appreciation of aspects of the cultures of Spanish-speaking peoples.

In addition to the four hours of teaching, students undertake independent learning study outside class time. This independent study is based on selected readings and exercises. Its aim is to expand the student's knowledge of the language and Hispanic cultures and is organised through individual and group tasks, including online activities.

All students undertaking language and culture study at UTS for the first time need to complete a level assessment form, obtained from UTS: International Studies, to ensure that they are placed in an appropriate level for classes. UTS: International Studies reserves the right to place students in a class that is appropriate for their level of language proficiency.

Typical availability

Autumn semester, City campus

97502 Spanish Language and Culture 2

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97501 Spanish Language and Culture 1

This subect is the second in a series of four subjects designed to provide students with no prior knowledge of the Spanish language with the basic survival skills in language and culture required to undertake in-country study in Latin America and Spain.

Emphasis is given to the development of speaking and listening skills required to establish and maintain relationships in social or work-related spheres, and fulfil basic survival needs in a Spanish-speaking environment. Students also expand their reading and writing skills. In addition the subject focuses on the development of sociocultural understanding relevant to appropriate language use.

The subject consists of 52 hours of classroom instruction. The approach adopted is communicative and provides students with many opportunities to interact and use the language in a meaningful way in various social and cultural contexts. Audio-visual equipment is used to facilitate learning.

This subject forms the basis for further study (Spanish3).

Requisite(s): 97502 Spanish Language and Culture 2

This subject aims to provide students who have a good knowledge of the Spanish language with a broad range of social situations in order to express their needs in Castilian and Latin American Spanish. Students learn how to give precise information and respond in a culturally and socially appropriate manner in oral and written forms. The four language skills of listening, speaking, reading and writing, both individually and in combination, are further developed using authentic materials covering a variety of situations. Narratives, autobiographies and a variety of other cultural texts are used for learning and students are taught to write accounts, biographies, letters and to discuss future plans using familiar register. Students further develop skills for planning, organising and presenting their ideas in Spanish and develop a wide understanding and appreciation of aspects of the cultures of Spanish-speaking peoples.

In addition to the four hours of teaching, students undertake independent learning study outside class time. This independent study is based on selected readings and exercises. Its aim is to expand the student's knowledge of the language and Hispanic cultures and is organised through individual and group tasks, including online activities.

All students undertaking language and culture study at UTS for the first time need to complete a level assessment form, obtained from UTS: International Studies, to ensure that they are placed in an appropriate level for classes. 97505 Spanish Language and Culture 5

8cp; 4hpw; availability: exchange and study abroad students with faculty approval $% \left(1\right) =\left(1\right) \left(1\right)$

Requisite(s): 97504 Spanish Language and Culture 4

This subject aims to provide students who have a firm knowledge of the Spanish language with a broad range of social situations in order to express their needs and ideas in Castilian and Latin American Spanish. Students learn how to express complex ideas and respond in a culturally and socially sensitive manner in oral and written forms. The four language skills of listening, speaking, reading and writing, both individually and in combination, are further developed using authentic materials covering a variety of situations. A range of authentic reading material, including texts with regional and social variants and specific registers such as alcoholism, immigration, education, child delinquency, poverty and short stories from Spain and Latin America, are used for learning, and students are taught to write complex letters and essays expressing a point of view. Students further develop skills for planning, organising and presenting their ideas in Spanish and develop a sophisticated understanding and appreciation of aspects of the cultures of Spanish-speaking peoples.

In addition to the four hours of teaching, students undertake independent learning study outside class time. This independent study is based on Hispanic literature containing short stories, a film analysis and essays expressing a point of view. Its aim is to expand the student's knowledge of the sociocultural context and is organised through individual and group tasks, including online activities.

All students undertaking language and culture study at UTS for the first time need to complete a level assessment form, obtained from UTS: International Studies, to ensure that they are placed in an appropriate level for classes. Undergraduate

This subject deals with the politics of 'reading and writing' the People's Republic of China (PRC). It starts by examining the history of the PRC, from the Chinese Communist Party's (CCP) rise to power in 1949 to the death of Chairman Mao Zedong in 1976. A key focus is how the early CCP leadership attempted to resolve an issue that stalks the Chinese government even today, namely, the question of how to modernise China and still keep faith with the ethical imperatives of socialist transition. In doing so, the subject examines how Western commentators and mainland Chinese scholars have chosen to evaluate the Chinese revolution in different historical periods. The subject then outlines some of the enormous changes that have taken place in the PRC since the introduction of market-based reforms in December 1978. With the introduction of economic reform and opening up, China entered the postmodern, global community and now faces similar social concerns to those that inform Western societies: inflation, unemployment, environmental degradation, growing crime rates, and ethnic tensions. However, following the Chinese government's brutal suppression of the student protest movement in 1989, the PRC's response to many of these issues has been accompanied by Western criticisms of human rights' abuses and claims that the CCP has failed to abandon the 'totalitarian' politics of the now denigrated Maoist era. The subject concludes by asking students to determine whether such views are justifiable and how we should read and write present-day China.

976211 Contemporary Japan

8cp; 3hpw; availability: International Studies combined degree students; International Studies students on dual programs of study from UTS international partners; students enrolled in an International Studies sub-major; students wishing to take it as an elective; non-award students (including UTS staff and research postgraduates)

Requisite(s): 976001 Foundations in International Studies These requisites may not apply to students in certain courses. See access conditions. Undergraduate

On completion of this subject, students have an overview of contemporary Japanese society. Students also have a grasp of the social, political and economic systems at play in Japan, how those systems interact in practice to shape culture, and a historical view of how those systems came into being. Some of the major themes students are able to analyse and discuss, using examples, include issues relating to the economic development achieved during the 20th century and current difficulties in reform. Some explanations are based on the unique and enigmatic nature of Japanese society, so students need to be able to discuss the nature of Japan. In order to be able to discuss current reform agendas in Japan, students also need to understand the formation of the workforce and fears about possible future directions of Japanese society.

976404 Contemporary Switzerland

8cp: 3hpw

Requisite(s): 976001 Foundations in International Studies These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject has been designed to provide students with a basic understanding of contemporary Swiss history, politics, society and culture in national, continental and global contexts. In weeks 1 to 4, students follow an umbrella program, shared by all European contemporary society subjects, which introduces general issues relating to contemporary Europe: definitions of Europe, the drive to unification, internal divisions within Europe, and the impact of migration. From week 5 onwards students pursue a separate program, focusing on contemporary Switzerland. The subject provides students with critical skills that allow them to identify major contemporary issues that shape present-day Swiss society. Insights are gained into long-term and more recent history and the complex notion of Swiss identity. Topics include contemporary politics, regional, cultural and linguistic diversity, Swiss neutrality, Switzerland's role in the Second World War and its subsequent approach to that past, its relationship with the EU and broader international role. Students develop critical thinking skills relevant to the multidisciplinary nature of the subject.

976451 Contemporary Spain

8cp; 3hpw

Requisite(s): 976001 Foundations in International Studies These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject introduces students to selected aspects of contemporary Spanish history, culture and social life, and relates contemporary Spain to European and global histories. The overarching question that students are encouraged to ask and answer is 'What is Spain?' For the first four weeks of the subject students learn about general European issues: definitions of Europe, the drive to unification, internal divisions within Europe and the impact of migration. The Spain-specific lectures and seminars in the subject build from noting divergent and contradictory historical ways of conceptualising Spain,

with attention paid to the legacies of waves of immigrant peoples and empires, religions and ethnicities. The subject also pays close attention to the modern history of Spain from the Second Republic in the 1930s, through the Civil War and Franco dictatorship to the restoration of democracy in the 1980s and the change in government in 2004, with specific investigation of regional drives, tourism and the manufacturing of 'Spanishness', gender and sexual politics, and the changing political and cultural climate. Students develop critical thinking skills relevant to the multidisciplinary nature of the subject.

Spring semester, City campus

976502 Contemporary Latin(o) Americas

8cp: 3hpw

Requisite(s): 976001 Foundations in International Studies These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject introduces students to the Spanish-speaking Americas and their sociocultural, political and economic dimensions. It begins with an overview of the periods of colonisation, independence and nation-state formation as stages vital to understanding Latin America's problematic insertion into Western modernity in the 20th century, and the complex interactions between the USA and the Spanish-speaking Americas since the mid-19th century. Students gain knowledge of important sociocultural and historical processes, as well as current theories, concepts and debates, in relation to patterns of change in Latin America and in an increasingly latinised USA, now the world's second largest Spanish-speaking country after Mexico. The subject links contemporary Latin American and US Latino peoples and cultures to broader processes of transnationalisation, globalisation and transculturation. The subject encourages students to develop critical skills for identifying the major contemporary issues at work in the Spanish-speaking Americas. This is a core subject for students doing the combined degree in international studies with any of the following country specialisations: Chile, Argentina, Mexico and Latino USA. Other students may take this subject as an elective. The subject requires no prior knowledge of Latin Ámerica, Latino communities in the USA, or the Spanish language.

Typical availability

Spring semester, City campus

976602 Contemporary Canada (Quebec)

8cp; 3hpw

Requisite(s): 976001 Foundations in International Studies

These requisites may not apply to students in certain courses. See access conditions.

Undergraduate

This subject aims to provide students with a basic understanding of the history, politics, society and culture of Québec (Canada). It examines the history of Québec, with a particular focus on events since the Quiet Revolution. It provides an overview of the economic and political development of Québec. Central themes in Québec society such as nationalism, independence movements and language are studied. Literature, cinema and other cultural works provide case studies in which these and other issues are examined. The subject thus introduces students to Québec's diversity and heterogeneity in regional, national, continental and international contexts. Students develop critical thinking skills relevant to the multidisciplinary nature of the subject. The subject gives students the opportunity to develop a critical appreciation of societies outside Australia.

Typical availability

Spring semester, City campus

977110 In-country Study 1: China

24cp; attendance at host university classes; availability: not offered to exchange and study abroad students

Requisite(s): 976111 Contemporary China AND 976001 Foundations in International Studies

Undergraduate

This subject is the key component of the China major in the BA in International Studies, which involves two semesters of study overseas attached to a partner institution of UTS. In-country study is designed to enable students to experience living and studying in the culture of their specialisation and is guided by the principles of cultural immersion and reflection, as well as self-reliance.

The subject recognises that intercultural competence is integral to professional practice. It aims to foster in students a capacity for critical reflection - in particular, the ability to identify and question one's cultural assumptions, values and beliefs, and thus to acknowledge and empathise with the perspectives of people from other cultures.

97801 Italian Language and Culture 1

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Students who successfully complete this subject understand and use familiar everyday expressions and basic phrases, in both speech and writing. Students learn to communicate appropriately in situations such as introducing themselves, exchanging personal information, asking and giving directions and discussing daily routines. They also develop strategies for long-term effective language learning. Students are also taught the sociocultural context in which the language is used.

Typical availability

Autumn semester, City campus

97802 Italian Language and Culture 2

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97801 Italian Language and Culture 1

This subject caters for students at the 'upper basic' level of competence in Italian language and culture. It builds on the basic linguistic and cultural capabilities and general language learning strategies acquired through prior exposure to Italian language and culture or through Italian Language and Culture 1. Upon successful completion of the subject, students communicate in simple and routine tasks requiring a simple and direct exchange of information on familiar topics, in spoken and written Italian. Students also continue to develop an understanding of aspects of the Italian culture and appropriate language use as well as developing strategies for long-term effective language learning.

Typical availability

Spring semester, City campus

97803 Italian Language and Culture 3

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97802 Italian Language and Culture 2

This subject caters for students at the 'lower intermediate' level of competence in Italian language and culture. It builds further on the linguistic and cultural capabilities and general language learning strategies acquired through prior exposure to the Italian language, or through Italian 2. Upon successful completion of the subject students communicate more effectively in familiar everyday social situations as well as more specific contexts, e.g. the workplace or at university. They understand short authentic newspaper articles and take active part in discussions on subjects related to topical issues, including debating their pros and cons.

Typical availability

Autumn semester, City campus

97804 Italian Language and Culture 4

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97803 Italian Language and Culture 3

This subject caters for students at the 'upper intermediate' level of competence in Italian language and culture. It consolidates and further expands the linguistic and cultural capabilities and general language learning strategies acquired through prior exposure to the Italian language, or through Italian 3. It enables students to understand the main ideas of complex texts on both concrete and abstract topics; interact with a degree of fluency and spontaneity; produce clear, detailed text on a wide range of subjects; and effectively explain a viewpoint on a topical issue. Students increase their knowledge of the Italian culture, assisting them in the further development of communication skills.

Typical availability

Spring semester, City campus

97805 Italian Language and Culture 5

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97804 Italian Language and Culture 4

This subject caters for students at the 'lower advanced' level of competence in Italian language and culture. It consolidates and further expands the linguistic and cultural capabilities and general language learning strategies acquired through prior exposure to the Italian language, or through Italian 4. Upon completion, students understand a wide range of texts and recognise implicit meaning; effectively express points of view on social and contemporary issues without much obvious searching for expressions; and produce clear, well-structured texts. They also increase their understanding of current affairs in Italy through watching and discussing Italian-language videos and TV programs.

Typical availability

Autumn semester, City campus

97806 Italian Language and Culture 6

8cp; 4hpw; availability: exchange and study abroad students with faculty approval

Requisite(s): 97805 Italian Language and Culture 5

This subject is designed to consolidate and further expand the linguistic and cultural capabilities and general language learning strategies acquired through prior exposure to the Italian language, or through Italian Language and Culture 5. Upon completion, students can understand a wide range of demanding, longer texts, and recognise implicit meaning; use the language flexibly, effectively and in a culturally appropriate manner; and produce clear, well-structured text, showing controlled use of organisational patterns, connectors and cohesive devices.

Typical availability

Spring semester, City campus

97807 Italian Language and Culture 7

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 97806 Italian Language and Culture 6

In some instances, and with approval from relevant major coordinators, students in the combined degree in international studies may take higher level language and culture subjects at other universities through concurrent study arrangements. Students need to plan ahead and check the deadline for when cross-institutional applications close at the other university.

97808 Italian Language and Culture 8

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 97807 Italian Language and Culture 7

In some instances, and with approval from relevant major coordinators, students in the combined degree in international studies may take higher level language and culture subjects at other universities through concurrent study arrangements. Students need to plan ahead and check the deadline for when cross-institutional applications close at the other university.

97809 Italian Language and Culture 9

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 97808 Italian Language and Culture 8

In some instances, and with approval from relevant major coordinators, students in the combined degree in international studies may take higher level language and culture subjects at other universities through concurrent study arrangements. Students need to plan ahead and check the deadline for when cross-institutional applications close at the other university.

97810 Italian Language and Culture 10

8cp; availability: exchange and study abroad students with faculty approval

Requisite(s): 97809 Italian Language and Culture 9

In some instances, and with approval from relevant major coordinators, students in the combined degree in international studies may take higher level language and culture subjects at other universities through concurrent study arrangements. Students need to plan ahead and check the deadline for when cross-institutional applications close at the other university.

978110 In-country Study 2: China

24cp; availability: not offered to exchange and study abroad students Requisite(s): 977110 In-country Study 1: China Undergraduate

This subject is the key component of the China major in the BA in International Studies, which involves two semesters of study overseas attached to a partner institution of UTS. In-country study is designed to enable students to experience living and studying in the culture of their specialisation and is guided by the principles of cultural immersion and reflection, as well as self-reliance.

The subject builds on the life and learning experiences of In-country Study 1: China to recognise that intercultural competence is integral to professional practice. In-country Study 2: China further develops students' capacity for critical reflection - in particular, the ability to identify and question one's cultural assumptions, values and beliefs, and thus to acknowledge and empathise with the perspectives of people from other cultures.

The assessments and life experiences of this subject form the culmination of a student's International Studies degree at UTS, and are intended to prepare students for lifelong learning about international societies and cultures.

Typical availability

Autumn semester, City campus Spring semester, City campus

978134 In-country Study: Canada

24cp; availability: not offered to exchange and study abroad students Postgraduate

In-country Study: Canada is the key component of the Canada major in the Master of Arts in International Studies, and involves one semester of study overseas attached to a partner institution of UTS. In-country Study: Canada enables students to experience living and studying in the culture of their specialisation, and is guided by UTS: International Studies' principles of cultural immersion and reflection, as well as self-reliance. In-country Study: Canada recognises that intercultural competence is integral to professional practice. It develops in students a capacity for critical reflection, in particular, the ability to identify and question one's cultural assumptions, values and beliefs, and thus to acknowledge and empathise with the perspectives of people from other cultures. To maximise the program's positive outcomes, the subject's learning objectives require students to actively seek hands-on social and cultural interactions during their semester in Canada. Incountry Study Canada consists of an agreed program of study at the host university (including language classes), and assessments based on humanities/social sciences research conducted in and about the host society. The subject's assessment tasks are the medium through which sustained immersion and engagement with the host country is demonstrated. The assessments and life experiences of In-country Study: Canada are the culmination of a student's Master of Arts in International Studies at UTS, and are intended to prepare students for lifelong learning about international societies and cultures

In-country Study: Canada is a full-time 24-credit point subject, which is a full time load.

978135 In-country Study: Chile

24cp; availability: not offered to exchange and study abroad students Postgraduate

In-country Study: Chile is the key component of the Chile major in the Master of Arts in International Studies, and involves one semester of study overseas attached to a partner institution of UTS. In-country Study: Chile enables students to experience living and studying in the culture of their specialisation, and is guided by UTS: International Studies' principles of cultural immersion and reflection, as well as self-reliance. In-country Study: Chile recognises that intercultural competence is integral to professional practice. It develops in students a capacity for critical reflection, in particular, the ability to identify and question one's cultural assumptions, values and beliefs, and thus to acknowledge and empathise with the perspectives of people from other cultures. To maximise the program's positive outcomes, the subject's learning objectives require students to actively seek handson social and cultural interactions during their semester in Chile. In-country Study Chile consists of an agreed program of study at the host university (including language classes), and assessments based on humanities/social sciences research conducted in and about the host society. The subject's assessment tasks are the medium through which sustained immersion and engagement with the host country is demonstrated. The assessments and life experiences of In-country Study: Chile are the culmination of a student's Master of Arts in International Studies at UTS, and are intended to prepare students for lifelong learning about international societies and cultures.

In-country Study: Chile is a full-time 24-credit point subject, which is a full time load.

In-country Study: China recognises that intercultural competence is integral to professional practice. It develops in students a capacity for critical reflection, in particular, the ability to identify and question one's cultural assumptions, values and beliefs, and thus to acknowledge and empathise with the perspectives of people from other cultures. To maximise the program's positive outcomes, the subject's learning objectives require students to actively seek handson social and cultural interactions during their semester in China. In-country Study China consists of an agreed program of study at the host university (including language classes), and assessments based on humanities/social sciences research conducted in and about the host society. The subject's assessment tasks are the medium through which sustained immersion and engagement with the host country is demonstrated. The assessments and life experiences of In-country Study: China are the culmination of a student's Master of Arts in International Studies at UTS, and are intended to prepare students for lifelong learning about international societies and cultures.

In-country Study: China is a full-time 24-credit point subject, which is a full time load.

979508 Research in International Studies

8cp; availability: not offered to exchange and study abroad students

The subject is designed to equip students for independent, creative research through the development of the critical, analytical and methodological skills required to complete the planning and proposal stages for a small-scale piece of original research within an international context. It introduces students to qualitative and quantitative social science and cultural studies research data-gathering methods appropriate to international studies research, how they work in combination, and the analysis and validity of the data they produce. An information literacy seminar will provide archive skills, information on the ethics of doing research with human beings and on the management of data, online research, and bibliographical and referencing skills through the UTS library.

979509 In-country Study in Australia

24cp; availability: not offered to exchange and study abroad students Postgraduate

The subject is designed to provide an alternative, cognate subject for students who for financial, health, or family reasons, cannot spend a semester abroad in order to complete their degree. The subject is offered locally but as distance education and is guided by UTS: International Studies' principles of cultural immersion and reflection, as well as self-reliance. It recognises that intercultural competence is

integral to professional practice. It develops in students a capacity for critical reflection, in particular, the ability to identify and question one's cultural assumptions, values and beliefs, and thus to acknowledge and empathise with the perspectives of people from other cultures. To maximise the program's positive outcomes, the subject's learning objectives require students to actively engage in hands-on social and cultural interactions with their country major diaspora population in Australia. Assessment tasks are based on humanities/social sciences research and are the medium through which engagement with the country major society is demonstrated. The assessments and life experiences of the subject are the culmination of a student's Master of Arts in International Studies at UTS, and are intended to prepare students for lifelong learning about other societies and cultures.

979510 Contemporary China

8cp; availability: not offered to exchange and study abroad students Requisite(s): 979508 Research in International Studies OR 979508 Research in International Studies

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject is designed to provide students with a basic understanding of contemporary Chinese history, politics, society and culture in national, continental and global contexts. Students learn critical skills that allow them to identify major contemporary issues that shape present-day Chinese society. Students develop critical thinking and scholarly writing skills relevant to the multidisciplinary nature of the subject via the writing of an extensive literature review and a research essay.

979511 Contemporary Japan

8cp; availability: not offered to exchange and study abroad students Requisite(s): 979508 Research in International Studies OR 979508 Research in International Studies

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject is designed to provide students with a basic understanding of contemporary Japanese history, politics, society and culture in national, continental and global contexts. Students learn critical skills that allow them to identify major contemporary issues that shape present-day Japanese society. Students develop critical thinking and scholarly writing skills relevant to the multidisciplinary nature of the subject via the writing of an extensive literature review and a research essay.

979512 Contemporary France

8cp; availability: not offered to exchange and study abroad students Requisite(s): 979508 Research in International Studies OR 979508 Research in International Studies

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject is designed to provide students with a basic understanding of contemporary French history, politics, society and culture in national, continental and global contexts. Students learn critical skills that allow them to identify major contemporary issues that shape present-day French society. Students develop critical thinking and scholarly writing skills relevant to the multidisciplinary nature of the subject via the writing of an extensive literature review and a research essay.

979513 Contemporary Spain

8cp; availability: not offered to exchange and study abroad students Requisite(s): 979508 Research in International Studies OR 979508 Research in International Studies

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject is designed to provide students with a basic understanding of contemporary Spanish history, politics, society and culture in national, continental and global contexts. Students learn critical skills that allow them to identify major contemporary issues that shape present-day Spanish society. Students develop critical thinking and

scholarly writing skills relevant to the multidisciplinary nature of the subject via the writing of an extensive literature review and a research essay.

979514 Contemporary Germany

8cp; availability: not offered to exchange and study abroad students Requisite(s): 979508 Research in International Studies OR 979508 Research in International Studies

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject is designed to provide students with a basic understanding of contemporary German history, politics, society and culture in national, continental and global contexts. Students learn critical skills that allow them to identify major contemporary issues that shape present-day German society. Students develop critical thinking and scholarly writing skills relevant to the multidisciplinary nature of the subject via the writing of an extensive literature review and a research essay.

979515 Contemporary Italy

8cp; availability: not offered to exchange and study abroad students Requisite(s): 979508 Research in International Studies OR 979508 Research in International Studies

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject is designed to provide students with a basic understanding of contemporary Italian history, politics, society and culture in national, continental and global contexts. Students learn critical skills that allow them to identify major contemporary issues that shape present-day Italian society. Students develop critical thinking and scholarly writing skills relevant to the multidisciplinary nature of the subject via the writing of an extensive literature review and a research essay.

979516 Contemporary Canada (Quebec)

8cp; availability: not offered to exchange and study abroad students Requisite(s): 979508 Research in International Studies OR 979508 Research in International Studies

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject is designed to provide students with a basic understanding of contemporary Québec (Canada) history, politics, society and culture in national, continental and global contexts. Students learn critical skills that allow them to identify major contemporary issues that shape present-day Québec society. Students develop critical thinking and scholarly writing skills relevant to the multidisciplinary nature of the subject via the writing of an extensive literature review and a research essay.

979517 Contemporary Switzerland

8cp; availability: not offered to exchange and study abroad students Requisite(s): 979508 Research in International Studies OR 979508 Research in International Studies

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject is designed to provide students with a basic understanding of contemporary Swiss history, politics, society and culture in national, continental and global contexts. Students learn critical skills that allow them to identify major contemporary issues that shape present-day Swiss society. Students develop critical thinking and scholarly writing skills relevant to the multidisciplinary nature of the subject via the writing of an extensive literature review and a research essay.

979518 Contemporary Latin(o) Americas

8cp; availability: not offered to exchange and study abroad students Requisite(s): 979508 Research in International Studies OR 979508 Research in International Studies

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Postgraduate

The subject is designed to provide students with a basic understanding of contemporary Spanish-speaking Americas' history, politics, society and culture in national, continental and global contexts. Students learn critical skills that allow them to identify major contemporary issues that shape present-day Latin American society. Students develop critical thinking and scholarly writing skills relevant to the multidisciplinary nature of the subject via the writing of an extensive literature review and a research essay.

98723 Research Dissertation 1 (NMH)

24cr

For subject description, contact UTS: Health.

98724 Research Dissertation 2 (NMH)

24cp

Requisite(s): 98723 Research Dissertation 1 (NMH) There are also course requisites for this subject. See access conditions.

For subject description, contact UTS: Health.

98725 Dissertation in Health Research 1

12cp

Postgraduate

This subject facilitates an effective learning contract between the student and appointed supervisor. This learning contract forms the basis of students' framework of study as they plan to undertake the Health Research dissertation.

Typical availability

Autumn semester, City campus

98726 Dissertation in Health Research 2

12cp

Postgraduate

This subject facilitates an effective learning contract between the student and appointed supervisor. This learning contract forms the basis of students' framework of study as they plan to undertake the health research dissertation.

Typical availability

Spring semester, City campus

98727 Quality Use of Medicines in Advanced Practice

6ср

Postgraduate

Safe and rational prescribing requires an understanding of the processes contributing to drug use, as well as acquiring the essential skills and attitudes required for good prescribing. This subject focuses on the skills, knowledge, attitudes, values and abilities that underpin competent and capable medicine management for prescribers. Using a clinical decision-making framework, students apply the principles of the World Health Organisation's Guide to Good Prescribing, learning how to select between different medicines on the basis of comparative efficacy, safety, cost and suitability in order to prescribe from a defined scope of practice.

Students also explore the use of teaching and learning strategies to promote patient understanding of their medicines, and consider the difficulty of adherence to treatment. Commonwealth and State laws pertaining to the control of medicines are also considered.

98728 Leadership, Accountability and Role Development in Advanced Practice

6ср

99201 Global Histories

8cp; 3hpw Undergraduate

This subject introduces students to the main concepts of globalisation and to the historical development of different kinds of globalisation through familiar commodities such as food, drawing on examples from the everyday lives of people in Sydney. The processes and outcomes of globalisation are examined and discussed by way of case studies in lectures and in student research projects. Skills developed include researching literature in the field of global studies, observation research methods, small group work and written and oral presentation of research.

Typical availability

Autumn semester, City campus

First-year experience videos

View commentary from students and academics about this first-year subject at:

- Student video: www.youtu.be/w8NOvz8vrRo
- Academic video: www.youtu.be/-leUzZ55UBI

99202 Global Work

8cp; 3hpw plus one week participating on a work-based project; availability: not offered to exchange and study abroad students Requisite(s): 99201 Global Histories

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

The global movement of people, ideas and capital has had a profound impact on what kind of work people do, how they do it, where they work and who they work with; work has been globalised. This subject introduces students to key ideas that help in understanding what this means for people, communities and economies. Topics covered include the impact of the global movement of people through short and long-term migration and travel on work; the impact of information technologies on the global spread of work practices and work organisations; and the challenges of reconciling local conditions with the expectations and demands of global production networks. The subject includes the opportunity to examine globalisation at work through a work-based project and to use the theoretical perspectives introduced in the subject to explore the way globalisation is shaping working practice. Skills developed include applying theories of globalisation to concrete issues in workplaces, observation research methods, engaging with industry, and written and oral communication.

Typical availability

Autumn semester, City campus

99203 Global Knowledges

8cp; 3hpw; availability: not offered to exchange and study abroad students

Requisite(s): 99201 Global Histories

There are also course requisites for this subject. See access conditions.

Undergraduate

Our world views define and shape the world 'as we know it'. This subject introduces different ways of seeing the world, charting how resulting world views shape what we know, and how we relate to it. Assumptions about globalisation produce specific forms of knowledge and data, often framed as 'global indicators'. The resulting global knowledges are produced and situated, whether in dominant or marginalised contexts and traditions. The subject draws on accounts of dominant, alternate and parallel globalities, using both Southern and Northern theory, to analyse, compare, critique and evaluate these perspectives.

Typical availability

Spring semester, City campus

99204 Global Governance

8cp; 3hpw; availability: not offered to exchange and study abroad students

Requisite(s): 99201c Global Histories

These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access conditions.

Undergraduate

This subject allows students to consider ways of governing problems in the global sphere (e.g. climate change, trade, peacekeeping). International institutions responsible for managing global problems are examined in terms of their structures, capacities, and ways different interests and concerns are represented (or not) in their processes and outcomes. Students research the players in global governance, analyse complex governance frameworks and develop an understanding of different interests in global issues. Through engagement in debates, simulations and reports, students develop their research, analysis and communication skills.

Typical availability

Autumn semester, City campus

99205 Global Work Project

8cp; work placement, several seminars over the semester, and UTSOnline; availability: not offered to exchange and study abroad students

Requisite(s): 99204 Global Governance

There are also course requisites for this subject. See access conditions.

Undergraduate

This subject allows students to undertake a substantial work placement in an organisation with global connections, and in a discipline and employment area related to their Global Studies major. Students independently research the global aspects of work in the organisation in which they are placed. Skills developed include: researching global phenomena as they manifest in professional practice, building research informed arguments, reflecting critically on practice and work organisations, communicating and learning online, and presenting research findings using experiential learning and theory informed critique.

Typical availability

Autumn semester, City campus

99206 Global Problem Solving

8cp; 3hpw; availability: not offered to exchange and study abroad students

Requisite(s): 99204 Global Governance

There are also course requisites for this subject. See access conditions.

Undergraduate

In this subject students tackle a real-world global problem. Learning is done in seminars where students focus on the possibilities of citizen action to address global problems, utilising knowledge from the diverse majors. At the end of the semester students make written and oral presentations of their recommended citizen-action

strategies. Skills developed include: combining knowledge from global studies with knowledge from the majors; ability to collaborate across disciplines; engaging with external organisations; independent and collaborative research on global phenomena; teamwork; and oral and written presentation.

Typical availability

Spring semester, City campus

99567 Introduction to Chinese Herbal Medicine

6cp; 6hpw

Requisite(s): 99639 Chinese Medicine Foundations 1 OR 99665 Chinese Medicine Foundations 1

This subject provides introductory information on the basic properties and functions of Chinese herbs. It forms an essential foundation for the understanding of Chinese herbal forumulae and the pharmacology of Chinese herbs. Students are encouraged to create a small herbarium of selected herbs.

Typical availability

Spring semester, City campus

99584 Clinical Features of Disease

6cp; 4hpw

Requisite(s): 91530 Pathophysiology and Pharmacology 2 These requisites may not apply to students in certain courses. There are also course requisites for this subject. See access

This subject builds on the theoretical material offered in anatomy and physiology subjects. It also develops the student's ability to differentiate, in a TCM setting, those conditions that should be referred to a medical practitioner or other health care professional.

Typical availability

Autumn semester, City campus

99618 Chinese Diagnostic System 1

6cp; 5hpw

Requisite(s): 99640 Chinese Medicine Foundations 2 OR 99666 Chinese Medicine Foundations 2

This subject provides a deeper understanding of the objectives, application and therapeutic conclusions inherent in the traditional Chinese diagnostic system. It provides practical workshops in advanced pulse diagnosis that complements students' theoretical work.

Typical availability

Autumn semester, City campus

99621 Chinese Diagnostic System 2

6cp; 6hpw

Requisite(s): 99618 Chinese Diagnostic System 1

This subject contributes a large component of the essential skills and knowledge required for traditional Chinese diagnosis. The subject and workshops underpin not only the clinical experiences of the student but also the differentiation of disease states. This subject hones the essential skills and knowledge of *Zangfu* and external pathogen diagnostics. Students are expected to work closely together in group situations online and in class time to develop their diagnostic skills.

Typical availability

Spring semester, City campus

99630 Clinical Practice 1 (TCM)

12cp; 250 hours of supervised clinical practice and development of clinical reasoning skills

Requisite(s): 99647 Clinic Level 6 AND 91611 Clinical Practicum (Therapy and Diagnosis)

In this subject the student experiences the full range of practitioner responsibilities under the supervision of a clinical manager. This area of training is accomplished in the outpatient clinics of the College of Traditional Chinese Medicine (TCM), which provide low-cost TCM services to the public. Students also have the option of undertaking a TCM internship in China with a UTS-approved institution. Students engage in a series of tutor and peer reviewed case analyses and develop a learning contract in a specialty area of TCM of their own choosing.

Typical availability

Autumn semester, City campus

99631 Clinical Practice 2 (TCM)

12cp; 2hpw, 150 treatments, 375 supervised clinical hours (in Stage 8, Year 4)

Requisite(s): 99647 Clinic Level 6 AND 91611 Clinical Practicum (Therapy and Diagnosis)

In this subject, students experience the full range of practitioner responsibilities under the supervision of a clinical manager. This area of training is accomplished in the outpatient clinics of the UTS College of Traditional Chinese Medicine, which provide low-cost raditional Chinese medicine (TCM) services to the public. Students also have the option of undertaking a TCM internship in China with a UTS-approved institution.

This subject replicates the previous semester internship subject (99630 Clinical Practice 1) and students again engage is a series of tutor and peer reviewed case analyses and develop a second learning contract in a specialty area of TCM of their own choosing.

Typical availability

Autumn semester, City campus Spring semester, City campus

99636 Essentials of Pathophysiology

6cp; 12 weeks, 5hpw

This subject is a study of essential elements of the disease process studied within the context of some commonly occurring disorders. It serves as an introduction of physiological processes in the disease state. Systems studied include cardiovascular, endocrine, muscular-skeletal, gastrointestinal, kidney and body fluid, respiratory, immune, reproductive, cancer, and nervous systems. The subject promotes an understanding of health issues which can be used in many health settings.

Typical availability

Autumn semester, City campus

99641 Point Location and Acupuncture Anatomy

6cp; 5hpw

This is a workshop-based subject dealing with the location, depth, action, special precautions and contra-indications of the major acupuncture points used in clinical practice.

- Module 1 (Point Location) provides practical workshops to accurately locate the 365 major acupuncture points. This module looks at the fundamental actions of the major acupuncture points, complementing the work undertaken in Chinese Medicine Foundations 1.
- Module 2 (Anatomy) covers the anatomy that underpins the accurate location of points and their safe needling. It defines major anatomical landmarks used in point location, closely examines acupuncture point substructures and provides a basis for understanding precautions associated with acupuncture and its safe practice.

Typical availability

Autumn semester, City campus

99644 Clinic Level 3 and Acupuncture Techniques 2

6cp; clinical assistance: 40hrs, practicums: 13 weeks x 4hpw Requisite(s): [(99643c Clinic Level 2 OR 99668 Clinic Level 2 and Acupuncture Techniques 1) AND 99641 Point Location and Acupuncture Anatomy)

Approximately 30 per cent of the undergraduate training program is devoted to gaining clinical experience in preparation for becoming a qualified traditional Chinese medicine (TCM) practitioner. The subject is split into three modules:

- Module 1 (Clinic) builds on previous clinical training subjects and acquaints students with the skills and duties required by a student-practitioner working in the University's outpatient clinics. Students must satisfactorily complete requisite clinical hours.
- Module 2 (Acupuncture) introduces basic theoretical constructs for the application of various acupuncture techniques. The practical workshops are devoted to revision of point location and the extension of student knowledge of point function, Jing Luo pathways, point interactions and needle depths. Practical

- needling experience is introduced using basic/intermediate needling techniques. Participation in needling workshops is compulsory.
- Module 3 (Tui Na, Chinese Remedial Massage) builds upon the student's introduction to Chinese massage in Clinical Theory and Clinic Level 1. A large amount of clinical practice requires the differentiation and treatment of musculoskeletal dysfunction. Accordingly, this module further develops the participant's manual therapy skills and their application within a Chinese medicine clinical context. This module forms the basis of continuing clinical studies in Clinic Level 4. Participation in massage workshops is compulsory.

Typical availability

Autumn semester, City campus

99645 Clinic Level 4 and Acupuncture Techniques 3

6cp; 6 hpw, workshops, tutorials, lectures; clinical assistant level 4: 40hrs (Stage 4, Year 2)

Requisite(s): 99644 Clinic Level 3 and Acupuncture Techniques 2

Approximately 30 per cent of the undergraduate training program is devoted to gaining clinical experience in preparation for becoming a qualified traditional Chinese medicine (TCM) practitioner. This subject is split into three modules.

- Module 1 (Clinic) builds on previous clinical training subjects and acquaints students with the skills and duties required of a student practitioner working in the University's outpatient clinics. Students must satisfactorily complete requisite clinical hours, case reports and competency assessments.
- Module 2 (Acupuncture Techniques III) extends on the basic theoretical constructs for the application of various acupuncture techniques introduced in Clinic Level 3 and Acupuncture Techniques 2.
- Module 3 (TCM Orthopeadic assessment and treatment (Tui Na)) builds upon the participant's introduction to Chinese remedial massage in Clinic Level 3: TCM Manual Therapy 1. This component covers integrative tuina techniques with a focus on the orthopaedic assessment, developing further diagnostic procedures for identifying regional musculoskeletal dysfunction and applying findings to planning and applying an integrative treatment approach using a range of modalities. The subject builds upon basic diagnostic concepts of the four methods of diagnosis (Si Zhen) in conjunction with biomedical principles involved in orthopaedic assessment.

Upon completion of the subject, participants have the basic knowledge necessary to undertake supervised clinical practice in the UTS Chinese Medicine Remedial Massage (Tuina) Clinic. Knowledge gained from the subject is necessary for further development of a clinical application of an integrative practice scope.

Typical availability

Spring semester, City campus

99646 Clinic Level 5 and Acupuncture Microsystems

6cp; clinical assistance: 60hrs, advanced needle techniques: 12 weeks x 5hpw

Requisite(s): 99645 Clinic Level 4 and Acupuncture Techniques 3

Approximately 30 per cent of the undergraduate training program is devoted to gaining clinical experience in preparation for becoming a qualified traditional Chinese medicine practitioner. The subject is split into two modules.

- Module 1: Clinical Assistant Level 5 builds on the first two years of theoretical, practical and clinical training and acquaints students with skills and duties required by a final year studentpractitioner working in the University's outpatient clinic. Clinical training is continued through the clinical program of the TCM course.
- Module 2: Microsystems and Advanced Treatment Techniques covers special areas of microsystems acupuncture, which has a wide range of applications in the general practice of acupuncture. The theoretical information of general acupuncture and microsystems acupuncture is applied and practised in the advanced treatment techniques practicum/workshop.

Typical availability

Autumn semester, City campus

99647 Clinic Level 6

6cp; 4hpw; workshops, tutorials and planning sessions: Clinical Assistant Level 6: 70 hours (Stage 6, Year 3)

Requisite(s): 99646 Clinic Level 5 and Acupuncture Microsystems

This subject is divided into three modules.

Module 1: Clinical Assistant Level 6: Approximately 30 per cent of the undergraduate training program is devoted to clinical experience and preparation for becoming a qualified traditional Chinese medicine practitioner. This module builds on the first two-and-a-half years of theoretical, practical and clinical training, and develops student skills and professional understanding of clinical practice as exemplified in the University's outpatient clinic.

Module 2: Internship Training: Students engage in a series of group exercises to prepare a fourth clinical management plan. This plan covers all aspects of daily management and promotion of their future internship clinic. Students engage in a series of reflective exercises dealing with the legal and ethical issues they may face during their internship clinic and after graduation. They must also undertake the preparation of a learning contract in an area of clinical specialisation of their own choosing that they execute during their fourth-year clinics.

Module 3: Disease States: This module contributes to the development of an evidenced-based approach to the clinical practice of Chinese medicine (CM). The module develops clinical understanding of disease and its treatment through the integration of theories and knowledge from Chinese medicine with biomedical and western medicine understandings of diseases and their processes. A number of diseases are covered from traumatology and paediatric CM clinical areas. Disease discussion undertaken in the clinical areas covers:

- CM classification(s)
- biomedical classification(s)
- aetiology
- pathology
- diagnosis
- differential diagnosis
- current therapy from a biomedical perspective
- herbal formula modification, application and treatment
- CM treatment therapy and strategies (may cover herbal formulae, acupuncture, massage, exercise methods, lifestyle and dietary advice)
- integration of laboratory and radiological findings (where relevant)

Preventative health measures and strategies for health maintenance are additionally addressed in this subject. These are discussed in the context of Yang Sheng, the CM clinical area of practice relating to 'health preservation and enhancement' including understanding and application of dietary principles.

Traumatology integrates and strengthens the knowledge obtained in orthopaedic studies in the subjects 99644, 99645 and 99641.

Together, study of the three clinical areas of Traumatology, Paediatrics and Yang Sheng assumes completion and understanding of the biomedical knowledge obtained in the subjects 91527, 91528, 91529 and 91530, and draws on knowledge from 99584 and CM diagnostic frameworks and knowledge. Specialist understandings and skills are developed, and their application of CM treatment scopes of practice specific to these three clinical areas of study.

The modules link into clinical practicum and clinic internship subjects where students are required to put into practice and integrate their learning within a clinical context.

Typical availability

Spring semester, City campus

Note(s)

This subject replaces the Spring semester of 99624 Clinical Theory and Clinic Level 3.

99650 Pharmacology of Chinese Herbal Medicine

6cp; 4hpw

Requisite(s): 99567 Introduction to Chinese Herbal Medicine

The subject utilises the latest research on Chinese herbal medicines. Students are provided with up-to-date scientific knowledge of commonly used traditional Chinese medicinal herbs, including the botanical description, active constituents, pharmacological actions, therapeutic uses, adverse effects, toxicity and Therapeutic Goods Administration (TGA) regulatory status (if applicable). The interactions between Chinese herbs and orthodox drugs is also discussed.

Typical availability

Autumn semester, City campus

99651 Chinese Herbal Formula 1

6cp; 6hpw

Requisite(s): 99567 Introduction to Chinese Herbal Medicine AND 99621c Chinese Diagnostic System 2

Differentiating patterns and deciding treatment strategies (Bian Zheng Lun Zhi) are the traditional processes in treating disease in traditional Chinese medicine (TCM). Chinese herbal formulas are specific combination of various single herbs that provide a standard strategy for deciding treatment.

This subject consists of the study of formulas and strategies in treating diseases according to TCM patterns. The core of the subject is in understanding how particular combinations of single herbs in the formulas work effectively to treat disease. The focus of this subject is in analysing the relationship of patterns (traditional descriptions of pathological conditions in Chinese medicine) and the strategies underlying the formulas that treat them.

The subject includes topics of standard treatment strategies in Chinese herbal formulas, relationship of formulas to TCM patterns, and detailed analysis of the structure of the formulas in accordance to the pathomechanism (Bing Ji) of TCM patterns and their clinical signs and symptoms.

Typical availability

Spring semester, City campus

99652 Chinese Herbal Formula 2

6cp: 6hpw

Requisite(s): 99651 Chinese Herbal Formula 1

Chinese herbal medicine utilises herbal combinations to treat illness. This subject follows Chinese Herbal Formula 1 and provides detailed information on Chinese herbal formulae for treating diseases. In this subject, the major herbal formulae are evaluated together with their appropriate application. Students are encouraged to discriminate between various treatment strategies in accordance with differential diagnosis of TCM patterns.

Typical availability

Autumn semester, City campus

99656 Disease States for Traditional Chinese Medicine 1

Scp; 5hpw

Requisite(s): 99652 Chinese Herbal Formula 2 AND 99584 Clinical Features of Disease

In this subject students integrate their knowledge of Western and Chinese medicine for the most common diseases in traditional Chinese medicine (TCM) internal medicine and contribute to the development of an evidence-based approach to the clinical practice of TCM. The subject focuses on developing diagnostic theory and skills, TCM pattern differentiation, and familiarity with current therapy in Western and Chinese medicine for common diseases which present in clinics relating to TCM internal medicine. This includes:

- CM classification(s)
- biomedical classification(s)
- aetiology, pathology, diagnosis and differential diagnosis
- · current therapy from a biomedical perspective
- herbal formula modification, application and treatment
- CM treatment therapy and strategies (may cover herbal formulae, acupuncture, massage, exercise methods, lifestyle and dietary advice)
- integration of laboratory and radiological findings (where relevant).

Typical availability

Spring semester, City campus

99657 Disease States for Traditional Chinese Medicine 2

6cp; 5hpw

Requisite(s): 99652 Chinese Herbal Formula 2 AND 99584 Clinical Features of Disease

This subject moves its emphasis from the learning of traditional Chinese medicine (TCM) to the clinical practice of TCM. It provides students with clinical knowledge of Chinese medicine for the female and male reproductive disorder, traumatology, dermatology, external disorders (surgical diseases), and ear, nose, throat (ENT) and eyes,

and oncology. It also enables students to understand the key clinical features of these diseases in Western medicine. After determining that TCM is appropriate to the patient's condition, students must then differentiate the pattern of disharmony as identified in TCM, decide on the treatment principle and devise a course of treatment.

This subject is a clinical subject for students to learn integrative knowledge of the Western and Chinese medicine for most common diseases in gynaecology, some surgical diseases and common dermatological diseases. The subject focuses on theory and skills of diagnosis, TCM pattern differentiation, current therapy in Western medicine and Chinese medicine approaches to diseases discussed in above three areas. In tutorial sessions, real clinical case study, including interviews of patients with diseases relevant to the lecture, and the role-playing (student plays either practitioner or patient) are important components of this subject.

Typical availability

Autumn semester, City campus

99659 Clinical Practice 4

8cp

Requisite(s): 99647 Clinic Level 6 AND 99627 Clinical Practicum (Therapy and Diagnosis) AND 99658c Clinical Practice 3

In this subject the student experiences the full range of practitioner responsibilities under the supervision of a clinical manager. This area of training is accomplished in the out-patient clinics of the College of Traditional Chinese Medicine (TCM) which provide low cost TCM services to the public. The student also has the option of undertaking TCM internship in China with a UTS approved institution. Students engage in a series of tutor and peer reviewed case analyses and develop a learning contract in a specialty area of TCM of their own choosing.

Typical availability

Spring semester, City campus

99665 Chinese Medicine Foundations 1

6cp; 4hpw

The subject introduces Chinese medicine's basic theoretical concepts. A broad foundation is provided for subject areas that are built on throughout the degree. Subject areas include the traditional Chinese medical view of health, disease aetiology, diagnosis and principles of treatment, traditional physiology (the 12 organs and 14 main channels), terminology issues, philosophical traditions and the *Huangdi Neijing Suwen*. The basic theories presented in this subject have a continuing and progressive application in all aspects of traditional Chinese medicine.

Typical availability

Autumn semester, City campus

99666 Chinese Medicine Foundations 2

6cp; 4hpw

Requisite(s): 99665 Chinese Medicine Foundations 1

This subject extends students' knowledge of Chinese medicine's fundamental substances and their physiology and the channel system, its components and functions. It builds on stage 1 subjects, especially with regard to physiological substances and systems and general patterns of dysfunction. The principles of Chinese dietetics are explored and the <code>Neijing Lingshu</code> introduced. Basic dietary principles and acupuncture point functions and indications are applied to basic patterns of disorder. The subject provides an understanding of how to regulate internal systems and utilise channel physiology in the clinical practice of Chinese medicine.

Typical availability

Spring semester, City campus

99667 Clinical Theory and Clinic Level 1

6cp; 5hpw

Requisite(s): 99665c Chinese Medicine Foundations 1 AND 99641c Point Location and Acupuncture Anatomy

This subject comprises a series of lectures, workshops and clinical practicum. The subject content has been organised into three modules:

 Module 1: Clinical Theory covers UTS clinical protocols for attending the clinic as both a student and intern practitioner (when in fourth year). Topics include treatment modality precautions and contraindications, introductory ethics, infection control procedures and principles of communication. There is a series of workshops associated with the module and these are used to introduce the learner to tuina, cupping and gua sha treatment modalities. In addition, the workshops are used to put into practice information from the lectures (i.e. practice-based learning).

- Module 2: Pulse Diagnosis: Theory and Practice introduces the
 techniques used for pulse assessment and provides information
 on assessing some basic pulse parameters, including their
 associated diagnostic meaning. It comprises a mixture of lectures
 and workshops and serves as an introduction to further advanced
 techniques covered in the second year of the degree program.
- Module 3: Clinic Practicum is the first of several undertaken in a real clinical environment. Clinic practicum for this module focuses primarily on observation, learning clinical processes and health information systems. Students may be required to assist the practitioner, and eventually, expected to undertake clinical assessments of patients and their treatments (under supervision) in the third and fourth year of their studies.

Typical availability

Autumn semester, City campus

99668 Clinic Level 2 and Acupuncture Techniques 1

6cp; 4hpw (Stage 2, Year 1)

Requisite(s): 99667 Clinical Theory and Clinic Level 1 AND 99641 Point Location and Acupuncture Anatomy

Approximately 30 per cent of the undergraduate training program is devoted to gaining clinical experience in preparation for becoming a qualified traditional Chinese medicine (TCM) practitioner. The subject is split into two modules:

- Module 1 builds on previous clinical training subjects and acquaints students with the skills and duties required by a 'student practitioner' working in the University's outpatient clinics. Students must satisfactorily complete requisite clinical hours.
- Module 2 introduces basic theoretical constructs for the application of various acupuncture techniques. Practical needling experience is introduced within the workshops. Participation in needling workshops is compulsory. Students are also introduced to the full set of Jing Luo pathways.

Typical availability

Spring semester, City campus

99669 Clinical Practice 3

6cp; 2hpw, 75 treatments, 188 supervised clinical hours (Stage 8, Year 4)

Requisite(s): 99647 Clinic Level 6

There are also course requisites for this subject. See access conditions.

In this subject the student experiences the full range of practitioner responsibilities under the supervision of a clinical manager. This area of training is accomplished in the out-patient clinics of the College of Traditional Chinese Medicine (TCM) which provide low cost TCM services to the public. Students engage in a series of tutor and peer reviewed case analyses and develop an annotated bibliography in a specialty area of TCM of their own choosing.

Students who undertake the option of an overseas clinical placement in China or Korea with a UTS approved institution must undertake this subject instead of 99631 Clinical Practice 2.
